
44 Guise, in *JAI*, XXVIII, 217.

violent grief, abstains from all kinds of food, isolates himself from his relatives, and ultimately dies of starvation."⁴⁵ The natives of British New Guinea believe that at death the spirit enters into wild animals, more especially crocodiles, pigs, and cassowaries. "It is said that certain persons have on occasions recognised the features of their relations in crocodiles and pigs, and thereupon not only refrained from killing them (which was done instead by some bystander), but also refrained from eating the flesh of these crocodiles and pigs."⁴⁶ Again, in the same region, "if the *iaufangai* is an animal, a man will not now, as a rule, be unwilling to kill it, but he will not himself eat it, though he will give it to someone else to eat." The old unwillingness even to kill it still survives with certain clans, and indeed among them, "if the *iaufangai* animal is caught in a snare or trap, they will shed tears at the wrong committed, and release the animal."⁴⁷

The most characteristic cultural feature of the Melanesian Massim is the existence of a peculiar form of totemism with matrilineal descent. In spite of local variations, it is certain that special importance is attributed to the bird-totem over the greater part of the Massim area. This is perhaps best shown in one of the first questions commonly put to a stranger: "What is your bird?" So too, if a man be asked his totem, he will commonly give his bird-totem only. "There are no totem shrines, and people are not believed to have particular influence over the birds or other animals which are their totems. There does not seem ever to have been any ceremony which had for its purpose the increasing of the totem, nor was there any tendency for a man to tame and keep his totem birds as pets." In spite of legendary close associations of men and totem-animals, there does not appear to be any generally recognized physical or psychical resemblance between men and their totems, nor are the latter regarded as omen-giving. A man should not eat his totem-bird, the penalty for transgressing this rule being a swollen stomach and perhaps death. A man would go round his totem-snake on the road to avoid touching it. Inquiry failed to elicit the purpose of the totems in the native mind.⁴⁸ In Mota there are many persons, perhaps as many as half the population, who are not permitted by custom to eat the flesh of certain animals, to eat certain fruits, or to touch certain trees. "The ground for the prohibition in most cases is that the person is believed to be the animal or fruit in question, his mother having received an influence from an animal or plant of the kind before his birth. . . . The belief underlying the prohibition of the animal as food is that the person would be eating himself. It seemed that the act would be regarded as a kind of cannibalism. It was evident that there is a belief in the most intimate relation between the person and all individuals of the species with which he is identified." The prohibition is a purely individual matter. Rivers⁴⁹ cites an instance of the evil effects believed to follow non-observance of the restrictions in Fiji: "A man whose people had always eaten snakes married a woman to whom these animals were *tambu*. He did not give snakes to his children but their food was cooked in pots which had been used to cook snakes and the constant illness of his children was ascribed to this cause and, in order to escape from continual trouble, he left his wife and took another woman."

In the Island of Aurora there are families within the two great exogamous divisions of the people; one of these is named from the octopus. "If anyone

of another family wished to get octopus for food he would ask one of this family to go to the part of the beach to which the family was said to have originally belonged, and standing there, to cry out, 'So-and-so wants octopus.' Then plenty would be got." In the Banks' Islands, the people identify themselves with certain animals or fruits, believe that they partake of their qualities and character, and refuse to eat them on the ground that in so doing they would practically be eating themselves.⁵⁰ One of the clans of San Cristoval, Solomon Islands, worships a man of former times who is now incarnate in a shark or other fish or the leaf of a tree. The group will not kill any of his several incarnations. It may be that we have here a group which might easily in the course of time develop into a totem-clan; probably it would be called the shark-clan and would have the shark and other associated totems. A Tawatana man once told the author⁵¹ that he would not kill either the totem of his father (eagle) or that of his mother (crab), especially not the latter; he said that if one of the crab-clan were murdered, he, with all other crab-people along the coast, would feel bound to punish the murderer; but if an eagle-man were killed he would only be "a little angry."

Totemism, if such a term is applicable in the D'Entrecasteaux Islands, is an institution altogether apart. "The totems are inherited taboos of a certain kind which affect all the kin, causing them to abstain from eating certain articles of food. The children inherit them from the father, in a few cases from the mother as well; but generally the mother's totem is disregarded by her children. Since most if not all of the inhabitants of a hamlet are connected by kinship, and have in consequence inherited the same totems, one may speak of a hamlet as having a certain totem or totems of its own. . . . One man conjectured that their spirits passed at death into their totems, and hence the totem has received the name of 'grandparent'; but others emphatically denied this doctrine. . . . Whatever be the mystic bond which unites the native with his totem, there are, or were, very material penalties for any infringement of it. Eyes and cheeks will swell, the hair will drop out, ulcerous sores will cover the body of the man who dares to kill or eat it. Death will follow quickly unless for three days, morning, noon, and night, he washes in the sea, and three times during the hours of darkness inside his hut. Kinsmen dare not go near him, but friends whose totems are different must take care of him; thus only is there any hope of his recovery. Even if, wandering in the woods, a man should set his foot on his dead totem, his foot will be covered with ulcers; or should it be cooked and eaten in his village by another native, he will die, and the native who cooked it must pay the blood-price to his relatives."⁵²

Codrington⁵³ finds the tribes in the Solomon Islands which have totem-groups also tracing descent in the female line, and a number of tribes with father-descent and no totem-groups. There are six mother-kin groups on Florida Island, called *kema*. "It adds very much to the distinction between these *kema* that each has some one or more *buto* from which its members must keep clear, abstain from eating, approaching, or beholding it. One of the very first lessons learnt by a Florida child is what is its *buto*, its abomination, to eat or touch or see which would be a dreadful thing. In one case, and in one case only, this *buto* is the living creature from which the *kema* takes its name; the

Kakau kin may not eat the *Kakau* crab. The Nggaombata may not eat the giant clam; the Lahi may not eat of a white pig; the Manukama may not eat the pigeon; the Kakau, besides their eponymous crab, may not eat the parrot *Trichoglossus* Massena. The Manukama are at liberty to eat the bird from which they take their name. If the question be put to any member of these *kema*, he will probably answer that his *buto* is his ancestor; a Manukama will say that the pigeon he does not eat is his ancestor; but an intelligent native, describing this native custom, writes:—"This is the explanation of the *buto*. We believe these *tindalo* to have been once living men, and something that was with them, or with which they had to do, has become a thing forbidden, *tambu*, and abominable, *buto*, to those to whom the *tindalo* belongs.' He gives the example of the clam of the Nggaombata. The ghost, *tindalo*, of a famous ancient member of that *kema*, named Polika, haunted a beach opposite Mage, and a large snake, *poli*, was believed to represent him there. The Nggaombata could not approach that beach, Polika was their *buto*. On another beach where they catch fish wherewith to sacrifice to Polika is a *gima*, a clam, which they call Polika, and used to believe to be in some way Polika; hence the *gima* is their *buto*. . . . There will occur at once the question whether in this we do not find totems. But it must be asked where are the totems? in the living creatures after which two of the divisions are named, or in those creatures which the members of the several divisions may not eat? It is true that the Kakau kindred may not eat the crab *kakau*; but the Manukama may eat the bird *manukama*. If there be a totem then it must be found in the *buto*; in the pigeon of the Manukama and the giant clam of the Nggaombata, which are said to be ancestors. But it must be observed that the thing which it is abominable to eat is never believed to be the ancestor, certainly never the eponymous ancestor, of the clan; it is said to represent some famous former member of the clan, one of a generation beyond that of the fathers of the present members of it, a *kukau*. The thing so far represents him that disrespect to it is disrespect to him. The most probable explanation of these *buto* may indeed throw light upon the origin of totems elsewhere, but can hardly give totems a home in the Solomon Islands. The *buto* of each *kema* is probably comparatively recent in Florida; it has been introduced at Bugotu within the memory of living men. It is in all probability a form of the custom which prevails in Ulawa, another of the Solomon Islands. It was observed with surprise when a Mission school was established in that island, that the people of the place would not eat bananas, and had ceased to plant the tree. It was found that the origin of this restraint was recent and well remembered; a man of much influence had at his death not long ago prohibited the eating of bananas after his decease, saying that he would be in the banana. The elder natives would still give his name and say, 'We cannot eat So-and-So.' When a few years had passed, if the restriction had held its ground, they would have said, 'We must not eat our ancestor.' This represents what is not uncommon also in Malaita near Ulawa, where, as in Florida also, a man will often declare that after death he will be seen as a shark."

Tylor⁵⁴ quotes a letter which was sent to Codrington, as follows: "When a father is about to die, surrounded by members of his family, he might say what animal he will be, say a butterfly or some kind of a bird. That creature would be sacred to his family, who would not injure it or kill it; on seeing or

falling in with such an object the person would say, 'That is *kaka* (papa),' and would, if possible, offer him a young cocoanut. But they did not adopt thus the name of a tribe."

In the westernmost Torres Straits Islands, "the transition from totemism to hero-worship was in process of evolution till it was arrested by the coming of the white man." Perhaps the change was correlative with a known change from the matriarchal to the patriarchal system. The author⁵⁵ thinks that Parkinson and Danks have proved true totemism for the northern Solomon Islands, New Britain, Duke of York Island, and New Ireland. The "close relations between man and totem were put to the service of the community. The Ongong-people were called upon when it was a question of alluring Ongongs to the coast. Then the Ongong-man, painted and ornamented, ascended . . . a peculiarly sacred place and here-carried out magic operations in which a carved Ongong-figure was used. At the end of the ceremony the turtle-people received the image to take with them on the hunt."⁵⁶ The Fijians have both principal totems, which are animal and vegetable and are not to be destroyed or eaten, and secondary ones, which can be eaten with certain ceremonial. But many tribal names have no analogy with the names of their principal totems. These latter were deeply respected and consulted on all important occasions. An expectant mother was visited by the totem-animal. The tree-totem is connected by legend with the origin of the people.⁵⁷ Melanesians and Polynesians have a system of worship of animals, like the totem in America and the kobong in Australia.⁵⁸

"Totemism on the one hand and a mass of differing and inconsistent myths on the other are demonstrated for Africa." There is totemism and tribal division on the basis of "animalistic" notions; the totem-animal is the incorporation or incarnation of the ancestors, and so there is a taboo on eating and, under certain circumstances, on killing. Persons of the same totem, even of different tribes, may not marry, for it would be equivalent to incest. Totemism is most marked among the Bechuanas and on the Gold Coast but along the whole western border of the continent there are survivals in the form of food-taboos and marriage-taboos.⁵⁹ "The different Bechuana tribes are named after certain animals, showing probably that in former times they were addicted to animal-worship like the ancient Egyptians. The term Bakatla means 'They of the monkey'; Bakuena, 'they of the alligator'; Batlápi, 'they of the fish': each tribe having a superstitious dread of the animal after which it is called. . . . A tribe never eats the animal which is its namesake, using the term 'ila' hate or dread, in reference to killing it. We find traces of many ancient tribes in the country in individual members of those now extinct, as the Batáu, 'they of the lion'; the Banóga, 'they of the serpent'; though no such tribes now exist."⁶⁰ Another writer⁶¹ reports that "tribal names are rarely the names of plants or animals, and totems are unknown." We are told that all good men of a certain tribe turn into lions when they die, and reappear to fight for the tribe.⁶² In the old days there is no doubt that the totem was regarded by the Bechuana as the supernatural friend and ally of the tribe, that it was respected and protected, and that men swore by it as by a sacred thing. One would not eat

or even touch an animal of his totem. Chance might determine an individual totem, as in the case of a native who, in his extremity, hid in a thicket. "His pursuers had seen him but a little while before, and as he was now nowhere to be seen, they surmised that he must be in hiding; and they approached the very thicket, intending to examine it. Just as they approached, however, a duyker sprang out and bounded away. Upon this one of them remarked that a man and a duyker could not hide in the same thicket, and the party went on. Henceforth, says the story, the chief took the duyker for his totem." Some of the tribes regarded the hoe as a totem. When asked how these people cultivated their gardens if they refused to touch the hoe, they replied that it was strictly correct to use the hoe for gardening, but that it was profanation to use it for any inferior work, and that it would be a very serious thing to strike a dog with it.⁶³ The Herero have divisions that call themselves the relatives of the sun, or the rain, or the tree, and each regards a special plant as holy and as the symbol of the division. Such connections are inherited from the mother. "The prescriptions which forbid eating this or that animal, to behave thus and so in connection with certain natural phenomena, to pay reverence to certain cattle that are somehow marked out, and so on, are to be regarded as a sort of 'family custom' and seem to serve to sustain the memory of fellowship, since the members, even when they are lined up with different tribes, yet evince a certain spirit of community."⁶⁴ Frazer⁶⁵ thinks that "the totemism of the Bantu tribes of South Africa resolves itself into a particular species of the worship of the dead,—the totem animals are revered as incarnations of the souls of dead ancestors."

No person of a clan among the Baganda is allowed either to kill or eat his own totem, though any one of another clan may do so with impunity. Any infringement of this custom will be followed by sickness, sores all over the body, or even death. No one mentions his totem, but asks some other person present to give the information when it is necessary to make the totem known. A woman must not eat green locusts; she may, however, catch them for her husband who, immediately after eating, must have intercourse with her "in order to cause the locusts to increase and avert any ill consequences to her children, which might otherwise arise from her catching her totem."⁶⁶

In West Africa, "to each clan its totem animal is sacred, and they will not eat of its flesh. In some parts this sanctity is regarded as so great that actual prayer and sacrifice are made to it. But in most of the Bantu tribes this totem idea does not exist as a worship. Indeed, the animal (or part of an animal) is not sacred to an entire clan, but only to individuals, for whom it is chosen on some special occasion; and its use is prohibited only to that individual. Only in the sense that it may not be used for common purposes is it 'sacred' or 'holy' to him."⁶⁷ "The Ewe-Speaking tribes, like the people of the Gold Coast, are totemistic, and the different communities are heterogeneous; that is, members of several, in some cases of all, of the clans are found in each community. . . . The usual reverence is paid by the members of a clan to the animal or plant from which the clan takes its name. It may not be used as food, or molested in any way; but must always be treated with veneration and respect. The general notion is that the members of the clan are directly descended

from the animal, or plant, eponymous."⁶⁸ On the Gold Coast there are indications of totemism in the facts that when a man sees a dead leopard he anoints its muzzle with palm oil, and if he kills one by accident, he says, "I have killed my brother," and puts palm oil on the wounds. There are stories of adoption of a totem by a town and by a household; in both cases the animal had pulled them out of trouble, by showing them a ford in a river, for example, or by saving life. Thereafter the totem-animal must not be killed or eaten; if caught in a trap, it is let go. There is also some notion of the dead migrating into the totem and omens from its appearance. Food and prayers may be offered to it. The belief also is held that the fate of an individual is bound up with his individual totem.⁶⁹

Trilles⁷⁰ has written extensively on totemism among the Fan. Originally, he believes, the totem was personal, applying only to a single individual, the father of the race; but by the very nature of things this totem became familial; then, in consequence of the extension of the family, it came, in the course of centuries, to apply to the clan, and finally to the tribe. Each secret society, and even each grade of each secret society, has its animal-protector, with its consecration, rites, cult, and particular prohibitions. The totem is generally an animal, but may also be a plant, a spirit, or even a natural phenomenon. The tribal totem is the most important. A clan, to be totemic, need not bear the name of the totem. Totemism, both as an object and as a body of doctrine, differs from, though it is allied to, fetishism, the taboo, nagualism, and other beliefs. The clans of the Fan do not consider the eponymous animal to be an ancestor, made of the same substance as themselves: they are kin because the same spirit animates them. In totemism the cult is directed toward the eponymic ancestor of the tribe, called guardian; in manism, or the ancestral cult, it is directed toward the true ancestor or father of the tribe. The former worships the effective materialization of the totem, also the living descendants of the eponymic ancestor; the latter worships the first ancestor, the very personification of the race. The whole race is issued from his loins; each individual's life is an episode or fragment of that of the race, as the fruit of the tree. There are many totemic rites, some of which concern the continuation and preservation of the race. One of these is the exchange of the blood of the totem; and in some cases there is a communion, which brings the stranger into the tribe and enlarges the range of the family or reunites two tribes in a common alliance by means of the chiefs who personify them.

"The Banyoro are divided into many clans, which would appear to have *totems*, as sacred symbols or ancestral emblems like the similar clans in Uganda. . . . It is unlawful by custom for a Munyoro to kill or eat the totem of his clan. . . . I have never been able to ascertain either from Banyoro or Baganda that their forefathers at any time believed the clan to be actually descended from the object chosen as a totem. The matter remains very obscure. It may be remotely connected with ancestor-worship, which is certainly the foundation of such religious beliefs as are held by the Banyoro, as by most other Negro races. . . . The paternal grandfather gives a name to the child. This naming is a very peculiar function. A great deal depends on the name given, and there are certain foods forbidden to families bearing certain names. For

68 Ellis, *Ewe*, 100; Ellis, in *PSM*, XLV, 780; Frobenius, *Masken*, 193, 194; Harper and Van Hien, both in *JAI*, XXXVI, 178 ff. and 185 ff. resp.

69 Harper, in *JAI*, XXXVI, 180-181, 185, 186, 187, 188.

70 *Fdh*, 8-9, 15, 21-22, 23-24, 24-25, 162, 163, 249, 363-364, 500-501, 505-506.

instance, if a child is called *Luanga*, it must never eat the flesh of an otter; a man named *Mayanja* cannot eat the flesh of a sheep; nor can one who is called *Katenda* eat the *Protopterus* (lung-fish). The prohibition extends to the man's descendants for all time, but it does not include his wife or wives. They may have a prohibition of their own inherited from their father, but the sons or daughters are only involved in the prohibition of their father: the prohibition (if any) which applies to their mother does not affect them. These restrictions regarding diet are no doubt connected with the totem or sacred symbol of the clan ('*kiká*') to which any person belongs.⁷¹ In Madagascar a certain lemur is believed "to be an embodiment of the spirits of their ancestors, and therefore they look with horror upon killing them."⁷²

In East Africa a relationship akin to totemism exists, "but it is a playful relationship, rigid only when choosing a wife, without the strict sanctions and penalties attached to the cult elsewhere." In fact, one author⁷³ thinks that totemism is a misnomer here; there is a need for another word. Totemic prohibitions seem to have been strict in the past, but are not binding today, save in a few special instances. Among the Bantu people each clan appears to have its own particular totem, and this may have given rise to their custom of exogamy, but in Nandi each individual is said to have his own totem irrespective of the clan. In all the groups in this region the totems appear to be animals; no example of a vegetable totem has been discovered. The Bantu group use the word *muziro* to denote the totem and, contrary to the usual belief, the eating of a totem-animal is not believed to be followed by death, but only by a severe skin-eruption; and if, by any mischance, the meat of the totem is eaten, the evil consequences can be averted by making a medicine extracted from certain herbs; this extract is mixed with the fat of a black ox and rubbed all over the body of the patient. Among the Nilotic Ja-Luo there is a long list of totem animals which are forbidden as food to both men and women. Curiously enough, the animals on this *index expurgatorius* are considered malignant in their influence and it is thought praiseworthy to kill them. There is hardly any trace of totemism among the Masai.⁷⁴ Some of the Hausa clans kill their totem each year, others every second, while some let three years pass between the rites. "Priests who were very full of medicine would catch the lion with their hands—there were only three of these priests. The animals were killed so that they should not become too numerous, and they had to submit because they obeyed the incense." It is stated that totemism is really a treaty of peace between man and animals, the latter promising to aid the former if worshipped in the proper manner and provided with offerings.⁷⁵

"Totemism as a survival may be suspected in the 'fish' and 'dog' people of the Rig Veda."⁷⁶ Certain families "have *devaks* or sacred symbols, which appear to have been originally totems, and affect marriage to the extent that a man cannot marry a woman whose *devak* reckoned on the male side is the same as his own. They are totems, worshipped during marriage and other important ceremonies. . . . Septs with different names, but whose object of special worship is the same, cannot intermarry. . . . They all pay reverence to their own totem, in the case of a tree by never cutting or injuring it, or as a

rule employing it in any way, while in case of other objects they avoid injuring them in any way. They make obeisance to the totem when passing and their women do *Ghungat*, i.e., veil the face when passing. Women desirous of children make an offering called *Männat* to the totem. As a rule some spirit is supposed to live in the tree, or other object."⁷⁷ "It is generally admitted that for many of these tribes there is ample evidence that at one time they passed through what is called the totemistic stage," but some of the evidence is not very conclusive. "To give a single instance, when we find the totem belief in this stage of degeneration, it is open to anyone to say that the connection of the sept or section with the sacred beast or plant is merely a case of tree or animal worship, and need not necessarily imply that the worshippers of it were ever consciously in the totem stage. . . . Nowadays most of the leaders of the totem school are prepared to admit the weakness of the evidence for totemism within the so-called Aryan area. Here possibly tree and serpent or animal worship will be found to explain most of the facts without the necessity of calling in the aid of totemism. . . . Under Hindu influence there has been a tendency to replace the old totem or sacred beast by some eponymous ancestor drawn from the ranks of Hindu saints or worthies, and here often the familiar influence of folk etymology comes into play. Thus Rikhmun, the divine ancestor of the Bhuiyas and Musahars, who is called a deified Rishi or saint, is probably in reality Riksha, the bear: so Kachchapa, the tortoise, has become the saint Kasyapa, and Bharadvaja, the lark, turns into a third Hindu worthy."⁷⁸ In Assam, "they cannot marry into their own tribe. The totem seems to come in here, i.e., a 'Bear' can marry an 'Iron,' but not a 'Bear'; a 'Palm' can marry a 'Tiger,' and so on."⁷⁹ The *devak*, or totem, is a creeping plant, banana-tree, lotus-flower, peacock-feather, stone, ant-heap, or other object; the family spares the tree or animal that is holy to it.⁸⁰

Strict taboos are in force in India among the members of a clan of the Oråons in regard to the totem, and not only will an Oråon himself abstain from killing, eating, or using his totem, but he will try to prevent others from doing so in his presence. In the case of totems such as rice or salt, whose use is indispensable, only some special form or manner of eating it is forbidden. "There are also interesting cases of the transference of totem taboos to other objects which happen to have in fact or in name, a resemblance to the totem proper. Thus the Tiger clan must abstain not only from the tiger, but from the squirrel, whose stripes suggest the tiger; the Monkey clan extend their taboo to a tree which bears the same name as the monkey, and therefore may neither cut or burn it, nor sit under its shade."⁸¹ In Chōtā-Nāgpur totemism has long ceased to be a living institution, except in its relation to exogamy, but facts from this district would seem to indicate that when primitive man found by experience that certain animals, plants, minerals, and other objects proved particularly helpful or inconveniently powerful and hostile, he sought by ceremonial alliance with such animal, plant, mineral, or other object to become "of one blood" with it, and thereby to secure its help and protection, or disarm its ill-will and hostility. It may be noted that according to Oråon tradition, no tiger would in olden days harm a man of the tiger-sept as both the man and the tiger were "of one blood."⁸² Some of the food-taboos may no doubt suggest the possibility of some form of totemism having obtained

among the Sema Nagas, but with one exception there is not a single clan which genuinely traces its descent from an animal or plant, and none has anything like a definite totem. "Generally speaking, it seems that one would be rather going out of one's way to attempt uncalled-for ethnological gymnastics if one set about demonstrating the former existence of totemism in Naga tribes. It may conceivably have existed once, but if it did it has left singularly few traces behind."⁸³

"The great authority on the religions of China, DeGroot, says that he has found no trace in China of animals being worshipped in the capacity of tribal progenitors, and he entertains serious doubts whether any so-called totemism exists in Eastern Asia as a religious phenomenon. It is interesting then to know that Lolo surnames always signify the name of a tree or animal or both tree and animal, and that these are considered as the ancestors of the family bearing the name. This name is often archaic." The common way in this part of West China of asking a person what his surname is, is to inquire "What is it you don't touch?" and the person may reply, "We do not touch the citron." People may not eat or touch in any way the plant or animal, or both, which enters into their surname. "The plant or animal is not, however, worshipped in any way."⁸⁴ In the Malay Peninsula, usages do not seem to show much if any totemism, but may indicate its former presence.⁸⁵

The Sea Dyaks or Iban have a *nyarong* which is allied to the *manitu* of North America. It is a spirit-helper. "The Iban believe that the spirit of some ancestor or dead relative may come to them in a dream, and this *nyarong* becomes the special protector of the individual. An Iban youth will often retire to some lonely spot or mountain-top and live for days on a very restricted diet in his anxiety to obtain a vision. This custom is called *nampok*. On the following day the dreamer searches for the outward and visible form of the *nyarong*, which may be anything from a curious natural object to some one animal. In such cases the *nyarong* hardly differs from a fetish. In other cases, as the man is unable to distinguish the particular animal which he believes to be animated by his *nyarong*, he extends his regard and gratitude to the whole species. In some instances all the members of a man's family and all his immediate descendants, and if he be a chief all the members of the community over which he rules, may come to share the benefits conferred by the *nyarong* and pay respect to the species of animal in one individual of which it is supposed to reside. 'In such cases, the species approaches very closely the clan totem in some of its varieties.' Here we have a parallel to the North American custom, but the later stages are not carried as far."⁸⁶

The name of the totem which the Australians call *kobong* is, in Polynesia, *atua*. It is forbidden to eat the animal or plant which is the *atua* of the tribe.⁸⁷ The *kalids* of the Pelew Islands are, in the narrow sense, "wholly identical with the 'totems' of the Americans, the 'kubongs' of the Australians, and so on. *Kalid* means in the Pelew tongue: 'holy,' 'consecrated object,' 'priest.' Every inhabitant has his special *kalid*, perhaps an heritage from his ancestors; perhaps also it may be connected with their notions about the soul-life after death." A native song proclaims that: "We call everything *kalid* that lives in the sea and in sweet water; but also all animals of which we are

afraid; we believe that our forefathers live in them. Therefore every one of us has a different *kalid*.”⁸⁸ The interchangeability of the fetish and the totem comes out in the story of the Eskimo who thought he had secured good luck through the ham-bone of a dog, so that he adopted a mark for it in place of his totem-sign, as did his son after him.⁸⁹

Smith⁹⁰ finds in the Semitic tribal names a testimony to original totemism; they are named after beasts which were held in veneration and from which they believed they were descended. Sayce⁹¹ thinks the distinction between clean and unclean animals comes from totemism; the totem is sacred, to be partaken of only sacramentally. Wellhausen⁹² does not think that Smith has made out his case, and Wilken⁹³ is very skeptical. Maurer⁹⁴ discovers “numerous examples of totemism in the Old Testament, chiefly in the form of animal names applied to groups of kindred.”

§261. Totemism (Social Aspect, and Theories about Totemism).

SPENCER and Gillen¹ generalize somewhat on totemism, finding that in Central Australia the religious aspect of the custom is predominant, while among the coastal tribes the social aspect, relating to tribal divisions and marriage-customs, is its chief feature, the religious aspect being but slightly marked. Between the center and east coast, while the social aspect is strongly marked, the religious is also clearly indicated. “With the Arunta and other tribes it is very different, and it seems quite possible that the original aspect of the totem is simply religious or magical, and that the social aspect has been, as it were, tacked on at a later period. . . . The most important point to be noticed is the traditional existence of totems long before that of exogamic groups, and the fact that when the latter did arise, the totems were not affected by them; in short, totemism appears to be a primary and exogamy a secondary feature. . . . The hypothesis which is now suggested . . . is that in our Australian tribes the primary function of a totemic group is that of ensuring by magic means a supply of the object which gives its name to the totemic group, and that further the relation between totemism and exogamy is merely a secondary feature.” “Exogamy can and does exist,” says Tylor,² “without totemism, and for all we know was originally independent of it, but the frequency of their close connection over three-quarters of the earth points to the ancient and powerful action of the totems at once in consolidating clans and allying them together within the larger circle of the tribe. This may well have been among the most effective processes in the early social growth of the human race.” “The problem of the origin of exogamy is one,” according to Frazer,³ “which has hitherto baffled anthropologists. Still, without probing the depths of this central mystery of social life, the writer thinks it can be seen how, when the principle of exogamy came into operation, it may have been applied to the already existing totem-groups. In Australia, Melanesia, and North America, there is almost indubitable evidence of the bisection of a community

into two exogamous classes, each of which in some tribes has been again bisected into two exogamous sub-classes. If, when the bisection of the community first took place, the existing totem groups were arranged, as they naturally would be, some in one of the two new classes and the rest in the other, the exogamy of the totem groups would follow *ipso facto*." And this despite the fact that "the group of persons who are knit to any particular totem . . . commonly bear the name of the totem, believe themselves to be of one blood, and strictly refuse to sanction the marriage or cohabitation of members of the group with each other."

It would seem that the totemic groups were anterior to exogamy; they formed first and then came the custom of marrying out. They were there and ready to be used. Spencer and Gillen⁴ find traditions bearing upon this matter which they summarize briefly as follows; the periods indicated by the traditions are: "(1) A time when men of one totem had marital relations normally with women of the same totem; (2) A time when men and women of what are now exogamic groups had marital relations; (3) A time when exogamic divisions were in force but different from those of the present day; (4) A time when the present exogamic divisions were introduced. It may also be noted in passing, that the introduction of changes is definitely ascribed to leading influential men who were the heads of powerful local groups." If this is so, then the totemic groups must have been formed as such at a very early period. Among the Arunta the mode of determining the totem has all the appearance of extreme antiquity; for it ignores altogether the intercourse of the sexes as the cause of offspring and, further, it ignores the tie of blood on the maternal as well as the paternal side, substituting for it a purely local bond, since the members of a totem stock are merely those who gave the first sign of life in the womb at one or other of certain definite spots. This form of totemism, which may be called conceptional or local to distinguish it from hereditary totemism, may with great probability be regarded as the most primitive known to exist at the present day, since it seems to date from a time when blood-relationship was not yet recognized and when the idea of paternity had not yet presented itself to the savage mind.⁵

It is plain from these quotations that the intra-tribal sections represented by the totems, as well as other such group-divisions, are general modifications of the societal system and cannot be referred to the system of marriage-restrictions or prescriptions as an unique cause. The foregoing citations are authoritative but they may be amplified by several additional ones of a more miscellaneous order and suggestive further of the social bearings of totemism.

Any general survey of Australian social organization reveals the wide prevalence of the totem-groups;⁶ but they are not invariably exogamic. "In some tribes totems govern marriage. In others they have nothing to do with the question. . . . Whether there ever was a time when, in the Arunta and neighboring tribes, marriage was regulated by totem, it is difficult to say. At the present day it is not, nor can we find any evidence in the full and numerous traditions relating to the doings of their supposed ancestors which affords indications of a time when . . . a man might only marry a woman

⁴ In JAI, XXVIII, 277.

⁵ Frazer, in *Fortnightly Rev.*, LXXVIII, 453-454; Lang's Introd. to Parker, *The Euah-layi Tribe*, xxi

⁶ Howitt and Fison, in JAI, XII, espec. 43-44.

of a totem different from his own." The authors quoted⁷ enter into minute detail concerning the descent of the totem. Where there are two phratries, each with four sub-divisions, "totems consisting of animals, plants, and inanimate objects are attached to certain pairs of sections, and these totems descend generally from a father to his sons and daughters, but this rule is subject to modifications. Certain totems are allotted to, or are inherited by, two sections in common, one of the sections belonging to phratry A, and the other to phratry B."⁸ A horde is thought by Cunow⁹ to develop into an exogamic kin-group and to adopt an animal or plant as a mark or symbol of itself—an association-designation. This represents "the first beginning of the organization into clans." Howitt¹⁰ writes: "From what I know of the Australian savage I can see very clearly how such a social change might be brought about. They universally believe that their deceased ancestors and kindred visit them during sleep, and counsel or warn them against dangers, or communicate to them song-charms against magic. I have known many such cases, and I also know that the medicine-men see visions that are to them realities. Such a man if of great repute in his tribe might readily bring about a social change, by announcing to his fellow medicine-men a command received from some supernatural being. . . . If they received it favourably, the next step might be to announce it to the assembled headmen at one of the ceremonial gatherings as a supernatural command, and this would be accepted as true without question by the tribes-people. . . . That such an identical legendary explanation of the origin of the classes and totems existed in two tribes so far distant from each other may be accepted as indicating a widespread belief in the supernatural origin of a practice which is universal throughout Australia."

Concerning the Onondaga Indians it is stated that "the rise of the different clans or stocks, likewise also the names of the tribes themselves, seem . . . to lead back to the original economic activity. . . . The clan-mark or totem therefore functions here as a sign of social differentiation."¹¹ On the north-west coast "an individual distinguishes himself, becomes wealthy, and hence a leading man in the village. His totem, or indeed his individual crest or sub-totem, may have been an obscure one. As he rises, its importance in the tribe rises with him. Under his successor, the totem widens its numbers and influence, and finally eclipses other clan totems, which eventually melt away or are incorporated with it. In the course of time, either by the accession of other totems or else by its splitting up into sub-totems, it came finally to be ranked as a phratry, then a sub-phratry. In this evolution we see the sub-totem grow into a clan-totem, then into a phratry or sub-phratry, when decay sets in. . . . In childhood a transfer can be made from one totem to another. Supposing a chief desires his son to succeed him and to belong to his own totem; the babe is transferred to his sister to suckle, and is figuratively adopted by her. In this way the son acquires the totemship of his father, and at an early age is taken back by his own mother to raise. Dawson cites these cases of transfer as often effected among the Haida to strengthen the totem of the father when its number has become reduced and there is danger not only of loss of prestige but of extinction. The ties of the totem or of the phratry are considered far stronger than those of blood-relationship. A man can not marry in his own

totem whether within or without his own tribe, or his own phratry within his own tribe. There is nothing to prevent a man from marrying his first cousin, and much to prohibit his marriage to a most remote connection or an absolute stranger." The totem is likewise a symbol of brotherhood, involving special privilege and treatment. "An Indian on arriving at a strange village where he may apprehend hostility would look for a house indicated by its carved post as belonging to his totem and make for it. The master of the house, coming out, may, if he likes, make a dance in honor of his visitor, but in any case protects him from all injury. In the same way, should an Indian be captured as a slave by some warlike expedition and brought into the village of his captors, it behooves any one of his totem, either man or woman, to present themselves to the captors, and, singing a certain sacred song, offer to redeem the captive. Blankets and other property are given for this purpose. Should the slave be given up, the redeemer sends him back to his tribe and the relatives pay the redeemer for what he has expended. Should the captors refuse to give up the slave for the property offered, it is considered rather disgraceful to them." There are peoples amongst whom ancestry is vaguely or not at all recognized and such have totemism.¹² Among the North Americans the regular rule is that in marriage the totem must be crossed, which is equivalent certainly, in view of the basic meaning of the term—namely, "one's kinship"—to the taboo of consanguine or supposedly consanguine marriage.¹³

Ethnological research in North America has revealed the fact that the social aspects of totemism vary with the social organization of the different stocks. "If totemism," comments Hill-Tout,¹⁴ "were primarily and essentially, as some students hold, a social phenomenon originating only in, and properly belonging to, the matrilineal stage of savage society, we ought to find it decaying and falling into desuetude as matriarchy passes into patriarchy and the village commune. But we do not, at least in this country, and apparently not elsewhere. . . . The 'religious' or 'magical' aspects of totemism there are just as strong and pervasive in those tribes that have patrilineal descent as in those having matrilineal descent."

The reader will have noticed that it is impossible to keep the religious and the social aspects of totemism strictly apart. Rivers¹⁵ devotes considerable special attention to totemism in Melanesia and Polynesia, his interest being, on the whole, involved with the social rather than the religious aspect. We conclude with a somewhat lengthy synopsis of his findings. By totemism he means a form of social organization which has three main characters: (1) the connection of a species of animal or plant, or of an inanimate object or class of inanimate objects, with a definite social group of the community, and typically with an exogamous group or clan; (2) a belief in a relationship between the members of the social group and the animal, plant, or object, a belief in descent from the animal, plant, or object being a frequent form which this relationship takes; (3) respect shown to the animal, plant, or object, the typical way of showing this respect being that the animal or plant may not be eaten, while an inanimate object may not be used at all or only with certain restrictions. "The people inhabiting the mountainous districts in the

interior of Viti Levu [Fiji] form a number of small independent communities, each of which has a sacred animal which none of the community eat. Further, the smaller divisions of the community . . . have also in many cases sacred animals or plants peculiar to themselves which none of the division may eat, though free to the rest of the community. The institution of exogamy does not exist, so far as is known, in Fiji, marriage being regulated by kinship, and the social organisation of the people has departed so widely from one founded on exogamy that it is impossible to tell which of their social divisions corresponds to the exogamous clan or sept. We have here a case in which one characteristic of typical totemism is not present, but we still have the apparent totem associated with at least two kinds of social unit. The third character of totemism, the belief in descent from the totem-animal, comes out among these inland people in a more decided manner than in any other case of which I have had experience. Here, in collecting a genealogy, an informant went back from human to human ancestor till as a perfectly natural transition he would state that the father of the last mentioned was an eel or other animal. In the special case of eel-ancestry the transition from animal to man was given as having taken place eight generations ago, and Mr. Joske told me that in several cases he had found the animal-ancestor of the whole people, but there is also a belief in descent from the sacred animals of the smaller divisions of the community.

"I do not think there can be any doubt that in the case of these mountain tribes we have to do with true totemism. It is in fact typical totemism except in the absence of association with exogamy, but there remains a clear connection with other social divisions just as might be expected in a community in which exogamy has been replaced by a different method of regulating marriage. . . .

"The clearest evidence for the existence of totemism in Polynesia is derived from Tikopia. This is a tiny island about 120 miles south-east of the Santa Cruz group. . . . These people call a number of animals *atua*, a word which they also use for an ancestor. Some of these animal *atua* belong to the whole community and may be eaten by no one on the island; others belong to one or other of the four sections into which the people are divided, the Kavika, the Taumako, the Tafua, and the Fangalele.

"The Kavika have the *feko* or octopus, which they may not eat, but it is also forbidden as food to the whole people. The Taumako may not eat the *toke* or sea-eel, nor may they eat a bird called *rupe*, and these prohibitions are limited to this division. The Tafua may not eat the *tuna* or fresh-water eel, nor may they eat the flying fox (*peka*) or the turtle (*fonu*), these two latter animals being also prohibited as food to the whole community, though regarded as especially sacred to the Tafua. The Fangalele may not eat a small black bird called *moko*, nor may they eat a fish called *one*. The *fai* or stingray may not be eaten by anyone, and it did not seem to be sacred to any special division. A man of a division who may not eat a certain animal may also not kill it. If one of the Fangalele caught an *one* fish he usually threw it back, but he might give it to a man of another division. . . .

"In addition to these animals there are also plant *atua*. One of these is a plant with large leaves like the taro, called *kape*, which is sacred to the Kavika and may not be eaten by the people of that division while free to the rest of the community. This plant seems to belong to the same category as the animal *atua*. . . . Three of the divisions have also vegetable *atua* which seem

to belong to a different category. These are the yam, the taro, and the coconut, belonging respectively to the Kavika, the Taumako, and the Tafua. These plants might, however, be eaten by all, but the Kavika do not like to see anyone cut the taro with a knife, and they scrape off the skin with the shell of a mussel. In this case it was said that it was the top of the yam which was especially regarded as the *atua*. Similarly, the Taumako do not like to see the taro cut with a knife, and here again it was a special part, the eye of the taro, which was regarded as the *atua*. The Tafua also objected to a knife being used to open a coconut, and always used a stone. This restriction on the use of a knife is of course recent, and is an interesting example of the feeling that sacred objects should not be subjected to usages which have come from without into the ordinary life of a people.

"The special relation between each division of the people and their sacred plant is shown in the planting season, the first yams being planted by the chief of the Kavika, while the chief of the Taumako plants the first taro. The chiefs of the respective divisions are also the first to eat their sacred vegetables. . . .

"There can be very little doubt that in the case of the animal *atua* we have true totems. The condition is not one of typical totemism, for the institution is not associated with exogamy. The four divisions intermarry with one another, and marriage also takes place between members of the same division. . . . It is probable that in Fiji the gods or god-like beings have been developed, at any rate in many cases, from heroes and that the animal nature of the gods is merely an indication of the close relation universally believed by totemistic peoples to exist between a man and his totem. The evolution would not be simply from totem to god, but from hero and totem together to god. . . .

"At the present moment it cannot be said that the presence of totemism in Melanesia (excluding Fiji) has been definitely demonstrated. In the Solomon Islands, Codrington described the connection of animals with exogamous social divisions, but did not regard this connection as an indication of totemism. In the Banks' Islands and the New Hebrides the same author has described a few cases of connection between men and animals which again may possibly indicate totemism, but only as the most fragmentary relics. Totemism, however, begins to appear definitely in the north and Ribbe has recorded totemism in the Shortland Islands, and it is probably definitely present in the Bismarck Archipelago. . . .

"I visited the group of islands known as the Matema or Swallow group. . . . The case of these islands differs from those so far considered in that we have now to do with typical totemism. The animals forbidden as food belong to exogamous divisions of the community, though these divisions have names otherwise derived, while there is also a belief in descent from these animals. . . .

"Santa Cruz. . . . We have in this island all the cardinal signs of totemism; exogamy, belief in descent and prohibition of the use of the eponymous object as food. . . .

"Vanikoro. . . . It is quite clear that in this district in the heart of Melanesia we have genuine totemism, but the case is very different when we turn to the islands south of Santa Cruz or to the Solomons which lie north-west of it.

"The Solomon Islands. These islands are far from having a uniform culture and in some regions there is no totemism or only its faint relics, while in others it is present. . . .

"The evidence, taken as a whole, points strongly to the condition being one

of genuine totemism, but in a relatively late stage, in which the totems and other sacred objects, including human ancestors, are all classed together as *tindalo*, while, so far as the social aspect is concerned, it is possible that there has been a considerable departure from the original condition. . . .

"Though developed totemism thus appears to be absent, there was found in the Banks' Islands a group of beliefs which are of the greatest interest in connection with the possible origin of totemism. In these islands devoid of the developed institution there exist beliefs which would seem to furnish the most natural starting point for totemism, beliefs which Dr. Frazer has been led by the Australian evidence to regard as the origin of the institution. . . .

"The course of events is usually as follows: a woman sitting down in her garden or in the bush or on the shore finds an animal or fruit in her loincloth. She takes it up and carries it to the village, where she asks the meaning of the appearance. The people say that she will give birth to a child who will have the characters of this animal or even, it appeared, would be himself or herself the animal. The woman then takes the creature back to the place where she had found it and places it in its proper home; if it is a land animal on the land; if a water animal in the pool or stream from which it had probably come. She builds up a wall round it and goes to visit and feed it every day. After a time the animal will disappear, and it is believed that that is because the animal has at the time of its disappearance entered into the woman. . . .

"I inquired into the idea at the bottom of the prohibition of the animal as food, and it appeared to be that the person would be eating himself. It seemed that the act would be regarded as a kind of cannibalism. It was evident that there is a belief in the most intimate relation between the person and all individuals of the species with which he is identified. . . .

"In the island of Motlav not far from Mota they have the same belief that if a mother has found an animal in her dress, the child will be identified with that animal and will not be allowed to eat it. Here again the child is believed to have the characters of the animal. and two instances given were that a child identified with a yellow crab will have a good disposition and be of a light colour, while if a hermit crab has been found, the child will be angry and disagreeable. In this island a woman who desires her child to have certain characters will frequent a place where she will be likely to encounter the animal which causes the appearance of these characters. Thus, if she wants to have a light coloured child, she will go to a place where there are light coloured crabs. . . .

"In 1905 Dr. J. G. Frazer¹⁶ advanced a hypothesis to account for the origin of totemism which was based on the belief of certain central Australian tribes which assign to a child the totem belonging to the place where the mother first becomes aware of the new life within her. In his 'conceptional' theory Dr. Frazer assumed that the belief that a child had an animal or plant nature, or one derived from any other object, was due to something which had impressed itself on the mind of the woman at the time of quickening. . . . Dr. Frazer has assumed a series of situations very closely resembling that which I have actually found to exist in the Banks' Islands, and there is definitely established the existence of the belief which forms the basis of his conceptional theory. . . .

"It is improbable that totemism has had everywhere the same origin, or rather, one of exactly the same kind, and in some parts at least of North America the absence of belief in descent from the totem and the nature of the myths make it probable that there the institution has had its origin in the guardian animal. It is interesting that a belief in a guardian animal should also exist in the Banks' Islands, and it is significant that in this case again the mysterious connection between man and animal is accompanied by a taboo on the flesh of the latter."

Theories about Totemism. Totemism, according to Thomas¹⁷ seems not to go with sacrifice or with domestication of animals. "In the two great totem-areas of Australia and North America sacrifice is either unknown or unimportant. Australia has no domestic animals; America had only the dog, and the dog was the only animal commonly sacrificed." In particular, as it seems to us, is totemism allied to fetishism;¹⁸ the ghost of the ancestor lives on in the fetish-animal or other object. It is not mere reincarnation, for a whole species of animals bear the totemic character. So that totemism seems to be no more than a peculiar set of religious beliefs, related back and forth with other sets, except for the rôle it plays in social differentiation and in connection with the sex-taboo and marriage. This rôle is really what has given occasion for all the special theorizing concerning it. By itself it would have fallen in well enough, as a whole, under the topic of religion, along with such related matters as have been mentioned.

Taking totemism to be all it may mean in its most characteristic and complete exhibition, "true" totemism may be distinguished from allied notions which by some are thrown together under the convenient category. "It is a pity," says Tylor,¹⁹ "that the word 'totem' came over to Europe from the Ojibwas through an English interpreter who was so ignorant as to confuse it with the Indian hunter's patron genius, his *manitou*, or 'medicine.' The one is no more like the other than a coat of arms is like a saint's picture. Those who knew the Algonkin tribes better made it clear that totems were the animal signs, or, as it were, crests, distinguishing exogamous clans; that is, clans bound to marry out of, not into, their own clan. But the original sin of the mistake of Long the interpreter has held on ever since, bringing the intelligible institution of the totem clan into such confusion that it has become possible to write about 'sex totems' and 'individual totems,' each of which terms is a self-contradiction. . . . Totems are the signs of intermarrying clans. . . . Totemism, as Dr. Frazer and I understand it, in its fully developed condition implies the division of a people into several totem kins (or, as they are usually termed, totem clans), each of which has one, or sometimes more than one, totem. The totem is usually a species of animal, sometimes a species of plant, occasionally a natural object or phenomenon, very rarely a manufactured object. Totemism also involves the rule of exogamy, forbidding marriage within the kin, and necessitating intermarriage between the kins. It is essentially connected with the matriarchal stage of culture (mother-right), though it passes over into the patriarchal stage (father-right). The totems are regarded as kinsfolk and protectors or benefactors of the kinsmen, who respect them and abstain from killing and eating them. There is thus a recognition of mutual rights and

¹⁷ In *Folk-Lore*, XI, 247.

¹⁸ Lippert, *Kgchite*, II, 419; Zapletal, 138.

Totemismus, 6.

obligations between the members of the kin and their totem. The totem is the crest, or symbol of the kin."²⁰ It is evident from these citations how thoroughly the social aspect of this practice must enter into any final judgment of it, as a whole. A number of writers have, in their interpretations, stressed various aspects of the subject; and a survey of their views is enlightening.

Several of them emphasize the relation of the totemic ceremonies to the food-supply. They see in the ceremonies an indication "that each totem group was charged with the superintendence of some department of nature, from which it took its name. The control was by magical means to procure for the members of the community, on the one hand, a plentiful supply of all the commodities of which they stood in need; and, on the other hand, an immunity from all the perils and dangers to which man is exposed in his struggle with nature. . . . This hypothesis takes us back far into the time when the function of each totem group was to secure the multiplication of the particular object the name of which it bore."²¹

"A totem," writes Frazer,²² "is a class of natural phenomena or material objects, most commonly a species of plants or animals, between which and himself the savage believes that a certain intimate relation exists." Again, in his work on Totemism,²³ he writes: "A totem is a class of material objects which a savage regards with superstitious respect, believing that there exists between him and every member of the class an intimate and altogether special relation. . . . The connection between a man and his totem is mutually beneficent; the totem protects the man, and the man shows his respect for the totem in various ways, by not killing it if it be an animal, and not cutting or gathering it if it be a plant. . . . Considered in relation to men, totems are of at least three kinds: (1) The clan totem, common to a whole clan, and passing by inheritance from generation to generation. (2) The sex totem. . . . (3) The individual totem, belonging to a single individual and not passing to his descendants. . . . The clan totem is revered by a body of men and women who call themselves by the name of the totem, believe themselves to be of one blood, descendants of a common ancestor, and are bound together by common obligations to each other, and by a common faith in the totem. Totemism is thus both a religious and a social system. In its religious aspect it consists of the relations of mutual respect and protection between a man and his totem; in its social aspect it consists of the relations of the clansmen to each other and to men of other clans. In the later history of totemism these two sides, the religious and the social, tend to part company. . . . On the whole, the evidence points strongly to the conclusion that the two sides were originally inseparable; that, in other words, the further we go back the more we should find that the clansman regards himself and his totem as beings of the same species, and the less he distinguishes between conduct towards his totem and towards his fellow-clansmen."

To continue with Frazer: "In general is it true that elsewhere than in Australia, members of a totem clan are credited with the power of exercising special control over a totem? The answer to this question is that it is true. For example, in one of the Torres Straits Islands, members of the Dog clan were believed to understand the habits of dogs and to be able to exercise special

²⁰ Haddon, in *Brit. Assoc. Adv. Sci.*, 1902, 739-740.

²² In *Fortnightly Rev.*, LXXI, 654 ff.

²³ *Totemism*, 1-3.

control over them. On a cloudy morning the Sun clan of the Bechuanas were accustomed to perform a ceremony to make the sun shine out through the clouds; the chief kindled a new fire in his dwelling, and every one of his subjects carried a light from it to his own hut. The intention of the ceremony clearly was by means of sympathetic magic to blow up into a brighter blaze the smouldering fire of the sun. In the Murray Islands, Torres Straits, it is the duty of the Sun clan to imitate the rising and setting of the sun, probably to ensure the punctual performance of these offices. Among the Omahas of North America the Small Bird clan performs a magic ceremony to keep small birds away from the crop; the Reptile clan performs a similar ceremony to protect the crops from worms; and the Wind clan think they can start a breeze by flapping their blankets. The same Wind clan practises a magic ceremony to stop a blizzard. They paint one of their boys red and he rolls over and over in the snow, reddening it for some distance all around him. This stops the blizzard, the notion apparently being that the white snow will not fall when it knows that it will be thus reddened and defiled. In another North American tribe the power of causing the snow to stop falling would seem to have been claimed and exercised by men of the Snow totem. Some of these examples explain the attitude of the totem clan towards their totem, when the totem is of a noxious and maleficent nature. In such cases it is the function of the clan, not of course to multiply the numbers of the totem or increase its virulence, but on the contrary to disarm, counteract and keep within due bounds its dangerous influence. Hence, members of the Serpent clan in Senegambia profess to treat, by their touch, persons who have been bitten by serpents; and the same professions were made by Serpent clans in classical antiquity. Similarly in Central Australia members of the Fly totem claim to cure, by a touch of a magic implement, eyes swollen by fly-bites. And by analogy it may be concluded that certain Arab families who believed their blood to be a remedy for hydrophobia were descended from the Dog totem. . . . As to the prohibition to kill and eat the totem, it may be conjectured that this taboo originated in an attempt to carry out more consistently that principle of the identification of the man with the totem which seems to be of the essence of totemism. As a rule, animals do not live upon their own kind; hence, *e.g.*, if an emu man regularly kills and eats emus, which he professes to regard as practically identical with himself, the other emus will distrust and avoid him; they will see that he is only a sham emu after all; he will no longer possess their confidence; and his power over them will be gone."²⁴

The eminent Dutch ethnologist, Wilken,²⁵ is always deserving of attention. He comes out strongly for the close connection of totemism with the ghost-cult, through the link of transmigration and reincarnation. "It is seen that the dogma of transmigration has universally led, among the peoples of the Indian Archipelago, to the notion of the relationship of man with, and his descent from, certain animals, which animals are thus raised to the station of ancestors and are revered like other ancestors. In a certain sense we have here what is wont to be called, in the science of religion, *totemism*. This word is . . . original with the North American Indians. Each tribe here has, under the term *totem*, some animal or other which is revered as a fetish, and from it the tribe is named and its members derive their descent. . . . What

²⁴ Frazer, in JAI, XXVIII, 285-286, 283.

²⁵ In VG, III, 78 ff., 85-86; IV, 110-111, 185; Tylor, in JAI, XXVIII, 145, 146, 147; Frazer,

Golden Bough, I, 9-62 (edit. 1900); §211, of the text.

we have encountered among the peoples of the Indian Archipelago corresponds fully to this. Only they have not come to the point of naming themselves after animals that they honor as their tribal forebears. . . . According to our view, the totemism of the North American Indians, or wherever else it is found, must have developed in the same way out of transmigration of the soul as it did among the peoples of the Indian Archipelago; the animal in which the souls of the dead were thought by preference to be incarnated becomes a relative, a forefather, and is as such revered. Therefore it is not, as Spencer would have it, a 'misinterpretation of nicknames,' but soul-transmigration that is the connecting bond between totemism, on the one side, and the cult of the dead, on the other—a connection which, though it has fallen away among many peoples, is still, for the most part, obvious in the Archipelago." Wilken quotes from Schultze,²⁶ who writes concerning the relations of men and animals, as follows: "The nature man scarcely distinguishes himself at all from the animals, and upon more developed stages very little. The interests of both are the same. . . . But if man is not yet distinct from these animals, then he cannot yet conceive himself as something quite different from them; his own conduct and actions and those of the animals harmonize; there are the same efforts and the same motives in both. Nature-man finds himself over again in the animal; therefore he regards it necessarily as his like, as in every respect his equal in birth." To which Wilken adds: "That with such a way of looking at it, the dogma of transmigration must lead of itself to the conception of relationship between man and beast, is self-evident." This doctrine of transmigration has just been worked out by the author, and he makes totemism a development from it and from ancestor-worship. "The animals, now, thus raised to the rank of forefathers, are honored like other ancestors are honored. This is totemism." Wilken's editors note that Tylor took this theory over from him.

To Haddon²⁷ it is doubtful whether the Wilken-Tylor totemism deserves the name. He thinks the animals must be the residences of the ancestral spirits of a clan, not a tribe; and that exogamic provisions must exist in connection with the totems; otherwise there is nothing more than "theriomorphic ancestor worship." He thus insists upon the presence of the social function along with the religious aspect. But he acknowledges the difficulty of precise definition of such evolutionary forms: "The more one looks into the evidence the more difficult is it to find cases of typical totemism; almost everywhere considerable modification has taken place, often so much so that the communities cannot logically be called totemistic." This difficulty has been expected by evolutionists ever since the species-question was settled. Haddon's own theory is that "in favourable areas each group would have a tendency to occupy a restricted range owing to the disagreeable results which arose from encroaching on the territory over which another group wandered. Thus it would inevitably come about that a certain animal or plant, or group of animals or plants, would be more abundant in the territory of one group than in that of another." This does not seem to us to add much to the case.

Hill-Tout²⁸ sees the connection of British Columbian totemism with several allied forms: "There is little room for doubt that our clan totems are a development of the personal or individual totem or tutelary spirit, as this is in

²⁶ *Fetichismus*, 196.

²⁷ In *Brit. Assoc. Adv. Sci.*, 1902, 745.

²⁸ Hill-Tout, in *JAI*, XXXIV, 328; XXXV, 141; XLI, 137; Haddon, in *Brit. Assoc. Adv. Sci.*, 1902, 741.

turn a development of an earlier fetishism." He believes that totemism *per se* had nothing originally to do with "clan"-structure or social divisions and was not dependent upon this social state for its existence, as some writers hold; he gives a reason for this view: "the fact that it survived such a radical social change as that which took place in the transition from the matriarchal to the patriarchal state; for it is equally, in this country, a feature of the latter as of the former condition of things, and that it still further survived the much greater social changes which resulted in the evolution of the 'family' from a union or modification of the two earlier groups or states." Taking the American evidence on totemism as a whole, it is to him impossible to doubt that totemism is as much a feature of patriarchy and the village commune, as of matriarchy. "It must be understood that I speak of totemism in the 'American' sense of the term. I am unable to regard it any longer in any other sense. Totemism to me is primarily and essentially a 'religious' phenomenon, the direct result and outcome of the savage's mental attitude towards nature. The social aspects of totemism I regard as something very secondary and incidental, which attained such importance as they possess in savage organisation only on account of their obvious convenience in classifying and distinguishing one kin group from another." He says, further, that a comparative study of the Salish as a whole "makes it clear beyond question or doubt that the group-totems found among them have sprung from, and are a development of, their individual totems, and that the same may be said of all other American stocks." He states that one investigator²⁹ discovered totemism in its three "most characteristic forms, viz., the non-hereditary *individual totem*, the hereditary *patriarchal totem*, and the hereditary *matriarchal clan totem*, among the tribes of California where totemism was not known to exist." Writing on the Tlinkits of Alaska, Jones³⁰ states that "after years of study of the subject and close observation of the working of the system, we are of the firm opinion that totemism had its origin in the belief of an animal ancestry, and that the distinguishing of clans, the effort to prevent war, and the knitting of tribes more closely together followed as a consequence from its adoption, rather than suggesting it."

Perhaps the statement that "totemism pure and simple has its home among races like the Australians and North American Indians, and seems always to lose ground after the introduction of pastoral life,"³¹ has in it a practical suggestion—the suggestion, at any rate, that totemism belongs, in its completeness, to tribes who exhibit a relatively low civilization, and that it fades away into survivals and symbols with the advance of culture. Thomas³² lists the survivals of totemism in Europe that may be found in the animal-superstitions; his list must not be accepted uncritically. "1. Descent from the totem. 2. Taboos (a) of killing the animal; (b) of eating, touching, or using it; (c) of seeing it; (d) of using the ordinary name. 3. Petting the totem-animal. 4. Burying the totem-animal. 5. Respect paid to the totem-animal. 6. (a) Lucky animals, (b) unlucky animals. 7. Adoption of (a) totem-marks, (b) totem-names, (c) totem-dress. 8. (a) Birth, (b) marriage, (c) death-customs. 9. Magical powers derived from the totem." The author adds the use of animals in magic, medicine, and divination, and the annual ceremonies of sacrifice and of communion with the sacred animal. Manifestly the totem-idea, as we have

remarked, can be brought into connection with a variety of phases in religious evolution.

Lang³³ is led to very positive opinions. He thinks the totem-names were imposed upon a group from without, in the form of animal-sobriquets. He reviews many of the theories and juggles them one against the other. Other views of totemism regard it as having "no mystic religious character," as "more magical than religious," as due to a misunderstanding or forgetfulness of the savage, whereby he transformed an ancestor with an animal-name into an animal-ancestor, and so on.³⁴ Jevons³⁵ goes to an extreme in his deductions from totemism, making it, for example, account for all domestication. Durkheim³⁶ believes that "at the beginning the religion of the totem is certainly the center and altar of family life. One cannot understand the one without the other." He has been finally led to incorporate the concept of *mana* into totemism as an essential part of it; *mana*, in fact, is interpreted as the totemic force—as the principle or "god" of which the totem is the symbol. But the totem is not only the symbol of this mysterious force; it is the symbol of the social group as well. "It is its flag; it is the sign by which each clan distinguishes itself from the others, the visible mark of its personality, a mark borne by everything which is a part of the clan under any title whatsoever, men, beasts, or things. So, if it is at once the symbol of the god and of the society, is that not because the god and the society are only one? . . . The god of the clan, the totemic principle, can therefore be nothing else than the clan itself, personified and represented to the imagination under the visible form of the animal or vegetable which serves as the totem."³⁷

Trilles³⁸ has some comments to make concerning totemism, as a result of his study of the Fan of West Africa. He regards totemism as one of the aspects of fetishism; like the latter it includes an ensemble of religious phenomena. "Just as totemism enters into fetishism and constitutes one of its aspects, though still profoundly differing from it, so does the totem form one of the aspects of the fetish, blending and mingling with it but otherwise profoundly distinct by its cult and the object of the cult." He mentions five conditions alleged to be necessary to the existence of totemism: (1) the clan has a totem; (2) the clan or tribe ordinarily takes the name of the totem; (3) the clan admits the parentage of the totem if it is an animate object; if not, of an animate object connected with the totem; (4) there is a taboo on marriage between clan-members or those with the same totem; (5) there is a taboo upon practices with relation to the totem, chiefly eating it, except on certain well-defined occasions. He agrees with the first condition and states with reference to the second that it is sometimes so and sometimes not, by virtue of special rules. There is no doubt, he says, about the third, while the fourth exists not as a consequence but as a concomitant of totemism, at least among the Fan. Taboos exist, not only in relation to foods, but also to practices and customs; with relation to the totem these taboos are the *éki*. He elaborates further: the totem is always a living or tutelary being; it materializes itself in an object in order to manifest its protection; the tutelary being is ordinarily an animal, more rarely a plant, still more rarely a mineral to which a special life is

attributed; when the totem is a spirit, it materializes itself in a natural phenomenon like thunder or in some manifestation which shall symbolize it; the phenomena (lightning, rainbow) materialize in their turn into objects having immediate relation to themselves (*e.g.*, mica for thunder or "heaven-stones" for lightning), or in some object determined by the "féticheur" (certain stones marked or spotted in a definite manner). We must here distinguish between the real totem and its materialization, and between the materialization of the living being and that of the spirit which is, so to speak, double.

According to Hopkins,³⁹ the essential feature in totemism is the belief in some association between the clan and an animal or a plant, whereas such other features, commonly associated with totemism, as descent, worship, exogamy, and the name of the clan, are features dependent upon special sociological conditions, by no means uniform even among peoples occupying the same primitive stage of culture.

§265. Avoidance: The Evil Eye.

THERE are numbers of instances drawn from tribes throughout the world where persons meeting with accidents are avoided as having incurred the wrath of the daimons. "In the Solomon Islands, if a man falling into a river succeeds in eluding the grasp of a shark with which he comes in contact, he is not allowed to escape, but his fellow-tribesmen throw him back to his fate, believing that he must be sacrificed to the river god."¹ Another type of avoidance refers to the use of the name of the deity. "The divine injunctions of Sinai, adopted in the Christian religion concerning God, as to the reverence and regard due to Him and His name, are quite intelligible to the tribes of Elema," on the Papuan Gulf.² A similar case is reported from New Zealand: "The name of Io was held in awe and respect to an extent that cannot be grasped by us, and the Maori of the early days of European settlement heard with amazement and contempt our name for the Supreme Being used in execration, and even in tones of pleasantry."³ In Samoa it was forbidden members of a family to sit back to back, lest it should be considered mockery and insult to the gods.⁴

There are many cases in Africa where victims of accident, especially those who have been struck by lightning, are avoided. Among the Akamba, "if anyone is killed by lightning no one will touch or move the body, the people say the person is killed by God, if anyone does touch a person who has been killed by lightning he or she will also be struck. If a cow or other animal is killed by lightning it is eaten."⁵ According to the Kikuyu belief, "if a tree falls on a hut it is considered extremely unlucky, the hut will not be abandoned, but it is necessary for the head of the village to kill a ram; it is led round the village before being killed. If this was not done, the owner of the village, or at any rate the woman who lived in the hut, would become the victim of a *thahu* or curse."⁶ If lightning strikes a Wawanga hut or kills a person or beast a medicine-man is called in. "He asks for a black sheep and having killed it removes all skin and flesh from the skull, into which he puts medicine. The medicine is roasted in a pot, and everybody in the village is given a little to

lick up in the palm of his hand. Some is also put into a reed and hidden in the grass of the roof of every hut in the village. The remainder is poured into the skull, which is then buried by the medicine-man, where the lightning struck, he himself digging the hole. With it is also buried a stick from the hut or, in the case of a person or a beast, some grass or earth from the spot where the lightning fell. For his services the medicine-man is given a hoe and the whole of the sheep excepting one shoulder. A lily called the 'Ikakha' is often stuck on the roof of huts to keep off lightning; this is a very common sight in Kavirondo.⁷ Among many tribes in East Africa the weapon used to inflict death upon anyone is in some way purified. "The performance of such acts originates in the idea that the weapon carries with it misfortune or fatality."⁸

Among the Ewe-speaking peoples of West Africa, although a person killed by lightning may not be buried, it is usual for the priests to allow the body of a free man to be ransomed. When houses are set on fire by lightning the conflagration may not be extinguished, "for the reason that to do so would be to act counter to the wishes or decrees of the god; and might consequently bring down his anger upon the entire community." Under any circumstances, such an accident is likely to prove disastrous to the owner. "If a house be struck by lightning and not set on fire, such an accident itself carries with it very serious consequences to the inmates; for it is at once invaded by a mob of priests and worshippers of the lightning-god; who, while pretending to search for the holy *so-kpe*, the thunderbolt, strip the house of everything portable, and secure their plunder in the large wallets always worn by followers of Khebioso. In addition, fines and compensation are demanded; for the fact of the house having been struck is proof that the inmates must have been guilty of some act or omission which has angered the god. If the fine imposed cannot be paid—the priests are usually very 'extravagant in their demands—imprisonment or slavery follows, and it is not at all uncommon for a whole household to be enslaved in consequence of such an accident."⁹ To avoid ill luck the Hausa has to take many precautions, especially when on a journey to a far country. "When leaving home the Hausa should get his wife to pour water in front of his horse, and behind it near the threshold, for the water exerts a good influence. No one who has been fortunate in his own town should leave it without having taken a pinch of its earth, otherwise he may lose the town's *albaraka* [luck]. . . . Before entering a strange town, or when landing from a ship, the Hausa eats a little of the earth and drinks some of the water as soon as possible, for this puts the *mallams* of the new country on his side."¹⁰

Among some Siberians, if a death is due to lightning, the corpse is treated in a special way, while the flesh of an animal struck by lightning is never eaten. Many precautions are taken to avoid contracting disease by contagion from lepers, and leprosy is so dreaded by the Gilyak that they never mention it by name. The shamans, even, are unwilling to undertake to treat the sufferers.¹¹ This is similar to the Chinese practice of tabooing the name of small-pox, it being a crime to speak of or to allude to it. Inversion of language to avoid terms of ill luck is not uncommon.¹² The Sema Nagas regard death by

lightning, fire, water, wild animals, the fall of or from a tree, or by suicide as in some way accursed and contagious. "The body must not be buried in front of the house, but at the back instead or in broken ground near by where men do not walk about." Animals killed by carnivora are regarded in a similar light: and their flesh may not be eaten by women.¹³ Among the Palaungs of Farther India, no attempt is made to revive a person struck by lightning. Exuviae of such persons play a part in magic, as well as the place where such a person is buried.¹⁴

By the Hudson Bay Eskimo "unlucky or disliked women are often driven from the camp, and such must journey until they find relief or perish by the wayside."¹⁵ Among the Araucanians all deaths save those by combat were supposed to be the effects of supernatural causes or sorcery. If a person died from the results of a violent accident it was supposed that the evil spirits had occasioned it, by frightening the horse so as to make it throw its rider, by loosening a stone so that it might fall and crush the unwary, by temporarily blinding a person so that he might fall over a precipice, or by some other expedient equally fatal. In the case of disease, it was supposed that witchcraft had been practised and the victim poisoned.¹⁶ There are many instances scattered throughout the literature where the Indians of Guiana have taken to their heels upon the development in their midst of diseases new to them, introduced by Europeans and negroes. They have so great a fear of fever and influenza that they will not touch with their hands a piece of money offered them by the whites before washing it with a stick. "These examples must not be taken as indicative of the Indians having any appreciation of the contagiousness of disease . . . but rather as indicative of their conception that disease can be sent them by their enemies or the medicine men."¹⁷

We now turn to the more specific case of avoidance as seen in the belief in the evil eye. The natives of the South Seas often put down the death of a chief to an evil eye having been cast on him. "This sometimes results in an unfortunate creature being picked out and killed through suspicion having fallen on him or her. At other times, when the supposed culprit has not been found, a terrible panic has taken place and the whole village has been deserted and a new one built. The old village then becomes 'hope,' and no amount of persuasion will induce the tribe to go back and settle in it, unless, as in one or two cases, the 'hope' is removed by some great chief or medicine man." The fear of evil wishing is very strong among the Solomon Islanders; when they are in mourning and so have to shave their heads, they bury the hair in order to prevent enemies getting hold of it.¹⁸

The Akamba are averse to telling any one outside the family the number of their children. The idea is held that boastfulness will induce jealousy on the part of others less favored and cause some envious person to use magic on the boaster's family so that the latter will die out.¹⁹ When a person has received a slight injury, he attributes his hurt to someone with the power of the evil eye. If one audibly admires a beast belonging to a neighbor, and the animal shortly after becomes sick, he is thought to possess the power of the evil eye; this indicates that the idea is based on an envious thought rather

19 Hopley, *A-Kamba*, 165.

than an evil glance. "If a cattle owner hears that a man who has this power (or one ought, perhaps, to term it 'this infliction') has been admiring one of his cows, he will send for him and insist on him removing the evil; this is done by the man wetting his finger with saliva, and touching the beast on the mouth, and on various parts of the body with his wetted finger; this is believed to neutralize the enchantment." It is to be noted that the word *kita* means saliva as well as evil eye. "Even a medicine man cannot remove a curse imposed by a person possessing the evil eye; only the individual who imposed it can remove it, and he can do it only in the morning before he touches food. . . . No one who is not born with the power can acquire it, and it appears to be looked upon as an unavoidable misfortune, for they say it is the gift of God. . . . In time the people get to know who possesses the power, and if such a person enters a village he is asked in a friendly way to spit ceremonially on all the children to prevent anything untoward occurring to them owing to his visit. If a father possesses this power he can render his children proof against its action either from himself or any other person by shutting his eyes and then ceremonially spitting into each of their mouths. The power is said to be hereditary, but all the children are not born with the gift." Among the Masai also, spitting is supposed to remove the spell of the evil eye.²⁰

Elsewhere in East Africa, the evil does not seem to be seated merely in the eye, but in the tongue also. "If a person of this peculiarity (called Kjeni) sees an article or living creature and says, 'this is good,' or words to that effect, the object is doomed to perish; even a stone is said to split asunder from the evil power of the person. If a man with the evil eye and tongue expresses his admiration for a woman who is pregnant at the time, she is sure to die in child-birth. The person possessed of this power can, however, also effect a cure for the evil by spitting on the object or person affected. There is a whole clan, the Mba Mwanziu, of which every member, no matter where he was born, has the evil eye and tongue, and curiously enough, they are often sought for the curing of small hurts, such as burns and bruises, which they do by spitting on the hurt."²¹ The Kavirondo claim that the evil eye can make a sound man sick and kill a man who is ill or an unborn child.²² The evil eye is dreaded throughout East Africa where there are all sorts of charms against it.²³ One native who remembered Henry M. Stanley well, remarked in awe-stricken words: "He could kill a man with a glance of his eye."²⁴ In the Upper Congo there is no distinct word for evil eye, but one person is supposed to bewitch the farm of another so that the produce will not grow. "To remove the effect of the evil eye the owner of the farm calls a nganga (shaman) who knocks a stake into the farm, and, if a person is bewitching the farm the stake is supposed to enter that person, and he or she will soon die unless they desist from their bewitchment." To call fishermen by their proper names is to destroy their luck; any person who does this is liable to a heavy fine or is compelled to sell the fish of the injured man at a good price so as to restore the luck again.²⁵ In Central Africa only the initiated may watch the smelting of copper, the cause of this limitation being fear of the evil eye.²⁶

In Bornu, "the better horses, which through sale or gift changed hands, were

preferably transported at night, to insure them against the 'evil eye' of men."²⁷ In the Sudan it is common to cover food carefully with conical straw covers, against the evil eye or envious glance of hungry people who admire and long for it.²⁸ In Kabylie, "the husband, left alone with his wife, . . . strikes her lightly three times on the shoulders with the back of a sabre or a dagger, to conjure off the effect of the evil eye."²⁹ In some sections one of the bridesmaids impersonates the bride; she attracts all attention, according to local belief, because if people were to say that the real bride was pretty or the reverse, she would be injured. The evil eye and the evil mouth are occult powers to conjure up an evil spirit residing in an evil-wisher, according to the Hausa. We all know what harm could be done "if a look could kill." A man who had an evil eye saw a stone while out walking, and remarked, "What an enormous stone," and immediately the stone broke into three pieces. This, say the natives, was a clear case of evil mouth, for the words did the mischief, though the evil eye could have acted by itself. Another case is mentioned where a man asked another to sell him one of the bulls he was driving to market. The owner refused. "The other said, 'Very well, but I shall eat of its flesh today nevertheless.' Soon afterwards the bull fell, and as it was apparently dying, the owner cut its throat, and had to beg his fellow-travellers to buy the meat. The other then came up and bought a portion for about one-tenth of what it would have cost him in the market."³⁰ In northeast Africa people may be sold into slavery on account of the evil eye.³¹

"An Arab never asks even his best friend how his wife is; at most he says: 'How is your house getting on?'"³² "Beneath all Mohammedan fatalism lives the primæval fear of daimonic influences. At the forefront of all cares stands the fear of the evil glance; they protect themselves from it by stroking with the hand over the face—the people often did that when they noticed that they were 'snapped'—and by using the hand, the *fatma* or lucky hand, in every form on the house, furniture, tools, clothing, and bodily ornament and by choosing it as a tattoo-pattern."³³ A lucky egg is also used: a common hen's egg with three little horseshoes of lead fastened on it very cleverly so as not to break or crack it.³⁴

The Todas of India believe that various misfortunes may befall a man if anyone says that he is looking very well or is well dressed. "It is also unlucky that anyone should look at a man when he is eating. Similarly it is unlucky for anyone to say that a buffalo is giving much milk; she will probably kick her calf, or will suffer in some other way soon after." This kind of misfortune is called by a term meaning literally "if looking anxiously," or evil eye. One of the commonest effects is indigestion.³⁵ In Nair life is an evil-working power called *Koti*. "The word literally means desire, but as an evil force it works only when a hungry person sees a rich and healthy fellow eating a good meal. If a poor man sees you eat, and his mouth waters at the delicacies before you, you are sure to suffer from his *Koti*, you will get stomach-ache and even dysentery. It is the particular look of the hungry man that has the evil effect.

35 Rivers, *Todas*, 263

When once a man begins to suffer from another's *Koti* the only way to get over it is to eat some salt over which some *mantrams*, or magical formulae, have been repeated."³⁶ Beneficent contagious magic is used by the Oraon and Munda of India to ward off the influence of the evil eye; they wear rings and armlets made of iron previously exposed to the influence of an eclipse of the sun, so that the wearer may offer to the evil eye of witches and the evil attention of ghosts and spirits a resistance as strong as that of iron so hardened. The idea of pollution by contact with the leavings of other people's food, now widely prevalent all over India, is thought to have its roots deep down in primitive fear of contact with evil powers and to have been borrowed by the so-called Aryan Hindu from the animistic aboriginal. Although subsequently the conceptions of physical cleanliness, hygienic necessity, and even internal purity have been super-added so as to transform the original idea beyond recognition, yet among some tribes we meet with the touch-taboo in its original naked simplicity. "The evil touch is not more effective than the evil eye. The evil eye of witches who are particularly averse to the sight of the gaudy dress or ornaments of others, make the well-dressed Oraon beau or belle dancing at the village *akhra*, or dancing ground, sometimes fall down in fainting fits. At times more serious consequences flow from the evil eye of a witch. . . . Food, like dress, is a favourite target for the evil eye. Oraon women are particularly anxious about the rice-flour they prepare on some festive occasions to make bread with. If the rice-flour happens to attract the evil eye of a witch, or the 'shadow' (*chhain*) of a ghost, the bread prepared out of it will either be imperfectly baked, or emit a foul smell, or cause diarrhoea or other sickness to those who partake of such bread. Similarly the evil eye of a witch or sorcerer directed against food or drink is believed to poison it. It is, however, not witches and sorcerers, alone, that possess the 'evil eye.' Anyone may possess it by nature." A method of avoiding evil powers is to divert their attention. Thus, "to divert the 'evil eye' of spirits or sorcerers and witches, and of malicious persons, the Oraon cultivator plants in the middle of his standing upland crops a wooden pole, over which is placed upside down an earthen vessel with its upturned bottom painted black and white. The magic of the colour diverts the 'evil eye' from the crops." Another method is to make a mimicry of driving the evil influences away, not so much by physical terrorism as by the cumulative spiritual force of a body of persons acting ceremonially. Thus may an evil spirit be driven out to another village, which, in its turn, performs the same ceremony and transfers the spirit to the next village, and so on. As an instance of avoidance in the form of threat may be mentioned the custom by which the father of an Oraon bride puts a small iron spear into the hands of his daughter before she starts for her husband's house. "She carries the spear in her hands during the journey to protect herself from evil spirits on the way. On reaching her husband's house, she inserts the spear into the roof of the house as a threat to such spirits of her father's village as may have shadowed her."³⁷

In India, again, "the evil eye may be found among the upper classes if it be induced in them by exciting their jealousy, envy, or hatred; but usually the lower the class and the blacker the person, the more intense the potency of his evil eye."³⁸ This looks like the ascription of evil powers to the aborigi-

nal type.³⁹ Certain of the taboos imposed upon the parents during pregnancy are explicable as provisions against the evil eye. It can be averted by means of iron and "it is not unusual to find a small knife or a nail or a scissor attached to the cradle of a child."⁴⁰ A mother, on hearing someone speak of the healthfulness or plumpness of her child, says to the speaker, "Look at your feet." This is to avert the speaker's eye from the child. If a fruit-tree is loaded with good fruit, it is not good to point at it with the finger, for thus it will catch the evil eye of the person and the fruit will become rotten or the tree will cease to bear. One must point at the fruit, not with the forefinger, but with the middle part of the thumb.⁴¹

In the East Indies the evil eye is thought to be cast in anger, as in a quarrel, and the sign of the phallus is thought to be a safeguard.⁴² In Sarawak if a native is seen while drawing a peculiar tattoo, he immediately covers it up. The reason why such a native would not allow the mark to be sketched "was that his wife was expecting a child, and he was afraid of my eye affecting her."⁴³ In Sumatra, simply to look at a child with admiring eyes is enough to harm it. The idea is that any look conveying admiration would evoke the envy and disfavor of evil spirits.⁴⁴ In the Malay Peninsula "the birth-name was sometimes superseded (as being unlucky) before marriage, when misfortunes happened to the child."⁴⁵ In the Caroline Islands when a ship arrived, they used to tie strips of leaf about the children's necks to keep off the evil glance. "For this reason they feared at first the missionary Snow because he wore spectacles." In canoe-building the work was protected from rain and the evil eye of the envious by a leaf-covering. No stranger may look on the work; and if a laborer hurts himself with an ax, he asks at once who lifted up the covering and looked. If he learns the name, he draws a human figure and cuts it in two with his ax, as punishment for the intruder.⁴⁶

The Chaldeans believed not only in the evil eye but also in the malevolent mouth, that is, an unlucky word pronounced unintentionally.⁴⁷ There is much evidence in Norse tradition concerning the evil eye, which may be possessed without the knowledge and against the will of a person. One of its uses was to make blunt the sword of an opponent; to look backwards through one's legs was also a magic rite.⁴⁸ It was the custom among the ancient Greeks to put figures before bronze foundries; their object was the aversion of ill will, charms against the evil eye, and "if we may trust the scholiast on Aristophanes they formed part of the furniture of most people's chimney corners at Athens." It is held that the Gorgon mask was one of these. "What the beast was and how the story arose cannot be decided, but it is clear that the Gorgon was regarded as a sort of incarnate Evil Eye. The monster was tricked out with cruel tusks and snakes, but it slew by the eye, it *fascinated*. The Evil Eye itself is not frequent on monuments; the Gorgoneion as a more complete and more elaborately decorative horror attained a wider popularity. But the prophylactic Eye, the eye set to stare back the Evil Eye, is common on vases, on shields and on the prows of ships."⁴⁹ Hornell⁵⁰ has a convincing article on survivals

of the use of *oculi* on modern boats. In modern Greece, "when they express liking or affection for a child that is plump, well formed, and healthy, after doing so, they spit on the ground to avert the influence of their evil eye drawn to the child by its beauty. . . . At Constantinople the writer saw the house of a Greek bearing an old flag on a pole; some houses bear an old shoe. This is to avoid the evil eye of passers by." The author draws parallels from Hindu life.⁵¹ Plutarch⁵² says: "And therefore people imagine that those amulets that are preservative against witchcraft are likewise good and efficacious against envy; the sight by the strangeness of the spectacle being diverted, so that it cannot make so strong an impression upon the patient."

To the investigator of Greek folklore no other superstition is more in evidence than the all-prevailing belief in the evil eye. "Greeks, both men and women, readily admit its existence and their own fear of it, for it is abundantly warranted by scripture, in particular by Solomon, notorious as an authority on magic. The investigator can therefore arrive in a village and at once, without danger of being baffled by shyness, suspicion, or stupidity, ask who suffers from overlooking. A little adroit playing on the belief that the more attractive a person is, the more he must fear the evil eye, will work wonders in the way of establishing sympathy between the investigator and the villagers." While beauty is a great danger to its owner, it is not the only thing that attracts the evil eye, for anyone, young or old, ugly or fair, may be attacked. "Only those born on a Saturday are exempt, but on Saturday afternoon, be it understood; for it was on Saturday afternoon that Christ was born, and it is from Christ that the Saturday-born derive their exemption. New-made mothers have much to fear from it until their purification, forty days after the birth of their child. Beasts and inanimate objects suffer no less than men; young children suffer most of all, although infants are safe until they are baptized or their mother celebrates her purification. . . . Any illness which is obviously not due to organic disease, a breakage, or a chill, is set down to the evil eye. The ordinary symptoms are discomfort, headache, whining, sleeplessness, and peevishness." Prevention is thought better than cure, so amulets are generally worn to keep the evil eye at bay; among such are rings and silver buckles which divert the visitor's attention to themselves, silver having in itself an additional power over evil magic, as in our own silver bullet. "Shops have a horseshoe or a clove of garlic suspended over the door. A Shatista man has particular confidence in a French horseshoe he picked up during the war; it is, of course, twice the size of an ordinary Macedonian shoe. Calves wear necklaces of bright wool tassels, as does even a young donkey of my acquaintance—adult donkeys, as is known, are unworthy even of being overlooked. . . . The spoken word may also effectively ward off the dreaded evil. As is well known, the pale skins of North Europeans are much admired by the dark-complexioned children of the South. As a result, on my removing my glove one day in Shatista, a woman screamed 'Garlic!' and kissed my hand, exclaiming, 'It is as white as a saint's.'" Any device is effective which serves to divert the attention of a possible overlooker. "Thus, a Kastoria small boy, who was frequently overlooked, was never allowed by his mother to leave the house until she had daubed some coffee grounds on his cheek, in order that the first remark made on him by passers-by might be a comment on his dirty face, *i.e.*, on something extraneous to his personality. . . . Another

51 Modi, in JASB, II, 169.

52 *Symposiasts*, V, q. 7.

small boy of Kastoria habitually wore stockings that were not a pair, or, if they matched, one was outside in. . . . The amulets, in short, are a species of lightning conductor, just as the power of overlooking is thought popularly to be a kind of electricity which resides in the eye. . . . Mothers make a point of buying some hair from the bear to store against future need." It is not difficult to learn the religious remedies for overlooking, but spells are more difficult to obtain. "Fortunately, the words must be *spoken* either to act or to break the spell, so that women who can write can usually be persuaded into writing down the words. . . . After banishing all her relatives from the room, she produced a well-thumbed piece of paper on which she had written down the words as dictated by the old woman who had taught her the exorcism. She wrote them down in my notebook from this piece of paper, but pulled me up short when I inadvertently repeated aloud one of the sentences." The authoress⁵³ has made a collection of charms, nearly all witnessing to the use of water, salt, and sometimes spittle in exorcising the evil eye. "Smoking" the child and the use of heat (live coals) are common practices, while sacred numbers, especially three and forty, are exorcistic.

In modern Egypt children are rendered dirty and shabby, particularly when taken out in public. This is "from fear of the evil eye, which is excessively dreaded, and especially in the case of children, since they are generally esteemed the greatest of blessings, and therefore most likely to be coveted." Boys are long kept in the harem and often dressed as girls. Alum is used, in a somewhat complicated ceremony, to counteract the effects of the evil eye. On being laid on burning coals, it assumes the form of the person who is envious or malicious. It is then pounded, put in some food, and fed to a black dog. At a wedding handsome chandeliers are hung before the bridegroom's house; but if a crowd gathers to see them, "it is a common practice to divert the attention of the spectators by throwing down and breaking a large jar, or by some other artifice, lest an envious eye should cause the chandelier to fall." A complaint reads as follows: "It is quite shocking to see fine sheep hung up in the streets, quite whole, tail and all, before the public eye; so that every beggar who passes by envies them; and one might, therefore, as well eat poison as such meat."⁵⁴

In modern Persia, "the evil eye may be invited by beauty, by an exceptional run of luck, or by anything that is valuable or attractive."⁵⁵ The Imeritian Christians still fear the evil eye, especially when a child is praised or admired.⁵⁶ In Hungary to be "struck with the eyes" brings on the "eye-evil." Most children's diseases "come from the eyes." People whose eyebrows grow together are most to be feared. The belief is general and is parallel to the "malocchio" of the Italians. Various unsavory practices are employed as safeguards.⁵⁷ In Anatolia, and among the Christians, this belief persists. Amulets are fastened to the necks of children and to the manes and tails of animals; generally these are metal triangles with a passage of the Koran upon them. Mohammedan boys draw the fez over the eyes, and girls cover the forehead with both hands, at meeting a missionary. Skulls of cows, horses, and camels protect gardens from the evil eye.⁵⁸ The veiling of Mohammedan women began

with the beautiful ones to save them from the evil eye; it was thus an outcome of daimonism.⁵⁹

Among the South Russian Jews "strangers may not praise children much, or caress them or look at them sharply." If that happens the mother bids the child to make a certain gesture, unseen by the stranger, whereby the evil glance is averted. Sickness comes from the evil eye, called euphemistically "a git Oig." To avoid it, the health of children is never praised. "In conversation with people of whom it is known that they have an evil eye, illnesses are even invented in order to lead them astray."⁶⁰ Mary Antin⁶¹ writes of the Jews in Russia: "Pepper and salt tied in a corner of the pocket was effective in warding off the evil eye." In one of the Scottish islands there is a sort of nut which is used as an amulet against witchcraft or the evil eye. If a child wearing one of these about the neck is threatened with evil, the nut, which is white, changes, they say, into a black color.⁶² It is a quite general belief that children should not be admired, and among some peoples custom prescribes that if one looks at a child for a while in admiration, the child should then be spat upon three times.⁶³ In Dundalk, Ireland, the superstition was recently dragged into court when one woman charged another with having cast the evil eye upon her child and doomed it to a life of ill luck. A witness testified that a third woman cut the fringe from the defendant's shawl and burned it under the child's nose in the belief that the spell cast upon the infant would disappear with the smoke. The magistrate refused to take the case seriously.⁶⁴

§266. Disparagement; Deception.

DISPARAGEMENT was part of the naming-ceremony in Fiji, where, on the day of circumcision, the initiates changed their names and everybody, including the women, "used the most filthy language possible to the aspirant."¹ If the first children die, the Altaians try to give the next a name implying worthlessness or humility, e.g., *It-koden*, the haunch of a dog. Under similar circumstances the Buryat and other Siberians practise deception: "When the first children die young, the newly born is hidden under the cooking cauldron, on the top of which is placed . . . a figure representing the child, made from barley-meal. Then the *kam* (shaman) is called, and begins to shamanize over this figure. . . . Then its body is cut into three parts and buried far away from the house. This ceremony will protect the child from death." The Diurbiut have a similar ceremony, in which soon after birth the child is stolen by some relatives and hidden under a cauldron, where it remains for three days, well fed and tended. "At the same time these relatives make an image of grass and throw it into the tent of the parents, who, when they find it, pretend to see in it their own dead child and bewail and bury it with much ceremony. This is to persuade the evil spirit who wished to harm the child that the latter is dead and buried." The Yakuts apply deception in the case of implements or other valuable objects by giving to them certain nicknames instead of names proper to them, in order that the spirits may not know that the objects in question are referred to, for if they did, they would destroy or

harm them. For the same reason the Yakuts often employ Russian names for things they value, being certain that the spirits will not understand these.²

Equivalent to giving an opprobrious name to a child is a birth-observance in the Punjab; half of the head is shaved and the other half left, "in order that the Angel of Death may pass them by as too ugly."³ The ethnographers have in India a fertile region. Thurston⁴ reports a number of examples from the southern districts. It is, for instance, a good thing to frighten anyone who expresses admiration of one's belongings. If a friend praises your son's eyes, say to him: "Look out. There is a snake at your feet." If he is frightened, the ill is averted. "The custom of calling a newly-born child, after the parent has lost a first born or more in succession, by an opprobrious name, is common amongst many castes in Southern India, including even Mohammedans. Kuppawami (Sir dungheap) is one of the commonest names for such children, and they have the distinguishing mark of a pierced nostril and ear (on the right side) with a knob of gold in it." Again, children are called "gunda (rock), kalla (stone), hucha (lunatic), tippa (dung-hill). The last name is given after some rubbish from a dung-hill has been brought in a sieve, and the child placed in it. . . . Another device is to give a Hindu child a Mohammedan or English name, such as Bade Sahib or Rapsan (corruption of Robertson)." This is a case of deception as to the child's identity. In certain forms of address, the speaker must refer to himself as a foot-servant. "If he mentions his rice, he must call it gritty rice. Rupees must be called his copper coins. He must call his house his dung-pit, and so on." Thus he and his possessions appear to be less than they are. Again, "men cause their names to be cut on rocks by the wayside, or on the stones with which the path leading to the temple is paved, in the belief that good luck will result if their name is trodden on."

Abuse at the time of marriage brings good luck and wipes away sin:⁵ "people who accompany the marriage procession to the bride's house are often vilely abused by the women-folk of the bride's family in the belief that it will lead on to the good fortune of the newly married couple." Again, at certain periods, "brothers are abused by sisters to their heart's content and this is done under the impression that it will prolong the lives of the brothers and bring good luck to them."⁶ At a wedding the women of both parties, bride's and groom's, sing coarse songs, "abusing each other and charging each other's families with poverty and bad conduct. This abuse, which is called *phatana*, is considered lucky, partly because it is coarse and coarseness is lucky, partly because it makes out the abused to be poor and untrustworthy, and therefore untempting lodgings for house-seeking spirits. Praise is risky; abuse and blame are safe."⁷ That coarseness pleases the daimons will appear in other connections.⁸

In China, "though endearing or fanciful names are often conferred, it is quite as common to vilify very young children by calling them *dog*, *hog*, *puppy*, *flea*, etc., under the idea that such epithets will ward off the evil eye."⁹ Thus the notion of the evil eye may underlie disparagement; the two ideas belong to the same species. In Sumatra there is the same fear of admiration: "one could bring an Atjeh mother to despair by praising her child in her presence.

⁹ Williams, *Middle Kingdom*, I, 797.

Even the parents refrain anxiously from mentioning and extolling among themselves one or another good characteristic of their child." Praising a good trait would lead to its speedy decline; they all know this and strictly refrain.¹⁰

In Homeric times "there was one very living danger from the gods that must be avoided as far as possible, the gods would not brook exceeding prosperity. Their natures were jealous, and they would allow to man but a moderate share of good fortune. Because Achilles' lot was so noble, his life was short and bitter; while Odysseus, having endured many sufferings, was to end a long life in peace and happiness. . . . After great prosperity, Bellerophon went mad. Worst of all, however was undue boasting and a desire to minimize divine power. Ajax boasted that he had escaped drowning in spite of the gods; Poseidon, angry at these words, split the rock 'upon which Ajax was sitting when he became greatly infatuated' and Ajax was drowned in the sea. 'Short-lived are those who fight with the immortal gods.' Therefore men were ever on their guard to avoid transgression in this respect and to turn aside all 'envy.' One should receive the gift of the gods in silence; compliments were turned off with some deprecatory remark; gradually there arose a sort of doctrine of excess, and, later, the conception of 'nemesis' "—which means only "censure" or "anger" in Homer.¹¹ Self-disparagement has become a sort of pose. The Chaldean gods were jealous of men and would not let them share the prerogatives of gods.¹²

Herodotus¹³ reports the coarse actions of the Egyptian women while floating in boats past a town; among other things they loaded the townspeople with abuse. All this was done, apparently, to scare off evil influences from the town. Coarse abuse and jokes occurred at Athenian festivals, especially in those held by the women in honor of Demeter. Songs with the coarsest ribaldry against the commander were sung at his triumph by the Roman soldiers.¹⁴ The rude and lewd fescennine songs, at a marriage or a triumph, were supposed to avert the envy of the gods, or the evil eye, on great occasions of good fortune.¹⁵

Salutations. There is undoubtedly a multiple explanation of the methods of greeting employed by primitive peoples. In some instances they appear to be simply expressions of affection¹⁶ or of respect,¹⁷ while in others there is a suggestion of avoiding or deceiving the spirits. Though a few of the following cases may belong more properly under other topics, we have thought it best to include them all here.

Weeping often occurs as a form of salutation.¹⁸ Among the Queensland aborigines a not uncommon form of greeting, say, after some years' interval, between mother and daughter, is for the elder woman to take any heavy stick, such as a fighting-pole, and, digging into the top of her head, rub it there until the blood comes, crying and sobbing as much as she can; the daughter from behind is all this time putting her arms round the old woman's waist, and when she thinks that her mother has given way sufficiently to her feelings, she will forcibly take the stick away.¹⁹ Kissing seems to be indigenous in the Torres Straits; "this salutation, combined with embracing the head, would

only be performed after a long separation, especially if the man had been supposed to be dead; in the case of relatives this might perhaps be accompanied with shouting and weeping."²⁰ The Andaman Islanders, on meeting, remain gazing into each other's eyes for what would seem to us an absurdly long time. "Relatives testify their joy at meeting after a few months' separation by throwing their arms round each other's necks, and sobbing as if their hearts would break." There is little or no difference between the demonstrations of joy and sorrow.²¹

Wilken²² mentions some cases of greeting with tears; his editor takes this to be a method of warding off evil influences. "Bengali women never weep, like their Behari sisters, on such joyous occasions as meeting after long separation."²³ When Polynesian friends meet, they "consider a sorrowful mien, the outpouring of tears, and contact of noses the correct behaviour. The contact of noses is usually termed 'rubbing noses' by European writers. It is, however, nothing of the kind; there is no friction applied to the process. The salutation is sometimes performed by the two parties standing, but more generally by one sitting and the other standing. Hosts receive their guests sitting. . . . Sitting down to receive guests is a mark of respect. . . . Both men and women use the same form of nose-pressure, but only on meeting, never at parting."²⁴ In New Zealand, on the arrival of a person of any consequence, or one much beloved, "they used to add to it [nose-pressing] by what they call the *tangi*, which was cutting the face, breast, and arms with a piece of lava or mussel shell, and giving utterance to a series of the most lamentable howls, whilst forced tears rolled down their bloody cheeks."²⁵

Friederici²⁶ has treated, with numerous references to the literature of the subject and lists of the tribes where it is found, the custom of greeting guests and strangers by weeping and sighing. His cases include tribes in North, Central, and South America; he thinks it once existed over the entire continent. Some typical instances may be cited. When a Spanish ship was wrecked on the coast of Texas, "the coast Indians came down, sat—full of sympathy, as the Spaniards thought, over their shipwreck—beside them and began so to weep that it could be heard far off. This lasted over half an hour." In one case an Indian brought a gift of hides to De Soto; "he wept bitterly and threw himself at the governor's feet as soon as he reached him. Soto lifted him up and the man made an address, but no one could understand him." A later case of weeping was interpreted as a sign of obedience and remorse on account of a previous misdemeanor. The custom of greeting with tears was so general and took so striking a form among the Sioux in what is now Minnesota, that an early European traveller referred to them as "the weepers." Among the Lenguas, "when anyone returns after long absence, then both greeting Indians shed some tears before they speak a single word. To act otherwise would be an insult or at least a sign that the visit is not viewed with pleasure." Among the Tupi and others the greeting of guests and strangers with protracted weeping and sobbing was done mostly by the women. "When a stranger and even a tribal member came to a hut as a guest, he was given a place in the hammock, and the naked women squatted around him, put both the hands before the face and raised a protracted weeping and moaning, consoling with

the guest for the trials and dangers of the journey he had endured and paying him all kinds of compliments. Custom demanded that the one so greeted should also weep or, if he as a European did not always have tears on tap, at least should act that way." The practice fell off after the end of the seventeenth century, largely through contact with Europeans, but it was still found in the latter half of the eighteenth century. The author considers this form of greeting nothing more than a senselessly exaggerated and degenerate form of courtesy.

§267. Anticipation and Interrogation.

Sneezing. The custom of saying "God bless you," or some equivalent expression, when a person sneezes, is ancient and very widely extended. "In fact, it is doubtful if there is a country in the world where traces of it cannot be found. Consequently the very general belief that the custom took its rise in one of the symptoms of the plague in Italy in the days of Gregory the Great cannot be credited." Its origin, of course, dates back to the religious ideas of primitive men, among whom "the sneeze was sometimes considered as an auspicious sign, sometimes as a most unlucky omen; but that it was due to the presence of spirits, either good or evil, was the belief of all."¹ In D'Entrecasteaux it is believed that the soul is inside the body, a separate entity the presence of which is revealed in sneezing. "For a sneeze is due to the soul's recollection of some dead kinsman or friend. The native will therefore say when he sneezes *tamanake* (i.e., *tamana keke*, 'his father is not'), or *inanake* ('his mother is not'), or whoever the relative may be the man has lost. He refers to his soul in the third person, for he is interpreting the meaning of its sneeze. If he has no deceased relatives he simply says *vaioma*, a word that implies some reference to fighting, the sneeze being then a reminder of some friend who has fallen in battle."² Among the Southern Massim "a man may sneeze when he becomes angry, otherwise sneezing is considered a sign of approaching illness."³

When the Mkamba in the East African Protectorate sneezes he always makes some remark; "it seems that as a rule such exclamations have reference to the sneezer's father or grandfather."⁴ Elsewhere in East Africa if a child sneezes, the father or mother kisses it and prays that all evil may depart from it. In the case of an adult, he prays in a similar vein for himself.⁵ Among the Awa-Wanga sneezing is supposed to be a bad omen, and if a man sneezes when about to start on a journey, he gives it up for that day. "If a person plans to visit a friend who is said to be sick unto death, and if a sneezing fit comes on before he starts, then he knows that his friend will certainly recover from his illness." The prejudice against sneezing went so far in the old days that if a warrior who sneezed en route, on a foray for cattle, were not speared, he was looked upon as a kind of Jonah who would bring ill luck to the raid.⁶ Sneezing is supposed by the Hausa to expel the evil spirit.⁷

It is especially dangerous, think the Buryat of Siberia, to sneeze during sleep, for then the soul springs momentarily from the body, and the evil

spirits who are on the watch seize it before it can hide.⁸ Among the Palaungs of Farther India, "to sneeze when setting out on a journey is unlucky and the journey had better be deferred. Sneezing is, at other times, not considered unlucky, except during a marriage-ceremony. If either bride or bridegroom sneeze, bad luck will follow them unless many offerings are presented in the image-house."⁹ Among the Araucanian Indians sneezing violently while gambling was thought to bring bad luck.¹⁰ A traveller who had been well received by the Guiana Indians, upon happening to sneeze, saw the circle around him broken; "the most timid betook themselves to a distance, the bravest closing their noses with the thumb and forefinger."¹¹

The Norwegian peasants still hold that if a sick person sneezes, he will not die and their custom when a child sneezes is to say "Grow: it is a sign of health." They believe also that anything a person is thinking of when he sneezes will be sure to come true. The Highlanders believe that when a person sneezes, he is liable to be stolen by fairies, unless protected by some one invoking the name of the Deity. The Moslem, when he sneezes, is saluted by his friends with the formula, "Praise to Allah!"—a custom, it is said, that is conveyed from race to race wherever Islam extends. In France, an indication of the survival of this usage is seen by the following quotation from a *Book on Rules and Civilities* of the year 1685: "If his lordship chance to sneeze, you are not to bawl out, 'God bless you,' but, pulling off your hat, bow to him handsomely, and make the obsecration to yourself." The custom among the Jews, when a person sneezes, is to ejaculate, "A long life to you!" In Italy the exclamation is "Happiness!" and in Germany "Gesundheit!"¹²

Other Omens. The sneeze has been illustrated rather fully. There are countless other omens. If the Papuans want to decide whether to hunt on one river or another, they look to the canoes for answer: "for a negative answer there is no movement; for an affirmative the canoes will all fall into an uncontrollable rocking."¹³ Comets are bad omens to the Akamba, being portents of the death of people and cattle and also of impending famine.¹⁴ To most Congo natives it is a bad sign if a man kicks his foot against anything in the road. "Sometimes the strong-minded ones would laugh away the fears of those who were inclined to turn back if the omen were against them; but it more frequently happened that they turned *en masse*, glad of an excuse to postpone a fight."¹⁵ In a village in West Africa, Garner¹⁶ once saw the people screaming and clapping their hands at the moon, over which was passing a small, fleecy cloud. They regarded it as a bad omen for their town, and were trying to drive it away. "When the new moon's face was again free from the cloud the people rejoiced, and told me it was good for them, and that the moon would like them and give them light because they had driven away *m'buiri*." The blacks of Trinidad refuse to engage in any sort of enterprise unless the aspect of the moon is propitious.¹⁷

In several districts of India, omens are drawn from the chirping of the lizard to the east, southeast, west, and other quarters. The lizard is taken to be a totem-animal.¹⁸ "One of the worst omens possible is to see two snakes

copulating, and a man who sees this is not supposed to return to his house or speak to any one until the next sun has risen."¹⁹ "If a deer crossed the path of an expedition when starting, an immediate return home was made, and the undertaking was postponed."²⁰ The mewing of a cat at night is ominous; she is an ancestress, and the mew betokens death.²¹ The Tamil marriage go-between "will always still turn back when halfway to the parents of the bride and put off his errand till a better time if somewhere on the way there passes across his road a pig, a cat, a snake, or above all a widow."²² The Parsees find fish a good omen, or the passing of a serpent at one's right, or over one's body when asleep. A serpent on the left is bad, as is also the crossing of one's path by a cat.²³ Among the Palaungs, a comet is always a sign of war or of danger to a king. "It is a royal star, and it only has power over royal people."²⁴

In Borneo a single evil omen is quite enough to halt a well-laid plan or to cause it to be given up altogether.²⁵ There are a number of omen-animals.²⁶ Dyaks, like so many other tribes around the earth, take auguries from the flight of birds; and the cry of certain animals near the house of the newly-married causes their separation, for they believe the death of one of them would otherwise ensue. As for the birds, if they are "heard on the wrong side, if in the wrong order, if the note or call be of the wrong kind, the matter in hand must be postponed, or abandoned altogether; unless a conjunction of subsequent good omens occur, which, in the opinion of old experts, can overbear the preceding ones. Hence, in practice, birding becomes a most involved matter, because the birds will not allow themselves to be heard in a straightforward orthodox succession. After all it is only the balance of probabilities, it is seldom that Dyak patience can wait till the omens occur according to the standard theory. . . . The worst of all omens is a dead beast of any kind, especially those included in the omen list, found anywhere on the farm." The birds are the messengers of the all-knowing ghosts.²⁷

Furness²⁸ and Gomes²⁹ enter very fully into the detail of Bornean omens and divination. The former portrays graphically the complexity of omen-observation that attends the search for camphor. There are numbers of miscellaneous omens; for instance, if a house-post gives way the sign is one foreboding evil; the house is abandoned and a new one built. But the dominant type of omen described by these authors is derived from birds. "I have sometimes," writes Gomes, "argued with the Dyaks that if the warnings of the birds are to be trusted, then why make so much noise to prevent hearing them? The Dyaks reply to this was that as long as they did not hear the warning, the spirits would not be displeased at their not regarding it; so to spare themselves the trouble of choosing another site and building another house, they make so much noise as to drown the cries of any birds." Before a war expedition the head man goes apart to listen to the birds; if the first omens are unfavorable he waits till he hears some bird of good omen. "The system . . . is most elaborate and complicated, and the younger men have constantly to ask the older ones how to act in unexpected combinations of apparently contradictory

omens. The law and observance of omens occupy a greater share of the thoughts of the Dyak than any other part of his religion." For a war expedition, birds heard on the right hand are best, "It is said that for farming, if a piece of gold be hidden in the ground, the hearing of the proper omen birds may be dispensed with. If a fowl be sacrificed, and the blood made to drop in a hole in the earth in which the fowl is afterwards buried, it is said the gods will be satisfied, and a good harvest ensue. And on the occasion of a war expedition, if an offering is made with beating of gongs and drums on starting from the house, it is said that no cries of birds need be obeyed afterwards. But none of these methods are ever used, the Dyaks preferring to submit to the tedious procedure of listening to the cries of the birds." They honor a good omen with respect to the crops by resting from work for three days. "So great is the Dyak belief in omens that a man will sometimes abandon a nearly finished boat simply because a bird of ill omen flies across its bows. The labour of weeks will thus be wasted. I have myself seen wooden beams and posts left half finished in the jungle, and have learned on inquiry that some bird of ill omen was heard while the man was at work on them, and so they had to be abandoned." No argument is of avail to shake the beliefs in vogue, though certain of the omen-animals are killed despite the taboo, sanctioned by sickness or death, which theoretically protects them. "It would seem that physical requirements are stronger than religious theory."

The Dyak system is very complete; and is approximated elsewhere in the Archipelago.³⁰ In Sumatra an eclipse is a strong portent of ill.³¹ The day of the new moon is fortunate for an Indian child; it is believed that boys who begin to walk on that day will be fast runners.³² Dreams are ominous to the Indian, as to most primitive folk. They are the natural and normal means of communication with the spirit-world. Dreaming of the dead is particularly unfortunate, for it means illness or death.³³ In the folklore of the Maoris, if a certain bird is seen hovering over a village it is known either that the tribe will soon lose a chief by death or that a defeat in battle is assured. It is an evil omen to eat of the food left by the first-born of a family. "The only cure for this dire affliction is for the unlucky person to seek out the first-born female of a family and get her to step over his body, which act breaks up the *pahunu*," or evil omen.³⁴

When an Iroquois prophet departed on a journey, he first assured his mother that, in the event of his death by violence or sorcery, the otter-skin, which he had hung head-downward in a corner of the lodge, would vomit blood.³⁵ Before foot-races or a war-expedition the Zuzi performed a certain religious ceremonial, after which each was asked what he had heard. "If he had heard the hoof beats of the Navajo horse or the roaring of the river or the hooting of an owl or the sound of lips smacking, all good signs, he would answer, 'It is well.' To hear nothing is a bad sign."³⁶ The following omens are accredited by the Indians of Guiana. Should the leaf of a certain plant which is suspended in the house when one of the inmates is ill, germinate, as under ordinary circumstances, the sick man will recover, but if it wither, that is an indication that he will die. The first night of the waxing moon is considered the proper occasion for obtaining clay for the manufacture of pots and other

utensils which will not speedily be broken. Owls are of evil portent and may indicate sickness, death, the presence of an as yet unborn babe, or a birth. When walking along the pathway one must not mind if a species of black ant bites his foot, because this means that he will obtain something very good and satisfying. It is considered a bad omen if either tree planted by parents when contracting for the marriage of their young children should happen to wither, as in that case the party represented by it is sure to die.³⁷ Among the Araucanians, "if vultures followed the route of a war party, many of the number would return home, considering slaughter and defeat as inevitable. A fox, crossing the path of a similar party, indicated, by the way it took, the fate of the undertaking. If it passed to the left, they returned home, assured of the uselessness of proceeding. If on the other hand it turned to the right they were convinced of their triumph."³⁸

Interrogation. In New Guinea the wooden ancestor-figures are directly questioned; any movement of the figures conveys refusal. This is almost direct worship rather than specific divination.³⁹ Among the Amaxosa, "the common man carries his 'tollus' [charms] about with him in a leather pouch, and questions them with great care" as to where his comrades are, whither his cattle have run, or where the nearest water is to be found; sticks are thrown on the ground in divination.⁴⁰ In South Africa "bones are thrown" on a number of occasions, to see what the spirits say.⁴¹ Divining tablets are common among the Bantu; each family has a set, and the use of dice is common.⁴² In Togo there is an effort to find out what luck the coming year will bring; all the men stand about a special tree, and as the name of each is called out, a splinter is struck from the trunk: If it falls on the ground bark-side up, it is bad luck; if the other way, good. Similar divination takes place with cowrie-shells.⁴³ In the Niger region, *juju* is performed before beginning house-building, fishing, fighting, boat-building, or other undertaking, and before childbirth.⁴⁴ In Angola some tribes divine by the use of knotted strings; different combinations of the knots, as seven pieces of string are wound round the thumb, reveal coming events.⁴⁵ Again, a tree is planted at the settlement of a village; if it keeps green and buds, the place will be prosperous; if not, they leave hastily, to seek better prospects elsewhere.⁴⁶ In Unyoro fowls are kept in cages, not for food but for auguries.⁴⁷

The Niam-Niam have several rather delicate devices for divination; they use, for instance, a smooth-topped stool, over which, when slightly wet, a smooth block is rubbed. "If the wood should glide easily along, the conclusion is that the undertaking will prosper; if the motion is obstructed and the surfaces adhere together, if according to the Niam-Niam expression a score of men cannot give free movement to the block, the warning is unmistakable that the adventure will prove a failure. . . . A way of trying fortune consists in seizing a cock and ducking its head repeatedly under water until the creature is stiff and senseless. Then it is left to itself. If it rallies, the omen is favorable;

but if it should succumb they look for adverse issue."⁴⁸ These people go through a rather elaborate ceremony of poisoning two fowls. "The man who is questioning the oracle makes an incantation somewhat to the following effect: 'Benge, tell me true! If this fowl die and this one live, the road is safe.' Then he addresses the fowls, 'You die!' he exhorts the one. 'You live!' he says to the other, and the result is watched with anxiety. Should the effect of the poison be different to that wished for, he will postpone his project or take another path."⁴⁹ If an Awemba child dies, the husband blames the wife, saying that the child has died because she has committed adultery. "If she denies this they resort to the hunting test. The husband goes out and fixes nets for game. If the game caught is a female it is the woman's fault, but if it is a male the husband is to blame."⁵⁰ In one African district two travellers were not allowed to see the chief till the signs had been consulted. "A goat was brought forward, both parties expectorated freely upon its head, and incantations were mumbled over it. A triangular piece of skin was cut from its forehead, much to the animal's distress; this was divided into strips and a slit cut in each. One of these strips was placed upon the middle finger of each of us by a prominent native, whom, in turn, we ornamented in a similar manner. After this the goat was killed and the entrails examined. The signs being pronounced favorable, we then proceeded to his majesty's presence."⁵¹ In the Sahara region, a knot is tied in an elastic plant with the idea of testing a wife's faithfulness; if it remains tied she is faithful, if it is found untied, she is not.⁵²

The Chukchi practise divination on the bodies of the dead; the head is lifted without effort if the answer to some question is affirmative.⁵³ In a Mongolian temple is the impression in sandstone of a human foot, which is examined, after a payment, to ascertain luck. If it is good, bright spots are supposed to appear on the surface of the stone in the footmark.⁵⁴ Cords, each representing several degrees of lucky and unlucky portents are used in Tibet; "the best out of three draws is held to decide the luck of the proposed undertaking, or the ultimate result of the sickness or the other question of fortune sought after."⁵⁵ The Nagas use the pancreas of a pig for auspices; it must be clear red, clean and smooth; if black, discolored, crinkled, or turned up at the edge, it foretells misfortune. Fowls also are used.⁵⁶ Auguries of good and bad luck are obtained in Madras from the speed with which the new rice comes to a boil.⁵⁷ An elaborate Hindu ceremonial determines whether a pregnant woman's first child will be a boy or a girl.⁵⁸ There is a Tamil treatise on house-building ceremonial. It descends to the most minute particulars as to the portents attending every step of the process, the lucky and unlucky time for every operation.⁵⁹ A bride selected one of eight balls of earth to find out what her wifely character is to be.⁶⁰ "Necromancy, or divination by communication with the spirits of the dead, is practiced in India today. A young boy is used as a medium, and is expected to see the future in a disc of lampblack. . . . The invoked spirit is then asked if he wants anything, and

any wants he may express are duly attended to. It is remarkable how closely this procedure resembles that described in the first book of Samuel."⁶¹

In Japan "there was divination by bones, by birds, by mice, by barley-gruel, by footprints, by rods planted in the ground, and by listening in public ways to the speech of people passing by." There were "strips of paper which pilgrims to Buddhist shrines chew into pellets, and then spit out at the *Ni-o*, or gigantic images of the guardian deities of the temples. If the pellet sticks, the pilgrim's prayer will be heard. If not, the prayer will not be heard."⁶² The Ainos keep skulls to ward off evil and for consultation concerning lost and stolen property. The skull is offered drink, then held in both hands while a prayer is spoken. The under jaw is then placed on the head and the consulting party bows till it falls—toward the place where the property is. If it falls on its side or teeth down, there is no answer and the proceeding must be repeated.⁶³ In Korea twelve beans are enclosed in a bamboo and lowered into the well for the night. "Each bean represents a month. In the morning, when examined in rotation, they are variously enlarged, the enlargement indicating the proportion of rain in that special moon. If, on the other hand, one or more are wizened, it causes great alarm, as indicating complete or partial drought during one or more months."⁶⁴

Divination from the bones of fowls is very popular among the primitive peoples of Farther India and even with the Chinese. As among the Greeks, the oracles are ambiguous and may be explained in more than one way; "as the circumstances of the case are generally known to the soothsayer, who, as doctor and wise man in the village, is generally a shrewd and far-seeing person, he probably translates the oracle to suit the requirements of the case."⁶⁵ The process of divination in the Malay Peninsula is accompanied by musical rhythm, incense-burning, and incantation. The spirit gives evidence of its presence by possessing someone, who falls down unconscious; while in this state of possession, questions are put to him.⁶⁶

It was the common belief of the American Indians that dreams or visions must be sought through the observance of some rite involving more or less personal privation; an exception is found in the Mohave who believe that the dream seeks the individual, coming to him before birth or during infancy, as well as in mature life. "Forecasting the future was deemed possible by means of artificially induced visions. The skin of a freshly killed animal, or one that had been well soaked for the purpose, was wound around the neck of a man until the gentle pressure on the veins caused insensibility, then in a vision he saw the place toward which his party was going and all that was to take place was prefigured. In some tribes a skin kept for this special purpose was held sacred and was used for divining by means of an induced vision."⁶⁷ Among the Indians of Ecuador, "those preparing for the feud never omit to first consult the spirits, who will let them know whether in the planned attack they will be successful or not." This divination is carried out through drinking the narcotic *maikoa*. "The Indian for this purpose retires to the forest, where he remains for three days and three nights, fasting strictly and sleeping in a small 'dreaming ranch.'"⁶⁸

67 Fletcher, "Dreams," in HAI, I, 400.

68 Karsten, "Jibaro," in BAE, Bull. LXXIX, 17.

Questioning of the future took various forms among the Homeric Greeks. "Belief in the prophetic nature of dreams was very strong, though less implicit than in other methods of prophecy. The dream was a shadowy creature, sent by one or other of the gods, generally Zeus, which assumed the form of some well-known person; it stood at the head of the sleeper and spoke the will of the deity; or it prophesied or acted in such manner that an omen could easily be drawn." Birds were frequently employed in divination: "Be not a bird of ill omen to me."⁶⁹ Siegfried understands the birds when Fafnir's blood has fallen on his tongue. Many examples may be found among the ancient Scandinavians of divination by the shoulder-blade of an animal; it was warmed until it cracked and the direction of the fissures noted.⁷⁰ The pre-Mohammedan Arabs cast lots on important occasions.⁷¹ Among the Montenegrins of today "a woman can tell if her child will be a boy or a girl by throwing a dried fish bladder on the fire. If it go off pop there will be a boy; if it only fizzles out, a girl." Needless to say, "there are great rejoicings when a boy is born and great disappointment over a girl."⁷² Survivals of divination may be seen today in the reported attempts to locate a drowned person by means of bread thrown in the water—a method described in Mark Twain's *Huckleberry Finn*—and to find a lost child by placing a lock of his hair in a tube held in the searcher's mouth.⁷³

§268. Religious Nature of the Taboo.

NOTIONS of ritual uncleanness, which must be offset by ritual operations, have been a very important part of the mores. The conviction that women, at the periods, are unclean and dangerous is almost universal amongst nature people.¹ Child-birth also produces uncleanness of the mother. A third case is death. Corpses are unclean and make all those unclean who have anything to do with them. There are numerous and various other trifling causes of ritual uncleanness, all of which involve the taboo.

The Bechuana negroes, when they have touched a corpse, dug a grave, or are near relatives of a deceased person, purify themselves by prescribed ritual washings, put on new garments, and cut the hair, or purify themselves with the smoke of a fire in which magic-working materials have been cast. On returning from battle they ceremonially wash themselves and their weapons.² Without this process of purification, they would be unclean, unholy, taboo. In Madagascar no one who had been at a funeral might enter the palace or approach the sovereign for a month and no corpse might be buried in the capital city. The mourners wash their clothing, or dip a portion of it in running water, as a ritual cleansing.³ The Tamils think that saliva renders ritually unclean whatever it touches; therefore, in drinking, they pour the liquid down the throat without touching the cup to the lips.⁴ Pious Zoroastrians could not travel by sea without great inconvenience because they could not help defiling the natural element, water, a thing which they were forbidden to do. They were also forbidden to blow a fire with the breath, lest they should defile the element, fire,

and wore a cover over the mouth on approaching fire for any purpose. Parings of nails and cuttings of hair were unclean; they were weapons for demons unless protected by rites and spells.⁵ The Greeks had the same conceptions of ritual uncleanness. Marriage was surrounded by rites of purification or precaution. Death and the dead produced uncleanness and purification by water, fire, or smoke was required.⁶

Letourneau⁷ cites many cases to illustrate the survival-value of the taboo in developing restraint and discipline and in serving utilitarian ends, as the taboo on chickens and pigs when scarce and other "game laws." Instances of this nature will be mentioned below, as well as others which bring out the religious nature of the taboo.

Taboo-signs among the Koita indicate magical protection of the objects to which they apply; they are trustworthy safeguards, and "it is certainly to the fear of the results of infringing their magical properties, that their efficacy is primarily due."⁸ Before the yam-feasts in New Guinea and New Britain, the principal chief, after certain ceremonies, ties a piece of prepared fiber round the posts of the yam-houses. "This makes them taboo, and no one can touch them"; they have become the property of the spirits.⁹

The sanctity of the taboo and its societal value are indicated in the following quotation regarding the natives of East Africa. "If space allowed of a closer study of native life we should see that the individual is constantly menaced by malignant spirits, the propitiation of which is not merely by sacrifices and charms; not only is the native called upon to perform certain acts and refrain from others, but the detail of many acts is of the highest importance. . . . Breaches of custom not directly connected with law often bring their own punishment, which is the anger of an offended spirit, and is manifested by a sore disease which breaks out all over the body. This is called *makwa*, the direct cause being a breach of custom. The elders . . . know best the cause, and they also know its cure. This they will effect by many curious performances, but it is clear that before they can do so they must question the sufferer about all that he has done, in order that they may diagnose the cause; thus an open confession is essential. This fact gives a great value to the belief in *makwa*, for however secretly a breach of custom may have been committed, it will not fail to require an open confession. The disease designated as *makwa* is invariably venereal, and is now often cured by medical treatment—particularly by certain missionaries, to whom even Akikuyu flock for treatment. The practical result of this may be good, but indirectly it is bad, because the public confession is evaded, and the moral restraint of the belief is in consequence destroyed."¹⁰

The expression *genna* (taboo) is loosely used to cover both the Sema words *chini* and *pini*. *Chini* means "is forbidden" and is used of any taboo. Thus a man may say that he is *chini*, meaning that for the time being he is unable to speak to strangers, or to anyone at all, or to be addressed by anyone. Again, some action may be *chini* or forbidden. In addition to the regular and recurring agricultural *gennas* there are a number of others observed by the whole village, which occur from time to time according to circumstances—

gennas for making peace or war, for repairing the village defenses, or at the birth of some monstrosity. The situation is similar in Assam.¹¹

A variety of religious prohibitions occur among the Nagas of India. It appears that a place or person under supernatural displeasure becomes taboo, "the spiritual infection extending even to the clothes of the household." We have seen that the victims of accident are regarded as sealed to the daimons; in India the taboo descends at large upon the family. "Should any member of a household be killed by a tiger, by drowning, by falling from a tree, or by being crushed by a falling tree, the surviving members of the household abandon the house, which is wrecked, and the whole of their property, down to the very clothes they are wearing, and leave the village naked, being supplied outside the village with just enough clothing to cover their nakedness by some old man amongst their relations. Thenceforth for a month they are condemned to wander in the jungle. At the expiration of this period, the wrath of the deity being supposed to be appeased, they are allowed to return to the village. Neither they nor anyone else can touch again any of the abandoned property, nor can a fresh house be built on the site of the old one that has been abandoned." Again, a household taboo occurs at the birth of a child, or if a domestic animal brings forth young; on such occasions no outsider may enter the house, and food and drink may not be given even to intimate friends. A British official was refused a drink at a house because the household had pups. Of course a period of taboo on labor means a village holiday; an accidental death, or fire in the village, puts the whole community under taboo. "In like manner before commencing either to sow or to reap, an universal tabu has to be undergone, and is accompanied by propitiatory offerings to their several deities, and no man dare commence work before. If their crops have been suffering from the attacks of wild animals, a 'kennie' is the remedy—in fact there is no end to the reasons why a 'kennie' must or may be declared, and as it consists of a general holiday when no work is done, this Angami sabbath appears to be rather a popular institution."¹²

In Cochin China, before an expedition after aloe-wood the village head sacrifices to the ancestors and the guardian spirits of the aloe. He and all the rest must refrain from sex-relations and from eating a specified fish, and their relatives who remain must not quarrel or use cross words.¹³

Wilken¹⁴ cites many cases to prove that "pamali" stands in close relation with religion; and that if it seems on the face of it not to do so, yet its origin will be found in ghost-fear. Taboos are of all places and times; of certain times and conditions; of certain places; for a whole people; or for one or more particular persons. The taboo on names, particularly on one's own, upon that of a father-in-law, parent, or chief, leads to prohibitions of words sounding like certain names; this leads to a multiplication of terms for the same thing, circumlocutions, and change in language. Flesh of animals which are the residence of departed souls is tabooed. Euphemisms form a method of reference to a feared beast, such as the tiger, which is called "the noble one" or "the kind one," much as the Greeks called the Furies the Eumenides. The East Indies show a full set of taboos at pregnancy, birth, sickness, and sacrifice;

11 Hutton, *Sema Nagas*, 220, 226; Hudson, in JAI, XXXVI, 96, 99

12 Godden, in JAI, XXVI, 191 ff.; and in XXVII, 33; Furness, in JAI, XXXII, 465-466.

13 Niemann, in *Bijdr.*, XLV, 335.

14 *Vhde.*, 596 ff.; Lippert, *Kgchte.*, I, 118-121, 390.

there is a cessation of labor and of moving about. When certain places, rivers, or trees are *pamali*, it means that they are regarded as haunts of the ghosts of ancestors. No noise may be made near them and if one goes by he must beg pardon of the spirit domiciled in them. No hunting or fishing may be done there. If fish are scarce, the taboo is laid and coconut-milk is cast into the sea while calling on the spirits. A property-mark, being a taboo, is respected with fear. The religious nature of the taboo is also seen in the use by the Alfurs of the terms *poto* and *koin*, which are synonymous with prohibited and holy, consecrated, inviolable. *Poto* is stronger than *koin*; of it no transgression is thinkable. Against *koin* sin is often committed, sometimes intentionally, for a person can always make good by small sacrifices and thus escape punishment, which is mainly sickness. It is *poto* to speak the names of parents or parents-in-law. When the names are the same as or sound like the names of living or dead objects, then the Alfur must always use for the latter other explanatory words. To a younger brother it is *poto* to look at the mouth of the wife of his older brother while she is eating; if there are many young brothers of her husband in the house, the woman covers her face with a cloth when so engaged. To a woman it is *poto* to marry within forty days after the death of her husband; this time is called the "days of the dead." It is *poto* to sell of the newly harvested rice before the communal sacrificial meal has taken place.¹⁵ It is significant that the sacred color, red, was used by the Maori to taboo an object. The house of death was thus colored; a red post was set up as a sign of a taboo's presence; and grave-marks were sure to be red.¹⁶

While the origin of some of the Eskimo taboos is obscure, their very seeming-whimsicality points to the irrational and daimonic. "It is forbidden, after the death of a sea-mammal or after the death of a person, to scrape the frost from the window, to shake the beds, or disturb the shrubs under the bed, to remove oil-drippings from under the lamp, to scrape hair from skins, to cut snow for the purpose of melting it, to work on iron, wood, stone, or ivory. Women are forbidden to comb their hair, to wash their faces, and dry their boots and stockings."¹⁷ In Pawnee lodges there hang sacred bundles of unknown contents, black with smoke and age, in the neighborhood of which it is forbidden to put a knife in the fire, or throw a knife, or enter the lodge with the face painted or with feathers in the hair. "On certain sacred occasions the bundles are opened, and their contents form part of the ceremonial of worship."¹⁸ It is a rule among the Apache that for the first four times one of their young men goes on the war-path he must not scratch his head with his fingers or let water touch his lips. To keep this rule and at the same time avoid discomfort, he makes use of the scratch-stick and sucks water into his throat by means of a tiny tube called a drinking-reed. "A long leather cord attached both stick and reed to the warrior's belt and to each other."¹⁹ Among the Guiana Indians children are discouraged from picking up certain feathers as these tend to weaken memory or may conduce to insanity. In the case of the Pomeroon Arawaks, "when an animal is killed with an arrow-trap or a gun-trap, its flesh has to be cooked in a pot without a cover, over a fire that it not too large, so as to avoid any water boiling over. Were either of these

matters not attended to, there would be no further use either for the arrow or for the gun, as all the game of the same kind as that recently trapped would take its departure to another region." The power of the taboo in these sections is very great, death being the penalty for violation. On the upper Rio Negro the sacred trumpets are such a mystery that no woman may ever see them. "When the sound of them is heard approaching, every woman retires into the woods, or into some adjoining shed which they generally have near, and remains invisible till after the ceremony is over, when the instruments are taken away to their hiding-place, and the women come out of their concealment. Should any female be supposed to have seen them, either by accident or design, she is invariably executed, generally by poison, and a father will not hesitate to sacrifice his daughter, or a husband his wife, on such an occasion."²⁰

There are many taboos mentioned in the Old Testament, the most famous being that laid upon the tree of knowledge. Uncleaness was the reason for a number of taboos, as applying chiefly to the dead, to sexual intercourse, menstruation, and leprosy. Everything which belonged to Jahweh or was used in his service was also taboo, while the priests, as Jahweh's servants, were rendered taboo through certain rites.²¹ A member of the Jewish sect of the Essenes, who were all celibate men, always wore an apron, even when alone in the bath; for the genitals were impure and must not be uncovered to the eye of God.²² Shoes could not well be washed, unless they were mere linen stockings; they were therefore put off before treading on holy ground.²³

One author "ascribes in great part to the tabu system the loyalty, probity, and courtesy of the Japanese, and their close observance of the forms of natural objects and historic scenes evinced by their art and literature."²⁴

§270. The Industrial Taboo.

IN West Africa, different vocations have different days upon which no work may be done: thus, Tuesday is a rest day for fishermen and Friday for farmers.¹ In Togo, "two days in the week, Sunday and Wednesday, are sacred to the fetish. Nobody may go into the fields on these days and perform plantation labor. These days are also and at the same time market-days. All the people are at home; buying and selling are allowed to them, likewise domestic labors. On Monday and Tuesday as well, special areas of the farms are not worked, because the fetish consecrates these areas on those days. A transgression of these commands is sternly censured, and in addition the transgressor draws down on himself the curse of the gods: he is persecuted by scarcity of crops and ill luck of all sorts. Thursday, Friday, and Saturday are . . . really full labor-days, on which good work must be done."² The Galla, like the Abyssinians, keep two Sundays, Saturday and Sunday, the heathen Galla consecrating Sunday to their great god. The nomadic part of them, however, keep no special day, because herdsmen can keep any day.³

3 Ratzel, *Vhde.*, I, 439.

In Madagascar, prior to 1869, "every idol had a day sacred to it, on which day those who were especially its votaries abstained from work."⁴

The case of the Yakuts, among whom the household of the deceased is not permitted to do any work until after the next new moon,⁵ recalls a prominent detail of the ghost-cult which is also classifiable under taboo. In February there occurs in India a festival in honor of the goddess of learning. "In case any writing has to be done on this day, it is done with chalk, not with the pens, 'which have a complete holiday.'"⁶ In Assam, during the communal *gennas* (taboos) for the crops, all trade, fishing, hunting, and other activities are forbidden.⁷

In Borneo, a "lali" lasts ten days, during which feasting occurs and "no one is permitted to do a stroke of work that resembles the cultivation of rice; a parang or a billiong, or any tool used in felling the jungle, is a strictly lali article; should any restless creature express a desire for active work, he is scoffed at and scorned as a spoil-sport and kill-joy."⁸ Evidently with the weakening of its sanction, the solemnity and strictness of the taboo are here on the wane. There is a "lali" for four days when ground for a plantation is selected; no stranger may enter the house and no dweller in it who has been absent one night. Members of the household do not carry out any extensive work, and do not use an axe. Then come three days of labor and four more of "lali"; then, after ten days, four more are tabooed, after which the work begins for good. In each moon, there are several unfavorable days, during which "it is especially undesirable to build or repair houses or boats; for these would be possessed by an evil spirit which would cause the house to burn down or blow over and the boat to capsize, to break against the rocks, or to drift away from its rattan hawser."⁹

No stranger may enter the Borneo paddy-fields for several days; the public path frequently passes through them, but during the "pamali," a detour must be made. The existence of the taboo is made known by a bunch of dried palm leaves or other conventional sign, placed in a conspicuous position at all the entrances of the forbidden farm. The same practice is used when sickness is in the house, or for the preservation of fruit-trees or other property from interference by the general public. If a Dyak is asked to do anything contrary to custom, he invariably answers that it is "pamali."¹⁰ If the basket in which paddy is put as it is cut during harvest be upset, that farm must rest for a day and a fowl must be killed, or all their paddy will be rotten.¹¹

In northern Celebes, "when a man dies who has been accustomed to fish in any particular place, that place is often declared to be holy. It is given over to the dead, in order that his ghost may come and fish there as he did when alive. It is 'tabu,' as they say in the South Sea Islands, or 'pilah,'" according to the people here referred to. This taboo reflects typical ideas of projectivism and practices of the ghost-cult. It has also distinct social consequences, for "if any one is seen by the family of the deceased to go there in a canoe, or to fish there, he is at once brought before the rajah and becomes a slave of the family of the deceased."¹²

12 Hickson, in JAI, XVI, 142.

In New Zealand, "in former times, life in a great measure depended upon the produce of their cultivation, and it was therefore of the utmost importance that their kumara and taro should be planted at the proper season, and every other occupation be laid aside until that necessary work was accomplished; all, therefore, who were thus employed, were made tapu, so that they could not leave the place, or undertake any other work, until that was finished."¹³ The author intends here to exhibit the essentially rational idea behind the taboo. Somewhat similar is the Tongan custom by which skilled handworkers become tabooed. But it is not reassuring for the case of rationality to find natives, as in Yap, allowed to raise bananas that they may not eat. In the Caroline Islands only those who have the proper training and designation may make the obscene figure set on the gable of the clubhouse; any other will die if he undertakes this task.¹⁴ In the Bowditch Islands the death of the king was the occasion for the planting of coconuts; "if anyone planted them at other times he would die."¹⁵

A strict religious custom forbids the Eskimo to work on the deerskins which are obtained in summer before the ice has formed; they are only dried and tied up in large bundles. Among the Kwakiutl only old women are allowed to dig fern roots. Many taboos surround the canoe-builder. There are other taboos which forbid menstruating women, murderers, and mourners from performing certain kinds of work.¹⁶ The Salish have a tradition that their ancestors used to observe a kind of Sabbath or seventh day ceremony long before they heard of the whites. "According to François and Mary Anne, the people used to come together every seventh day for dancing and praying" though it is "extremely improbable that the old-time Indians had any conception at all of a Supreme Being."¹⁷ A sort of game law exists among the natives of Guiana. "If Indians hunt too many of one kind of game, the Bush Spirit of that particular animal may come and do them harm." The Indian must never himself bring into the house any game that he has caught, but leave it for his wife to carry in. "The reason given for this custom is that, were the food to be brought home direct by the man he would have bad luck in fishing or hunting on the next occasion."¹⁸

"The seventh day is the sabbath of the Lord thy God: in it thou shalt not do any work." The Hebrews borrowed the term and some of the ideas associated with it from the Assyrians and Babylonians. As a day of rest it was an adjustment characteristic of the agricultural stage, being unknown among any nomadic group. It was probably solely religious in origin.¹⁹ In Rome anyone who did not cease labor on holy days was fined.²⁰

§271. The Food-Taboo.

MANY food-taboos seem to be quite irrational. It is reported of the Tasmanians, for instance, that they "would rather starve than eat fish."¹ Some Australians will not eat pork.² The Australians eat worms, rotten eggs, and other things

of the sort and also plants which we reject because they taste badly or offer little nourishment; but on the other hand, they reject certain fish, molluscs, and fungi which we eat.³ Totemic practices account for some food taboos. In Central Australia "the people of the emu totem very rarely eat the eggs unless very hungry and short of food, in which case they would eat, but not too abundantly." The same principle holds good through all totems.⁴ Notions akin to imitative magic account for other food taboos: "No sooner does a boy begin to go about in the bush in search of food than he finds himself very considerably restricted as to what he may and may not eat. . . . Should he eat kangaroo tail or wild turkey, or its eggs, then he will become prematurely old; parrot or cocatoo flesh will cause the growth of a hollow on top of his head, and of a hole under his chin; large quail and its eggs cause the beard and whiskers not to grow; any part of the eaglehawk other than the sinewy legs will produce leanness, though the strong legs are admirable, as they improve the growth of the same limb; in fact, to strengthen the limb, boys are often hit on the calf by the leg bone of an eaglehawk, strength passing from the one into the other. Should the podargus, or night jar, be eaten then the boy's mouth will acquire a wide gape."⁵

Some Melanesians will not eat eels. There are ghosts in them.⁶ In a book dealing with native life in Florida of the Solomon group "an old native is represented as horror-struck at the sight of dark blue trousers, because some part of the inside of the shark, of a dark-blue colour, was a forbidden thing to his family. . . . In the island of Aurora, in the New Hebrides, mothers sometimes have a fancy, before the birth of a child, that the infant is connected in its origin with a cocoanut or breadfruit, or some such object, a connection which the natives express by saying that the children are a kind of echo of such things. The child, therefore, is taught not to eat that in which it has had its origin, and is told, what the mothers entirely believe, that to eat it will bring disease."⁷ Rivers⁸ mentions a large number of animals which are not eaten, including the shark, the sea eel, and the octopus, but in every case a definite motive was given for the abstinence. "Thus, the shark is not eaten because it is believed that those who eat it would be caught by a shark when in the sea, and the eel is avoided because it is believed to be poisonous. Further, it seemed clear that the abstinence is observed by the whole population, and is in no way different for the members of the different social groups." In some sections a taboo is placed on coconuts. "A *tapu* is only imposed when the trees are not bearing well and is usually maintained till the nuts which have dropped from the trees have begun to sprout and are ready to be transplanted. The general *tapu* imposed by the chief of the Tafua on coconuts is but one example of a wide-spread practice among the Tikopians. Any chief may *tapu* a special place in order that the trees may grow to a proper size before the fruit is taken and anyone can initiate such a *tapu* which is later confirmed by a chief." Among the Roro-speaking tribes, there are special functionaries who alone have the power of pronouncing the most dreaded, and consequently the most rigorously observed, form of taboo on vegetable food. They are in fact taboo experts, and the office is hereditary. Among the Elema tribes the name for these men and the masks they wear is *harihu*. "The sign that a garden

is tabooed is a small stone of a special shape placed at the entrance to the garden. It has on it certain 'private marks' of the *harihu*, to tamper with which would render the offender liable to instant death."⁹

One tribe of African Bushmen will not eat goats, though they are the most numerous of the local domestic animals. The Hottentots share the general South African prejudice against fish to the extent of disdaining all those without scales. "As a rule . . . all the South African Bantu peoples abhor the eating of fish, which animals they call 'watersnakes' and avoid even touching them. Many eschew also the eating of pork but this does not occur so generally and not with the fanaticism shown in the rejection of fish," which are tabooed even by the tribes living near rivers.¹⁰ Among the Zulus, bananas are reserved as a royal food.¹¹

The following foods are prohibited to the cowmen of the Bahima: "any part of goat, sheep, or fowls; among vegetables, peas, beans and potatoes. To eat these and at the same time to drink milk would endanger the life of the cow from which the milk comes, and her calf."¹² Social distinctions account for some of the food-taboos of the Atharaka: "wild birds and fowls are not eaten except by uncircumcized children; eggs are not eaten by anyone. The reason that they give is that the circumcized people wish to make a distinction in the matter of diet between themselves and the uncircumcized. I suspect the existence of some other reason. Fish is not eaten by anyone; however, I am told that there is no prohibition, but that a man would be sick if he did so. Wild animals, cattle, sheep, and goats are all eaten by the Atharaka, but each person according to his sex, rank, relationship, and position in the village has his particular portion. The elder of the village eats the head, the heart, the front leg, and the spleen. The latter must not be boiled, but roasted, and eaten in company with other elders of the same standing as himself."¹³ The Ba-Yaka of West Africa do not use milk as food.¹⁴ In the Upper Congo, "milk was tabued by all and regarded with great abhorrence. Anyone drinking it was considered unclean for several days and was not allowed to eat with his family. They could touch milk, for they milked our goats and sheep, and carried it to us without suffering defilement, but it must not touch their lips. A boy of mine was known to have drunk some milky water out of a glass, and he was not permitted to eat with his family for five days. They could give no reason for this, but only stated it was their custom." Taboos among the Bangala in this region apply even to the manner of drinking; the author cites a number of examples. "All these various modes of drinking are rigidly followed out of regard to the strict injunctions of some *nganga* or medicine man, who has told them that in order to prevent the return of a sickness from which they have suffered or to escape some disease they must drink in such and such a manner or not at all." The only fish that all the natives refused to eat was the electric fish. "Nearly all fish were tabu to one person or another, and in very rare instances I have known persons not allowed to eat any kind of fish, they were all tabued." Food-taboos here have affected the methods of marketing, as is brought out in the significant quotation which follows: "If the

owner of an animal wished to sell the flesh in open market the skin was not taken off, but the animal so cut up that a piece of skin was left on each portion. The buyer could then see the kind of animal flesh there was for sale, and would know for a certainty whether it was tabooed to him or not."¹⁵

On the lower Congo, when a famine threatens, it is forbidden to collect palm-fruit under penalty of death.¹⁶ In Togo individual taboos arise out of vows in honor of a chosen fetish, at marriage, for instance, and are strictly observed through life; and there are general restrictions, especially on widows, who may not for the first six weeks of mourning eat beans, meat, or fish, or drink palm-wine or rum. If they do, the departed husband gets power over them and at once hales them away to the spirit-world. "During menstruation women may not drink milk, lest the cattle die." Members of a certain society may not drink the rain-water that flows from the roof. "The head of a household never quite finishes what he has on his plate, and the eldest son is the only one who can do it for him." Of these many taboos, a number "are laid solely with the object that they shall remain quite often unnoticed, in order thereby to give into the priest's hand a ready means of dragging light-minded sinners to punishment."¹⁷

The yam-customs of the Gold Coast represent both "a thanksgiving to the fetishes for allowing their people to live to see the new yams, and for the new yams, but they are also institutions to prevent the general public eating the new yam before it is ready. The idea is, no doubt rightly, that unripe yams are unwholesome, and the law is that no new yams must be eaten until the yam custom is made. The fetish-men settle when the yams are in a fit state to pass into circulation, and then make the custom." It is thought to be very perilous to eat of the new crop prior to that time. In Calabar the taboo on a certain food is called "ibet" and attaches to individuals; if one buys a slave he always inquires as to the slave's "ibet," for if he were given his "ibet" to eat he would fall ill. A person's "ibet" is discovered by magic shortly after his birth and he has to keep to it. In New Calabar the bull was at one time worshipped, but fresh beef was "ju-ju" until recently. The negroes of the French Congo "have a perfect horror of the idea of drinking milk, holding this custom to be a filthy habit, and saying so in unmitigated language. . . . Among Congo Français tribes certain rites are performed for children during infancy or youth, in which a prohibition is laid upon the child as regards the eating of some particular article of food, or the doing of certain acts. It is hard to get the exact object of the 'Orunda.' The prohibited article is not evil in itself, for others but the inhibited individual may eat or do with it as they please. Most of the natives blindly follow the custom without being able to give any reason, but from those best able to give a reason, you learn that the prohibited article is a sacrifice ordained for the child by its parents and the magic doctor as a gift to the governing spirit of its life. The thing prohibited becomes removed from the child's common use and is made sacred to the spirit." In one case a chief, "when given a glass of rum, had a piece of cloth held before his mouth that people might not see him drink. This was his Orunda."¹⁸ One of these Africans said he did not dare eat of a fowl, as it was *orunda* to him;

another's *orunda* was that when on a journey by water his food should be eaten only over water.¹⁹

There are numerous food-taboos among the natives of South Cameroons. If, for example, a person is healed through medicine which the priest has made from fowl, he may never eat fowl again. Leopards' flesh is interdicted because, according to tradition, a native woman once gave birth to leopards. Parents may forbid their children to eat certain foodstuffs, and these taboos hold as long as the former are alive.²⁰ On the Loango coast various foods are set before a child, and the one to which he shows aversion is, from that time on, his "xina" or "quixilles." Goat is not eaten lest the skin scale off; nor chickens, lest the hair fall out; nor birds, lest one's descendants be born with crooked feet. Not a few negroes eat nothing at all that has blood and life. Chiefs refrain, in some localities, from wild meat or pork.²¹ The Banziri of the Congo basin eat dog-meat with great relish but it is "rigorously forbidden to the women, who have no part in preparing the dish. They believe, or affect to believe, that it would make women sick. So rigorously is the prohibition kept, that the Banziris wash themselves carefully after eating dog before touching a woman, if only with the tips of their fingers."²²

In Borku, with circumcision "ceases the privilege of eating chickens and other fowls, fish, and eggs," foods regarded as improper for men.²³ Chickens are held in abomination by the Gallas and other tribes to the east. Wild meat is disdained and eaten only in need; this seems to be due to the prevalence of domesticated cattle and the lack of weapons with which the best wild animals could be brought down. Birds and fish are not eaten by the higher classes, though the rivers and lakes are full of fine fish. The Somal have a proverb: "Speak not with the mouth that has eaten fish." Where fish are eaten, only those with white flesh are allowed.²⁴ Poultry is abjured elsewhere in East Africa as unwholesome and unmanly; since neither poultry nor eggs are eaten it is hard to say why they keep fowls. Some of the tribes near the Zanzibar coast have learned to eat fish when visiting the shores.²⁵ The Madagascar "fadi" is laid chiefly against pigs, the chief abomination; other forbidden animals are dogs, fowls, crocodiles, and snakes. Some of the most nourishing vegetables, as manioc-root, are tabooed by certain individuals or families.²⁶

The old rule in East Africa was that a man could not drink liquor until he had a circumcised child, but times have changed and at the present day youths of all ages drink.²⁷ In Equatorial East Africa cow's milk is not drunk, it being regarded as robbery of the calf—probably a rationalization.²⁸ Among the Kikuyu *thahu* is a sort of ill luck or curse following upon certain acts, many of which seem largely arbitrary. "If a woman is milking a cow and the calf climbs up on her shoulders while she is so occupied, the calf is not allowed to suckle the cow again and is forthwith slaughtered; this is a case for the elders. The people of the village must not eat any of the meat, half is taken by the woman to her father and the other half is eaten by the elders." *Thahu*

is also called *thabu*, thus bearing a strange similarity to *tabu*, and "in many ways there is very little difference between *tabus* and *thabus* or *thahus*."²⁹ The pastoral Masai not only do not fish in any of the lakes and rivers, but they regard fish as a most unwholesome food. The agricultural Masai obtain fish by trapping and spearing, and eat it in much the same way as do their Bantu neighbours. The agricultural Masai also keep a few fowls, and eat them, together with their eggs; but fowls and eggs are absolutely eschewed by the pastoral Masai, who never keep this domestic bird. Among the Bantu Kavirondo, women do not eat fowls, sheep, or goats, and are not allowed to drink milk as a beverage, though they may use it in a kind of soup mixed with flour or meat. "In some instances chiefs do not eat sheep or fowls. People of both sexes may eat the flesh of the serval cat, and many of them will eat leopard meat. They devour most other birds and beasts, except the lion, vulture, crowned crane, and marabou stork. It is easy to understand their rejecting the last-named bird as an article of diet, because it is as filthy a scavenger as the vulture. Their respect for the *crowned crane*, however, actually seems to be due to admiration for its beauty, and the bird is found in large numbers in the Kavirondo country, where it is practically protected." All these people, except perhaps those of Mount Elgon, are like the Masai in their love of blood as an article of food. "They periodically bleed their cattle, and drink the blood hot, or else mix it with porridge. The women of all these tribes do not eat fowls, and neither men nor women eat eggs. As amongst most negro races, the men feed alone, and the women eat after the men have done."³⁰

The Tuareg nobles taboo the flesh of the camel and sheep, and abominate fish, birds, and eggs. The heart and intestines of animals are eaten only by men, the liver and kidneys by women.³¹ The Dinka are said to be more particular than other tribes in the choice of their animal food. There are many creeping things, not rejected by the Bongo and Niam-Niam, which they loathe with utmost disgust. Crocodiles, iguanas, frogs, crabs, and mice they never touch; they use turtles for making soup. The cannibalism of the Niam-Niam excites horror among them. Nothing is more repulsive to them than dog's flesh, which is enjoyed by the Mittoo. Dinka as well as Bongo have declared to the writer in the most decided manner that they would rather die than eat the flesh of a dog.³² There are many "don'ts" connected with cooking among the Hausa, for not only the eating but also the preparation of food is dangerous. "It is not only the food which has to be considered. If your totem is a tree, do not eat food which has been cooked on a fire fed with its wood, for if you do you will become ill, and perhaps die. . . . Meal-times are always dangerous. . . . Do not eat anything against which you feel a repulsion, especially if your heart rises, your hair stands on end, or your flesh creeps, for your guardian-bori is setting you against it for your own good. From personal experience I can vouch for the fact that a European often experiences such sensations when near a Hausa dainty dish."³³

"The Beja, the half-Hamites, and the Nilotes all have a large number of customs which have this in common, that they are connected with the chief product of their herds, *viz.*, milk, or with the grass upon which they feed. I am inclined to think that love and veneration are not too strong terms for the feelings towards their cattle which I believe form the basis of that special re-

²⁹ Hobley, in JAI, XL, 430, 434.

gard for milk and grass which occurs under varied forms among many of the tribes that have a strong infusion of Hamitic blood, or who have adopted elements of Hamitic culture. None of the Beja tribes with whom I am acquainted milk into a clay vessel or put milk into one of these, in spite of the fact that many of the Hadendoa make pots. Nor would it be permissible to milk into one of the modern tin bowls which Europeans have recently introduced into the country. Gourds and basket vessels, especially the latter, are considered the appropriate receptacles for milk, though skin vessels, *girba*, may be used. . . . There are also customs concerning the cooking of milk which vary from tribe to tribe; thus the Beni Amer and Bedawib commonly cook their milk by dropping into it hot stones as it stands in one of the wide-mouthed basketwork vessels called in Arabic *umra*. On the other hand, the majority of Hadendoa will not cook milk, and in this the Artega and Ashraf resemble them. Among the Artega, Ashraf, and Hasa only men may milk camels or sheep, and these tribes despise the Arab Zebediya, recent immigrants from Arabia, for allowing their women to milk their animals. . . . These facts all indicate that milk is not 'common' (using the word in its biblical sense) among the present day Beja; it might, indeed, almost be called sacred or sacrosanct. This is also the attitude of the southern Galla in British East Africa, for Miss Werner informs me that the only legitimate receptacle for milk, which may never be boiled, is a basket-work vessel called *gorfa*. . . . Among half-Hamites there are numerous ceremonial observances connected with milk. Gourds are the only vessels in which it may be received or stored. Milk may not be boiled."³⁴

Mongols do not eat fish at all, or birds. "The Mongol abhors birds; every day I shot several partridges or bustards, and when I offered them to my Mongols, they turned away from me with signs of aversion."³⁵ The Chukchi use fish only in case of necessity, and have a distinct aversion to salt.³⁶ The Tungus will not eat reptiles and amphibians.³⁷ There is a general absence of food-taboos among the Saoras but the marriage of a girl into another class taboos beef for her. The Nagas abhor milk, though they will eat meat that has been three days buried. Milk is repulsive to the races bordering Assam. "It is a custom for no man in the North to eat the liver of any animal during his father's life-time, as it is deemed disrespectful to do so." It is significant that food otherwise tabooed may be eaten if offered in sacrifice; a discarded or tabooed food may be thus temporarily restored by the conservative cult. The almost omnivorous Veddahs will not eat cow or fowl. In southern Cochin China the children and grandchildren of a deceased person eat no meat.³⁸ In India the horse is a luck-bringing animal whose flesh is somewhat tabooed. "Eating horse flesh is supposed to bring on cramp, and when a sepoy at rifle practice misses the target, his comrades taunt him with having eaten unlucky meat."³⁹

The Kayans eat lizards quite as little as do we; they are *lali* (taboo); "only to children and old men is it permitted to eat these animals."⁴⁰ The Dyaks eat

snakes with gusto, but the swarming eels are held in aversion. Dyak taboos cover more or less strictly the flesh of cattle, buffalo, deer, she-goats, and hens, and also cows' milk and butter. The bull and cow are revered; and food prepared with butter is refused. One tribe will not kill a certain animal or eat it, while a neighboring tribe will. In southern Formosa, fish were tabooed.⁴¹ Hose, one of the authors just quoted indicates a reason for these taboos: "when the soul separates from the body, it is supposed to take the form of an animal or bird, and, as an instance of this belief, should a deer be seen feeding near a man's grave, his relatives would probably conclude that his soul had taken the form of a deer, and the whole family would abstain from eating venison for fear of annoying the deceased." The deer would have become then a fetish-animal, to be tabooed. The Nicobarese entertain the same general aversion to the use of milk as an article of diet which is common to the various races of Indo-China and the Archipelago.⁴² In the islands Luang and Sermatta, a sexual taboo is involved in the custom by which the husband gives a feast after a birth, at which only women may be present. "It is believed that any man tasting the food will be unlucky in all his undertakings."⁴³

Significant again is the removal of the taboo upon solemn religious occasions. The Areoi, "a strange association of men and women, who prohibited the rearing of any offspring and practiced total infanticide, at the feast of admission to their society 'removed the tabu on females who partook with men of the pig and other sacred food.'" Polynesian women were formerly not allowed to eat eels, "and to this day they mostly turn away from this fish with the utmost disgust." In New Zealand, "women were allowed to eat what men ate, but human flesh was generally denied them."⁴⁴ Dogs and swine, where they have them, are kept for the nobles in Polynesia. They are very fond of fat, specially that of swine, and eat great quantities of it, even when rotten. Only common people eat rats; on Tahiti only women.⁴⁵ On Easter Island, as a sign of mourning, the taboo was laid upon the potato-fields or upon some other prized food-supply. Sea-birds' eggs, representing the chief god, were obtained from a certain island, which must not be visited for nine months in the year.⁴⁶

The Micronesian taboo covers chickens and pigs. In the Marshall Islands the chief can taboo the coconuts. In the Carolines, the eel is held in the greatest horror, being called "the Dreadful One"; and the turtle, being sacred to the gods, is eaten only as a sacrifice in case of illness. In the Pelew Islands the chicken was once the symbol of bravery and tabooed; but contact with foreigners has led the younger generation and especially the women to break over the restriction. Participants in the catching of flying-fish must avoid association with women, the crossing of a brook, or the climbing of a mountain. They must not eat fish caught within the reefs.⁴⁷

The Eskimo taboo certain foods to menstruating women. Greenlanders and

Lapps will not eat the hare. For superstitious reasons the Indian of the American northwest coast will not eat whale blubber.⁴⁸ Among some tribes of British Columbia, "should a pubescent girl eat fresh meat, it was believed her father's luck as a hunter would be spoiled thereafter. The animals would not permit him to kill them; for it was held that no animal could be killed against its own wish or will. Indeed the Indian looked upon all his food, animal and vegetable, as gifts voluntarily bestowed upon him by the 'spirit' of the animal or vegetable, and regarded himself as absolutely dependent upon their goodwill for his daily sustenance. Hence his many curious customs and observances to propitiate the 'spirits' and secure their favour and regard. All his food taboos are conceived and carried out with this intention." Frequent deaths are taking place in Salish bands, and some of the old people do not hesitate to attribute this to the disregard of their old customs and practices. "Others attribute it to the white man's food, of the 'taboos' of which they are ignorant, and so suffer in consequence. For they imagine that we have food restrictions and taboos similar to their own, to disregard which means sickness or death."⁴⁹ Dorsey⁵⁰ lists a set of taboos on animals and parts of animals not touched or eaten by divisions of the Omahas and other Indians. Taboos rest upon the calf, especially if its hair is red. The system is too derived and detailed to be explicable, but is closely connected with totemism. The Navaho will not eat fish or pork, believing "with an earnestness that characterizes all his ideas, that if he should eat fish . . . his body would swell up to an enormous size and his skin break out in sores, while the fish-bones, whether he has eaten them or not, will come out through these sores." In Navaho mythology appears "that curious and widespread tabu with respect to eating in the underworld, or abode of the dead, known to classical readers as the myth of Persephone, but which, with slight modifications, appears in the lore of almost all races." The Mohave would not eat the lizards, turtles, beaver, and certain of the wild seeds utilized by their neighbors. Another tribe refused to eat fish. "This tendency led to specialization along certain lines of food-procuring instead of the utilization of all possible means of subsistence which the country scantily afforded."⁵¹ Here we have the persistence of a taboo in the face of economic necessity or at least in the presence of opportunity for a higher grade of well-being. Although fish and bear were found in abundance in the country of the Apache, they were not eaten, being tabooed as food.⁵² Pork is rarely eaten among the tribes in the Southwest of the United States and Northern Mexico, owing, perhaps, to Indian beliefs concerning swine, although the writer has been told a number of times by the natives that they dislike the taste of the meat. The Tlauhilttec, though living for centuries near the whites, still avoid milk, and no hogs are seen in their village. The Walapai eat no lizards or snakes, nor do they eat dogs or coyotes, but they like the flesh of the badger. They eat also the hawk but not the eagle. Field mice are "good." This tribe does not eat fish, saying that they smell bad, but there is, as with the Apache and some Pueblos, a mythical background for this peculiarity. The Navaho, besides tabooing fish, avoid eating bacon. The latter was given them during the captivity of a portion of the tribe at the

Bosque Redondo, and as many died at that time the bacon was suspected of being the cause.⁵³

The Guiana natives show a deep aversion to the eating of European swine. Some of them refrain from eating the big river-fish, though they use those found in brooks and ponds; and they will not eat game hunted with dogs or killed with guns. Certain tribes of Brazil abominate eggs, and reject milk, cheese, butter, beef, and the flesh of all their domestic animals, including fowl. The last they regard as members of the family. Again, the men alone eat venison.⁵⁴ All tribes of the Surinam Indians agree in refusing to eat the flesh of such animals as are not indigenous to their country but introduced from abroad, such as oxen, sheep, goats, and fowls. "It must, however, be added that, under great pressure of circumstances, such as utter want of other food, these meats are occasionally rendered eatable by the simple ceremony of getting a *piaman*, or even occasionally an old woman [who may play the rôle of *piai*, or medicine-man], to blow a certain number of times on them; apparently on the principle that the spirit of the animal about to be eaten is thus expelled. . . . In Cayenne, they do not eat fowls (*poules*) and other birds though they be delicious; they imagine that out of spite these animals would cut their stomachs to pieces, gnaw their intestines, and cause frightful colic with the beak and spurs, although only the meat portion should be eaten." It would appear that in the olden times, it was strictly taboo for any one to take a meal after nightfall, though the true reasons for such a restriction are seemingly not now obtainable. "The certain punishment for infringement of this taboo was the transformation of the offender into some bird or beast."⁵⁵ Salt and bacon were despised by the Bororo. These Indians planted the mandioca and maize at some distance from the village so that the children could not eat the green and unripe husks of corn before they had been blessed by the priest. A similar ceremony is repeated whenever a large animal such as a tapir or wild pig, or some large fish is shot. "It is the firm belief of the Bororo that should anyone touch unconsecrated meat or maize before the ceremony has been completed, he and his entire tribe would perish."⁵⁶ The deer is the incarnation of a demon; "the Jibaros, therefore, never eat the flesh of the deer or even touch it with their hands." Food-taboos are prominent features of the ceremonies prescribed by Jibaro custom to protect the victor against the spirit of his slain enemy. "If one asks what ideas underlie the choice of the slayer's food—palm top, beans, mashed manioc, etc.—the Indians only give the explanation that he ought to eat such light kinds of food that remain in his stomach and which he does not run the risk of throwing up, which evidently would be regarded as dangerous for him. Their idea is, no doubt, that a very indigestible or irritating food could become a means through which the invisible, supernatural enemy of the slayer—the spirit of the killed enemy—could get an opportunity to harm him, perhaps cause his death. . . . That monkeys' flesh is forbidden to the slayer is due to the great likeness of these animals to man. The spirit of the dead enemy may hide in such an animal and cause the death of the slayer in case he tries to shoot it in the forest or eat of its flesh." It is recommended for the slayer to eat the flesh of the agouti.

⁵³ Hrdlička, in BAE, Bull. XXXIV, 20, 23, 26.

⁵⁴ Von Martius, *Beiträge*, I, 621, 403; Lippert, *Kgchte.*, I, 485; Von Koenigswald, in

⁵⁶ Frič and Radin, in JAI, XXXVI, 392 (quoted); Von den Steinen, *Zent. Bras.*, 490.

"This small rodent is very shy and runs fast, being rather difficult to catch. By eating the animal the slayer will acquire the same quality, at present very useful to him. Similarly the fish *wámbi* is known as very shy and quick, great skill being required for catching it. The large fish *nápi* also cunningly hides in the depths of the great rivers and lagoons, thus easily escaping his persecutors. Even this fish, therefore, possesses qualities which are useful for the Jibaro warrior who is trying to evade his enemies."⁵⁷

The fish-taboo is found among the aborigines of the Canaries,⁵⁸ and a strong aversion to fish as food persisted in Homeric and old Egyptian times. Egyptian priests who ate of it were considered unclean. The taboo is often noticed in the ritual.⁵⁹ In classical times cows' milk was not considered wholesome by many Greeks, and a generation ago only one cow was reported to be kept for milk in all Attica.⁶⁰ Plutarch, in consequence of a dream, abstained for a long time from eggs. One night, he tells us, when he was dining out, some of the guests noticed this, and got it into their heads that he was "infected by Orphic and Pythagorean notions, and was refusing eggs just as certain people refuse to eat the heart and brains, because he held an egg to be taboo as being the principle of life." As propitiatory offerings to the dead, eggs became "purifications" in general, and were tabooed as food.⁶¹ "Among the Hindus the horse, the ox, the sheep, and the goat are mentioned as [sacrificial] victims; amongst the Greeks and Romans, oxen, sheep, goats, and pigs; though in ancient Italy it was regarded as sinful to kill and eat the plough-ox." The sacrifice of horses, and the eating of horse-flesh implied thereby, Schrader⁶² regards as a custom which spread at a relatively late date through the northern peoples owing to Persian influence. The Phœnicians were forbidden to eat the flesh of both swine and cows.⁶³ In the Old Testament is listed what may and may not be eaten of beasts, fish, and fowls.⁶⁴ In the poetry of the old Norse the eating of carrion is spoken of as a sin.⁶⁵ The bones of horses found in ancient British caves indicate that these animals were an article of food. The Christian ecclesiastics forbade horse-flesh because the heathen ate it in honor of Odin. Modern prejudice against it is believed to be due to this fact.⁶⁶

The Christian Church has aided in bringing food-taboos down to modern times. In 817 the Council of Aix la Chapelle forbade monks to eat poultry except during four days at Easter and four at Christmas, it being luxurious. But for a long time poultry and fish were regarded as identical in the eyes of the church. In the middle of the thirteenth century Aquinas ranked poultry amongst species of aquatic origin. When the church forbade poultry on fast days it excepted some kinds of aquatic birds and amphibious quadrupeds. For a long time the laws of the church about eating milk, butter, cheese, and eggs in Lent were unsettled. Eggs were eaten without scruple, since hens were thought to be aquatic. At first, especially amongst monks, dishes were prepared with oil instead of butter; but in northern countries animal fat had to be used. The discipline as to butter and milk varied very much. Papal dis-

pensations to use butter were only obtained on onerous conditions. Anyone who ate meat on forbidden days was liable to fine or imprisonment, scourging or pillory. Clement Marot was imprisoned and nearly burned alive for eating pork in Lent. In 1534 the bishop of Paris granted dispensations to cease fasting to a lady eighty years old, only on condition that she should take her meals out of sight of every one and still fast on Fridays. Erasmus says: "He who has eaten pork instead of fish is taken to the torture like a parricide." In 1549 Henry II forbade the sale of meat in Lent to persons who had not a doctor's certificate. Charles IX forbade the sale of meat to the Huguenots. The butcher must take the address of every purchaser, even if he had a certificate. Later the certificate must be endorsed by the priest, specifying the quantity of meat. Even then pork, poultry, and game were forbidden.⁶⁷ Through the intervention of Boniface the Germans were forbidden to eat hare, beaver, jay, raven, and stork.⁶⁸ On the basis of taboos in the Old Testament and in the Talmud the Jews of today are forbidden to eat various kinds of food.⁶⁹

§272. The Property and Civic Taboos.

THE following cases are illustrative mainly of the civic taboo and especially of sanctuary. In Central Australia may be found a tabooed location which is the germ of sanctuary, of a city or house of refuge. "Everything in its immediate vicinity is sacred, and must on no account be hurt; a man pursued by others would not be touched as long as he remained at this place."¹ In the neighborhood of Port Darwin is a neutral zone of some eight or ten miles, upon which no habitations are erected, where game remains unmolested, and where none trespass without good reason.² This is an example of the place-taboo.

There are various ways of denoting ownership in D'Entrecasteaux, some of which have a magical sanction attached to them. Stones are sometimes used in the banana-plantations, and woe betide the man who removes his neighbor's landmark. "Many other trees, especially the bread-fruit, and the coco-nut and betel-nut palms, are protected by taboos. You find a coco-nut palm leaf tied round the trunk or laid at the foot of the tree. . . . Emaciation is the penalty for the infringement of this taboo, and the whole hamlet will point the finger of reproach at the delinquent; his only cure is to bathe frequently in salt water. Sometimes a native will expectorate on his trees, making his saliva red by chewing betel-nut; then bloody pustules will form all over his body, and especially on the face and head, of any one who breaks the taboo." The authors³ state that, despite all their taboos, the natives have never been inspired with a faith strong enough to make them keep the law and respect their neighbors' property, especially their fruit-trees and betel-nuts, but add that "no doubt the trees of a man famed for his skill and magic would be properly respected." Among the Marutse of South Africa is a city of refuge whose neutrality is sanctioned by the military power of a confederation.⁴ In West Africa there is but one escape from the penalty and inconveniences of

accusations of witchcraft, and that is flight to a sanctuary. There are several sanctuaries in the French Congo, the great one in the Calabar district being at Omon; thither mothers of twins, widows, thieves, and slaves flee, and if they reach it, are safe.⁵

In the Pelew Islands if a festival is near and a shortage of necessary articles is feared, a taboo is laid upon them. Betel is passionately desired; there is little of it and it is difficult to raise; and it is most often the object of taboo. The chief may lay a taboo but custom controls him in so doing. It has a religious, mysterious sense, or is aimed at social expediency. No bread-fruit tree may be felled for a canoe without the chief's permission and payment to him. All turtles taken must be given to the chief. Several special taboos are cited: to go about on land with a fish-spear in hand; to own more than five such spears; to strive and come to blows with others; to cover the head and upper part of the body when in the town in the day-time.⁶ In the Mortlock Islands the chief regulates by taboo but may not handle it capriciously. The taboo when laid is very strictly observed. Generally at the time of the bread-fruit harvest, for three or four months, coconuts are tabooed and must not be plucked, "in order that a sufficient store be made of old nuts, which the chief preserves." In this "political-economic provision for the tribe" the chief may also lay a "puanu" upon bread-fruit and sometimes even forbid fishing or allow it to certain persons only. This happens in order to restrain the people from frequenting the shore and the neighboring coco-groves, and so has, as everywhere, a practical basis, to prevent the need that often prevails upon these islands.⁷

On the island of Yap, limitations in the use of the soil are frequently met with; one writer thinks that "perhaps wise law-givers have by this means sought to prevent a too intensive use of the soil and overpopulation. This view receives a certain support in the circumstance that a long time ago the island was notoriously overpopulated, so that even infanticide is said to have existed. But since the great majority did not permit their actions to be determined by considerations for the general well-being, the shrewd law-giver took superstition to his aid, to reach by means of it his national-social aims."⁸ We regard such an explanation as mythologizing in the same sense that the stories of Minos and other "law-givers" are myth-making about a core of reality, the core being the development of such preventive and preservative methods by the impersonal process of adjustment.⁹ In ancient Hawaii land was tabooed so that no one could leave it until the taxes were fully paid. When they were, the priest and people chanted a prayer and the land was freed.¹⁰ A "city of refuge" is reported from the Sandwich Islands for women, children, and even conquered warriors. Flags floating at the four corners of the sacred enclosure indicate its nature.¹¹

A war-taboo, whereby the land was closed to aliens, is the "making of lines." Castañeda's account of the first meeting of Spanish soldiers and Hopi warriors mentions a Tusayan custom which has survived to the present day. "The Indian warriors drew a line [of meal] across the trail which led to their pueblo to symbolize that the way was closed to the intruders." In the same way they symbolically close the trails today with sacred meal.¹²

The houses of the two hereditary chiefs of the Osages became sanctuaries not only for the people of the tribe, but also for members of other tribes, including enemies who were allowed to seek refuge there. "These two houses were made to represent the earth and all life contained therein. . . . Two doors were given to each of these sacred houses, one facing east and the other west, and an imaginary line running from door to door symbolized the path of the sun, which daily traverses the middle of the earth."¹³ Williams¹⁴ has written as follows of the Indian sanctuary of Paradise Valley near Mt. Rainier: "Here was the same bar to violence which religion has erected in many lands. The Hebrews had their 'Cities of Refuge.' The pagan ancients made every altar an asylum. Mediæval Christianity constituted all its churches sanctuaries. Thus, in lawless ages, the hand of vengeance was stayed, and the weak were protected. So, too, the Indian tradition ordained this home of rest and refuge. Indian custom was an eye for an eye, but on gaining this mountain haven the pursued was safe from his pursuer, the slayer might not be touched by his victim's kindred. When he crossed its border, the warrior laid down his arms. Criminals and cowards, too, were often sent here by the chiefs to do penance."

Holy places were common amongst the ancient Arabs.¹⁵ "The god gave shelter to all fugitives without distinction, and even stray or stolen cattle that reached the holy ground could not be reclaimed by their owners. What was done with these cattle is not stated; possibly they enjoyed the same liberty as the consecrated camels which the Arabs, for various reasons, were accustomed to release from service and suffer to roam at large. These camels seem to be sometimes spoken of as the property of the deity, but they were not used for his service. Their consecration was simply a limitation of man's right to use them."¹⁶ A number of references to cities of refuge occur in the Old Testament.¹⁷

§274. Sin.

NEARLY all calamities are explained by the South Sea Islanders as due to "some accident, or wrong action which they have done in their youth."¹ In New Caledonia "no whiskers was considered a sign of wickedness, a curse from the gods, and the mark of an outcast."² Though all the Gilyak have certain common religious and social laws which must not be broken, there are, besides, certain prohibitions, the forms of which are peculiar to a given clan. "The breach of these latter rules constitutes a 'sin' for that clan only. . . . Not only is the breaking of a taboo a sin, but also failure to perform religious duties. The sin of an individual acts in such a case to the detriment of the whole clan; just as, on the other hand, the observance of socio-religious duties is essential to the preservation of the clan as a whole."³ There are few beggars in the Palaung hills, but people afflicted with blindness or some incurable disease sometimes come from a distance to Palaung festivals to beg for money. "They are received most kindly, not because the Palaungs are particularly sorry for their sufferings—holding the idea that they are suffering because of the sins that

they have committed in a previous existence—but because it gives them an opportunity of acquiring merit by being charitable.”⁴ The latter statement recalls a common belief of mediæval times.

Tibetan Buddhism distinguishes six hells for different classes of sins: the first for suicides, murderers, ignorant physicians who kill their patients, fraudulent trustees, and tyrants; the second for those who have been disrespectful to parents, to Buddha, or the priests; the third for thieves, those indulging in hatred, envy, or passion, users of light weights and short measures, and those who cast refuse or dead animals upon the public roads; the fourth for obstruction of water-courses, grumblers at the weather (“clearly the English hell!” comments the author), and wasters of food. The fifth is the hell for heretics. In the sixth are punished those who roasted or baked animals for food.⁵

Among the sins of a dead woman were: poisoning food; misleading those who asked the way; refusing rice to the hungry; throwing thorns in the road; making a hole in a tank so that water escaped; spitting in a fountain and otherwise polluting fire or affronting the face of the sun; lying on a carpet when her father-in-law had nothing to sit upon; envying neighbors’ harvests and cows; removing a landmark; and killing a snake, lizard, or cow.⁶ “To pluck a branch—nay, a twig of the mango—wantonly or for making a tooth-brush is a sin which no Hindu with a particle of sense will ever commit. A Hindu will rather die of hunger than sell a green mango tree to be felled.”⁷ Sweeping with a broom, splitting green branches, going to sleep after seeing an eclipse of the moon, polluting water or fire, reviling the soma; these are further sins. “By repeating sinful acts men are reborn in painful and base births, and are hurled about in hells; where are sword-leaved trees, etc., and where they are eaten, burned, spitted, and boiled; and they receive births in despicable wombs; rebirth to age, sorrow, and unquenchable death.” Eight commandments interdict killing, stealing, telling lies, drinking intoxicating drinks, fornication or adultery, the eating of unseasonable food at night, the wearing of garlands or the use of perfumes, and sleeping except on a mat spread on the ground. Naturally the Buddhistic system is more sophisticated than that of a less developed religion.⁸

The Eskimo believe that the sea-mammals note the effects of sin upon a man, “who appears to them of a dark color, or surrounded by a vapor which is invisible to ordinary man. This means, of course, that the transgression also affects the soul of the evil-doer. It becomes attached to it and makes him sick. The shaman is able to see, by the help of his guardian spirit, these attachments, and is able to free the soul from them. If this is not done the person must die. In many cases the transgressions become attached also to persons who come in contact with the evil-doer. This is especially true of children, to whose souls the sins of their parents, and particularly of their mothers, become readily attached. Therefore when a child is sick the shaman, first of all, asks its mother if she has transgressed any taboos.”⁹

Among the highly primitive Seri Indians the deepest sin is sex-relation with an alien.¹⁰ Bad Haida Indians “are always quarreling and fighting. They

do not care to love their friends and they do wish to steal the property of the good Indians. All bad Indians hate the medicine man . . . which is the greatest sin; they despise his authority, and are consequently sent by him to a lower region." They will be handed over to a second evil spirit after the first has feasted on their bodies.¹¹

In China it was a great sin to throw any impurity into the fire; and a parallel case of sin appears under the Zoroastrian system.¹² The terror of sin followed the Chaldeans all their lives and kept them in distress about their motives and intentions—for some of them had arrived at a stage where acts were not all. Maspero¹³ quotes a penitential psalm which is as intense as any in the Bible. Sin did not affect the soul, but produced physical pain and death. Penitence cured sin, for a time, but death would at last gain the victory. "In any museum," says Tylor,¹⁴ speaking of the Egyptian religion, "we may still see the scene of the weighing of the soul of the dead, and his trial by Osiris, the judge of the dead, and the forty-two assessors, while Thoth, the writing god, stands by to enter the dread record on his tablets. In the columns of hieroglyphics are set down the crimes of which the soul must clear itself, a curious mingling of what might be called ceremonial and moral sins, among them the following: 'I have not privily done evil against mankind. I have not told falsehoods in the tribunal of Truth. I have not done any wicked thing. I have not made the laboring man do more than his task daily. I have not calumniated the slave to his master. I have not murdered. I have not done fraud to men. I have not changed the measures of the country. I have not injured the images of the gods. I have not taken scraps of the bandages of the dead. I have not committed adultery. I have not withheld milk from the mouths of sucklings. I have not hunted wild animals in the pasturage. I have not netted sacred birds. I am pure, I am pure, I am pure!'"

Throughout the penitential psalms of Babylon breathes a deep sense of guilt. Words full of consolation are addressed to the last of the great monarchs of Ashur: "Thy sins, O Ashurbanipal! like the waves of the sea, shall be obliterated; like the vapours on the face of the earth, they shall melt away before thy feet!" The highest of the gods are neither created nor born, but have created themselves. Such was the doctrine taught on the banks of the Euphrates and the Tigris, and such on the banks of the Nile.¹⁵ In the *Vendidad*, "it is safer to kill a man than to serve bad food to a shepherd's dog, for the manslayer gets off with ninety stripes, whereas the bad master is at once a Peshotan, and will receive two hundred stripes. Two hundred stripes are awarded if one tills land in which a corpse has been buried within a year, if a woman just delivered of a child drinks water, if one suppresses the menses of a woman, if one performs a sacrifice in a house where a man has just died, if one neglects fastening the corpse of a dead man so that birds or dogs may not take dead matter to trees and rivers. Two hundred stripes if one throws on the ground a bone of a man's corpse, of a dog's carcase as big as two ribs, four hundred if one throws a bone as big as a breast bone, six hundred if one throws a skull, one thousand if the whole corpse. Four hundred stripes if one, being in a state of uncleanness, touches water or trees, four hundred if one covers with cloth a dead man's feet, six hundred if one covers his legs, eight

hundred if the whole body. Five hundred stripes for killing a whelp, six hundred for killing a stray dog, seven hundred for a house dog, eight hundred for a shepherd's dog, one thousand stripes for killing a Vanhapara dog, ten thousand stripes for killing a water dog. . . . There is hardly any prescription in the Vendidad, however odd and absurd it may seem, but has its counterpart or its explanation in other Aryan legislations: if we had a Latin or Greek Vendidad, I doubt whether it would look more rational."¹⁶

Among the greatest of sins is heresy. Tacitus¹⁷ says that about 18 A.D. Egyptian and Jewish worshippers were expelled from Italy, being sent, if of military age, to Sardinia to suppress brigandage—"a cheap sacrifice if climate killed them." Others were to quit Italy within a day or to renounce their rites. In Japan "Christians who freely recanted were not punished, but only kept under surveillance: those who refused to recant, even after torture, were degraded to the condition of slaves, or else put to death. In some parts of the country, extraordinary cruelty was practised, and every form of torture used to compel recantation." People of nearly every rank, from prince to pauper, suffered for Christianity; "thousands endured tortures for its sake—tortures so frightful that even three of those Jesuits who sent multitudes to useless martyrdom were forced to deny their faith under the infliction;—and tender women, sentenced to the stake, carried their little ones with them into the fire, rather than utter the words that would have saved both mother and child."¹⁸ The Spanish Inquisition is of course the classical example of "man's inhumanity to man" in this respect.¹⁹ It is said by Lecky²⁰ that Philip II and Isabella the Catholic inflicted more suffering in obedience to their consciences than Nero and Domitian in obedience to their lusts.

§275. Remission.

It will be noted from the cases that the topic of remission and that of exorcism, immediately following, cannot be sharply separated. Self-cleansing is exorcistic. The instances cited under Remission look, however, to forgiveness of sin rather than expulsion of evil influences.

In East Africa the weapon which has destroyed human life is looked upon with awe and dread. "Having once caused death it retains an evil propensity to carry death with it for ever. Among the Alikuyu and Atheraka, therefore, it is blunted and buried by the elders. . . . These rites are intended for purification, and if omitted the direst consequences ensue, for the murderer will continue to slay friends and foes alike. . . . Purification is performed in all cases of homicide, no matter of whom and under what circumstances. There is one curious point about the custom in Theraka, namely that, if a man has killed a stranger, the purification is performed in public, but if he has killed a member of the tribe it is done secretly."²¹

Thahu is the word used by the Kikuyu for a condition into which a person is believed to fall if he or she accidentally becomes the victim of certain circumstances or intentionally performs certain acts which carry with them a kind of ill luck or curse. "A person who is *thahu* becomes emaciated and ill or breaks out into eruptions or boils, and if the *thahu* is not removed will

1 Dundas, C., in JAI, XLV, 269-271.

probably die. In many cases this undoubtedly happens by the process of auto-suggestion, as it never occurs to the Kikuyu mind to be sceptical on a matter of this kind. It is said that the *thahu* condition is caused by the *ngoma* or spirits of departed ancestors, but the process does not seem to have been analysed any further. . . . The removal of the curse is effected by a process of lustration which, in the more serious cases, has to be done by the *mundu mugo* or medicine man, and in others by the members of the native council or *kiama*; the latter is an interesting case of the overlapping of judicial functions and those of a sacerdotal character. The lustration ceremony is almost always accompanied by the slaughter of a sheep and anointment with the contents of the stomach." The *thahu* is in nearly all cases removable by the elders and medicine-men for payment, and it may therefore be urged that the belief has not much value as a moral restraint. "This view cannot, however, be seriously maintained for the following reasons:—Take the case of a person who commits an act which he knows will bring *thahu*; it must be clearly understood that he never questions the liability of the principle, he goes about with the burden of the misdeed on his conscience, this worries him so much that he gradually gets thin and ill, and all this he puts down to the *thahu*. It therefore ends by his confessing to the elders and begging them to free him from the curse. It is in essence nothing more or less than the confession and absolution of the Christian Church. Then again we have to consider the publicity of *kraal* life, very little goes on which is not known to the neighbours; polygamy too increases this, a man confides in one wife, she tells another wife and so it goes through the village; if one person commits an act which inflicts *thahu* on himself or a neighbour, it will gradually leak out by some means or other, and public opinion will insist on measures being taken to remove it. No living person would ever dream that he could hope to evade the wrath of the *ngoma* or ancestral spirits. Of course occasions may arise when the commission of a prohibited act may involve a third party, and the person who committed it may preserve silence on the point, but the elders will in most cases be in possession of complete information as to the movements of every person in the neighbourhood, and moreover, the demeanor of the conscience-stricken culprit will invite suspicion, so in practice it is but rarely that the offender would not be detected." The Kikuyu people form the bulk of the labor supply of the upland colonists in British East Africa, and complaints of its capricious nature are often received from employers. "Upon investigation it was found that, apart from the natural ebb and flow of this supply, the charge of caprice was well founded, i.e., there were many cases of desertion and often without any suspicion of ill-treatment, further, in some cases it was discovered that it was necessary to go away to get *dawa*, which is the general local synonym for medicine, whether of the nature of drugs or magical in character. The question then arose as to why such frequent calls occurred, and it was a long time before a definite clue could be obtained, but the principles gradually unfolded and became clear and were found to rest on the necessity of obtaining ceremonial purification to free the individual from either a *thahu* or the impurity left by a death in the family."²

Among the Bahima a man will divorce his wife if she becomes quarrelsome and abusive. "Abuse from a wife is a serious matter, the husband accuses her

² Hobley, in JAI, XL, 428-429, 440, and XLI, 456-457.

to the head of the clan, who calls her to give account of her behaviour, and unless she can give an adequate excuse she is condemned to go to a lake near Karagwe for purification; a strong emetic, and a purgative, are administered; when these have done their work she is washed in the lake, and restored to her husband."³ Among the Asabs of Niger, "a woman confesses to the Diokpa [the head of the family, who is also a preparer of medicine] before parturition, naming all persons with whom she has had connection or familiarity. If this is not done, or any person is omitted, the danger of labour will be greatly increased and the woman may die."⁴

"To pray for ablution," ranks among the most sacred of the Buddhist rites, and is performed at every solemn assembly for the washing away of sins. Water is poured out from a vessel similar to a tea-pot over the vessel's well-cleaned cover, or a particular metallic mirror which is held so that it reflects the image, which stands on the altar.⁵ In the belief of the Hindus, when a woman dies unpurified within fifteen days after childbirth she becomes a demon, and is then always on the watch to attack other young mothers. "Whatever sins," says one of the sacred writings, "a man may have committed during life, if his bones are cast into the Ganges he must certainly go to heaven."⁶ For the purification-bath in India water of all seas and oceans is required; it is collected in small phials, each labelled to show from what particular body of water it came.⁷ Again, in the case of a woman found guilty of adultery, if her paramour is of low caste similar to herself, he has to marry her. But, in order to purify her for the ceremony, when a hut has been built and the woman put inside, it is set on fire, and the woman escapes as best she can. The same performance is gone through, until she has been burnt out seven times. She is then considered once more an honest woman, and fit to be married.⁸ "From the earliest period Shintō exacted scrupulous cleanliness—indeed, we might say that it regarded physical impurity as identical with moral impurity, and intolerable to the gods. It has always been, and still remains a religion of ablutions. The Japanese love of cleanliness—indicated by the universal practice of daily bathing, and by the irreproachable condition of their homes—has been maintained, and was probably initiated, by their religion. Spotless cleanliness being required by the rites of ancestor-worship,—in the temple, in the person of the officiant, and in the home,—this rule of purity was naturally extended by degrees to all the conditions of existence. And besides the great periodical ceremonies of purification, a multitude of minor lustrations were exacted by the cult."⁹ "Once each month a Shinto priest visits the homes of pious families having wells, and he repeats certain ancient prayers to the Well-God, and plants nobori, little paper flags, which are symbols, at the edge of the well. After the well has been cleaned, also, this is done. Then the first bucket of the new water must be drawn up by a man; for if a woman first draw water, the well will always thereafter remain muddy."¹⁰ A Korean expiatory offering consists of a bundle of straw tied with hoops of straw into the outline of the head and trunk of a man. Arms and legs are fastened to the body. Some bits of money are put in this figure, and it is thrown away under the impression that the influence of an evil star may be

overcome when the image is torn to pieces. The object apparently is to rid one's self of this as the Jews ejected the scapegoat.¹¹

A rather forehanded case of remission is reported from Alaska, where "a noted woman of Sitka prayed openly in prayer-meeting that God forgive her for the sins she had in mind to commit the following week."¹² "The medicine arrows of the Cheyenne are 4 in number, of different colors, and were kept together in charge of a special priest from the earliest traditional period. . . . They . . . are exposed only on occasion of a solemn purification rite when a Cheyenne has been killed by one of his own tribe. They are still preserved among the Southern Cheyenne, by whom the rite of blood atonement was performed as late as 1904."¹³ "Many or most solemn, mysterious or religious ceremonies are preceded by formal acts which appear to have the purpose of purification and suggest the same object that is attained by the burning of sweet grass or sweet pine, or the wiping off the body or a part of it by a wipe of white sage. The purpose of such acts is in part protective."¹⁴ Blood-guilt, even from slaying of any enemy, must be cleansed; "there was no law among the Pimas observed with greater strictness than that which required purification and expiation for the deed that was at the same time the most lauded—the killing of an enemy." Sixteen days of isolation during which no one addresses the slayer; a day of abstention from food and drink, followed by a sparing diet not including meat or salt; observance of a number of other taboos; frequent river bathing; the covering of the head with a plaster of mud and mesquite—these are some of the details of self-clearance. If the man in question is married, his wife must not eat salt during his seclusion, else she will suffer from the owl disease and have stiff limbs. "The explanation offered for the observance of this law of lustration is that if it is not obeyed the warrior's limbs will become stiffened and paralyzed."¹⁵

This case may be compared with the practice in New Guinea, where, however, the object is to exorcise the ghost of the slain enemy, whose presence in the neighborhood of his slayer makes the latter unclean. "A man who has taken life is considered to be impure until he has cleansed himself and his weapon. He may eat only the center of toasted bananas. On the fifth day he walks solemnly down to the nearest water and bathes, while all the young untried warriors swim between his straddled legs in order to derive some of his courage and strength. "The following day, at early dawn, he dashes out of his house, fully armed, and calls aloud the name of his victim. Having satisfied himself that he has thoroughly scared the ghost of the dead man, he returns to his house. The beating of flooring boards and the lighting of fires is also a certain method of scaring the ghost. A day later his purification is finished."¹⁶

The post-Homeric Greeks have ceremonies of purification that "accompany human life through its whole course." The bearing woman and whoever has touched her are unclean; so is the new-born child; so are the dead and everything that comes near them. A series of purificatory acts surrounds marriage. Self-cleansing takes place after an evil vision, at the occurrence of prodigies, after recovery from illness. The purification of one who has spilled blood, even in lawful strife or unintentionally, is indispensable; if it has taken place,

11 USNM, 1891, plate XXXII.

even the calculating murderer is cleansed, though he has no intention of mending his ways. No sense of guilt demands it; it is a ritual matter. "Much more was it superstitious fear of a spirit-world uncannily hovering about men . . . that invoked the purifier and priests of conciliation for help and defense against the terrifying figures of their own imagination."¹⁷

"All contact with holy things has a dangerous side; and so, before a man ventures to approach the holiest sacraments, he prepares himself by ablutions and other less potent cathartic applications. On this principle ancient religions developed very complicated schemes of purificatory ceremonial, but in all grave cases these culminated in piacular sacrifice; 'without shedding of blood there is no remission of sin.'" The Arabian woman cut her nails or plucked out part of her hair, parts in which the impure life might be supposed to be concentrated; or rubbed herself against some animal presumably by way of transferring her uncleanness. Handling holy things, as for instance the Scriptures, entailed ceremonial washing.¹⁸

One of the ancient methods of purification was to spend a night in a cromlech or sacred stone cell. In Wales it was spent under the altar.¹⁹ This recalls the Greek "temple-sleep," practised for cure of disease, and also the ceremony of the bath, at entrance to knighthood.

In the Persian system are found minute and detailed precepts for the treatment of the dead body, the construction of "towers of silence," and the purification of men or things brought into contact with a corpse. The idea pervading the whole is the utter impurity of a dead body, and the extreme purity and sacredness of earth, fire, and water. No impure thing may, therefore, be thrown upon any one of these elements, because it would spoil the good creation by increasing the power and influence of the demons, who take possession of the body as soon as a man is dead. The corpse is, therefore, to be carried on to the barren top of a mountain or hill, and to be placed on stones (or iron plates), and exposed to dogs and vultures, so as to benefit in this way the animals of the good creation. A man who touches a dead body, the contagious impurity of which has not been previously checked by presenting to the corpse a peculiar kind of dog, is said to be at once visited by a specter, representing death itself. This is called "the destructive corruption." To get rid of this annoyance he is sprinkled with water on the different parts of his body, as described with the greatest minuteness.²⁰ In Egypt, "for the preservation of health, purgation and vomiting were practised three days in each month." The practice of temple harlotry in Chaldæa and elsewhere was in part for expiation.²¹ Hesiod²² warns his hearers not to offer their morning devotions with unwashed hands—the gods spit out such prayers. On the death of Philip of Macedon, Demosthenes, though in deep mourning for the death of his own daughter, donned a white robe and a garland, and offered sacrifice of thanksgiving. Euripides²³ represents Alcestis as bathing and taking her best array from her cedar chests before her prayer. Greek purification was by means of cleansings and baths and aspersions, and "because of this a man

must keep himself from funerals and marriages and every kind of physical pollution, and abstain from all food that is dead or has been killed, and from mullet and from the fish *melanurus*, and from eggs, and from animals that lay eggs, and from beans, and from the other things that are forbidden by those who accomplish holy rites of initiation. . . . When Plutarch is describing the hapless plight of the man who thinks that affliction comes to him as a punishment for sin, 'It is useless to speak to him, to try and help him. He sits girt about with foul rags, and many a time he strips himself and rolls about naked in the mud; he accuses himself of sins of omission and commission, he has eaten something or drunk something or walked in some road the divinity forbade him.' This morbid habit of self-examination is a thoroughly Orphic trait."²⁴ The idea of Orphic mystery is that humanity is suffering and sinful and must be initiated to wash away its stains and redeem its sins. Initiation puts man in communication with the divinity.²⁵ In ancient Rome, if the offense to the deity was not involuntary the transgressor was *impius* and there was no expiation. Non-expiation applied only to a limited number of cases. There were expiatory rites for petty religious faults, as cutting wood in the sacred grove, neglecting inhumation of a corpse, or breaking the quiet of a holy day. There were many ceremonies of lustration.²⁶

Mohammed declared that "each step taken while bearing a corpse shall be worth the remission of ten transgressions and the replacement of each of these sins by ten good acts."²⁷

§276. Exorcism.

Among certain Africans "all sorts of charms and medicines are used to ward off the *rufti*, which in the native's imagination dog his existence." All deaths are caused by their desire to eat the dead, and the corpses are carefully guarded against them. "While a body is lying unburied, people will not walk out at night except in bands, as the *rufti* is supposed to be abroad."¹ In North Africa the exorciser drew a circle about the camp, praying the while; "and they believe that thereby not only robbers and wild animals, thieves and evil spirits are kept afar off, but the whole encampment is thought to become invisible for all of them."²

The Buryats have a belief in cannibal spirits who prey especially on the blood of new-born children. They allow no stranger to enter the dwelling where the new-born lies, lest the evil spirit press in with him. When the shaman imposes this taboo, the door remains constantly shut; "and outside before it they have a pot with a stick in it, and if a member of the family enters he must first knock on the pot with the stick; then the evil *ada* is frightened and flees." Koryak women wear grass-masks at the whale-festivals, while young men wear wooden ones in the fall of the year, to drive away evil spirits.³ Here is an avoidance-device passing into an exorcistic one. "The Votyaks have a devil-driving day; the men from early morning get on horseback, and with

cudgels in their hands and with loud cries drive out the devil from their villages."⁴

In Ladak the lamas are always trying to get rid of the thronging evil spirits. When the hymn of exorcism fails, "one of them suddenly seizes a yak-tail lying near and lifts it on high. The red devils cannot stand that; they raise a whining howl and rush off."⁵ "The intensity of the Ladakh's superstition may perhaps be connected with the impenetrability of his great mountains, fit homes for millions of demons, and to the suddenness of the disasters which overtake him." Here we have a more than usually direct inmixture of the aleatory element. "On a clear day, a storm may gather on one of the snowy passes and in an hour or two overwhelm a whole caravan. Under the influence of a mild drizzle or a bit of melting snow, the soil may be loosened so that avalanches of rock suddenly sweep down the steep mountain sides to block the roads, kill travelers, and bury villages. At other times . . . a flood of accumulated snow-water may burst out of an apparently dry valley, and destroy houses, fields, and villages. When he sees so many evidences of what he supposes to be the activity of demons, small wonder that the Ladakhi becomes nervous, and thinks it wise to save his crops from drought and frost by hiring a red lama to sit beside his field while it is being sown, and read all day from a leaf of the holy book. And it is equally wise to keep demons out of the house by smearing the lintels, doorposts, and corners with blood or red paint, a custom curiously suggestive of that of the ancient Israelites."⁶

The Sikhimese intensely dread all mining operations; for they believe that the ores and veins of metal are the stored treasure of the earth-spirits who are enraged at its removal and visit the robbery with all sorts of ill luck, plagues of sickness on men and cattle and failure of their scanty crops. The same author⁷ reports that, coming inside a Lepcha house, he was about to put his hat on a clean-looking vacant spot, when the good-wife, with horror written on her face, snatched it up and placed it elsewhere, explaining that the devil of the house was at that time occupying that spot and that his fearful wrath would be incurred if anything were placed there. Some incantations were needed to undo the harm already done. Similarly in a Tibetan house. The Kirghiz represent mountain-sickness to themselves as a young lady; to get rid of it they utter "the most obscene and disgusting expressions, thinking thereby to shock the lady's modesty and drive her away."⁸

In a Shan funeral, the eldest son of the deceased goes first, "with a naked sword in his hand to clear the way, which is supposed to be barred by spirits."⁹ The Naga believed in a disease-giving spirit which could be guarded against by shields and arms; and they practised as a funeral-rite a war-challenge to the power that had treacherously slain the dead man. Certain Hindus place a crowbar along the threshold of a confinement-chamber as a check against the crossing of any evil spirit; it is kept there for ten days. It is believed that spirits always avoid iron, and even nowadays pieces of horseshoe can be seen nailed to the sills or doors of native houses.¹⁰ Unguarded openings are an invitation to entrance; "no Tamil will yawn without holding the hand before the mouth, or making protective signs with the fingers before the mouth,

lest some evil spirit or other observe the opportunity and slip through the wide-open portal into the man." Similar practices have been alluded to under the topic of taboo on eating.¹¹ Again, a spirit is drawn away from a house and family by setting apart for it a piece of land, together with sacrifices; such a place is never cultivated, and people will not go near it at night.¹² In southern India, after other well-authenticated methods of exorcism have failed, the devil's retreat "may generally be hastened by the vigorous application of a slipper or broom to the shoulders of the possessed person, the operator taking care to assist the cure by reviling him in the most scurrilous language he can think of. After a time the demoniac loses his downcast look. He begins to get angry and writhe about under the slipping, and at length cries, 'I go, I go.' . . . When the demon consents to leave, the beating stops; often immediate preparations are made for sacrifice. The person now awakes as from sleep, and appears to have no knowledge of anything that has happened."¹³ To be noted are the apparently hysterical or hypnotic state of the possessed person¹⁴ and the fact that the possessing spirit is often a deceased relative.

Of the Nicobarese it is reported that "their whole belief is a childish spectre-fear; everywhere they fear and scent the *Iwi*, an evil, very intrusive, ravenous, prying, saucy spirit, and make an effort to scare him off with all sorts of roughly carved images. . . . Everything that worries, torments, oppresses, or pains is begotten by *Iwi* or is he himself. If it is a case of indigestion or a pain in the limbs, the conjurer, operating here as a physician, must come and drive the *Iwi* out of the sick person."¹⁵

In Korea, toward twilight on New Year's Day, the smell of burnt hair pervades Seoul; for on that day the carefully saved clippings and combings are burned in order to keep evil spirits out of the house during the year. Another New Year's ceremony is "walking the bridges": "Up to midnight, men, women, and children cross a bridge or bridges as many times as they are years old. This is believed to prevent pains in the feet and legs during the year." The authoress¹⁶ quoted once encountered a small log with several holes like those of a mouse-trap in it, one of the holes being doubly plugged with wooden bungs. The ponies were led over the log and the men stepped over it. Into the bunged hole a sorceress had by her arts inveigled a sickness-bringing daimon and had corked him up. Such a log is buried at nightfall.

In Borneo certain tribesmen feared to remain on a mountain over night and "only confidence in the powerlessness of their evil spirits over against Europeans and the influence of reading in books" gave them the nerve to stay.¹⁷ The apparatus of exorcism is always in evidence; at intervals of some fifty feet along the verandas are shallow boxes in which fires are lit at night for light and to keep off evil spirits. Barriers are constructed against the spirits: a circle of stakes cut on their sides into curled shavings, earthen jars of water, and cleft sticks with eggs in the clefts. Furness¹⁸ took pictures of these things, despite the solemn warning that he would have bad dreams and be subject to the "ghost-clutch," which scars for life or, if at the throat, causes choking to death. In northern Sumatra it is better not to see a lunar eclipse directly, so it is viewed in a vessel of water. Meanwhile guns are fired in the direction of the moon, and people pound on rice-blocks and beat metal objects, with the

idea of frightening the sun into loosing his prey. Pregnant women must keep off the streets during an eclipse of sun or moon.¹⁹ Of some of the Luzon natives it is reported that they frequently light great bonfires or burn the bush to exorcise the evil spirits.²⁰

The Eskimo and Aleuts keep off evil spirits with fetid and malodorous substances, chiefly urine; the Cambodians use the urine of a white or fetish-horse against smallpox; and elsewhere over the earth parallelisms are not uncommon.²¹ Again, fire is kept up at the Indian's grave and friends howl about it to protect the departing soul from spiritual assault.²²

Fire, water, and noise are almost universally employed as exorcistic devices. One of the richest fields is China, where fire and noise are combined in the fire-cracker to scare away demons.²³ A case of exorcism by fire is reported of the Kwakiutl Indians as follows: as soon as the shells of the sea-eggs are all in, "the woman takes a large firebrand and puts it on top of the empty shells. Then she goes and pours them out outside the house. The reason why they put the firebrand there is that the spirits may not eat the refuse of the sea-eggs. If they do not put a firebrand on top of it, it is said that the spirits immediately go and eat it; and it is said that he who ate what was in the empty shells eaten by the spirits would be immediately sick."²⁴ Fire, together with noise, was a general method of curing sickness, as among the Apache, where, "when anybody fell sick several fires were built in the camp, and while the rest lay around on the ground with solemn visages, the young men, their faces covered with paint, seized firebrands and ran around and through the fires and about the lodge of the sick person, whooping continually and flourishing the brands to drive away the evil spirit."²⁵ The Indians of Guiana believe that the spirits of the forest shrink from exposure to sunlight or firelight, from hearing their names called or particulars of their origin talked about. Any of these eventualities will drive them away. Special precautions have to be taken, when any large animal has been slain, to protect the hunter from any harm that might be expected from the spirit of the animal he has just destroyed. "Thus, when a big snake or other large animal is killed, arrows are stuck into the ground in the middle of the pathway leading from the place of destruction toward the house, with a view to preventing the Spirit of the beast coming to do the slayer or his family any hurt." Some of these Indians practise a whip dance for the purpose of expelling the evil spirit, especially in the case of a re-marriage, when the widow and her future husband are severely chastised. Roth²⁶ thinks that the whipping of visitors as a salutation-ceremony among some of these tribes may similarly bear relation to the spirits which the host, in his welcoming speech, trusts that the visitors have not brought with them.

Eclipses and other natural phenomena call for exorcism, noise being regarded as especially efficacious under such circumstances. It is the belief of the natives of the D'Entrecasteaux Islands that "eclipses are due to a large black snake which tries to devour the moon, and is only prevented from succeeding by the natives frightening it away with the noise of drums and conch-

shells.”²⁷ “Tonight,” writes Solomon²⁸ from Nicobar, “there was an eclipse of the moon. The people here are under the same impression as some of my countrymen regarding this phenomenon. They think that the moon is actually being swallowed by a serpent. Throughout the night both the young and old refrained from sleep and occupied themselves in driving out the serpent in the following way. Having provided themselves with kerosene oil tins and planks they beat them and shouted ‘Alas! alas! do not devour, let the moon alone and go away.’ It was a comical sight.” When a bad thunder-storm comes on, the Sakai climb down from the house to the ground, strike their working-knives into the earth, and leave them there. “Hot stones from the hearth, the supports for cooking pots, are also thrown out of the door of the house. Both these actions are thought to be helpful in dispersing the storm, and the hot stones, symbolically at any rate, dry up the rain.”²⁹ In Cayenne, eclipses of the sun and moon upset the Indians a good deal: “they think some frightful monster has come to devour these heavenly bodies. If the eclipse is total or of short duration, they consider it a fatal thing for them: they make a terrible noise, and shoot a volley or arrows into the air to chase away the monster.”³⁰ About four thousand years ago, Mitchell³¹ tells us, two Chinese astronomers, Hsi and Ho by name, were drunk during an eclipse. They were thus unable to beat drums and gongs to scare away the dragon who was devouring the sun. The monster, it seems, was generous and disgorged his prey. The emperor, not so kind, had the unfortunate Hsi and Ho beheaded—a most salutary example for astronomers.

Chief among the birds used in exorcism, on account of the noise made by him, is the cock. The common practice of putting the figure of a cock on church steeples has long been popularly associated with the reproach that bird once conveyed to St. Peter. But there is still another significance to the old custom. In the early history of the world the figure of a cock was placed on the top of sacred trees and spun by the four winds in the popular belief that it would disperse evil spirits and ward off calamities. Its living prototype was supposed to accomplish the same results by crowing. The figure of the cock still decorates May poles in North Germany.³² The Chaldeans represented the demons under forms so hideous that it was sufficient for them to be shown their own images, to cause them to flee away alarmed. In the museum of the Louvre is a curious bronze statuette of Assyrian workmanship. It is the figure of a horrible demon in an upright posture, with the body of a dog, the feet of an eagle, the claws of a lion, the tail of a scorpion, the head of a skeleton but half decayed and adorned with goats’ horns, the eyes still remaining, and lastly four great expanded wings. The figure was originally suspended by a ring behind the head. On the back there is an Accadian inscription, which informs us that this is the demon of the south-west wind, and that by placing this image at the door or the window, its fatal influence might be averted. In Chaldæa, the south-west wind comes from the deserts of Arabia, and its burning breath which dries up everything, causes the same havoc as the *Khamzin* in Syria, and the *Simoon* in Africa. The winged bulls with human heads, flanking the entrance gates, were genii which kept real guard, and were held to their posts as long as their images dwelt there without being disturbed.³³ A

popular device in Scotland for frightening away witches and fairies was to hang bunches of garlic about the farms. "I have known," writes Barrie,³⁴ "a black-fishing expedition stopped because a 'yellow yite,' or yellow-hammer, hovered round the gang when they were setting out. Still more ominous was the 'péat' when it appeared with one or three companions. An old rhyme about this bird runs—'One is joy, two is grief, three's a bridal, four is death.' Such snatches of superstition are still to be heard amidst the gossip of a north-country smithy."

The use of water in exorcism, and the derived baptism by water or blood, may be illustrated by a few much-scattered cases. A sort of baptism by blood composed part of the initiation-ceremony of the Dieri in Central Australia.³⁵ Among the Tshi and Ewe tribes in West Africa, the mother and child are considered unclean. "The water which is always in the earthen vessels placed before the images of the gods, is brought to the house and thrown up on the thatched roof, and as it drips down from the eaves the mother and child pass three times through the falling drops. The *babalawo* next makes a water of purification with which he bathes the child's head, he repeats three times the name by which the infant is to be known, and then holds him in his arms so that his feet touch the ground. After these ceremonies have been duly performed the fire is extinguished and the embers carried away; the house is then carefully swept out, live coals are brought, and a fresh fire lighted. We thus appear to have a combination of a purification by water and a purification by fire. After the new fire has been kindled, another sacrifice of fowls is made to Ifa, and the proceedings are at an end."³⁶ In the Cameroons, after a man accused of witchcraft was sacrificed, the whole community went naked into the sea to wash away the magic.³⁷ In 1924 the members of a certain Filipino religious society engaged in a battle with the constabulary; hostilities arose when the latter destroyed a tank believed by the natives to hold sacred water. About three hundred members of the society were bathing in it, or drinking its waters, when the constabulary broke its walls and let the water out. The natives believed the waters possessed remarkable health-giving properties.³⁸ In Mexico there was a rite known as "baptism by fire," which "was celebrated on the fourth day after the birth of a child, during which time it was deemed essential to keep the fire burning in the house, but not to permit any of it to be carried out, as that would bring bad luck to the child."³⁹ Fuegian children were immersed in the sea immediately after birth.⁴⁰ In the *Nibelungenlied* there occurs, in the case of Siegfried, an instance of blood-baptism.⁴¹ Snake and child to the primitive mind are not far asunder: the Greek peasant of today has his child quickly baptized, for till then he may at any moment disappear in the form of a snake. In the primitive Church the sacrament of baptism was immediately followed by communion. The custom is still preserved among the Copts.⁴²

Spitting is an exorcistic device, though in some instances, especially in Africa, it appears to be merely a form of salutation. Even here, however, it may be exorcistic at bottom, and the same may be said of hand-clapping, an-

other typical African mode of salutation.⁴³ The noise thereby produced and the "shooing off" effect would suggest exorcism as an original motive, though this theory should not be pushed too far. In the Papuan ceremony of fumigation, the spraying with spittle after chewing the "hot bark" or wild ginger, is meant to invigorate the fetish. "With the little hunting charm called *ke' upura*, it is the practice to chew some such bark, spit on to the palms, and then roll the charm between them; lastly, the intending hunter will rub the spittle over his own face and limbs."⁴⁴ Among the African Akamba "both father and mother spit on a new-born baby to bring it luck; a friend seeing the baby will do likewise. It is said that the custom of spitting at people for luck was general, but since the arrival of Europeans they spit on their hands instead, even this modified custom is not at all general."⁴⁵ The Wachagga regarded spitting as a mark of honor and in early days employed it even toward Europeans.⁴⁶ Among the Wagogo, by way of contrast, if one spits on his cousin, the offender will get warts; one who spits on another incurs a fine as purification.⁴⁷ Much more common is the practice of spitting on the person toward whom the spitter is well disposed.⁴⁸ With the Masai, spitting expresses the greatest goodwill and the best of wishes. "It takes the place of the compliments of the season, and you had better spit upon a damsel than kiss her."⁴⁹ Schweinfurth,⁵⁰ describing the Dyur, says: "Recently they have lost some of their ancient habits. For instance, the practice of mutual spitting, long the ordinary mode of salutation, has fallen into desuetude." Throughout his entire residence in Africa, the writer was never a witness of it more than three times: in all those cases the spitting betokened the most affectionate goodwill; it was a pledge of attachment, an oath of fidelity; it was to their mind the proper way of giving solemnity to a league of friendship. Miss Kingsley⁵¹ describes how a West African once took leave of her: "The old lady's farewell of me was peculiar; she took my hand in her two, turned it palm upwards, and spat on it. I do not know whether this is a constant form of greeting among the Fan; I fancy not. Dr. Nassau, who explained it to me when I saw him again down at Baraka, said the spitting was merely an accidental by-product of the performance, which consisted in blowing a blessing; and as I happened on this custom twice afterwards, I feel sure from observation he is right." Among cabalistic words she thinks ought to be classed that peculiar form of friendly farewell or greeting which Dr. Nassau poetically calls a "blown blessing" and the natives, *ibata*. "The method consists in taking the right hand in both yours, turning it palm upwards, bending your head low over it, and saying with great energy and a violent propulsion of the breath, *Ibata*." Among the Dinkas, "if a chief is anxious to be very polite, his correct course is to spit in one's face."⁵² When entering and when leaving a town, the Hausa spit upon a stone and throw it behind them in order to get rid of all evil influences which are in the rear.⁵³

Sieroshevski⁵⁴ says that when two Yakuts engaged in a quarrel, stop and

decide to make an alliance, they spit in each other's hands. Among the Sema Nagas "a curse is effected by men naming the one to be cursed, flourishing their daos and spitting in unison."⁵⁵ Spittle was a feature of the Tusayan Indian snake ceremonies: "At a signal the Snake priests rushed to the reptiles, seized as many as they could, . . . departed hastily down the mesa trails and distributed them to the cardinal points. As they left the plaza, a perfect rain of spittle from the spectators on the surrounding house-tops followed them."⁵⁶ If a Guiana Indian smells any decomposing matter, he spits. Spitting is also done to show aversion to negroes, while it is in addition of exorcistic value in burials. The medicine-man spits on the corpse.⁵⁷ Theocritus⁵⁸ mentions spitting as a means of warding off the evil eye.

Amulets. The Tasmanians were anxious to possess themselves of a bone from the skull or the arms of their deceased relatives, "which, sewn up in a piece of skin, they wore around their necks, confessedly as a charm against sickness or premature death." As other charms, "thigh-bones were featured on the head in a triangle."⁵⁹ In the Andaman Islands the bones of a child or of one long dead discharge the same purpose; protection comes "through the intervention of the disembodied spirit, who is supposed to be gratified by and aware of the respect thus paid to his memory."⁶⁰ Certain Papuans esteem most highly as a charm for good hunting or female sterility a stone found in the crop of a pigeon. Such charms are worn about the neck or carried in a little bag.⁶¹ In the case of the New Caledonian, "if chance throws in his way stones whose peculiar form gives his superstition something to think about, he ascribes to them certain characteristics and a secret influence. . . . Since such stones are rather rare, and their power therefore so much the more effective, they give their possessor a big influence. . . . At the time of a doubtful or even successful draw of fish, the fetish-stone is held in the water ahead of the boat, and its power is so great that it infallibly draws the fish into the nets." If sunshine is wanted, there is set up in the fields a piece of quartz whose veins spread radially from a ground-line; if rain, a stone is laid on the ground whose natural striation is thought to indicate rain.⁶² Here is a sort of imitative magic.⁶³ On the Sierra Leone coast fetish-arrows serve as protective devices against theft in the fields, as charms against sickness, and as talismans against witchcraft.⁶⁴

In North Tibet "some people wear on the left shoulder a piece of cloth, decorated with turquoises and corals. This is one of the talismans consecrated by a holy lama, which shall protect the bearer against all kinds of sickness and ill luck."⁶⁵ Many of the printed charms in Burma have sympathetic relations with their intended purposes: thus, for example, "a charm against ghosts may bear a picture of a ghost in fetters; one against dog-bite may bear a chained dog; or one to obtain greatness may have an elephant upon it. . . . As example of their use as instruments in magical ceremonies may be taken the

waving about in the air of a traveller's charm when the traveller is about to cross a river, and its exhibition to the devils of the vicinity; the showing of a charm to the devils in the four directions when a hailstorm occurs in order to cause the storm to depart; and the apparent transference of a disease to a charm placed with rice, the summoning of the devils to the food, with the subsequent throwing away or destruction of the charm." Parts of the elephant, as in other Buddhist countries where they are available, are highly valued as protections. As in Tibet and the neighbouring states and in Ceylon, so in Burma, the hairs from the elephant's tail are often used for the making of finger-rings. "Imitations of the elephant-hair rings, resembling their originals very closely, are made of palm-leaf, and are," writes Hildburgh,⁶⁶ "more common than the genuine rings. They are very much cheaper than the genuine rings, and although I have been told that they are worn merely as ornaments and not as 'medicine,' I think it reasonable to assume that in many, if not in most, cases their wearers rely upon their close resemblance to their originals to deceive the malignant spirits. . . . Elephant-nail is another material favoured, for the making of charms, by both Burmese and Shans. . . . Tigers supply, as in other Asiatic countries, various amulets and remedies. . . . It is worth noting, in view of the protective or curative virtues assigned to the colour red in many parts of the world, that, although the cords used for the suspension of a child's amulets or neck-ornaments in Burma are much more frequently red (or reddish) than any other colour, I was always told, in answer to my many inquiries concerning it, that no special protective virtue is assigned to red, and that it is favoured merely because of its decorative effect. Red coral is worn by Burmese children as a protection against sicknesses."

In India the possession of a rare or curious coin or medal is assurance of good luck; tiger's claws and bear's hair are set in gold and silver; glittering, swinging, fluttering things draw the evil eye to themselves and save the wearers. Mantrams, or sacred formulas, are very powerful; they are "combinations of the five initial letters of the five sacred elements, which produce sounds, but not words. These are believed to vibrate on the ether, and act on latent forces which are there." Cabalistic figures and mantrams on their metal plates are very effective. When a sick person talks of his illness, one who hears mutters defensive formulas, where in Italy he gently and imperceptibly taps from below on a table, or points his amulet at the talker, or, if he has no amulet, points with two spread fingers, to repel the illness.⁶⁷

In China, a gourd shell, or a representation of a gourd painted on children's clothes, is a defense against smallpox; the children wear masks, on the last night of the year, to deceive this demon. A certain type of hair-pin, with small silver figures of animals attached, is widely effective. Cords bought of witches, often with leather cylinders attached, are charms against maladies; and in Burma "luck-pigs"—discs of gold, silver, lead, tortoise-shell, or horn, engraved with a pig and mystic symbols—are put under the skin of the breast or arm as amulets.⁶⁸ A special sort of family-amulet is the kite. "The Chinese

have a superstition that the bird kite and the dragon kite are a protection to the family against evil spirits; the first by frightening them away, and the last perhaps by abashing them by its harmonies, as those which infested Saul were influenced to depart from him at the sound of David's harp. Sometimes these kites—the cord being securely fastened—remain aloft for several days and nights; the family meanwhile enjoying an unusual sense of security." This "dragon-flying" is a religious custom in the Pelew Islands.⁶⁹

Among the Malays any object becomes an amulet if it is found in a place where it was not expected. A huntsman prays to a stone for good luck, and if he gets it the stone becomes a fetish to him and his whole village. Any stone found in the entrails of a fish, bird, buffalo, or man, any lump of gum exuded from a tree in a peculiar form, any shell, root, or stone of striking form or color, any fruit which through disease has taken an extraordinary form, or any peculiar fruit-stone, will become an amulet. They keep a sharp lookout for such things. Amulets have a political significance; being owned by ruling families, they become state-jewels. They are kept in shrines, with priestesses assigned to them, and are the objects of cult. When a man dies without heirs his ricefields fall to the amulet; likewise the property of those who resist commands, and even their persons. A slave woman who resisted her master might dedicate herself to the amulet, whereupon the master lost all right to her. These amulets are only those of private persons, which have ceased to be private property and have been assumed by the state, that is, by the rulers. They come down from the time when there were many small independent states.⁷⁰ The above summary might well be cited under fetishism; it affords a good retrospect of the features of that subject as well as a clear indication of the connection of fetishes and amulets, the cult and the state.⁷¹

Talismans, including the phallic variety, are rife in the Indian Archipelago. The bezoar stone, a calculus formed in the stomachs of porcupines and monkeys, has especial virtue. Agate bracelets drive off all evil spirits. Holy jars are a protection and asset to their owners. Little wooden boats are protection against diseases which are supposed to put out to sea in them. The Tagals use shells, crocodile-teeth, and inscriptions consisting of senseless extracts from Latin prayerbooks, interspersed with Tagal words and phrases. Doubtless the reverence for skulls, which are prepared and preserved with the greatest art, is connected with their employment as talismans.⁷²

"The heathen Greenlanders sought by amulets to protect themselves against magic and other evil, and still today among the Christians the same idea is found quite wide-spread and firmly rooted. For such amulets anything could be used—a bone, a bird's beak, an old shoe-sole, etc.—but in later times a certain tendency has been noticed to choose for this some object from a foreign country, such as a coffee-bean, a lock of hair from some prominent European, splinters from a ship's capstan, etc." A rare article like wood naturally lends itself to such use. They do not worship the evil spirits, "but to insure themselves against their doing damage all the people wear the most diverse things as amulets," which help against sickness and dangers, promote long life, and

secure fulfilment of wishes.⁷³ Similarly with the Bering Strait Eskimo: "the images and fetishes used in hunting are supposed to watch for game and, by some clairvoyant power, to see it at a great distance; the hunter is then guided by the influence of the fetish to find it. They are also supposed to guide the spears so that they will be cast straight," and may even bring the game to the hunter. These amulets are things which have belonged to or been in contact with people of ancient times or fortunate hunters or supernatural beings, or "objects which merely by their appearance recalled the effect expected from the amulet," for instance, the "flint whale," hung around the neck for luck in whaling.⁷⁴

The Indian amulets were "medicine," that is, "mystery." The warrior's protection in battle "was a feather, a tiny bag of some sacred powder, the claw of an animal, the head of a bird, or some other small object which could be readily twisted into his hair or hidden between the covers of his shield without attracting attention. Its virtue depended entirely on the ceremony of the consecration and not on size or texture. The war paint had the same magic power of protection." Mantles of invisibility, recalling the *Tarnkappe*, are met with, their fetishistic power depending largely upon the devices drawn on them. It was exceptional to find the medicine-bag and medicine-songs looked upon somewhat depreciatingly as witchcraft was in former days among the whites.⁷⁵

The green so-called Amazon-stones were used widely in northern South America as amulets against fevers and snake-bite. They were in the form of fish and animals with figures cut on their surfaces. Certain lilies and other plants were cultivated as charms to make good hunters and fishermen. The use of amulets must always be painful; the nose-charm was a whip of fiber which was put up one of the nostrils and drawn through the back of the mouth. If the hunter fails, he must renew his strength, which he does by digging up a lily-root, slashing himself on breast and arms, and rubbing in the acrid juice; the more excruciating the torture the better the charm is working. "Next day he goes forth into the forest with renewed confidence, and is likely to be more successful on that account alone." In general, "when a warring tribesman slew an enemy, partly as a trophy, but chiefly as a mystical talisman and constant invocation to the powers, he appended the scalp to his spear or belt, or strung the teeth in a necklace, or converted the hand into a gorget. This stage and custom are well known among the primitive peoples of the earth."⁷⁶

Among the Semites the gum of the acacia served as an amulet.⁷⁷ In Jewish antiquity, a special amulet called phylactery, consisted of a strip or strips of parchment inscribed with certain texts from the Old Testament, and inclosed with a small leather case, which was fastened with straps on the forehead just above and between the eyes, or on the left arm near the region of the heart. The four passages inscribed upon the phylactery were Exodus, xiii. 2-10, 11-17, and Deuteronomy, vi, 4-9, 13-22. The custom was founded on a literal interpretation of Exodus, xiii, 16, and Deuteronomy, vi, 8 and xi, 18.⁷⁸ "He which

hath his Phylacteries on his head and armes, and his Knots on his garment, and his Schedule on his doore, is so fenced that he cannot easily sinne."⁷⁹ According to Deuteronomy there should be tassels or fringes on the borders of garments to remind of Jahweh's commands. Originally they were to keep off evil spirits.⁸⁰ In the desert and after the children of Israel had sinned, Jahweh commanded them to remove their ornaments that "I may know what to do with thee."⁸¹ It would almost seem as if the dazzling character of the ornaments interfered somewhat with Jahweh's ability to plan and execute proper punishment.

The Oriental jinn are in such deadly terror of iron, that its very name is a charm against them; and so in European folklore iron drives away fairies and elves, and destroys their power.⁸² Among the amber-ornaments deposited in the grave-vaults in Denmark are many shaped as axes or hammers. "On the basis of this form's general and wide extent in the north it is reasonable to suppose that the ax has here, as in the western and southern lands, a symbolic significance associated with ideas of a powerful thundering godhead, Thor, whose general and contemporary cult can also be demonstrated among Finnic and Celtic people, and that the ax-shaped amber-ornaments have been carried as protectors and weal-bringing amulets. In this connection it is not without significance that bigger and smaller stone axes have been bored in the same way and hung or worn as amulets both here and in other countries, *e.g.*, in Greece and all through the Orient to China, where they were, somewhat later, provided with magic inscriptions. Indeed, they were almost universally called 'thunderstones' by the common people and were held to have fallen in thunderstorms or to stand in the closest connection with lightning and its effects."⁸³ In making a collection of Italian amulets, Miss Buell⁸⁴ attempted to bring together those in modern use and their ancient parallels. Six classes may be cited: 1. "Prophylactics against the evil eye, having in form some relation to a horn and representing phallicism, Diana worship, and defensive symbolism by means of the hand. Examples—a phallus, a tiger's claw, a boar's tusk, a crab's claw, coral and shell horns, lunar crescents, composite horned animals, hands making the sign of the *fico* and the sign of the horns. 2. Amulets that make the sound of metal, hateful to evil spirits. Examples—bells, clashing disks and pendants. 3. Grotesque and ocular guards against malevolence. Examples—masks, a humpback, compositions or stones resembling eyes. 4. Preventives and cures by suggestion. Examples—a fossilized trochus or 'eye of Santa Lucia,' for eye maladies; a limonite concretion with a loose inner particle, 'pietra grvida,' for miscarriage; fossilized corals, 'witch stone,' for witch spells; carnelian and jasper, 'blood stones,' for heart disease and hemorrhages; bronze and silver fish, for female sterility; a comb, for caked breasts (caused by the presence of a witch's hair); a dried sea horse, to increase milk in the breasts; a red woolen sack containing bread crumbs, salt, incense, and wheat from a field ripe but unspoiled by the harvester's iron, to guard against the evil eye and witchcraft. 5. Charms pertaining to animals. Examples—badger's hairs, for defense against witches; claw of a paradise bird and a monkey's paw, valid against the evil eye. 6. Roman Catholic amulets. (a) Authorized by the church. Examples—the Agnus Dei and medal of St. Benedict

for divers bodily ills and storms. (b) Unauthorized, but popularly endowed with specific virtues. Examples—the medal of the Three Magi, 'witch money'; the medal of St. Anthony, Hermit, for animal protection; St. Joseph's carpenter's rule for child protection; the pig of St. Anthony for luck; the medal of St. Andrea Abellina for apoplexy; the coin and the key of the Holy Spirit for infantile convulsions."

The Cross. The cross as a religious symbol has been practically universal both as to time and place. It antedates Christianity by countless years, being found even on objects of the stone age.⁸⁵ Its invention, in one form or another, must have been rather easily accomplished. "The straight line, the circle, the cross, the triangle, are simple forms, easily made and might have been invented and reinvented in every age of primitive man and in every quarter of the globe, each time being an independent invention, meaning much or little, meaning different things among different peoples or at different times among the same people; or they may have had no settled or definite meaning." The principal forms of the cross, known as symbols or ornaments, can be reduced to a few classes, though when combined with heraldry its use extends to 385 varieties.⁸⁶ "The Latin cross, *Crux immissa*, is found on coins, medals, and ornaments anterior to the Christian era. It was on this cross that Christ is said to have been crucified, and thus it became accepted as the Christian cross. The Greek cross, with arms of equal length crossing at right angles, is found on Assyrian and Persian monuments and tablets, Greek coins and statues. The St. Andrew's cross, *Crux decussata*, is the same as the Greek cross, but turned to stand on two legs. . . . The *Crux ansata*, according to Egyptian mythology, was Ankh, the emblem of Ka, the spiritual double of man. It was also said to indicate a union of Osiris and Isis, and was regarded as a symbol of the generative principle of nature."⁸⁷ One writer considers it to be a picture of the lion girdle.⁸⁸ A most ancient type of cross is the swastika, which will be discussed later on. The three-armed cross of Odin is found in the bronze age, and also the four-armed cross of Freya. This is an equal-armed cross sometimes in a ring like the wheel-figures of the graves of the stone age, a religious symbol found in Europe, Asia, and America.⁸⁹

The cross may be seen on prehistoric monuments in America, on objects of pottery found by Dr. Schliemann at Hissarlik and at Mycenæ, and, in more than one form, on pagan Roman altars still preserved in Germany and Britain. It appears frequently on tombs in Asia Minor. Missionaries discovered it in Africa, where it was employed as a mystic symbol by the priests long before Christianity was introduced. "A cross was used by the people of Erin as a symbol of some significance at a period long antecedent to the mission of St. Patrick or the introduction of Christianity to this island. It is found, not unfrequently, amongst the scribings picked or carved upon rock surfaces and associated with a class of archaic designs, to the meaning of which we possess no key." With the Chinese it was for untold ages a symbol of the earth. The Buddhists and Brahmins tell us that the figure of the cross, whether in a simple or complex form, symbolizes the traditional happy abode of their primæval

ancestors. Travellers say that crosses are exhibited on the curtains of the monasteries of the Tibetan Buddhists to mean peace and quietness. "With the same conception the loop-holes of the Japanese forts were in time of peace covered with curtains embroidered with crosses, which when war broke out were removed."⁹⁰ In Brittany a common amulet, but one of great power and regarded with great veneration, is the one called the *pierre du croix*, a mineral which crystallizes in the form of a cross, not always at right angles, but frequently so. This is regarded as a token from God in favor of the religion of the country, and is given to these his chosen people as a recognition of their piety and religious fervor. There are several quarries of these in Brittany. Gathered there, they are mounted by the jewelers and sold as amulets. There are others of the same nature, crystallized in star-shape, which are regarded in the same way. They are considered as talismans against shipwreck, drowning, and hydrophobia, and are a cure for sore eyes. When not mounted on a pin or a ring, they are worn in a small sachet or bag around the neck or in the pocket.⁹¹

Not to go into too much detail concerning the cross, we may center our attention upon its connection with the religion of the aborigines of America. Ingenious theories have been advanced to account for the presence of the cross among American symbols. Some believe that the great importance attached to the points of the compass—the four quarters of the heavens—by savage peoples has given rise to the sign of the cross. With others, it is a phallic symbol, derived by some obscure process of evolution, from the veneration accorded to the reciprocal principle in nature. It is also frequently associated with sun-worship, and is recognized as a symbol of the sun—the four arms being rays remaining after a gradual process of elimination. The cross has also represented the stars, dwellings, the dragon-fly, the Midé Society, human form, maidenhood, evil spirit, and divers others.⁹² Among the Blackfeet Indians of Canada, "the 'T,' or tau-cross, is a sacred symbol used in the consecration of medicine men. It is painted in blue upon the breast of the newly initiated as a sign of power. It is connected with the gift of healing."⁹³ Another type of cross has arisen from the sign for the butterfly—a design roughly in the shape of a maltese cross. It is held that the butterfly brings sleep and dreams. "It is still a custom for the Blackfeet woman to embroider the sign of the butterfly in beads or quills on a small piece of buckskin, and to tie this in her baby's hair when she wishes it to go to sleep. At the same time she sings to the child a lullaby, in which the butterfly is asked to come flying about and to put the baby to sleep. . . . The use among the Dakota of the Latin cross to denote the dragonfly as a warning of the approach of danger, is interesting in this connection."⁹⁴ Among the Sioux the square or oblong, with the four lines standing out, is interpreted to mean the earth or land with the four winds standing toward it. "The cross, whether diagonal or upright, always symbolizes the four winds or four quarters."⁹⁵ With all the prairie tribes the morning-star is held in great reverence and is the subject of much mythological belief and ceremony. "It is universally represented in their

pictographs as a cross, usually of the Maltese pattern. In this form it is frequently pictured on the ghost shirts. The Arapaho name, *nagaq*, means literally 'a cross.'⁹⁶ Among the Tusayan, "the equal-armed cross in modern pictography is a symbol of the Star god or Heart-of-the-sky. How old this association is in Tusayan mythology is doubtful, but the cross is found on many decorated food bowls."⁹⁷ A Maltese form of cross representing the four winds of heaven and repeated six times on an Apache cloak was held to make the wearer invisible. It was also painted by warriors upon their moccasins upon going into a strange district in the hope of keeping them from getting on a wrong trail.⁹⁸ "The cross as portrayed by the Zuñi refers to the bright morning star, which symbolizes that one of the 'fire gods' who lights up the day." Sometimes the cross represents a conventionalized form of man; and among the Ojibwa, apart from symbolizing the four cardinal points as the abode of the wind-gods, it signifies the fourth degree of the cult society of the Midé, because, during the ritualistic ceremonies of the fourth degree; a cross is erected within the enclosure built for the purpose." This consists of two posts in the form of a cross. Marquette evidently did not know that the cross is the sacred post. The erroneous conclusion that it was erected as an evidence of the adoption of Christianity, and possibly as a compliment to the visitor, was natural on the part of the priest.⁹⁹ A number of copper crosses have been unearthed in Tennessee, Ohio, and elsewhere, which cannot be accounted for by contact with Europeans. They probably were worn as ornaments; the form is an easy design to execute and one of natural conception.¹⁰⁰ The Maltese cross of the ancient inhabitants of the Southwest is the emblem of a virgin, still so recognized by the Mokis. "It is a conventional development of a more common emblem of maidenhood, the form in which the maidens wear their hair arranged as a disk of three or four inches in diameter upon each side of the head. This discoidal arrangement of their hair is typical of the emblem of fructification, worn by the maiden in the Muinwa festival." This strongly marked form of Maltese cross appears frequently in the pottery and also in the petroglyphs of the Moki.¹⁰¹

The cross was generally used by the Mayas and Mexicans as a symbol of the cardinal points. Possessing four arms, it came readily enough to be regarded as indicating directions, and hence the four winds. As the winds brought rain, the cross became a symbol of rain or of the god of rain, and governed the Maya calendar.¹⁰² It occurs on one of the bas-reliefs of Palenque and on the monuments of Cuzco, in the very center of the worship of the sun, being similar to the Egyptian *tau*.¹⁰³ One writer¹⁰⁴ thinks that the crosses which were frequently used before the conquest by the aborigines of Mexico and Central America were merely ornaments and were not objects of worship, while the so-called crucifixes, like that on the "Palenque tablet," were only the symbol of the "new fire" or of the close of a period of fifty-two years. He believes

them to be merely representations of "fire-drills" more or less ornamented. On the other hand there is much evidence that the cross figured in the religion of various tribes of the peninsula of Yucatan and that it represented the god of rain, while Quetzalcoatl, the "Feathered Serpent," is represented with his robe marked with the sign of the cross to show that he was Lord of the Four Winds and of Life.¹⁰⁵ Trees were regarded as sacred by the Nagualists, and in Mexican mythology "the tree of life" is represented as having four branches, "each sacred to one of the four cardinal points and the divinities associated therewith." In the Mexican figurative paintings this tree resembles a cross. The ancient Mexican pictographic manuscripts abound in representations of trees, conventionalized in such a manner as to resemble crosses; these apparently take an important part in the scenes depicted. By a comparison of them with the cross in the Palenque tablet, Holmes¹⁰⁶ has been led to the belief that they must have a common significance and origin. "The analogies are indeed remarkable. The tree-cross in the paintings is often the central figure of a group in which priests offer sacrifice, or engage in some similar religious rite. The cross holds the same relation as the Palenque group. The branches of these cross-shaped trees terminate in clusters of symbolic fruit, and the arms of the cross are loaded down with symbols, which, although highly conventionalized, have not yet entirely lost their vegetable character. The most remarkable feature, however, is not that the crosses resemble each other in these respects, but that they perform like functions in giving support to a symbolic bird which is perched upon the summit. This bird appears to be the important feature of the group, and to it, or the deity which it represents, the homage or sacrifice is offered. These analogies go still farther; the bases of the cross in the tablet and of the crosses in the paintings are made to rest upon a highly conventionalized figure of some mythical creature. A consideration of these facts seems to me to lead to the conclusion that the myths represented in all of these groups are identical, and that the cross and cross-like trees have a common origin. Whether that origin is in the tree on the one hand or in a cross otherwise evolved on the other I shall not attempt to say." The sign of a cross, with arms of equal or unequal length, came to be the ideogram for life in the Mexican hieroglyphic writing. As such, varied in different ways, it was employed to signify the nagual, "the sign of nativity, the natal day, the personal spirit."¹⁰⁷ Among the cave-dwellers of the Sierra Madre, the medicine-man marks the forehead of the newly-born babe, if a boy, with three crosses, if a girl, with four. The Tarahumari, who inhabit this region, have a tradition involving the cross which is of significance in their religious rites. "Once when their god was intoxicated, the devil robbed him of his wife. 'I cannot remain here any longer,' said he, 'because the devil took my wife; but I will leave two crosses in the world.' He placed one cross where the sun sets and one where it rises. The cross in the east their god uses when he comes down to visit the Tarahumaris; that in the west is for the Tarahumari when he dies and goes to heaven. Between these two crosses lives the Tarahumari tribe. The Indians would like to go to the crosses and dance before them, one of their forms of worship, but they are prevented from doing so by large bodies of water, and they therefore have small crosses standing outside their own houses before which they hold

¹⁰⁵ Brinton, *Nagualism*, 43; Preuss, in *Globus*, LXXIX, 262.

¹⁰⁶ In BAE, II, 270.

¹⁰⁷ Brinton, *Nagualism*, 48.

their nightly dances. They also sacrifice before these crosses, and here is where their god comes to eat. The Tarahumari invariably provides a smooth place near his house or cave upon which he erects his cross and where he holds his dances."¹⁰⁸

On an isolated rock in a certain valley there is a round tower made by the Incas, of rough stones faced with stucco. "Above the door, and simulating windows, we meet again with the Egyptian *tau* that we have already seen at Palenque." The structure of this tower seems to indicate that it was a temple.¹⁰⁹ Among some tribes the cross was adopted as an amulet, as in the case of the Abipones who had crosses tattooed on the middle of the forehead.¹¹⁰ In Surinam the cross is common and is in no way connected with Christian views.¹¹¹ That the cross in the Americas was an independent development antedating contact with the whites, there can be no doubt.¹¹²

The Swastika. An ancient form of the cross is the swastika. Its origin is unknown. The bars of the normal swastika are straight, of equal thickness throughout, and cross each other at right angles, making four arms of equal size, length, and style. Their peculiarity is that all the ends are bent at right angles and in the same direction, right or left. The swastika has been used as a symbol or as an ornament since prehistoric times from China to western Africa, throughout Europe, and in the two Americas. In the historic period it is found in Japan, Korea, China, Tibet, Armenia, Asia Minor, Greece and its islands, especially Cyprus and Rhodes, Italy, France, Germany, Scandinavia, Great Britain—perhaps only under Scandinavian influence—Ohio, Tennessee, Mississippi, Alaska, Mexico, and Brazil. Dr. Schliemann found many specimens of swastika in his excavations at the site of ancient Troy on the hill of Hissarlik. It is common on the prehistoric monuments of Western Europe; it occurs on Greek and Cilician coins and in catacombs, on bronze grave-plates and, in the Middle Ages, on priestly garments. It was adopted into heraldry as the cross cramponnee.¹¹³ In Scandinavia it used to be vulgarly called the hammer of Thor and Thor's hammer-mark; some authors, however, hold that it has no connection with the Thor hammer, which is reported to be the same as the Greek *tau*, having the form of the Roman and English capital T.¹¹⁴

The swastika is connected particularly with Buddhism, and its presence in Japan, China, and Tibet is thus explained. In Buddhism, the ends of the arms are always bent in the respectful attitude, i.e., to the left; "for the Lamas, while regarding the symbol as one of good augury, also consider it to typify the continuous moving, or 'ceaseless becoming' which is commonly called Life." The Jains appropriated it for the seventh of their mythical saints; the heterodox Tibetans, the Bön, in adopting it have turned the ends in the reverse direction.¹¹⁵ The swastika stands on the first page of Hindu ledgers and daybooks, and is a common stamp on East Indian coins. A saddle in the

Chinese department at the Boston Art Museum bears a swastika in gold on the front of its pommel.¹¹⁶

It cannot be doubted that the swastika was known in the Western Hemisphere in prehistoric times. A specimen was taken by Dr. Edward Palmer in 1881 from an ancient mound opened by him on Fains Island, Tennessee. Excavations in the mounds in Ohio and among the ruined pueblos in southwestern Colorado have disclosed objects bearing the swastika.¹¹⁷ The Pima use it for decorative purposes,¹¹⁸ while it appears "alike engraved on Japanese bronzes and portrayed in the Navajo sand-pictures."¹¹⁹ It occurs as a mystic symbol of the wind-powers on war-charts of the Kansa and Osage tribes.¹²⁰ The Spaniards found it in Yucatan when they first came there, while many examples have been collected from Brazil.¹²¹ "If some learned traveller from the Orient chanced to stop overnight in an out-of-the-way corner of the United States, where patchwork quilts still sometimes take the place of woven counterpanes, and upon awakening in the morning should find his bed-cover besprinkled at regular intervals with this mystic sign of the religion of his own land, surely, if he recalled Hans Christian Andersen's dramatic tale of 'The Tin Soldier,' and of his final reappearance in the very room from which he had been so lucklessly borne away, he too would exclaim . . . 'Nay, how wonderfully things can come to pass in the world!'"¹²²

There are many theories concerning the symbolism of the swastika, its relation to ancient deities and its representation of certain qualities. There is nothing to prevent us from supposing that it was spontaneously conceived everywhere, like the equilateral crosses, circles, triangles, chevrons, and other geometrical ornaments so frequent in primitive decoration. It may have been merely decorative in its origin. There is good reason to believe, however, that it has been and is chiefly talismanic. "We see it, at least among the peoples of the Old Continent, invariably passing for talisman, appearing in the funeral scenes or on the tombstones of Greece, Scandinavia, Numidia, and Thibet, and adorning the breasts of divine personages—of Apollo and Buddha—without forgetting certain representations of the Good Shepherd in the Catacombs."¹²³ Some scholars say it is a solar symbol; others an earth or wind symbol. Says Wilson:¹²⁴ "Some writers have respectively considered it the emblem of Zeus, of Baal, of the sun, of the sun-god, of the sun-chariot of Agni the fire-god, of Indra the rain-god, of the sky, the sky-god, and finally the deity of all deities, the great God, the Maker and Ruler of the Universe. It has been held to symbolize light or the god of light, of the forked lightning, and of water. It is believed by some to have been the oldest Assyrian symbol. Others think it represents Brahma, Vishnu, and Siva, Creator, Preserver, Destroyer. It appears in the footprints of Buddha, engraved upon the solid rock on the mountains of India. It stood for the Jupiter Tonans and Pluvius of the Latins, and the Thor of the Scandinavians. In the latter case it has been erroneously thought to be a variety of the Thor hammer. At least one author thought it had an intimate relation to the Lotus sign of Egypt

and Persia. Some have attributed a phallic meaning to it. Some have thought it represented the generative principle of mankind, making it the symbol of the female. Its appearance on the person of certain goddesses, Artemis, Hera, Demeter, Astarte, and the Chaldean Nana, the leading goddess from Hissarlik, has caused it to be claimed as a sign of fecundity." Various suggestions have been offered as to the derivation of its form. Some think it developed from the cross, the lotus-petal, or the circle; others regard it as the conventionalization of a flying bird.¹²⁵ Among the Buddhists, where it was especially associated with the divinity of Fire, it is thought that its origin was the cross-shaped part of the fire-drill.¹²⁶ It has been asserted by Max Müller¹²⁷ that the swastika was a mark of property which was put on the ear of a cow, from the time of the Vedas down; it was only one of many such marks. Prior to Christianity it was said to be a sign of submission like two bended knees.¹²⁸

Definitions and derivation of the term "swastika" have been given, though the sign must have existed long before that name was applied to it. "It must have been in existence long before the Buddhist religion or the Sanskrit language." The word comes from the Sanskrit and its use can be traced back to about 400 B.C. The following analysis of the Sanskrit *swastika* has been given: "*Su*, radical, signifying good, well, excellent, or *suvidas*, prosperity. *Asti*, third person, singular, indicative present of the verb *as*, to be, which is *sum* in Latin. *Ka*, suffix forming the substantive."¹²⁹ It might be translated literally as "of good fortune." "What seems to have been at all times an attribute of the Swastika is its character as a charm or amulet, as a sign of benediction, blessing, long life, good fortune, good luck. This character has continued into modern times, and while the Swastika is recognized as a holy and sacred symbol by at least one Buddhist religious sect, it is still used by the common people of India, China, and Japan as a sign of long life, good wishes, and good fortune."¹³⁰ It is a striking memorial of the universal significance of the aleatory element.

§277. Coercitives.

AMONG the Nairs of India there is an implicit distinction between practices to propitiate a god and those with which to bully a spirit. A ghost or spirit, though superior to man in power and intelligence, as well as in the will to do harm, can be rendered harmless and kept under control by magical practices.¹ This notion was fairly common among the ancients. It is expressed in writings composed under the Ptolemies upon the sacred science of the Egyptians. "They not only called the god by name, but if he refused to appear they threatened him." These formulæ of compulsion of the gods were named by the Greeks

theōn anagkai.² In the religion of the Parsis one of the chief means of checking evil influences is the cultivation of the soil. In the *Avesta* it is written:

When barley occurs, then the demons hiss;
When thrashing occurs, then the demons whine;
When grinding occurs, then the demons roar;
When flour occurs, then the demons flee.³

In the imitative magic of the Athenian Thesmophoria, man attempts direct compulsion, he admits no mediator between himself and nature, and he thanks no god for what no god has done. "A thank-offering is later even than a prayer, and prayer as yet is not. To mark the transition from rites of compulsion to rites of supplication and consequent thanksgiving is to read the whole religious history of primitive man."⁴

Certain religious acts of self-denial can be interpreted here as coercitives. Continence is a preparation to come into the presence of God at Sinai.⁵ Men abstain from their wives when on the warpath.⁶

Nudity, as has been shown in the text, is a typical coercitive. In southern India, on the third and fourth days of a festival held in honor of two divinities, a god and a goddess, women walk naked into the temple, but are covered with leaves and boughs of trees and surrounded by their female friends. The proceedings end with a procession around the boundaries of the village lands; here order and propriety cease, and the goddess is abused in the foulest language.⁷ Crooke⁸ cites many cases of nudity from Indian sources and from his own experience. Ritual nudity is common in religion and magic. In rain-magic, he says, the performers hope rain will fall and fertilize them, like thirsty vegetation. The religious orders practise it as symbolic of death to this world, renunciation of family and social ties. It is associated with fertility-rites, as when a woman walks naked one hundred and eight times around a certain tree to get offspring, or appears stark naked in various rites to get children, or when a naked man pounces on a lamb, tears its throat with his teeth, drinks some blood, and runs with the carcass to the village boundary "to expel evil and promote fertility." Nudity seems to be a necessary condition for magic and witchcraft. Cattle may be cured by a man walking around them naked, with a wisp of burning straw. Survivals may be seen in ancient priestly vestments composed of a few leaves.

The Aleuts had religious dances and festivals in December, during which images were carried from island to island and strange ceremonies, of which we have but dim traditions, were performed at night. There were mysteries sacred to males and to females. In some secret orgies both sexes joined without reproach. Hundreds of women wearing masks are said to have danced naked in the moonlight, men being rigidly excluded and liable to death if detected intruding. The men had analogous dances. An idea prevailed that while these mystic rites were going on a spirit or power descended into the idol.⁹

At Mecca, in the times of heathendom, the sacred circuit of the Kaaba was made by the Beduin, either naked or in clothes lent by a member of the religious community of the sacred city. The same custom appears in the wor-

ship of the Tyrian Baal. It appears that sometimes a man did make the circuit at Mecca in his own clothes, but in that case he could neither wear them again nor sell them, but had to leave them at the gate of the sanctuary; they became taboo through contact with the holy place and function.¹⁰

Belief in the magic power of nakedness continued into modern times, as in the case of Charles II of Spain. This impotent king thought he was bewitched, a belief which was confirmed by his father confessor, a Dominican who had a vision that the royal pair were prevented from having children because of a charm. It was decided to break the spell by means of an exorcistic ceremony: the king and queen were to go out naked and the monk in *pontificalibus* was to tackle the charm. The king vigorously importuned the queen to accede to this, but that lady could not be persuaded to submit to the ignominy.¹¹ It is a modern superstition that single women desiring husbands should, the night before St. Andrew's day, call upon that saint naked, and they will see their sweethearts in their sleep. Also, "on Christmas-eve the girls sit up from 11 to 12. To find out if they shall get married the next year, they strip themselves naked, stick their heads into the copper, and watch the water hissing. If that does not answer, they take a broom and sweep the room backwards, and see the future lover sitting in a corner: if they hear the crack of a whip, he is a waggoner; if the sound of a pipe, a shepherd. Some rush out of doors naked, and call the lover; others go to a cross-road, and call out his name." The spiteful creature, who wants to do his neighbor a rascally mischief, "goes at midnight, stark naked, with a sickle tied to his foot, and repeating magic spells, through the middle of a field of corn just ripe. From that part of the field that he has passed his sickle through, all the grains fly into his barn, into his bin."¹²

Cursing. The invocation of injury or evil upon another, whereby, apparently, the spirits are forced to carry out the curse, is a coercitive of the first magnitude among primitive peoples. The Loyalty Islanders had "great faith in, and dread of, cursing. To be cursed by a parent or chief was regarded as the greatest calamity." Imprecation was a frequent method of causing sickness.¹³

The Bangala of the Congo calls down a curse on the thief; his formula witnesses to the local sex-division of labor. "Should the thief be a man he will henceforth have no luck in fishing, and should it be a woman she will have no more success in farming."¹⁴ An interesting feature is the dying curse—the *kirume* of Kikuyu and *kiume* of Ukamba, "the general idea of this being that a dying person can put a curse upon property belonging to him, or can lay a curse upon another person, but only upon a person belonging to his own family; thus, for example, the head of a village, when dying, can lay a curse on a certain plot of land owned by him and will that it shall not pass out of the family, and if a descendant sells it, it is believed that the speedy death of the offender is the result." A case recently came to the author's knowledge where an elder was offered a very tempting sum for a particular piece of land, as well as equivalent land elsewhere, but it was refused by the owner because it had come down to him with a *kirume* on it. "This is a very interesting revelation, because when one comes to consider it, it is undoubtedly

the genesis of a last will or testament. Furthermore, it is the rude beginning of our principle of 'entail.' It moreover shows that these people have reached the stage of individual tenure in land." Examples may be found all over the country, where the curse is passed on from generation to generation, such is the strength of the belief. If a man does not receive his father's blessing he is believed to go through life attended by much misfortune. A daughter may be a trouble to her father; "she is, say, married to a husband who has paid over the required dowry to her father, she runs away, repeatedly misbehaves herself, and so forth, and the father will then be subject to continual worry, owing to the husband's demands for the return of the dowry. The father may eventually become so weary of all this worry that he will put a *kirume* on her and condemn her to perpetual barrenness." A man is, generally speaking, able to lay a *kirume* only upon a person belonging to his own clan, which really means that a curse will affect only one with a common blood tie. "If a person hears that, say, a brother intended to place a *kirume* on him, he would at once take a male goat or sheep to his village and kill it there, he would offer some of the fat, some milk and some beer to the dying man, who could not refuse to forgive the suppliant, and would ceremonially spit into his hands and rub a little saliva on his forehead, navel, and feet. The threatened person would then depart in peace free from any danger of a *kirume* from that person. . . . If a man hears that a near relative is very ill he makes a point of going to see him, and takes the precaution of getting him to ceremonially spit on his hand and rub his visitor on the navel. If a man goes to see his sick father or mother he takes a piece of mutton fat, and the sick parent ceremonially spits on it and the visitor rubs the saliva covered piece of fat on his navel." The effective power of the *kirume*, according to native belief, is derived from the spirit of the deceased person by whom it is imposed, assisted by the spirits of the ancestors of the family. Another type of curse, called *thahu*, is imposed by the elders; it is possible to have this curse removed. "To remove the curse the offender then goes to the elders and begs to be allowed to pay the amount of the judgment. This is done, and he brings in addition a sheep; the elders then say, 'Go back home, bring some beer, and the day after to-morrow we will come and spit on you.' . . . The elders then each take a little of the sheep's fat and rub it on their staves saying, 'We are glad that the man who defied our order has now obeyed it; we cursed him through our *mithegi* [staves], but we now smear our *mithegi* with fat, as a sign that we and our *mithegi* are glad, and there is now nothing to be feared, for we have come to cleanse you and your village from evil.' The elders then assemble in a circle with the man and his family in the middle, and one of the elders anoints the tongue of each individual of the family with a spot of *ira* or white earth, and the elders then ceremonially spit on the offender and each of his family and depart." The same belief occurs in Ukamba, where the council of elders can inflict upon a man, for disregard of its orders, a curse which, if he is still recalcitrant, is said to be so potent as to kill him and all the people of his village in a short time.¹⁵ Among the tribes of British Central Africa, in some cases a man who is cursed will starve himself to death.¹⁶

In a Samoan case of stealing, fine mats or other gifts were taken by the injured party to pay the priest to curse the thief and make him ill. "The priest

¹⁵ Hobley, in JAI, XLI, 406, 416-417, 419, 427-429.

¹⁶ Stannus, in JAI, XL, 302.

would then sit down with some select members of the family around the bowl representative of the god, and pray for speedy vengeance on the guilty; then they waited the issue. These imprecations were dreaded. Conscience-stricken thieves, when taken ill, were carried off by their friends on a litter and laid down at the door of the priest, with taro, cocoa-nuts, or yams, in lieu of those confessed to have been stolen; and they would add fine mats and other presents, that the priest might pray again over the death-bowl, and have the sentence reversed."¹⁷

The formulæ of imprecation among the Chaldeans were really terrible. They called upon all the gods of heaven and of the abyss to display their power by overwhelming with misfortunes the person against whom they were directed.¹⁸ Since the opening of the tomb of Tut-ankh-Amen a series of dramatic events has taken place, beginning with the death of Lord Carnarvon and being followed within two years by that of five others; this has led to a revival of theories about unseen powers protecting a tomb against desecration by profane hands.¹⁹ One recalls the mortuary inscription on the sarcophagus of a Phœnician king of the sixth century, B.C., in which he cast his curse on the desecrator in no uncertain tone: "Let there be no resting place," the curse reads, "for the man, even if he be of royal lineage, who ventures to open this chamber of repose, or remove the sarcophagus in which I am at rest." The same sentiment is expressed by the lines cut on Shakespeare's gravestone: "Curst be he that moves my bones."

On its religious side the curse developed into the vow and the prayer, on its social side into the ordinance and ultimately into the regular law; hence the language of early legal formularies still maintains as necessary and integral the sanction of the curse. The formula is not "do this" or "do not do that," but "cursed be he who does this, or does not do that."²⁰

The Oath. Allied to cursing in its religious aspect is the oath, a solemn affirmation made with an appeal to supernatural power to establish the truth of what it affirmed. The savage method of taking oath often makes evident the kind of punishment invoked in case the person is not speaking the truth.²¹

In affirming the truth the Papuans of Geelvink-Bay call upon heaven as witness, the Alfurs upon the sun, while the natives of Utanata River on such an occasion inflict a small wound on their bodies, mix the blood with salt water and drink it.²²

The Koranna of South Africa confirm an oath by saying: "as truly as I have a mother."²³ The Makololo do not administer an oath, but occasionally when a statement is questioned, a man will say: "By my father," or "By the chief, it is so."²⁴ Generally among the Kaffirs an oath is affirmed by calling the name of a chief, usually of one who is dead, or by invoking a father or brother on the part of females, and a sister or mother, especially a mother-in-law, on the part of males.²⁵ To make an oath binding on the person who takes it, certain West Africans give him something to eat or drink which in some way appertains to a deity, who is then invoked to visit a breach of faith with punishment. The ordinary plan is to take something from the spot in which the deity resides. Thus, in the case of a marine god, a little seawater, or seaweed

from the rock or reef in which he dwells, is taken into the mouth and swallowed.²⁶ The Mandingo swear by Mumbo-Jumbo and regard such an oath as holy. In Liberia a woman accused of adultery must swear by the mark of the secret society so that the spirit of the club may kill her if she is guilty.²⁷ On the Loango Coast a most effective type of affirmation is that which involves driving a nail into a wooden image. He who drives in such a consecrated nail—in serious cases a red-hot one—is thought to be constantly reminded of his duty by the pain which he has caused, and only after fulfilment will the nail be drawn out and the wound (of the hole) healed. "As such a mighty demon, naturally filled with violent wrath against the author on account of the pain he has caused, strives to pursue him with full vengeance, the thief, when he hears that the victim has sent for the image of the fetish to have a nail driven in, tremblingly returns the stolen goods. The guilty party dares not drive in a nail and thus be counted among those suspected." These ceremonies are used in a preventive way also, as when a merchant, before sending out his slaves to bring in the goods he has purchased, will have the fetish brought and a nail driven in before the assembled house-servants, with maledictions against him who may be guilty of any peculation. Vows also are given a binding and coercing power through this means. If, for example, a master cannot cure his servant of drunkenness, he has a nail driven into the fetish before his eyes, and then the fear of sickness or death in case of transgression prevents the servant from violating his promise.²⁸

In the ceremony of allegiance in Madagascar, a young calf is killed, the head and feet are reversed in position, spears are thrust into the carcass, and those who are about to be sworn hold spears in their hands while one of the judges repeats a form of oath, imprecating fearful penalties upon the heads of those who violate it, that they may in that case become like the mangled animal before them. To this they express assent by violently shaking their spears. This form of oath is employed chiefly for the more influential personages. For those of lower rank the following ceremony is considered sufficient: the parties stand round a small pond of water into which there has previously been thrown the dung of a bullock, the flower of a certain grass, a musket ball, the wadding of a musket, branches of a certain tree, a long grass, and a water flower. An oath of allegiance having been recited by one of the judges, assent is given by the persons to be sworn striking the water with boughs, a spear also being plunged into the pool and a musket fired over it. At the accession of one of the kings, another form of oath was devised: in this ceremony a quantity of red earth taken from the tomb of one of the kings was mixed with water and drunk by the common people, it being supposed that this would operate as a curse upon those who should violate the oath.²⁹ Oaths of fidelity are just as binding. "Among the Wakanda the emissaries of the two parties squat together in a circle round a pot as large as the fist, roughly moulded in clay and dried in the sun, containing water. The speakers take a stick in their hands and speak, tapping all the time on the pot, of the friendly disposition of their belongings, until one takes the pot in his hand, and with the speech, 'If we break the friendship which we have here promised, may we be broken like this pot,' dashes it to the ground. The Mussulman Swahelis, in place of an oath, dash down a cocoa-nut in the mosque.

²⁸ Lenz, *Westafrika*, 183.

²⁹ Sibree, *Great Afr. Isl.*, 185-186.

The Wakikuyu strangle a lamb, wishing that they may undergo the same death if they break the oath."³⁰

The Kilimanjaro native swears by his chief;³¹ the northeast African by the repudiation of his wife; "If I don't speak the truth, may my wife be put away."³² The oath of the Dinka tribe is taken on the sacred spear of the district. "Lying, after taking oath on the spear, is so much feared that I have seen cases of alleged injury withdrawn absolutely on the defendant taking the oath on the spear that he is innocent."³³ In some parts of the Sahara an oath taken on the foliage of certain trees is held to be just as holy as that of the Mohammedan upon the Koran.³⁴

The oath among the Ostyak of Siberia consists in having the accused kiss the paw of a bear. "He who has kissed the paw is regarded as truthful; the Ostyak is of the firm belief that if one has lied he will be torn to pieces by a bear at the next encounter. This oath, however, has little by little lost importance; the young Ostyaks carry a bear's paw in fish-oil as an amulet and believe that they have thereby smeared, i.e., appeased, the bear and that, in case they have actually sworn falsely, it will be lenient with them."³⁵ The form of oath, both in the Hindu Kush mountains and on the eastern frontier of Bengal, is licking salt.³⁶ A Naga case is cited where the natives erected a large stone on the occasion of taking an oath, and said, "As long as this stone stands on the earth no differences shall occur between us."³⁷ The commonest and most sacred form of oath is for the two parties to lay hold of a dog or fowl while the creature is cut in two, "emblematic of the perjurer's fate."³⁸ Another common method is to bite a tiger's tooth kept for the purpose, and then to eat some of the earth from a grave, saying at the same time, "The gods will see me, and if I am lying, they will send a tiger to eat me, or they will turn my head to earth like this grave." A form of oath used by the Angamis is: "May I be eaten by a tiger, and may my harvests be nothing but stalks; may my rice grow up and then may the beards of grain grow down into the earth again, if I am not speaking the truth." "They seem," writes Furness,³⁹ "to have absolute confidence in a man's statement, after taking oath in this manner. I once questioned the trustworthiness of such an oath, and an Angami Naga said: 'Possibly a white man might live after breaking his oath, but a Naga would surely die.' Their death rate must be large; the Angamis, above all others, are treacherous liars." It would be significant to know whether the last statement applies to their dealings amongst themselves or with the whites. The Chin take oaths when making agreements of every sort; the most common form is for both parties to kill an animal and paint each other with its blood. In some parts of the hills it is customary to eat earth when swearing, and in the south, earth is tendered to a witness in a criminal case to eat in court. "The eating of earth is considered a very binding oath, and, if there is any possibility of getting the truth out of a Chin at all, there is more chance of it after he has taken this form of oath."⁴⁰

In the *Mahabharata*, vows of penance and fasting have power over the gods and they accumulate strength. One way of swearing is to touch one's head.⁴¹

Often the only binding oath is taken under a tree. When swearing the Hindu holds water or holy grass;⁴² and if he does it with a mango leaf on his head, "none but a hardened sceptic will disbelieve him then."⁴³ When two villages in Assam are about to swear an oath of perpetual peace, "they place a cat inside a basket and the two headmen take hold of the basket at either end and then hack the cat in pieces. Both take care to make the first cut at the same moment for the efficacy of the oath depends on the guilt of the slaughter of the cat being shared equally until one or other commits a breach of the oath, when the whole of the guilt attaches itself to the offender. . . . The ceremony is intended, no doubt, to make the two villages one by means of the communion in the blood, or, since the blood is often regarded as the soul itself, by means of the communion in the soul of the cat which is a special animal—a god in fact."⁴⁴ The cutting off of a cock's head is the usual form of swearing among all Chinese, the intimation being that a like fate awaits the treacherous.⁴⁵

In Sumatra the place of greatest solemnity for administering an oath is the burying ground of their ancestors. Their method of swearing is as follows: "The young shoots of the anau-tree were made into a kind of rope, with the leaves hanging, and this was attached to four stakes stuck in the ground, forming an area of five or six feet square, within which a mat was spread, where those about to take the oath seated themselves. A small branch of the prickly bamboo was planted in the area also, and benzoin was kept burning during the ceremony. The chiefs then laid their hands on the *koran*, held to them by a priest, and one of them repeated to the rest the substance of the oath, who, at the pauses he made, gave a nod of assent; after which they severally said, 'may the earth become barren, the air and water poisonous, and may dreadful calamities fall on us and our posterity, if we do not fulfil what we now agree to and promise.'⁴⁶ The natives of Borneo in taking oath employ the teeth of tiger-cats; the person swearing holds the teeth in his hand and calls on them to harm him if he does not speak the truth.⁴⁷ Oath-ceremonies are performed in British North Borneo on occasions, such as the brotherhood-ceremonies and those of welcome. For the first type the jungle is cleared for about twenty yards and then a hole dug about a foot deep, in which is placed a large water-jar. The old men of the brotherhood commenced declaiming, "Oh, Kinarringan, hear us!" and then, for half-an-hour, went on declaring that by fire (represented by a burning stick), by water (brought in a bamboo and poured into the jar), and earth, that they would be true to all white men. "A sumpitan was then fetched, and an arrow shot into the air to summon Kinarringan. We now placed our four guns, which were all the arms my party of eight mustered, on the mouth of the jar, and each put a hand in and took a little clay out and put it away. Finally several volleys were shot over the place and the ceremony terminated." This is similar to the welcome-ceremony of the Dusuns described by Sir Charles Brooke: "First the chief cut two long sticks, and then sitting down, he had a space of ground cleared before him, and began a discourse. When he came to any special point in his discourse he thrust a stick into the ground and cut it off at a height of half-a-foot from the earth, leaving the piece sticking in. This went on until he had made two little armies of sticks, half-a-foot high, with a stick in the middle of each army

much higher than the rest, and representing the two leaders. These two armies were himself and his followers, and myself and my men. Having called in a loud voice to his god, or Kinarringan, to be present, he and I took hold of the head and legs of the fowl, while a third person cut off its head with a knife. We then dropped our respective parts, and the movements of the dying fowl were watched. If it jumps towards the chief his heart is not true, if towards the person to be sworn in, his heart is not true; it must, to be satisfactory, go in some other direction. Luckily, in my case, the fowl hopped away into the jungle and died."⁴⁸ To swear, among the Alfurs, means to drink salt. They put salt water in a vessel, and add some wax, a bullet, a knife or other cutting tool. If the person lies, he will melt like the salt or wax, the knife will cut his throat, and the bullet will hit him even though aimed in a totally different direction. This is parallel to the case mentioned in the text as the most common way of taking oath in the Archipelago.⁴⁹

An instance is mentioned in the early history of New Hampshire in which the Indians and whites swore to an agreement at two heaps of stones previously raised, called "Two Brothers."⁵⁰ In administering oaths to plaintiffs and defendants appearing before the three Indian judges of the Court of Indian Offenses of the Crow tribe, a tin arrow is used. "It is held in high and sacred esteem by all the older Crows, and it was claimed that no one can touch it and tell an untruth without meeting with a mishap such as bodily injury, the loss of a horse or other property, or even death. The pointed end of the arrow is painted red to resemble blood."⁵¹

Among the civilized people of antiquity it was not any singular regard for the truth, but a belief in the binding magic power of an oath, that gave the latter its awfulness.⁵² The Scythians confirmed their oaths by drinking wine in which they had let drip some of their own blood and after they had immersed in the mixture a sword, arrow, axe, and spear.⁵³ Herodotus⁵⁴ tells a story of a mutual oath to give the best thing one has to the other on demand. As the Hindu today swears with some water of the Ganges in his hand, so among the ancient Hebrews "the priest shall have in his hand the bitter water that causeth the curse."⁵⁵ To raise the right hand as though in a challenge to heaven was so universal a custom among the Semitic nations that in some of their languages the right hand is used as equivalent to oath.⁵⁶ "When thou shalt vow a vow unto the Lord thy God, thou shalt not slack to pay it: for the Lord thy God will surely require it of thee; and it would be a sin in thee. But if thou shalt forbear to vow, it shall be no sin in thee." In another place we read that it was forbidden to swear, "The Lord liveth."⁵⁷

Hera swore by the Styx, with one hand on land and one on the sea.⁵⁸ Roman soldiers swore by the genius of the emperor never to desert.⁵⁹ The ancient German oath of the women was upon "breast and hair."⁶⁰ The Norsemen had a ring-oath; the ring was kept in a temple, but at every gathering it was worn by the person presiding on his arm; every suitor and witness must

first invoke the gods on it. Other oaths were by the ship's bulwark, the shield's rim, the horse's shoulder, and the sword's edge. On Christmas evening a boar was led into the hall before the king, and all men laid their hands on its bristles, taking the holiest oath and promise.⁶¹ In 1247 a cardinal who went to crown a Norse king abolished the ordeal because, he said "it did not beseem Christian men to put God to an oath to bear witness in the affairs of men."⁶² Under feudalism in England the oath of the freeman to his lord was as follows: "He shall hold his right hand on the book and shall say thus:—Hear you my lord that I shall be to you both faithful and true, and shall owe my faith to you for the land that I hold, and lawfully shall do such customs and services as my duty is to you, at the times assigned, so help me God and all his saints." Again, "the villain, when he shall do fealty to his lord, shall hold his right hand over the book, and shall say:—Hear you my lord that I from this day forth unto you shall be true and faithful and shall owe you fealty for the land which I hold of you in villenage and that no evil or damage will I see concerning you but I will defend and warn you to my power, so help me God and all his saints."⁶³ The South Slavs of today swear, the mother or father by their children, the sister by the life and well-being of the brother, and so forth.⁶⁴

Some of the official oaths in European courts at the end of the nineteenth century resembled those of ethnography. When appointed presiding judge at a special trial in the Isle of Man, Mr. Shee, Q.C., was required to swear that he would administer justice as impartially "as the herring's backbone doth lie in the middle of the fish." Before the Norwegian witness gives his testimony he raises the thumb, the forefinger, and the middle finger of his right hand. These signify the Trinity, while the larger of the uplifted fingers is supposed to represent the soul of the witness, and the smaller to indicate his body. "If I swear falsely," he exclaims, "may all I have and own be cursed; cursed be my land, field and meadow, so that I may never enjoy any fruit or yield from them; cursed be my cattle, my beasts, my sheep, so that after this day they may never thrive or benefit me; yea, cursed may I be and everything I possess." Even more conscientious, perhaps, was the first witness in the days of the Brehons, who took three separate oaths before he gave his testimony, the first standing, the second sitting, and the third lying, as these were the positions in which his life was spent.⁶⁵

§279. Ritual.

ACCORDING to Lippert,¹ it is the rites, not the shaman, who can draw forth divine power and coerce the gods; the shaman is merely one who understands the rites and has a familiar spirit. Ritual always has a pronounced fetishistic power.

In the Trobriand Islands, "a magical formula is an inviolable, integral item of tradition. It must be known thoroughly and repeated exactly as it was learnt. A spell or magical practice, if tampered with in any detail, would entirely lose its efficacy. Thus the enumeration of ancestral names cannot con-

ceivably be omitted. Again, the direct question, 'Why do you mention those names?' is answered in the time-honoured manner . . . 'our old custom.' And in this matter I did not profit much from discussing matters with even the most intelligent natives."²

The Kabyle Mussulmans recite the first surah of the Koran in unison at the beginning and at the end of every important affair.³ Their religion has fallen into the rut of ritualism, with details so numerous and standards of correctness so strict that a rite fails over and over again because of some error.⁴ Islamic prayers are ejaculations of epithets of God and verses of the Koran, pure ritual. However meager and trivial, mechanical and arid the service is, yet there is in it intense devotion, fidelity, and punctiliousness.⁵

The present state of the Toda religion seems to be one in which ritual has persisted while the beliefs at the bottom of the ritual have largely disappeared.⁶ Formalism marks more advanced religions. In Mongolia, no one seems to understand fully the meaning of the prayer of the lamas: *Om mani padme hum*; no one of the lamas could translate it, yet they say it is the quintessence of Buddhist wisdom and it is inscribed on all the temples.⁷ According to the *Avesta*, the Almighty God has one hundred and one names, which signify all his virtues; these numerous names are recited in several ceremonies.⁸ There are 1008 epithets of Siva, 1000 of Vishnu, 80 of Christ, 99 of God in Mohammedanism, and 100 of Zeus.⁹ The day for the Brahman consists of a series of ritual acts, very minute and tedious.¹⁰ The mourning-rites of a Hindu may serve as an example of the force of ritual. On the thirty-first day after a death, the son, accompanied by the officiating priest, goes to the river-side, bathes, and performs certain preliminary rites. A quantity of silver and brass utensils, besides shawls, cloth, and hard silver in cash are required for the ceremony and to serve as gifts for the Brahmans, Pandits, and other guests. The guests arrive early, and are asked to take their seats according to their caste. About ten o'clock the son begins the rite, the officiating priest reciting the formularies and the son repeating them. Meanwhile female singers of questionable character entertain the guests with their songs, while garlands and sandal-paste are distributed. On the following day an entertainment is given to the Brahmans; until this is done no Hindu can be released from the restrictions of mourning, nor regain his former purity. Every Hindu must have his guru or religious guide, for it is by him that he is initiated into the privileges of the Hindu religion. "The power of these men over their disciples is almost unparalleled in history." In the Laws of Manu, guru is referred to as a venerable one, he who performs the rites. The nature of the initiation through which the Hindu boy must go could scarcely be inferred from its name, which literally means "leading or bringing a boy to his Guru or spiritual preceptor." "But in real fact, until the boy was so brought, he could not be reckoned among the 'twice-born,' and until he was spiritually regenerated by the act of investiture he could not be permitted to use a single prayer, or repeat the Veda, or engage in any single religious service or sacrificial rite. Nor was any ceremonial observance effectual unless the thread was worn." This is a simple necklace made of a few strands of thread, but it is the mark

of the spiritual aristocracy of India; and in most cases an earl is not more proud of his coronet than is the Hindu of this thread which marks him as a special favorite of the gods. Of course, it is of no use unless blessed by Brahmans and consecrated by the recitation of Vedic texts. After the boy is given the thread he is now for the first time taught to repeat the Vedic prayer for illumination, translatable thus: "Let us meditate on that excellent glory of the divine Vivifier, may he illumine our understanding." This is "the most ancient of all Aryan prayers, which was first uttered more than three thousand years ago, and which still rises day by day towards heaven, incessantly ejaculated by millions of our Indian fellow-subjects."¹¹

In Manipur prayer and obeisance close the important ceremonies, of which every action and word is of importance. When asked for an explanation of their ritual, the natives replied: "It was the custom of our forefathers, how do we know its meaning?"¹² In Central Borneo there are long and minute ceremonies connected with planting, cultivating, and harvesting rice, all based on fear of the daimons.¹³ An exceptional case regarding ritual is reported from the Malay Peninsula: "An error in the pattern does not, as a Pangan man said, take away the power of the comb. 'It is like a break or a hole in a bird-trap: the bird may slip through, instead of falling into the trap, but it is always a question whether it will see the hole.' . . . The error is no worse than, *e.g.*, the writing of capital letters instead of small ones would be to a European."¹⁴

There were many superstitious observances in Samoa in preparation for fishing. "The person who attached the hook to the fly must first bathe his body, then put on a fisherman's apron of cloth, then seat himself on a mat and thus solemnly set to work. Only by a strict observance of the particulars could success be looked for in the subsequent use of the hook."¹⁵ In New Zealand, no tree might be felled, nor bird taken by fowlers until certain rites were performed. If not, "then the forest would lose its 'health,' that is to say, its vitality and productiveness, hence birds would be scarce." Invocations were repeated in order to bring many birds to the forests. "If a traveller should see a lizard in the path before him, he would know that the creature did not come there of its own accord but had been sent by an enemy as an *aitua* (evil omen) for him and to cause his death. He, therefore, at once kills the reptile and gets a woman to step over it as it lies in the path. By this means the evil omen is averted. And he will also probably cast about in his mind to discover who the person or persons were who sent this dread object to bring misfortune to him. Then he will say, 'May so-and-so eat you.' Thus he will transfer the *aitua* to that person so named."¹⁶

The Indians of Vancouver Island celebrated a great ceremony which was repeated at one or more villages every winter: the first five days were devoted to secret rites and initiations. The first public performance was a procession on the fifth day of males and females, naked, or nearly so, with their limbs and bodies scarified and bleeding. Invited guests received presents. Every evening after the first secret days were over was devoted to masquerades, when

each lodge was visited and a performance enacted.¹⁷ This appears to have been somewhat similar to the mysteries of the ancients. The main object of the majority of Hopi ceremonials is the production of rain and the growth of corn. "There are three primal elements which permeate all Hopi ceremonies—the gods, the worshiper, and the needs of the latter, or what he wishes to obtain from the former. Ceremony is largely, if not wholly, made up of the methods adopted by the worshiper, man, to influence the gods to grant his wishes, and is directly the outgrowth of prayer, which is a reflection of desire or want, which in turn is the outgrowth of climatic influences. Agriculturists desire rain and crops, and they pray to the gods especially for these things."¹⁸ Indian villages throughout almost the entire Southwest have kivas or sacred ceremonial chambers. As practically all the rites and dances take place after the harvest is gathered and before planting in the spring, they are performed in the home pueblos, as distinguished from the summer places, and such villages have kivas. The importance of the kiva and the part it played in the life of the aboriginal inhabitants cannot be overestimated. "Even to-day, after more than three centuries of white domination, during which period the region has been overrun and persistently Christianized, the dwindling remnant of the Pueblo Indians still clings tenaciously to its kiva mysteries. Every pueblo has at least one kiva, and sometimes several, as Taos in northern New Mexico. These are the rooms where preparations for the dances are made, where councils are held, and where the ceremonies of the pueblo take place—where, in short, the religious life of the group centers, and from which emanates the influence that regulates all the affairs of daily life as well as defines man's duties and obligations to his Makers."¹⁹

The religion of the Romans was austere and stiff; all emotional behavior was regarded with contempt; consequently their religious rites were pure ritual, and on their accuracy and correctness public and private fortune depended. The divinity had a right to be worshipped in the traditional way: every word and gesture must be correct or all was vain. No change was permitted in the language of prayer even if it had become unintelligible to the priests; otherwise the god would not recognize that he was being called upon. The cult acts were fixed by strict rules: the man states what he means, the god says nothing, while the priest does not answer the man but advises him how to approach the god, who is supposed to be bound if the act is correctly offered.²⁰

In the centuries just preceding the Christian era there arose in the ancient world new rites and cults to which have been given the name "mysteries." In general, a mystery is a rite in which certain *sacra* are exhibited, which cannot be safely seen by the worshiper till he has undergone certain purifications.²¹ He is under the obligation of secrecy. While the mysteries have much in common with the primitive religious secret societies,²² they are treated here for their ritual and sacramental features. The most important of the mysteries were those of Mithra and the Greek mysteries such as the Eleusinian, Orphic, and Samothracian. They all appear to have had the purpose of imparting pre-

cepts and semi-magical formulæ supposed to ennoble this life and to impart a belief in a future life.

Mithra was a Persian god of the light of the middle zone, between heaven and hell, the defender of truth, and the chief helper of Ahura-Mazda in his struggle with the powers of darkness. The Mithra cult was attended with mysteries including sacraments closely resembling the Christian, celebrated in grottoes and underground chapels. To receive the sacred ablutions and the consecrated food, the participant was obliged to prepare for them by prolonged abstinence and numerous austerities; "he played the rôle of sufferer in certain dramatic expiations of strange character and of which we know neither the number nor the succession. . . . Sometimes, the terrified mystic took part, if not as an actor, at least as a spectator, in a simulated murder, which in its origin was undoubtedly real. In late periods, the officiants were contented with producing a sword dipped in the blood of a man who had met a violent death. The cruelty of these ceremonies, which among the warlike tribes of the Taurus must have been downright savage orgies, was softened by contact with western civilization. In any event, they had become more fear-inspiring than fearful, and it was the moral courage of the initiate that was tried rather than his physical endurance. The idea which was sought to be attained was the stoic 'apathy,' the absence of every sensitive emotion. The atrocious tortures, the impossible macerations, to which some too credulous or inventive authors have condemned the adepts of the Mysteries, must be relegated to the realm of fable, as must likewise the pretended human sacrifices which were said to have been perpetrated in the shades of the sacred crypts." The converts believed they found in the mystic ceremonies a stimulant and a consolation. "They believed themselves purified of their guilt by the ritual ablutions, and this baptism lightened their conscience of the weight of their heavy responsibility." The astonishing spread of Mithraism is due in large measure to these stupendous illusions, which would appear ludicrous were they not so profoundly and thoroughly human. "There can be scarcely any doubt that the practice of the taurobolium, with the ideas of purification and immortality appertaining to it, had passed under the Antonines from the temples of Anáhita into those of the *Mater Magna*. The barbarous custom of allowing the blood of a victim slaughtered on a latticed platform to fall down upon the mystic lying in a pit below, was probably practised in Asia from time immemorial."²³ The Mithra cult was introduced into Rome in the time of Trajan, and given powerful impulse by Commodus, who was an initiate. It was a prevailing religion among the Roman legionaries, by whom it was carried throughout the empire, and in the last days of paganism it was the most serious rival of Christianity.

Most of the oriental cults had become widespread in Athens by the time of the Peloponnesian War. They were all of an orgiastic character. At all times processions of the worshippers of Sabazios and the "Great Mother" went through the streets amidst deafening noise; at the Adonis festival the city resounded again with the lamentations of the women over the god who had died in the bloom of youth. Especially did the people flock to the consecrations with which the Phrygian-Thracian cults were associated. "The believers gathered at night, with intoxicating music of flutes, rolling of drums, and wild howling; soon all were whirling about in a mad dance, until ecstasy had mounted to the highest

degree. Then they set the new candidates for admission naked upon the holy stool; there they were rubbed with earth and bran and then cleansed with water; therewith passages were read out of the ritual, full of scraps of Phrygian, which no one understood; at the conclusion the initiated person spoke the holy formula: 'I have escaped from sin, I have found salvation.' Then followed further exhibitions from the holy legends in which the shameless symbols of oriental superstition were presented to public view. As the dregs of the population, both sexes promiscuously, took part in these nocturnal celebrations, and as there was lacking any official supervision, the door was open to licentiousness of the worst sort. The great majority of the cultured people naturally looked on such actions with disgust."²⁴ The two outstanding characteristics of the Orphic Mystery were speculation on ultimate matters, on the being and becoming of gods and men, and the eager business of purification and consecration.²⁵ The rite of purification was common to all the mysteries. The ancients knew and felt that *mystery*, secrecy, was not the main gist of a "mystery": the essence of it all primarily was purification in order that one might safely eat and handle certain *sacra*. "It is significant of the whole attitude of Greek religion that the confession is not a confession of dogma or even faith, but an avowal of ritual acts performed. This is the measure of the gulf between ancient and modern. The Greeks in their greater wisdom saw that uniformity in ritual was desirable and possible; they left a man practically free in the only sphere where freedom is of real importance, *i.e.*, in the matter of thought. So long as you fasted, drank the *kykeon*, handled the *sacra*, no one asked what were your opinions or your sentiments in the performance of those acts; you were left to find in every sacrament the only thing you could find—what you brought."²⁶

§280. Renunciation.

Then announced the Magnificent One
That she had made a vow
Three days and three nights long
To stand motionless, fasting.

THESE lines from the *Mahabharata*¹ express the notion of renunciation in general and of fasting in particular. The religious nature of fasting is also evident in the customs of the Palaungs of Farther India: as a perpetual offering to the image-house, they give up some kind of food that they particularly like, never in their lives touching it again. "There is no obligation on any one to fast, but a man or woman who never fasted would be looked down upon by the more religious."²

Fasting was a practice well known to the American Indians. "Simple garments or none were worn when fasting. Among some tribes clay was put upon the head, and tears were shed as the appeals were made to the unseen powers."³ Among the Cora, fasting, which was sometimes conducted by shamans alone, was a ceremonial feature and was thought to be necessary to in-

sure good crops.⁴ Among a number of tribes in the Southwest "the clan heads go into a retreat of continence and fasting for rain after the summer solstice."⁵ An elaborate ceremony of many Indian tribes, but especially of those that formerly inhabited the Gulf States, and one which involved much renunciation, was the Busk, a rejoicing over the first fruits of the year. The term, which comes from the Creek *púskita*, literally means "a fast." It was an occasion of amnesty, forgiveness, and absolution of crime, injury, and hatred, a season of change of mind, symbolized in various ways. The new year begins with the busk, which is celebrated in August, or late in July. In connection with it the women broke to pieces all the household utensils of the previous year and replaced them with new ones; the men refitted all their property so as to look new. "When a town celebrates the busk, having previously provided themselves with new clothes, new pots, pans, and other household utensils and furniture, they collect all their worn-out clothes and other despicable things, sweep and cleanse their houses, squares, and the whole town, of their filth, which with all the remaining grain and other old provisions, they cast together into one common heap and consume it with fire. After having taken medicine, and fasted for three days, all the fire in the town is extinguished. During this fast they abstain from the gratification of every appetite and passion whatever. A general amnesty is proclaimed, all malefactors may return to their town, and they are absolved from their crimes, which are now forgotten, and they are restored to favor."⁶

Among the Jibaro Indians of Ecuador, abstinence is an essential part of the rites that must be observed by the avengers on return from a feud. "The diet is continued for two or three months. During the first month after having killed the sorcerer the Jibaro is likewise forbidden to sleep in his house, and passes his nights in a small ranch made on the bank of the river. After the lapse of the month he goes to a natural small waterfall and takes a cold bath, letting the water fall on his naked body. After this purification he returns to his home and may sleep in his house, not with his wife but in the foreroom or department of the men. This sexual abstinence is observed as long as the fasting, namely, for two, or, among some Jibaros, three months. If the rules mentioned are infringed by the slayer the soul of the killed enemy, who constantly follows him thirsting for revenge, will take his life."⁷

Fasting was a common practice of the Hebrews and Christians, as any concordance of the Bible amply demonstrates. Often something definite was expected in return, as when Ezra proclaimed a fast at the river of Ahava, "that we might afflict ourselves before our God, to seek of him a right way for us, and for our little ones, and for all our substance. . . . So we fasted and besought our God for this: and he was intreated of us."⁸ An example of renunciation, so well known as not to call for extended comment, is furnished by the history of mendicancy in the Middle Ages. The notion that poverty was meritorious and a good in itself was widely entertained but unformulated at the beginning of the thirteenth century; it later gave rise to the mendicant orders. Renunciation of property was greatly admired and during the two following centuries high merit was attributed to beggary. "The social consequences were so great that this view of poverty and beggary is perhaps the

most important consequence in the history of the mores which go with the ascetic philosophy of life."⁹

§281. Continence.

AMONG the Melanesians, shortly before a trading-voyage starts the leaders must sleep apart from their wives, and during the absence of the expedition the latter do not wash themselves. Other similar "precautions" are taken to avoid ill luck and get good luck. Continence is also insisted upon when making a new garden; if a man so employed approach his wife his yams will grow but poorly.¹

"To one who knows anything of the very low standard of sexual morality that prevails among the Becwana," states Willoughby,² "it is not a little astonishing to discover the notion of a virgin priesthood. There is still some doubt in my mind as to the exact meaning of this virginity. I have been told again and again by men who would not willingly mislead me that of the officiating regiment only those are allowed to perform the duties of the *makgaye* who have never known women." Spiritual communications are said by the Kikuyu priests to be received only during dreams; "the only austerities they are called on to practise during the exercise of their spells are interdiction *a mensa et toro* as far as their wives are concerned."³ Among the Masai a man must abstain from having sexual intercourse with his wife as soon as she becomes pregnant, and he may not again have connection with her until the child cuts the two middle incisor teeth of its upper and lower jaws. "Should this rule be broken it is believed that the child will never be strong." Other occasions when continence is imposed are when poison is being made or honey wine is brewed. "During the time that a man is making poison (eight days) he is treated almost as an outcast. . . . When honey wine is to be brewed a man and a woman are selected for the purpose, neither of whom has had sexual intercourse for two days."⁴

The doctrine of religious celibacy prevails in India, Mongolia, and Tibet, but the usages of some districts admit of lamas having wives. "Eastern Mongol lamas like living here."⁵ "The Todas worship stone images, buffaloes, and even cow-bells, but they have a celibate priesthood!"⁶ The Sema Nagas believe it to be absolutely necessary that the taker of the omens should have remained chaste the preceding night. "The hunter who takes the head of the game killed must remain chaste that night, in addition to which he may eat no rice until the following day. Whoever kills a tiger must remain chaste for six days. He may eat no rice the first day, and for the whole six days may not eat any vegetables except chillies, nor any meat except pork, and he must sleep away from home, or at least away from his women-folk, on a bed of split bamboo to prevent sound sleep, during which the soul of the slain beast might attack and devour his own."⁷ The laws of Manu⁸ declare that "there is no sin in eating meat, in drinking spirituous liquor and in carnal intercourse, for that is the natural way of created beings, but abstention brings great re-

wards." A twice-born man aiming at the true life of a Brahman will abstain from his wife on the day of the new moon, on the eighth lunar day of each half-month, on the full moon, and on the fourteenth, though these are times proper for intercourse. The practice of taking the sword-blade vow of chastity existed, even down to recent times, in South Bihar. It was parallel to the German practice, to the effect that "when a man slept with a woman whom he did not intend to touch, he placed a sword between himself and her." All the ascetic sects of the Saivas are celibates; "it is, in fact, a much harsher and more repulsive form of religious life than that followed by the Vaishnavas."⁹ It is one of the inconsistencies of the Hindu religion that "it enjoins the duty of marriage upon all, yet honors celibacy as a condition of great sanctity and a means of acquiring extraordinary religious merit and influence."¹⁰

The Zufi Indians hold that failure to observe conjugal continence during the four days before and after plume-planting would mean death. Does not the planter of plumes promise when he or she plants them to be continent, observing the decree of the Sun Father? "Of his deputy, the *pekwin*, the Sun Father requires an even greater degree of continence. For one month after the harvests the *pekwin* may have intercourse with his wife, if he wants it; but the rest of the year he is to abstain. The position of *pekwin* is at present vacant; four or five months ago, in April, 1915, the *pekwin* died, a victim, it is said, to broken taboo. His relations to his wife were too intimate."¹¹ It is said that there were virgins and youths in Mexico vowed to a life of chastity, who cut off the hair and renounced all adornment.¹²

Certain Phœnician priests were bound to celibacy.¹³ The Jewish tradition was that at Sinai all the people were ordered to refrain from women for the time, but that for Moses this injunction was unlimited.¹⁴ In the rabbinical period it was established doctrine that any one who desired to receive a revelation from God must refrain from women.¹⁵ Other cases in the Old Testament show that persons who were under a renunciation of this kind were in a state of grace. The ritual of uncleanness was ascetic and it enforced ascetic views of sex and marriage.¹⁶ The religious scruples of the Talmudist permit him to enjoy scarcely any of the pleasures of matrimony. Bound by the laws of marriage, he may not select his better half according to his own judgment, but as prescribed, and for the most part a wife whom he hardly knows and whom he has acquired from her father or other relatives. "If he then comes into possession of her property, he may not so much as have intercourse with her nor enjoy her embraces as much as he would like, but must submit to certain times and observances and regard them as a duty imposed."¹⁷

In the Egyptian system the religious ceremonies were veiled in mystery and allegory. Chastity, abstinence from animal-food, ablutions, long and mysterious ceremonies of preparation or initiation, were the most prominent features of worship.¹⁸ Among the Turks, the order of Calenders is bound to perpetual virginity. As regards the pagan priesthoods, there can be little doubt that their example had its influence in introducing the custom among the Christians.

Absolute continence for ten days was a prerequisite to admission to the Eleusinian mysteries of Greece and to the Bacchic mysteries of Rome; while a declaration of virginity was exacted in the Dionysiac solemnities in Athens. It was not, however, until the end of the third century of the Christian era that the opposition against a married priesthood began to take form. The Spanish Council at Elvira (295 A.D.) enjoined celibacy on priests and deacons. Here was the beginning of the divergence on this question between the East and the West. Then came the Council of Ancyra in 314 A.D., forbidding a priest to contract a new marriage, if he had become a widower, under pain of deposition. The disputes between the Greek and Roman Sees began in the fifth century and culminated in "The Great Schism" in the ninth. The struggle to maintain a celibate priesthood was carried on by such determined prelates as Popes Leo IX and Gregory VII. The Fourth Council of the Lateran (A.D. 1215) gave a firm and clean pronouncement in favor of celibacy, which was later confirmed by the Council of Trent.¹⁹ "Scarcely had the efforts of Nicholas and Gregory put an end to sacerdotal marriage in Rome when the morals of the Roman clergy became a disgrace to Christendom. . . . The pious Desiderius, Abbot of Monte Casino, better known as pope under the name of Victor III, declares that throughout Italy, under the pontificate of Benedict (1032-1045), all orders, from bishops down, without shame or concealment, were publicly married and lived with their wives as laymen, leaving their children fully provided for in their wills; and what rendered the disgrace more poignant was the fact that the scandal was greatest in Rome itself, whence the light of religion and discipline had formerly illumined the Christian world. Another contemporary writer asserts that this laxity prevailed throughout the whole of Latin Christendom, sacerdotal marriage being everywhere so common that it was no longer punished as unlawful, and scarcely even reprehended."²⁰ The priests of various Oriental churches took unto themselves wives before their ordination; and their right to retain their wives was formally recognized by a decree of St. Benedict.²¹

§282. Self-Discipline.

If men torture themselves they can at least select their form of suffering. In this, as in the infliction of punishment on criminals, they have shown great ingenuity.¹ The passionless ascetics of Tibet are homeless mendicants, belonging to no sect in particular; they are now almost extinct, but all are regarded as saints who in their next birth must certainly attain Nirvana. "They carry thigh-bone trumpets, skull-drums, etc., and in the preparation of these instruments from human bones, they are required to eat a morsel of the bone or a shred of the corpse's skin."² In the *Mahabharata* it is averred that heaven may be won by standing on one leg and by eating little or nothing. Sacrifices, gifts, loyalty, and warlike deeds store up merit and win a place in heaven.³

If the Jain may kill himself, he may not kill or injure anything else. Not even food prepared over a fire is acceptable, lest he hurt the "fire-beings," for he

believes in water-beings, fire-beings, and wind-beings. Every plant and seed is holy with the sacredness of life. He may not hurt or drive away the insects that torment his naked flesh. Lest animate things, even plants and animalculæ, be destroyed, he sweeps the ground before him as he goes, walks veiled lest he inhale a living organism, strains water, and rejects not only meat but even honey, together with various fruits that are supposed to contain worms; not because of his distaste for worms but because of his regard for life. Almost every city of western India where the Jains are found, has its beast-hospital, where animals are kept and fed. Five thousand rats were thus supported in a temple-hospital in Kutch, the town being taxed to pay for their food. "Patience is the highest good," and the rules for sitting and lying conclude with the statement that not to move at all, not to stir, is the best rule. To lie naked, bitten by vermin, and not to disturb them, is religion. Like a true Puritan, the Jain regards pleasure in itself as sinful. "What is discontent, and what is pleasure? One should live subject to neither. Giving up all gaiety, circumspect, restrained, one should live a religious life. Man! thou art thine own friend; why longest thou for a friend beyond thyself? . . . First troubles, then pleasures; first pleasures, then troubles. These are the cause of quarrels." The Fourth Vow reads: "I renounce all sexual pleasures, either with gods, or men, or animals. I shall not give way to sensuality. . . . The clauses here forbid the Niggantha to discuss topics relating to women, to contemplate the forms of women, to recall the pleasures and amusements he used to have with women, eat and drink too highly seasoned viands, to lie near women." In the Brahmanism of the Bharata, physical prowess is the one thing admirable. "To stand for years on one leg, to be eaten by ants, to be in every way an ascetic of the most stoical sort, is the truest religion." Such an ascetic has no ordinary rules of morality; to seduce young women is one of his commonest occupations. "The gods are nothing to him. They are puppets whom he makes shake and tremble at will." All the gods together are represented as weaker than a good hero, not to speak of a priestly ascetic. The greed and rapacity of these priests exceeds all imagination. "The royal priests are the king's constant advisors, his most unscrupulous upholders in wickedness, and there gave themselves up to quest of wealth and power. But one should err if he thus dismissed them all. . . . To offset rapaciousness there are tomes of morality of the purest sort. . . . There were doubtless good and bad priests, but the peculiarity of the epic priest, rapacious and lustful, is that he glories in his sins."⁴

As an offering to the deity, the Samoans, in terrible earnest, battered each other's scalps till the blood streamed down and over their faces and bodies. "Old and young, men, women, and children, all took part in this general mêlée and bloodletting, in the belief that Taisumalie would thereby be all the more pleased with their devotedness, and answer prayer for health, good crops, and success in battle."⁵

The American as well as the Asiatic Indians carry self-discipline to great lengths. The Dakota, prior to an important enterprise, purifies himself by the steam-bath and by fasting three days, during which he avoids women and society and tries to become pure enough to receive a revelation. Then comes the sacrifice. "Some, passing a knife through the breast and arms, attach thongs

⁴ Hopkins, *Relig. Ind.*, 288, 291, 294, 296, 352 ff.

⁵ Turner, *Samoa*, 57.

thereto, which are fastened at the other end at the top of a tall pole . . . ; and thus they hang, suspended only by these thongs, for two, three, or even four days, gazing upon vacancy, their minds being intently fixed upon the object in which they desire to be assisted by the deity, and waiting for a vision. Once a day an assistant is sent to look upon the person thus sacrificing himself. If the deities have given him a vision or revelation, he signifies it by motions, and is at once released; if he be silent, he is left alone to his reverie." Another method is to drag a buffalo-head, attached to a hook passing through the large muscles in the small of the back, all over the camp. "A third class pass knives through the flesh in various parts of the body, and wait in silence, though with fixed mind, for a dream or revelation. A few will plant a pole upon the steep bank of a stream, and attaching ropes to the muscles of the arm and breast, will stand, but not hang, as in the first instance, gazing into space, without food or drink for days." The essence of the matter is to get a vision, which process is hastened by the fasting and suffering undergone. Some simply concentrate for weeks, or even months, upon some deserved object, frequently crying about the camp, mostly fasting, but intent upon a revelation.⁶ Catlin has a portrait of Four Bears, a Mandan, with scars on the breast, arms, and legs that witness to several experiences in self-torture. Under the circumstances, the vision and revelation are pretty sure to come.⁷ An Indian Agent has reported the "medicine-dance" of the Cheyennes: A number of braves, their bodies naked from the waist up, enter the "medicine lodge"; they gash their arms and legs, and pierce holes in their chests, pass ropes through the holes and suspend themselves from the center of the lodge until their struggling tears the flesh loose. Each one has a whistle, and keeping their eyes on the charm, they dance night and day without food or water until exhausted. These "medicines" are a record of terrible suffering, endured with indomitable heroism, which sometimes ends in death.⁸

At the time of the winter solstice the Hopi priests sat naked in a circle and suffered gours of ice-cold water to be dashed over them.⁹ The following are some of the episodes introduced in Tusayan ceremonials: "1. Inordinate eating and begging, urine drinking, gluttony, and obscenity. 2. Flogging of one another, stripping off breechcloths, drenching with foul water, ribald remarks to spectators, and comical episodes with donkeys and dogs. 3. Story telling for pieces of corn under severe flogging by masked persons, races, smearing one another with blood, urinating upon one another, tormenting with cactus branches, etc."¹⁰

The Karoks of northern California have a grand dance of propitiation, to prevent land-slides, forest fires, drought, and other calamities. First there is selected a robust tribesman, called the "God-man" who fasts in the mountains for ten days; "and their evident belief is that by the keen anguish he undergoes, he propitiates the spirits vicariously in behalf of the whole tribe." He returns at length and, with his last strength, seated upon a sacred stool, lights a sacred fire. It is death for common people to behold him returning or to look upon the sacred smoke. Somewhat the same ceremony occurs in the spring to insure a good catch of salmon. The "God-man," on his return, again lights the sacred fire after eating a portion of the first salmon of the catch.¹¹ In this

case the self-discipline has extended to a community-discipline performed for all by one.

In a Brazilian dance the men flogged each other till the blood ran. The young men exhibited triumphantly long whip-scars on abdomen and upper thigh. This sort of dance is wide-spread over a good part of tropical South America, even among the so-called "Christian" Indians. Interrogated as to the occasion for it, an Indian answered: "I do not know. Our ancestors have been doing this already 'antigo de mundo,' and therefore today we do so still." Study of the matter reveals the procedure as a means of getting rich harvests, and therefore as propitiatory.¹² This seems to be the case among the Guiana Indians, where flagellation is part and parcel of the festival held to ensure abundance of fruit: they place young men in lines and a certain number of old men provide themselves with whips and rough thongs; "as soon as intimation is given that it is time to commence work, the whipping of these young men takes place, and notwithstanding the cuts and marks which their bodies receive, neither groan nor complaint escapes them." The flagellation is held to be a propitiation for favors already received or expected. Self-torture, through ant-biting, is imposed before hunting; regular frames, with ants fastened in them, are applied.¹³

The cult of the Great Mother of the Gods attained a notable development in Rome, probably because "there was something more genial and satisfactory to the soul in the religion itself than in the formal, stately, and passionless religion of the ancient gods of Rome. . . . Her devotees were brought nearer the divine and nearer each other than the worshippers of the classical divinities. . . . The priest of the Great Mother consecrated himself to her service with an act of self-sacrifice as great as that of any modern monk or priest. He knew what it was to fast, he was merciless to his flesh on the *Dies sanguinis*, and was no stranger to the pain of self-scourging." The final act of consecration, by which one became a minister of the cult, was castration. "Early in the first century B.C., in spite of the law forbidding it, a Roman citizen became a eunuch and devoted himself to the priesthood of the Mother. She begins to figure on coins about 83 B.C. . . . Cicero complains of the loss of the original purity of the worship, and speaks of the collection of money by priests as a serious drain on the finances of the people." Domitian, by his law against castration, opposed at least one feature of the worship, whether or not he directed the measure against the cult.¹⁴

§284. Nature of Sacrifice.

If reported correctly, the case of the Bakoko of Cameroons is most exceptional. They are said to offer no sacrifices whatever to the god, who not only does not need such but, if he did, could procure food and drink himself.¹ The usual situation is that depicted by Ellis² with reference to the Tshi-speaking people, who, in addition to many offerings, make arrangements for the comfort of the imaginary beings, with a view to propitiation. For instance, "a country stool may be seen in some shadowy recess of the forest, or under a mass of rock, placed there for the use of the local god; or, raised from the earth on a light

platform of sticks, to preserve the contents from animals, earthen saucers and pitchers, full of water for the god to drink, may be observed. As, exposed to the ardent rays of a tropical sun, the water gradually diminishes through evaporation, the natives have, to their minds, ocular demonstration of the existence of the gods, and of their need for drink, and hence for food." In the French Congo sheep and goats are kept for sacrifices and for the payments of heavy blood fines; they are rarely eaten for ordinary purposes.³

Among the Todas of the Nilgiris, at a short distance from the temple-hut is a small platform of earthwork, the place where they offer young calves of buffaloes as sacrifices. The offering in the temple itself consists mostly of milk.⁴ According to the *Mahabharata*, "the acts by which one gains bliss hereafter are austerities, purity, truth, worship of parents, and the horse-sacrifice."⁵ The various Vedic sacrifices are today either obsolete or obsolescent, and animals are now seldom killed in India, except as offerings to the bloody goddess Kālī.⁶ When a high-caste Hindu dies, a pitcher full of water is hung from a branch of the pipal tree. This pitcher has a small hole in its bottom into which a twisted grass is put. "Water constantly drops from it during the ten days of the obsequies or funeral ceremonies of the dead. The man who burns the dead puts water in the pitcher afresh morning and evening during these ten days. . . . It is supposed that the ghost of the dead, who dwells for ten days on the pipal tree, drinks of the water-drops."⁷

The article most widely used in sacrifice by the American Indians was native tobacco. Next came articles of food, and then clothing and adornment, particularly the latter. The sacrifice of one tribe consisted of eels, of another fish-bones, while a third commonly sacrificed the offal of a buffalo. At a ceremony held by the Hurons in 1639, in answer to the direct order of an apparition, twenty-two presents were asked, among the items of which were six dogs of a certain form and color, fifty pieces of tobacco, and a large canoe.⁸

It was the belief of the ancient Persians that Ahura-Mazda desired only the soul of the immolated animal; the victim or parts of it were given back to the sacrificer.⁹ The case is cited of some Arabs in the fourth century who fell upon a sacrificed camel and hacked out pieces which they ate raw. Later this crude practice was modified and pieces were distributed.¹⁰ Only once does Homer refer to the offering of horses as a sacrifice to divinities. "On the last day of battle, Achilles, throwing the corpse of a son of Priam into the river Scamander, says that the Trojans shall not be saved even by the silver-eddy river to which they sacrifice many bulls, and into whose eddies they sink living horses. This sacrifice of horses is called un-Hellenic. Perhaps in this connexion, however, the slaughter of four horses at the burial of Patroclus should be noted, although these horses, like the two dogs who were then killed, were not a sacrifice in the ordinary sense." Reference is made to the sacrifice of a span of white horses by Mithridates before the war with the Romans and a similar sacrifice by Sextus Pompeius. Priests were not necessary among the Homeric Greeks, as they were among the Jews, for the proper performance of a sacrifice. Another man might do as well as they; and the king regularly performs the sacrifices for his people. "The only sacrifice con-

ducted by a priest in the Homeric poems is one in which this priest is the chief person, apart from his priestly office, and which is on his own account. Evidently no complicated system of ritual was to be observed with precision, any more than by the Bedouins of to-day, and the ordinary rites were familiar to all men. In general, each master of a family was the priest of his household, *i.e.*, he was the representative of his family before the gods as well as before men. . . . In later times, as life became more complicated, the priests were supposed to have peculiar knowledge of what was pleasing to the gods; but the priestly families of classical times had for the most part inherited their rights to the sacrifices over which they presided, their shrine originally having been a family shrine, and they had inherited also special directions for worship." Feast, song, and dance were expected to propitiate the gods, better than fasting and prayer. "Men not only have no idea of inherited sin or natural sinfulness, but even when they have done a wrong, they have no vivid and painful sense of guilt, and their offering of sacrifice to the gods has no deep ethical meaning. The divinity at the moment, it is true, is vexed with them, but that may be due to his caprice rather than to their fault, and they are confident that the kindness of his nature will finally prevail over his wrath. The fact that their victims for sacrifice were eaten proves that the sacrifice was not one of atonement."¹¹

As part of the rite of cutting wood in a sacred grove the Romans offered a pig as an expiatory sacrifice, although they did not know to what deity the grove was sacred. Plutarch asks: "Why did the Romans not permit that the table should be ever entirely bare, but always left some food on it?" He gives many answers, among which is: because the table is sacred and they never left a sacred thing empty.¹² A rite of considerable importance was the *taurobolium*, the sacrifice of a bull, or its variation the *criobolium*, the sacrifice of a ram. The rise of this ceremony dates from the early part of the second century A.D., as the first evidence of its existence is an inscription of the reign of Hadrian, in the year 133, found at Naples. It spread rapidly throughout Italy and to all parts of the Empire, and was one of the most important rites of the cult up to the fall of Paganism.¹³ During the days of feudalism in the North the peasants and landowners tried to make Hagen Adelsteen eat horseflesh at the sacrifices. This and similar events are cited to show that in the old Norse rule the king's power was limited.¹⁴ They also indicate the persistence of old religious customs.

§285. Bargain Sacrifice: Prayer.

THE element of *quid pro quo* is evident in the prayer of the Bawenda of South Africa: "We pray Thee: give us food for us and for our children; give us cattle; give us happiness. Preserve us from illness, pestilence and war. In case of war give us victory over our enemies; give us always prosperity. See, here we bring from what we have harvested. Thou art our father, also our grandfather, grandfather's father and his grandfather," and so on as far as any ancestor is known. "After this or a similar prayer, every member of the family offers his sacrifice of the first-fruits and the first beer, and then all are at

¹³ Showerman, *Great Mother*, 280-283.

¹⁴ Rothe, *Nordens Staatsverfssp.*, 58.

liberty to harvest and to enjoy the new food and the new beer."¹ Missionaries often find that savages take a practical view of religion. The people of Masonpa, South Africa, would not repair the church, saying that God could repair his own. One who had received a blanket for attending church, disappointed when the gift was not repeated, said: "No more blanket, no more hallelujah."² Prayer is offered by the Akikuyu only at the time of sacrifice, when it is a public ceremony. "In times of illness or epidemic among the herds prayers are offered to Ngai, but they are always accompanied by sacrifice. Only temporal benefits are asked for."³ In the oasis of Fezzan, men pray not to let it rain at all. Their wells suffer and the rain destroys their houses made of salt-containing earth.⁴

Sacrifices among the Gilyak of Siberia are based on the principle of exchange, *i.e.*, one does not offer fish to the god of the sea. "Offerings of dogs are made chiefly at the beginning of the season for the trapping of sables and at the bear-festival. On these occasions the victims are killed by strangling, and as the dogs are dispatched they ask them to make intercession to the gods for them."⁵ Buddhist pilgrims pass "with a step and a bow" over the boulevard which encircles the sacred city of Lhasa, Tibet. "Each clasps his hands in prayer above his head, lowers them to the mouth, to the breast, and prostrates himself face downward, with the clasped hands extended in advance. He marks the place where the hands rest, and rising, steps to that spot, prostrates himself, and rises again. In this way he measures in four days the distance he could walk in three hours, the most contrite pilgrims often marking each such step with coins or precious stones left in the roadway."⁶ Buddhist prayer is not always associated with such austerity, for the famous prayer-wheel has both lightened the task and increased the merit thus gained. The same teachings which cause the northern Buddhists to believe in the efficacy of reiterated prayer-formulæ is responsible for the invention of this mechanical contrivance which, when turned from left to right, is as efficacious as if the person turning it recited all the prayers inclosed in it on printed slips of paper. Each complete revolution of the wheel counts as one repetition of all the prayers contained in the barrel. The prayer-wheel has been for five or six centuries a popular instrument in Tibet, Korea, and Japan. It is of two kinds: the first comprises hand wheels, those turned by the wind or by water, and small stationary wheels or barrels placed either in a house or in rows near a temple; the second class comprises much larger machines, found only in temples. They are sometimes thirty or forty feet high and fifteen or twenty in diameter. In them is placed a collection of the canonical books of lamaism, and by means of bars fixed in the lower extremity of the axis of the barrel it is put in motion. "The prayer-wheel consists of a cylinder of metal, or, in the larger wheels, of leather or even wood, through which runs an axle of wood or iron around which it pivots. In the interior are arranged, one on top of the other, sheets of paper or leaves of a book on which 'the *mani*' [a colloquial expression for the most universal prayer, the formula *om mani padme hum*] or some other spell is printed in very fine characters, the finer the better. The sheets are wound on the axle from right to left, and the wheel when set in motion must revolve in the opposite way, so that the writing passes in front

of the person turning the wheel in the way in which it is read, i.e., from left to right." Bits of cotton with prayers printed on them and tied to strings or to high poles placed over houses belong to the same class of objects as the prayer-wheels; each time these bits of stuff flutter in the breeze it is as if the prayer written on them had been recited, and the occupants of the house gain the merit of repeating this sentence. In Lesser Tibet "there are prayer-mills, sometimes 150 in a row, which revolve easily by being brushed by the hand of the passer-by, large prayer-cylinders which are turned by pulling ropes, and others larger still by water-power. The finest of the latter was a temple overarched by a perennial torrent, and was said to contain 20,000 repetitions of the mystic phrase, the fee to the worshiper for each revolution of the cylinder being from 1d. to 1s. 4d., according to his means or urgency."⁸

The bargain-nature of sacrifice is expressed in the great epic of the Hindus, where complaint is made because misfortune—in this case the destruction of a caravan by elephants—occurred despite the cult. Why have we incurred this calamity? Was not the god worshipped by us? Didn't we bring sacrifices? Before the journey began, were not the flight of the birds and the position of the stars consulted? What is it, then, which brings this affliction upon us?⁹ Of the "good man" in the *Rig Veda* are demanded piety toward gods and manes, liberality to priests, truthfulness and courage. In the Brahmanas the phrase "man's debts" is current. Whoever pays these debts, it is said, has discharged all his duties, and by him all is obtained. And what are these duties? To the gods he owes sacrifices; to the seers, study of the *Vedas*; to the manes, offspring; to man, hospitality.¹⁰

The Dyaks of West Borneo pray for long life, riches, plenty of good rice, and success in their undertakings, especially head-snatching. To a mountain-god supposed to be offended, they pray: Don't send skin disease, nor insects to destroy crops; don't let the pigs die.¹¹ Among all the tribes of the Malay Peninsula both prayer and invocations still remain in the stage in which material as distinct from moral advantages are sought. Among the Semang, however, "with the rarest exceptions, they appear to have scarcely reached the stage of fixed forms, the petitioner generally contenting himself with expressing his wish in a quasi-conversational phrase, addressed to the great spirits or deities of the tribe."¹²

A practice which seems peculiar to the American Indians is the use of sticks, to which feathers are attached, as ceremonial supplicatory offerings. The most familiar prayer-sticks are those made by the Pueblo Indians of New Mexico and Arizona, who use them extensively for a definite purpose, but analogous objects representing the same idea are employed in the ceremonies of nearly all American tribes. Such sticks are frequently found with the dead in ancient Pueblo cemeteries, and great deposits of them occur in ceremonial caves in southern Arizona. They are often consecrated by being moistened with medicine, sprinkled with sacred meal, and fumigated with tobacco, and by other rites; after prayers have been breathed into them they are sent out in the hands of messengers to be deposited in shrines, springs, or

fields. "The sticks to which the plumes are attached indicate the gods to whom the prayers are offered, and the feathers convey to the gods the prayers which are breathed into the spiritual essence of the plumes. This conception is materialized in the 'breath feather,' generally the downy plume of the eagle. Prayers are also breathed into sacred meal, pollen, and other objects offered."¹³ The Tusayan word for prayer is "scatter," that is, to scatter sacred meal. "When a Tusayan priest addresses a supernatural being of his mythology, he believes he must do so through the medium of some object as a prayer bearer; he breathes his wish on meal and throws this meal to the god. The prayer bearer is thought to have a spiritual double or breath body which carries his wishes. It is an old idea with him, reaching back to fetishism, for his breath with the talismanic words is the spell which brings the desired results. It must be mentioned, however, that oftentimes ethical ideas are associated with Tusayan prayers for rain, and I have frequently heard the priests at the close of their songs for rain exclaim, 'Whose heart is bad, whose thoughts are leaving the straight path,' and as they bewailed that the rains were delayed, sorrowfully resumed their songs and incantations." The simple act of breathing a prayer on a pinch of meal is all-sufficient in an individual's use of prayer-meal, but in the complicated rain-prayer this simple act is, in their belief, inadequate. "The prayer bearer intrusted with the prayers of a community of priests must be laid on the altar, smoked upon, prayed over, and consecrated by song before it is deemed efficacious. . . . The paho must be offered to the god addressed in a dignified manner worthy of its object and the care used in its consecration. A special courier carries it to a special shrine. He is commissioned to his task with formal words, and he places his burden in the shrine with prescribed prayers. It has thus been brought about that the manufacture, consecration, and final deposition of the elaborate paho or stick to bring the rain occupies several hours, and when repeated, as it is in all great ceremonies for several consecutive days, makes a complicated series of rites."¹⁴

The entire life of the East Iranians, according to the views set forth in the *Avesta*, consisted of a struggle against the powers of darkness. "In this fight against evil the gods rendered man assistance in various ways. They lent him a weapon through which he was able to ward off and nullify the pernicious influence of the daimons. This was the holy word which Mazda revealed to Zarathustra, the prayers which he taught him. . . . In the word dwelt a mysterious, one might almost say magic, power; the recital itself, if it is correct and flawless, brings this power into action. . . . As the daimons were always lying in wait to injure man, so the prescription was regular; it consisted in prayers, as a kind of preservative, to be recited at appointed hours of the day and at all constantly recurring functions and acts."¹⁵ The Semites conquered the Sumerians in Babylonia but adopted their cuneiform writing and literature, which contained forms of worship, hymns of praise to gods, prayers for forgiveness of sin, and incantations for delivery from disease.¹⁶ Ritual is here all-important. When praying, the Moslem is in duty bound to

perform all actions and utter all words in the prescribed manner that has been taught him, for any deviation makes the prayer invalid. Day after day he repeats the same passages, which are generally lacking in ideas. If he is unfamiliar with Arabic he may not know what he is saying, for even in non-Arabian lands the prayer must be said in that language.¹⁷ According to one who seems to have been admitted to the divine confidence, prayer is the will of man moving the will of God. "It is ludicrous to think that by moving the will of God we alter His purpose, but if we mean not changing the Divine purpose but stirring it into action, then it is the essence of prayer. He is determined to give us all sorts of blessings, but His purpose in many instances is quiescent and inoperative simply because we fail to fulfill certain conditions."¹⁸

§286. Atonement.

THERE are so many creditors among the deities that it seems to be more than a life's work for a man to get out of debt. Incited by the declarations of the priests, shrine after shrine is visited by modern Hindus, and work after work is done; still in the minds of many there is a fear that some deity has been neglected who may at any moment demand his rights and punish them for neglecting him.¹ The idea lying at the basis of the Behari purificatory rites for absolving one's self from the pollution caused by the touch of a lizard seems to be akin to the custom of sin-eating. These rites consist mainly of bathing and of touching sesame, wheat, salt, or gold and giving away the touched articles to a Brahman. The latter, acting the part of sin-eater, takes upon himself the sins of the person who has offended the totem.² In Persia the cock is a sacred bird, and orthodox Zoroastrians do not eat of it, except in the case of very young ones that have not yet commenced to crow. When asked to eat a cock by the doctors, who at times prescribe it, they plant several fruit-bearing plants known as *sanjan*, as an act of atonement.³ This expiates the breach of taboo.

The various aspects in which atoning rites presented themselves to ancient worshippers have supplied a variety of religious images which passed into Christianity, and still have currency. Redemption, substitution, purification, atoning blood, the garment of righteousness, are all terms which in some sense go back to antique ritual. The one point that comes out clear and strong, comments Robertson Smith,⁴ is that the fundamental idea of ancient sacrifice is sacramental communion, and that all atoning rites are ultimately to be regarded as owing their efficacy to a communication of divine life to the worshippers, and to the establishment or confirmation of a living bond between them and their god. It was held by the Israelites that if an oracle is to be obtained, the applicant must be on good terms with the Deity. To one who is under the weight of guilt unatoned for, the oracle is silent. This happens even if it is not himself that has incurred the guilt, as when Saul obtains no response because of the offense of Jonathan, and where he consulted Jahweh, but "the Lord answered him not, neither by dreams, nor by Urim, nor by prophets."⁵ The man to whom guilt attaches is unclean, and as such is *ipso facto* excluded from any approach to God and from handling objects conse-

crated to Him. The days of atonement "do not represent days of humiliation on the part of the people, but contemplate an atonement for the sanctuary by means of external ceremonies 'on account of those who may have offended through error or ignorance.' The purifying of the temple building from Levitical defilement appears here as the main object to such a degree that the cleansing of the heart, which to the pre-exilic prophets was by far the most important matter, remains unmentioned."⁶

"Our whole modern conception of the scape-man," thinks Harrison,⁷ "is apt to be unduly influenced by the familiar instance of the Hebrew scape-goat. We remember how . . .

The scape-goat stood all skin and bone
While moral business, not his own,
Was bound about his head.'

And the pathos of the proceeding haunts our minds and prevents us from realizing the actuality and the practicality of the more primitive physical taboo. It is interesting to note that even in this moralized Hebrew conception, the scape-goat was not a sacrifice proper; its sending away was *preceded by sacrifice*. The priest 'made an atonement for the children of Israel for all their sins once a year,' and when the sacrifice of bullock and goat and the burning of incense, and the sprinkling of blood was over, then and not till then the live goat was presented to the Lord. . . . The Hebrew scriptures emphasize the fact that the burden laid upon the goat is not merely physical evil, not pestilence or famine, but rather the burden of moral guilt." The Athenian festival of Thargelia was a rite of expulsion, of riddance, which incidentally involved loss of life to a human being. The event for which it was most famous was the driving forth of two human scape-goats, indicating that a chief function was the ceremonial purification of the city. It may be that many of the so-called human sacrifices among the Greeks of mythological days and a large number of cases so regarded by the tragedians were primarily not sacrifices but ceremonies of riddance and purification. The ultimate fact that lies behind such ceremonies is the use of a human *pharmakos*. "The *pharmakos* is killed then, not because his death is a vicarious sacrifice, but because he is so infected and tabooed that his life is a practical impossibility. The uneducated, among whom his lot would necessarily be cast, regard him as an infected horror, an incarnate pollution; the educated who believe no such nonsense know that the kindest thing is to put an end to a life that is worse than death." When needing a scape-goat the Athenians utilized a man already condemned by the state, a device adopted by other peoples. "Why not combine religious tradition with a supposed judicial necessity? Civilized Athens had its *barathron*; why should civilized Athens shrink from annually utilizing two vicious and already condemned criminals to 'purify the city?'" In the rituals known as flight-ceremonies, common to both Egyptians and Greeks, the same notion of transferring the pollution to a human victim is in evidence.

In the year 217 there was great excitement and fear in Rome; there were many prodigies, and a heavy penalty seemed called for. The rite of *ver sacrum*

—a special offering of the firstlings of spring—was renewed, but the old ritual offered few means of redeeming sin.⁸

§287. Insurance and Investment.

THE practice of offering first fruits is much in evidence in San Cristoval, Solomon Islands.¹ Among the African Bageshu, "at harvest time an offering of first fruits together with some of the last year's corn and a fowl are sent to the medicine man for the deity before anyone dare touch the new corn." These people are said to have no permanent temples nor appointed priests. "When occasion requires, the temple or hut is rebuilt and the offerings made, but directly the cause of anxiety passes, the temple is neglected and falls into ruin until required again, when a new one is built."² The lord of the thunder and lightning, among the Tshi-speaking people, was Bobowissi. At times he manifested his displeasure by killing persons by lightning, by storms and tornadoes, and especially by sending such torrents of rain that the mud dwellings of the natives fell in and crushed the occupants; and "after any great loss of life from this cause the people would offer sacrifice to Bobowissi, asking how they had offended him."³ A Congo ceremony of insuring good fortune is as follows. "All the fetishes are spread out on a piece of cloth; the chief with two of his sons or slaves sits down opposite them. A cock is brought, and the chief cuts an artery at the side of the bird's neck and lets the blood trickle out through the mouth over the three first fetishes, scattering a few drops over the others. Then he chews kola, and, meanwhile, addresses the fetishes, alternately coaxing and threatening them, and making his petition, which is usually a request for fertility for his wives and slaves. After each sentence he spits on the three principal fetishes, and his sons or slaves spit on the others."⁴ Among the Bangala of the Upper Congo, "the first-fruit of game and fish that a lad killed would be given to the lad's mother, or, if she were dead, to his mother's sister or the next to kin. The first-fruit of a farm was given in the same way by a girl to her mother, or her aunt."⁵

Before any crop can be eaten by the Akamba an offering of first fruits must be made to the *Aiimu*, or evil spirits. This occurs in a clearing called "the place of praying." "During the dance one of the women present is sure to be seized with a fit of shaking and cry out aloud—this sign is known to be the answer to the people's prayer to the *Aiimu*."⁶ The *mugomo* tree is regarded by the Kikuyu as sacred, and it is not ruthlessly cut down as is the case with all other trees which impede clearing operations during the making of fields. "Ngai is supposed to live up in its branches, but he descends in order to eat the meat of the sacrifice, which is offered below. . . . Those who worship merely cross their lips with a morsel of meat before sacrificing. . . . Generally speaking it seems to be their belief that constant sacrifices are necessary to propitiate even the good deities. The sudden death of a man, for instance by lightning, is ascribed to some evil act of his life being punished by Ngai." In Kavirondo and Nandi the natives look upon the *sumba* or elves as rather malicious in their influence and are careful to propitiate them by offerings,

if any untoward circumstances happen. For instance, "when the fishing fails, the chiefs send a present of cattle to the island. And from time to time, the people take cooking pots and tobacco pipes, and leave them for their use. . . . The island being quite small, any cattle which have been brought as offertories to the *sumba* are transferred to the mainland and herded with the cattle of the tribesmen; but they are all known, and never sold or killed. Even if a neighbouring tribe made war, these cattle would never be carried off as booty, but would be regarded as sacred."⁸ Sacrifice for a purpose is a daily ritual with the agricultural Kabyles. "At dawn they bury four hard eggs, four pomegranates, and four nuts for each pair of oxen. They leave them in the ground all day, and in the evening these titbits become the prize of the children of the village. Before leaving home, each laborer places some bread, fritters and cake on the horns and neck of his bullocks; then he rubs oil on them, in order to preserve himself and his beasts of burden from all malady during the year. Arrived at the place of work, he commences by scattering on the ground a handful of mixed seeds—wheat, barley, peas and beans; then he makes a new distribution of eatables to his assistants; finally all recite together the *fatha* [the first sura of the Koran], and the work begins."⁹

The original religions in Sikkim, India, and in Tibet have many points in common: in both systems temples and images are unknown, while propitiatory offerings occupy a prominent place; and neither recognizes a definite priestly order, while both encourage resort to shamans to ward off the malign influences which surround the human race.¹⁰ All the iron deposits of Manipur are under the protection of the forest god, who has to be propitiated before the metal can be worked. When fresh ground has to be broken, a buffalo is sent by the Raja, and this animal is taken to the site of the proposed excavation, where in olden times it was slain; but since the introduction of Hinduism the animal is released and dedicated to the god, after a few hairs from each fetlock and the end of his tail, and a drop or two of blood from his ear, have been offered.¹¹ The modern features of this rite represent, in part at least, an attempt to avoid the burden of sacrifice. The same applies to a practice of the Borneans, who pour a poisonous mixture into streams to aid them in fishing. "But before any poison is cast in, a certain quantity must be set aside for the Spirits. One of the party, therefore, goes a little further up the stream to some insignificant pool which has been left on the pebbly bank, (wherein—alas! for poor human nature—any one could see with half an eye that there was no fish) and, pouring in the Tuba juice, he calls out: 'O Spirits of the Rocks! of the Wood! of the Smooth, Flat Stones! of the Karangans! of the Earth! and of the Leaves; here in this pool is your share of the numberless fish! Spoil not our sport by any interference!'"¹²

The Dyaks keep away from a cemetery, as an abode of spirits, except when they bury their dead; when they do that, they begin by scattering rice on the ground, as the price paid for the grave to the spirit owning the land. "Then a fowl is killed, and the blood sprinkled on the ground. These offerings are made to prevent the spirits from hurting any of those who take part in digging the grave."¹³ Strewing rice, says Wilken,¹⁴ was at first merely a means to keep a person's soul in his body or to bring it back; later it was used to allure spirits

in general. Among the Dyaks the strewing of rice was not so much a sacrifice as a device to make the god called upon attentive to the fact that something out of the ordinary was going on and to indicate the place where divine help was needed. Among the Macassars of Celebes the usage is to have a chicken pecking at the kernels, especially during a pregnancy. A chicken is used in calling back the soul of a sick person; at the sacrificial feast a little rice is strewed while a chicken is swung about by the feet until it begins to squawk. The Alfurs of Buru, who have no priests, hold that ghosts and spirits can be called on by anybody and at any time and place, but most properly in little shrines built for them. If the Alfur has any project he always seeks to assure himself of the favor, help, and coöperation of the ancestral spirits. He also gives a thank-offering for the aid received and to assure future favors: "Thanks, ancestors, here is your food prepared from the first fruits of the rice." Such thank-offerings are not without their bearing upon future, as well as past, well-being.

Of fundamental importance in the religious attitude of the Bagobo, in the Philippines, are "the group assemblages at which sacrifices of human beings or fowls are presented to certain gods; sacred liquor is ceremonially drunk; formal lustrations in the river for the expulsion of disease take place; rites magically protective against ghosts and demons are manipulated; and material wealth in garments, ornaments, and weapons is offered up with the primary intention of obtaining an increase of riches. Yet it is noteworthy that the parents of every family, at their own home altar, are accustomed to perform devotions and to make offerings for the health and well-being of members of their household. Formal worship is carried on at fixed altars or at temporary shrines of recognized types, where fruits of the field and manufactured products are placed, or the slain victim is ceremonially offered up. But acceptable devotions may be performed by the wayside or in the forest, merely by laying on the ground an areca nut and a betel leaf with a word of prayer to some divinity."¹⁵ The Maori "offered death sacrifices, sacred food for the dead, etc., rather with the idea of 'throwing a sop to Cerberus' in pacifying the evil deities, and also in paying honor to a chief, than from the faintest idea of adoration."¹⁶

In Greenland, gifts were offered to the spirits of certain rocks, capes, and ice-firths, principally when travelling and passing those places. Food, beads, and other desirables were cast into the water.¹⁷ In the Yukon delta, at a celebration, "the inuas or shades of the various animals are invited and are supposed to be present and enjoy the songs and dances, with the food and drink offerings, given in their honor."¹⁸ During the full moon of December the Eskimo held a feast to which the bladders of animals killed during the year were brought. These were supposed to contain the shades of the animals. We have seen elsewhere that the bladders were taken out to a hole made in the ice and thrust into the water. They were believed to swim far out to sea and there enter the bodies of unborn animals of their kind, thus becoming reincarnated and rendering game more plentiful.¹⁹ Certain ceremonies among the Salish and other tribes were intended to placate the spirits of the fish, plant, or fruit, as the case might be, in order that a plentiful supply of the same might

be vouchsafed to them. "The ceremony was not so much a thanksgiving as a performance to ensure a plentiful supply of the particular object desired; for if these ceremonies were not properly and reverently carried out there was danger of giving offence to the 'spirits' of the objects and being deprived of them."²⁰ The Haida deposit certain offerings in the sea, and many tribes throw offerings into springs, lakes, and rivers.²¹ The Canadian Indians hung a dog on a pole by his hind legs as a sacrifice.²² Among the Kwakiutl, "when a beloved child is dying, the parents keep on praying to the spirit not to try to take away their child. 'I will pay you with these clothes of this my child, Sitting-on-Fire.' Thus they say, while they put on the fire the clothes of the one who is lying there sick."²³

"Before eating, an Indian took a small piece of food from the dish and threw it into the fire as an offering to the evil spirit, also making a short grace."²⁴ It was an Onondaga belief that "a magic feast at which all ate everything set before them without stint or escape as to amount might be necessary to save the giver's life, he eating nothing."²⁵ From the most remote period the Iroquois believed in the existence of a race of supernatural beings whom they called False-faces. They were evil spirits without bodies, arms, or limbs—merely faces, of the most hideous description, whose glance paralyzed the beholder. They could send plagues and pestilences among men, as well as devour their bodies. "Upon this belief was founded a regular secret organization, called the False-face band," very widespread in Iroquois villages, with initiation, forms, ceremonies, and dances. Membership was attained by dreaming that one was a False-face; and the only way to get out was by dreaming that he had ceased to be such. All the members but one, the "keeper of the False-faces," were men. "The prime motive in the establishment of this organization was to propitiate those demons called False-faces, and among other good results to arrest pestilence and disease."²⁶

The Omahas have a sacred well or spring, located in western Kansas: "The miraculous quality of this pool, which chiefly astonishes the Indian mind, consists in a slow rising of the water whenever a large number of people stand around the brink. The water of the pool is perfectly limpid and considered to be bottomless; it harbors an aquatic monster which engulfs all the objects thrown into it, and never sends them up again. Indians offer to it beads, arrows, kerchiefs, earrings, even blankets, and all sink down immediately. Before putting clay or paint on their faces, the Indians impregnated these substances with the water of the well. . . . It was the custom of the tribe to offer the spearheads and other tokens to appease nature or their gods by depositing them in the spring, which they considered holy ground. This custom was observed whenever the tribe went on the war-path, to insure victory; when a child was born, to secure blessings for the child; and for any unusual undertaking, to make it successful. These deposits of tokens in the springs were also good-luck offerings. The spring was usually a shrine resorted to by the old-time Indians to commune with the unseen world. . . . The custom of making offerings at springs to the water deities is common to all primitive tribes, and among the Arapahos and Cheyennes I have myself seen shawls and strips of calico hung up as sacrifices upon the bushes about every little

watering-place in the vicinity of a regular camp. . . . The most notable examples of sacrifices of this general class are recorded by explorers of Central and South America, where offerings of gold and precious things of various kinds were cast into lakes, streams, springs, and the deep cenotes, or natural wells, to appease the gods believed to dwell therein."²⁷ Here is an excellent example of the extraordinary thing in nature being elevated to fetish-quality.

The offering of first-fruits among the Natchez was made by each father of a family, and on certain occasions when a live stag was sacrificed by the Iroquois it was the oldest man of the hut or village that gave the death-blow. "The Hupa offer dry incense root upon a rock, near which dwells a being supposed to have control of the weather, when they desire the rains to cease, but incense root mixed with water when they wish the frosts to melt and disappear."²⁸ Near the present Hopi villages there are shrines in which offerings of eagle eggs carved from wood are placed during the winter solstice for the increase of eagles.²⁹ Fewkes³⁰ says the prayer-objects employed by these people are not regarded as symbolic representations of sacrificial offerings, but as material representations of animals desired. "The sheep effigy of the modern Hopi is not a sacrifice to the god of growth, but a prayer symbol employed to secure increase of flocks. The painted eagle egg has a corresponding significance." As contrasted with their neighbors, the Pimas make little outward show of religion, though there is an occasional "rain dance" and other ceremonies for the cure of disease. Propitiation is directed chiefly to the sun: "When weary upon a journey, the Sun was appealed to, and the first whiff of cigarette smoke was puffed toward him." The sun-disk was regarded as the veritable person of the god, not his shield or head-dress.³¹ Zuñi brides desirous of becoming mothers make an offering of *kunque* (meal) at a phallic shrine.³²

In Mexico, "while the fishing is going on, a cross is set up near the river, upon which beads and girdles, head-bands, tunics, pouches, and arrows are hung. Should they omit this sacrifice to the spirit of the water, the fish will not die, 'for surely there is some great big man who is the master of the fish,' said an Indian to me; and he added, 'or it is perhaps only the oldest fish.'"³³ Much reverence was shown for an idol in a temple in Yucatan, and "when there was great mortality or a pestilence or other public calamities, all went to him, men and women alike, carrying a great number of presents to offer to him, and then, in sight of all, a fire descended at noon and consumed the sacrifice. Then the priest announced to them what would happen concerning the subject about which they desired information, such as diseases, famine or death, and, after that, they became acquainted with the good or evil fortune to come, although sometimes the event was contrary to what had been announced to them."³⁴ Von den Steinen's³⁵ Indian attendant, during his travels in Brazil, gave no encouragement to the idea that the April festival was one of thanksgiving for the crop; he said that they celebrated the feast at the time of the harvest because that was when they had the food and other things with which to celebrate it.

Twice in the Homeric poems, offerings are made which bear a close re-

semblance to sacrifices to the souls of the dead, although they may be distinguished from them: at the funeral-pyre of Patroclus, Achilles leans jars of honey and of oil against the bier on which the corpse lies; and when Odysseus goes to the realm of Hades to consult a seer, he digs a small pit in the ground and "pours about it a libation for all the dead, first mixed-honey [i.e., milk and honey], then sweet wine, and thirdly water;" then after a prayer to the dead, including a vow that on his return to Ithaca he will sacrifice a farrow cow and burn a pyre full of treasures, and in particular that he will sacrifice a black ram to the seer, Odysseus cuts the throats of a ram and of a black ewe in such a manner that their blood flows into the pit. "When the Achaean army suffers from the plague, and Achilles calls an assembly to consider what shall be done, the question is not what drug can be found as a specific for the pestilence, but how the god is to be appeased; and not what sin has been committed, but whether some vow has been left unperformed or some sacrifice unoffered. The plague was sent . . . because Agamemnon had refused to give up for ransom the captive daughter of a priest of Apollo, in spite of the fact that this priest had presented reverence for his god, in addition to boundless gifts, as a motive for granting his request. The offense was a lack of respect,—not a moral crime. The god would not have been offended if Chryseis had not happened to be the daughter of his priest." The importance which the divinities attach to the sacrifices offered by men is shown by the following incidents. Menelaus on leaving Egypt neglected to sacrifice to the gods, and he came no farther on his way than the island of Pharos before he was checked by lack of wind for his voyage, and there his supplies of provisions were exhausted before he learned from the sea-god Proteus the cause of his trouble. He returned to Egypt and offered the sacrifices which he had neglected, and then found no difficulty in sailing to his home.³⁶ In a later and more sophisticated age a Greek tragedian puts these words in the mouth of the Cyclops: "Wealth is the god for the wise; all else is bombast and fine words."³⁷ "That there are gods only for the rich," states Reclus,³⁸ "is a doctrine which, on careful investigation, seems ancient and universal." There is evidence in ancient Greece of economy in sacrifice, in that war-axes were so worked as to have no practical utility and fragments were made to look like complete axes so as to serve as offering or amulet. "Similar votive pieces, axes in which the shaft-hole is not bored through, but only indicated by a little depression, are known from later periods."³⁹

On one of his expeditions, "Sennacherib went to the head of the column, and, standing on the prow of the flag-ship, he offered a sacrifice to the god of the Ocean, Ea. He poured the solemn libation, then cast into the water a model of a ship in gold, a fish of gold, an image of the god himself, also in gold."⁴⁰ Smith⁴¹ sketches the typical Hebrew sacrifice. It was a public ceremony of a township or clan, private householders being accustomed to reserve their offerings for the annual feast and for the time being simply vowing. Victims appointed for the sacrifice were brought, and also a store of bread and wine for

the feast, whose law was openhanded hospitality; "no sacrifice was complete without guests, and portions were freely distributed to rich and poor within the circle of a man's acquaintance." The pious Jews of the time of Christ took on themselves enormous burdens of payments, ritual obligations and constraints in interests in order to comply with the Mosaic law.⁴²

The Scandinavians brought tribute to Odin, that he should defend the land from enemies, and sacrificed for good crops.⁴³ Survivals of the ancient idea of sacrifice may be seen in the practice of German builders, who place a little tree on the gable of a new house. This custom has been explained as follows: "As a sacrifice was offered when the foundation of a house was laid, so was a sacrifice offered when the roof was completed. The roof was especially subject to assaults of the wind, and the wind was among the Northmen and Germans Odin, Woden, or Wuotan. Moreover in high buildings there was a liability of their being struck by lightning, and the thunder god Thor had to be propitiated to stave off a fire. The farmhouses in the Black Forest to the present day are protected from lightning by poles with bunches of flowers and leaves on the top, that have been carried to church on Palm Sunday, and are then taken home and affixed to the gable, where they stand throughout the year. The bunch represents the old oblation offered annually to the God of Storm." The floreated points of metal or stone on the apex of the gable are a reminiscence of the bunch of grain originally offered to Woden's horse. "The sheaf of corn, which is fastened in Norway and Denmark to the gable of a house, is now supposed to be an offering to the birds: originally, it was a feed for the pale horse of the death-god Woden. And now we see the origin of the bush which is set up when a roof is completed, and also of the floral hipknobs of Gothic buildings. Both are relics of the oblation affixed to the gable made to the horse of Woden,—corn, or hay, or grass; and this is also the origin of the 'palms,' poles with bouquets at the top, erected in the Black Forest to keep off lightning."⁴⁴

§290. Cannibalism.

THERE is little doubt but that the tribes of western Australia were originally cannibals, although at the present day it is impossible to obtain any reliable information on the subject. "It would seem, however, that in some cases they ate parts of their enemies slain in a fight, while in others they ate parts of their own relatives and friends."¹ Where cannibalism is of the corporeal type, one finds cases like the following. "The Nobo house, it appears, is always built at some little distance from the village, and is used as a trap for unwary strangers—in this particular instance, for Papia. Papia, the culprits told me afterwards, 'was a fat man with a light skin, and we wanted to eat him too much,' so, when the conversation had turned upon the recent dance and upon feathers, and plumes, and other ornaments, one of the Boboi casually remarked that there were some very fine feathers in the Nobo house, and that if Papia would walk over there he would show them to him. The unsuspecting village constable fell in with the suggestion, and entered the Nobo house, and

was promptly killed, cooked, and eaten; the Nobo house was then burnt down, and a fresh one built in another place."²

The Edugaula tribe were the only natives in Southeast Papua who ate human flesh raw and drank human blood. "The other tribes were terrified at such doings."³ Certain tribesmen of the Gulf of Papua "are not cannibals and never were, detesting it with a great detestation, so much so that some lads I took with me lately to . . . a cannibal district, would eat no food cooked by others lest it should have been cooked in a pot in which human flesh was cooked."⁴ In the majority of cases among the southern Massim the eating of human flesh was part of the solemn act of revenge, "which it was the duty of each community to take on behalf of its own members killed and eaten by other communities with whom it was at enmity. . . . In a smaller number of cases human flesh was undoubtedly eaten for the pleasure it afforded, and complete strangers were commonly killed and eaten. . . . Human flesh is stated to resemble pig in flavour, but to make better food since, although they both taste much alike, the former has the more delicate flavour, as well as the further advantage (stated by everyone who talked freely on the subject), that it never produces any painful feeling of satiety or induces vomiting. It was pointed out that if too much pig flesh were eaten a man's stomach would swell up and he would be sick, but that human flesh might be eaten until a man found it impossible to swallow any more without producing these unpleasant symptoms; it was however admitted that it was very rare for any one to get as much of this food as he would have been pleased to eat."⁵ In former times the people of Lifu, Loyalty Islands, ate the bodies of enemies slain in war. "They acknowledged that they positively like human flesh, and it was not merely eaten to express hatred, or to prove the completeness of a victory. . . . The natives were exceedingly fond of human flesh. The chiefs were despotic and ordered their subjects to be clubbed and cooked at their pleasure. I have heard the natives speak of a time of severe famine when those men who had the greatest number of wives and children were considered to have the most food . . . the dead were often exhumed to be cooked and eaten: and sometimes when a native was dying with plenty of flesh on his bones, some of those standing by would be rejoicing at the prospect of a feast, and arranging to steal the body."⁶ In Tana, when the body of an enemy is taken, it is dressed for the oven, and served up with yams at the next meal. "They delight in human flesh, and distribute it in little bits far and near among their friends, as a delicious morsel. I recollect talking to a native one day about it," writes Turner,⁷ "and trying to fill him with disgust at the custom, but the attempt was vain. He wound up all with a hearty laugh at what he no doubt considered my weakness, and added: 'Pig's flesh is very good for *you*, but this is the thing for us;' and, suiting the action to the word, he seized his arm with his teeth, and shook it as if he were going to take the bit out! It is different on some other islands, but at Tana cannibal *connoisseurs* prefer a black man to a white man. The latter, they say, tastes *salt*!" The natives of New Caledonia picked out the good bodies of the slain for the oven and threw the bad away; they tied up a captive to a tree, dug a hole, and kindled a hot stone oven for his body before his very eyes. "The women went to battle. They kept in the

rear, and attended to the *commissariat*! Whenever they saw one of the enemy fall it was their business to rush forward, pull the body behind, and dress it for the oven. The hands were the choice bits, sacred to the priests. The priests went to battle, but sat in the distance, *fasting* and praying for victory. They fasted for days if they got no *hands*. If the body of a chief was cooked, every one must partake, down to the little child, and before a gourmandiser proceeded to *polish* the bones, he called out, 'Have *all* tasted?' If it was the body of a woman they ate only the arms and legs. On Mare they devoured all. Sometimes they cooked in joints, and sometimes the whole body was doubled up in a sitting posture, with the knees to the chin, put into the oven, and served up so, as they squatted around for their meal. Their appetite for human flesh was never satisfied. 'Do you mean to say that you will forbid us the *fish of the sea*? Why, these are our *fish*!' This is how they talked when you spoke against cannibalism."

In the New Hebrides cannibalism prevailed until recently. "A missionary on Efate said that there was not a single middle-aged man on the island who had not eaten human flesh, and that each village regarded the next as a larder for human meat." Elsewhere man-eating is practised "perhaps more as a religious ceremony than to allay hunger." A vendetta between two villages was closed, not as usual by the payment of pigs, but by the sending of a small boy as a sacrifice.⁸ In New Britain human flesh is eaten and is sold in shops as we sell beef.⁹ These natives boast of their cannibalism, and "people have told the writer how they have enjoyed their feast on the previous evening, which had been some portion of a human being."¹⁰ They appear never to have eaten the bodies of slain Europeans. Some authors ascribe this to their fear of the magic powers which dwell even in dead white persons; others explain it as an aversion to unfamiliar food.¹¹ In New Ireland and the Admiralty group the natives are notorious cannibals; one tribe lives by fighting for hire, demanding no payment save the bodies of the slain.¹² In New Georgia cannibalism is still practised but in the utmost secrecy.¹³ Elsewhere, "in returning boys to their homes the greatest care has to be exercised that they are landed at the villages whence they were recruited, as in the event of their being put ashore at a place only a few miles from where they belong, they would run serious risk of being instantly killed and eaten."¹⁴ When the dreaded Nuya Malu warriors came as allies to Soloira, Fiji Islands, "an abundant feast was provided for them, in which figured several roast pigs; but the 'friends' murmured that that was not a feast for warriors, and asked why no human bodies were provided for them. Human flesh was then obtained for their sustenance, but as none of the enemy had been sufficiently accommodating to come within the power of the Soloira clubmen, the source from whence the stimulating banquet was furnished can be surmised. The mountain men were not fastidious where human meat was concerned; they have dug up bodies that have been buried for days, and eaten parts of them done up into puddings. On their war marches, when they have killed victims, they have been known to cut up the bodies and carry portions in their 'kit' for provender on

the way, as with other kinds of food."¹⁵ Johnson¹⁶ makes the general statement that cannibalism is still (1922) practised in the South Seas.

In Africa, cannibalism is confined chiefly to the central interior, though some South Africans seem to have practised it in former ages.¹⁷ "The Fang and other interior tribes eat any corpse, regardless of the cause of death. Families hesitate to eat their own dead, but they sell or exchange them for the dead of other families."¹⁸ The Bonjo eat human flesh with relish and literally practise the breeding of human cattle. "In each village, as the missionaries know only too well, one will find men, children, and young girls thus destined to sale and the slaughter-house, and resigned to their fate."¹⁹ In recent years European nations have had to take action against sporadic cases of cannibalism in Sierra Leone and the Cameroons.²⁰ A number of Bantu peoples are cannibals; in the Belgian Congo the custom has been very hard to uproot—charges have been made, indeed, that it was favored by the Belgian authorities. From this region has recently come an amazing account of a negro king who sued the hospital at Boma for the possession of his leg, which had been amputated as the result of a serious accident. The surgeons, well aware that the king was an open advocate of cannibalism, flatly refused his demand for the severed limb, knowing the use to which it would be put. The court, however, handed down a decision restoring the severed member to the king who, without further formality, took possession of his property and departed for his home.²¹ The Mabode "are great cannibals, the presence of the white man having had little restraining influence over them. Their laws forbid them to eat a blood relation, even though he may have been killed in war. This, however, does not prevent them from cutting up and cooking the corpse, and selling the meat thus prepared to another person for food."²² Actual paddocks, filled with "human cattle" that were being fattened for market, are reported.²³ In 1890 cannibalism was very general along the north bank of the Congo River from the mouth of the Mobangi River to the town of Likunungu. "It was the custom to eat those slain in battle, to buy slaves from the Lulunga River and other places on purpose to eat them, and to eat those also who by some criminal act had rendered themselves liable to the penalty of death. Slaves were dear, and bloody fights were infrequent, consequently the cannibal feast was one in which they could not often indulge. I could never obtain any other reason for eating human flesh than that 'it is very nice and better than any other meat.'" The Boloki folk of the Upper Congo also ate human flesh for the pleasure of it; "the palms of the hands were regarded as delicacies, although the whole hand was said to have much fat in it." Unlike other tribes in the Bangala district, only the men ate such flesh, which they cooked for themselves in saucepans reserved for that purpose. It was thought that human flesh had a beneficial effect upon those who ate it. "Dead bodies floating down the river were drawn to land and eaten by some, but not by all; some had no objection to eating relatives by marriage, and even their wives, but they never ate their blood relations. When fighting they would not eat one killed on their own

side, but if they captured the body of an enemy they would eat it with gusto."²⁴ These facts are reported by a missionary who was an eye-witness to such scenes.

Among the Ba-Mbala of East Central Africa, cannibalism may be described as an everyday occurrence, and, according to the natives themselves, is based on a sincere liking for human flesh, which, when used for food, is called *Misumi*. "Enemies killed in war, people buried alive after the poison test or dying in consequence of it, relations (except father, mother, children, uncles, or aunts), and sometimes foreign slaves, are all eaten; in fact, any corpse which is not in the last stages of decomposition is considered a dainty. Victims killed for cannibalistic purposes are often buried for two days before being eaten, during which period a fire is kept burning on the grave; the body is then exhumed and cooked with manioc flour. . . . Vessels in which *Misumi* has been cooked are broken and the pieces thrown away. Cannibalism accompanies the ceremony by which a kind of alliance is established between chiefs of the same region." Cannibalism is general among the Ba-Huana, though practised by men only. "The habit cannot be ascribed to a craving for animal food, since game is plentiful in the Ba-Huana country. It is, in fact, due to a sincere liking for human flesh, of which the natives are in no way ashamed. The bodies of enemies are consumed, and expeditions are arranged for the purpose of recruiting the larder. No special ceremonies are observed in connection with cannibalism, and the flesh is prepared and boiled in the same fashion as any other meat. The blood is not touched, and the sexual parts are thrown away; the head is placed in water until the flesh rots away, and the skull is preserved as a trophy in a special hut."²⁵ The Bageshu, a Bantu people, are "a more primitive race and stand low indeed in the human scale; . . . they are, undoubtedly, cannibals, though each clan, when questioned, denied the fact and pointed out another which followed the practice of eating the dead secretly. Their land might be called a land without graves owing to the practice of throwing out the dead towards evening under the pretext of leaving them for the wild animals, whereas the old women visit the bodies and take what they consider the prime pieces and leave the refuse to the wild animals."²⁶ That there exists, principally in the region of the great lakes, a group or sect of people who habitually indulge in feeding on human flesh is an indisputable fact, to which several administrators and explorers have borne testimony. "One thing, however, is certain: natives, when brought in contact with corpses and putrefaction, do not feel the same horror that we do. A bright, intelligent young fellow once asked me, in a matter-of-fact way, if I had never tasted a corpse. To my indignant protest, 'The smell alone is sufficient to drive a man away,' he replied, 'No, the smell is very pleasant!' And on another occasion I was asked quite seriously if, among the many 'tinned stuffs' brought into the country by Europeans, there is not also tinned human meat."²⁷

Of a tribe in the Malay Peninsula it is written: "It is undeniable that the Bataks as a race have a greater prevalence of social virtues than most European nations, and that truth, honesty, hospitality, benevolence, chastity, absence of private crimes, are here found actually to co-exist even with cannibalism."²⁸ During some of their wars, a body was occasionally cooked by the

Samoans; "but they affirm that, in such a case, it was always some one of the enemy who had been notorious for provocation or cruelty, and that eating a part of his body was considered the climax of hatred and revenge, and was not occasioned by the mere relish for human flesh. . . . It is the custom on the submission of one party to another to bow down before their conquerors each with a piece of firewood and a bundle of leaves, such as are used in dressing a pig for the oven; as much as to say, 'Kill us and cook us, if you please.' Criminals, too, are sometimes bound hand to hand and foot to foot; slung on a pole put through between the hands and feet, carried and laid down before the parties they have injured, like a pig about to be killed and cooked. . . . During a great scarcity occasioned by a gale cannibalism prevailed. When a light was wanted in the evening, two or three went to fetch it—it was not safe for one to go alone. If a child was seen out of doors, some one would entice it by holding up something white and calling the child to get a bit of cocoa-nut kernel, and so kidnap and cook."²⁹ Cannibalism is said to have been practised on Easter Island up to 1864. One old man boasted of the number of human beings he had eaten. "When asked how he liked 'long pig' he smacked his lips and expressed a regret that he could no longer enjoy the luxury."³⁰ Among the Maoris the eating of human flesh was usually a sequel of battle. A venerable warrior relates: "We cut off the heads of the slain, to be smoked and preserved as trophies of war, and we cooked and ate the bodies. That was indeed the warrior's food, the flesh of man. There was no other meat to equal it. In appearance it was like pork when cooked, and it tasted like pork, only sweeter. I ate it, and I also drank human blood. That was the custom of us all in those days. This was also a custom of our people: when a man had succeeded in killing a foe whom he particularly hated, he would drink the blood of the slain man and would cook the body and consume every portion of it—*kai katoa*!" In peace, slaves were frequently killed as a relish for the monotonous fare of taro or fern-root. "Sometimes a chief would become 'meat-hungry'; then a slave, preferably a girl, would be slaughtered and cooked to appease the aristocratic appetite." These epicurean eaters-of-man preferred their own countrymen to white sailors, saturated with tobacco and "salt-horse"; yet "in the Hauhau war with the white troops, cannibalism was revived, and as late as 1869 the flesh of colonial soldiers killed in bush fighting in Taranaki was frequently eaten by the Maoris."³¹

Cannibalism, writes Letourneau,³² citing cases, "exists and has existed, in America, from the Arctic region down to the island of Tierra del Fuego;" but it was not an everyday affair. Together with human sacrifice, it rested upon religious motives, or revenge, or excessive savagery in war; there was about it something extraordinary and sacred, an air of exception and mystery, with some awe. The existence of prehistoric cannibalism is likely.³³ The term cannibal seems to have originated in a Spanish corruption of the word we know as "Carib";³⁴ but it is doubtful whether the Spanish accounts are trustworthy. In regard to the island Carib, "there are records preserved in Chanca's account of Columbus's second voyage in which he himself took part. 'These captive women [at Guadeloupe] told us,' says he, 'that the Carib men use them with such cruelty as would scarcely be believed, and that they eat the

children which they bear to them, only bringing up those which they have by their native wives. Such of their male enemies as they can take away alive they bring here to their homes to make a feast of them, and those who are killed in battle they eat up after the fighting is over. They claim that the flesh of man is so good to eat that nothing like it can be compared to it in the world.' From the same authority it is learned that when the Carib take any boys as prisoners of war they remove their organs, fatten the boys until they grow to manhood, and then, when they wish to make a great feast, they kill and eat them, for they say the flesh of boys and women is not good to eat. Three boys thus mutilated came fleeing to us when we visited the houses." Roth,³⁵ who finds evidence of cannibalism both real and survivalistic among the Guiana Indians, goes on to say: "Were all historical evidence wanting for confirmation of the practice of cannibalism, there would still remain the middens, the bone and shell mounds, of the Pomeroon, Moruca, and Waini Rivers as silent but eloquent testimony of the prevalence of such a custom in earlier times throughout the neighborhood." There is not a little cannibalism in Brazil; there is plenty of food, but they fight and then eat the slain "as a kind of noble game." The Botocudos and others not only eat the slain who belong to another tribe, but "kill and eat even the old and sick of their own tribe, without sparing father or child, rather betimes, before the patient can become thin."³⁶ The Fuegians ate defeated enemies and, in time of famine, old women.³⁷ There are a number of anthropophagous tribes on the Amazon.³⁸ Even among historic peoples, a reversion to cannibalism has occurred during famines.³⁹

§292. Animistic Cannibalism.

AUSTRALIAN cannibalism extends beyond the eating of children; it is often practised, not for the sake of food, but for strength and to prevent habitual sorrow. The fatty portions of the breast, arms, and legs are eaten raw just before burial and in very small quantities. "A black mark of charcoal and fat is made around the mouth of all who have partaken of the human flesh. The reason they assign for this barbarous custom is that should the relatives not eat they would be perpetually crying and become a nuisance to the camp." It would seem that the eating relieves them of the necessity of mourning by laying the ghost or pleasing it. "When they eat the fatty portions of an enemy, their reason is different; they think it will impart strength to them. When not the enemy, only near relatives partake of the dead."⁴⁰ In Victoria, where the fat of the corpse is eaten by the nearest relatives, the reason given is that they may thus forget the departed and not be continually weeping. "The Australian is not a man-eater as the New Zealander is. When severely pressed by hunger, he has been known to eat human flesh; and for the proper performance of certain ceremonials he is required by his laws to use the fat of

the kidneys and other parts of the body for anointing himself, and he also swallows the fat and skin on some occasions; but he does not, like many of the South Sea Islanders, build a huge oven and cook a number of human bodies, in order that a whole tribe and its friends may enjoy a feast."² Cannibalism was not a general practice in Central Australia, but was more of a rite; cases are cited to show that it was a precaution against magic and probably also to ensure food.³ In the east central region, "if a strong black-fellow should die his body is suspended over a fire and the fat that exudes and drops is caught in a wooden vessel (koolaman); this fat is rubbed over their bodies. The sinews of the dead man are then eaten to make them strong. A corroboree (dance) is held before the feast, and when all is over the koolaman is burnt."⁴ "In the Gulf country the blacks killed in fight are eaten," but "the bodies of enemies killed are left where they fell, those of their own side only are eaten."⁵ The fat around the heart and kidneys of slain enemies is eaten to appropriate their courage; in the north the head or the eyes are eaten with the same idea in mind. Sorcerers allege that they must eat human flesh to keep up their supernatural powers.⁶

Among the Melanesians cannibalism is becoming ceremonial, and turning into human sacrifice; "there was no sacrificial feast upon the flesh as when a pig was offered; only little bits were eaten by those who desired to get fighting *mana*, by young men, and by elders for a special purpose. Such sacrifices were thought more effectual than others, and advantage was taken of a crime, or imputed crime, to take a life and offer the man to some *tindalo*."⁷ Here is the ceremonial eating, or mere tasting, as part of ritual. On the Torres Straits islands, to make a boy brave he is given the eye and tongue of a slain enemy, cut up into small pieces and mixed with wine.⁸ Cannibalism in the Solomon Islands, "as on the other islands of the South Sea seems not to have taken its origin from the absence of other animal food, but from the need of finding an expression for the highest humiliation that can be put upon an enemy. I certainly know cases where cannibalism had become a passion."⁹ "Cannibalism is to a certain extent a religious ceremony to these natives. They do not kill and eat human beings for the sake of their taste, or because they are hungry, as some writers will insist on having us believe. The cause is farther back than this; in nearly every case when human beings are killed and eaten, it is on occasions when such a sacrifice is necessary, according to the natives' religious beliefs."¹⁰ Some of the Melanesian practices in connection with appropriating the souls of the dead are too incredibly loathsome to reproduce.¹¹

A rare form of cannibalism among the Southern Massim is that which consists in eating bodies exhumed for this purpose soon after they have been buried. "Although very little is known about this matter, the common opinion throughout the district that sorcerers commonly exhume and eat corpses seems to indicate that the object of the deed is the performance of an act of magic."¹² With reference to the natives of New Guinea it is stated that head-hunting and cannibalism are closely allied as to purpose, for both rest on the notion that

the soul-essence remains in the body at death. "Every man desires to increase his own soul strength, and so we have another inducement to homicide, for, by eating the body of an enemy, it is believed that a man adds to his own strength the quality of the portion eaten. So, in the belief that like produces like, the cannibal, when it is possible, eats that portion of the body of a victim which is weak in his own, that his deficiency may be reinforced."¹³ On the Loyalty Islands, the victorious army carry off the bodies of their slain enemies and, on their arrival at home, prepare a feast and have them cooked and eaten. "The king eats the eyes, heart, and part of the breast. The women are not allowed to partake of it at the public feast, but I have been told they sometimes get a portion from their husbands in private."¹⁴ In eating human flesh, and for that purpose alone, the Fijian chiefs used wooden forks.¹⁵ Cannibalism has become a thing of the past in these islands, but memory of it is still vivid. When the district commissioner, a few years ago, was inspecting the mission schools, the native children sang for his benefit a dirge, the refrain of which ran thus:

Oh! dead is Mr. Baker,
They killed him on the road,
And they ate him, boots and all.

This referred to the murder of the Rev. Thomas Baker, who, in July, 1867, had been killed and eaten by the hill tribes of Viti Levu as a form of reprisal for violation of a native taboo.¹⁶ The cannibal feast in the D'Entrecasteaux Islands was always considered an act of revenge. "Sometimes the prisoner was dismembered and disembowelled on the stone platform while he was still alive, sometimes he was dispatched beforehand with a club. . . . Where only one prisoner had been taken, his head and hands were given to the wife or nearest kinsman of the man for whom the prisoner was the atonement. That night when the victim's soul returned to gather up its body and rebuild its earthly tenement it found each house-door closed and spears bristling through every wall to prevent its entering."¹⁷

Macdonald¹⁸ gives, in two articles, evidence from South and East Central Africa, making some comparison of the two regions. "Among the mountain tribes of Natal, whenever an enemy who has acted bravely is killed, his liver, which is considered the seat of valor; his ears, which are considered the seat of intelligence; the skin of his forehead, which is the seat of perseverance; . . . and other members, each of which is supposed to contain some virtue, are cut from his body and baked to cinders. The ashes are carefully preserved in the horn of a bull, and being, when required, mixed with other ingredients, into a kind of paste, are administered to the youths by the tribal priest as a kind of bolus. . . . There is a close resemblance between the war usages of the South and those of Central Africa. There we find . . . the Basuto habit of cutting out an enemy's heart and liver and eating them on the spot. We also find the habit of mutilation for the purpose of reducing the parts to ashes to be stirred into a broth or gruel which must be lapped up with the hand and

thrown into the mouth, but not eaten as ordinary food is taken, to give the soldiers courage, perseverance, fortitude, strategy, patience, and wisdom."

In the Congo region, the traditional focus of cannibalism, "the motive for eating human flesh is mainly attributable to two sources: firstly, by eating prisoners of war, certain tribes consider they gain courage; and secondly, because human flesh is relished."¹⁹ It is worth noting as an exception that "these Central African cannibals have not the belief which is held by others that to eat the heart of an enemy is to give them his courage, or that by eating his arms they receive his strength."²⁰

Farther east, as in West Africa, witches are found practising cannibalism,²¹ which consists in good part in getting portions of a human body for purposes of sorcery. Warriors do not eat human flesh, but they drink hot bullock blood before entering battle "and eat raw steaming meat hacked from live creatures. They also make incisions into their wrists, and suck their own blood to put heart into themselves."²² In the Niam-niam country it is believed that drinking great quantities of human fat intoxicates.²³ In West Africa there are secret societies whose ritual includes a cannibalistic feast. Members of the fraternity are eaten instead of being buried, "in the belief that they will continue in the bodies of their friends." The skulls of slaves killed and eaten are preserved for vanity's sake; "several native chiefs apologized to us for the small number of skulls on their huts as man's importance was gauged thereby."²⁴ The communal cannibalistic meal of men joined to each other and to some daimon in a spiritual bond, is a common phenomenon in West Africa.²⁵ Extracts from testimony given in 1920 before a Naval Court of Inquiry reveal that in at least one case Haitian bandits, having killed a lieutenant of marines, removed and ate his heart and liver. It is asserted by marine officers that the natives believe "that eating the heart of a white man will give them wisdom, while eating a white man's liver will bring them courage, and smearing the sights of their rifles with the brains of a white man will bring accuracy in shooting."²⁶

A survival of cannibalism is reported from Nigeria: corpses are smoke-dried, then pulverized and formed into small balls by the addition of water in which Indian corn has been boiled for hours; this mixture is allowed to dry and is then "put away for future use as an addition to the family stew."²⁷ "Schweinfurth maintains that dog-eating is an indication of cannibalism, but the Banziris strenuously deny every charge of this kind."²⁸ The Fan will eat prisoners of war in a ritual sacrifice, after the usual ceremonies; this is done through vengeance, to annihilate the body and hence the soul. Women and sometimes children are also eaten according to ritual ceremonies and solely by their relations.²⁹ Traces of cannibalism are still found among the Hausa. "Abu Bakar told me," writes Tremearne,³⁰ "that the Sarikin Kano, before fighting us in 1903, killed one of his officers, took his heart, eyes, and private parts, and, having had them cut up and cooked with the flesh of a ram, gave a small piece to each of his principal officers." In North Africa, as well as in

Nigeria, the flesh of a young child is supposed to be the proper remedy for one of the stages of syphilis.

The notion that parts of the human body may cure disease is only a variation of the belief that one may get courage or other quality by eating the same. Cases are recorded, especially among the Chinese, in which persons out of self-sacrificing piety or compassion give some of their own flesh to the sick as a means of cure.³¹ DeGroot³² refers to "children who, in order to cure their parents or parents-in-law, gave them to eat, properly roasted, boiled, or otherwise prepared, a piece of their own flesh from the thigh, buttock, breast or arm, or a finger, or a dose of their blood. Such fanatic self-mutilation was publicly discountenanced in 1729 by an Emperor of the present dynasty. . . . Still it is not improbable that honorary gates are awarded now and then to pre-eminent models of perfection among the devotees of the great national virtue."

Partial and ceremonial cannibalism, similar to the foregoing cases, is to be found in lands where the actual practice is a thing of the past. Among the Buryat the black man-eating demons have their representatives in the "black shamans" who are believed to eat human flesh.³³ The Tibetans formerly ate their dead parents out of piety in order to give them no other sepulcher than their own bowels. This was given up before 1250 A.D., but cups made of the skulls of relatives were used as memorials. Tartars and some "bad Christians" killed their fathers when old, burned the corpses, and mixed the ashes with their daily food.³⁴ Funeral-cannibalism is also reported of the Birhors of Hindustan, who formerly used to kill and eat their aged parents, but "they repudiate the suggestion that they ate any but their own relations."³⁵ Reclus,³⁶ without citing authority, says that in this tribe "the parents beg that their corpses may find a refuge in the stomachs of their children, rather than be left on the road or in the forest."

In one tribe of India "it is customary for a young warrior to eat a piece of the liver of the first man he kills. This is said to strengthen the heart and give courage."³⁷ Further, sects of various description persist in or revert to anthropophagy.³⁸ Before a certain Hindu snake-doctor died—and by strange irony of fate he met his death by snake-bite—he instructed the twenty-two disciples whom he had taken under his tuition, that on his death they should eat his flesh to acquire the powers he possessed in life. Accordingly, they cut his corpse to pieces, stewed the flesh and divided it amongst themselves in twenty-two leaf-cups. Each asked the other to begin eating. They were dissuaded. "One of the men placed his *dona* or leaf-cup on his head before consigning its contents to the fire, and a drop of meat-juice trickled down his cheeks and entered the corners of his mouth, and thus this man alone acquired a fraction of the powers that his late teacher had possessed. It is through this more fortunate disciple that the Nag-matis of our days have inherited what little knowledge of snake-charming and snake-bite cure they still possess. A similar story is related of the powers of the present race of witches and sorcerers."³⁹ Among Dyaks and others, "it is the practice still to cut up and consume the raw heart of 'a brave' killed in battle, under the

idea that the partakers will in time become braver." It seems that cannibalism has not long been obsolete in Borneo. In Cochín China, "the drinking of the gall of dead enemies, generally mixed with brandy, is looked upon as an important means of making anyone redoubtable in war."⁴⁰

A case which may be a survival of cannibalism is reported from Hudson's Island, Polynesia: "The head of the parent was taken up on the third day after burial, and the skull cleaned by the *teeth* of the children. It was a disgrace and a byword if they refused to do so."⁴¹ An old Maori warrior relates as one of the little incidents of his earlier years, that when the father died the sons divided the corpse amongst them, and cooked and ate it, both as a mark of respect and in order to acquire the inherent sacred virtues and *mana* of their parent. This devouring of parents, states Cowan,⁴² appears to have been looked upon as a semi-religious act; but it could not have been a frequent practice, as the above case is the only one he heard of among them.

Cannibalism is an important part of the ceremonial of secret societies in the northwest of America, having been introduced among the Kwakiutl about sixty years ago and among the Tsimshian over seventy years ago. "Among the southern tribes the action of the cannibal was confined to his taking hold with his teeth of the heads of enemies, which were cut off in war." A slave might be killed by the owner, then torn and eaten; while pieces of flesh torn with the teeth from the arms and chests of prepared corpses were also consumed.⁴³ "The idea of eating any other human being than a brave enemy was to most Indians repulsive. One of the means of torture among the Indians of Canada and New York was the forcing of a prisoner to swallow pieces of his own flesh." Among the Iroquois, according to one of the Jesuit fathers, the eating of captives was considered a religious duty.⁴⁴ In a war with the Tuscarora, a mixed band of Indians "carried the day with such fury, that, after they had killed a great many, in order to stimulate themselves still more, they cooked the flesh of an Indian 'in good condition' and ate it."⁴⁵ The idea of feeding the gods is expressed by the Hopi prayer-stick to which a small packet of sacred meal is tied. Fewkes⁴⁶ regards the prayer-stick as a symbolic substitute for human sacrifice.

A number of Guiana tribes, about a month after the funeral, disinter the corpse and put it in a great pan or oven over the fire, till it is reduced to a black carbonaceous mass. This is pounded into a fine powder, mixed in large vats of caxiri and drunk by the assembled company. "They believe that thus the virtues of the deceased will be transmitted to the drinkers."⁴⁷ When the Jibaro is speaking of an enemy whom he particularly hates and wants to kill, he says of him: "*Yuotaheï*"—"I will eat him." This expression may be a survival from a time when the Jibaros were cannibals, and as a matter of fact at the head-feast a ceremony formerly took place which may certainly be regarded as cannibalism.⁴⁸ The Tauaré burn their dead. The ashes are preserved in hollow reeds and at each meal some of them are consumed.⁴⁹ The Chavantes on the Uruguay eat their children to get back the souls of the latter; espe-

cially young mothers do this, as they are thought to have given part of their own souls to their children too soon.⁵⁰ At the time of the Spanish invasion, the Araucanians were still cannibals, although it is now nearly a century since the last authenticated case was recorded. This cannibalism was not general, being practised only on prisoners of war. The occasion served as a national feast. The prisoner was made fast to the trunk of a tree, where he was subjected to a thousand torments, "till his captor rushed forward and hacked off a limb or piece of flesh. . . . This was the signal for the rest, who came one at a time, each one cutting off a portion of flesh, until the bones were stripped and life extinct. Men, women and children partook of the feast. The flesh was sometimes roasted, sometimes eaten raw. Before life was quite extinct they opened the breast and tore out the heart, which was passed from hand to hand among the chiefs and captains, each one biting it and sucking the blood and sprinkling it to the east. . . . The heads of the enemies slain in battle were cut off and carried in triumph to the villages, where they were afterwards used as drinking vessels in the feasts."⁵¹

Reversions to cannibalism out of hatred and revenge have probably been numerous. Dozy⁵² mentions a case in which women cast themselves on the body of a chief who was responsible for the death of their relative, in 890 at Elvira, cut it in pieces and ate it. The same author reports that a woman made for herself a necklace and bracelets of the noses and ears of Musulmans and also cut open the body of an uncle of Mohammed, tore out the liver, and ate a piece of it. It is related of an Irish chief of the twelfth century that when his soldiers brought to him the head of a man whom he hated, "he tore the nostrils and lips with his teeth, in a most savage and inhuman manner."⁵³

§294. Nature of the Offering.

THE usual sacrifice among African tribes, according to Gomme,¹ was "two human adults, one male and one female." The Kaffirs, just before a battle, send someone into the enemies' country "to steal a child, who is sacrificed to make the raid successful"; and, as among the Baganda, it is customary to flay a child and to lay its body in a path that the warriors may step over it on their way to battle. South African police recently saved an old woman from being sacrificed by a witch-doctor in a ceremony designed to give the natives strength in war.² In East Central Africa, in case of illness, the wizard is commonly put to death as a sacrifice, whereas in the South the culprit is executed as a criminal, after a tribal council has met and heard him "named" in the most formal manner. "In Central Africa the magician has the power of summary condemnation. . . . The custom of human sacrifice accounts for the difference, where on the whole, the customs are the same, and regulated by the same usages." Thus closely do religion and law align themselves. Again, "if the prophetess declares that a person must be offered as a sacrifice to a mountain deity, the victim is led by her and bound hand and foot to a tree. If during the first night he is killed by beasts of prey, the gods have accepted the sacrifice, and feast 'on his fat,' which is as the smell of spices in their nostrils. If he is not devoured, he is left to die of starvation or is thrown into

a lake or river, with a sinker attached. He was considered unworthy. . . . The frequency of human sacrifices among certain tribes is appalling. When the gods are offended, men must die; when they are hungry, cattle and fowls serve their turn; and when they are only to be propitiated, as for a favor desired, flour or corn will answer."³ A missionary who spent twenty-three years among a people of Central Africa says: "The streams of blood that flow at a king's death in the far interior of Africa are in a sad, sinister sense real red sunsets."⁴

On the Loango Coast, human beings are sacrificed at a burial and whenever a stroke of ill luck occurs, the latter being interpreted by the soothsayer as evidence that the ancestral spirits are angry and must be appeased.⁵ On the wall of the king's palace in Benin was found a frame for crucifixion, with a woman on it sacrificed to the rain-god.⁶ In Dahomi, besides the Grand Custom that is held after the death of a king, there is an Annual Custom which is designed principally for the purpose of supplying the dead kings periodically with fresh servitors. As a rule those sacrificed on the former occasion are the personal attendants of the king—his wives, the chief eunuch, and a suitable following of soldiers, Amazons, bards and drummers. The despatching of messages to the deceased kings causes a far greater loss of human life than do the Customs, it having been estimated that five hundred persons are slain in ordinary years for this purpose. The victims are said to resign themselves to their fate with the greatest apathy.⁷

In earlier days in East Africa, at a time of famine or visitation of cattle-disease, it was the custom to sacrifice at the shrine a small child and then bury it there. "The mother of the child was afterwards compensated for her loss."⁸ In one Madagascar district human sacrifices were formerly offered every week, "Friday being the proper day, and those of high rank were considered the most appropriate offering; the victims were speared and left to be devoured by wild dogs and birds."⁹ In northeast Africa, "the old custom of human sacrifice stands in connection with slavery"; the author¹⁰ mentions the tribes who do and do not practise it. At the time of the Arab conquest a virgin in gay apparel was thrown into the river as a sacrifice to obtain a plentiful inundation. 'Amr, the conqueror of Egypt, prohibited this custom, but even in Lane's time a truncated pillar or cone of earth called *aruseh* (the bride) was raised some little distance in front of the dam shortly before the date of the great ceremony. The *aruseh* was washed away by the rising waters, generally a week or fortnight before the dam was cut.¹¹

In India occur many instances of human sacrifice. One legend "speaks of the sacrifice as having been at first human, subsequently changing to beast sacrifice, eventually to a rice offering, the latter now representing the original sacrificial animal, man. . . . Human sacrifice must have been peculiarly horrible from the fact that the sacrificer not only had to kill the man but to eat him, as is attested by the formal statement of the liturgical works. . . . It cost 'one thousand cattle' to buy a man to be sacrificed. . . . Several of the modern Hindu sects have caused to be performed human sacrifices, even in this country. . . . Not long ago it was quite customary to fling children

also into the river."¹² "The goddess remains satisfied for a thousand years with a human being sacrificed according to prescribed rites and ceremonies, and with three human sacrifices for a hundred thousand years." Another divinity remains satisfied with human flesh for three thousand years. Human blood offered with mantras [spells] always becomes ambrosia. The wise offer a bloody human head and human flesh. In one drama, it is announced: "Human flesh is for sale—unwounded real flesh from the body of man. Take it, take it!"¹³

All the hill people of the eastern Ghats, except perhaps the Saoras, seem to have practised human sacrifice. The Khonds wished, in 1888, to renew the custom, and would have done so if allowed. In 1886, in Jeypore, all the preparations for such a ceremony were made but "at the last a black sheep was dressed up and adorned, its head shaved, etc., and it was beheaded instead of the man, who was given a present and released." During certain disturbances, in 1879-1880, the hill people made many human sacrifices.¹⁴ This was evidently a case of reversion under calamity. "Three years ago [1887], an old man and his daughter were seized and their heads struck off,—a sacrifice to the goddess Meenachee—by another hill tribe in the neighborhood."¹⁵ A report of 1854 shows that it was a very common practice with one tribe to cut off the heads, hands, and feet of anyone met with, "without any provocation or pre-existent enmity, merely to stick up in their field to ensure a good crop of grain." In the same region, on the death of one of the men immediately after the purchase of a captive boy, the latter was flayed alive, his flesh being cut off bit by bit till he died; "these superstitious savages then divided the whole body, giving a piece of the flesh to each man in the village to put into his . . . corn basket from which they suppose all evil will be averted, their good fortune will return and plentiful crops of grain will be ensured."¹⁶ Kidnapping, followed by sacrifice, is done from private motives, to gain riches or win some coveted private revenge, and also for the benefit of the entire tribe.¹⁷

Slavery and human sacrifice are still going on in some of the mountain districts of Northern Burma, according to a recent report of the Commissioner of the Northeastern Frontier. In this territory, known as the Naga Hills, the number of human sacrifices is never less than from six to ten a year. The most common victims are Indian children captured from Assam, although any kind of available slaves may be included in the slaughter. In 1921 the inhabitants of a village in Rajputana burned an old woman alive "in order to call down the vengeance of heaven on the State," which had sent sepoy to assist in the collection of the usual revenue contributions.¹⁸

Thurston¹⁹ reports at length upon the custom in southern India. Grown men are most esteemed as victims because they are more costly. Children are bought and reared for the altar; when old enough to realize their impending fate they are fettered and guarded. The victim is always purchased from parents or kidnappers; criminals or prisoners of war are not considered fitting subjects. In the ceremony the earth is addressed: "O God, we offer the

sacrifice to you. Give us good crops, seasons, and health." And the victim is told: "We bought you with a price and did not seize you. Now we sacrifice you according to custom, and no sin rests with us." The victim is intoxicated and anointed with oil; then each participant touches the anointed part and wipes the oil on his own head. A hog is sacrificed and its blood allowed to run into a pit, into which the human victim's face is pressed until he is suffocated. Bits of the body are buried on the boundaries of the village. Or the victim has his flesh cut piecemeal from his bones, "till the living skeleton, dying from loss of blood, is relieved from torture, when its remains are burnt, and the ashes mixed with the new grain to preserve it from insects." Once more, in the sacrifice of three human beings, the live victim is hacked by the priest while he addresses the deity: "On account of this sacrifice you have given to kings, kingdoms, guns, and swords. The sacrifice we now offer you must eat, and we pray that our battle-axes may be converted into swords, our bows and arrows into gunpowder and balls; and if we have any quarrels with other tribes, give us the victory." To the victim he says: "That we may enjoy prosperity, we offer you a sacrifice to our God . . . who will immediately eat you, so be not grieved at our slaying you. Your parents were aware, when we purchased you from them for sixty rupees, that we did so with intent to sacrifice you. There is, therefore, no sin on our heads, but on your parents. After you are dead, we shall perform your obsequies." The last of these Khond sacrifices took place in 1852; a buffalo is now substituted for the human victim. It is hewn to pieces while alive, and pieces of its flesh buried in the soil to secure good crops. Sometimes as many as twenty or thirty human beings were thus sacrificed, the number being in proportion to the importance of the petition.

"Cannibal gods were hungry; they could pay; therefore purveyors made their appearance" to cater to the sacrificial needs. The custom was firmly rooted and has lasted down until recent days, as where a Goa fisherman killed his companion, "from no enmity against the deceased, but under a superstitious idea that the sacrifice would please the spirits of the river and bring him good fishing."²⁰ "Our own times have witnessed fishermen walking about with sacks on their shoulders near lonely habitations searching for little children, whose blood, when sprinkled on the sea, appeases it and facilitates fishing." But substitution is commoner: "they usually begin their fishing operations by the sacrifice of a cock or other animal instead of the human blood which they offered during their state of paganism in former times."²¹ Two sacrifices common in India in the Middle Ages were the suttee²² (sacrifice of a widow on her husband's pyre) and "the act of self-immolation by a votary before the image of a deity, with the object of compelling the deity to satisfy the votary's demands." This latter form is really one of coercion. Again, "the excavation of a well or the search for a supposed hidden treasure required the offer of a human victim. The lower classes of the Hindus still believe that whenever a difficulty is experienced in the sinking of a well, or in the construction of a bridge, or in the discovery of a supposed hidden treasure, the work can be facilitated by the offer of a human victim to the guardian spirit of the place."²³ Here we trench upon the next following topic of foundation-sacrifice.

Human sacrifice plays an important part in the religious life of many tribes in the Philippines. Victims are needed as funeral companions, and when some great man is ill slaves are immolated in the belief that the evil spirit which caused the illness will be drawn off in the souls of the sacrificed men.²⁴ Through all Polynesian mythology runs the idea that the gods eat souls—an idea that almost by necessity involves human sacrifice.²⁵

In the New World the custom is well represented, though it is asserted that the mounds offer no evidence of its presence.²⁶ In 1643 the Mohawks burned a young Algonquin with torture as a sacrifice to the war-god and then ate her flesh. This was contrary to the custom at other times.²⁷ It was a sort of common meal of men and the god. There is an account of a yearly sacrifice of children, celebrated about ten miles from Jamestown. "Fifteene of the properest young boyes, betweene ten and fifteene yeares of age," were put through a certain ceremony and finally "cast on a heape, in a valley as dead." The natives said that they were not all dead and that those whose blood had not been sucked by the evil spirit became priests and conjurors. If this sacrifice were to be omitted the evil spirit "would let them haue no Deere, Turkie, Corne, nor fish: and yet besides he would make a great slaughter amongst them."²⁸ Child sacrifice has appeared among the foregoing cases; and sometimes the victim must be a girl.²⁹ "Aharihon, an Onondaga chieftain of the seventeenth century, sacrificed forty men to the shade of his brother to show the great esteem in which he held him."³⁰

In the far Northwest, slaves were regularly sacrificed, being despatched by means of ceremonial implements, called slave-killers, on occasions of building a house, or on the death of an important person.³¹ The Pawnees show some revulsion from the practice; when they took captives, only one was sacrificed, the rest being adopted into the tribe. It seems that the death of the one captive assured good crops and plenty of everything; but the Indian who killed him fasted and mourned for four days, "for he knew that he had taken the life of a human being."³² Among the Natchez, "at the death of the female chief in 1721, her husband, not belonging to the family of the Sun, was strangled by her son, according to custom."³³ This case might come under the ghost-cult except that the dead woman was really a goddess.

In 1700 the temple of the Taensa was struck by a thunderbolt and burned, upon which five women threw their infants into the flames as a sacrifice to the offended deity. On one occasion the Iroquois drove arrows into the body of a new-born babe, ground up its bones, and swallowed a little of the resultant powder before starting out to war.³⁴ As late as the first quarter of the nineteenth century the traditional ceremony of the Skidi was performed, in which a girl, typical of the evening star, was sacrificed to the masculine morning star, thus exemplifying their belief that the universe was dual—male and female—and that on the conjunction of these two forces depended the perpetuation of all forms of life.³⁵ At a festival held in honor of one of their

gods, the tribes of the Pacific States sacrificed thieves and prisoners of war. "At midnight the victims were taken from the chapel, where they had been compelled to watch, and brought before the sacred fire. Here the hair was shaven from the top of their heads. . . . Towards daybreak the prisoners were taken up to the great temple to be sacrificed," which was done by cutting open the breast and tearing out the heart.³⁶

An author³⁷ from whom we have quoted in the text goes into detail that reveals the connection of such sacrifices with cannibalism. "Among the Aztecs, on the day consecrated to the god of fire, captives were sacrificed by burning. 'The most delicate morsels were reserved for the priests. Part of the body was given back to the person furnishing the victim. Sahagun tells us that this meat was cooked with hominy. This dish was called *Tlacatlaotli*, and the master of the slave sacrificed was not allowed to eat it, for the slave was looked upon as one of the family.'" Though the Maya gods were less sanguinary, prisoners of war were sacrificed and when these failed, parents offered up their children; also human sacrifices accompanied funeral ceremonies. But, whereas "the office of sacrificer was considered the greatest dignity to which a Mexican could aspire; among the Mayas, on the contrary, it was looked upon as impure and degrading." In Nicaragua, human sacrifices were offered on the first day of each of their eighteen months; "if the victim was a child offered or sold by its parents, the body was buried, custom not permitting the assistants to eat the flesh of one of their own people." These sacrifices lasted until the Spanish conquest and were attended by all sorts of revolting practices.

Some of the sacrifices of the Toltecs and Aztecs were to get rain, or in general to favor the new-sown crops; human sacrifice to that end has been very widespread, as the collections of Frazer³⁸ show. He cites the so-called "meeting of the stones," a ceremony, attending the Mexican harvest-festival when the first-fruits were offered to the sun. "A criminal was placed between two immense stones, balanced opposite each other, and was crushed by them as they fell together." Preuss³⁹ thinks that "in the sacrificed human beings really daimons were killed, in order thus to renew them and to give them capacity for greater services to men." Men were sacrificed in the dress of the gods to whom they were offered; there was death and re-birth to avoid real death.

In South America the Chibchas, on rare occasions, offered human sacrifices to the sun. Under the Incas, as well as before their time, they were common, the Quito tribes sacrificing all the first-born. At the accession of the Inca, a thousand children are said to have been killed, and there was regular child-sacrifice at other times. When the Inca was sick, one of his sons was offered in his behalf.⁴⁰ In Brazil, at the sacrifice of a prisoner, "in order that nothing should be lacking to him during the time when he was awaiting death, rather, on the contrary, with the purpose of distracting him, they even gave him for a concubine the girl whom he chanced to choose, who, when the victim died,

had, by way of ceremony, to shed a few tears. But, to her honor, she must immediately thereafter swallow (horror!) the first morsel of him."⁴¹

In Chaldaea of the most ancient periods there were human sacrifices; but later they became rare and animals were used instead. Juristic and exorcistic formulas mention the sacrifice of children and slaves.⁴² "Among all Semitic peoples in the Near East, not excepting the Arabs . . . once prevailed the barbarous usage of sacrificing human beings, chiefly children, at particular times or on special occasions, to the highest gods. . . . The Aryans did not hold themselves free from it. But this custom appears among them only in the time of their barbarism or in out-of-the-way regions, where people held more obstinately to the old. . . . It is harder to understand why people who had reached such heights of a very refined culture, as the Ardmæans and the Phœnicians, had not long before abolished the bloody rite. . . . No colony was sent out, no campaign begun, without moving the gods by human sacrifice not to withhold their support. If they came home in triumph from the battlefield, they slaughtered the prisoners as a thank-offering to them. And every year they sought reconciliation for the sins of the people by burning a number of children, chiefly from the most noted families, on the altars of the king of heaven, while a hellish music drowned the shrieks of the victims and the lamentation of the mothers. This was true not only of the Phœnician religion of the metropolis but also of that of the colonies. So tenaciously did the Carthaginians cling to the barbaric institution that the Romans never succeeded, even when they had become complete masters of their old competitors, in getting rid of it. . . . Of the Ammonites and Moabites the same is known; and the Old Testament relates how Mesha, the king of Moab, when he was besieged by the kings of Judah and Israel, offered his own first-born son to Chemosh, in order to soften that god." The Egyptians "set the example of abolishing these sacrifices, but they were sturdily maintained none the less." The god Ra is reported to have replaced the sacrifice of men by that of beasts.⁴³

The Phœnicians and their colonists have been infamous in history because of their persistent sacrifice of human beings and especially of children.⁴⁴ But sometimes the immolation bears a more heroic tinge. "Comparable to that Marcus Curtius, of whom the Roman legend related that he once . . . heroically cast himself into a chasm which had opened in the forum, is, it is said, the Punic field-marshal Hamilcar, son of Horno. When, in the battle of Himera, 480 B.C., the defeat of the Carthaginian army seemed inevitable, he, to purchase the victory for his fatherland, himself leaped into the blazing flames of the sacrificial fire and found his death there." Again, after a Carthaginian victory the stateliest prisoners were cast into the flames of a mighty sacrificial fire—"a scene that recalls in lively manner the description . . . of the *noche triste*, that 'sad night' in which the Aztecs, in honor of their gods who were not less endued with a dark, insatiable thirst for blood, slaughtered the companions of Cortez who had fallen into captivity. . . . The duty of providing the sacrifice rested upon the most noble families of Carthage, as the representatives of the community. They undertook it according to a fixed order. Out of a number of children devoted to it the victim was chosen by lot. Secretly, therefore, and often, in these families, their own children were

traded for those of other families, and the latter were adopted. At Carthage the victim is alleged to have been laid on the arms of a brazen figure of the god, hollow within, and thence rolled down through an opening into the interior, where a fire glowed. The parents, it is said, might not lament over the loss of the child; otherwise the sacrifice would have lost its virtue."⁴⁵

In Homer, actual human sacrifice is represented by the one case where Achilles slew twelve Trojan youths at the pyre of Patroclus; this is really the provision of a grave-escort and Homer⁴⁶ calls it an "evil deed." The motif of human sacrifice originating in legend is carried over into Greek tragedy: Macaria sacrifices herself, on behalf of her brothers, to save the city of Athens; Alcestis buys off her husband by substituting for him; Iphigenia is sacrificed by her father; Polyxena is offered to the manes of Achilles.⁴⁷ In a number of legendary cases, however, the victim is not slain, but caught away; as the ram was the substitute for Isaac, so was the hind for Iphigenia; and Heracles wrests the victim of Death, Alcestis, from his very clutches.

In Rome human sacrifice "belonged to the essence of the old religion"; children were exposed and the old killed. "Of actual human sacrifices also there was no lack, on occasion, even at the time of the Republic. . . . According to Porphyry, human sacrifices were everywhere abolished under the Emperor Hadrian; but at the beginning of the fourth century the Romans still ordered, according to Lactantius, a bloody cult to the Jupiter of Latium by immolating to him a man every year."⁴⁸ "The gradual growth of the custom of selecting a criminal or a maimed person for sacrifice must be regarded as a modification of the original custom." The gladiatorial shows may well have grown out of human sacrifice, if, as in Mexico, the condemned captive was given a chance for his life.⁴⁹ It is typical of the mores of the age that Jews and Christians, on account of their secret rites, were charged with child-sacrifice.⁵⁰ Human sacrifice was consistent with the warlike mores of the ancient Scandinavians; ordinarily it was a penalty for misdeeds, but often the best and dearest was demanded.⁵¹

Foundation Sacrifice. In Melanesia, "in former days when a chief's dwelling-house or canoe-house was finished a man's head was taken for it as for a new canoe; a boy or woman was sometimes bought to be killed. It is a matter of tradition that men were crushed under the base of the great pillar of such a house, when it was set in its place."⁵² In many of the tribes in the Gulf of Papua communal houses must not be occupied and canoes must not be launched until human blood has been sprinkled on them.⁵³

"Several tribes of the Upper Congo . . . celebrate the occasion of a settlement of a political dispute between rival chieftains by the sacrifice of a slave as an indication of their seriousness. Upon such occasions the victim's arms and legs are first broken with sticks, after which torture he is buried to his neck at the junction of two paths, where he is allowed to die a lingering death."⁵⁴ Again, a form of oath among conspirators required the burning

alive of a human being. In 1892, in such a case, a substitute was employed: the head was cut from a turtle and its blood, mixed with gin, was drunk by participants in a sworn enterprise.⁵⁵

In India, among the Khonds, the "method of sacrificing a human victim is to put him into the cleft of a tree . . . or into a fire. . . . Victims offered either to the sun or to the war-god serve to mark boundary lines." The victims are captured young and treated with kindness. "At the appointed time they are slowly crushed to death or smothered in a mud bath, and bits of their flesh are then cut out and strewn along the boundary lines."⁵⁶ A southern tribe, in former times, "before setting out on a journey, used to procure a little child, and bury it in the ground up to its shoulders, and then drive their loaded bullocks over the unfortunate victim. In proportion to the bullocks thoroughly trampling the child to death, so their belief in a successful journey increased."⁵⁷ "On August 1, 1880, the Indian correspondent of the London Times wrote that the people had got the idea that the government was about to sacrifice a number of human beings to ensure the safety of the new harbor works. It is stated that seven or eight years earlier, when the bridge over the Ganges was built, the natives got an idea that Mother Ganges, indignant at being bridged, had at last consented to submit to the insult, on the condition that each pier of the structure should be founded on a layer of children's heads."⁵⁸ "But a few years ago, when the great railway bridge over the Ganges was begun, every mother in Benares trembled for her children."⁵⁹ These cases recall to mind the story of Kipling⁶⁰ called "The Bridge-Builders."

"There are found colossal burial-jars in Cochin and Travancore" which, the natives declare, contain the remains of sacrificed virgins. "All the petty Rajahs are said to have sacrificed virgins on the boundaries of their estates, to protect them from incursions and to ratify their engagements with neighboring chiefs." Again, "a young woman about to become a mother for the first time, was at certain times, chosen and brought before the shrine. She was beheaded with one blow, her head rolling before the image, on which her blood was then sprinkled. This was done until 1744. In the next year, a possession of the goddess came upon a bystander when the sacrifice was about to occur, directing that it should be discontinued. The descendants of the woman and child spared thus . . . live together in a small community of forty or fifty persons. They receive offerings made to the shrine and are exempt from government taxes. A public sacrifice of a sheep is now annually offered in place of and in the same way as the girls of old." When Mandalay was founded in 1858, "fifty-two persons of both sexes and various ages, mostly girls, were buried alive to feed and propitiate the demons; three being buried under each of the twelve gates, one under each gate-post, bearing the name of the entrance, and one at each of the four corners of the city."⁶¹

Among the Sema Nagas, "in the case of the renewal of the house of a chief there are particular rites to be observed. When the hole for the erection of the carved centre front post is dug, a chicken is killed in the hole and the post is erected on its body. If the hearth is moved from its old site even a little, a chicken must be killed and cooked on the new hearth and eaten by the owner and his family. In the evening of the first day of building, on which the centre

front post has been stepped, any two old men . . . pick out the best red cock obtainable and kill it by knocking its head on the post."⁶² This case appears to be survivalistic of a time when a human sacrifice was used. Among the Palaungs the wise man must be consulted as to the most fortunate day on which to make the hole for the chief post and to raise it into position. "This hole is dug deeper than the others, and rich men throw gold and silver, and sometimes gems, into it. A poor man throws in copper—a coin or two will do—and even lead. These offerings are for the spirits of the earth and the underworld. Sometimes a lump of iron is placed under each of the principal posts, and water in which raw rice has been washed is poured into the holes."⁶³ Wilken,⁶⁴ citing a number of examples of the use of horseshoes, concludes that it has some connection with foundation-sacrifice and that horse-sacrifice is a sign of it.

Among the Tlinkit it was customary to kill slaves and to bury their bodies beneath the corner-posts of the chiefs' houses at the time when they were erected. Other events which demanded the sacrifice of slaves were: the death of the owner or of any member of his household, an unusual feast, some occurrence to give shame to him, or the mere gratification of his vanity. The sacrifice at the erection of a house was made "to insure a good foundation."⁶⁵

The Druids are said to have advised the British king, who was building a strong tower for his own safety, to seek out a youth whose father was unknown and let his blood bespatter the castle court, for thereby could it be built. When, in another legend, the walls fell down as fast as they were erected, the builder received supernatural information that they would not stand unless a human victim was buried alive. Again, in a district of Normandy, a newly built house must be purified by the slaughter of a cock, the blood of which was shed on its threshold, or the tenant would die in a year. In 1876, under an old church in Warwickshire, two skeletons were discovered, one under the north, the other under the south wall, about a foot below the original foundations, which appear to have been anterior to the church. Each skeleton was covered with an oak slab, which had been used as a bench. The skulls were said to be Danish. There is a Yorkshire superstition that the first child baptized in a new font is sure to die. A new church was built at Dalton. A blacksmith in the parish, after having seven daughters, had a son born. He asked the rector to baptize him in the old church. The rector asked him why he would not wait a few days and have him baptized in the new church. He said if it had been another girl he would not have minded, but as it was a lad he would be sorry that he should die. There is a Rumanian tale of a prince who tried to build a monastery but the walls fell down every night, as much as had been built in the day. At last the chief mason was warned in a dream that the work would be in vain unless they walled up, living, in the edifice the first woman who should come in the morning to bring them food. The first one who came was his own wife. Despite all sorts of miraculous portents which crossed her path, she came on, and was walled into the building. But when the house was done and the masons awaited the praise and reward of the prince, the latter caused a scaffolding to be broken down, and as the masons fell the husband heard the

cry of his wife through the wall.⁶⁶ A recent story illustrates similar ideas among the Bulgarians.⁶⁷

Head-Hunting. From an old history of Dahomi is quoted a speech by a chief with reference to his collection of heads: "That makes me fearsome to my enemies and gives me this name in the bush. Besides, if I neglected this unescapable service, would my ancestors then permit me to live? Would they not plague me night and day and say that I sent nobody to look after them? That I was concerned only for my own name and forgot the ancestors? The white men are not acquainted with these circumstances; but I speak that you may at least hear and tell it again to your fellow-countrymen, that the festivals are fixed and shall remain in existence as long as the negroes shall hold their own land."⁶⁸

"All the Nágá tribes of the Nágá Hills district are head-takers"; in other tribes no youth becomes a man and often may not marry until he has a head; he may not be tattooed until he has actively assisted in getting a head, hands, or feet of some enemy.⁶⁹

Head-hunting finds its classic ground among the Malays. According to Wilken⁷⁰ its motive is three-fold: to serve the dead; to get glory; and to prepare for marriage.⁷¹ All skulls are not of equal value: among the Dyaks, a man's is worth more than a woman's, a Malay's than a Dyak's, a Chinaman's than a Malay's, and a European's exceeds them all.⁷² Head-hunting is the chief cause of war, and constant warfare prevents their advance; the boys of some districts practise decapitating straw men. The Dyaks, in so far as they are still head-hunters, do not name a new-born child until a head has been taken.⁷³ Heads must be secured for every great event in Dyak life: to win love, at the death of a rajah, at births. The son of a rajah may not don the war-garment until he has taken a head. Nothing can be done without heads: "all kinds of sickness, particularly the small-pox, are supposed to be under the influence of an evil spirit which nothing can so well propitiate as a head."⁷⁴ "To make their rice grow well, to cause the forest to abound with wild animals, to enable their dogs and snares to be successful in securing game, to have the streams swarm with fish, to give health and activity to the people themselves, and to ensure fertility to their women"—all these blessings "the possessing and feasting of a fresh head are supposed to be the most efficient means of securing. The very ground itself is believed to be benefited and rendered fertile."⁷⁵ "A nearer acquaintance with these usages will teach us that they are not based upon a natural thirst for blood, but upon superstition and deep-rooted prepossession."⁷⁶

§295. Redemption and Covenant.

It is the custom in San Cristoval, Solomon Islands, to bury alive the first-born child.¹ In Rhodesia, in 1923, the chief and five members of a local tribe were

sentenced to death for burning alive the former's son in order to appease the rain-goddess and thus terminate a severe drought. Counsel for the defense commented on the high motives which led the chief to sacrifice his own son for rain so as to save his people from drought, and referred to parallel cases in Biblical history. It is noteworthy that the natives are firmly convinced of the efficacy of human sacrifice, for rain fell soon after the young man was killed.²

Where a person volunteers to serve as sacrifice, we have what might be called religious suicide. Such is the case among some primitive tribes in China where a voluntary human sacrifice is offered, in some cases annually, so as to preserve the group from disease, hunger, and distress. In one instance an ingenious device is used: a crescent-shaped instrument is placed with the sharp inner curve against the neck of the suicide-candidate, while he places his feet in chains which hang down from both ends of the instrument and are tied underneath into a kind of stirrup; with a violent jerk he cuts his head off almost as effectively as a guillotine could do it.³

On the fifth day after birth the Chukchi perform the ceremony of blood-painting, before which no person from outside may enter the house. "Even the father of the child has to subject himself to certain incantations before he can enter. This prohibition is repeated when the child is ill, or in the case of an infectious disease. . . . The blood-painting ceremony begins with the conveyance of the mother and child and the reindeer on the family sledge to the sacrificial place behind the tent. The reindeer is slaughtered, and with its blood the faces of the mother, child, and other members of the family are smeared."⁴ Every clan of the Kuki-Lushai places offerings of food and drink over the grave, and kills some animal in honor of the deceased and as a ransom for his soul. Offerings of the first-fruits are made to their forefathers by almost every clan.⁵ The following Hindu legend recalls the story of Abraham. A Brahman came to an old king and said he desired something to eat. "What shall I do?" said the king; "command me." The Brahman replied, "You must kill your son." This the king did, and when he told the most venerable one that the food was ready, the latter said, "Eat of it yourself." "Gladly," said the king, who as before was not disconcerted; but when he made ready to eat the Brahman seized his hand and said: "You have conquered anger. There is nothing you would not sacrifice for a Brahman." Whereupon he disappeared, and the king saw his son standing before him like a young god.⁶ In India a short time ago a girl was sacrificed by her family who believed this was necessary to the recovery of her sick brother. As no improvement in the boy's condition was forthcoming, they deprived him of food and bound him, naked, near a holy place, where he died of exposure.⁷

The East Indians practise head-snatching on the occasions of marriage and birth; it is a sort of sacrifice of redemption, as well as an exhibition of courage. The evil spirits want a life; to offer such brings luck.⁸ A Samoan once promised to give any offering the god required, if he would only preserve mother and child in safety. His prayer was thus expressed: "O Moso, be propitious; let this my daughter be preserved alive! Be compassionate to us; save my daughter, and we will do anything you wish as our redemption price." The

household god of the family of the father was generally prayed to first; but if the case was tedious or difficult, the god of the family of the mother was then invoked.⁹ Here, it would seem, recourse was had to the older, matrilineal divinity as a last resort. The Maori used to offer human sacrifice at the baptism of the first-born child, the priests selecting the victim who was always a man. A survivalistic practice, known as "a forbidding of man slaying," is to place the child's head on a weapon.¹⁰

In Mexico, captive and slave were vicarious sacrifices for the citizens; the gods must have somebody. In terror of them, man's first thought was to offer his own children, especially the first-born, as a vicarious sacrifice for himself; that discharged the claim of the gods on the father. This was the most suitable sacrifice until one got slaves or captives. The state waged war for this purpose, while rich men bought substitutes. Later, with advance in the arts and more settled life, human sacrifice was raised to a great state-institution.¹¹

Not only on pressing occasions, such as plague, drought, and misfortune in war, did the Phenicians decide on human sacrifice and then, in order to enhance the value of the offering, spare not even the lives of their own children, but at annual festivals also they appear, at least in some places, to have followed the same practice. With the notion that no other kind of sacrifice would gladden and appease the gods more than this, there was joined the idea of redemption. Also, in expiation for wrong committed, one who was conscious of guilt sacrificed to the god, to whom he believed he had forfeited life and body, an animal as substitute for himself. In the same sense it was held requisite to promise or offer up similar sacrifices as soon as one found himself in any exigency. Even in the thank-offering there was something of the notion of substitution. But the higher gods were not always satisfied with animals and ordinary gifts; in their eyes such were only a paltry compensation for human sacrifice, in which a human soul as well as body fell prey to the gods. When from sure signs it seemed beyond doubt that a god had marked out a city as his victim and had determined to annihilate the inhabitants and destroy the land, then there was no delay in offering human victims so as to discharge the rage and curse upon the heads of some few and thus divert them from the whole. Similar vicarious sacrifices occurred when the first-born of the chief families were offered up for the community and when the first-born or, better yet, the only son of the king was sacrificed.¹² That this fancy as to the efficacy of child-sacrifice had not died out in Judah, is proved by the offering of his own sons by Ahaz during the stress of the Syro-Ephraimitic war.¹³ We are told that the death of Christ was a sacrifice for all; it paid the cult obligation. All may share in this redemption by faith in him and by accepting his work and the life of the covenant. The old cult-works to assure future life were thus done away with; Paul repudiated them as a burden.¹⁴

From Madrid comes a story of a mother's sacrifice. When her only son was sent to Morocco to fight the Moors, she besought the Virgin del Carmel to protect him from all harm and made a vow to offer her own life on condition his was spared. When he returned, she prayed all night before the statue of the Virgin and then drowned herself in the river.¹⁵ A recent newspaper report

from the same place relates how a workman offered his daughter as a human sacrifice, "as a test of his faith, acting under divine command." He believed that he was required, as a final test, to make this sacrifice after the fashion of Abraham.¹⁶ In Maine, some years ago, the police were just in time to prevent a child sacrifice "demanded by the Lord" at the hands of a frenzied religious sect.¹⁷

The communion and similar ceremonies throw further light on the notion of redemption. The Orāons and the Mündās of India seek alliance with the good spirits or deities by periodical ceremonies, "of which the most salient feature is the worshippers eating together the liver of the animal or fowl sacrificed to the deity, and drinking together rice-beer, after a portion of both the liver and the rice-beer has been offered to the deity. The liver is considered by the Chōtā-Nāgpūr aboriginal to be the seat of the vital principle. . . . The blood, for which the rice-beer is apparently a substitute—for on certain important occasions such as a purificatory ceremony sacrificial blood is actually drunk—is identified by the Orāon and the Mündā with the soul or spirit, as is indicated by their belief that an evil spirit sometimes attacks a person by appearing as a blood-spot on his clothes. And this sacramental eating and drinking with their deities may not improbably be a modification of an older practice of offering up a member of the tribe, and ceremonially eating with the gods the human meat and drinking the human blood by way of sealing a compact of alliance and friendship. . . . Whether this ceremonial eating of the sacrificial meat be a case of eating with the god, or, as is not unlikely, of 'eating the god,' the sacrifice being considered as partaking of something of the nature of the deity, and the consumption of the meat calculated to impart to the eaters something of the strength and other virtues of the god, such ceremonial compact or alliance with the deities through a sacramental meal is renewed at stated intervals by similar sacrifice and sacrificial meals. Delay in renewing the alliance may turn these supernatural allies into temporary enemies, and, in such a case, more than the ordinary sacrifices is required to convince them of your sincerity, and thereby placate their wrath and restore the old terms of friendship and alliance."¹⁸

The striking similarity between the Mexican ceremonies and the eucharistic service is thus described by Bancroft,¹⁹ who quotes from the *Vatican Codex*: "The Mexicans celebrated in this month (December) the festival of their first captain Vichilopuchitl. They celebrated at this time the festival of the wafer or cake. They made a cake of the meal of bledos, which they called tzolli, and having made it they spoke over it in their manner and broke it in pieces. These the high priest put into certain very clean vessels, and with a thorn of maguey, which resembles a thick needle, he took up with the utmost reverence single morsels, and put them into the mouth of each individual, in the manner of the communion—and I am willing to believe that these poor people have had the knowledge of our mode of communion or of the preaching of the Gospel; or perhaps the devil, most envious of the honor of God, may have led them into this superstition in order that by this ceremony he might be adored and served as Christ our Lord." This is an author who never heard of parallelism.

Again, in Tibet have been found rites and other features which bear a close resemblance outwardly to those of the Church of Rome, viz., pompous services

with celibate and tonsured monks and nuns, candles, bells, censers, rosaries, mitres, copes, pastoral crooks, worship of relics, confession, intercession of "the Mother of God," litanies and chants, holy water, triad divinity, and organized hierarchy. The Lamaist liturgy, on account of its dispensation of consecrated wine and bread, has been compared by many to the Christian eucharist, although in reality it is a ceremony for gratifying the rather un-Buddhistic craving after long earthly life.²⁰ Lamaists, such as the Buryat, will often enter a Russian church to sacrifice wax candles to St. Nicholas, in whom they recognize one of the higher lamas.²¹

The ancients showed special reverence to the queen of heaven: "Men, women, and children shared in this: the children gathered wood, the men kindled the fire, and the women, who played the chief rôle in this cult, kneaded the dough into cakes which must represent an image or symbol of the goddess. The meaning of this custom, which is found not only among the Semites but also generally among the Aryans—particularly with the ancient Germans—while traces of it still remain in our Christmas cakes, is that through the eating of the image one partakes of the deity."²²

The festivities held in the month of the Egyptian god Thoth, in honor of Osiris and the dead, partook of the nature of mysteries. On one such occasion Herodotus²³ mingled with the crowd and was present at "the scenes of divine life which the priests represented on the lake in the light of their torches, episodes of the passion, mourning, and resurrection." Such terms as redemption, baptism, grace, faith, salvation, regeneration, were not invented by Christianity, but were household words of Talmudical Judaism.²⁴ The notion of animal sacrifices as a gift of food to the gods superseded the original notion of communion between men and their gods in the life of the sacrifice.²⁵ The cult was the center of the communal life of the Essenes, a Jewish sect remarkable for their strictness and abstinence. This was an entirely new kind of cult: in place of the sacrificial cult appeared the cult of the sacrament, with daily ablutions having the greatest sacramental significance. The bath brought forth a fundamental change in man; it made him an Essene. Only after a year was the novice granted the right to share in this purification-ceremony, which thereafter was consummated daily before the common meal. "If a member of the order touches another of a lower class, he must bathe. The water has a wonderful power, it obliterates all impurity, both external and internal. Associated with the bath is the holy common meal. Here is revived an ancient religious feeling from the time of Semitic tribal life. The conception of the sacrificial repast as the means of restoring a mystical spirit-body community of the members of the tribe with one another and with the deity, was to some extent come to life again. The common dining-room of the Essenes is in the temple into which one walks with timid awe, after having laid off his working-clothes and put on festive attire. Those who prepare the food and drink are the priests of the order. At the beginning and end of the meal the priest utters a prayer. The meal is eaten in solemn silence and reverent seriousness, so

that the stillness within the house appears to those who go by outside as the celebration of an awe-inspiring mystery."²⁶

The ancient mysteries had influence on Christianity. Up to a certain time we have no evidence that Christianity anywhere bore the character of secrecy; then a great change set in: what was once an open and easily accessible belief became a mystery and there were precepts which one did not mention before the ears of the unconsecrated. But the influence of the mysteries and of the religious cults analogous to them was not merely generally effective: the mysteries transformed in several important respects the Christian sacraments of baptism and the evening meal, that is, the custom of granting admission to the fellowship through a symbolic purification and of giving expression to the membership by eating together.²⁷

There are various theories concerning the origin of communion as practised by the Christian churches. For some authors the ceremony is a survival from the cannibalism of remote ages, from anthropotheophagy.²⁸ If we heard that the Chinese or Mohammedans had a religious custom in which they used currently the figure of eating flesh and drinking the blood of a man or god, and if we had no such figure of speech in our own use, we should consider it very shocking.

§296. Sacrificial Prostitution.

INDIA shows a highly developed phase of sacral harlotry. "All the temples . . . maintain troops of dancing girls. . . . Furthermore, it is well-known that in ancient times women were dedicated to the service of the temples, like the Vestal virgins of Europe. They were held to be married to the god, and had no other duty but to dance before his shrine." They were once generally patterns of piety and propriety but are not so now. "No doubt they drive a profitable trade under the sanction of religion, and some courtesans have been known to amass enormous fortunes. Nor do they think it inconsistent with their method of making money to spend it in works of piety. Here and there Indian bridges and other useful public works owe their existence to the liberality of the frail sisterhood."¹ Prostitutes in the temples were at the will of any one who would pay; they were once exclusively for the Brahmans. No dishonor inhered in this devotion; in fact, wives entered, with the consent of husbands, in order to get a good confinement and barren women were promised fertility if they would yield to any comer. "It is generally admitted that the dedication of females to idols is a survival of human sacrifice." In antiquity females were obliged to purchase exemption from being sacrificed by prostitution, and the so-called Basivis in India, as well as other types in that country, represent later parallelisms.² Such prostitutes were originally for the priests and commerce with them was believed to cleanse sin.³ A Portuguese traveller in Indo-China reported that he saw in a temple five thousand priestess-prostitutes: "all the women, virgin daughters of chiefs and lords

of the kingdom and of all the other nobility, go there, in consequence of a vow they are made to take when little, to sacrifice their honor; for without this no eminent man wants to marry them."⁴

There is a special class of prostitutes among certain peoples of the Indian Archipelago. They get considerable honor among the Javanese, Sundanese, Macassars, and Buginese. This is partly due to the fact that they are priestesses of Terpsichore as well as of Aphrodite, have an art of their own, which is their chief interest, prostitution being a sort of avocation. In the looseness of these women we have a survival of sacrificial prostitution. Shamanesses are often singers and dancers by profession, there being no longer any exhibitions of ecstasy or other shamanistic characters; they are entertainers. They exercise a considerable influence over men by spurring them on to war and to trade-journeys which often have important results. They have a special art in influencing men. They are so respected that an injury done them is doubly punished. It is clear that the profession is regarded as favored by the gods and dedicated to them. Parents often make a vow to have one of their daughters become a dancer, so that even young girls not yet come to puberty are to be seen among them.⁵

Among the Phœnicians temple harlotry was common, being undertaken temporarily or for a lifetime, in consequence of a vow made voluntarily or by one's parents; the state of the girl was one of consecration to a god. "No more welcome gift could a woman bring to the deity than the payment she received for surrendering her body. In the service of female deities men gave themselves in the same way, as 'dogs,' so the expression signifies. To mark the denial of their sex they put on women's clothes."⁶ In spite of the energetic protests of the prophets and the prohibitions of the law, such practices were widely prevalent in Israel. A number of passages indicate that it was nothing uncommon to bring the earnings of male and female hierodules as a votive offering into the temple of Jahweh.⁷

The case most commonly cited is doubtless that of the Aphrodite temple at Byblos, where the Adonis ceremonies were performed. These were funeral rites: dust was cast into the air and heads were shaved. Women who did not wish to be shaven might undergo prostitution for one day, with strangers only, the payment going as a sacrifice to Aphrodite. Elsewhere the giving of the hair was a substitute for prostitution—a species of exuvial sacrifice.⁸ The worth of the sacrifice was enhanced by accepting a stranger, and no marriage might be contracted until it had been made.⁹ Here was a species of redemption that has been interpreted as "expiation for marriage."¹⁰ Women who did not get husbands lived in a sort of protected and hallowed prostitution in or near the temple, under the protection of an ancient goddess-mother.¹¹ "But not seldom religious tradition refused to move forward with the progress of society; the goddess retained her old character as a mother who was not a wife bound to fidelity to her husband, and at her sanctuary she protected under the name of religion, the sexual license of savage society, or even demanded of the daughters of her worshippers a shameful sacrifice of their chastity, before

they were permitted to bind themselves for the rest of their lives to that conjugal fidelity which their goddess despised." The mores protected the practice; it was under convention.

"Prostitution is said to have entered into the religious rites of Babylon, Biblis, Cyprus, and Corinth, and these as well as Miletus, Tenedos, Lesbos, and Abydos became famous for their schools of vice, which grew up under the shadow of the temples."¹² The cases given by Herodotus¹³ and Strabo,¹⁴ as occurring in Babylonia, Egyptian Thebes, Lycia, Lydia, Armenia, and elsewhere, are mere variants of the above; often the dowry for marriage was thus collected, and there was no dishonor involved. Said Strabo: "The Armenians pay particular reverence to Anaitis, and have built temples to her honour in several places, especially in Acilisene. They dedicate there to her service male and female slaves; in this there is nothing remarkable, but it is surprising that persons of the highest rank in the nation consecrate their virgin daughters to the goddess. It is customary for these women, after being prostituted a long period at the temple of Anaitis, to be disposed of in marriage, no one disdaining a connexion with such persons. Herodotus mentions something similar respecting the Lydian women, all of whom prostituted themselves. But they treat their paramours with much kindness, they entertain them hospitably, and frequently make a return of more presents than they receive, being amply supplied with means derived from their wealthy connexions. They do not admit into their dwellings accidental strangers, but prefer those of a rank equal to their own." The cult of Ishtar, the Babylonian goddess of the reproductive forces of nature, was surrounded by a host of women who gave themselves to prostitution in her service. Male hierodules also were to be found.¹⁵ "To live in Corinthian fashion" was a by-word for every kind of debauchery; "a journey to Corinth is not every man's business." The Aphrodite temple had a world-famous cult of unchastity, and its courtesans were reminded by vows that in case of success so and so many women would be dedicated. These temple-women had a festival of their own called Aphrodisia.¹⁶ Even if the hierodules are not regarded as connected with sacral prostitution, the temples were yet in receipt of income from its practice.¹⁷ "A genuine sacral prostitution in Scandinavia shortly before the introduction of Christianity" is reported.¹⁸ The Corn-mother of the German field-cult bore the name of "Grosse Hure."¹⁹

§297. Survivals of Human Sacrifice.

CHIEF, perhaps, among the practices witnessing to the former prevalence of human sacrifice is the substitution, often with similar ceremonies, of an animal for a human victim.¹ When a sacrifice is required by the Papuans to consummate some rite, they use a bush pig; formerly they "caught a man just as they now catch a pig."² In olden times the Bawenda practised human sacrifice; today they offer only a black sheep, goat, or ox and all kinds of food, bits of

hide, and beer.³ In Zululand "the women sometimes bury their children up to their neck in the ground, and then retire to some distance and keep up a dismal howl for a long time: the heavens are supposed to melt with tenderness at the sight. The women then dig the children out and feel sure that rain will follow."⁴ Should a Bangala be successful in fishing or trading, without any particularly apparent cause, and shortly after this success should his wife fall ill and die, he may be accused of having passed over his wife to the spirits as an acknowledgment of his increased wealth. The ordeal is often taken to disprove such accusations, which amount, it would seem, to a charge of collusion.⁵ When the medicine-man of the Baganda arrives to treat a sick man, the latter is carried out of the house into the open, where the former kills a cow or goat brought for the purpose, and catches all the blood in a vessel; "some of it he sprinkles on each doorpost, he also takes a stout stick three feet long, fastens a tuft of grass to each end, places it across the doorway, and sprinkles it with blood; the sick man is then anointed with blood on the forehead, on each shoulder, and on either leg. . . . Poor people who are unable to supply even a fowl for the blood are sprinkled with a mixture of water and ashes."⁶

Some of the Sema Nagas, on the day of burial, kill and cut up the dead man's dog, and distribute its flesh to all guests at the funeral who are not of the same clan as the deceased. On other occasions a dog or calf is killed, according to special rites; and "we shall perhaps not go far astray if we take the puppy-dog, with its spear and shield, and the bull-calf, whose liver is buried not eaten, and who is also vested by a spear and a cloth with sinister attributes of humanity, to be the unfortunate latter-day representatives of more terrible offerings of human life attending the erection of the monoliths at Dimapur."⁷ On the occasion of the annual hunt of the Santals, the priest has to dip grains of rice into blood drawn out of his own body and offer such rice to the spirits believed to reside at different spots on the hill. "This rite . . . is probably a modified survival of the practice of offering human victims."⁸ The Lushai believe that the only cure for a bewitched person is to eat the liver of the one who has bewitched him.⁹ "The practice of sacrificing individual lives for the good of the community, which is so utterly opposed to Buddhist teaching, may be traced in Burma at the present day in all its stages, from the killing of a human victim to the mere offering of plantains at a shrine." In one place, a boy or girl is annually bought from a distant village and killed with much ceremony, the blood being sprinkled on the seed-paddy.¹⁰ If a Palaung father and mother have lost many of their children, and another baby is born to them, "they may dedicate it to the monastery, in the hope of saving its life. By so doing, the evil spirits that have robbed them of so many children may not have the power to kill a baby thus dedicated. . . . When a baby is ill it is sometimes weighed, and, when its exact weight is known, the father takes uncooked rice, of the same weight as the child, and spreads it on a large flat board or tray. It is carried to the image-house and set before an image of Buddha. . . . The father and mother then shape the rice into a recumbent image to represent the child. They, and any friends who may have

accompanied them, pray for the health of the baby. They leave the candles and flowers beside the statue and return home. The rice, however, is not left, but is brought home, and on the same day is boiled or steamed. Four or five worthy old men, who have already been invited, are given this rice to eat, along with curry. They all pray for the health of the child, they eat the food, then they pray again and bless the baby. They are careful to eat every grain of the rice, none being thrown out to the birds. . . . The father then carries the little house containing the figure and the food—the mother assisting—to the highest point that can be reached in the monastery beside the image-house. There he rests his burden on a ledge overhanging the court-yard; he then turns round so that he cannot see the little house, but feeling for it with his hands behind his back he gives it a push and topples it over, saying: 'May this little house touch the planet of sickness, and may the sickness of our child disappear!' The planet to which offerings should be made when a child is ill depends on the age of the child. . . . Palaungs now believe that these effigies represent the child, but the custom may go back to pre-Buddhist times, when a living victim was perhaps offered."¹¹

A common form of birth-ceremony among the Maori, and one which illustrates incidentally the division of labor by sex, consisted principally of "the dedication of a male child to the service of the god of war, and of a female child to the tutelary deity, or presiding genius, of the tasks of women."¹² In a story based upon the history of the League of the Iroquois they are represented as setting aside children at birth (*Hidden Children*) to be mated at maturity; this was an alternative, apparently, to their sacrifice. The Senecas debased this ceremony to one of bloody rites.¹³ "The Hurons burned the viscera and a portion of the flesh of one who had been drowned or had died of a cold as a sacrifice to the Sky god, who was supposed to be angry."¹⁴ The spirit of a dead Osage must be avenged; this was done by the sacrifice of the scalp of an enemy over the grave.¹⁵

Odin, dying of disease, caused himself to be transfixed with a spear. His worshippers later did the same in order to die, not of disease but like soldiers. This was called marking one's self for Odin. A death by violence pleased the gods. The aged sprang from a cliff, so as to attain Valhalla, or, if bed-ridden through age, were clubbed to death by relatives.¹⁶ In Albania today, tradition prescribes that "when a child is born you should break an egg over its face to keep off the evil eye; and when a house is built you must kill a cock or a lamb and sprinkle the blood on the foundations. These two customs are still practised at Scutari, and the old fortress on the hill is one of the places, in the foundations of which a woman is said to have been built in the Middle Ages as an offering to the devils that destroyed it as fast as it was built." This is foundation-sacrifice.¹⁷

§298. Exuvial Sacrifice.

Mutilation. Cutting off the finger-joints, drawing one's own blood, boring the ears, and tattooing or marking the body are typical forms of exuvial sacrifice.

¹⁷ §294; Durham, in *JAI*, XL, 464.

Wilken¹ demonstrates by copious examples the origin of self-mutilation as a form of redemption for human sacrifice, or at least as a survival of it. He cites a number of cases where human sacrifice is only simulated and others where the belief is held that the soul resides in the blood or hair, which is offered up in place of the victim.

A Mosaic law reads: "Ye shall not make any cuttings in your flesh for the dead, nor print any marks upon you."² This custom of flesh-wounding as a sign of mourning is very widespread, as Andree³ has shown in his well-known work. It is especially common in the South Sea Islands. In Fiji, for example, at the death of a king or queen, every man or a member of a family, particularly children, cuts off a finger or toe joint, in some cases a whole finger, fastens it in a reed stalk and hangs it up in the house of the dead.⁴ Some tribes in New Britain amputate a joint or two from the fingers of relatives when any of their friends are sick. A number of natives may be seen with one or more joints on several fingers gone; mere children are thus disfigured.⁵ The San Cristoval Islanders believe that at the entrance to the spirit-world there stands a spirit who will admit only ghosts who have their ears and nose perforated and the proper marks under the right eye.⁶ In New Hebrides the belief is that the shades of the dead are seized by a great spirit who cuts off their noses with a tomahawk if they lack certain tattoo-marks.⁷

The Bushmen cut off the joints of the finger of the left hand.⁸ This practice is common among other South Africans who perform the operation especially on children, "so as to make them proof against evil influences of all kinds." There is said to be considerable difference in the way the amputation is done, so that the appearance of the stump serves as a family-mark.⁹ The Bechuana bore the ears of their children when the latter are about twelve years old; and "sometimes if a woman has lost several children in infancy she will be afraid to wait so long, and will bore the baby's ears before taking it outside the house."¹⁰ The Ba-Mbala perforate the ears, and wear no ornaments in them.¹¹ Again, "if a child dies who has not had the middle incisor in its lower jaw knocked out, this tooth is knocked out after death; this is considered very important, for if omitted someone is said to surely die in the village soon afterwards."¹² Wilken¹³ thinks that the filing of teeth is a relic of breaking them out, though the religious significance has become lost.

In the southern provinces of India mothers will cut off their own fingers as sacrifices lest they lose their children.¹⁴ In all Bengal there is said to be scarcely a respectable house, the mistress of which has not at one time or other shed her blood, under the notion of satisfying the goddess by the operation. At each sickness "a vow is made that on the recovery of the patient, the goddess would be regaled with human blood."¹⁵ A number of sects bear on the forehead the cult-mark, modified as to color and line for the numerous subdivisions. Sometimes the "mark of Vishnu" represents one foot of the god, in other cases both feet. All followers of Vishnu have the vertical sign, those

of Civa a horizontal sign on the forehead.¹⁶ The practice of tattoo is widespread in Borneo, and amongst Kayan women is universal. "They believe that the designs act as torches in the next world, and that without these to light them they would remain forever in total darkness."¹⁷

In parts of Polynesia everyone must carry on his body the mark of his protective spirit. In Tonga, during the illness of a person of importance, people vied with one another in cutting off a little finger so as to bring about his recovery. So general was this custom that all natives, with exception of the chief princes, lacked the little finger, even small boys submitting to the operation.¹⁸

As a sign of grateful acknowledgment to the spirits, an Indian woman went through the ordeal of the sun-dance and had her arms scarified from shoulder to elbow. This was done by a medicine-man, who also slit the ear of the babies born since the last sun-dance. "That the ghost may travel the ghost road in safety, each Lakota must during his life be tattooed either in the middle of the forehead or on the wrists. In this event the spirit will go directly to the 'Many Lodges.'"¹⁹ In Central America part of the rite of naming the child consisted in conducting it to the temple and boring its ears.²⁰ In Mexico the people drew their own blood and cast it with their hands up to heaven.²¹ On the seventh day after birth the ear of the Moslem child is bored.²²

Hair-Sacrifice. Wilken²³ has written searchingly upon this form of exuvial sacrifice. It is connected with many events, such as birth, maturity, marriage, and sickness, and is performed on other occasions also to influence the supernatural powers. The immediately following cases are reproduced from Wilken. In Malabar it is the custom, at the exorcising of a sick person possessed of an evil spirit, to cut off his hair and consecrate it to the demon as a palliative. Among the ancient Greeks during sickness the hair was dedicated to the god of health, and at Sicyon the image of Hygeia was so covered with consecrated hair that one could scarcely see it. Not only in sickness but also before starting on a journey, and especially before going to war, was it customary to cut off the hair and offer it to the gods or else to make a vow so to do upon safe return, as the author shows by many examples. After a war among the wild tribes of Central America, "he who had killed an enemy cut off his own hair." The ancient Mexicans used to shave the boy's head save for a lock in the back; "at the age of fifteen years the boy was sent to war in charge of veteran warriors, and if with their aid he took a prisoner, the tuft was cut off." When a Buginese prince must leave his land to seek the aid of the Dutch against an enemy, he climbs to the top of a mountain, ties a knot in a creeping plant as evidence of his inviolable vow, and says: "If I conquer Gowa and return home without injury, then will I have the long hair of myself and vassals cut off at this place and a huge sacrificial meal prepared, at which the rice shall be piled up as high as this mountain." Examples are here cited where the sacrifice of hair is made not by the person going on a journey or to war but by someone else for him.

A sacrifice of this sort by a few persons may have the virtue of diverting a common danger. In 1799, for example, there occurred a volcanic eruption on a Pacific island, and in order to appease the angry gods, after a number of pigs had been offered up in vain, the king, surrounded by priests and chiefs, went to the troubled area and, "as the most valuable offering he could make, cut off part of his own hair, which was always considered sacred, and threw it into the torrent."²⁴

The custom of cropping the hair of a child is very widespread, and is usually attended with religious rites. The Unyamwesi of Africa do this when the baby is only nine days old; the hair is preserved in a box.²⁵ The practice is general in the Indian Archipelago, being found among the Mohammedans as well as among the heathen. The Aru Islanders conceal the shorn hair in a plantain or banana tree, while the Amboinese bury it under a sago palm or put it in a silver box which is hung about the child's neck like an amulet against sickness. Elsewhere, when the child can crawl, its hair is shorn and the ceremony of name-giving takes place.²⁶ In Brazil, when the child is two months old, its hair is literally torn or pulled out to the accompaniment of music and dancing.²⁷ Cutting the hair in New Zealand was done with much ceremony and many spells. The operator was made taboo for his services, and the hair was placed on an altar in a holy grove.²⁸ On the seventh day after birth the hair of the Moslem child is cut off and alms in money equal to the weight of the hair are given.²⁹ The Buddhist novice in the first degree of monkhood must cut off his hair in token that he sacrifices his most prized decoration.³⁰ Ritual hair-cutting at marriage is common among the Malayo-Polynesian races.³¹ On the wedding day the Greek bride and groom took a bath, and then went into the temple of some god to ask his blessing, at which occasion each sacrificed a lock of hair.³²

Circumcision. The following survey discloses this practice in practically all parts of the world. It is a common rite in initiation-ceremonies, being performed on both sexes; it has much religious significance; it is related to the subject of self-perpetuation in that, among a number of peoples, it constitutes a prerequisite to marriage; it is associated likewise with vanity, being regarded as a mark of maturity and position.³³

A line drawn from the mouth of the Murray to the Gulf of Carpentaria roughly separates the area in Australia where circumcision is practised from that where it is not known. In the central section the ceremony is performed when a boy is nine or ten. The public proceedings are begun by a woman walking up to a youth and quietly slipping over his head a string of human hair to which is attached a mussel shell. There is immediately a row; the boy rushes out of camp and for several months after the circumcision no woman is supposed to see him. The night before the ceremony all the women see him for a few minutes only. As soon as the operation takes place, "the father stoops over the boy and believing himself inspired by Muramura, gives

him a new name." A stone knife is used.³⁴ In the different districts of Queensland the ceremonies are very elaborate.³⁵ Initiatory rites of circumcision and subincision are in vogue all over the northern territory except a part of the northwest; they are usually performed early in the morning, the whole tribe being gathered together.³⁶ Throughout the Carpentaria region no woman is allowed to marry until the operation of intocision has been performed, nor may a man marry until he has been circumcized.³⁷ Curr³⁸ thinks that circumcision is designed to prevent for a time the intrigues of the young males with the women. In Australia "uncircumcized" is as much a term of reproach as among the Hebrews.³⁹

Circumcision is widely practised in Melanesia; in many districts, however, it seems to have no connection with initiation-ceremonies.⁴⁰ On the New Hebrides and other islands it is said to be necessary for marriage, for the purpose of making one fruitful, and for cleanliness and manliness.⁴¹ On the island of Tikopia incision takes place when a boy is about twelve years of age and is done in the same fashion as in Tonga. "Before the operation the chief of the division will make an offering of kava to the dead and will pray that the boy may pass through the ordeal successfully. The relatives of the boy assemble in the house but the operation is performed by the maternal uncle of the boy just outside the house. While it is being done the relatives in the house cry, the male relatives on both father's and mother's sides cut themselves on the forehead so that blood flows over the face, and the female relatives tear their cheeks with their nails."⁴² The blood-letting feature would seem to ally this case with the general practice of exuvial sacrifice. In Viti Levu, if a member of a Nanga union (the term is derived from the name of an enclosure in which they hold puberty-ceremonies for boys and girls) is sick, a friend of his or a boy not yet circumcized has this operation performed; it is a sacrifice for him.⁴³ Such notions prevailed throughout the Fiji Islands. "According to the native chronicler, sickness was the cause of circumcision. It was a sacrificial act made to appease and avert the wrath of the ancestral gods. When a man got infirm and old, and sickness got such a hold on him that he could not shake it off, he would say, 'I have sinned against the *Lawa Ruku* [canons and ordinances laid down by religion], therefore must I make a sacrifice.' Then he would get one of his younger relatives and one of his sons to go through the rite of circumcision as an act of atonement." One native told the writer that he had undergone the operation three times in order to propitiate his deity. Upon being reminded that that was scarcely possible, he explained that on the latter occasions he had only been bled in that particular spot, and added that the ancient gods continually required the spilling of blood. "He also told me that those who practised complete circumcision had a great contempt for those who only partially did it, and when they fought such people they advanced to the battle reviling them on their uncircumcised state, saying that they were unclean and stank. So when the Bible was

translated, the objurgations hurled by the Israelites at the uncircumcised Philistines were a familiar cry to them."⁴⁴ Missionaries have now and then had the way thus smoothed for their ministrations.

Many tribes in Africa practise circumcision or incision without having had contact with Mohammedans or Jews. Some isolated tribes have the custom although living among tribes that do not practise it.⁴⁵ The Herero and Damara perform the operation between the sixth and eighth year, celebrating the occasion with a feast.⁴⁶ Both boys and girls are circumcized among the Atharaka; it is believed that persons just circumcized are very susceptible to evil influences.⁴⁷ In West Africa the practice is universal among both sexes, with the exception of the Ewe, who do not perform it on girls. The operation upon the girls is done by old women, amidst much singing, dancing, and hideous noises of the other women present; after which the girls are publicly declared marriageable.⁴⁸ An uncircumcized native here is not considered to be a man in the full sense of the word—fit for fighting, working, marrying, and inheriting. He is regarded as nothing by both men and women, is slandered, abused, insulted, ostracized, and not allowed to marry.⁴⁹ On the Loango coast it is believed that circumcision helps in procreation, and should an uncircumcized man get married, he becomes the butt of a popular jest.⁵⁰ On the west coast and in the Congo basin circumcision is part of the initiatory rites of the secret societies; for the girls it is also an indication of their marriageability. In one case the boys are allowed to steal a fowl or an ox from another tribe "to alleviate their pain"; although at other times such action would be severely punished. The author⁵¹ is impressed with Ellis's observation that in West Africa the diffusion of the phallic cult goes hand in hand with circumcision, while the latter is closely related also to the service of the sex-blessing god. Circumcision among the Fan is said to rest on the notion of sacrifice; by the act alliance is renewed with the deity; it also partakes of the nature of the offering of first-fruits.⁵² The Banziris of the Congo who do not practise circumcision are disposed to ridicule the men of the surrounding tribes who use this rite.⁵³ Circumcision is practised by all the males among the Bangala, the operation generally taking place between the ages of ten and fifteen. "Great shame is attached to being uncircumcised, and a person can be cut at any age. The only reason given is that women do not want them if they are uncircumcised."⁵⁴

Among the Hovas of Madagascar, circumcision was attended by festivity second to no other occasion; it was also a time of licentiousness. Unlike the Semitic peoples, among whom the individual child was the object of attention, they circumcized at recurring periods, every few years, at times appointed by the sovereign. On these occasions children who had matured in the interval underwent the rite.⁵⁵ The Bantu peoples quite generally practise circumcision on both boys and girls. Among the Masai it differs in certain special features from the operation as performed elsewhere in Africa.⁵⁶ Among the

Wawanga it is quite the exception to find a family where every male member has undergone the operation.⁵⁷

Female circumcision is common in Northeast Africa.⁵⁸ The Somali and other tribes that have been influenced by Islam circumcize boys, after the Mohammedan-Arabian rite, at the age of three.⁵⁹ In the Niger Protectorate all boys are circumcized, whether free or slave, the operation being performed at any age, on babies a few weeks old or on young fellows of fifteen or sixteen.⁶⁰ Among the Kabyles, when a boy reaches the age of four, his father fixes the day for the ceremony; in the case of girls, the operation is replaced by the pretense of making a cross-like incision, with the back of a knife, on the sexual parts of the newly-born child.⁶¹

Circumcision is not universal or obligatory in Borneo, and is performed only upon males. The patient must lie down and neither work nor bathe while the wound is healing.⁶² In Central Celebes the operation is done by shamans.⁶³ In those parts of Sumatra where Mohammedanism prevails, boys are circumcized between the sixth and tenth year; the ceremony is called "casting away their shame."⁶⁴ In Java and in numerous places in the Indian Archipelago a corresponding ceremony is observed in the case of girls.⁶⁵ Circumcision is practised widely, but not universally, in Polynesia.⁶⁶ Dall⁶⁷ holds that the practice took its rise in the Pacific region as a test of fortitude.

The *Handbook of American Indians* contains no caption on circumcision; the practice is rare in America. Of an Athapascan tribe it is stated: "Many of the males are circumcised in infancy; those who are not are called dogs, not opprobriously, but rather affectionately."⁶⁸ It is to countries farther south, however, that one must turn to find more examples of this practice. Herrera⁶⁹ mentions it among a number of nations in Central America. Certain of the Guiana Indians have the custom, and perform it in such a brutal way that the children often die.⁷⁰ Certain tribes in Brazil and on the Amazon circumcize both sexes.⁷¹ The Indians of the Urubamba River district make the girls drunk before performing the operation; circumcision is said to prepare them for marriage.⁷²

Herodotus⁷³ states that the Colchians, Egyptians, and Ethiopians practised circumcision from time immemorial, and that the Syrians and Phoenicians borrowed it from them. Pietschmann⁷⁴ says that circumcision became a general tribal mark among the Phoenicians, while the custom was unknown to the Philistines. In Egypt only priests and warriors, not the common people, were circumcized.⁷⁵ The custom was in existence before the arrival of the

Jews who adopted it.⁷⁶ Its universality among the Jews later incurred the derision of the civilized world.⁷⁷ Circumcision was in the nature of a ransom for human sacrifice—a part for the whole. Such seems to be the significance of the passage where Jahweh was in a killing mood before the son of Moses was circumcized: "Then Zipporah took a flint, and cut off the foreskin of her son, and cast it at his feet; and she said, Surely a bridegroom of blood art thou to me. So he let him alone. Then she said, A bridegroom of blood art thou, because of the circumcison."⁷⁸ The interpretation is that Moses himself was uncircumcized and for that reason Jahweh tried to kill him; but that his wife circumcized the son and smeared the blood upon Moses, so as to make it appear that the blood proceeded from an incision in him; then Jahweh was pleased. That a stone knife was used indicates the age of the custom. "Redemption through circumcison and through the Passover lamb belong to two different culture-periods. When in a later law circumcison is made a condition for sharing in the feast of the Passover, it follows that circumcison represents the older form of redemption. Ransom through the blood-sacrifice of a bodily incision and substitution through domestic animals are two practices which the Jews share with other peoples, the first with the African especially, the second with the Asiatic-European herdsmen; but a third form is common, so far as we know, only to the Jews and has contributed most to impress their ethical peculiarities: it is the offering to the deity of all blood as the price of redemption." The author⁷⁹ emphasizes the manifold significance of the custom. It was connected with the cult, a token of the covenant, and was ordered performed on every male child eight days old. It was further a form of ransom for human sacrifice. When Abraham circumcized the thirteen or fourteen year old Ishmael, it became at the same time a mark of puberty. The youth was declared a man, qualified for the cult and capable of bearing arms; he was permitted to marry. There is no mention of circumcison as an operation for hygienic reasons or as protecting against sickness. The strongest evidence of the Prophetical spiritualizing of the old ritual customs is the turn given to the ancient and strictly observed requirement of circumcison, where the circumcison of the heart is called for.⁸⁰ Such was the stress laid upon circumcison that in later times "circumcized" became a synonym for Israelite, and "uncircumcized" for a foreigner.⁸¹ It also became a synonym for all the spiritual and ethical qualities for which the Jahweh-cult had then come to stand. Abraham, it was thought, would save from the pit all who bore the mark of circumcison. How deeply fixed this rite became is indicated by the struggle which Paul and others had in order to throw it off. The fixed and important character which it possessed at all periods indicates that from the beginning it must have been considered a vital part of the religion of Jahweh, and must have had its motive in a conception which identified the rite with some of Jahweh's most important functions.⁸² The Zealots, who resorted to murder in attempting to expel the Romans from Palestine, would slay the uncircumcized unless they consented to the operation.⁸³ It is said that a certain governor had his mother,

who was a Christian, circumcized so as not to be reviled with the epithet, "son of the uncircumcized." Greek women were chided for not having undergone mutilation.⁸⁴ The Mohammedan rule is to perform the ceremony between the twelfth and fourteenth year with the reading aloud of prayers of thanks and of intercession and with great festivity.⁸⁵

§300. Exuvial Magic.

THROUGHOUT all of the tribes studied by Spencer and Gillen¹ in Central Australia the hair of the head is wholly or partly removed from the deceased immediately after death and used for magic purposes. In some cases the beard also is cut off; in each case the hair is made into some sacred object, which is taken out by the avenger of the dead man. "Such hair is always kept because it is supposed to be endowed with the attributes of the dead man, and therefore to give special power to its possessor." Generally such hair may be handled by men only; there is one case where the women carry about with them little locks of the beard of a maternal uncle. "It is this man who, when he is alive, has the power of betrothing them to other men . . . and the possession of a lock of his hair is supposed both to indicate the fact that they have been assigned to one particular man, and at the same time it magically protects them against the advances of other men." Among all the tribes the disposal of the hair of each individual, dead or alive, is regulated by strict rules. "As everybody presents his or her hair to some one else at stated times, it would be a comparatively easy matter for any evil-minded person to secure a clipping of the hair of any one else. He has only to ascertain, which he can do without the slightest difficulty, to whom the hair was given, and then nothing would be easier than to steal a little bit of string made from the hair of the person whom he desires to injure. The result is that no one is afraid of any one else possessing his or her hair, and there is never any attempt made to practise that form of magic so common amongst savage tribes, even in other parts of Australia, which consists in burning, or performing some kind of magic charm on the hair, with the idea that the person from whom it has been cut can be injured thereby."

Bones form another instrument of magic common in Central Australia. "All diseases are supposed to be caused by the bone of a dead blackfellow being pointed at the sick person. . . . The bones of the dead are never disturbed or touched, except for the purpose of obtaining an arm-bone to point at an enemy."² The method of using a bone varies slightly. "If one man has sufficient confidence in himself he will seize the bone in his left hand with the two fingers extended along it. He then takes up the hair string with his right hand and pulls it tight against his right hip, and kneeling down points towards his enemy's camp. . . . After he has finished the song the point of the bone is covered with *mindrie* pitch to keep in the poison that has been sung into it, and the man then waits until he hears that his enemy is ill. The bone in the meantime is buried in a hole in the sand and covered up with feathers. When the enemy becomes ill the bone-pointer digs up the bone and burns about half an inch off its point; he then covers up the burn with *mindrie* and again hides the

bone. The sick man in the meantime, suspecting that he has been 'boned,' steadily gets worse. His friends travel in all directions searching for the man who has 'boned' him. If they find a partially burnt bone it is brought to the sick man, the *mindrie* is taken off the point and the whole bone is immersed in water. The sick man usually then gets better. . . . Usually some man who is a general nuisance to the camps is finally settled upon as the one that did the 'boneing,' and then, unless he can get into sanctuary, he is killed or at least badly knocked about. . . . The male children are taught the use of the bone almost as soon as they understand anything, the father sometimes getting the boy to assist him, but the boys very rarely use the bone until they are made men. Young girls very often 'bone' a man who has refused to have anything to do with them. In this case they usually boast of it, hoping that the young man will be frightened and come to them. . . . In the event of the bone not being found, every few days another half-inch is burnt off, and by about the tenth day the remainder of the bone, with the hair string and *mindrie*, is burnt. The sick man usually dies very soon after. . . . They distrust white man's medicine because it is not strong enough to cope with the poison of a bone."³

The Australians best illustrate the crude usages connected with fragments of the body. The Melanesians too are abject believers in exuvial magic. All the scraps from Papuan meals are burned or buried, "as they could be used in sorcery, to which all disease and calamity is ascribed."⁴ The sorcerer gets hold of a bit of property of the person he wishes to charm, "for example, a lost hair, cuttings from fingernails, some tobacco, a bit of his food-leavings, a spear left standing. . . . This he puts into a fire, . . . observing all sorts of precautions, and as soon as the article is burnt up the life of the original possessor is thought also to come to an end. This process can be hurried or delayed. It is therefore comprehensible that the Papuan takes a ridiculous amount of pains not to let these things get into strange hands. . . . I think that this is the cause of the peculiar method of spitting of the Tamos . . . who wish thereby to prevent the spittle reaching the earth as a usable whole."⁵ Thus, too, in the Ladrões, one must not spit near the house of an enemy, doubtless for fear of sorcery. Elsewhere there is a sacred pool into which scraps of the victim's food are cast; if the fish in the pool quickly devour them, the man will die. Friendly intervention is sometimes paid for by the intended victim, if he knows. "It is evident that no one who intends to bring mischief to a man by a fragment of his food will partake of that food himself, because by doing so he would bring the mischief also on himself. Hence a native offering even a single banana to a visitor will bite the end of it before he gives it, and a European giving medicine to a sick native gives confidence by taking a little first himself." Again, a person can acquire a vampire-like power by eating a morsel of a corpse; "the ghost then of the dead man would join in a close friendship with the person who had eaten, and would gratify him by afflicting anyone against whom his ghostly power might be directed." In the New Hebrides the bones of chiefs are used for arrow-tips and poisoned, a double combination of the fetish-motive.⁶ The deadly quality of the poisoned arrows "was never thought by the natives to be due to poison in our use of the word,

though what was used might be, and was meant to be, injurious and active in inflaming the wound; it was the supernatural power that belonged to the human bone of which the head was made on which they chiefly relied, and with that the magical power of the incantations with which the head was fastened to the shaft."⁷

The essential part of one kind of magic in British New Guinea is that something which has been in intimate contact with a person is obtained by the magician, who places it in contact with some magical medicine, when it is believed that the person will get sick and may perhaps die. "Thus natives fear to leave fragments of their nails or hair about lest a hostile magician may get hold of them and cause sickness or death." The medicine in question is mainly some kind of vegetable product known only to the magician and thought capable of producing the desired evil effect. When Strong⁸ once chewed some sugar-cane in an unfriendly village, he noticed that a loyal policeman from another district insisted on collecting and hiding the fibrous material he spat out. "He feared that the unfriendly village people, who had deserted their village on our approach, would be able to do me harm if they found such material. Another instance I know of occurred at Kerema in the Elema district on the south coast. A native came to me and quite seriously complained that another native had killed his wife by collecting some sand out of her foot prints, and had then placed the sand in a small bamboo with the requisite medicine." In some of the islands associations exist for mutual protection against magic. "If a member wishes to injure an enemy, he goes to the head man who commissions one of his followers to obtain something from the man to be injured, whether fragments of his food, his hair, nail-parings or excrement. It is usual to use food and the method employed if fragments cannot be otherwise obtained is the following: the man commissioned to obtain food roasts a yam and breaking it in half he gives one half to the man who is to be injured while he eats another piece of yam himself which the victim is led to believe is the other half of his own. As a matter of fact the piece of yam which is eaten has been substituted for the real other half of that eaten by the victim which is kept for the magical rite. Sometimes the device is discovered, when a terrible fight will ensue."⁹ In New Britain "charms are made out of anything that has had connection or contact with a person, such as remains of food of which she or he has partaken, earth from a footprint, excrement, spittle, hair, or clothing. Any of these things may be buried with incantation ceremonies, and thus through the process afflict the people concerned in various ways." Against this kind of charm much precaution is taken. "Expectoration is in the form of infinitesimal spray. (Stooling is always in absolute secrecy, and with the greatest care.) When shaving or cutting the hair, every scrap of hair is carefully burnt, and the crumbs of one's food also burned."¹⁰ The real gods in both Tana and New Caledonia may be said to be the disease-makers. "It is surprising how these men are dreaded, and how firm the belief is that they have in their hands the power of life and death. . . . It is believed that these men can create disease and death by burning what is called *nahak*. *Nahak* means rubbish, but principally refuse of food. Everything of the kind they bury or throw into the sea, lest the disease-makers should get hold of it. These fellows are always about, and consider it their special business to pick up and

⁷ Codrington, in JAI, XIX, 215.

⁹ Rivers, *Melan. Soc.*, I, 161-162.

¹⁰ Danks, in AAAS, 1909, 455.

burn, with certain formalities, anything in the nahak line which comes in their way. . . . The people stare as they see him go along, and say to each other, 'He has got something; he will do for somebody by-and-by at night.' . . . When a person is taken ill he believes that it is occasioned by some one burning his rubbish. Instead of thinking about medicine, he calls some one to blow a shell . . . which can be heard three miles off. The meaning of it is to implore the person who is supposed to be burning the sick man's rubbish and causing all the pain to stop burning; and it is a promise as well that a present will be taken in the morning. The greater the pain the more they blow the shell, and when the pain abates they cease, supposing that the disease-maker has been kind enough to stop burning. Then the friends of the sick man arrange about a present to take in the morning. . . . We observed also, that the belief in the system of nahak burning was as firm in the craft as out of it. If a disease-maker was ill himself, he felt sure that some one must be burning *his* nahak. He, too, must have a shell blown, and presents sent to the party supposed to be causing the mischief. Some of our kind neighbours were surprised at our indifference on the matter, and felt so concerned for our safety that whenever they saw a banana skin lying at our back-door, or about the servants' houses, they would pick it up, take it away, and throw it into the sea lest the disease-makers should get hold of it."¹¹

The Pygmies, when their hair is cut, keep the cuttings till the next morning and burn them in the ashes when they break camp.¹² In the French Congo. charms, which are made either to rouse good will toward the charmer or to work ill to an enemy, "must have in them some portion of the person to be dealt with—his hair, blood, nail-parings, etc.—or, failing that, his or her most intimate belonging, something that has his smell—a piece of his old waist-cloth." If another illustration of property being an attribution of personality is needed, we have it in this example. Blood from cuts or nose-bleed is most carefully covered up and stamped upon, if it falls on the earth; "if it falls on the side of a canoe, or a tree, the place is carefully cut out and the chip destroyed." Blood from a wound on a woman is held in high horror.¹³ In Angola at the induction of a new chief the heads of an antelope and of a human being are magically used.¹⁴

Perhaps the most potent West African charm, stowed in the tusk of a young elephant, comprises hair from the head of a white man, a bit of human flesh, also said to be that of a white man, some large snake-teeth, the point of a leopard's claw, a fragment of the tooth of a crocodile, a few seeds of the plant from which poison for arrows is made, all mixed in a kind of paste. To this is added a little gunpowder and a few drops of snake-poison. "This gruesome compound is all held in the cavity of the tusk by a fragment of glass broken from the side of a gin bottle. The efficacy of this 'medicine' is largely enhanced by its being visible through the glass, and the sum of the matter is that the combined efforts of this fetish can subdue the terrors of the jungle; but the power of the charm resides in the things from which the parts are taken."¹⁵ The Makoko think that human hair can bring rain; they wanted some from the missionaries and would have submitted to baptism to get it.¹⁶ If a Bangala woman runs away, her husband gets out her nail-parings and hair-

cuttings which he has gathered for such an emergency, and takes them to a medicine-man, who puts them into a skin and returns them to him. The husband then utters the imprecation: "If my wife stops to eat at the place whence she has run away let her die quickly." The same is done to get back a runaway slave or to punish some one with whom the owner of such *exuviae* has quarrelled. "For this reason nail parings and hair cuttings are always destroyed if possible."¹⁷ Among the Bahima, "any portion of a person's clothing, a bit of hair, nail parings, spittle, a bit of grass which a person may have had in his mouth and thrown down, or earth where one has relieved nature, are eagerly sought for and carried off by those who wish to exercise an evil influence over the man or woman: any of these are taken to the priest to enable him to make the person ill or even to kill him."¹⁸

In East Africa, where married women only wear a special sort of loin-cloth, no such cloth has been known to have been sold, given, or bartered, with one exception in the possession of the authoress.¹⁹ "The reason for this is that if the cloth should be given to any white man, or if he should obtain it in any way, the woman from whom it came would be under sexual obligation to him, and that he could bewitch her, at any time, wherever he might be, and however unwilling she might feel, and could take her away from her husband and people to the ends of the earth." The Wagogo, having cut out the private parts of slain enemies, cook and eat them with medicine, "in order to take away the *manlwoa* [not explained] from the enemy."²⁰ Dundas²¹ once tried to purchase some of the tweezers used for pulling out the eyelashes from a party of young men who were dancing in his camp, and the result was an instant move to leave the place. On inquiry he found that the man whose tweezers he had purchased was supposed to be doomed to die by his hand. "It seems strange," he remarks, "that such a simple article, which is made by every boy and worn merely as an ornament, one would think, should be so vital to the owner's life, yet the belief is very strong and should be considered when natives appear unwilling to part with such articles." Among the medicines of these people are an extraordinary medley of articles such as crocodiles' teeth, lions' claws, berries of various sorts, and, as a much prized addition, a loaded cartridge. "The latter article gives one an idea of the meaning of these medicines: it is presumably the latent power of the cartridge which is valuable. The cartridge is lifeless yet full of strength, but so also there may be strength in the lion's claw and fruitfulness in berries." When a Kabyle herdsman returns home at noon to pass the period of heat, "he should not for one single instant let go the staff that serves him as a crook. The one who gets it at once makes all the milk of the flock pass into the udders of his cows."²² Believing that negro hair is much more powerful in magic than that of other people, the Arabs of Algiers and elsewhere buy it to cure fever. They burn some and make the patient smell the smoke, putting the remainder away. "Finger nails may be used in a similar way, and are even more powerful. The negroes will sell their hair because they can avoid the results of the Arab charms by taking precautions, but they will not sell their nail-parings, as the spells produced are too strong to be overcome. If the hair was stolen, the owner might be injured, but even

so, some people let their clippings blow about, and thus expose themselves to the risk. 'There are always some fools in the world,' according to Sambo, who is careful to spread a cloth in order to catch his own severed locks. . . . A person should not bite his nails in public, for he may not know where the bits go. All milk-teeth should be burnt. . . . When a person is ill, neither his hair nor his nails should be cut, lest too much of the vital force should be thus removed, and the patient rendered incapable of throwing off the malady. Indeed, even if he were not to become worse because of the original attack, some other *bori* [spirit] would probably take advantage of his state of weakness. A woman should not even plait her hair when ill. . . . A few say that a boy could certainly be killed by a magician who possessed the discarded foreskin."²³

Certain tribes of India believe that some evil spirits are always on the look-out for a drop of the blood or urine of a pregnant woman, and that when such is found and licked up, the woman is sure to have difficult labor, which may end in death. "As for blood, not only a woman but also a man, promptly effaces with the feet or covers with dust any blood that may fall from any part of the body; for it is believed that if a witch licks up such blood or a spirit overshadows it, or ants or some particular species of birds lick it up, the person whose blood is licked up is sure to fall sick. Blood falling on the ground at midnight is particularly dangerous, as at that time evil spirits roam about in all directions. Sometimes a witch or sorcerer wishing to harm a man secures a little dust of his footprints and effects his mischievous purpose by uttering some magic spell over such dust."²⁴ The hair of grown-up people, when cut off, is placed by the Palaungs in the thatch of a roof or high up among the thick branches of a bush or tree, "the object being to prevent its being stepped upon or used as a charm. But that of a baby is nearly always hidden in the ground. No hair is ever burned." For a love-charm to be effective, the lover must secure some threads from the dress of the girl. He usually solicits the aid of some female friend. "The lover must be sure of the truthfulness of the girl whom he has asked to help, because if she gave him some of the threads from her own clothing, she might fall in love with him and he with her. It is therefore better to get a sister to help, if it is possible." To bewitch an enemy, his horse, or his ox, "a footprint of the man or beast should be carefully dug up, so that all the earth touched by the foot is secured, whether broken or in one mass. This should be wrapped in large leaves and roasted over a slow fire."²⁵ A Dusun once sold Evans²⁶ his long hair, but only after a fowl was given in addition to the purchase price; this was sacrificed in order to protect him should the white man try to make magic with his hair.

In the Gilbert Islands, "a girl's arrival at the age of puberty was a time of great anxiety to the parents, for then she was considered dangerously sensitive to enemy magic and especially to that sort which caused sterility. . . . Her urine was made into a coco-nut shell and most carefully destroyed, for fear of evil spells. The urine was, throughout the Group, considered one of the most powerful mediums through which magic might be directed against a man or woman. Therefore, a native will always, if possible, make water into the sea." Concern did not cease with marriage; "the mat was afterwards carefully burned in order that no enemy of the family might obtain it and, by using

evil magic upon the blood, curse the bride with barrenness."²⁷ In the Hawaiian magical practice of "praying to death," if the victim be a chief or a person living at a distance, effort is made by the sorcerer to secure some tissue or secretion of the body, especially the saliva. "Unimpeachable, in truth, must be the character of the royal spittoon bearer, to this day an office of dignity in the farther isles of the Pacific. All the 'divinity that doth hedge a king' must prove of slight avail if speck or slightest trace of the kingly spittle fall into possession of any sorcerer ready for regicide. A nail-paring, a hair, or a tooth would also be favored (as in clairvoyance) by any business-like kahuna [sorcerer] who warrants a result. The kahuna seems to deify this material, which he then addresses as an idol or fetish, praying it to destroy the life of the patient."²⁸ When travelling through the country of a hostile tribe, the natives of New Zealand hold that it is well to keep away from paths, and safer still to walk along the bed of a stream, so as to leave no footprint. "Because to every footprint you leave there clings a certain amount of *Manea*, which is the *Hau* [life-principle] of the human footprint. An enemy could, and would, take this subtle essence simply by scooping up some of the earth on which the foot-mark was imprinted. This would be taken to a warlock versed in black magic, who, by means of certain magic rites, would soon cause your death, the soil being employed as an agent to connect the spells with yourself, or your vitality. A shred of clothing, a lock of hair, or spittle can also be employed as such an agent." A Maori folktale relates how Rongo of the Ready Hand was once pursued by a monster; the world of death was already open to receive him when he bethought him of the means by which monsters and goblins are subdued. Hastily plucking a lock of hair from his head, he cast it into the troubled waters of the pond, repeating some magic words, whereupon the monster instantly retreated and the surging waters became calm.²⁹

The Eskimo show a firm belief in magic, practising it with human bones, flesh of corpses, skulls, snakes, and spiders, as well as by special manufactured articles. Bits of bone, skin, and things that have belonged to the intended victim are tied up in a bag, and are by charms converted into a living thing which glides away in the water to do harm. If it fails it turns against the sender. The author³⁰ thinks they borrowed this particular notion from Norway and Iceland. "The Indians along the Missouri River in Nebraska and Dacotah always used to allow their finger-nails to grow quite long and when necessary to cut them they placed the cuttings on a string, which they always kept at the belt or around the neck. Indians also have the belief that if an enemy gets hold of their pipes and smokes them, muttering an oath against them in the smoke, the smoke will carry up the oath to Heaven, and evil will come to them. I have a pipe which formerly belonged to Sitting Bull. He parted with it only on condition that it should never be smoked again, and it would require a pretty strong temptation to go against his wish."³¹ Sometimes a Winnebago woman would take a hair of her husband and stick it into some bad medicine. "In such case he would never leave her for he would become very much enamored of her. If ever she went away, he would miss her very much. However, he always had a headache. Finally he would get sick and lose his appe-

lite and then his eyesight. That is why it is forbidden to use this medicine, although some do it."³² Some of the Plains tribes had "crazy medicine," consisting of a hair, a bit of nail-paring, or even some small shreds of the victim's garment that had been secretly procured by a malignant sorcerer. "The medicine was suspended from the branch, and the more the wind blew the more the medicine danced and the crazier the victim became."³³ One mode of bewitching was similar to that employed in Europe and New England. "The wizard would possess himself of a lock of the victim's hair, parings from his nails, some of his saliva, a bit of the clothing he had worn, especially such as had absorbed his perspiration, a fragment left after he had eaten, some of his implements, or other personal belongings, and by treating them in certain ways would bring on him local or general sickness or some other misfortune. It was said that the wizard could affect any part if he obtained something taken from it. Thus sore throat might be brought about or a man made to 'spit himself to death' by means of a little saliva, and headache might be induced through a few hairs."³⁴ Certain Indians of South America use the bones of slain enemies to make points for arrows, because such are supposed to be more effective.³⁵ Fitzroy³⁶ cut a lock of hair off a Fuegian, whereupon the man snatched it, wrapped it up carefully, and handed it to a woman who stowed it in her bead-and-paint basket. Then the man very seriously asked the author to put away the scissors.

Belief that magic could be performed with *exuviae* was common in antiquity, the Egyptians holding that bits of skin or hair from a corpse gave sorcerers power over the deceased.³⁷ Among the Jews it was explicitly ordained that natural functions should be performed in retirement and with precautions. The sanction was that God, when he walked through the camp, should see no uncleanness.³⁸ The Tyrolese spit on hair before throwing it away; otherwise witches could get hold of it and cause hail or storm.³⁹ In East Prussia, "if anyone wants to be truly loved by anyone else, he must give him secretly three drops of his blood in some food and drink."⁴⁰ For love-charms, in Germany of earlier days, magicians used sundry words, signs, wax images, nail-parings, a piece of the person's clothing or something else that had been in contact with him, which latter were buried under the threshold. Harlots and others of that ilk made use of sexual secretions, after-births, milk, perspiration, urine, spittle, hair, navel-strings, and the brains of tadpoles or burbotts. "A mixture of such ingredients or a concoction of one's own blood, testicles of a hare and liver of a dove, when taken by the coveted person, should awaken responsive love. Against these and other love-charms (love-apples, love-rings, Venus-talismans) there were remedies. In the *Mirror of Medicine* for 1532 it is stated: 'If you fear that a woman has given you a love-charm to eat, take a diapente of perlin, the same of iperikon, both powdered and drunk with melissa-water, and hang a lodestone on the neck.'⁴¹ In Russia, "they open the graves to remove a dead hand; if the dead hand is laid in the window where the thief breaks in, the victims will sleep so soundly that he can work in peace." This belief is connected chiefly with horse-stealing.⁴² A Russian peasant "made the astonish-

ing statement that if you make a candle from human fat and light it you can see *all*."⁴³

Upon earlier and later stages of civilization much magic has been performed by the use of excrement.⁴⁴ Retirement-taboos, alluded to above, as well as several other varieties of prohibition, are guaranteed by fear of magic.

§301. Other Instrumentalities.

"*Medicine.*" Besides the use of exuviae there is another kind of magic employed in New Guinea: that which is performed "by putting some 'medicine' in such a place that an enemy will touch it or perhaps that food will come into close contact with the 'medicine.' The following is a typical instance. A policeman at Port Moresby had a bad wrist. From his point of view it was caused by two Koiari natives being refused as police recruits. They then made the requisite 'medicine,' apparently not to be distinguished from ordinary sticks, placed it on the footpath, with the result that the policeman touched it and his hand became bad as a consequence."¹ The constituents of a sorcerer's kit are miscellaneous, but there are certain media, used to produce disease and death, which are universal, namely, snakes, certain magical stones, and the leaves and roots of a number of plants. "No layman would willingly touch or even look at the stones and other objects used by sorcerers, and any contact with them, even when not expected to produce death, would be avoided as unlucky." The greater number of cases of snake-bite, especially such as are fatal, are attributed to the machinations of the sorcerer. "Indeed, not only do sorcerers kill people by causing them to be bitten by snakes, but they are also able to obtain from the black snake a deadly stone which instantly kills any individual touched with it, even the sorcerer who uses it is said to take every precaution not to come into immediate contact with the stone. . . . To kill a man, it is sufficient to touch him with the snake stone, which is described as red and 'hot' and about the size of a filbert. A snake stone is rendered innocuous if it be dropped into a bowl of salt water which immediately hisses and bubbles as though boiling. When no more bubbles arise the stone is 'dead,' *i.e.*, harmless." The Southern Massim believe that the shoots of a certain tree, when chewed to the accompaniment of muttered spells, are capable of bringing about death. A sorcerer about to use this tree would by the aid of charms make himself invisible. "He would then spit the chewed shoots in the direction of his victim, who in two or three days would feel ill and lie down by the fire in his house, becoming gradually worse until he dies." Examples are cited to show that "only the sorcerer who had produced the illness could cure the stricken man, and the cure could only be effected by chewing another root and spitting it upon the victim while muttering spells."² It sometimes happens among the Melanesians that a man who has carried out a magical rite with the idea of killing his enemy repents when he sees that his purpose is about to be effected. "He may try to save the life of the man who is dying at his hands, and in order to do so he commissions his brother or some other man of his family to go to the house of the dying man and give him to drink a mixture of the milk of a coconut and the juice of certain leaves. The sick man will drink it and re-

cover but will at once know the cause of his illness and will seek to discover at whose hands he has suffered. The intermediary must never confess by whom he has been commissioned to bring the healing mixture and rather than do so, he will pretend that he has himself been the worker of the spell, even at the risk of the injury or even death which his pretence may bring on him. A man who undertakes this duty knows that he does so at the risk of his life. When the sick man has completely recovered, his relatives present a large sum of money to the intermediary."³

When a Pygmy has lost his wife through death or theft and wishes to obtain another, he drinks a kola-nut concoction night after night, in the belief that it will bring him good luck. The author says that many of the men succumb to the influence of this drink.⁴ If a young man in South Africa loves a girl, but she is averse to his attentions, he secures a preparation containing the heart of a male rock-pigeon and applies this to her person or mixes it with her food. "In consequence she gets violent fits of hysteria, and it is supposed that she only recovers in the presence of her lover, to whom she will fly, if possible. While in this hysterical condition the girl emits a sound like the call of the rock pigeon—'vu, vu, vu, vu,'—which is often continued for hours. Whatever truth may be attached to the charm, the girl certainly becomes exceedingly excited, bites and scratches anyone who attempts to hold her, and is deaf to all reasoning."⁵ Kafir magicians manufacture fame-philtres, and "fools who wish to become renowned buy these philtres from them and have to slaughter an animal into the bargain."⁶ The Mkamba has a "medicine" which he puts in a powder in the palm of his hand and blows in the direction of the intended victim; it is essential that the wind be blowing that way. "This medicine is so powerful that it will kill a person at a distance of a mile or two. A milder form of this kind of medicine is undoubtedly used by thieves who rob huts at night; they blow it in the direction of the inmates of the hut and they become stupefied and the thief steals with impunity." A chief told the author that he had been recently robbed in this way; he and his wife saw the thief enter the hut but were unable to move or call out.⁷ A form of witchcraft employed in East Africa is the secret deposit of the dead body of a domestic rat in the doorway of a hut; the occupants will then fall sick and may even die; pregnant women will abort. "If the body of a rat be discovered in this position and the owner of the hut has reason to suspect witchcraft, he consults a medicine man, who directs him to kill a red or white cock and to pour the blood on the spot, where the rat was found. Before killing it, the owner of the hut takes the fowl by the leg and brushes each member of the family with it on the chest. If this ceremony be performed unnecessarily, that is to say without consulting the witch-doctor, the people themselves will fall sick, and will not recover without his assistance."⁸ One should not "doctor" himself, but should always consult a specialist. Other tribesmen too, when wishing to kill an enemy secretly, bury a dead rat or chicken at the victim's door. "If, when the latter comes out the next morning, he treads on the spot where the animal is buried, it is believed that he will die that day."⁹ Burglary is rife in Hausaland, for all the hazards have been removed from the profession. "A charm made from

the ashes of a black cat will enable a burglar to open walls, render himself invisible, and paralyse anyone attempting to interfere with him." A medicine particularly valuable to warriors has the following ingredients: the flesh of an albino, the hearts of a lion, a leopard, and a ram which bleated when the men came to the flock, and as many flies as settled upon any of the meat during the preparation. "This mixture was given to war-horses also, and they would then smell out enemies, however well they were concealed, and would carry their masters to them. . . . The flesh of an albino would be available only for officers of the army, so the rank and file had to content themselves with something more easily obtainable." It is related of a native chief who was fighting against the French some years ago, that several bullets hit him, but rebounded and fell to the ground. "Only a silver bullet could have wounded him, for the Sariki had procured every medicine possible, including the head and skin of a lizard made into an amulet."¹⁰

Survivals of African beliefs and practices may be found among the negroes of the New World, especially in the activities of the "voodoo doctor" or "conjurer" man." The physical sufferings of negroes who have been "conjured" are often, no doubt, real, as voodoo art includes skill in the preparation of poisons. "Arsenic mixed with the food of an intended victim accounts for the potency of many a charm, and the patch of weeds at every cabin door contains materials from which the experienced 'conjurer' man' knows how to prepare poisons unfamiliar to the analytical chemist. Among the most dangerous articles sold by the voodoo man is the mixture of ground glass with water. This is known as 'obi water.' A vial of it put under a man's doorstep brings him the worst possible luck. A white cock's head found lying at your threshold with the beak pointing to the door is bad enough, but this is worse. It may be given a practical use. In small doses obi water produces a sort of dysentery, and if the doses are repeated a miserable death, after protracted suffering, is sure to follow. The jealous lover, or the man anxious to be rid of a neighborhood bully, does not, however, at present often obtain such effective charms. The vendor, not caring to get within the clutches of the law, lets his customer have instead a vial filled with live lizards, spiders, or tree frogs. A half-dollar more will buy a white cock's head, or an acorn hollowed out to inclose a bit of your enemy's hair and pierced in four places for the insertion of white chicken feathers. Add to this last device a bit of scarlet worsted, and no mortal but its possessor and his friends can come near it and live. The dealer in these noxious articles incurs very little risk, being secured from the danger of exposure by the prevailing belief among the negroes that to betray the voodoo, or hoodoo, man would cause one's fingers and toes to drop off."¹¹

Among the Saoras of Madras, if a tiger or panther kills a person, the shaman is called, who on the following Sunday goes through a performance to prevent a similar fate overtaking others. Two pigs are killed outside the village and every man, woman and child is made to walk over the ground whereon was spilled the pig's blood. At the same time he gives to each individual some kind of "tiger medicine" as a charm against death by tigers.¹² How the extraordinary or inexplicable is related to magic through fetishism is seen in the Malay Peninsula in the case of a medicine made from a stump which was

"pinched in," that is, irregular, "a sure sign . . . of the late presence of the demon of which it had been the embodiment."¹³

Sometimes the Indian medicine-man draws animal-forms upon sandy earth or a bed of ashes. "For this purpose he uses a sharply pointed piece of wood, thrusts it into the region of the heart, and afterwards sprinkles upon this a small quantity of powder consisting of magic plants and vermilion." This is a part of the preparation of the hunters' "medicine" by a first-degree shaman.¹⁴ "Many Winnebago are blind, because there is a medicine that causes blindness. If one person offends another who possesses such a medicine, the latter would cause the offender to become blind."¹⁵ All of the sacred bundles of the Menomini contain the skins of the sacred birds of war and of snakes and weasels. In some, buffalo-tails may be found, for according to their traditions the bison was among the animals which agreed to help mankind. "Other invariable features are the reed whistles for signaling of the braves, deer-hoof rattles for accompanying the sacred songs, and paint given by the Thunderers to cure the wounded. The rest of the contents of the bundles varies in accordance with the instructions given in the dream of the owner. One may contain small medicine war-clubs, charms for the warriors to carry into battle; another a quill-worked bow, a scabbard, or some other valued trinket." The medicine-bundles are to be divided into four groups: those for war, for hunting, the witch-bundle, and that for good luck. They may also be classified into public and private medicines. The bundles of the Menomini differ from those of several other tribes in this, that in being transferred from one person to another, their full power is not preserved.¹⁶ The Lenape warriors have "brave medicine," supposed to protect them from injury, if they follow the regulations.¹⁷

In Mexico, under the influence of "the divine remedy," an ointment made of insects burned in a basin and rubbed with other living insects, green tobacco leaves, and the powerful seeds of a local plant, "they conversed with the Devil and he with them, practicing his deceptions upon them."¹⁸ Arawak, Warrau, Akawai, and Carib women all have their own binas or charms for managing the opposite sex. "The Arawak young woman plants her hiaro(girl)-bina usually in some secluded spot known only to herself; she will bathe with a leaf of it, or carry it about with her, and, provided the opportunity offers, without her being seen, may rub it over her lover's hammock, or she may rub her own hands with it, and then touch his. In any case, the man must be ignorant of what is going on, and, provided the procedure is strictly carried out as described, he will never have any desire to transfer his affections elsewhere. . . . The male Arawak has a corresponding belief as to the wajili(man)-bina, the leaf of which he generally carries about with the object of brushing over his girl's face or shoulders: he is very intent on going through this performance when he notices that she has a weakness for other men." Among these people, when the husband is very jealous and ill-tempered, his wife will cut off the head of a small lizard, burn it, and put the ashes into the water which she gives him to drink; "any man or woman can then make the husband do whatever he or she likes." When one woman wants another's husband, she will manage to

put wasp-eggs into his drink, which will make him leave his wife and go off with her.¹⁹

Among the Semites, "the more notable unclean animals possess magical powers." The swine, for example, which the Saracens as well as the Hebrews and Syrians refused to eat, "supplies many charms and magical medicines."²⁰ The unclean or holy thing is dangerous to men because they are not on a plane with it. The magic powders and salves used in antiquity and later ages run all the way from Circe's herb, "moly," through the unguents of the Thessalian witches on down to the "philtres, charms, and ligatures for exciting desire or preventing its fruition, or for arousing hatred, which meet us at every step in modern sorcery."²¹ The Telchines were the typical magicians of antiquity; it is said that one of their magic arts was to "besprinkle animals and plants with the water of Styx and sulphur mixed with it, with a view to destroy them."²² Heathendom "seems to have practiced all sorts of magic by cutting off horses' heads and sticking them up"; Scandinavians, Germans, and Hollanders did this, and "a fox's head was nailed to the stable door, in some parts of Scotland, to bar the entrance of witches." In Scotland it was accounted unlucky to get possession of a clean house, for if a person wanted to harm his successor, he swept it clean on leaving. There were several pieces of magic which he could do in addition to bring discomfiture; but the suspicious newcomer could throw a cat into the house first, as a test; and if evil had been left behind the cat would sicken and die.²³ Among the southern Slavs, "in the burned-out coals, according to popular belief, there is still hidden a sure trace of the tree-soul, and therefore they can with profit use coals for various magical procedures, especially for healing and for divining the future."²⁴

It was a German belief in the Middle Ages that a kiss was effective in winning love if one concealed a magic herb in his mouth.²⁵

Miscellaneous Instruments. The pointing-stick is a common means of magic in Central Australia. "When a man wishes to use one of these he retires with it to a secluded spot in the bush, and, crouching down, mutters some such incantation over it as the following:—'May your heart be rent asunder, may your backbone be split open, may your ribs be torn asunder, and your head and throat be split open.' This is supposed to endow it with evil magic. The stick is then left for three or four days in the secret spot, and then brought near to the camp; finally, choosing his time, he steals out into the darkness beyond the area which is lighted by the camp fire, and turning his back upon his victim, jerks the stick in the direction of the latter, repeating each time the curses. This over, he conceals the instrument, and within a short time the man begins to sicken, and will surely die unless saved by the skill of a medicine man." In another form there are a number of small pointing-sticks attached to a strand of fur-string, at the opposite end of which are one or two eaglehawk-claws. After the usual pointing, jerking, and muttering of curses have been gone through, the man pinches up in front of him a little ridge of earth; "if this were not done, the victim would probably dream of the place

at which the operator's mother camped in the Alcheringa, and would then know at once who his enemy was. The eaglehawk-claws are supposed to grip the internal organs of the victim, and to cause great pain." Another instrument of magic is connected with the legend of a man who, like Job, was afflicted with boils. "When he could bear them no longer he plucked them out, and threw them from him, each one turning into a stone, in evidence of which the stones may be seen at the present day by anyone who visits a sacred spot called Undiara." They are called the "stone boils." If a man desires to afflict anyone with boils, "he makes some small toy spears, and throws them at these stones, which part with some of their virtue to the spears, the latter in consequence becoming, as it were, charged with evil magic. The spears are then thrown one by one in the direction of the man whom it is desired to injure."²⁶

The Papuans believe that eclipses of the sun and moon are caused by women with secret powers who throw spears made out of the small ribs of the coconut leaf through the interstices of the houses.²⁷ In New Britain there is a cheap and easy method of carrying on burglary: the offender provides himself with certain bones which he places on the chests of the inmates of a house when asleep; "they are supposed to keep them asleep while the thief takes possession of the household goods."²⁸ On special occasions the priest of the temple in Fiji would take a sacred axe and rub it with certain leaves to "make it kill."²⁹ Many taboos surround the South Sea Islander who undertakes to make a magic drum, which is used to conquer the heart of a maiden; unless they are strictly observed, the instrument will be ineffective.³⁰

Some wizards in Africa use a wooden whistle.³¹ On going out in the morning each man of a tribe in Mashonaland takes from one pile of stones a stone with which he scratches a line in the rock; he then throws it to another pile on the opposite side of the path. On his return at night he reverses the operation. They say that it is for luck.³² There is magic connected with the fetish-image into which nails are driven, a West African practice. "As long as the nail remains in the figure, the man believes that breaking the law gives the fetish the power to kill him, and he therefore behaves himself on pain of death." This is an effective device in regulating the habits of the natives.³³ The negroes of the coast could not understand the European eagerness for ivory. Why build ships and go to all the trouble to get ivory for knife-handles, combs, and other things, when wood is equally useful? They were convinced that ivory was used in magic or other secret processes which were concealed from them lest the price should go way up.³⁴ Arab women think that the French government makes gold at will. It produces the gold, extracting it from nothing thanks to certain magic receipts, and then profusely distributes it among its officials, without counting.³⁵

"Face-throwing" is a peculiar magical procedure observed in the region back of Sierra Leone, Liberia, and the Ivory Coast. Wishing to kill you without showing blood, an enemy throws his face on you. "You hardly know anything is wrong at first; by-and-by you notice that every scene that you look on, night and day, has got that face in it, not a filmy vision of a thing, but quite material in appearance, only it is in abnormal places for a face to be, and it

is a face only. . . . This sort of thing tells on the toughest in time, and you get sick of life when it has always that face mixed up in it, so sick that you try the other thing—death. This is an ill-advised course, but you do not know in time that, when you kill yourself, you will find that on the other side, in the other thing, you will see nothing but that face, that unchanging silent face you are so sick of. The Kufong man who has thrown his face at you knows, and when he hears of your suicide he laughs.”³⁶ Hearn,³⁷ in recounting an old Japanese story, cites a somewhat similar case. About two hundred twenty years ago while a lord had halted his train at a tea-house, the lord’s attendant—Sekinai—found in the cup of tea he was drinking the face of a samurai. He filled another cup and the face re-appeared in that one. He ordered fresh tea only to find that the same face was present, but it now wore a mocking smile. Sekinai did not allow himself to be frightened. “Whoever you are,” he muttered, “you shall delude me no further!”—then he swallowed the tea, face and all, and went his way, wondering whether he had swallowed a ghost. That same evening the samurai, whose face had been in the tea, appeared in person to Sekinai. He made a fierce thrust with his sword at the samurai’s throat, but the latter noiselessly leaped sideward to the chamber-wall, and *through it!* The wall showed no trace of his exit.

The “pitar” or “tānk,” in India, is connected with the dead. A piece of metal is put under the head of a dying person, and as soon as he dies is taken to a smith and stamped with a human figure. The pitars of the good, learned, or renowned can kill a man instantly. To kill with a pitar it is laid, face upwards, on the ground and struck three times with heel of a used shoe, and is ordered to kill such-and-such a person within so many days. The spirit becomes enraged at the beating it gets and carries out the order. “I will lay low your *pitar* in the dust” is a phrase reflecting the firm Hindu belief; it means that by counter-charms the soul of the relative represented by the pitar “will be imprisoned in the earth, and thus prevented from entering the abode of the blessed.”³⁸ A metal amulet in use among the Palaungs may have a love-charm on one side and a charm to bewitch, for evil, on the other. “The lover must be careful to see that the love-charm lies uppermost; if the other side were uppermost, there might be disastrous consequences. In the same way, if any one wished to use a charm against an enemy, and the love-side of the charm remained uppermost by mistake, it might cause strange and unexpected complications.”³⁹

Sendings or “pointing” are common magical methods in the Malay Peninsula. A bamboo slip or sliver, laid on the right palm and commanded to go and kill the victim, is thought to fly through the air and pierce his heart. Wax, especially from an abandoned bees’ nest, may be thrown in the same way by the magician.⁴⁰ A Filipino sorcerer, known as the “Pope,” used wooden stamps in his “anting-anting.” He was killed when the American troops destroyed a camp at which he was staying. His demise practically marked the end of pulahanism on Leyte, for a few days later the native leader and his followers surrendered. When questioned as to why he had come in, the Commandante of Pulajanes replied that if the “Pope’s” anting-anting would not protect the

"Pope" himself he was quite sure that they would not protect anyone else, so he thought it was about time he came in and surrendered.⁴¹

Two examples from the New World illustrate the tendency to ascribe to magic the inexplicable products and processes of civilization. To the Eskimo, MacMillan and his company, their ship and apparatus, were as much of a curiosity as the circus is to a small boy. "We showed them moving pictures on a screen and by means of the radio conjured voices and music from the air. To them it was pure magic, and the word went far and wide and they came with their dog sleds for a hundred miles and more, over the ice and snow, to see these strange and, to them, unbelievable wonders."⁴² A member of an expedition to the Amazon basin gained the respect of the Indians by working magic. He put a pocket flashlight into his mouth, illuminating it suddenly; this was set down as a miracle. The Indians called it "cold magic" because the flashlight did not burn them when applied to their bodies. A small magnifying glass was another wonder-worker. With this he lit a pipe. When he focused the lens on a native's arm the latter would jump and howl. This was "hot magic."⁴³

Magic and tokens have their votaries yet. According to a communication from Thuringia, one of the ways of baffling the binsenschneider (reaper) is as follows: on Trinity Sunday or St. John's day, when the sun is highest in the sky, go and sit on an elderbush with a looking-glass on your breast, and look round in every quarter; then no doubt you can detect the binsenschneider, but not without great risk, for if he spies you before you see him, you must die and the binsenschneider remain alive, unless he happen to catch sight of himself in the mirror on your breast, in which case he also loses his life that year. It is a modern superstition that he who looks in the mirror at night, sees the devil there.⁴⁴ During the World War there were found in possession of German prisoners numerous charms against "iron or steel, brass or lead, ore or wood"; but, evidently, not against being made prisoner of war. Many of these were ancient, having been handed down for generations among the German peasantry.⁴⁵ The Little Russians are said to dislike kerosene, holding that when people were good that fluid did not come out on the earth; presently it will cover the whole world and judgment will ensue.⁴⁶ The following two cases are press-reports. An old woman was banished from a county in Virginia because she was believed to have killed the mules of her enemies with a magic wand. The "wand" was but a cane which she used to support her aged body, but to the negroes it was the staff of a sorceress.⁴⁷ Not long ago a woman went to the old cemetery in France, to tend her relatives' graves. She noticed that the statue of the Virgin on a mausoleum was covered with moss, which she cleaned away with her handkerchief. On returning home, according to the reports, she touched her little paralytic daughter with the handkerchief, and the girl was completely cured. Thereafter large numbers of pilgrims went every day to the tomb.⁴⁸

Incantation. A Papuan must be very wise in counter-charming if he is to dare

41 Communicated by W. H. Taylor, Manila, P. I., April 14, 1907.

to walk alone. In fact, he must be able by incantations to do one of the following: charm his own body so that it becomes invisible; charm a tree so that it will split open and take him in until the wizard has passed; change himself into a bird, so that he may fly above the wizard's head, or into a snake, so that he may crawl through the bush.⁴⁹ The backbone of Kiriwinian magic is formed by its spells. "It is in the spell that the main virtue of all magic resides. The rite is there only to launch the spell, to serve as an appropriate mechanism of transmission. This is the universal view of all Kiriwinians, of the competent as well as of the profane, and a minute study of the magical ritual well confirms this view." In their formulas frequent mention is made of the ancestral names, which serve in a way as an invocation. "All such formulæ were hereditary in the female line."⁵⁰ Among some East African tribes only the males have magical powers. They can bewitch an enemy by blowing in a horn and saying: "I blow this horn and your heart will become like the wind I blow through this horn," meaning it will disappear and be lost. Another method is to place some eggs and leaves on a fire and say, "As these eggs burst and as these leaves shrivel up so shall this village be destroyed." Here we trench upon imitative magic. Certain men are believed to have the power of bewitching unknown thieves, and "it occasionally happens that a person who has had, say, some goats or some sugar cane stolen, will call in a Mweithaga and ask him to throw a spell on the thief."⁵¹ Among the modern Egyptians the most approved mode of charming away sickness or disease is to write certain passages of the Koran on the inner surface of an earthenware cup or bowl, pour in some water, and stir until the writing is quite washed off. The water, with the sacred words thus infused in it, is to be drunk by the patient.⁵² One sura in the Koran presents a special prayer against the "knot-blowers," that is, a kind of sorcerers who operate by tying a knot and then blowing it.⁵³

No wonder the mystic formula in Lamaism, the *Om mani padme hum*, is so popular and constantly repeated by both Lamas and laity, for "its mere utterance is believed to stop the cycle of re-births and to convey the reciter directly to paradise."⁵⁴ The rosary, which is peculiar to the northern school of Buddhists, is "the outcome of the esoteric teachings of the Mahayana school, instilling belief in the potency of muttering mystic spells and other strange formulas."⁵⁵ Evidence is given in their formulas of the close relation between magic and religion among the Todas. "The formulæ of magic and of the dairy ritual are of the same nature, though the differentiation between the sorcerer and the priest who use them is even clearer than that between the sorcerer and the medicine-man."⁵⁶ By chanting formulas the Nairs believe that one becomes possessed of magical power. Persons who have devoted themselves to such practices are looked upon with great fear.⁵⁷ A typical example of the charms mentioned in an ancient Vedic collection may be seen in this one used in a woman's rite for obtaining a husband: "The creator (maker) sustains the earth, the sky, and the sun; may the maker make for (give to) this spinster a husband that is according to her wish." Or, in a charm for healing: "The berry and remedy, sufficient for life, the gods prepared." Again, against in-

sanity: "May all the gods give thee again, that thou mayest be uncrazed."⁵⁸ Yantras are written charms among the Sinhalese, often astrological in character, which are used for protection, for curing, or for causing injury. They are usually engraved upon sheets of metal or upon ola leaves, although they are occasionally written upon paper. "Paper is, however, considered to be very unsuitable for the purpose, since if it becomes torn or otherwise injured, as may easily happen, the efficacy of the yantra may be changed or cancelled by the complete destruction or the changing of the form of some of its component characters. . . . Yantras are usually for the purpose of correcting unpropitious or harmful planetary influences causing misfortune or sickness."⁵⁹ Unlike the evil eye and the evil touch, the evil sound or *mantram* may be aimed at the intended victim from any distance in space and without the least chance of detection. "It is called the *bān* or arrow-shot of the witch and the sorcerer. The Orāons believe that with the help of a powerful *mantram*, a magician is even able to extract unperceived the liver of an intended victim, wherever the victim may be." The liver, be it noted, is regarded as the seat of the vital principle, so such extraction would be fatal; but this may be offset by the counter-spells of another magician who is called in to aid.⁶⁰ Throughout India the mantras or formulas are recited, chanted, or sung in a set fashion in order to obtain certain physical or psychical effects. By such means one exorcises, recovers weapons, causes it to rain or stop raining, cures or causes disease, makes flocks prosper, aids or prevents conception, or calls gods and demons. Often the sound alone is efficacious, all knowledge of the sense of the formula having long ago disappeared. "When misfortune or disease arrives it is invariably ascribed to the malignant action of a devil." In the *Mahabharata* the spell brings the god at once to the presence of the one exercising it; the magic is stronger than Indra.⁶¹ Among the Palaungs, each time the incantation is repeated the wise man blows over the pots containing wax. This blowing is always done when any charm is said; during massage to ease pain, for instance, the masseuse constantly blows.⁶² The soul, we know, is commonly associated with the breath.⁶³

The Veddahs, getting lonely on the cliffs, sing in lively fashion songs which will soften the spirit of the rock and prevent him from casting the hunter off his ladder. It is with songs that they prepare themselves for their labors on the cliffs, so as to get into the state of excitement necessary to carry the task through.⁶⁴ This case looks at first like propitiation rather than coercion and it seems to be in part, like the war-dance, for the purpose of working up courage. All these forms and motives run one into the other and become intertwined.

By formulas "one gets power, not only over spirits but over persons; by them, in general, one gets all he wants. Batak formulas are composed of old or wholly senseless words—by which they get the greater power; they are effective against illness, to win a wife, to catch a runaway wife, to win in trade, to make a load light.⁶⁵ It is believed in all simplicity, by northern Sumatrans, that one person can be brought to love another "to his marrow

and kidneys," if the proper formulas are pronounced under the necessary precautions. If delivery in childbirth is delayed, they hurriedly consult a person who has the name of making good incantations. He writes one out proper for the occasion, washes what he has written with water and has the woman in parturition drink the water; or he simply recites the formula, "with a loud voice and much puffing, above a bowl of water, whereupon the woman, again, must drink the water."⁶⁶

On one of the Pacific Islands there is a house-incantation against mishap, which is recited on entering one's house. It is a family secret; and the correct recital of it by children has enabled their father, from whom they had been separated, to recognize them.⁶⁷ The heathen Maori never undertook any work or started on any journey without first uttering a spell for success or safety. They "have spells suited for all circumstances—to conquer enemies, catch rats, snare birds, and even to bind the obstinate will of woman, to find anything lost, to discover a stray dog, a concealed enemy, in fact, for all their wants."⁶⁸ Again, "a girl who did not respond to her lover's advances could be bewitched, driven mad, and killed. The usual way of obtaining power over another was to obtain (European fashion) some of the nail-parings, hair, etc., anything of a personal nature, to act as a medium between the bewitched person and the demon. Spells would be muttered over these relics, then they were buried, and as they decayed the victim perished."⁶⁹

One of the traditions of the Indians in Arizona is to the effect that So-and-so came and witnessed the women dancing; he shook his rattle and sang a magic song, which enticed them to follow him to another dance-place. A rival also sang such a song, but found it powerless to prevent the departure of the women; they were so bewitched by the first song that they could not or would not obey him.⁷⁰

The incantations of the civilized peoples of antiquity sought to mitigate the influence of evil spirits in general. "All formulas are composed of a description of the bad spirit in question and a drastic sketch of his baseness; thereafter follows last of all a calling on the high gods to display their help against the daimons."⁷¹ The sacred books of the magicians, which Assurbanipal caused to be recopied in the seventh century B.C., for the instruction of his priests, were written in the Accadian; a Semitic Assyrian version had been added to them at a very early epoch, in order to render the incantations intelligible to those who had to recite them, but the Accadian was clearly the only properly liturgical text, as is proved by the fact that some lines which are repeated or are very easy to understand, have no translation attached to them. Thus at the present day the Coptic priests always have an Arabic version accompanying their missals, so that they may understand the words of the ritual while they recite them in the Coptic tongue. The Accadian formulas banished the demons which they had expelled from a man's body to the sandy desert; the Finnish *runa* sends the plague away to Lapland. Such are the different forms we should expect the same idea to take with two nations placed in such diverse geographical conditions.⁷² The library of Assurbanipal consisted for the most part of treatises written by the most celebrated adepts of the sciences for which Chaldæa was renowned—collections of celestial and

terrestrial omens, where the mystic sense of each phenomenon and its influence on human destiny were explained; conjurations to pronounce against demons, phantoms, and vampires, the causes of all malady; prayers and psalms which one should recite to wring from the gods pardon for one's sins; and chronicles of the gods and kings.⁷³ In Egypt from an early date there were engraved on the sarcophagus holy texts through whose magic power were secured mystical union with the deity and thereby victory over all the monsters of the other world. During later dynasties magical papyri abounded with all sorts of prescriptions for warding off evil and danger, rapacious animals and fantastic monsters, sickness and plague. As one of the surest preventatives were certain barbaric words, which were regarded as the more effective the more impossible it was to read any logical sense into them. Also hymns, which were not lacking in religious sublimity and had not been composed for such purpose, were used to exorcise evil spirits and other harmful creatures. Magic knew no boundaries, and views of nature and of man were purely daimonistic.⁷⁴ The most sacred formula of the Parsis, when recited without mistake, is equal to a hundred of the other principal stanzas; if with mistakes, to ten. Whoever shall recall one part of it, or "in the course of recalling shall mutter it, or in the course of muttering shall chant it, or in the course of chanting prays to it, his soul will I, who am Ahuramazda, carry all three times over the bridge to paradise." So clear-cut is the fetishistic concept of the word, that sacred verses or hymns were prayed to, as beings. Another effectual spell to guard against the influences of evil spirits is to utter the different names of the chief deity.⁷⁵ A Jewish soldier in the World War ascribed his immunity from wounds to bands on his head and hands inscribed with the Hebrew commandments.⁷⁶

§302. Imitative Magic.

IN most of the performances in Central Australia for the increase of the totemic plant or animal, decorated men imitate the actions of the animal whose totem they bear; the acting is described as wonderful. In one scene, a number of men, equipped with long tails made of grass, "put themselves in motion as a herd of kangaroos, now jumping along, then lying down and scratching themselves, as those animals do when basking in the sun. One man beat time to them with a club on a shield, while two others, armed, pretended to steal upon and spear them."¹

In New Guinea the magical idea seems to be, at basis, that success may be obtained by imitating the desired result, *e.g.*, "burying a stone to represent a potato when potatoes are desired; or by verbally in some way stating the desired result, as by proclaiming over a hunting area that it is the home or village of kangaroos, so that many kangaroos may be found when it is hunted over. Likewise giving a spear a 'thorny name' makes it pierce well, or coating it with red makes it draw red blood easily." Rain-makers exist both on the south and northeast coast; they are blamed when rain does not come. "In one such case a rain-maker was arrested and brought to me. His account was that after a long period of drought a cloud appeared which looked like rain. He stood forth on a hill, the centre of an admiring crowd, and did his best by

making a fine spray of saliva come from his mouth on the usual principle of imitating an effect desired. However, his account was that he had done his best, but that the south-east wind proved too strong for him and blew the cloud away." A further illustration of their beliefs is furnished in the case of the native who was suffering from an obstinate ulcer on his arm. "Whenever the ulcer tended to get worse he would come and try to persuade me to arrest the suspected hostile magician. His view of the matter was that when the magician wanted to make the ulcer worse he hung the bamboo containing the article of intimate contact with the 'medicine' close to the household fire, and that the ulcer would only heal up if the magician was made to throw the mixture away into a stream of water. His idea clearly was that as the mixture became hot so would the ulcer become hot, inflamed, and get worse. I have noticed signs of a very similar belief on the south coast, including the inhibitory action of water."²

The Papuans attach great importance to preparing the young men before a fight, particularly if they have not killed anyone before, and for this purpose they are given various "medicines." The ingredients of one of these consisted of small bits of the eye, talons, beak, and tongue of a large hawk. "The eyes help the men to find the enemy, the pieces of the talons and beak to catch him, whereas the tongue of any animal, when it hangs out, represents the fury of fighting; therefore a piece of the tongue of a dog too is used for a medicine of war. Sometimes when an enemy is killed the natives cut off a piece of the skin above one eye and let the young men swallow a fragment of it, the explanation being that a man's brow is the foremost part of his body when he rushes at an enemy, and therefore in a way symbolizes fighting."³ While the warriors were away the women would not sweep the villages and the children were not allowed to make a noise.⁴ Before proceeding to battle in the Loyalty Islands, "a warrior placed water in the hollow part of a piece of coral, and drank from it, in order to make his heart hard like the rock. A woman whose husband or son was absent in war would place a piece of coral, to represent the warrior, on a mat before her, and move it about with her right hand to represent his movements in the fight. Then with her left hand she would brush away imaginary obstacles and evils. The warrior was thus thought to be protected by the charm performed at home."⁵ At the birth of a male child in New Caledonia, a priest cut the umbilicus on a particular stone, "that the youth might be stone-hearted in battle. The priest, too, at the moment of the operation, had a vessel of water before him, dyed black as ink, that the boy, when he grew up, might be courageous to go anywhere to battle on a pitch-dark night, and thus, from his very birth, the little fellow was consecrated to war."⁶

The sympathy which the Baganda believe exists between themselves and the plantain offers an illustration of "contagion." Plantains used as vegetables are regarded as female, and those used for making beer as male. "When children go through the ceremony of being named, the piece of umbilical cord, which has been preserved for this occasion, is put on a male tree if the child is a boy, and on a female tree if the child is a girl. A married woman who does not bear children is driven away by her husband because she will ruin his garden, and cause the plantains to cease to yield fruit. Again a woman who gives

birth to twins is a source of blessing to the whole community."⁷ The sex-act is often supposed to bring good luck, by stimulating nature to procreation, and seems to be a sort of coercitive.⁸ The Kitui even hold it to be necessary for the husband and wife to have connection when their hut is completed; "failure to observe this is followed with the direst misfortune in the way of sickness and death."⁹ The Lango people employ sacred rain-spears in the ceremony of rain-making, which goes on the principle that like produces like. The performer dips the blade of the spear into a bowl and with it flicks the water first east and then west, while chanting a prayer. Finally he sprinkles the water, scooping it up with his hands and throwing it high, first east and then west. "The owner of the spear also, having spat into the water and uttered a prayer for fruitfulness and good rains, sprinkles the water. The spear is stuck into the ground, blade down, near the porch, and is not moved into the house till the harvest is ripe. . . . When the dance is over, the old men, one after the other, asperse the water, using for the purpose a plant of the thistle order. . . . Fresh, cold water is drawn from a neighbouring spring at a traditional spot and each old man drinks a little, while other water in which medicines prepared from the roots of certain trees have been mixed is thrown up into the air (not aspersed over the people), and an old man climbs the tree, sprinkling the medicated water on its leaves, praying the while for good rains and harvest. . . . Water is thrown up from the well into the air both with the hands and with the thistle called *ekwanga*, while the old men pray, 'May rain fall as this water falls: may it fall on our grain and fructify it exceedingly, bringing joy and increase to our wives and children.'¹⁰ In Algiers, to make rain fall, "Arabs and Hausas pour water over each other's heads and clothes, and promenade with a spoon dressed as a doll, throwing water over it and each other; bathe in the sea; and turn their cloaks from left to right over their shoulders in the mosques on a Friday." Another kind of imitative magic is performed in lieu of a fugitive slave law. If a slave ran away, "the master would trace a certain design upon the ground and stick a nail in the centre to which was tied a scarabaeus. The insect would walk round and round, thus shortening his radius, and as it approached the nail, so would the fugitive be forced to come nearer and nearer to the house. . . . Sambo says that if the slave had urinated upon his hands and feet, he would have counteracted the effect of the charm—such an act also enables one to swear falsely."¹¹

A notable instance of imitative magic in India is the Orāon ceremony of rain-making. "On their arrival at the sacred tree, all the women simultaneously pour the water in their pitchers over the foot of the tree, saying, 'May rain fall on earth like this.' The wife of the village-priest now puts marks of vermilion, diluted in oil, on the trunk of the tree. After this the women depart, and the *Pāhān* or village-priest proceeds to sacrifice a red cock to the god *Bārāndā* at the spot. It is firmly believed by the Orāons that within a day or two after this rain-making ceremony, rain is bound to fall. And in olden times, it is said, a heavy shower of rain would even overtake the women on their way home from the sacred tree. In this case, apparently, direct alliance, by sacrifice and by anointing the tree with vermilion, have been superimposed on what was once, perhaps, purely a ceremony of imitative magic." Another

instance of the same sort for securing plenty of rain and crops is the custom of all the families in a village heaping rice on the sacred winnowing-basket which the Pāhān carries in procession, while he drops rice as he proceeds and his assistant drops water from his pitcher, all along the route. By a similar process the yoke of a plough and three bundles of straw, on which the bride and bridegroom are seated at the wedding-ceremony, are calculated to bring to the married pair prosperity in agriculture. "Another instance of imitative magic in connection with an Orāon marriage is the practice of keeping apart at the harvest preceding the marriage a few of the best sheaves of paddy, carefully selected by a young bachelor who must be ceremonially clean during the process. These selected sheaves of paddy are used in the benedictory ritual of the marriage, and are calculated to bless the newly-wedded pair with agricultural prosperity—with abundant sheaves of paddy as full and fine as those." The principle of imitative magic appears to be further illustrated by the practice of omen-reading or divination. "If an intentional imitation of some desired result produces that result by something like spiritual attraction, an unintentional and accidental imitation, real or fancied, of something fortunate or calamitous—of some human event, or physical phenomenon—may, it is believed, attract such thing, event, or phenomenon by a similar spiritual sympathy. Thus, during the ceremonial ablutions at the village spring or tank where all the Orāon villagers assemble for the purpose on the occasion of the *Sarhāl* festival, if the Pāhān or his assistant, the Pūjār, happen to touch any part of his body with the hand, it is apprehended that fleas and mosquitoes will prove particularly troublesome to the villagers that year. The cawing of crows is an evil sound which bodes misfortune through sympathetic attraction. So is the sight of a jackal crossing the path of an Orāon or a Mündā on a journey. Anything abnormal is an evil power which sympathetically attracts some evil or misfortune. Thus, the birth of a child with one or more teeth portends the death of either of the parents in a short time. Orāons, it is said, generally put such a baby to death by secretly making it swallow a large quantity of salt. An Orāon girl whose canine teeth grow out of the line, finds it difficult to get a husband, for the girl is fated to be a widow within a short time of her marriage. If a present event or phenomenon attracts a like event or phenomenon in the near future by sympathy, conversely does a future event or phenomenon sometimes cast its shadow before it in the shape of an analogous event or phenomenon."¹² In Assam "it was usual to kill a fish and scatter the bits about, at the same time informing the deities that the fish were all dying, and that rain was necessary. A similar method of attracting the attention of the rain power is common in Manipur, where a solemn procession of boats, headed by the great racing boat of the Raja, is formed. The boats are dragged along the mud of the moat and the Raja asks for rain."¹³

The wife of the Kwakiutl who has gone on the hunt enters her house and sits down on the floor, keeping quiet and eating a little food, but never enough to be satiated. It is said that the animals hunted by the husband do the same way as she does. If the man goes out for otters or seal, his wife always lies down in her bed covered with a new mat. "The reason why the hunter's wife does this is that the sea-otter and the fur-seal may be asleep when they are hunted by the husband. . . . The land-hunter and the sea-hunter get their game easily if their wives sit at home well." The hunter always pushes his

paddle right over the fire, because he wishes it to become very black; and also that no young woman, or one who is menstruating, and no young man may step over it, for they never do right. When a canoe-builder has chopped deep into a tree he takes four chips, which he throws behind the tree, saying: "O, supernatural one! now follow your supernatural power!" Throwing another chip, he says: "O, friend! now you see your leader, who says that you shall turn your head and fall there also." Then a third, saying, "O, life-giver! now you have seen which way your supernatural power went. Now go the same way." Taking the last one, he utters: "O, friend! now you will go where your heart-wood goes. You will lie on your face at the same place." Then he answers himself, and says: "Yes, I shall fall with my top there." He takes his ax and chops again; but "it does not take long until the cedar-tree falls backward." Among the Tsimshians, "if many members of one family die in quick succession, the survivors lay their fourth fingers on the edge of the box in which the corpse is deposited, and cut off the first joint, 'to cut off the deaths.'" ¹⁴ If it was believed that a man had died in consequence of being bewitched, they would take his heart out and put a red-hot stone against it, wishing at the same time that the enemy might die. If the heart burst, they thought that their wish would be fulfilled; if not, their suspicions were believed to be unfounded. ¹⁵ Among the Lenape the child was taught how to blacken with charcoal the inside of each milk tooth as it came out, then throw it away to the east before sunrise in the morning, repeating: "'Come back quick, I want to eat sweet-beans!' This was said to insure a quick growth of strong new teeth." ¹⁶ There are similar examples of imitative magic among the Bellacoola and other Indians of Canada. ¹⁷

Among the Great Plains tribes imitative magic took the form of dancing and acting. Before starting out on the hunt, the Sioux performed the bear-dance, in which they all joined in a song to the Bear Spirit, who must be consulted before success could be assured. For the dance one of the chief medicine-men clothed himself in the skin of a bear, put a war-eagle's quill on his head, and took the lead in the pantomime, looking through the skin which formed a mask over his face. Many others wore masks made of skin from the bear's head on their faces, and all, by the motions of their hands, closely imitated a bear's movements, some representing its motion when running, and others its peculiar attitude when watching for the approach of an enemy. The Mandans, Pawnees, Hopi, and others danced to make buffalo come when they were likely to starve for want of food. There was a song to the Great Spirit, imploring him to send them buffalo. According to Catlin's ¹⁸ account, "Every man in the Mandan village is obliged by a village regulation to keep the mask of the buffalo hanging on a post at the head of his bed, which he can use on his head whenever he is called upon by the chiefs to dance for the coming of buffaloes. The mask is put over the head, and generally has a strip of the skin hanging to it, of the whole length of the animal, with the tail attached to it, which, passing down over the back of the dancer, is dragged on the ground. When one becomes fatigued of the exercise, he signifies it by bending

¹⁸ Donaldson, in *Smithson. Rep.*, 1885, pt. II, 308, 309, 311, 316, 358 ff.; Parsons, in *Man*, Feb., 1923, 21-26; Grinnell, *Folk Tales*, 273.

quite forward, and sinking his body towards the ground; when another draws a bow upon him and hits him with a blunt arrow, and he falls like a buffalo—is seized by the bystanders, who drag him out of the ring by the heels, brandishing their knives about him; and having gone through the motions of skinning and cutting him up, they let him off, and his place is at once supplied by another, who dances into the ring with his mask on; and by this taking of places, the scene is easily kept up night and day, until the desired effect has been produced, that of ‘making buffalo come.’” We have here a fine example of play-acting.¹⁹

When the time came for battle, the Cheyennes performed a ritual which had for its purpose the confusing and alarming of the enemy. The keeper of the medicine-arrows took in his mouth a bit of the root which is always tied up with them, chewed it fine, and then blew it from his mouth, first toward the four directions and finally toward the enemy. “The blowing toward the enemy was believed to make them blind. After he had done this he took the arrows in his hand and danced, pointing them toward the enemy and thrusting them forward in time to the dancing. He stood with the left foot in front, and with this he stamped in time to the song and the motions. Drawn up in line behind the arrow keeper were all the men of the tribe, standing with the left foot forward as he stood, dancing as he danced, and making with their lances, arrows, hatchets, or whatever weapons they might hold, the same motions that he made with the arrows. At each motion made by the arrow keeper, all the men who stood behind him gave the shout commonly uttered as they charged down on the enemy. The first motion of the arrows by the arrow keeper is directed toward the (collective) enemy’s foot, the second toward his leg from ankle to thigh, the third against his heart, and the fourth against his head. . . . After the arrow keeper had pointed the arrows four times in the direction of the enemy, he thrust them the fifth time toward the ground.”²⁰ Charcoal, the product of fire, is regarded by the Hopi fire-priests as possessing most powerful magic in healing diseases, especially those of the skin in which there is a burning sensation.²¹ The Zuni give to persons who have been struck or shocked by lightning the rain-water of that same storm to drink—a sort of inoculative magic—plus black beetle and suet; otherwise they will surely die. “About three years ago a house on the south bank of the river was struck and the three women inmates failed to observe the proper measure of safety. The following summer two of them died and the third died this year. Properly doctored survivors are qualified by their experience to become medicinemen or women.”²²

As soon as the new moon is visible, all the men among the Makusi stand before the doors of their huts and draw their arms backward and forward in its direction at short intervals; “by this means they are strengthened for the chase.” They also take certain leaves, roll them in the shape of a small funnel, and pass some drops of water through it into the eye, while looking at the new moon; “this is very good for the sight.” To point the finger at a fellow creature, among the Arawaks, is to offer him as serious an affront as it would be to step over him when lying on the ground; “in the latter case, the recumbent person would rightly say, ‘You can cross me when I am dead. I am not dead yet!’” If the occupants of a Carib settlement wish to assure victory for their

¹⁹ §442, of text.

²² Parsons, in AA, XVIII, 249.

warriors on the march and to assure themselves at the same time of the issue of the battle, perhaps already fought, they place two boys on a bench and whip them without mercy, especially over the shoulders. "If the boys bear the pain without shedding a tear or uttering a groan, victory is certain. One of the boys is then placed in a hammock, from which he has to shoot at a target fixed to one of the roofs: as many arrows as hit the target, so many of the enemy will be killed by the warriors."²³ Imitative magic is here evidently combined with interrogation. About one o'clock in the night, when the new day is supposed to begin, the Jibaro warriors assemble in the house of the chief to perform a magical ceremony by which they believe themselves able to conjure forth victory over the enemy. This, which they continue until the break of day, is repeated every night during one week. Besides the war-dance, the Jibaros try to secure the same end through a kind of war-song, which is sung by the warriors before starting for the expedition. While the men are absent on the warpath it is customary for the women to assemble every night and perform a special dance with rattles around the waist, while chanting conjurations. This is supposed to have the power of protecting their relatives against the lances and bullets of the enemy. Imitative magic is also employed to produce increase. "When the flesh of the animals killed is cooked early in the morning, at the first beginning of the new day, this will have as its consequence that henceforward there will be plenty of swine's flesh in the house of the slayer. . . . The slaughter takes place outside the house, but the animals are not all killed on the same spot, but one here and another there, close to the different walls of the house. In this way the impression is produced that the swine killed and eaten at the feast are very numerous, and the effect of this will be that they will really be numerous in the future." According to their notions all plants are animated by human spirits, some of male sex, some of female. "The manioc, like most other domestic plants, has a woman's soul. Hence—according to the principle 'like is best known by like'—the women have to cultivate this plant just as, in regard to the preparation of the manioc beer, they are believed to have a special power of promoting that mysterious and, to the Indian mind, unintelligible process of nature which is called fermentation."²⁴

Effigy. A special type of imitative magic consists in making an image or other representation and treating it in a special manner, in the belief that the person or thing for whom it stands will be affected accordingly. This has been called *envoûtement*. To punish a woman, in Central Australia, "a rough diagram is drawn on the ground, which is supposed to represent her body, and by the side of this a piece of bark is placed, which again represents her spirit. All the time the men who are present keep singing exhortations to the evil magic, with which their singing is endowing the bark to go straight and eat up all the woman's fat. Then all of them stick miniature spears into the bark, which is finally thrown in the direction in which the woman has gone. Nothing further happens for, perhaps, some time, until one night they see a shooting star, and know that that is the woman's spirit, and that she is dead. If she should turn up at a later period the explanation is a very simple one—there was some counter magic stronger than theirs, and what they saw was the spirit of some other woman."²⁵ Like many other religious beliefs, this is an argu-

²³ Roth, in BAE, XXX, 257, 271-272.

²⁴ Karsten, "Jibaro," in BAE, Bull. LXXIX, 22, 24, 60 (quoted), 81 (quoted).

²⁵ Gillen, in AAAS, 1901, 123.

ment-proof theory. Sometimes, among the Bangala of the Upper Congo, "a piece of wood or plantain stalk was roughly carved to represent the enemy, and wherever it was stuck or cut the enemy would feel intense pain, and to stick it in a vital part meant death."²⁶ Models of enemies, made of a candle in North Africa, of beeswax in Nigeria, are at night and in secret placed in cooking-pots over a fire. "Hunters used to practise this rite to secure success over beasts. A frog is useful in this connection, for if its tongue be slit in the shadow of an enemy, whatever happens to the frog happens to the enemy."²⁷

The Buryat woman, desiring children, will carry a child's swaddling clothes or a specially made doll, and pretend to feed it at her breast. Those present ask her sympathetically, "How is your child? Is he quiet? Have you much trouble with him?" "Then the guests take turns in nursing it, and if the woman should leave the hut, they will call to her to return because the child is crying."²⁸ In accordance with their desire to escape some of the expense, the Chinese for *envoûtement* make paper figures instead of wax.²⁹ Nearly every Kuki-Lushai clan, while denying that its members have any knowledge of witchcraft, is firmly persuaded that its neighbors practise the black arts. "There are several ways of bewitching your enemy. Colonel Lewin has a tale in which the wizard takes up the impression of a person's foot in the mud and puts it to dry over the hearth, thereby causing the owner to waste away. Clay figures, into which bamboo spikes are thrust, also figure in all cases in which a person is accused of this offence. To cut off a piece of a person's hair and put it in a spring, is certain, unless the hair is speedily removed, to cause his death."³⁰ The Palaungs make small figures of men and women to represent an enemy, and subject them to the injury they would inflict on that person. "The figures are made of earth, and as that in the Palaung hills is not very plastic, it is moistened and modelled on a piece of board in the manner of a rough bas-relief. . . . Incantations are said over these figures, and splinters of bamboo are stuck into them, or a hand or foot is cut off."³¹

The Zuñi make small clay figures of sheep, horses, donkeys, cows, chickens, of chili and melons, of bracelets, and of gold and silver coins, over which they perform certain rites for the increase of all the objects represented. There is also a rite for the increase of children or the development of an unborn child. During a dance a woman who has had miscarriages may be given a *wiha* or doll, which, after certain ceremonies, she takes away with her secretly. The doll is usually kept as "the heart" of the child and "the family would not think of parting with what appears to be a kind of life token. Were they to sell the *wiha*, the child 'it brought would not live.'"³² The Jibaro Indians will form of a piece of manioc a likeness of a human head, which is supposed to represent the enemy threatened. "This head is put on the top of a stick, and the stick is fixed in the ground in the neighborhood of the enemy's house. This procedure is supposed to have some power of promoting the plans of the avenger."³³ Among the Chaldeans wax figures were melted for sorcery.³⁴

"In the primitive belief that, by means of certain human acts performed with a certain intention, the *life* of an individual or that of a divinity could be compelled to enter a certain medium, through which it might be subjected to

human control, we have the explanation of a close relation which the practices and legends of the ancients imply as having existed in their minds between images and the personality of the being represented. By keeping this in view, a long series of legends, and of, to us, seemingly senseless folk-lore, receives a logical explanation: from the waxen serpent made in the image of the evil serpent Apap and inscribed with his name, which the Egyptians burned three times a day in order to avert the possibility of a storm, to the curious Arab legend . . . according to which Alexander the Great obtained control over the sea-monsters, who daily interfered with the building of Alexandria, by having their portraits taken, after which they disappeared and allowed the work to proceed—from the poetic legend of *Pygmalion* and *Galathea* to the part played in ancient mysteries by the dough images of the gods, which were carefully manufactured according to stated rules, and in which, no doubt, the real presence of the deity was thought to dwell. In the Osirian mysteries these dough images were used to represent the body of the dead god.”³⁵

As an illustration of the thesis expounded in the above quotation, it should be of interest to relate a story from the *Gesta Romanorum*,³⁶ a collection of short tales in Latin, much current in the late Middle Ages. “A certain man went to Rome, for to seek S. Peter and S. Paul; and when he was gone, his wife loved another, that was what men call a scholar-errant, and did covet her to wife. The woman saith, ‘my good man is departed unto Rome; were he dead, or couldst thou take away his life, then would I have thee of all men.’ He said, ‘yea truly I can take his life,’ and buyeth wax about six pound, and maketh an image thereof. Now when the good man was come to Rome into the city, there came one to him and spake: ‘O thou son of death, what goest thou up and down? If none help thee, this day shall see thee alive and dead.’ The man asked, ‘how should that be?’ And he said, ‘come to my house, and I will shew it thee.’ And having brought him home, he prepared for him a water-bath, and set him therein, and gave him a mirror, saying, ‘look thou therein,’ and sat beside him, reading in a book, and spake unto him, ‘behold in the glass, what seest thou therein?’ The man in the bath said, ‘I see one in mine house, that *setteth up a waxen image on the wall*, and goeth and taketh his crossbow, and having bent it, *will shoot at the image*.’ Then said the other, ‘as thou lovest thy life, duck thee under the water when he shall shoot.’ And the man did so. And again he read in the book, and spake ‘behold, what seest thou?’ The man said, ‘I see that he hath missed, and is exceeding sorry, and my wife with him; the scholar-errant setteth to, and will shoot the second time, and goeth the half way toward.’ ‘Duck thee when he shall shoot.’ And he ducked. Saith the other, ‘look, what seest thou?’ The man said, I see that he hath missed, and is sore troubled, and speaketh to the woman, If now I miss the third time, I am [a man] of death; and setteth to, and aimeth at the figure very near, that he may not miss.’ Then spake he that read in the book, ‘duck thee!’ And the man ducked from the shot. And he said, ‘look up, what seest thou?’ ‘I see that he hath missed, and *the arrow is gone into him*, and is dead, and my wife bestoweth him in the basement below.’ Then said he, ‘arise now, and go thy way.”

³⁵ Stevenson, in *Int. Cong. Anth.*, 1893, 308.

³⁶ Quoted in Stallybrass, *Grimm's Teut. Myth.*, III, 1091, note 4.

Several other modern cases³⁷ may conclude this list. "A mountaineer in Tennessee heard his wife complain that no matter what she did, she could not make butter come that day. 'That thar's Nance Clay's doin's,' said the husband. 'I'll soon fix her.' He proceeded to draw the figure of a woman on a sheet of paper, and when it was finished he marked with an oval the place where her heart would be. He pinned the paper on the wall of his log cabin, melted a silver coin into the form of a bullet, took down his rifle, aimed at the drawing, and shot the bullet through the oval. He believed that a neighbor . . . had bewitched the milk, and that by shooting her through the heart in the drawing he could cause her to sicken and die. This is a very ancient notion found in one form or another among the red Indians, the negroes, the Asiatics, and many other old races."³⁸ Again there is the reported case of the Italian in London who "burned a pin-studded wax effigy of President McKinley on the doorstep of the United States Embassy last evening. He said he was a brother of Guido Mazar, who was lynched in Louisiana, and was avenging the death of his kinsman."³⁹ Magic is not yet defunct. Early in 1922, in a French village, there was found buried about ten inches below the surface of a grave-mound a young calf's heart stuck full of pins and enclosing a lock of hair. Investigation by a police-commissioner revealed it as a love-charm to bring back a faithless sweetheart.⁴⁰ In July, 1922, an Italian was sentenced to imprisonment and fine for telling fortunes and practising medicine in his home without a license. He had sold to one policewoman a charm to ward off the possibility of marrying a poor man and to another a mystic salve for the head, to prevent nervous collapse.⁴¹

§305. Applications of Magic.

In the immediately preceding paragraphs magic has been seen, incidentally, to have been employed for various purposes, such as to kill an enemy, commit theft, or win affection. Further applications of magic, as well as other features which shed light on this important part of religion, are mentioned below.

The Papuans use magic as a sort of universal expedient: "If the young folk become too fond of their distant relations and visit them too often, the near relations become jealous and secretly bewitch their food and drink, also their sleeping houses to keep them at home. . . . If visitors come repeatedly until their hosts are tired of seeing them, the latter will charm the rollers on which the visitors' canoe will be launched, so that they will not return for a long time. . . . If a young man becomes a hardworking gardener, much to the joy of his friends, the neighbouring families will become jealous and will secretly bewitch his gardening tools, so as to cause him to hate them and become lazy. . . . If a woman becomes the envy of other women because of her good gardening qualities, and the care she takes of her supplies of yams, thus earning the title of Arawata—the highest title a woman can possess—the jealous will try to get hold of her peeling shell, which they will bewitch so as to cause her to be reckless and careless over the food and to lose her title. . . . When making a garden knives and axes are charmed, and there are special incanta-

⁴¹ *N. Y. Times*, July 14, 1922.

tions before burning off, before digging, before planting, while the crop is growing, when the harvest is reaped. . . . Every part of a canoe is charmed as it is being made right up to the launching. Fishing and hunting nets are charmed, spears and implements of warfare, houses and trees. . . . In order to make life at all bearable, and to counteract the evils strewn in their path, charming is resorted to. When preparing for a sea-voyage:—(1) The body is charmed to prevent the witches from knowing that anyone is coming. (2) The canoe is charmed to make it strong and so that it will not leak. (3) The steer-paddle is charmed so that the canoe will not broach to. (4) The wooden baler is charmed so that it will not sound against the canoe, which would attract the witches. (5) The mast is charmed that it may not snap. (6) The conch-shell is charmed so that when blown it will drive away the squalls. (7) The waves are charmed to keep the sea calm.”¹

In New Britain, “charms are a great power with the people and there are as many of them as there are clever or wealthy men. Every man may have (*i.e.*,—buy) his own *malira*, or charm. . . . It is dear or cheap, according to its reputation. They are used for any purpose the purchaser desires. Now a love charm, now to secure acquiescence to indecent proposals, now to inflict disease, now to prevent recovery, or any other purpose in view. They mostly consist of leaves, bark, or sap of trees, and are sometimes administered in the food of the person to be influenced and at other times are counted effective through the simple incantation of the wizard.” A special charm, placed at the entrance of a fish-trap, is supposed to induce fish to enter.² “Magic plays an enormous part in the tribal life of the Kiriwinians (as it undoubtedly does with the majority of native peoples). All important economic activities are fringed with magic, especially such as imply pronounced elements of chance, venture, or danger. Gardening is completely wrapped up in magic; the little hunting that is done has its array of spells; fishing, especially when it is connected with risk and when the results depend upon luck and are not absolutely certain, is equipped with elaborate magical systems. Canoe building has a long list of spells, to be recited at various stages of the work, at the felling of the tree, at the scooping out of the dugout; and, towards the end, at painting, lashing together, and launching. But this magic is used only in the case of the larger sea-going canoes. The small canoes, used on the calm lagoon or near the shore, where there is no danger, are quite ignored by the magician. Weather—rain, sun and wind—have to obey a great number of spells, and they are especially amenable to the call of some eminent experts, or, rather, families of experts, who practise the art in hereditary succession. In times of war—when fighting still existed, before the white man’s rule—the Kiriwinians availed themselves of the art of certain families of professionals, who had inherited war magic from their ancestors. And, of course, the welfare of the body—health—can be destroyed or restored by the magical craft of sorcerers, who are always healers at the same time.”³

Among the Kaffirs, the fruit of the wild chestnut is sometimes bound by hunters round their wrists for the purpose of charming the game.⁴ Among Bantu beliefs, that in witchcraft “stands at the head and shows a shocking extension.” No sickness or death would occur, they believe, if witches had not caused it. Drought and other forms of ill luck are referred to sorcery. They

³ Malinowski, in JAI, XLVI, 384-385.

⁴ Kropf, *Kaffir-Eng. Dict.*, 15.

even believe in mass-bewitchment. They have a ceremony of the "smelling-out of a sorcerer by the shaman." "As soon as he is detected, even his best friends draw away from him, he is seized and they try by the most fearful torture to bring him to confess his guilt and to reveal the magical means which he has used. . . . Also his whole property is confiscated at the end of the process, and often the whole kraal of the unfortunate is devoured. Since in this manner the witch-process is at the same time an easy means of enrichment for the chief, it is the well-to-do who have drawn the hostility of the despot on themselves that are particularly menaced. Often it is known beforehand . . . just who is to be smelled out; sometimes those who are threatened save themselves by quick flight to a neighboring tribe, leaving their property behind."⁵

Others use the ordeal⁶ to detect the suspect; "he had to dip his hand in boiling water; if he was scalded, they gave the guilty person poison and burned him while yet alive, amidst the curses of the onlookers." Elsewhere black ants whose sting is very painful, are spread over the bodies of those who are accused of witchcraft, after they have been sprinkled with water, to extort confession. The charge of sorcery is the Kaffir method of getting troublesome people out of the way; when anyone is once accused, he is hopelessly lost.⁷

In Cameroons, if someone is killed by a leopard or crocodile—the rivers are infested by the latter—it is believed that an enemy of the dead man has enchanted the beast. The shaman, by asking the crocodiles, is able to designate the culprit, who is made to drink poison. If he vomits at once, he is innocent; the crocodiles have lied and the doctor undertakes to punish them for it. Elsewhere the poison used in the ordeal acts "as an emetic, a purge, or a toxic, causing death by coma. The first of these effects indicates innocence, the others guilt." "Fetish-drinking" is found also in Togo. "Since the mixing of the fetish-drink is wholly the affair of the uncontrollable priests, it rests solely upon their good or ill will whether the condemned party is to get off alive or not. If he has wealth but is otherwise without influence or protection, he will do well to set his house in order and have done with life. He will certainly die of the poison and his property will go over into the hands of the sly witch-master." The priest secures this property for the moment by cutting off the dead man's fingernails and strewing them about the dwelling, "that everyone who removes anything out of it may also be carried off by the poison. After the burial the priest appears and demands the property of the deceased, and no one dares to oppose, for the people firmly believe in the infallibility and justice of the process."⁸ There is no question about the hatred of magic by the West African priests, but it is equally abhorred where there is no organized priesthood.⁹ It is an abominable thing to cause illness by tampering with what people drink; or even to cause the milk of a neighbor's cows to pass into the udders of one's own cows or the olives of his orchard to locate themselves in one's own jar of oil.¹⁰ It is believed by everyone, however, that such things are being done all the time.

tact, seems to know comparatively little about magical matters, although they have often no small part in the conduct of his life. "While in many cases his ignorance is of the same nature as that of Europeans where the practices of their own physicians are concerned, it is, doubtless, in others more or less feigned, prompted by the common disinclination to speak of magical matters to strangers of superior standing, and with different beliefs." Among them the science of charming is divided into eight parts: "the power of inducing swoons, illicit sexual intercourse, the expulsion of demons, compelling the attendance of demons, destruction by discord, causing death, the power of imprisoning, and the power of curing diseases, to each of which are assigned certain seasons, days, and hours for their successful performance."¹¹ The following graphic description has been given of the sway of magic among the natives of a district in Punjab. "A more utterly ignorant and superstitious people than the Bannuchis I never saw. . . . For him the whistle of the far-drawn bullet, or the nearer sheen of his enemy's sword, had no dangers; blood was simply a red fluid; and to remove a neighbour's head at the shoulder as easy as cutting cucumbers. But to be cursed in Arabic or anything that sounded like it, to be told that the blessed Prophet had put a black mark against his soul for not giving his best field to one of the Prophet's own posterity, to have the saliva of a disappointed saint left in anger on his doorstep, or behold a Haji who had gone three times to Mecca deliberately sit down and enchant his camels with the itch and his sheep with the rot—these were things that made the dagger drop out of the hand of the awe-stricken savage, his knees to knock together, his liver to turn to water, and his parched tongue to be scarce able to articulate a full and complete concession of the blasphemous demand."¹²

The Dyaks have an unshakable confidence in magic, and each individual has his own magic articles in the infallibility of which he thoroughly believes; magic power may be exercised promptly over miles of intervening space.¹³ Praying to death, known as *pule-anaana*, has long been a practice in the Hawaiian Islands. Perhaps half of the people who die unattended by a regular physician are victims of the death-sorcery or incantation. The only scientific hypothesis offered as explaining this phenomenon is that it is a phase of hypnotic suggestion. A *kahuna-anaana* or sorcerer believed to be capable of exerting this power could have his services secured like a hired assassin by gifts of white fowls, brown hogs, or woolly dogs. "Death was almost certain to follow the machinations of a kahuna of approved power, unless his dupe could promptly secure the intervention of a kahuna of higher rank, that is, one of greater age." The processes of praying to death are as follows: "Any native whose goods were desired, or who might otherwise have given cause of offense, summoned by anaana instantly suspended his avocation and, hastening to the kahuna, crouched in abject submission to his will, until death took place, usually in a few hours, and apparently from exhaustion. Frequently a kahuna repairs in person to the abode of his victim and places himself in the presence of the man, thereupon muttering incantations and prayers. The kahuna's own favorite god is usually addressed and also such aumakuas [charms] and deities as are supposed to have been offended by the accused. The subject sits quietly before his antagonist, takes no food and but little drink,

¹² O'Brien, in JAI, XLI, 509-510.

and dies in a few days." In some cases it is performed on the exuviae of the victim. Dread of death and the expectation of it, which seize the natives when approached by anaana, chiefly explain its uncanny power. The native has no thought of resisting. "It is nearly impossible to induce a native, when sick, to submit to medical treatment. Here the power of the ordinary kahuna, one of the saving sort, is displayed. Black pigs are roasted for the invalid and his friends and the kahuna, while communications, well paid for, are held with the powers above and below. There is then no limit to the fortitude with which the patient will endure suffering unrelieved. Pretending to obey the foreign physician, he follows the directions of the kahuna, who, in his twofold function of doctor and priest, is preaching and practising behind the scenes and throwing away the mixtures of his foreign rival." The ready surrender to sickness is, in most cases, said to be "due to a definite belief in a demon whom the native feels working in his vitals, and whom it is hopeless to resist."¹⁴

Magic is a means, in America, of protection from the consequences of crime, or of discovering plots.¹⁵ Among the Hudson Bay Eskimo, "an exchange of wives is frequent, either party often being glad to be released for a time, and returning without concern. There is so much intriguing and scandal-mongering among these people that a woman is often compelled by the sentiment of the community to relinquish her choice and join another who has bribed the conjurer to decide that until she comes to live with him a certain person will not be relieved from the evil spirit now tormenting him with disease. . . . Some wives are considered as very 'unlucky' and after trial are cast off to shift for themselves. A woman who has obtained the reputation of being unlucky for her husband is eschewed by all the men lest she work some charm on them."¹⁶ A Haida shaman repeats the names of all persons in the village in the presence of a live mouse and determines the guilty party by watching its motions.¹⁷ The Athapascans had "absolute faith in the necessity and efficacy of certain charms which they tied to their fishing hooks and nets."¹⁸

The magic connected with idol-worship was regarded by the old Hebrews as the worst of sins and the serpent as the author of it; in the New Testament magical books were burned, plainly because they prescribed heathen customs, formulas, and invocations by means of which the higher powers might be brought under control.¹⁹ "The highest attainment in divine magic consists in the knowledge of the . . . 'most great name' of God, which is generally believed, by the learned, to be known to none but prophets and apostles of God."²⁰ Homer shows a number of isolated instances of magical performance through fetishes, and one complete case—that of Circe; but Homeric magic is connected almost wholly with divinities and foreigners.²¹

Out of later Greek religious beliefs, says Miss Harrison,²² half-seriously, came a truth that it has taken science centuries to establish, namely the fact that disease is caused by germs—bacilli, we call them, where the Greeks used the word Keres. "The Keres are physical actual things not impersonations. So when Æschylus puts into the mouth of his Danaid women the prayer

'Nor may disease, noisome swarm,
Settle upon our heads, to harm
Our citizens.'

the 'noisome swarm' is no mere 'poetical' figure but the reflection of a real primitive conviction of live pests." Much correction into science came from Chaldean magic. Amongst the Accadian people there was no evil which the sorcerer could not work. "He ordered at will the fascination of the evil eye or of unlucky words; his rites and formulæ for enchantment subjected the demons to his orders; he let them loose upon the person he wished to injure, and made them torment him in every way; he sent ill-luck alike to countries or individuals, and caused demoniacal possession and other terrible diseases."²³ Yet out of such beliefs and fear came scientific investigation, especially in the field of astrology. The religious axiom was that the stars ruled all life, their mutual position being decisive of fate. "The astronomic studies gave means into the hand to prophecy all happenings if one once before had observed what happened on earth contemporaneously with a certain phenomenon in the heavens." Hence there were extended observations. From the belief that the gods were identified with stars came the notion that certain positions of the stars affected the possibilities of daimonic action; hence horoscopes. This led to the interpretation of a sequence of events from like earthly conditions previously observed; hence history. The accuracy of their observations, taken for ages and checked up by repetition, was surprisingly great. In alchemy, all was explained by some god's inworking; his aid was always needed. In the alchemic receipts there were formulæ, prayers, and, later on, astrology, each planet having its metal. Natural explanation dates from the Greek period, being at bottom the teaching of the Greek philosophers.²⁴ The orientation of the ancient megaliths in Britain is to the rising of the sun on definite days of the year—the festival days of the early Eastern Mediterranean nations, dates of common religious observance. Tombs are likewise laid out in one or other of these auspicious bearings, the cult of the dead thus being associated with the cult of the heavens. Such orientation argues considerable mental advance.²⁵

Magicians were highly revered by the ancient Persians who believed also in mythical sorcerers, evil spirits which laid snares for men; against their black magic man called on the gods and heroes for help and protection. There came to be a deification of the elements: "indeed, this appears among lower people to have remained the chief form of religion. Especially were fire and water regarded as great gods. . . . First and foremost, however, was sorcery. . . . The Avesta frequently turns with great vigor against sorcery as an Ahrimanic evil."²⁶ The independent power attributed by Mazdaism to the principle of evil afforded justification for all manner of occult practices. "Necromancy, oneiromancy, belief in the evil eye and in talismans, in witchcraft and conjurations, in fine, all the puerile and sinister aberrations of ancient paganism, found their justification in the rôle assigned to demons who incessantly interfered in the affairs of men."²⁷

The Arabs were all daimonists before Mohammed. The childbed was protected from jinns and the evil eye averted by a rag spotted with blood. A besieged city put a witch on the wall and compelled her to make a shameful

exposure, to scare the enemy and by magic to ward him off.²⁸ Still widespread is the belief in alchemy, astrology, and sorcery; "in the lands of Islam one finds soothsayers, dream interpreters, and magicians without number."²⁹ "Marcus Aurelius, in recounting the benefits he had received from different persons, acknowledges his debt of gratitude to the philosopher Diognetus for having taught him to give no credence to magicians, jugglers, and expellers of daemons. Lucian declares that every cunning juggler could make his fortune by going over to the Christians and preying upon their simplicity. Celsus described the Christians as jugglers performing their tricks among the young and the credulous."³⁰

§308. The Black Art.

WITCHES are considered by the Papuans to have great power. "By occult influences a witch can deafen a person's ears, and so make him mad; or can cause his heart to burst, or drink his blood, or snap his veins, or break his bones. She can throttle a child at night by invisible fingers, can swamp or capsize canoes, climb to the top of mountains, cross from peak to peak on cords of fire which can be seen any dark night. She can descend into the earth and bring forth fruitful seasons, or epidemics of sickness, at her own sweet will." This by no means concludes the extent of such power. If a wizard, after fasting from food and drinking sea-water, performs special incantations in secret, then his touch will cause death; he can impale his victim with an imaginary stick or pierce the body with an imaginary spear; he can bewitch food left over after a meal, or a tuft of hair or portion of clothing, and so cause death; or bewitch food before it is cooked and make it poisonous; his hand placed secretly on the head of a child will cause its death; he can send poison into the mouth of a person as he is eating; can kill by spitting at a person; can cause a man to fall to his death when climbing; can bewitch a fireplace so that food cooked upon it becomes poisonous, and poison the drinking water by putting into it a leaf which he has charmed; and can bewitch a sharp-pointed stick and cause a man to walk with his bare feet on the spot where he has hidden it, so that it will pierce his victim's foot and kill him. "There are many other things he can do, but he must do them secretly; therefore no one must walk about alone. There must always be two or three together."¹ The Murray Islanders attribute disease, death, and trouble of all kinds to the evil influence of sorcerers; such influence can be averted only by liberal payments.² Except in the case of very old folk, death is not admitted by the Roro-speaking tribes to occur without some obvious cause such as a spear-thrust. "Therefore when vigorous and active members of the community die, it becomes necessary to explain their fate, and such deaths are firmly believed to be produced by sorcery. Indeed, as far as I have been able to ascertain, the Pappasian of this district regards the existence of sorcery, not as has been alleged, as a particularly terrifying and horrible affair, but as a necessary and inevitable condition of existence in the world as he knows it, so that the Roro-speaking tribes look on sorcery in the abstract with no more horror or fear than Europeans in their prime regard old age and death. . . . The attitude of the natives towards the in-

² Hunt, in *JAI*, XXVIII, 8.

dividuals they recognize as sorcerers is one of perfect good fellowship; indeed a sorcerer may have great influence in his own village, and not only may not be feared but may be regarded generally as a real protection. . . . I have no doubt that in many instances sorcerers actually believe in their own powers, and a well-known sorcerer explained to Captain Barton that he was scarcely a free agent in the matter, since his father had been a sorcerer before him, and it was but natural that the power should pass to him." There is a general belief that these sorcerers endeavor to obtain access to newly dead human bodies, portions of which they use as charms, and it is suggested that this may have contributed to the practice of burial under the house of the deceased or in the village street.³

In the New Hebrides wizards and witches are necromancers who have familiar spirits and use their power malevolently. If many people become ill suspicion falls on a "sacred man" as the cause; but the latter sets in motion a witch-finding ceremony and the person finally designated by the process has to pay a pig to the relatives of the dead and another to the witch-finders.⁴ Sorcerers in the Trobriand Islands are "those who possess the power to kill people by magic."⁵ Both white and black magic exist in D'Entrecasteaux. No man would be at pains to deny knowledge of the first kind; on the contrary he is proud of whatever little he may know; but no one will confess that he knows black magic; "yet, wherever you go, you hear of some one who has just been victimized and is lying at death's door." According to the natives, a person cannot die except for one of two reasons: first, because a spirit has taken his heart away, and secondly, because some one has practised sorcery on him. Black magic differs from the white variety, so far at least as these natives are concerned, in its anti-social nature. "The two, however, sometimes tend to coincide; that which is anti-social from one point of view may favour society from another. The same magic which has slain your brother you may use to slay his enemy, and all your relatives will approve your deed." Many different methods for bewitching a man are cited.⁶

"The curriculum vitæ of the heathen Mowenda is a long succession of fear, superstition, suppression and misery. From birth to death they are haunted by their gods, by the ghosts of their ancestors, by all sorts of hobgoblins, and tremble from fear of their witchdoctors and chiefs. . . . The Batlapin, in common with all other native tribes in South Africa, had a firm belief that all deaths except those occasioned by violence and old age were caused by enchantments and sorcery. . . . In Matabeleland the wizards or witches believed that they had the power to bewitch a person and thus cause his death. They go to the graves of the dead to pray for power to bewitch others, and believe that they get it, and that by means of medicines (roots, etc.) they can influence a person so that he dies. When a native wished to learn to bewitch he would pay a big price to an established wizard, who would go with him to a grave and dig up a freshly buried body, cut it open and roast the liver, and teach him witchcraft."⁷ A witchcraft case a few years ago was brought up in the native court in Southern Rhodesia: a man accused his wife of invoking a spirit against him. The jurymen decided in the woman's favor, because they

said that, had she really called upon the Juju, the spirit would have seen to it that the man should not have been alive to accuse her.⁸

Bent⁹ tells of a South African chief who was convinced that Mrs. Bent had been sent by Queen Victoria, from a country ruled by a woman, to bewitch him. A Gold Coast chief is complaining of the way the English government is preserving vermin in the shape of witches. He says that the witches there live almost entirely on the blood they suck from children at night. In old days they did this furtively, and do now where the native custom is unchecked; but in districts where the Government regards witchcraft as utter nonsense and the killing of its practitioners as utter murder, which will be dealt with accordingly, the witch flourishes exceedingly, and blackmails the mothers and fathers, threatening that if they are not bought off they will have their child's blood; if they are not paid the child gradually dies—poison again, most likely.¹⁰ Some negroes of the Guinea coast believe that "the soul that lives its life in a body fully through is held happy; it is supposed to have learnt its full lesson from life, and to know the way down to the shadowland home and all sorts of things. . . . Now if this process of development is checked by witchcraft and the soul is prematurely driven from the body, it does not know all that it should, and its condition is therefore miserable. . . . I well remember gossiping with a black friend in a plantation in the Calabar district on witchcraft, and he took up a stick and struck a plant of green maize, breaking the stem of it, saying, "There, like that is the soul of a man who is witched, it will not ripen now."¹¹ Both heathen and Christianized natives believe that witches can turn into animals and can damage with a glance. A teacher in one of the missions had to be dismissed, "because he was continually accusing the wife of a catechist of witchcraft and always hid his child from her."¹² In one locality all the old women are killed because they are believed to become servants of evil spirits.¹³

"Infinitely the larger proportion of death and sickness is held to arise from witchcraft, more particularly among the Bantu. Witchcraft acts in two ways: witching something out of a man or witching something into him. . . . Witches are continually setting traps to catch the soul that wanders from the body when a man sleeps; when they have caught this soul, they tie it up over a canoe fire and its owner sickens as the soul shrivels. This is a regular line of business, and not an affair of individual hate and revenge. The witch does not care whose dream-soul gets into the trap, and will restore it on payment. Also witch-doctors, men of unblemished professional reputation, will keep asylums for lost souls, i.e., those that have been out wandering and found on their return to their body that their place has been filled by a Sisa, i.e., a low class soul. These doctors keep souls and administer them to patients who are short of the article."¹⁴ A drawing of a soul-trap, as used on the Harvey Islands, is given by Bartels;¹⁵ in this region the trap is hung on a tree by which the victim must pass. When he sees it he thinks his soul is caught in it and is terrified into decline and death. In Senegal those suspected of witchcraft or relation with evil spirits are killed or terribly mutilated, and their corpses thrust into a hollow of a sacred tree. Often strangers who are travelling through the country—Arabs or Europeans—suffer this fate.¹⁶

In Central Africa "witchcraft reigns supreme. Should the suspicion of witchcraft fall upon any one, only trial by ordeal can free them."¹⁷ Those who practise the black art in Madagascar are "accustomed to go about naked, but this is, of course, done by night."¹⁸ The word for witch or wizard in Nyasaland implies the possession of something like the evil eye; such a person is also supposed to add to his or her supernatural powers by corpse-eating.¹⁹ "Sorcerers in Ukamba and Theraka are almost exclusively women, but in Kikuyu they are mostly men; in the former country witch-doctors are constantly employed at great expense, and I have known them to be summoned from the coast to exhaust the evil spirits, the treatment costing in one case fifty rupees for every one treated. In Kikuyu, sorcery may be practised by many methods, and certain people, such as hunters and smiths, may put witchcraft on others through the secrets of their professions."²⁰

Certain Africans have but little religion but they take great stock in witch-doctors, "who are continually fussing about supposed cases of witchcraft." This "smelling-out" of witches was a pest to the country. Sir Harry Johnston had to remove a prominent chief into exile "because he was continually accusing harmless individuals of witchcraft practices and having them executed."²¹ African cases include that of cutting open the body of a supposed witch—a woman on the verge of childbirth—while she yet lived in order to tear out and burn the gall-bladder in which the witch-power was supposed to reside.²² The sorcerer's body is not accorded burial after his execution.²³ Kabyle village-annals "teem with examples of fines imposed on sorceresses" who have caused the milk of their neighbors' cows to enter the udders of their own animals.²⁴ It is a well-known fact that the so-called *voodoo* practices of the negroes in the southern part of the United States came from Africa, by way of Haiti, about 1809.²⁵ Two negroes, regarded as witches by their associates, were arrested in Havana in 1906, charged with the murder of a white baby for the purpose of procuring the heart, which they prescribed as a poultice for the cure of barrenness.²⁶

Witchcraft-beliefs are strong in southern India. It is believed that, to revenge herself on a man, a witch "climbs at night to the top of his house and, making a hole through the roof, drops a thread down till the end of it touches the body of the sleeping man. Then she sucks at the other end and draws up all the blood out of his body."²⁷ Again, "witches and sorcerers often harm through direct contact. Thus, they generally have with them small rag bundles in which they carry small thin knives and nail-parers, besides nails, bones, and legs of chickens and other birds and animals. . . . A magician, thus called in, stands face to face before the patient so that the mouth and navel of the sorcerer respectively touch those of the patient; and in this posture he goes on reciting his mantrams or spells until the bone, leg, or nail-paring comes out of the mouth of the patient into his own mouth." It is thought that witches and *mātis* perform their magic feats with the help of some powerful spirits with which they have entered into compact and alliance. The control exercised is not that of the magician over the evil spirit harming a client but of one

powerful spirit, the magician's familiar, over another. "As the witch and the *māti* exercise their art for their own benefit and for harming others, they are believed to die invariably a miserable death. The *māti's sādhak*, or familiar, is an evil spirit which he holds under control; as soon as this spirit gets out of hand it brings ruin on the *māti* himself. Whereas the *pāhan*, or village-priest, the director of beneficent public magic, is respected and looked up to as the natural leader of the village, the sorcerer and witch are shunned and looked down upon as enemies of humanity. Here we see the tribal conscience of even such backward tribes as the Mündās and the Orāons of Chōtā-Nāgpūr, recognizing the immorality of anti-social private magic. And the brutal persecution of a suspected or declared witch, of which we now and again hear rueful stories in Chōtā-Nāgpūr, however much we may condemn it, is due not to any perversity of nature but to a lamentable ignorance of the causes of phenomena, and to a laudable desire to punish the anti-social mis-chief-maker."²⁸

In the Indian Archipelago women are more often witches than men, yet the power may be inherited in the male line. The head being regarded as the chief seat of the soul, the belief is that witches' heads detach from the body and, along with the vital organs which hang from them, fly about as vampires. They must get back to the trunk of the body before daylight, or the body decays. People susceptible to witchcraft are known by their shy demeanor and rolling eye-balls; such peculiarities lead to their elimination, through fear.²⁹ Probably the persons thus killed are defective. In New Zealand, "sorcerers were said to have the power of striking people dead by a look, and withering up trees and shrubs." Certain trees were thought to be enchanted men and able at times to move about. A story is told how "a sorcerer possessed of a magical wooden head caused the death of all who came within a certain distance of it. A brave warrior renowned for skill in magic resolved to rid the country of the pest. To gain his object he enlisted by the agency of powerful charms and incantations the services of thousands of spirits kindly disposed to mankind, to fight the malignant spirits who guarded the head. A battle ensued, the evil spirits were defeated, the fortress was taken, and the cruel sorcerer and owner of the magical head was put to death."³⁰

It is said to be almost impossible to exaggerate the Tlinkit's terror of witches. "It is for this reason rather than for hardness of heart or delight in human sufferings, that they torture them. They deem nothing too cruel for them because they hold them responsible for all human sufferings and death itself." In one case a young girl was tied up and after severe torture was compelled to admit that she had made witch-medicine. "She was then compelled to dive down and bury the concoction in the bed of the river, the natives believing that if this is done the bewitched will get well. . . . Witch-medicine is composed of several ingredients, such as hair and finger parings of the dead, herbs, and the tongues of birds, frogs and mice."³¹ When a man among the Kwakiutl thinks that he has been bewitched, he goes into the woods and prays to the supernatural spirits of certain trees to save him; he then goes to bed, without eating, that he may dream. "Men say that the dream comes from the spirits of the trees who give instruction to the bewitched man how to cure himself, and generally the man gets well after that." There is also a special

set of persons whose business it is to undo the wizard's work. They go through the same ceremonies as the wizard himself, but end by putting everything into the fire. Witchcraft among the Tsimshians is practised by people called *haldáwit*. "They steal a portion of a corpse, which they place in a small, long, water-tight box. A stick is placed across the middle of the box, and thin threads are tied to this stick. The piece of corpse is placed at the bottom of the box, and part of the clothing or hair of the person whom the witch desires to bewitch is tied to these strings. If it is in immediate contact with the body, the person will die soon; if it is hung a little higher, he will be sick for a long time. If hair is put into the box he will die of headache; if part of a moccasin, his foot will rot; if saliva is used, he will die of consumption. If the person is to die at once, the *haldáwit* cuts the string from which the object is suspended, so that it drops right on the corpse. This box has a cover, and is kept closely tied up. It is kept buried under the house or in the woods. After the witch has killed his enemy, he must go around the house in which the dead one is lying, following the course of the sun. After his enemy has been buried, he must lie down on the grave and crawl around it, again following the course of the sun, and attired in the skin of some animal. If he does not do this, he must die. Therefore people watch if they see any one performing this ceremony. Then they know that he is a witch, and he is killed." Weapons, tools, and other objects are bewitched by blowing water on them, though blowing water on the body serves as a protective device. Also, "a person may be bewitched by catching his breath in shredded cedar bark, which is put into the mouth of a frog."³² The Tsimshian suspected of witchcraft is tied up and starved until he confesses, when he is driven into the sea in order to expel the evil spirit. If he refuses to confess, he is starved to death or exposed on the beach at low tide until the water rises over him.

Among the Haida, "witchcraft was supposed to be due to mice which had got inside of a person's body, and if these could be expelled he might be restored to his right mind. There were said to be as many as ten of these mice sometimes, one of which (the last to leave) was a white one." As an illustration of the influence of witchcraft on religious rites, it may be stated that a special ceremony of the Hopi was undertaken to relieve the land from the bewitchment of winter. The charge of witchcraft was brought not only against individuals but entire towns and tribes, and in the Southwest the people of the Hopi pueblo of Awatobi were destroyed on this ground.³³ The belief is hard to down, and now and then the newspapers report that some Indian has been tortured to death as a wizard.³⁴

"Witchcraft played a very great part in the whole of ancient Egyptian life."³⁵ In the Euphrates valley from the earliest times to which our knowledge reaches demonism was the real religion. Demons in inconceivable hordes surrounded men and malignantly vexed or tormented them; but men could by sorcery control the demons and use them to do ill to other men. The incubus and succubus demons are met with in the oldest documents of history so that we find here already the notion of sex-commerce between demons and human beings.³⁶ The same notion prevailed among the ancient Hebrews,³⁷ who made

many pronouncements against witchcraft and ordered that "a man also or woman that hath a familiar spirit, or that is a wizard, shall surely be put to death."³⁸ The Romans held such beliefs.³⁹ The Christian Church of the Middle Ages led mankind back to witchcraft, for in the seventh, eighth, and ninth centuries it had been rejected. Great numbers of people practised sorcery and witchcraft. They were taught by the church that magic and sorcery were wicked but that they were real ways in which objects of human desire could be obtained. Thousands of men and women were ready to perpetrate the sin to gain their wishes; they therefore performed the acts which they understood would be effective to enter into relations with Satan, to destroy enemies, to win love or wealth, and to attain to objects of ambition.⁴⁰ Witch-epidemics broke out in nearly every country, and in Germany it is estimated that in a period of about two hundred years over one hundred thousand were executed.⁴¹

Among the Germans, "miracle is wrought by honest means, magic by unlawful; the one is *geheuer* (blessed, wholesome . . .), the other *ungeheuer*. . . . It is so with all nations, and was so with our ancestors: by the side of divine worship, practices of dark sorcery, by way of exception, not of contrast. The ancient Germans knew magic and magicians; in this foundation first do all the later fancies rest." Even the earliest antiquities impute witchcraft pre-eminently to women. The author⁴² from whom we are quoting concerning the ancient Germans looks to "all the circumstances external and internal" to explain this belief about women. "The various ways of naming magic have led us to the notions of doing, sacrificing, spying, soothsaying, singing, sign-making (secret writing), bewildering, dazzling, cooking, healing, casting lots. . . . To woman, not to man, was assigned the culling and concocting of powerful remedies, as well as the cooking of food. Her lithe soft hand could best prepare the salve, weave the lint and dress the wound; the art of writing and reading is in the Middle Ages ascribed chiefly to women. The restless lives of men were filled up with war, hunting, agriculture and handicrafts; to women experience and convenient leisure lent every qualification for secret sorcery. Woman's imagination is warmer and more susceptible, and at all times an inner sacred power of divination was revered in her. Women were priestesses, prophetesses, their names and fame are embalmed alike in Old-German and Norse tradition; and the faculty of somnambulism still shows itself most of all in women. Then again, looked at from one side, the art of magic must have been chiefly monopolized by *old women*, who, dead to love and labour, fixed all their thoughts and endeavours on hidden science. . . . On all this put together, on a mixture of natural, legendary, and imagined facts, rest the mediaeval notions about witchcraft. Fancy, tradition, knowledge of drugs, poverty and idleness turned women into witches, and the last three causes also shepherds into wizards. . . . Sorceresses have also at their command a bird's shape, a feather-garment, especially that of the goose, which stands for the more ancient swan, and they are like swan-wives, valkyrs, who traverse the breezes and troop to the battle."

It is noteworthy that "it is *precisely salt* that is *lacking* in the witches' kitchen and at devil's feasts, the Church having now taken upon herself the hallowing and dedication of salt. Infants unbaptized, and so exposed had salt placed beside them for safety. . . . The emigrants from Salzburg dipped a wetted finger in *salt*, and swore. Wizards and witches were charged with the *misuse of salt* in baptizing beasts. I think it worth mentioning here, that the magic-endowed giantesses in the Edda knew how to grind, not only *gold*, but *salt* . . . : the one brought peace and prosperity, the other a tempest and foul weather." Again, with respect to the resorts of witches: they "invariably resort to places where formerly justice was administered, or sacrifices were offered. Their meeting takes place on the *mead*, on the *oak-sward*, under the *lime*, under the *oak*, at the *pear-tree*. . . . Sometimes they dance at the *place of execution*, under the *gallows-tree*, in the *sand-pit*. But for the most part *mountains* are named as their trysting-places."

These references to woman's function in magic, to salt, and to the several fetish locations and objects illustrate beliefs treated elsewhere,⁴³ which, in turn, throw light upon the passages just cited, enabling the reader to distinguish, among other things, between the actual and the fanciful in the passage quoted concerning woman. "After the conversion, sorcery links itself with the discredited gods, both foreign and domestic; not yet at once with the Devil, the idea of whom had scarce begun to take root among the people. The witches are the *retinue of former goddesses*, who, hurled from their thrones, transformed from gracious adored beings into malign and dreaded ones, roam restlessly by night, and instead of their once stately progresses can only maintain stolen forbidden conferences with their adherents."

Belief in witchcraft is not yet dead, nor even dormant. Among the women in a Scots village community in the fifties and sixties was a "witch," who had the evil eye and was shunned by everyone. "In her youth she had been brought before the Kirk Session, charged with a lapse from virtue. The 'ruling elder,' a well-to-do farmer, admonished her more sharply than she relished, and she told him that one day he would suffer for his severity. Thereafter, every night, so the story went, she pronounced upon the head of this farmer one of the imprecatory psalms. Within a year and a half an epidemic of foot-and-mouth disease struck the district, the polled Angus herd of the farmer was stricken, and he was ruined. Everyone believed that the witch had brought her curse to bear upon him. Intelligent the people were in many ways . . . yet in general they entertained some primitive superstitions. My aunts Elspeth and Mary, who were by no means wanting either in acuteness of mind or in education, have been known to have their churn carried across a running stream so that their butter might be freed from witchcraft. Such harmless gaucheries are by no means the last, and may well be considered as the least, of the evidences of superstition."⁴⁴ Current newspapers in this twentieth century afford evidence that belief in witchcraft still flourishes and that witch-doctors still do business.⁴⁵ Dr. Alice Hamilton⁴⁶ writes concerning the belief in witchcraft among the Italians in Chicago: "In my twenty-five years at Hull House I have heard many a weird and dramatic tale of this hidden side of life in the Italian colony." Uncommon sickness is sometimes laid to this cause; an Italian woman once said

to her: "If the doctor can cure you, it's a sickness. If he can't do nothing for you and the more medicine you take the worster you are, you're witched." Love-potions and charms are numerous; to make or remove a charm one may consult *il mago* or *la maga*—the witchman or witchwoman. As an illustration of love-magic, the case is cited of a girl who bewitched a man by putting into a glass of wine three drops of her own blood and giving it to him to drink. "After that he was helpless. Her blood within him drew him to her and, fight as he would, he had to follow her." Again, "Vincenzo was to marry Carolina, but Concetta wanted him, and when she found she could not get him she took a doll and called it Vincenzo. She stuck a pin into it every day and each time she did so a stroke went through Vincenzo's heart. Then, when the doll was full of pins, she threw it into the Lake. At this point Vincenzo's mother consulted a famous *maga* who told her that the only way to save her son would be to find the doll and pull out all the pins. How could the poor woman find a doll in Lake Michigan? So of course Vincenzo died."

§310. The Fetish-Man.

A GIRL was once sick in a village in British New Guinea. It was alleged that a shaman from another district had visited her, yet it was acknowledged by all that he was at that time in his own village, some miles from where the girl was. It was obvious to Strong¹ that the magician could not be in two places at once; "it seemed equally obvious to the natives that he could. Moreover, it was alleged that a footprint under the house was proof positive, because it was large like the footprint of the magician. . . . It was alleged that a native had been driven into a state of maniacal excitement because a brother miles away at Ioma had come and thrown a stone at him. The stone was produced—apparently identical with hundreds of other small stones lying around. It was admitted by all that the brother was miles away at Ioma, but at the same time contended that he had come and thrown the stone." A person with such power must be extraordinary. In the Mekeo district, "the prevailing belief was that the only way of rendering an evil magician harmless was to kill him. If he went to gaol he was only temporarily harmless, presumably because he would not have facilities in gaol for performing magic." Among the Fijians, "as soon as the god was supposed to have entered the priest, the latter became violently agitated, and worked himself up to the highest pitch of apparent frenzy, the muscles of the limbs seemed convulsed, the body swelled, the countenance became terrific, the features distorted, and the eyes wild and strained. In this state he often rolled on the earth, foaming at the mouth, as if labouring under the influence of the divinity by whom he was possessed, and, in shrill cries, and violent and often indistinct sounds, revealed the will of the god. The priests, who were attending, and versed in the mysteries, received, and reported to the people, the declarations which had been thus received."²

In the Andaman Islands, "these quasi-seers are invariably of the male sex, and it sometimes even happens that a young boy is looked upon as a 'coming,' . . . their position being generally in the first instance attained by relating an extraordinary dream, the details of which are declared to have been borne out subsequently by some unforeseen event, as, for instance, a sudden death by

¹ In JAI, XLIX, 295.

² Ellis, *Polyn. Researches*, I, 373-374.

accident." The seer "is credited with the power of communicating in dreams with the invisible powers of good and evil, and also of seeing the spirits of the departed, or of those who are ill. On the occurrence of an epidemic in an encampment, he brandishes a burning log, and bids the evil spirit keep at a distance; sometimes, as a further precaution, he plants stakes a few feet high in front of each hut."³

A certain South African negro was accredited with the power of understanding the speech of birds. "His friends thought that he had been chosen by the ghosts to be a magician or doctor and ascribed the fact that he did not attain to this dignity to a strife between the ghosts of his own house and those of his maternal uncle's; of these the latter wanted to confer on him the capacity, but the former resisted. Thus he had become only a sage and a dream-interpreter."⁴ The activity of the bone-thrower in South Africa is more or less confined to sickness among cattle or human beings and to lost property and food. "It may be practised by either male or female, but is generally handed down from father to son. The son, when young, is given certain medicines to drink. At night he dreams that he finds out wonderful things by means of the bones. The father continues to give him medicine, and in due time the son, after he has proved to his father his ability to discover the cause of, and cure for, the sicknesses of people and animals, is proclaimed a bone thrower. To test his capabilities a stick or stone is hidden in a hut or corn bin in the kraal, or in the fence surrounding it. The discovery of this stick or stone is another proof of the power of the bones to reveal the thoughts of men and women."⁵ In West Africa, "One cannot see his own bush-soul unless he is an Ebuntup, or sort of second-sighter. Ebuntupism is rare, and if one does happen to possess the gift, it is discovered by the presiding elders during initiation to the secret society of the tribe. When it is discovered, the presiding elders strongly advise that its owner enter the medical profession and become a witch-doctor, as the profession is a paying one, although dreadfully expensive to one's parents, for it has to be carried on by the established witch-doctor."⁶ Again, soothsayers are such by heredity; if the father was a soothsayer, the son might not be, but only the grandson, to whom his grandfather appeared in a dream, urging him not to let the profession lapse.⁷ Among the Fan the fetish-man is the special minister of the religious life; beside him, and striving in the shadow against him, is the sorcerer, a man of the extra-legal or illegal cult.⁸ Black art is practised in the Upper Congo but is condemned by the natives, and its votaries have to pursue it in secret, else the hatred of the whole countryside would fall upon them. The medicine-man's white art is of a quite different character; it is used to cure people. Such practitioners "sometimes receive instruction from other witch doctors, but their fame, and consequently their wealth, depend upon their own craftiness and power to gull the people. Half-daft persons, and those who had recovered from insanity, were treated with much fear, and often spoken of as *nganga* of much power."⁹ Magicians vary in importance among the Ba-Mbala, and also their prices in direct ratio. One such, if called by his name, replies *Gale*, a word the meaning of which is a great secret and is known to no one. "When he laughs he hisses loudly between his teeth, a performance which greatly

impresses the natives." Fetishes are carved from wood, but receive their power from the *Kissi* applied by the magician; "this *Kissi* is composed of clay or earth which he has inherited from his predecessors." One magician claims to be the inspired servant of his *Kissi*, "and alleges that when divining he does not know what he says, the *Kissi* speaks through him." Among the Ba-Yaka, the chief is the principal magician, but any man who possesses many fetishes with the requisite *Kissi* can become one.¹⁰ The greatest of the Baganda deities is Mukasa; no suppliant is ever allowed in his hut, one must wait in an outer room for Gugu, the chief priest, to go in and inform Mukasa of the request, and also for the god to possess the priest. "The priest loses his identity and the god incarnated speaks and answers questions put to him and advises the suppliant how to act; when the interview is over the priest goes to the back of the hut and the ghost of Mukasa leaves him and returns to the hut and the priest is free to leave the enclosure if he wishes. During the time the priest is possessed by the *Lubare* [deity] he does not leave the hut. The priest is not allowed to drink beer, but must smoke a pipe of tobacco which prepares him for the reception of the ghost. When possessed he is able to lick hot iron, rub it with his hands, or strike his body with it and receive no harm."¹¹ Among some East African tribes, "a man can only become a medicine man if he is in direct communication with the *aiimu*, or ancestral spirits." Such a person points at a person or an object with the fingers extended but with the first and second joint doubled, for "if he pointed at a person with his finger he would be liable to an accusation of designs on the life of the person pointed at."¹² Among the Berbers of Tunis and Algiers, an ascetic who leads a pious, secluded, abstemious life is regarded as holy and is termed a marabout. Even the grave of such an one would shortly be called by the same term.¹³

The Soyots of the upper Yenesei are nominally Lamaists and Buddhists, but "without doubt shamanism still has the greatest authority." The lamas, like the shamans, have drums, flutes, and trumpets. The oldest of the three lamas is peculiar in that, in contrast to most Soyots, he has a long, coal-black beard. The shaman's job is inherited by sons or daughters; many women function as such. Their chief job is to prophesy and to drive out evil spirits from the sick; they hold converse with the dead in so doing. Their garb has pieces of iron on it and they are permitted to put on new ribbons for every time they have been in connection with the spirits, so that one can tell from his dress how experienced a shaman is. The iron attachments jingle as the shaman circulates about. It is very hard for a stranger to get such an outfit; to part with such would be like selling one's soul and endangering the community. A shaman must not operate on days of even number; overcast days are not good for a shaman's passage through the air. The fees of these specialists are usually three or four kroner (a krona is \$2.68); but if one is only slightly ill, he may have a "half-shamanization."¹⁴

Amongst the Yakuts the function of shaman is not hereditary; man became devoted to the service of the spirits without willing it. The guardian spirit of a deceased shaman seeks to find a place in somebody who belongs to the kin of the deceased. He who is to be a shaman begins to show signs of possession;

has fits of unconsciousness; runs about the woods; lives on the bark of trees; casts himself into fire and water; seizes weapons and wounds himself—so that his relatives take notice of him and recognize by these signs that he will be a shaman. They name him after the old shaman.¹⁵ It is reported that the tendency of certain Yakuts to mental disease is quite extraordinary. "The Yakut woman is *without exception* hysterical," and is highly suggestible. One form of hysteria (*menerik*) appears to be epidemic and is characterized by paroxysms; it is artificially induced by the shamans. Hysteria major is also to be seen.¹⁶ Marco Polo describes hallucinations of sight and sound in deserts, which often mislead travellers; no wonder the thought of the desert-dwellers turns to sorcery.¹⁷ Miss Czaplicka,¹⁸ generalizing about shamanism among all the Siberian tribes, states that "everywhere the supernatural gift is a necessary qualification for becoming a shaman." Among the Chukchi such persons are called "those with spirit." Although hysteria lies at the bottom of the shaman's vocation, yet at the same time the shaman differs from an ordinary patient suffering from this illness in possessing unusual power of mastering himself in the periods between the actual fits, which occur during the ceremonies. "He must know how and when to have his fit of inspiration, which sometimes rises to frenzy, and also how to preserve his high 'tabooed' attitude in his daily life." Whether his calling be hereditary or not, "a shaman must be a capable—nay, an inspired person. Of course, this is practically the same thing as saying that he is nervous and excitable, often to the verge of insanity. So long as he practises his vocation, however, the shaman never passes this verge. It often happens that before entering the calling persons have had serious nervous affections. . . . To be called to become a shaman is generally equivalent to being afflicted with hysteria; then the accepting of the call means recovery." The following is a typical statement as to how a person became a shaman: "When I was twenty years old, I became very ill and began to 'see with my eyes, to hear with my ears' that which others did not see or hear; nine years I struggled with myself, and I did not tell any one what was happening to me, as I was afraid that people would not believe me and would make fun of me. At last I became so seriously ill that I was on the verge of death; but when I started to shamanize I grew better; and even now when I do not shamanize for a long time I am liable to be ill." Generally in the features of a shaman there is something peculiar which enables a stranger after short experience to distinguish them from the other folk. The Chukchi are well aware of the extreme nervousness of their shamans and express it by a term meaning, "he is bashful." "By this word they mean to convey the idea that the shaman is highly sensitive, even to the slightest change of the psychic atmosphere surrounding him during his exercises." Examples are cited to bear this out. "The Altaians believe that no one becomes a shaman of his own free will; rather it comes to him *volens volens*, like a hereditary disease. They say that sometimes when a young man feels premonitory symptoms of the call, he avoids shamans and shamanistic ceremonies, and by an effort of will occasionally cures himself. The period when the shamanistic call comes to the descendant of a shamanistic family is known as *tes bazin-yat*, 'the ancestor (spirit) leaps upon, strangles him.'" A child

18 *Aborig. Siberia*, 169, 170, 172-174, 178, 185-187, 190, 194-196, 197-198, 199, 200, 201-202, 243-245, 320.

chosen to be a shaman is recognized among the Buryat by the following signs: "He is often absorbed in meditation, likes to be alone, has mysterious dreams, and sometimes has fits during which he is unconscious." According to the native beliefs, the soul of the child is then in process of being trained. "Living in the dwelling of the gods, his soul, under the tutelage of deceased shamans, learns the various secrets of the shaman's vocation; the soul must remember the names of the gods, the places where they live, the means by which they may be propitiated, and the names of the spirits which are subordinate to the high gods. After a period of trial the soul of the child returns to the body, which for a time resumes its normal life. But on his reaching adolescence, peculiar symptoms show themselves in the person who has undergone these experiences. He becomes moody, is easily excited into a state of ecstasy, leads an irregular life, wandering from *ulus* to *ulus* to watch the shamanistic ceremonies. He gives himself up with great earnestness to exercises in the shamanistic arts, for which purpose he segregates himself, going to some high mountain or into the forest, where, before a great fire, he calls on the spirits, and afterwards falls into a swoon. . . . If the future shaman belongs to a poor family, the whole community helps to procure the sacrificial animals and other things which are indispensable for the ceremonies. . . . But very few shamans go through all these purifications; most only undergo two or three; some, none at all, for they dread the responsibilities which devolve upon consecrated shamans. To a fully consecrated shaman the gods are very severe, and punish his faults or mistakes with death." The means of education among the Samoyed has been described as follows: "Two *tadibey* (shamans) blindfolded him with a handkerchief, and then beat him, one on the back of the head and the other on the shoulders, till his eyes were dazzled as with too much light, and he saw demons dancing on his arms and feet. It must be remembered, of course, that he had been taught beforehand about the Samoyed world of spirits. In former times Lapland was a school of shamanism, and all neighbouring tribes sent youths thither to be trained as shamans."

The smith, the authoress continues, who made the ornaments for the shamans' garments acquired some shamanistic power. "He was in contact with iron, which was of magical importance, and power came to him through this contact. (The smiths were, like the shamans, 'black' and 'white,' but among the Yakut one hears more of 'black' smiths than of 'white.') Thus the similarity between the vocation of a shaman and that of a smith becomes close, especially when the calling of smith descends through many generations in the same family. Smiths come to be considered as the elder brothers of shamans, and then the differences between them finally disappear, the smith becoming a shaman." This has been characteristic of the smith in other places.¹⁹ "The smith and the shaman are of one nest," says a proverb of the Kolyma district. "The smiths also can cure, advise, and foretell the future, but their knowledge does not possess a magical character; they are simply clever people, who know much, and who possess 'peculiar fingers.' The profession of smith is generally hereditary, especially in the north. It is in the ninth generation that a [hereditary] smith first acquires certain supernatural qualities, and the more ancient his ancestry, the more marked are these qualities. The spirits are generally afraid of iron hoops and of the noise made by the blowing of the smith's bellows. . . . If the smith who makes a shamanistic ornament has not a sufficient

number of ancestors, if the noise of hammering and the glare of the fire does not surround him on all sides, then birds with crooked claws and beaks will tear his heart to pieces."

Miss Czaplicka considers the essential meaning of the word shaman. "In Sanskrit *śram* = to be tired, to become weary; *śramana* = work, religious mendicant. In the Pali language the word *samana* has the same meaning. These two latter words have been adopted by the Buddhists as names for their priests. But, according to Banzaroff, the word *shaman* originated in northern Asia: *saman* is a Manchu word, meaning 'one who is excited, moved, raised'; *samman* (pronounced shaman) and *hamman* in Tungus have the same meaning. *Samdambi* is Manchu: 'I shamanize,' i.e., 'I call the spirits dancing before the charm.' From the above we see that the essential characteristic of a shaman is a liability to nervous ecstasy and trances." Women are more prone to emotional excitement than men and many become shamans. "The woman is by nature a shaman," declared a Chukchi shaman to Bogoras. She does not need to be specially prepared for the calling, and so her novitiate is much shorter and less trying. Nearly all writers on Siberia agree that the position of the female shaman in modern days is sometimes more important than that occupied by the male. Taking into account the present prominent position of female shamans among many Siberian tribes and their place in traditions, together with certain feminine attributes of the male shaman (such as dress, habits, and privileges, which will be discussed later) and certain linguistic similarities between the names for male and female shamans, many scientists have been led to express the opinion that in former days only female shamans existed, and that the male shaman is a later development which has to some extent supplanted them. "The gift of inspiration is thought to be bestowed more frequently upon women, though it is reputed to be of a rather inferior kind, the higher grades belonging rather to men. The reason given for this is that the bearing of children is generally adverse to shamanistic inspirations, so that a young woman with considerable shamanistic power may lose the greater part of it after the birth of her first child." Thus does motherhood interfere with a career. The position of women as shamans is in accordance with what we have noted in respect to sex-differences and sex-destiny.²⁰

The Siberian case is extensive and conclusive, but further instances may be briefly cited to show how generally the shaman is a fetish-man. Certain Todas have the power of divination, others are sorcerers, and others again have the power of curing disease by means of spells and rites, while all three functions are quite separate from those of the priest or dairyman. Before a dairyman enters upon office he has to undergo certain initiatory rites, which may fitly be spoken of as ordination-ceremonies. During the divining process the prophet is "in a distinctly abnormal condition of frenzy."²¹ Among the Sema Nagas the *thumomi* is a seer, an interpreter of omens, a dreamer, and a clairvoyant. "Second sight he no doubt often has in some degree or other, and since it is an intermittent gift, he must simulate it when absent, for the sake of his reputation, and descend to deception just as a European medium does. In general the *thumomi* is in some degree possessed and is sometimes subject to fits somewhat resembling epilepsy." He is usually skilled in legerdemain. "If a man is ill or lame he will often go and consult a *thumomi*, who will tell him that there is 'dirt' in his body and will, after rubbing the injured place or

²⁰ §§58 ff., of the text.

²¹ Rivers, *Todas*, 144, 153, 249, 253.

sundry and divers parts of the patient's body, extract, either by mouth or by hand, bits of stone, scraps of bones, teeth, chewed leaves, brown juices, or any old thing from the patient's body, leaving no mark where it came out."²² The Saora "Kudang" communicates with the unseen world by some power which the ordinary Saora is not supposed to understand in the least and which is hereditary. He is the medium of communication between the spirits of the deceased and the living. "The Kudangs think they are to the manner born, and will reply, 'I do not know; my father, and his father before him, was a Kudang. I have always been a Kudang,' or words to that effect, if asked how he learned his trade."²³ In Manipur fitness for the post of priest or priestess is demonstrated by the spirits taking possession of one, throwing him into a species of fit, during which he babbles incoherently.²⁴ Among certain groups in India, as soon as priests begin to read the Veda, they dance, violently twist the limbs, roll their eyes, and foam at the mouth, thus becoming "possessed" and under the weather-god's control.²⁵ Among the Palaungs, a man or woman who has the power of projecting his or her spirit into another person's body is called a *bre*. "People with this power are greatly dreaded, and for this very reason are treated with great politeness. They live apart by themselves in the village, generally at one end, and only marry among themselves; their power is said to be hereditary. If a *bre* comes to a house and says, 'Friends have come to my house, give me, please, some rice or vegetables,' the things required would be given at once, without payment. Money is generally offered by the *bre*, but invariably refused, as no one would take money from a *bre*, for fear lest an evil influence should be transmitted with it. . . . When the wise man thinks that a *bre* has entered into a person who is mad or who has delusions, he gives him medicine, sprinkling some of it on the patient's face, saying, 'I order thee to say who thou art.' The patient generally gives as an answer the name of some person, either that of a living *bre*, of a person who is not known as a *bre*, or of the spirit of some one who is dead. In the latter case offerings must be made on the grave of the dead person. . . . If, however, the patient gives the name of a *bre*, the wise man proceeds to question him, saying, 'What dost thou wish to have?' The patient may answer nothing, or may say that he wants money, or some other thing. This request is supposed to come from the *bre* speaking in the patient. In that case friends go to the house of the suspected *bre*, taking with them the money or object desired. . . . The *bre* enters the room of the patient, holding the money, or the thing demanded, and says, 'Let us go, we have what we wanted.' . . . The *bre*, when a part of his spirit is supposed to be in the body of another person, appears tired and sleepy. The spirit or life of a person is made up of many separable parts, some may go out while others remain; so with the spirit of the *bre*, some part may leave his body and for a time may remain away; but if too many parts of his spirit go out, he will die."²⁶

That the people of the Indian Archipelago "preferably choose the impotent for shamans has its natural reasons. . . . They 'are usually delicate of form and have a pale, languishing appearance, weak eyes, and a hoarse voice'—persons thus who certainly are more than others susceptible of being artificially brought into ecstasy."²⁷ It is stated, however, that in central Borneo

there is no especial selection of neurotic subjects for the priesthood.²⁸ Some Bornean priestesses are "self-appointed, hysterical girls."²⁹ Among the Dusuns there are regular fixed fees for young women wishing to enter the ranks of the initiated, their instruction covering a period of three months.³⁰ The chief power of the Sakai magician in earlier days consisted in his universally recognized attribute of being able to assure the health of his *clientèle*. "No demon could injure a magician, and the latter's death (no matter from what cause) was regarded solely as the act of heaven. . . . In addition to his staff, the Sakai magician also occasionally employed a sprinkling-brush with which, in the performance of certain ceremonies, he sprinkled the demons."³¹ Among some tribes in the Philippines the shamans are mostly women; demons utter their will through "diabolic women" priests, often demanding the lives of innocent beings.³² In the Gilbert Islands the priest's person was sacred.³³

Among the Samoans, hunchbacks, epileptics, and others having any malformation or peculiarity of temper are suited to the office of shaman; it is also hereditary in the families of some chiefs.³⁴ "The priests in some cases were the chiefs of the place; but in general some one in a particular family claimed the privilege, and professed to declare the will of the god. . . . He fixed the days for the annual feasts in honour of the deity, received the offerings, and thanked the people for them. He decided also whether or not the people might go to war." On Tracey Island, "when the priest became 'red,' by which they meant flushed and excited, it was a sign that the god had something to say."³⁵ In the Friendly Islands, high priests could marry only the daughters of the king; their sons were priests, their daughters analogous to vestal virgins, not being allowed to marry.³⁶ Evidently both the royal and the priestly heredity carried a large element of the spiritual. Throughout Central Polynesia, the great chiefs or kings laid claim to actual personal sanctity, and sometimes even divinity. "It was considered dangerous to approach them, because of the deadly influence supposed to radiate from their persons. . . . not only that they might not be touched, but that their food had to be thrown to them; no one might eat the food they had left, and no one might sit beside them, a vacant place being always left on each side of the seat of honour on which they sat. . . . It would be sacrilege to disobey, hurt, or even touch him. . . . There were in Tonga certain contact taboos which apparently applied only or specially to the *tuitonga*" (priestly king). If he entered the house of "a subject it would become taboo and could never be inhabited by its owner; so there were particular houses for his reception when travelling. . . . The persons of the Tahitian kings were regarded as scarcely less sacred than the personifications of their deities. . . . The ground upon which the king and queen trod, even accidentally, became sacred, and it was for this reason that, when travelling on land outside their own private estate, they had to be carried on the shoulders of bearers, never for a moment letting their feet touch the ground, which, had they done so, would at once have become sacred. . . . No one was allowed to touch the body of the king or queen; and any one who should stand over them, or pass a hand over their heads, would be liable to pay for the sacrilegious act with his life. . . . Chiefs were sometimes taboo

for several days, and even months, remaining in a state of absolute inactivity, not being allowed to use their hands to eat, but being fed by others." Numerous examples on these points are given. A special body of Society Island officials, known as *harepo*, were the depositories and preservers of the sacred traditions. "The memory of these men was astonishing, and they could go on for whole nights, reciting these ancient traditions, word for word. On solemn occasions they would walk slowly at night-time round the temples and other sacred places, reciting all the time; and it was from this practice that they derived their name of *harepo*, or walkers in the night. If at any time they made a single mistake, or hesitated for a moment, they at once stopped, and returned home; and if their promenade had had as its aim some enterprise in which they wished to interest the gods, that single mistake sufficed to make them abandon the project, and not return to it; for success was no longer deemed possible." This is similar to the situation in Samoa where, if the priest stuttered over a single word in his prayer to the god, prior to war, it was a bad omen. It was the belief that "no one could have the power unless he had inherited it from his father; for we are told that, when a *harepo* was dying, his last moments were carefully watched; and the instant he expired they put to his mouth the mouth of the child who was to succeed him, thus making the latter, as it were, inhale the powers of the dying at the moment when his soul was about to leave the body." The extraordinary proceedings, with contortions and foaming at the mouth, of persons who were under the inspiration of a god are reported from a number of islands.³⁷ In New Zealand, Cowan³⁸ heard of numerous instances of mesmerism or hypnotic suggestion or whatever it may be, and "it has not yet been quite lost to the race. Telepathic powers the Maori *tohunga* undoubtedly had, and the power of projection of the will, by which he was enabled to afflict his enemies fatally. Many of the singular stories told of the occult powers of the adepts in *tohunga*-ism are obviously exaggerations and fables, but there is sufficient of fact left to suggest that the Maori priest enjoyed certain faculties which were widely possessed in the early stages of human history, but which through disuse—and civilization—have been lost to common knowledge."

The religion of the Eskimo appears to be "a belief in a multitude of supernatural beings, who are to be exorcised or propitiated by various observances, especially by the performances of certain specially gifted people, who are something of the nature of wizards."³⁹ Among the Tlinkits "the office of shaman may be inherited, like the ancient priesthood, but not necessarily so. As a rule, one must be consecrated to the office from infancy, and no comb, scissors or water must ever touch his hair. The longer and more matted the hair the greater the power the doctor is supposed to possess. For this reason the hair of an *iklet* was jealously guarded. If shorn of it his power vanished, and he was no longer consulted as a doctor. . . . They spent long periods in the forest in absolute solitude, supposedly in communication with evil spirits. They also had periods of fasting, and their diet differed in many respects from that of others. They ate the bark of devilclub and portions of bodies of the dead. They also procured and held in the mouth the finger of a dead *iklet*."⁴⁰ Among the Ten'a, "a man or woman, who has at his or her command one of these familiar spirits, is a medicine-man or a medicine-woman, as the case

³⁷ Williamson, *Cent. Polyn.*, II, 409, 419-420; III, 72-82.

may be. . . . The Russians designated them by the word *shaman*, which, according to Ivan Petrof, is 'a Kamchatkan term for sorcerer or medicine-man, used by many tribes who once were subject to Russian influence.' There are about five times as many men as women in this category. Such a person does not choose his own spirit, but *vice versa*. "Some, indeed, are naturally predisposed to the calling. A peculiar deformity, which singles a man out of the vulgar crowd, is a sign of vocation. Thus the cross-eyed, the cripple, the lame, the sterile women, are more apt than others to be called to the devil-craft." One of the most famous of these shamans had "a sort of an appendix, probably a superficially located cyst, about the size and the form of the thumb, hanging from his breast." The calling to the profession is by the finding of a *karunih*, a small round body like a bead, to which is attached a spirit which becomes the familiar spirit of the new medicine-man. "A shaman is always supposed to die in the same way as he makes other people die, i.e., his soul is eaten up by a spirit. I could obtain no particulars as to how this eating is done, but it is always the first and the last saying which one hears about a dying or dead medicine-man: 'A spirit is eating up his soul,' they will say: or 'his soul was eaten by a spirit.' Such is the summary of their funeral orations." Two shamans who were held in great repute and who undoubtedly were intelligent men, died in 1900, a Catholic priest assisting them during their last illness. "They both owned to him that they had never believed in their magical power, that they had been anxious for a long time to get out of their awkward situation, but were morally constrained to persevere in it by the fear of incurring universal reproof, if they had given it up. People, they alleged, would have considered them as mean and stingy fellows who refused to help the sufferers when they had the means to do so."⁴¹

When treating a patient or otherwise performing, a Northwest Coast shaman was supposed to be possessed by a supernatural being whose name he bore and whose dress he imitated. In general among the Indians north of Mexico, "there were two sorts of shamans—the shaman proper, whose functions were mainly curative, and the 'dreamer,' who communicated with spirits and the ghosts of the dead. All shamans were also dreamers, but not the reverse. During the winter months the dreamers held meetings in darkened houses, where they spoke with the spirits much like modern spirit mediums."⁴² Among the Omahas there are mystery designs and decorations, to be used only by members of one of the orders of shamans. "The right to use such designs on a buffalo robe, blanket, tent, etc., must originate with one who has had a vision or a dream in which the mystery objects are manifested."⁴³ Any young man can become a doctor among the Apaches. His friends must be convinced that "he has the gift," that is, he must show that he is a 'dreamer of dreams, given to long fasts and vigils, able to interpret omens satisfactorily, and do other things which will demonstrate the possession of an intense spirituality. Then he begins to withdraw temporarily from the society of his fellows and to devote himself to long absences, particularly by night, in the "high places" which were interdicted to the Israelites. An Indian will climb to apparently inaccessible heights on a mountain to make his medicine."⁴⁴ With the Cheyenne Indians "a man cannot become a doctor by himself; when he receives the

⁴³ Dorsey, in BAE, XI, 394.

⁴⁴ Bourke, in BAE, IX, 452.

⁴² Swanton, "Shamans," in HAI, II, 522, 523.

power, his wife—who afterward is his assistant—must also be taught and receive certain secrets. . . . If the wife of the man who is receiving the power does not wish to become a doctor, the man must find another woman to act with him. A man may become a doctor through a dream, thus receiving spiritual power directly from above, but even in this case he must have a woman to help him. Even though he receive his power through a dream, he must still go to another doctor to be taught certain things.”⁴⁵ Among one of the southwestern tribes, the chief, who is also chief priest, is blind. “It is presumed that after having been chief many years, he put out his eyes, according to a custom of the Indians, in order to become chief priest among them.”⁴⁶ Iroquois women are reported traditionally to have been magicians. Among the aborigines of the Mosquito coast in Central America women often serve in the same capacity, and are said to exercise great power.⁴⁷ Among the Araucanians “the witchdoctor, through his training, mode of life, and natural temperament, is generally a person of a highly strung nervous disposition, to whom the faculty of throwing himself into a cataleptic or hypnotic trance is a second nature. When called in to discover the secret enemy who has caused the death of a certain individual, by the aid of powerful drugs, intensely concentrated attention and severe bodily exercise, he works himself up to such a pitch of nervous excitement that he finally collapses into a state of coma or trance, which frequently lasts for several hours. During this trance, any person or being which passes before his mind’s eye is considered to have been the offender and is speedily denounced, there being no appeal from these decisions. Naturally enough, this gives the *machi* an immense power, as it offers him an opportunity for wreaking vengeance on anyone who has fallen into his bad books. But these opportunities are seldom taken advantage of, as it creates a blood feud with the kindred of the accused.”⁴⁸

The Nazarite was “one separated,” a Jew who bound himself by a vow to a life of purity and devotion to Jahweh. Samson is the oldest example. To “separate themselves unto the Lord,” the Nazarites had to abstain from wine, let their hair grow, and come at no dead body. In the post-exilic period they were very numerous, even among women, and in the time of the Maccabees exhibited symptoms such as later characterized the mediæval crusades.⁴⁹ In Rome the priests of the Great Mother of the Gods were called sorcerers, dwellers in caves. They and the priestesses, who were just as common, “often dedicated to the goddess their locks, which they had tossed wildly in the frenzied dance.”⁵⁰ Cybele’s dark-robed priests and priestesses were familiar figures in the Augustan age, “gashing themselves like the Galli of Magna Mater, catching the blood in shields, and dashing it over their train of followers who believed in its powers of expiation.”⁵¹

Sex-reversal. As shedding light upon the abnormal, or at least peculiar, character of the shaman, a number of cases of sex-reversal could be cited. This practice of men posing and living as women, and *vice versa*, is also related to religious sexual perversions. In northeast Siberia the shamans put on women’s dress and wear the hair in long braids like women. It is believed

51 Dill, *Nero*, 558-559.

that any distinguished shaman can bear children.⁵² On the Yakut shaman's apron there are sewn two iron circles, representing breasts. Other feminine attributes of the male shaman are as follows: he dresses his hair like a woman, on the two sides of the head, and braids it; during a performance he lets the hair fall down; both women and shamans are forbidden to lie on the right side of a horse-skin; the man-shaman wears the shaman's costume only on very important occasions, in ordinary circumstances he wears a girl's dress made of the skin of a foal; during the first three days after a confinement, when the deity of fecundity is supposed to be near the woman who is lying-in, access to the house where she is confined is forbidden to men, but not to shamans.⁵³ In Manipur, "the Maibi [priestess] is looked on as superior to any man, by reason of her communion with the god; and therefore if a man is honoured in the same way he assumes the dress of the Maibi as an honour."⁵⁴ The custom of a man adopting the life of a woman prevailed among some of the western Indians of the United States; an informant had known of eight cases during her lifetime. "She knew of no ceremonial functions performed by them, but she had heard of physical relations between them and men."⁵⁵ More definite is the account of this custom among the Cheyennes: "Of these halfmen-half-women there were at that time five. They were men, but had taken up the ways of women; even their voices sounded between the voice of a man and that of a woman. They were very popular and especial favorites of young people, whether married or not, for they were noted matchmakers. They were fine love talkers. If a man wanted to get a girl to run away with him and could get one of these people to help him, he seldom failed. When a young man wanted to send gifts for a young woman, one of these halfmen-halfwomen was sent to the girl's relatives to do the talking in making the marriage. . . . These men had both men's names and women's names. The one among the Northern Cheyennes was named Pipe and his woman's name was Pipe Woman. . . . When a war-party was preparing to start out, one of these persons was often asked to accompany it, and, in fact, in old times large war-parties rarely started without one or two of them. They were good company and fine talkers. When they went with war-parties they were well treated. They watched all that was being done, and in the fighting cared for the wounded, in which they were skillful, for they were doctors or medicine men. After a battle the best scalps were given to them, and when they came in sight of the village on their return they carried these scalps on the ends of poles."⁵⁶ The sorcerers among the Araucanians "wore woman's dress and their hair long and uncombed."⁵⁷ In Rome, the priests of the Great Mother of the Gods "were eunuchs, were attired in female garb, and wore their hair, fragrant with ointment, wound in coils on the top of the head, letting it hang loose, however, while performing their orgies."⁵⁸ There are numerous other cases of the same sort.⁵⁹

§311. Induced Possession.

If the shaman is not already "possessed," he knows how to produce that ecstatic condition so essential to proper communication with the gods. Witness the case of the Fijian priest, who takes a whale-tooth and stares at it: "In a few minutes he trembles; slight distortions are seen in his face, and twitching movements in his limbs. These increase to a violent muscular action, which spreads until the whole frame is strongly convulsed, and the man shivers as with a strong ague fit. In some instances this is accompanied with murmurs and sobs, the veins are greatly enlarged, and the circulation of the blood quickened. The priest is now possessed by his god, and all his words and actions are considered as no longer his own, but those of the deity who has entered into him. Shrill cries of 'It is I! It is I!' fill the air, and the god is supposed thus to notify his approach. While giving the answer, the priest's eyes stand out and roll as in a frenzy; his voice is unnatural, his face pale, his lips livid, his breathing depressed, and his entire appearance like that of a furious madman. The sweat runs from every pore, and tears start from his strained eyes; after which the symptoms gradually disappear. The priest looks round with a vacant stare, and, as the god says, 'I depart,' announces his actual departure by violently flinging himself down on the mat, or by suddenly striking the ground with a club, when those at a distance are informed by blasts on the conch, or the firing of a musket, that the deity has returned into the world of spirits."¹

A South African girl must enter the profession of the *i-shumba* or doctors if she is possessed by one of this class of spirits. She is put under blankets and given a vapor bath. "She generally has to remain inhaling the vapour until she is almost choked, and the more she suffers the greater is the credit given to the doctress who is performing the operation. Whilst the patient is under the blanket the *i-shumba* woman asks her what her name is and generally receives in reply some odd name, which is taken to be the title of the spirit who wishes to enter the girl. . . . After this is done all the *i-shumba* women meet and the girl goes through the final initiation ceremony. This consists of drinking a compound of raw goat's blood, tobacco juice, meat and herbs. Should this make her sick it is taken as a sign that the *shumba* spirit rejects her. On the other hand should she retain the mixture she is entitled to wear the special costume of the *i-shumba*."² The following is a description of the means employed in Madagascar to call a spirit into a girl. Two old skinny hags stood on either side of her, but they were dignified and grave. From time to time they passed under the girl's nose incense with a penetrating odor, and made passes with wands before her. She was agitated by violent internal emotion, her chest expanding and contracting vehemently, and her eyes imploring. A song was sung urging the spirit to enter her. Suddenly she jumped to her feet and said, "I have arrived." The crowd became delirious. "The features of the young girl were changed before my eye," states a missionary who was an eye-witness, and who scouts the idea of being under hallucination. She seemed to get bigger in stature and form; she became taller by a head at least than the two old women. The sick and others were brought to her as a medicine-woman and prophetess. She told them the useful remedies, speaking in a guttural

¹ Williams, *Fiji*, quoted in Wilken, "Shamanisme," in VG, III, 339-340.

² Garbutt, in JAI, XXXIX, 554.

voice, brief and jerky, giving commands rather than advice. She did not look at the patients, her eyes were fixed on a distance and immobile. Thereafter occurred more passes by the old women and she shrank back to her ordinary stature, her eyes finally recovered their normal expression, and she (that is, the spirit within her) said, "I am going away." The missionary subsequently saw the girl from time to time; she had a distraught air and haggard eyes.³

In modern Egypt a magician, wishing to detect a thief, poured a little ink into a boy's palm. "Into this ink, he desired the boy steadfastly to look. He then burned some incense, and several bits of paper inscribed with charms; and at the same time called for various objects to appear in the ink. The boy declared that he saw all these objects, and last of all, the image of the guilty person; he described his stature, countenance, and dress; said that he knew him; and directly ran down into the garden, and apprehended one of the labourers, who, when brought before the master immediately confessed that he was the thief."⁴ This is a variant of crystal-gazing.

Lehmann⁵ reproduces a vivid description of the Tungus shaman and his process of securing inspiration: "A bright fire was burning in the middle of the hut, and about it was spread a circle of wild sheep's skins. Upon these a shaman circulated with slow, measured step, mumbling his incantations. His long black hair hung down over and almost totally covered his red and swollen face; through it, as through a veil, shone a pair of glittering, bloodshot eyes. His long robe of deerskin was from top to bottom bedecked with thongs, amulets, chains, little bells, and pieces of copper and iron. In his right hand he held his magic drum to which likewise bells were attached, and in his left a bow. His appearance was downright horrible, and the whole company observed him with the most spellbound attention. Little by little the fire died down, the glowing coals emitting a mysterious half-light. The shaman now threw himself to the earth and lay immovable, sighing and groaning in such manner as to give the impression of several different voices. Then the fire was again brought to a clear blaze and the shaman sprang up; he rested his bow upon the ground, leaned his forehead against its upper end, which he held in his hand, and thus began, at first slowly, then faster and faster, to run around the bow. This was kept up so long that one became dizzy simply from looking on. Suddenly the shaman stopped and began to draw magic figures in the air; then seized his drum and struck up a kind of melody, at the same time leaping about and contorting his body in the most incomprehensible manner. Meanwhile he smoked, off and on, several pipes of strong tobacco, and took whiskey in the interval between pipes. This, in combination with his gyrations, finally made him dizzy, and he suddenly fell and lay rigid and unconscious. Two of the onlookers lifted him up; he was now fearful to behold. His eyes were fixed, and protruded from his head; his face was copper-red and he seemed totally unconscious; except for a slight twitching of his body, no sign of life was to be observed in him. Finally he appeared to come to his senses; he swung his magic drum rapidly, causing the bells to jingle loudly; then let it fall upon the earth. This was a sign that he was ready to be consulted. His answers to questions propounded were given without reflection, as if he himself had no inkling of what was going on. For the most part, the answers were given in an ambiguous, oracular style, so that the questioners could interpret

³ Account quoted in Trilles, *Fân*, 644-646.

⁴ Lane, *Mod. Egypt.*, I, 409.

⁵ *Overtro*, I, 31-32.

them as they chose. But the most interesting thing about the account is without question the conclusion, that here we see employed intoxication and hypnotism as means of inducing a mental state in which sorcerers, unwittingly to themselves, are able to answer questions to which, in a normal state, they could scarcely give an intelligent response."

"The individual who is predestined by the power of the ancestors to be a shaman feels suddenly a languor and relaxation in his limbs, which announces itself by a violent trembling. There comes over him a vehement, unnatural yawning, a powerful pressure weighs down upon his breast, forcing him suddenly to emit loud, inarticulate cries. A feverish chill shakes him, his eyes roll wildly, he suddenly leaps up and whirls in a circle as if possessed until he falls covered with sweat, and grovels on the ground with epileptic twitchings and spasms. His limbs are quite without sensation, he seizes what comes to hand and swallows purposelessly everything he has laid hand to—glowing iron, knives, needles, axes—without any harm coming to him through this engorgement. After a time he rejects what he has swallowed, dry and intact. (Naturally I have all this only from hearsay and indeed from very trustworthy persons—a matter which is, in affairs of superstition, certainly, of complete indifference. Who is here the dupe is hard to decide; probably self-deception and deliberate imposition go hand in hand.) All these sufferings become stronger and stronger until the individual who is so tortured at last seizes the shaman's drum and begins to shamanize. Then only does nature become quiet; the force of the ancestors has gone over into him and he cannot now do otherwise—he must shamanize. If the man destined to be a shaman opposes the will of the ancestors, if he refuses to shamanize, he exposes himself to frightful agonies which result either in the person in question losing all spiritual power whatever, and so becoming imbecile and inert, or in his falling into wild insanity and commonly doing himself some injury within a short time or dying in paroxysm."⁶

Michailovski⁷ says of Gmelin, an early authority, that in his studies in Siberia he was not guided by an objective spirit of investigation, but showed all the time the prejudices of a Lutheran pastor. He saw in the proceedings of the shamans only efforts to deceive, which he tried to expose. The fact is that the short and violent gestures, the sound of the drum, the convulsive writhings, the inarticulate cries, and the wild glances amidst the half gloom, all taken together, exert terror on the half-wild people and act powerfully on the nerves.

The so-called demonolatry in southern India exhibits the same methods and makes a similar impression. The official priest is called a "devil-dancer," and he dons the devil's insignia to strike terror into the imagination of the beholders. When the devil-dance is about to commence, the music is first comparatively slow and the dancer seems impassive and sullen; he stands still or moves about in gloomy silence. Gradually, as the music becomes quicker and louder, his excitement rises. Sometimes he uses medicated drugs to help create a frenzy, and cuts and lacerates his flesh until the blood flows, lashes himself with a huge whip, presses a burning torch to his breast, drinks the blood which flows from his own wounds, or drinks the blood of the sacrifice, putting the throat of the decapitated goat to his mouth. Then, as if acquiring a new life, he brandishes his staff of bells and dances with a quick but wild step. Sud-

⁶ Radloff, *Schamanenthum*, 16, 17.

⁷ *Shamanism* (Russ.), 4, 55, 69; Shchukin, *Shamanism* (Russ.), pt. II, 24.

denly the afflatus descends. There is no mistaking that glare or those frantic leaps. He snorts, he stares, he gyrates. The demon has now taken bodily possession of him; and though he retains the power of utterance and motion, they are under the demon's control, and his separate consciousness is in abeyance. The bystanders proclaim the event by raising a long shout, attended with a peculiar vibratory noise, caused by the motion of the hand and tongue or of the tongue alone. The devil-dancer is now worshipped as a present deity and every bystander consults him respecting his disease, his wants, the welfare of his absent relatives, the offerings to be made for the accomplishment of his wishes, and, in short, respecting everything for which superhuman knowledge is supposed to be available. "As the devil-dancer acts to admiration the part of a maniac, it requires some experience to enable a person to interpret his dubious or unmeaning replies, his muttered voices and uncouth gestures; but the wishes of the parties who consult him, help them greatly to interpret his meaning."⁸ This is a case of what we should call daimonology rather than demonolatry or devil-worship. It is to be noted how the people read their own interpretations into the oracular or meaningless words of the intoxicated dancer.

In India the process called "hazirat" is based upon the principle of the magic mirror. The same idea underlies various other forms of divination, *e.g.*, lecanomancy, hydromancy, catoptromancy, crystallomancy, and pyromancy. "All of these date back to remote antiquity. By the first method, the seer is required to gaze into a metal cup or basin, filled with water, wine, or oil; by the second, into a sacred pool or fountain; by the third, into a metal or glass mirror; by the fourth, into a crystal; and by the last, into fire or flame."⁹ Some holy men in India claimed that they were able to asphyxiate themselves by rolling the tongue back, remain dead for forty days, and then come to life again.¹⁰ "The Lushais believe that certain persons, both males and females, but more generally females, have the power of putting themselves into a trance and are in a state of communication with Khuavang. . . . The belief in a species of demoniacal possession is very common."¹¹ In Bangalore there is held, in the first month of every Hindu year, a feast in honor of Swami. At eight the next morning, the people still fasting, a stage of the proceedings is reached when those women who have been previously possessed by evil spirits show signs of possession. They sit in a row in front of the Swami and are questioned in turn by the chief worshipper. Two rude pieces of cane, three feet long and rudely ornamented, are always kept near the Swami. "A man, having previously bathed and put on clean cloths, twists one of these wands in a patient's hair and holds it with a handful of her hair in one hand at arm's length; another man on the other side of the patient also holds a handful of her hair at arm's length; between them they drag her by her hair to some trees half a mile away; nail a lock of her hair to a tree, and let her go. She flings herself about in frenzy (sometimes trying to climb the tree), and throws herself on the ground, leaving the lock of her hair, torn out by the roots, fastened to the tree by the nail. After a while she gets up, mistress of her person, the spirits having gone up the tree. All patients are treated in the same way." When these women found themselves possessed, they had been starving for about thirty-six hours.¹²

In the East Indies, ecstasy was inspired in young boys and girls by various means and shamans worked themselves up into that state in the presence of the sick, thus receiving the evil spirit that afflicted them. In their ceremonies they often used a strange tongue, words generally from the Malay or some antique speech. To interview the spirits concerning the fishing prospects, a woman has incense burned before her and her body strewn with white and browned rice. Presently her eyes begin to glitter as they are fixed upon one point; she is then possessed and in a position to direct propitiation. Swaying back and forth, she addresses the spirits in an unknown tongue. There are other cases where ghost-seers work themselves into ecstasy, showing first a trembling movement and then springing up and dancing until they sink unconscious to the earth. For the duration of the ecstasy the shaman can see through the mysteries of the present and future. Precipitation of this state occurs in a ceremonious way in the presence of a large gathering who chant certain melodies and beat a drum to help transport the shaman. In their midst he performs the wildest and oddest sort of dance, usually called the dance of the witches, by which means he contributes to the enchantment of the stimulation until finally he reaches the acme of ecstasy. This makes him clairvoyant and able to answer the questions propounded to him.¹³ The Dyak shamans depend largely upon dreams, in which they receive advice from spirits concerning the properties of various fetish objects.¹⁴ Another means of communicating with the supernatural is to sleep on the tops of mountains. Swings may be used to produce vertigo, a trance resulting.¹⁵ Cures are generally effected in darkness, for it is difficult and dangerous to have dealings with the spirits in the daytime. The shaman gazes into his "stone of light" to diagnose the character of the ailment and to see where the soul is.¹⁶ Some of them seem to know that they are impostors.¹⁷

Among the Polynesians there were, in addition to the priesthood, certain persons who were inspired permanently or periodically, and "could at almost any time obtain inspiration, and make oracular statements as mouthpieces of the god, whose name they often took. These people formed a kind of college or corporation in Tahiti, and had considerable power; and, although linked with the priests, they rather supplanted them in their functions as augurers in time of war. The influence of these inspired men over combatants was accentuated by the positive and vehement nature of their pronouncements, as compared with the vague and uncertain statements which followed the investigation by the priests of victims, their consultation of the heavens and their experiences of dreams."¹⁸

To become an *angakok* the Eskimo goes into the wilderness and engages in contemplation. His brain becomes unsettled and he is then competent to discharge shamanistic functions. In the novitiate the candidate must rub one stone on another for three days. He is supposed to die in frightful agonies, partly from fear and partly from overexertion, but to rise again later on. The process goes on for three years or more, during which the novice has learned a number of mystifying tricks.¹⁹ Among the Central Eskimo "most of the angakut believe in their own performances, as by continued shouting and in-

voking they fall into an ecstasy and really imagine that they accomplish the flights and see the spirits."²⁰ Doubtless the not uncommon "flying dream" plays its part in this persuasion. Training is often from babyhood, through vigils, pain, the control of desires, silence, and solitary communion with nature. The aim is to attain trance or ecstasy, union with the spirits, absorption into the universe. Contortions, paroxysms, exhaustion, and fits of homicide and suicide are attendant phenomena.²¹

The use for narcotic purposes of peyote, a species of cactus grown in Northern Mexico, has assumed alarming proportions among the Indians of the United States. From time immemorial peyote has been used by certain tribes in Mexico to produce intoxication at religious ceremonies. From there it spread to the Kiowas of the Rio Grande, the Zuñis of Arizona, and others. The use of four or five peyote balls "produces a peculiar cerebral excitement attended with an extraordinary visual disturbance. There is uncertainty of gait, like that caused by alcohol, wakefulness, and over-estimation of time; minutes become hours; distances become accentuated; there is a sense of dual existence. The drug also produces visual hallucinations and affects the hearing. The habitué enjoys a regular kaleidoscopic play of most wonderful colors and an incessant flow of visions of infinite beauty, grandeur and variety." It is not strange to find that a drug producing such extraordinary effects is eagerly sought and that to it is ascribed supernatural power. Today there is a new, semi-religious movement among thousands of Indians which exalts peyote into a fetish to be worshipped as something supernatural. Meetings are generally held every Saturday night and last all night long. By midnight many have become intoxicated, enjoying the incessant and wonderful visions and music. In some tribes it is spoken of as the Holy Spirit, the "Comforter" that Jesus sent. It is believed that it causes the users to see their sins and makes their hearts feel kind toward God and man.²² "The members of the peyote societies customarily see God, Jesus, or Heaven with perhaps some scenes from their past misdeeds. The terrifying visions of the novices are interpreted as the result of an unrepentant spirit, acceptance of the peyote as holy being in the nature of a conversion (reorganization of attitudes toward it) which carries with it pleasant visions. Due to the vividness with which the peyote vision portrays things and the ease with which Christian and pagan elements can be combined in it, peyote is regarded as the means of interpreting the Bible. It has been identified with the Holy Ghost and thus becomes one of the Trinity and through it the Bible becomes clear to the Indian, that is, through the visions the Biblical teachings are applied to the Indians' individual problems. . . . It is highly significant that all the older members of the peyote speak of the diseases of which it cured them. Along this line lay unquestionably its appeal for the first converts."²³

Similarly wine is considered as a spirit or as containing a spirit, because it intoxicates or inspires. Some Indians of Spanish America intoxicated themselves to commit with impunity certain crimes. "It appears that in the primitive view intoxication or the inspiration produced by wine is exactly parallel to the inspiration produced by drinking the blood of animals. The soul or life is in the blood, and wine is the blood of the vine. Hence whoever drinks the

20 Boas, in BAE, VI, 594.

22 Lindquist, *Red Man*, 69 ff.; N. Y. Times, Jan. 8 and 14, 1923.

23 Shonle, in AA, XXVII, 72, 73.

blood of an animal is inspired with the soul of the animal or of the god who is often supposed to enter into the animal before it is slain; and whoever drinks wine drinks the blood, and so receives into himself the soul or spirit of the god of the wine."²⁴

The shamans of Hispaniola delivered oracles in a state of rhapsody produced by drinking a "secret water," and performed the usual shamanistic contortions.²⁵ The activity of the shamans of British Guiana included the production in themselves of a wild ecstasy by the use of a narcotic powder and the art of ventriloquism. They are identifiable by their gloomy and black looks, their lonely, secluded manner of life, and their ascetic severity. The whole village is unreservedly subject to the shaman.²⁶ Among the Shingu Indians any one may become a medicine-man but it is difficult and there is much to be learned. For four months one must drink only their starch extract, eat no salt, flesh, fish, or fruit, not sleep, bathe often, and scratch the arm and breast till the blood runs. The chief element of the art is the use of poisons with which the shaman kills others and also himself, in order to transform himself into other forms. The method used is excitement of the imagination; the idea is to work one's self up to a pitch of excitement which enables him to contend with the evil forces. Hence it is that the medicine-man takes the medicine; it is a sort of "Dutch courage." It is believed that the shamans, when they have narcotized themselves with tobacco, are transformed into animals and can go anywhere while in that state. Tobacco smoke cures everything; the natives blew it into the author's ears in order that he might learn their language more rapidly.²⁷

Again, the *pajé* must begin even in youth to seek solitude in inaccessible spots, and through years he must fast, keep silence, and abstain. He engages in wild, obscene dances to the point of exhaustion and by these exercises, and also by injecting tobacco-juice and other strong liquids into his eyes, he becomes competent to associate with snakes and other poisonous beasts, to practise the healing art, to counsel the elders, and to excite the youth by nocturnal rehearsals of war-stories and tribal tradition. Many legends support the power of these shamans over animals and men.²⁸

In Homer we find a long description of how Odysseus acted in order to come into relation with the spirits. Lehmann²⁹ says he is probably the oldest "medium" concerning whom there is any exact information. The Homeric poems give scarcely an inkling of the overexcitement of religious feeling which the Greeks of a later time knew and revered as god-sent madness. This originated in the Dionysus cult and came into Greek life as something new and foreign.³⁰ The great law-givers, such as Manu, Moses, and Zoroaster, were fetish-men in that they received the laws from God through revelation. God will answer only when the rites are fully satisfied, and most distinctly he answers the faithful priest. Aaron was to be the mouth of Moses, and Moses the god of Aaron.³¹ Laurel was chewed in southern Europe to secure religious exaltation, to drive out consciousness so that some other spirit might enter and inspire the prophet. Later it yielded to better means.³²

§312. Reputed Powers of the Shaman.

AFTER various initiatory features, such as are mentioned in the text, the new Australian medicine-man mingles with members of the craft, learning their secrets, such as they are, practising sleight-of-hand tricks, and, not least in importance, accustoming himself to looking preternaturally solemn, as if he knew and were constantly dealing with things hidden from the knowledge of ordinary men. By means of certain fetish stones he is able to combat the evil magic which an enemy has planted in the body of his patient. "These stones he can, unseen by any ordinary being, project into the patient's body."¹ Abel² often asked the natives of New Guinea: "Do you really believe the sorcerer extracts stones and sticks from the body?" and the answer usually was, "No, but he says he does. The man is dying and we don't know what to do."

It is said that in spite of all his superstitions the Bakoko is not dependent on the medicine-man nor deceived by him; for the religion is the common property of all and the ceremonies take place in the open.³ The Ju-Ju priests of West Africa were supposed to be able to cause the water used in ordeals to rise in the well, and when it was suggested that there was here an underground water-supply brought from a higher elevation, the idea was scouted as follows: "White man he no be fit savey all dem debly ting Ju-Ju priest fit to do; he fit to change man him face so him own mudder no fit savey him; he fit make dem tree he live for water side, bob him head down and drink water all same man; he fit make himself alsame bird and fly away; you fit to look him lib for one place and you keep you eye for him, he gone, you no fit see him when he go."⁴ "A peculiar facility for making fire when and where he likes is a distinguishing characteristic of a wizard, and intelligent English-speaking Fantis have assured me that their own eyes beheld unmistakable proofs of this magic in action."⁵ Where the dead are supposed to ascend on a string to the spirit-world, the shaman summons them by tying a string to the top of the temple and letting it rest on his back as he kneels. The dead thus descend and possess him.⁶ An illustration of clumsy work in mystery-making is related by Johnston.⁷ When a witch-doctor becomes the father of a son, he contrives to have the baby disappear on the third night after birth, "and every one affects to bewail its loss and to search for it ineffectually. At dawn it is found outside the door of its mother's house with the tail of an ox tied round its neck (by the father, of course). This is a sign that the child is intended to be a sorcerer when he grows up." And it is found as easy to believe the impossible as to shut the eyes to such an obvious performance. Among the Galla it is related of a certain woman that she descended naked into a pool, dove under water and managed to get to the surface of the water again with a burning torch in her hand; whereupon she was declared, on the basis of this piece of art, to be the local magician.⁸ Among the Kabyles a wise, virtuous man, faithful in his duties to god and fellow-men, will be honored and revered as a marabout or saint, which title he may bequeath to his male posterity. The credulous crowd is always ready to accord to the marabouts supernatural powers; "this belief once established, their influence becomes truly considerable and can operate effectually, at a given moment, on the

people. In fact, how could a Kabyle help but respect and especially fear a man who, with a word, can change him into a woman, make hail fall on the crops, or inflict him with any disease?" In Kabylie, as in all Moslem countries, there exist religious orders the chiefs of which, without being always marabouts, exercise considerable power over the spirits. "One divines that it is a question of the associations surrounding them and of the mystery of the secret societies."⁹

The Buryats believe that the "black shamans" eat human flesh; "the shaman eats the soul of the man, and the latter dies, for man cannot live without a soul."¹⁰ This people has a legend that the first shaman was born, at the desire of the Good Spirit, of an eagle and a Buryat woman. He had unlimited power and God, desiring to test him, took away the soul of a rich maiden, so that she became ill. The shaman flew on his drum through the heavenly paths and through Hades, seeking the soul, until finally he saw it in a bottle on the table of God. To keep the soul in the bottle the god had corked it with a finger of his right hand. The coming shaman turned himself into a yellow horse-fly and stung the god on the right cheek so that he put his right hand to his cheek and let the soul escape. The angry god limited the power of the shaman and from that time the shamans have become worse and worse. The Buryat shamans believe so firmly in their profession that when they themselves are sick they call in their fellow-shamans to treat them by the stock methods.¹¹ "The characteristic of shamanism which distinguishes this school of religion from others is the belief in the close union which exists between now living men and their long deceased ancestors. Belief in the power of this bond engenders an unbroken reverence for ancestors."¹²

A Tibetan proverb states that without a lama in front God is not approachable.¹³ In India "there are two kinds of gods; for the gods are gods, and priests that are learned in the Veda and teach it are human gods." So the fees paid to the priests are like sacrifices to the gods. The priest comes to be, indeed, more important than the god.¹⁴ From India have come tales verging on the miraculous of the feats of fakirs and magicians, but American and European prestidigitators who have made investigations there report the situation as highly exaggerated. None of them brought back any notable addition to his repertoire of illusions.¹⁵ In China, "the exorcists were a certain class of priests and priestesses entirely possessed by spirits of the Yang [white, male, good] material, and, as such, were deemed especially fitted to perform chiefly three several functions: (1) to call upon the spirits of the dead in order to make them partake of offerings; (2) to foretell future events by interrogating the spirits and communicating their will to the living; (3) to expel diseases and evil in general, especially droughts, by neutralizing through the Yang power residing in their persons the influence of the element of darkness Yin and the evil spirits identified with it."¹⁶

In Borneo, "some men, by a peculiar magic influence, or by gift of the bird spirits, are credited with possessing in themselves, in their own hearts and bodies, some occult power which can overcome bad omens. These men are able, by eating something, however small, of the produce of the farm, to turn

off the evil prognostication [say, of a swarm of bees lighting upon a farm, which is a dreadful matter]. . . . Anything grown on it which can be eaten, a bit of Indian corn, a little mustard, or a few cucumber shoots, is taken to the wise man and he quietly eats it raw for a small consideration and thereby appropriates to himself the evil omen which in him becomes innocuous and thus delivers the other from the ban of the tabu."¹⁷ The priests and priestesses are supposed to be possessed by the souls of the dead which, however, do not remain in them all the time but can be invoked to enter them and thus enable them to oppose evil spirits. If the son of a priest enters the profession the soul that inspires him is a descendant of the one that inspired his father.¹⁸ When the priests dance, it is not really the priests but the spirits who do so; and dancing with the women is allowed to them, which is otherwise forbidden.¹⁹ The chief priests hold the unlimited confidence of the Pelew Islanders, as representatives of the devil.²⁰

In Tahiti, the general class of inspired persons and sorcerers was not organized regularly; sometimes there were many, at other times none. "The god was supposed to select his man, and enter into his body; he manifested this by some marvel. The rumour spread, and the body of the man became sacred as an idol. Not only could he enter the *marae* [central inclosure] and everywhere he pleased, but he even ascended the altar, and gave himself up to the diverse extravagances which the god who was in his body inspired him to commit. The sorcerer was not always in a state of inspiration. Sometimes the god abandoned him, and he became again in every way like an ordinary mortal. Sometimes the inspiration occurred through a caprice of the god, who seized his man unawares. At other times he himself invoked the god by means of certain formulae, which afterwards became forgotten or unintelligible. These inspired persons enjoyed high consideration and their rank of blood did not matter. Besides the permanent sorcerers who were devoted for life to the whims of their deities, there was a class of sorcerers who confined their industry to certain miracles or *tours de force*, the principal of which was that of *pimato* or rock climbers, whose methods of climbing perpendicular rocks with smooth and shining surfaces are described."²¹

It is an Eskimo belief that everything has its *inua* (owner) which may become the genius of a man, but three kinds of spirits become protectors (*tornaq*) of the shaman: those in the shape of men, of stones, or of bears. They enable the shaman to have intercourse with others that are considered malevolent to mankind and are kind to him though they would hurt strangers who might chance to see them. The bear seems to be the most powerful of these spirits; it is a huge animal without any hair except on the points of the ears and of the tail and at the mouth. "If a man wishes to obtain a bear for his *tornaq*, he must travel all alone to the edge of the land floe and summon the bears. Then a large herd will approach and frighten him almost to death. He falls down at once. Should he fall backward he would die at once. If he falls upon his face, however, one bear out of the herd steps forward and asks him if he wishes him to become his *tornaq*. He then recovers and takes the bear for his spirit and is accompanied by him on the return journey. On the way home they pass a seal hole and the bear captures the animal for his master. The Eskimo is now

a great angakok and whenever he wants help he is sure to get it from his bear."²² According to the Tsimshians, shamans may be initiated by various kinds of supernatural beings. "One shaman is initiated by the Squirrels, who take him to their home in a tree, where his skeleton is finally found hanging. The body is spread on a mat covered with another mat, which is painted red and covered with bird's down, sacrifices are brought, while the young man's parents leave the house. When the people sing over the body, the man revives and becomes a powerful shaman. . . . Another shaman is initiated by a supernatural being that lives in a deep cave called the Cave of Fear, which only shamans are able to enter. He is let down by means of a cedar-bark rope, and on his way down is stung by great swarms of insects. At the bottom he finds a hairy young man, who leads him through a door shining like the sun, into a cave where the supernatural being that gives him power is seated. From the east side of the house a supernatural being enters, accompanied by attendants. They take their supernatural powers out of their mouths, and put them into the mouth of the visitor. Finally the chief of the house lays his hands on the visitor and rubs his eyes."²³

Among the Haida and Tlinkit, generally speaking, the shaman obtained his position from an uncle, inheriting his spiritual helpers just as he might his material wealth; but there were also shamans who became such owing to natural fitness. In either case the first intimation of his new power was given by the man falling senseless and remaining in that condition for a certain period. Elsewhere in North America, however, the sweat bath was an important assistant in bringing about the proper psychic state, and certain individuals became shamans after escaping from a stroke of lightning or the jaws of a wild beast. Great influence was exercised by the shamans, to whose malign power death was generally ascribed. "If the soul had wandered, he captured and restored it, and in case the patient had been bewitched he revealed the name of the offender and directed how he was to be handled." He was believed to have "obtained from the deities, usually through dreams, but sometimes before birth, powers of recognizing and removing the mysterious causes of disease."²⁴ Among the Winnebago, "if a man was a good hunter or if he was wise and good, these bad shamans would poison him. If an individual was a great medicine man and these bad shamans got jealous, they would poison him. Indeed, only if a person was poor and lowly would they like him. Such a man they would never poison for they had no reason for being jealous of him. A bad shaman is always treated with the greatest respect and honor, because he kills many people."²⁵ The high-priests of the Creeks would "foretell rain or drought and pretend to bring rain at pleasure, cure diseases, and exorcise witchcraft, invoke or expel evil spirits, and even assume the power of directing thunder and lightning."²⁶ The Algonquin medicine-man might announce that he was going to kill a rival shaman who lived a hundred leagues away.²⁷ In general, the Indian shaman seeks to cover himself in case of the failure of his art; "in nearly every boast there is some sort of a saving clause to the effect that no witchcraft must be made or the spell will not work, no woman should be near in a delicate state from any cause, etc. . . . Though the medicine men are considered to have wonderful power, it

is conceded that baleful influences may counteract and nullify them. Among these are the efforts of witches, the presence of women who are sometimes supposed to be so 'antimedical' that the mere stepping over a warrior's gun will destroy its value."²⁸

If one sets up as a medicine-man, his medicine, so the people think, ought to possess efficacy in all cases. If he fails, he may lose his life. Such was the fate of the medicine-man of certain Indians of Arizona, who was impotent before the great influenza epidemic of 1919.²⁹ A few years earlier an Indian in California killed a medicine-man in revenge for the death of his two children who had been subjected to bleeding by him "to drive away the evil spirits."³⁰ So among the Jibaro Indians of Ecuador: "Since supposed sorcery is nearly always the nearest cause of murders within the tribe, it is clear that the professional sorcerers or medicine men are those members of Jibaro society which are most frequently exposed to the revengeful attacks of their enemies. As a matter of fact, in large Indian societies sorcerers are almost continually assassinated, or at least threatened with death, by their enemies. When a medicine man has undertaken to cure a sick person and the latter dies in spite of the treatment, the 'doctor' is also generally made responsible for the death, the relatives of the dead reasoning that the medicine man, instead of curing the patient, on the contrary used his art to kill him. The unsuccessful curer is therefore murdered unless he escapes by flight."³¹

The apprenticeship of the medicine-man among the Guiana Indians was far from being the proverbial bed of roses. Among other tests, "he had for many months to practise self-denial, and submit under a stinted diet to the prohibition of what were to him accustomed luxuries. He had to satisfy his teacher in his knowledge of the instincts and habits of animals, in the properties of plants, and the seasons for flowering and bearing, for the piai man was often consulted as to when and where game was to be found, and he was more than often correct in his surmises. He also had to know of the grouping of the stars into constellations, and the legends connected not only with them, but with his own tribe. He had likewise to be conversant with the media for the invocation of the Spirits, as chants and recitatives, and also to be able to imitate animal and human voices. He had to submit to a chance of death by drinking a decoction of tobacco in repeated and increasing doses, and to have his eyes washed with the infusion of hiari leaves; he slowly recovered, with a confused mind, believing that in his trance, the effect of narcotics and a distempered mind, he was admitted into the company of the Spirits, that he conversed with them, and was by themselves consecrated to the office of piai priest-doctor. Bancroft says that the novitiate 'is dosed with the juice of tobacco till it no longer operates as an emetic.' Sometimes . . . other things were mixed with the tobacco, for example, a plant called quinquiva, as well as certain of the drippings from an exposed dead body. For the same colony Fathers Grillet and Bechamel record that the medicine-men proffer neither physic nor divination 'till they have made divers experiments, one of which is so dangerous that it often makes them burst. They stamp the green leaves of tobacco and squeeze out the juice of it, of which they drink the quantity of a large glassful, etc.; so that none but those who are of a very robust constitution, who try this practice upon

31 Karsten, "Jibaro," in BAE, Bull. LXXIX, 9.

themselves, escape with their lives.' . . . During his course of training, in addition to his other instruction, the apprentice was taught to suffer the pangs of hunger and thirst, and to experience the martyrdom of pain without complaint or murmur. To teach him the latter, he was either bitten with ants or cut on various portions of the body. Among the Islanders 'his body is scraped with acouri teeth.' The ants were fixed into the interstices of plaited diamond-shaped mats or girdles and these were held or tied on the neck, breast, stomach, or legs. In some cases, during their period of probationership, the prospective medicine-men must not come into contact with Europeans, as this would destroy forever their influence over the spirit world. West of the Orinoco, 'they submitted to a seclusion of two years in caverns, situated in the deepest recesses of the forests. During this period they ate no animal food; they saw no person, not even their parents. The old Piaches or doctors went and instructed them during the night.' Magic stones are alleged to be placed in the novitiate's head." The curriculum must have been impressive for there is abundant evidence that the medicine-men practised what they preached and had every confidence in the powers with which they had been intrusted: "They practise those incantations over their own sick children, and cause them to be practised over themselves when sick. . . . They act the farce on themselves when they are disordered: a practice which has not a little contributed to overthrow all doubts of the sincerity of their pretensions. . . . The piai himself believes in it: one will put himself in the hands of another when sick. . . . Schomburgk was 'convinced that the piai believes in the efficacy of his witchcraft as firmly as his protégés.'"32

There were three classes of theurgists among the Araucanians: sorcerer, diviner, and witch-doctor or exorcist. The sorcerers were formerly the sacerdotal class, inasmuch as whatever rites, ceremonies, sacrifices or other religious observances took place were performed by them. They dwelt in caves in remote mountainous regions and were supposed to be in communication with the spirits over which their arts gave them certain powers, compelling them to work their wills. Contrary to the practice of the other two classes, "their incantations and spells were secret and mystic, wrought in the darkness of their caves, and hidden from the eyes of ordinary mortals, although some of their charms were done visibly, such as seeing visions in a bowl of water, and blowing smoke from their mouths in the direction of the dwellings of their enemies." The diviners exercise a considerable influence in Indian society, "as they are consulted on all doubtful points of social or domestic intercourse, and every-day events. It is they who indicate the author of a robbery, the whereabouts of a missing animal or mislaid object, the probable result of a given enterprise, the perpetrator of any evil happening to the flocks and herds." They perform their divinations outside their huts, their familiar spirits answering them from within. "By far the most popular and most consulted of these personalities is the *machi*, who combines in his person the offices of medicine-man, seer, and exorcist . . . the learner graduating after a long apprenticeship to some well-established *machi*. The principal accomplishments are a profound knowledge of medicinal herbs, with which the forests and plains abound, a slight acquaintance with surgery, a considerable mastery of simple conjuring tricks, and the talent of ventriloquism. Many never attained to this last art and had recourse to darkness and a different modulation

of voice, which served the purpose equally well, although it was less dramatic."³³

Among the Zoroastrians the seer seems to have produced a marked effect by being able through his prescience, as the story goes, openly to disclose the thoughts of the king and of others, with astonishing results.³⁴ With the Arabs, as with other peoples, what is not customarily seen or heard by everybody, but by one alone, has naturally, at least for himself, the greater surety of higher origin and more mysterious meaning.³⁵ Apollonius of Tyana, whom the pagans opposed to Christ, had raised the dead, healed the sick, cast out devils, freed a young man from a vampire with whom he was enamoured, prophesied, seen in one country events that were occurring in another, and filled the world with the fame of his miracles and of his sanctity. He was born at nearly the same time as Christ. The Fathers of the fourth century always spoke of him as a great magician.³⁶

*Fire-Walking.*³⁷ In several remote countries of the world, notably Mauritius, India, Japan, Hawaii, Tahiti, the Malay Archipelago, and the Fiji Islands, men are reported, on trustworthy authority, to have walked barefoot across living coals or over white-hot stones, and to have come through the ordeal uninjured. Eyewitnesses have testified as to the heat, while physicians have failed, upon examination, to discover any sign of burns. Burke³⁸ gives as corroborating evidence a number of photographs which he made of the fire-walkers of Fiji. In this case it takes the participants from ten to fifteen seconds to complete the circuit of the pit of hot stones. Langley³⁹ has described the fire-walk ceremony performed by native shamans in Tahiti; he certifies as to the high temperature of the stones. The ceremony of fire-walking is reported to be annually performed in Japan by a certain sect of Shinto. Treading slowly across a bed of coals while wildly gesticulating priests chant magic incantations, several hundred members of the sect prove in a modern ordeal by fire their moral purity and their faith in the Shinto god, Kami-sama. A witness describes a recent celebration as follows: "The signal at last was given and a priest who stood at the edge of the fire stepped boldly in. Straight across he walked, and behind him came his associates and the common folk in an unbroken line. They were all ages—men, women and children—barefoot and with their kimono tucked up from the fire. Young boys walked between old men, and on the backs of many of the women were babies who slept soundly through the whole performance, worrying not a bit about their standing with Kami-sama. Those who suffered from the heat of the coals were judged unrighteous and warned to mend their ways; all who passed through the ordeal unscathed were good and faithful, saved from harm by the supernatural powers of the god and the prayers of the officiating priests. Either that, or they escaped unburned because they had used proper care in rubbing their feet in a pile of sacred salt which lay at the point where the march across the coals began."⁴⁰

§313. Shamanistic Practice.

DIVINATION is a common practice of Melanesian shamans. In the Solomon Islands, when a thing is lost a wizard is engaged to find it in a dream. "In Lepers' Island in case of theft or of any hidden crime some wizard who understands how to do it drinks *kava*, and so throws himself into a magic sleep. When he wakes he declares that he has seen the culprit and gives his name. . . . In Motlav and the other Banks' Islands they divined by means of a bamboo into which a ghost had entered, and which pointed of itself to the thief or other culprit to be discovered. A common method of divination in the Banks' Islands is called *so ilo*, and is used to enquire where a lost person or thing is to be found, who is the thief, whether an absent friend is alive or dead. The hands are lifted over the head and rubbed together with a magic song calling on a ghost. The sign is given by the cracking of the joints; when the question is of life or death, if the thumbs or shoulders crack the man still lives, if the elbows crack he is dead. So if a man sneezes he will *so ilo* to know who it is that curses him; he revolves his fists one over the other and then throws out his arms; the revolving is the question, and the answer is given as he asks, 'Is it So-and-So?' and his elbows crack."¹ Prophets may be found even in low civilization; in New Guinea one foretold calamities so as to get the natives away from white influence.² Communication with the spirit-world is held to be possible in New Britain, and "there are no more faithful and ardent spiritualists in the world than the New Britain savages." So writes Danks³ who was present at a native séance. "It was black unrelieved darkness. . . . In the space there were two companies of men, one company at each end of the open space. They were all dressed in white, the spirits being supposed to like that colour. At the sound of a whistle these two companies marched past each other across the open, and so changed ends, making a weird procession, amid a profound silence. I said something to my neighbour and was immediately warned to keep silent. In answer to the question put in the lowest of whispers, What are they doing? I was informed that *Ingai*, the spirit they sought, would presently be so pleased with their wooing in this way, that he would reveal himself to them. . . . I waited long, but he came not that night, and it was soon mentioned that I was the unbeliever who kept him away, and I was urged to leave, which after a while I did. I was told next day that after I left he came, a sure evidence that I was the hindrance, which added to my security, for if I was stronger than *Ingai*, I must indeed be strong. I was never again invited to a séance. This *Ingai* may enter into a man, and through him may be revealed the secrets of the *Malira*, or charm either for good or evil use, and he is therefore much sought after. *Ingai* is supposed to live at the top of very high trees, and may be induced to come down and converse with men."

In the New Hebrides, Uhgen is the power behind all things.⁴ "A watch, a gunlock, even a wall that a missionary will build is a thing made by god. This Uhgen made natural features what they are, gave names to the district units of territory and population, gave customs to the forefathers, and conferred the sacred stones. But some man is said to make bread, fruit, fish, yams, rain, and wind by virtue of power given to the ancestors long ago." In short, Uhgen made the world and committed what we call Providence to certain men. On the

⁴ §258 of the text.

caprice of these their fellowmen must depend. It is these fellows that do all the mischief in human life; and their instrumentalities are the sacred stones, knowledge of the use of which is a revelation from Uhgen. His disclosures concern talismans to bring the enemy within range, to render the person invisible, and so on *ad infinitum*; and also the taboo, which preserves property from theft by fetishes. Through such vehicles spirits work ill as punishment on violators. Different varieties of stones are used as fetishes to make crops grow, to make rain or wind, or to bring game. The mightiest stone is called Nuruk (narak), and has the power of life and death. They are kept by a Nuruker, but to work them he must have something which has been used by or has been in contact with the person of his victim. Such a thing must not be carried over fresh water, and if it can be washed it is Nuruk-proof—another case of the exorcistic effect of water—but if it is rubbed on the Nuruk-stone and burned by a slow fire the victim wastes away with disease. Black-mail is common, whereby the Nuruk-process is threatened if some coveted thing is withheld. When a person is ill there is always a great effort to trace the Nuruk. Facts seem to support the belief. "Good intelligent Christians accept evidence of direct answers to prayer less satisfactory and conclusive than that presented in cases of Nuruk." Every Nuruker, who is evidently a shaman, is a chief by virtue of the possession of the stones. Natives shudder at the sight of them. Knowledge of their use is handed down from father to son.⁵ Elsewhere in the New Hebrides if a man dies, the shaman says that though he went to Hades to try to bring back the ghost of the dying, the other shades seized it, drew it away into their cave, and shut the door.⁶

In Africa the priests have great influence and power; they make sacrifices and incantations, carry out the frequent ordeals, sprinkle babies with water, give them a name, practise circumcision, and lead in the festivals of reconciliation and harvest, the mask dances, and the funerals. The chief function of the Zulu shaman is to communicate with the souls of the dead who have much to do with the affairs of the living. From the cradle to the grave, the life of the Bechuana is entangled in the most complicated and time-wasting usages. Ceremonies of a special nature go on till death, so that one of them could not live without a shaman. A European could get on much better without a physician or clergyman. In 1857 a Kaffir maiden, not a Zulu, declared that she had a revelation from the spirits that the Kaffirs would drive the whites out of their land, provided that the natives, by sacrifices, would secure the assistance of the spirits. In the first place, they must kill and eat the best cattle. This they did, although it was contrary to all their laws and customs, the chiefs approving of it apparently with the idea of bringing the people to despair. The result was a terrible famine, and thousands died.⁷ In West Africa the shaman brings news of the recently deceased, usually announcing his safe arrival in Deadland, and in return gets a sumptuous but private entertainment—for to see him eating is death. The family intrust him with messages to the deceased.⁸ There is no denying that such speedy and natural resumption of relations is comforting to the bereaved. The shaman among the Fan sits on the ground and pretends to listen to mysterious voices which, in fact, can be heard coming from the soil. "This is very probably a simple effect of ven-

⁶ Macdonald, in AAAS, 1892, 727.

⁷ Ratzel, *Vhde.*, I, 187, 267, 279.

⁸ Ellis, *Yoruba*, 109.

triloquism; certain shamans are past masters at it." Some of the shamans possess secrets transmitted from generation to generation. "These are sometimes beneficent remedies composed of medicinal plants, the medical effects of which are incontestable: in other cases they are philtres the power of which I have repeatedly been obliged to verify; there are also poisons, especially vegetable poisons, which paralyze or cause an incurable malady, or again kill without leaving a trace. And finally there are charlatans who ape the others without having the science: their mysterious airs and pretenses sometimes deceive the people more than a true power. It is here as elsewhere."⁹ Certain of the Bangala shamans are said to scrape their eyes with the sharp edge of the sugar-cane grass, "which operation clears the vision and enables them to see the *moloki* or witch afar off and frustrate its evil designs." Another special class make a charm which is rubbed on the body or tied on the wrist or leg of the client who, when thus protected, "can walk right among his enemies, and if they catch him they find only his cloth, for the person in the cloth has vanished. This charm is used in times of war as the possessor can fight and kill without being seen by the enemy, and this charm is also in great favour with thieves."¹⁰

A means whereby a medicine-man may direct the path of life for a Mkamba is by making little cuts in his skin and rubbing in a particular medicine for various purposes. "This done to the tongue gives a man the power of great authority in his speech; the same treatment to the forehead and throat just above the breast bone ensures to a man the admiration of women, and applied to the chest or abdomen brings him great riches. Almost every Mkamba has one or more of these magic medicines about his body which serves him all through life, or if not, a reason for its failure is, of course, easily found."¹¹ A native claiming the gift of prophecy was interviewed and cross-examined by Hobley;¹² he stated that "at intervals, about twice a year, during the night he falls into a deeper sleep than usual, a trance in fact, and that while in this condition he is taken out of his bed and statements are made to him by a voice, but he cannot see who gives him the message. The trance always occurs at night, and he is generally taken outside his house while in this cataleptic condition, but says that he never remembers being able to distinguish the huts or any familiar objects in the village. The interior of the hut appears to him to be lighted up, and the message comes with a booming sound which he understands. . . . The day following one of his seizures he collects the elders and delivers to them his message. He states that after one of these seizures he is very exhausted, and for three days cannot rise from his bed. His father and paternal grandfather had this gift or power, and he says that his father told him that his paternal grandmother had three breasts, two on her bosom and one on her back, but whether he considered that this had any connection with the other phenomena he did not disclose." Other statements about his personal history indicate that he was a typical fetish-man. "He was seized before the great famine of 1900 and foretold its arrival. Later on he was told to inform the Kikuyu to sacrifice at the . . . sacred fig trees a white sheep, a red sheep and a black male goat, and that the chief Kinnanjui was to sacrifice a *mori*, white heifer, at the head waters of the Mbagathi River. These orders were obeyed, and the famine and small-pox were lifted from the land. . . .

He says that sometimes when rain does not come he is accused of stopping it, but that such accusations are due to ignorance, that he is merely the unconscious and involuntary agent for utterances from a Supreme Power, and that all he can do in such cases is to take a sheep to a sacred fig tree, sacrifice it there, and pray for rain, just like any other elder who is qualified to do so." The Beja of the Sudan follow their priests in all things. "Each family has a priest who erects a tent of skins in which he practises his vocation. When consulted he strips himself and enters the tent backwards. He comes out behaving as a maniac or epileptic and says: The spirit salutes you and advises you to give up a particular journey for such and such a tribe is about to attack you. . . . When they determine to move their encampment, the priest loads the tent of which I have spoken on the back of a camel which bears no other load. They allege that this animal rises and travels as if heavily laden, and that it sweats profusely although the tent is absolutely empty."¹³

Of the Siberian shamans it is believed that they can control rain and snow at will and bewitch men and beasts.¹⁴ A local Yakut tradition narrates that a great shaman once seized death and, having shut it up in some iron boxes which were enclosed one within the other, buried it in a grave. People ceased to die; and they increased to such numbers, became so old, and grew so weary of life that they begged to have death set free.¹⁵ The Buryats think the shamans find out secrets and can foretell the fate of each man. The priests decide all details of burial. They exploited the Buryats and hindered them from coming to terms with the Russians.¹⁶ Yet the shaman-to-be is adjured: "When a poor man calls you, do not demand a great price from him for your labors but take what he gives. Always exert yourself for the poor; help them, and pray the gods for protection against evil spirits and their power. If a rich man calls thee, ride to him on an ox and do not demand much for thy labors. If a rich and a poor man call thee at the same time, go first to the poor man." This sounds a little like the Oath of Hippocrates but for the Siberian practitioner it is a rather hopeless counsel of perfection. The fact is that the consecration of a shaman costs heavily, and such sacrificial ceremonies are established for it that the impression exerted upon all those present remains long in the memory of the people and elevates the calling of the shaman in their eyes. It is strange to find that the shamans are not respected among the Chukchi, where their activities are restricted to healing and the performance of magical rites.¹⁷ The Soyots believe that the soul of the shaman flies through the air on his drum while his body remains behind. When performing, he falls into a state of mind resulting often in unconsciousness. One case is cited where the shaman really died; he fell into the fire and was fatally burned. Things happen in the operations that Europeans cannot well explain; e.g., a shamaness who had bad legs and could not move or stand, began to "shamanize" seated; presently she got up and capered about; furthermore, the prophecies often come true. Before beginning, the shaman drinks ten cups of water, which represents blood-drinking; he smokes some, and then mumbles and sings formulas while lightly striking his drum; the movements get faster and more violent, the drumming harder; the voice seems to come from deep in the chest; he looks earnestly ahead; the "flight" is begun. He whirls about, falls over, and

is seized and supported by someone; he then reports what happens on his "flight"—dialogues with people and devils that he feigns to meet. The practices are similar in the case of the ancient Lapps.¹⁸ "It may be said that all over Siberia, where there is a shaman there is also a drum. The drum has the power of transporting the shaman to the superworld and of evoking spirits by its sounds." It is the most important of the many accessories of the profession. The novice must learn singing, dancing, various tricks, including ventriloquism, and how to beat the drum. "The beating of the drum, notwithstanding its seeming simplicity, requires some skill, and the novice must spend considerable time before he can acquire the desired degree of perfection. This has reference specially to the performer's power of endurance. The same may be said of the singing. . . . The amount of endurance required for all this, and the ability to pass quickly from the highest excitement to a state of normal quietude, can, of course, be acquired only by long practice." The ecstatic shaman communicates with spirits. "This includes all kinds of intercourse with 'spirits' which become apparent to the listeners; that is, the voices of 'spirits' talking through the medium of the shaman, ventriloquistic performances, and other tricks—generally speaking, the whole spectacular part of shamanism, which forms the main content of the shamanistic *séances*. . . . With increasing years some of the shamans discontinue most of these tricks. . . . The majority of shamans, however, combine in themselves the gifts of all these categories and in the name of 'spirits' perform various tricks, foretell the future, and pronounce incantations." The Altaian shaman purifies the host, his family, and relatives, by "embracing them in such a way that the tambourine with the spirits collected in it touches the breast and the drum-stick the back of each. This is done after he has scraped from the back of the host with the drum-stick all that is unclean, for the back is the seat of the soul."¹⁹

Among the Tibetans, "every act in trade, agriculture, and social life needs the sanction of sacerdotalism, whatever exists of wealth is in the *gonpos* [monasteries], which also have a monopoly of learning, and eleven thousand monks, linked with the people, yet ruling all the affairs of life and death and beyond death, are connected closely by education, tradition, and authority with Lhasa." At the beginning of every one of the harvest operations the presence of lamas is essential, to announce the auspicious moment and to conduct religious ceremonies. They receive fees and are regaled with the fat of the land.²⁰ The lama "performs sacerdotal functions on every possible occasion; and a large proportion of the order is almost entirely engaged in this work. And such services are in much demand; for the people are in hopeless bondage to the demons, and not altogether unwilling slaves to their exacting worship."²¹ In India barren women go to the temple of Vishnu to spend the night. They are humbugged by a priest whom they take to be the god.²² A Hindu epic states: "We see through the power of penitence what is future and what is past."²³ The medicine-men of the Sema Nagas frequently resort to tricks. "The sucking out of the extracted object is often accompanied by a shrewd nip, which the patient takes for the pain attending the object's emergence from his body. The writer has been operated on by one of these practitioners. The objects produced are bits of stone, quartz, iron, tin, old teeth, chewed leaves,

mud, hairs, etc., the latter being invariably produced from a patient with a cough. . . . A really clever *thumoni* extracts not with the mouth, but with his bare hands, so that the object is probably not concealed in his mouth, but in such cases he usually does it in the inner darkness of a Sema house where little skill or sleight of hand is needed. For a consideration a *thumoni* will sometimes teach his trade, but no case of a pupil's having given away his teacher is known. Indeed they appear to have a belief in their own powers which assorts most ill with the impostures they practise. But to go out of one's way to convict the *thumoni* of fraud is to break a bluebottle upon the wheel. Sufficeth it that the *thumoni* believes in himself and is believed in by his patients and in very truth often cures them by faith alone. After all, he differs little from a 'Christian Science' practitioner, unless it be in that he uses a trifle more deception to induce the state of mind in which the patient recovers of his affliction."²⁴ Cases of hypnotism appear rare among the Palaungs or Palès, but from what Mrs. Milne²⁵ heard, they are not unknown. "I was told of a Palè at Kangwantok who was said to have strange powers over both men and women. The Palaungs who told me of him, said that he 'knew how to blow.' Blowing is used in all sorts of mysterious ways. A wise man blows into the air, or on a charm, while he is invoking the help of spirits; a wise woman, after massaging a limb, blows upon it. This Palè seems to have used his hypnotic power chiefly for making practical jokes." Among these people, "every monastery is also a school, taught by the monks, the scholars being all boys. There, besides learning the precepts of Buddhism, the children learn to read and write a certain amount of Burmese and Shan, enough to help them in later life."

The medicine-basket in Sarawak usually contains a "sight stone," that is, a quartz crystal with which the medicine-man is reputed to see the condition of a patient's soul; he goes into a trance and wakes with the soul in hand. Other items are a beetle whose movements indicate the outcome, resin, the fumes of which blind the evil spirits, bark, "waterworn" crystals, and, as charms against the evil eye, porcupine-quills, and bamboo-slips.²⁶ "If a Dyak dreams of falling into the water, he thinks that this accident has really befallen his spirit, and sends for a *manang*, who fishes for it and recovers it." It is the shadow-spirit that falls into the water.²⁷ It is noteworthy that the man who has the reputation of being fortunate and has had large paddy-crops is selected to be the augur who shall undertake to obtain omens for a large area of land on which he and others intend to plant. He must hear the cries of birds in a complicated order and from the right directions.²⁸ The male and female shamans of the Mentawai Islands lead the festivals and, in case of storm or earth-quake, must drive off the evil spirits causing the disturbance.²⁹ The offices of the local shaman are indispensable to the young child, in Atjeh; "he lays it before him on the ground, utters a prayer, and whispers the usual prayer-formulas in its right ear, after which the child is restored to its mother."³⁰ The Semang of the Malay Peninsula have a most undeveloped religion, but the shamans are very necessary as intercessors between men and spirits.³¹ In Nukuoro the intercessor gets no fees and the pressure of the priesthood on the people is due to immediate fear of the gods rather than to priestly domination.³² Certain Filipinos

priests prophesy over a slain pig, distributing all but the best parts among the crowd.³³

In Polynesia there were graded classes of men who engaged in operations, some of which were obviously religious, whilst others were of the character of magic. Writers call some of these people "priests," and others "sorcerers," the latter being, generally speaking, an inferior class. "The evidence shows, however, that some of the priests, who in their observances were in the habit of appealing to the gods, engaged in operations which we should, from their character, include under the term magic; and it was in some cases through a god, who might or might not comply with the prayer of the priest, that the processes of magic were put into operation." The priesthood of the Marquesas was composed of several ranks: first were the *atua*, or gods; "they were men who had been actually deified in their lifetime, and performed their sacred offices, not by virtue of professed inspiration or possession by some other supernatural being, but with their own powers as gods. They were believed to be able to control the elements, impart fruitfulness to the productions of the earth, or smite them with blasting and sterility, and to cause illness and death." They lived lives of mysticism and seclusion. Next came the *taw'a*, a more numerous and tangible class than the *atua*, but allied to them in office and reputation, for "though they did not profess to be gods, they were supposed to possess an hereditary gift of inspiration and a power of causing a god to dwell within them, and sometimes usurped the dignity and name of *atua*; they seemed to be a combination of prophet and sorcerer. . . . They also cured ills of soul and body, supposed to be the effect of divine wrath. A sort of mystery surrounded them, and the power they had of disposing of the taboo and of demanding human victims rendered them very terrible." The *tahuna*, or priests, were next in order, a more numerous but less formidable class, and less presumptuous. "Their offices were various, consisting mainly in offering sacrifices and performing religious ceremonies; in singing sacred songs, beating the drums of the temple, celebrating funeral rites and performing surgical operations." The *w'u* were the assistants of the priests, helping them in the conduct of ceremonies, and especially in the more laborious parts of the performance of human sacrifice. "Admission to this office was only granted to men who had killed an enemy in battle with the short club or battle-axe—*w'u*—from which they derived their name; they had the privilege of feasting with the *taw'a* and *tahuna*." There were female *taw'a*, but they never entered the temples; "some of them, claiming divine inspiration, had little altars in their own houses; whilst others, having no power actually to invoke the gods, were able to predict events."³⁴

Holm³⁵ says that the East Greenland angakoks played no great rôle in social life; yet the natives feared to go hunting alone lest they should fall victim to some angakok's vengeance. And Fries³⁶ tells how the angakok united in himself the priest, judge, physician, and chief; he was the bearer of his nation's science, however insignificant, and upholder of the rules of living inherited from the fathers; in all extraordinary situations his advice was sought by those who needed help, within the little human society where he lived. By the aid of their guardian-spirits the angakoks of the Central Eskimo cure the

sick and make good weather; they discover transgressions of taboos and other causes of ill luck.³⁷ The person settled on by the Tlinkit shaman as a witch was "generally some unimportant member of the community, an uncanny-looking creature, a slave, or some one who had the ill will of the doctor or the relatives of the patient. This was a very effective way of ridding one of his enemy. No one, not even the victim himself, thought of disputing the shaman's judgment."³⁸ Among these people, as among the Haida and Tsimshian, the shaman proper and the sorcerer were quite distinct functionaries. Among the Kwakiutl, at least, those sorcerers who served chiefs to counteract the evil of other hired sorcerers were distinguished as a class from those who used sympathetic magic in the treatment of illness. "The ability of the shaman to see and control the souls of the living and the dead appears to have caused the assignment to shamans of the disagreeable and dangerous duty which ordinary persons are less well equipped to perform—the preparation and burial of the corpse. To the shaman for the same reason was given the collection of the bones of the dead and the dispatching of food and clothing to the deceased. . . . The specialization of functions peculiar to shamans was reflected in the specialization of duties for shamans in mortuary practices, and this resulted in the differentiation of several shamanistic mortuary castes. In this mortuary development the shaman becomes a priest, so far as his behavior goes, but his qualification for office and the basis or origin of his functions are shamanistic."³⁹ As a display of power, without any particular purpose, but always sure to be repaid by a shower of presents, the medicine-men of the Ten'a used to indulge occasionally in exhibitions of wonderful feats, such as any sleight-of-hand performer accomplishes to amuse an audience. A certain one, before falling into a trance, during which he held intercourse with the spirit-world, used to put aside his head. Jetté⁴⁰ ventures to suppose that the bystanders lost theirs, rather than he his. "Other shows could be commemorated here, but hardly deserve more than a passing mention. Shamans allowed themselves to be shot at with a rifle [which they themselves had loaded, or allowed another man to load], dropping down as dead and afterwards jumping to their feet, making an infuriated run, and finally coughing and spitting out the bullet. Others covered an empty dish-pan with a piece of drill, raised it toward heaven, and when they put it down it was found filled with powder or shot or gun caps. Another one took the stars from the sky and laid them on the floor of the cabin before his wondering admirers. He must have been very careful to put each back in its own place, unless, perhaps, he be the one who is answerable for the loss of one of the Pleiades. If there be any truth in these facts, they would prove that the medicine-men in the old times were skilful performers, a qualification which their actual successors lack conspicuously. . . . Their profession seems to exercise no special influence on their moral character. They are generally smart, somewhat crafty, but not to a degree that would greatly transcend the ordinary. Some are very wicked, but others, on the contrary, are benevolent and genial." They are losing their power, probably through white influence; and the old ability to predict a person's death is now discredited and hence remains without effect, though some natives fall sick from fright.

Hewitt⁴¹ says that Iroquois shamans are all jugglers and have annual meetings at which they show their skill. They believe that each trick comes from a "dangerous dream." Each juggler is obliged at these meetings to show a new trick or he forfeits his life, and a simple trick will answer the purpose if it deceives the other jugglers. These tricksters can swallow pebbles, knives, and the like, by the use of a tube inserted in the throat. They also cause "appearances" in the smoke after putting tobacco and perfumes upon the fire. A juggler who could not tell the meaning of a dream also forfeited his life. LaFlesche⁴² related some tricks played by the Pawnee shamans. One feat, the swallowing of a deer's head, he could not explain. "Arrows" were swallowed which were made of a vine soaked and greased so as to render them pliable. Their performances were remarkable in that the shamans were nearly nude, remained in the midst of the audience, and did not use any of the aids employed by professional prestidigitators. Before the Cheyenne doctor treated a patient, he purified himself and the sick man, largely through the use of smoke. "The hands were frequently passed through the smoke, the palms held up to the sun, and then rubbed on the ground, and afterward placed on the patient, while prayers were made." All the medicine-men were also horse-doctors. "The very great usefulness of the horse in all aspects of Plains Indian life, but especially in war, gave an extraordinary importance to the work of curing injured horses or—by means of mysterious power—enduing them with an added measure of activity, speed, strength, and endurance. The doctor who possessed the power to heal men exercised this power as well on horses. When a doctor instructed a young man how to cure sickness, he usually taught him also the secrets of doctoring horses. . . . If the Cheyennes were going to race horses against another tribe, those who were backing the horse might take a pipe, and, generally, also some arrows, as a gift, to ask help from the horse doctor. To do this in ordinary tribal races was not admissible. The horse doctor then sought and found a track of the opponent's horse, and taking a handful of dirt from the track, he put this earth in a gopher's hole. This, it was believed, would cause the horse to step in a hole and fall or get hurt. . . . No horse doctor would eat horseflesh, and no horse doctor would shoot a horse, wild or tame."⁴³ In some cases the object of Indian sorcery was, by means of divination, to find out the plans of the enemy.⁴⁴ Some of the Californian medicine-men, through their incantations, pretended to be able to bring fish as well as to cure the sick.⁴⁵

The Indians, like the Hebrews, had their prophets who urged the people to return to the ways of righteousness. Such an one was Tenskwatawa, the famous "Shawnee Prophet." "He declared that he had been taken up to the spirit world and had been permitted to lift the veil of the past and the future—had seen the misery of evil doers and learned the happiness that awaited those who followed the precepts of the Indian god. He then began an earnest exhortation, denouncing the witchcraft practices and medicine juggleries of the tribe, and solemnly warning his hearers that none who had part in such things would ever taste of the future happiness. The firewater of the whites was poison and accursed; and those who continued its use would be tormented after death with all the pains of fire, while flames would continually

issue from their mouths. This idea may have been derived from some white man's teaching or from the Indian practice of torture by fire. The young must cherish and respect the aged and infirm. All property must be in common, according to the ancient law of their ancestors. Indian women must cease to intermarry with white men; the two races were distinct and must remain so. The white man's dress, with his flint and steel, must be discarded for the old-time buckskin and the firestick. More than this, every tool and every custom derived from the whites must be put away, and the Indians must return to the methods the Master of Life had taught them. When they should do all this, he promised that they would again be taken into the divine favor, and find the happiness which their fathers had known before the coming of the whites. Finally, in proof of his divine mission, he announced that he had received power to cure all diseases and to arrest the hand of death in sickness or on the battlefield." The movement was therefore a conservative reaction against the breakdown of old customs and modes of life due to contact with whites, but it had at first no military object. To establish his sacred character and to dispel the doubts of the unbelievers, the prophet continued to dream dreams and announce wonderful revelations from time to time. "A miracle which finally silenced all objections was the prediction of an eclipse of the sun which took place in the summer of 1806; this was followed by his enthusiastic acceptance as a true prophet and the messenger of the Master of Life."⁴⁵

On four special occasions the Island Caribs needed the services of their medicine-men, with their incantations and tobacco smoke: (a) to be revenged on some one who had done them harm, by drawing punishment upon him; (b) to be cured of some illness and learn the results of it; (c) to consult the gods on the issues of their wars; and (d) to hunt away the Evil Spirit. "When the Boyé [medicine-man] has made his Familiar Spirit appear, the latter is heard to reply clearly to the questions put to him: he is heard to click his jaws as if eating and drinking the anacri, but next morning they find that he has not touched it. These temporal viands which have been soiled by these unfortunate spirits are deemed so sacred by the magician and the people whom they have abused that it is only the old men and the most illustrious among them who are free to partake of them, and even then they dare not taste them unless they have a certain cleanliness of person."⁴⁶ One of the head chiefs of the Araucanians died suddenly of apoplexy. This manner of death, so uncommon among the Indians—there being no visible cause to explain it—was immediately set down to witchcraft. There was nothing to do but call in the medicine-man. He arrived, carrying in his right hand a wand about eighteen inches in length, covered with snake's skin and garnished with human teeth. "The *machi* took his stand in front of the fire, with arms extended, face upturned, and eyes unblinking for more than half an hour, inhaling without flinching the clouds of suffocating smoke that enveloped him, and seemingly lost to everything around him. Suddenly he recovered consciousness, and rushed into the hut where the body was laid out on a bed of skins. What he did there, no one could tell, but after a short while he reappeared, showing signs of mental and bodily exhaustion." In a jar he placed exuviae from the corpse and then started to dance. "By degrees, the dance became more and more furious, the contortions more complicated, and at length he broke out into a wild monotonous chant. This was kept up till human nature could stand no more, and he fell back in a fit, or

state of coma, produced by utter exhaustion. . . . In a short time he announced that the chief had been slain by an enemy who had taken the form of a black *caita* (wild bull), and that it was necessary to sacrifice such an animal, when the evil-doer would immediately suffer for his act."⁴⁷

Divination was a regular practice among the advanced peoples of antiquity. The Hebrews "ask counsel at their stocks, and their staff declareth unto them."⁴⁸ Prophetism exhibited a connection with various survivals of the most ancient conceptions, even with magic.⁴⁹ Among the early Scandinavians the future was foretold by a prophetess, who was queen of the goblins and was long remembered in Sweden.⁵⁰ The greatest of the Grecians treated the Oracle of Delphi with respect; Plato and Aristotle did not hesitate to express publicly their belief in her prophecies, which were interpreted by a body of very learned and experienced priests. Recent excavations have revealed something of the inner history of this famous shrine. The investigation of the temple-foundations shows that the *sanctum sanctorum* of the Oracle was no bigger than a ship's cabin; "this Adyton was like a small box contained in a bigger one, and was, like the rest of the temple, built of limestone, had a flat wooden ceiling and four smooth walls, one of which was pierced by a door. The interior floor surface measured only fifteen square meters." The inquirers sat on stone benches. A stairway led down to the vault, where the tripod stood and under which issued the prophetic spring. This tripod was called "the common hearth of Hellas." "Curiously enough, the priestess might not be a learned or an experienced person in the ways of the world; she must have as far as possible an utter simplicity. For a time the Pythia was a young girl, but the priests for very good reasons decided that she must be of more mature age, and yet she was always dressed as a youthful damsel and expected to assume the airs of maidenhood. The priests of Apollo were her prophets. If the Pythia shrieked and foamed at the mouth the priest interpreted her in vocal syllables and made her articulate. In the beginning these interpretations were given in hexameters, but later the answers were in prose. Dr. Poulsen believes that the Pythia was ignorant and sincere and that her madness was genuine; he gives the priests of Apollo credit for great shrewdness and knowledge of affairs, but he does not venture an opinion as to whether they played tricks on the credulity of their clients or not. There seems, however, to have been something more than mere frenzy on the part of the Sibyl, and if the priests were tricksters they were extraordinarily wise and potent tricksters, for from the beginning of the seventh century B.C. the Oracle of Delphi became not only the arbiter of the destinies of Greece, the directress of great men's minds, but the guiding star of the founders of its colonies."⁵¹

Oracles like the Greek were unknown at Rome, but the custom of learning the will of the gods by incubation was most ancient and Italian. Divination was accomplished also by cards written, mixed, and extracted at sanctuaries; other means were dreams and the flame of the burning laurel. At one time nothing, whether ploughing or marrying off a daughter, was done, even in private, without auspices.⁵² Nearly all the successors of Augustus in the first and second centuries were infected by the fatalist creed of astrology. Astrolo-

gers "were banished again and again in the first century, but persecution only increased their power, and they always returned to exercise greater influence than ever. Never was there a clearer proof of the impotence of government in the face of a deep-seated popular belief."⁵³ Astrology suddenly appeared in the foreground of Italian life in the thirteenth century. Rulers had a corps of such persons at court; in the universities from the fourteenth to the sixteenth centuries there were special professors of this pseudo-science. The popes openly espoused star-questioning, and Paul III held no consistory court without the star-gazers having decided the hour for him.⁵⁴ Among the portents of the Great Plague noted by Defoe was "running about to fortune tellers, cunning men, and astrologers." Sadly he reports that "this trade grew so open and so generally practiced that it became common to have signs and inscriptions set up at the doors: 'Here lives the Fortune Teller,' and the like." The same gentry are still with us; fully one thousand fortune tellers may be found plying their ancient trade in New York City alone. Under the name of psychic and occult there is carried on a profitable business which is supposed to have disappeared with the Middle Ages.⁵⁵

§314. Rain-Making.

IN Australia, the rain-maker may merely go to a pool "and, taking care that no women or strangers are in sight, bends down over and 'sings' the water; then he takes some up in his hands, drinks it, and spits it out in various directions. After that he throws water all over himself, and after scattering some all around, returns quietly to his camp, and rain is supposed to follow." Again, there is a rain-bird whose mate, a snake, lives in a water-hole. The performer first sings the bird, then secures one of the snakes and puts it alive into the water-hole. "After holding it under for a little time, he brings it out, kills it, and lays it down by the side of the creek." He then makes a grass-imitation of the rain-bow. "All that he then does is to sing over the snake and the imitation rain-bow, and sooner or later rain falls." While only a special performer can make rain, "any black-fellow can stop it by simply taking a green stick, warming it in the fire, and then striking it against the wind."¹

In southeast Australia, a log hut is built over a hole about twelve feet long, eight to ten feet wide, and two feet deep. Then two supposedly inspired men are lanced in the arm with a sharp flint, and while they bleed, down is thrown into the air—the blood symbolizing rain and the down the clouds. Two large stones also symbolize gathering clouds. The men who are bled carry away these stones and place them in the highest possible location in the tallest available tree, while others gather gypsum, pound it fine, and throw it into the water-hole. The hut is then thrown down by the old and young men who butt at it with their heads; "the piercing the hut with their heads symbolises the piercing of the clouds, and the fall of the hut symbolises that of the rain." Failure is referred to the adverse influence of some neighboring tribe upon the rain-giving powers.² In the East Central district the process is similar: "In order to make rain the old men cut themselves on the ears and both sides of the face. Rain is also made by the following ceremony: Twelve old men sit down

² Howitt, *S. E. Aust.*, 394-396.

at a small waterhole and make a large copi [gypsum] ball about 10 lbs. in weight. The ball is put into the waterhole and the twelve men return to the camp. Then one by one they go and have a look at the ball to see if it is dissolved. When it has dissolved it is bound to rain."³

Among certain Melanesians, "if the rain expert is lazy, and stays much in his house wrapped in his blanket, rain is likely to come; on the other hand by getting up and walking about the village he is able to stop rain. He also has certain charm stones which are suspended by strings over vessels of water; when rain is required the stones are let down so as to touch the surface of the water; when enough rain has fallen, the stones are drawn up again. Bats are said to frequent the house of the rain expert, and should he build a new house these animals forsake the old house and fly to the new one of their own accord."⁴ The rain-maker holds a very responsible position in New Guinea; failure on his part may bring disaster. On one occasion the natives accused him of trying to kill them, the charge specifically being that he was not making rain, as a result of which the native gardens would fail and the people starve and die.⁵ In New Caledonia "there was a rain-making class of priests. They blackened themselves all over, exhumed a dead body, took the bones to a cave, jointed them, and suspended the skeleton over some taro leaves. Water was poured on the skeleton to run down on the leaves. They supposed that the soul of the departed took up the water, made rain of it, and showered it down again. They had to fast and remain in the cavern until it rained, and sometimes died in the experiment. They generally chose, however, the showery months of March and April for their rain-making. If there was too much rain, and they wanted fair weather, they went through a similar process, only they kindled a fire under the skeleton and burned it up."⁶

Every tribe in Mashonaland has its own Mondoro or protecting god, and there is always a medium through whom he speaks. "If rain does not come when it should, then all the women in, say, one kraal take small baskets full of grain to the hut of the oldest woman in the kraal, who must be of the same *M'tupo* 'totem' as the tribe of the Mondoro. She then takes the grain to a flat rock and finds a hollow place into which she pours all the grain, and takes a dipping calabash and walks round the grain and calls upon the Mondoro to send rain because his children are starving. They then wait a few days and if rain does not follow, the whole kraal proceed to the kraal of the medium of the Mondoro, and offerings of snuff are made to her and she is requested to call up the spirit of the Mondoro and ask him what the people have done wrong that no rain has fallen. The medium retires to her hut and the people remain outside all night waiting for the spirit to enter the medium. This usually happens in the early morning, when the medium comes rushing from her hut foaming at the mouth and shouting out to the people, who all follow her and ask questions as to what is to be done to get rain. The medium may tell them that they have offended the Mondoro in some way and must make an offering of a goat, head of cattle or a hoe, and if this is done then rain is sure to follow." In South Africa one also finds specialists—"rain doctors" and "callers for rain," as the native terms signify. Usually the king is the chief rain-maker, but the profession is not necessarily practised by males only; one of the most famous rain doctors was a chieftainess, said to have four breasts and credited

with being the source of the locusts.⁷ Obviously she was a fetish-woman. When rain is threatening on the Upper Congo a certain ceremony is performed in order to ascertain how long it will be before the rain will fall, "If the leaf breaks at the first whack the rain will begin to fall in twenty minutes, and so on. They will start a journey or remain at home according to the indications of this performance." On the shelves in most of the houses are sticks with "medicine" tied round them, which are taken down and plunged into water with some leaves so as to bring rain. "It is rarely that they resort to this as the rains fall with great regularity all the year round. Throwing salt on the fire will cause a superabundance of rain to fall."⁸ Among the Bageshu are special men whose duties are to regulate the elements; they bring the rain when it is necessary and cause sunshine when it is required. "They have not always the most pleasant time, because their failure to produce the necessary rain is never attributed to inability, but to disinclination to accommodate the people. The people try persuasion, bring presents and offerings to them, begging them to act for them; if the rain does not come they lose patience and demand it; if the men persist in their obstinacy and if the rain does not come, they resort to strong measures and deeds of violence. They rob them of their cattle, and if the rain does not come then, they proceed to burn their houses down, and the rain-makers are fortunate if they escape a severe handling, or even death. The method commonly practised by the medicine-man is to take a couple of fowls which have been brought by the suppliant, and kill one of them by striking it on the head with a stick; he cuts it open by making an incision from the under side of the beak down the breast to the tail, then lays it open and examines the entrails for the markings upon them, and for any speck. . . . If the strong measures fail, the people are reduced to seeking out the man, and again try by flattery and presents to obtain his help. They rebuild his house and restore his cattle and make reparation for the ill he has suffered. The man may agree to go to the extreme measure of a visit to the deity on the mountain which he professes to fear doing."⁹

Among the Wagogo of East Africa the art of rain-making is kept secret, but the color black appears to be an essential. Offerings of black fowls, black sheep, and black cattle are made at the graves of ancestors, while during the rainy season the rain-maker wears black clothes.¹⁰ Serpa Pinto¹¹ says the African rain-makers note the winds that bring rain and operate accordingly. Doubtless such weather-wisdom is a tradition of the profession. The Wawanga make the medicine-man a present of a bullock and request him to produce rain. "So long as the drought lasts the chief sends him the humps of all bullocks killed by him; and at harvest time, should the medicine-man have been successful in producing rain, he sends round to all the plantations for a contribution of grain. If, however, no rains come, the people argue that some other medicine-men are jealous of him and are working against him. They accordingly go by night to their own medicine-man and kill him. It is asserted that heavy rains invariably follow his death."¹² Although the wizard is held in abhorrence and dread by the Nilotic Kavirondo, the rain-maker is greatly esteemed. "His success probably depends upon a knowledge of the signs of the heavens, but his methods are as follows: His village is to be found as a

rule near a big tree, which he asserts is sacred; when rain is wanted he gathers some herbs and puts them in a large pot containing water, which he boils beneath the holy tree. Of the decoction thus prepared he draws off a little into a smaller pot, above which he squats on his haunches. Next a reed is produced, and through this the rain-maker draws up a little of the liquid and then squirts it forth into the air after blowing through the reed and causing the fluid in the pot to bubble; the whole process being punctuated by voluble mutterings and *abracadabra*.¹³ The principal function of the magician-chiefs of the Upper Nile is to make rain, for this is the one thing that matters to the people in those districts; if it does not come down at the right time, it means that their animals and crops, their only resources, are destroyed. "These chiefs, the rain-makers, have various ways of producing rain. One may have a collection of rain-stones such as rock crystals and amethysts. These he plunges into water and, taking a cane, beckons with it to the clouds, accompanying his gesture with an incantation."¹⁴ The position of rain-maker in the Anglo-Egyptian Sudan is precarious; "he has great power as long as the rain behaves within bounds, as he can always get more goats slaughtered up to a certain amount and feast upon them. But there comes a time when the need is too great, and he is given a last chance. Then an ox, if they can afford it, is slaughtered and a great feast prepared, and some of the blood with some round pebbles is put in one of the hollowed stones used by the women for grinding corn. This is left on one side, I presume as an offering to some higher power. The feast is held with much drumming; at its conclusion, on a given signal, amid dead silence, all retire to their huts, and not a sound is made till morning. If no rain comes in three weeks from that day the rainmaker is killed."¹⁵

In Manu's time an oblation thrown on the fire reaches the sun, whence comes rain.¹⁶ A native writer¹⁷ goes into some detail concerning rain-producing ceremonies in India, exhibiting, among other expedients, the employment of coercive nudity. The women parade the streets at night, singing, for ten or twelve days; or they strip naked and draw a plow across the fields. In the latter case, if they should be seen by men, the spell would lose its effect. Hook-swinging for rain, where the victim has hooks fixed in his back and is drawn up forty feet into the air, is parallel to other forms of self-torture.¹⁸ Abuse of the men by the women, whereby the former "are supposed to be offered as sacrifices to the offended rain-god in order to appease his wrath so that he may cause rain to fall," is another variant; and there are ceremonies by the women to cause the rain to cease. Abuse of the lame, halt, and blind, by pouring water on them and receiving their vituperations, is believed to be sure to bring rain in a dry time. If Brahman women, who never plow for themselves, engage in such undignified manual labor, it is thought that rain will pour down in torrents immediately after. If there is hesitation about subjection of such high-caste females to actual labor in broad daylight, they touch the plow early in the morning, before people are up, and the plowing is done later in the day by the men. Slaughter of animals was, in one case, forbidden, in consequence of a long period of drought; "but in two days the rains set in, and the prohibition was removed." In Bengal, in times of drought and threatened failure

of crops, all the outlets of a certain temple were closed and a hundred to one hundred and fifty Brahmans poured water on the idol till it was immersed to the chin; the people confidently believed that rain-clouds would at once gather and send down showers. Another writer¹⁹ reports that the women assemble alone and dance, nude, around a mystic tree—a plantain stem or young bamboo stuck into the ground—singing old songs and charms. This rite is to get rain and a good harvest when they are suffering or likely to suffer from drought.

In the Japanese highlands, after a prolonged drought, five or six hardy hunters are sent as a deputation to the god supposed to dwell on the summit of Jonendake. Armed with guns and primed with rice-beer, they climb to the top of the mountain and make a fire. "By discharging their guns, rolling masses of rock down the cliffs and otherwise making a din, they endeavour to attract the attention of the spirit of the place to their prayers. By the noise and flames they intend a mimic representation of the storm they are seeking, and the practice may be classed with those commonly known to folk-lorists as 'sympathetic magic.'" The hunters declare that rain always comes within a few days after the ceremony.²⁰ The submerging of prehistoric stone axes in pots of water is a rain-producing device in north Celebes.²¹ In the Gilbert Islands, writes Finsch,²² "a woman promised to raise a 'good wind' on payment of several pieces of tobacco; when it did not come, and I jokingly demanded the tobacco back, she (and I) were derided by the natives." The Eskimo *angakok* is called in to get a good wind.²³

Mandan medicine-men perform their rain-producing ceremonies inside the lodge and young men volunteer to stand upon the lodge from sunrise to sundown, in turn, commanding it to rain. "Each one has to hazard the disgrace which attaches . . . to a fruitless attempt; and he who succeeds acquires a lasting reputation as a *mystery* or *medicine-man*. They never fail to make it rain! as this ceremony continues from day to day until rain comes. . . . He who has once made it rain never attempts it again. . . . On future occasions of the kind he stands aloof who has once done it in presence of the whole village, giving an opportunity to other young men who are ambitious to signalize themselves in the same way."²⁴ The ceremonies of the Indians of the arid regions to secure rain are too protracted and complicated to reproduce in description; they include the well-known Snake-Dance, with its bands of priests and accessories of imitative magic.²⁵ An individual intrusts his prayer to sacred meal, over which he breathes his petition; but a society of priests uses a more powerful charm, called a prayer-stick whose manufacture, on account of all the symbolical accessories, takes time and complex rites. The snakes are intercessors between men and the rain-gods, and there is "a compulsion of the rain and growth supernatural to perform their functions." Members of the medicine-society "claim immunity from the bite of the snake because it is their totem. . . . The main object of the majority of Hopi ceremonials is the production of rain and the growth of corn. . . . The modern Tusayan Indians believe that the dead have certain occult powers over rain deities. 'You have come to be a rain-god,' is the import of their prayer to a deceased friend or

relative."²⁶ From Arizona comes the report that immediately following the close, in 1926, of the annual snake-dance of the Hopi Indians such a heavy deluge fell that many of the automobiles of the returning sightseers were mired in the Painted Desert. Records show that the Indian priests have rarely failed to time the dance so as to coincide with the break in the dry season. "Generations of skill in desert weather lore have taught the priests of the Snake and Antelope clans of the Hopi Indians to foretell with almost uncanny correctness the exact day of the first rains. In fact, so wise are they that the snake dance ceremony is usually followed by a shower within an hour of its termination. Usually the first rain is light. This year it appears to have been a cloudburst."²⁷ Among the Zuñi, rain-making is properly the function of the rain-priests and of a certain esoteric society.²⁸ The Huichol Indians of Mexico have a yearly festival to bring rain. They abstain for a long period before the festival from sexual relations, salt, and bathing; and both sexes drink a decoction expressed from the cactus which is stimulating and quells hunger, thirst, and sex-feeling; it leaves a certain lassitude and headache behind but evokes colorful visions.²⁹ A skull on a pole, facing northwest, was supposed by certain South American Indians to secure dry weather.³⁰ In Teneriffe, "in time of drought, men and women cried aloud and danced around a pole in the ground, not eating until rain fell"; or, in case of disappointment, a holy man freed a sacred pig to roam till it rained. "This pig was thought to be the devil, who was greatly learned in the ways of nature and produced rain to blind the people and make them worship him."³¹

It is the belief of the Guiana Indians that rain can be produced as well as stopped by human, animal, or spirit agency; at the same time it appears to have an independent existence. "To make rain on the Pomeroun, one of the authorized methods consists in plunging into water a length of cassava stalk held at one extremity. Next the stalk must be tied up in the center of a bundle of other cassava stalks, and the whole left to soak in water: rain is sure to fall within twenty-four hours. Another method practised here is to wash in water the scrapings from one of an alligator's largest teeth. Arawaks as well as Warraus believe also in the *piai* [medicine-man] or any layman burning the carcass of a *camudi* as an inducement for the rain to fall. The Oyambis of Cayenne have the same belief in the efficacy of the killing of a snake. . . . In the Moruca River district, there is a half-submerged tree stump, known as *Ibúma* (lit. 'young woman,' in the Warrau language), believed to be the site where either an Indian murdered his wife or where she killed herself. In dry weather the tree is exposed, and as the Indians pass it in their corials, they call out, '*Ibúma!*' and slash their cutlasses into it, with the avowed purpose of making the woman vexed, and so causing the rain to fall. Rain can also be made to fall in this district by cursing the black *kurri-kurri* bird. . . . On the upper Mazaruni it is a large eagle and a *camudi* that can cause the rain to fall; frogs are reputed to be able to do the same thing." The infringement of certain taboos can entail a downpour of rain, as for instance, "when traveling on the sea or any other large sheet of water, as a big river, the Indians

(Arawaks, Warraus, etc.) have to be very careful as to what they do with the pot-spoon. . . . After use they must wash it in the traveling boat or wait until they get on land, but never wash it in the river or sea: otherwise, big squalls and storms will arise. Near the Chichi Falls, upper Mazaruni, on giving the Indians rice to cook that evening, the men told them to wash it first by dipping the earthen pot into water, but to this they demurred, saying that if they placed their pot in the water the rain would fall more heavily. In the same way a Cayenne bush-negro, in order to stop the rain, advises his fellow-servant not to wash the inside of the pot." There are other methods of stopping rain. In a certain district "there was a hill close by on which, the Indian said, a 'Spirit at the approach of the end of the rainy season, made a noise like the report of a gun to stop the rain.' 'We passed an old man,' says Brett, 'fishing in a canoe on the Manawarin. The clouds threatened rain, and when he perceived it, he began to use extraordinary gesticulations, flourishing his arms, and shouting his incantations to drive it away. It soon cleared up, and the old sorcerer rejoiced at his success, as he deemed it.' So again, Dance on the Potaro: 'A cloud was gathering windward, and threatened rain. The Indian who had the front paddle in my woodskin commenced to blow away the threatening rain cloud. This he attempted to do by blowing into his fist and dashing his hand upward toward the cloud.' Schomburgk describes a similar manoeuvre executed by a Warrau. On the Pomeroon, should rain fall at a time when it is particularly not desired, as when traveling in an exposed corial, one of the occupants will address the 'Boss' Spirit of the Rain somewhat as follows: 'Pass on. We don't want you here. Clear out to the head of the river where you are wanted,' at the same time pointing with his finger toward the direction he wishes it to take. Another of the occupants will as often as not then get up in the boat on all fours and, pointing his posterior in the direction of the Rain, will address it with an obscene remark."³²

Civilized peoples and savages may not be so far apart, suggests a journalist, facetiously; the former merely operate in the field of politics. "In the region of the Upper Mississippi and its major tributaries, among such tribes as the Wisconsinians, the Illinoisians, the Indianians and the Non-Partisan tribes of Minnesota and the Dakotas, the custom is to select every four years a chieftain, resident at the national kraal called Washington, whose chief function is to make rain, develop a high production of sunlight, ward off cyclones, and in every other way promote the growth of the crops and the hogs upon which these tribes depend for their subsistence. If climatic conditions have been unfavorable under a chieftain of one great clan, known as the Republicans, the tribesmen replace him with a chieftain from another clan, known as the Democrats, and vice versa. The Republicans have amassed a large collection of magic rain-stones, such as Home Markets, American Standards of Living, Foreign Pauper Labor, etc. When the kettle begins to boil, once every four years, they plunge these magic stones into the hot water and, taking up a magician's wand, known as the Tariff, they perform incantations with it, and immediately the rain begins to fall, the crops begin to burgeon and the hogs begin to fatten like anything."³³

§315. Theory of Disease.

THE Central Australians have a suggestive theory of the cause of pain: the spirits are supposed to use a special form of pointing-stick, which is hooked at one end. "This is projected into the body of the victim, and every now and then the spirit gives a malicious tug at the hair string which is attached to the hook, so as to increase the victim's pain."¹

In British New Guinea there are people who suffer much from ulcers on feet and legs, which probably start with wounds from sharp coral. The natives have no medical skill in treating these wounds, merely lying by the fire and heating them or strewing them with ashes or resin.² They are exceptional in that they do not even use curative magic. In the New Hebrides, "in an ordinary case, when it is supposed that a ghost is the cause of the complaint, the friends of the sick man send for the professional dreamer and give him now tobacco, as formerly they gave mats, to find out what ghost has been offended, and to make it up with him. He sleeps, and in his dream goes to the place where the sick man has been working; there he meets some one, like an old man it is likely, of small size, who really is a ghost, and he learns from him what is his name. The ghost tells him that the sick man as he was working has encroached upon his ground, the place he haunts as his own, and that to punish him he has taken away his soul and impounded it in a magic fence in the garden. The dreamer begs for the return of the soul, and asks pardon on behalf of the sick man, who meant no disrespect; the ghost pulls up the fence in which the soul is enclosed, and lets it out; the man of course recovers." It is usually a case of recovering the soul. "In the Solomon Islands, if a child starts in its sleep it is believed that some ghost is snatching away what must be called in translation its shadow. A wizard doctor undertakes to go in sleep and bring it back; he dreams and goes; if those who have taken the 'shadow' let him take it back the child recovers, but if the child dies the dreamer reports that they would not let him come near them."³

"The bush-soul is always in the form of an animal of the forest. Sometimes when a man sickens it is because his bush-soul is angry at being neglected, and a witch-doctor is called in, who, having diagnosed this as being the cause of the trouble, advises the administration of some kind of offering to the offended one. . . . The witching of things into a man is the most frequent method among the Bantu, hence the prevalence among them of the post-mortem examination—a practice the writer has never found among the Negroes."⁴ The Yorubas have a smallpox god, who is accompanied by an assistant ready to wring the necks of those attacked by the disease.⁵ When Serpa Pinto⁶ had a severe fever, near the headwaters of the Zambesi, the local chief visited him bringing his personal physician, an old man, small and thin, with white beard and hair. The latter began by solemnly pronouncing several magic words and went through a form of divination, concluding that Serpa Pinto's dead parents had taken possession of him and must have some gift if they were to leave. "I stood it all with the greatest patience, feigning to believe what he said to me, and gave him a little present of powder." In another case of illness, "the physicians, by the inspiration breathed into them by the daimon, had decided

the night before that the sickness was caused by the fact that the man who fell ill had eaten a food forbidden by the quixilles [taboo] of his family, and so had offended the fetish who was now punishing him." One can bring a swollen stomach upon his enemy by driving nails into the fetish; therefore sick persons who fear that such a thing has been done, "if they are rich enough, send for him and his priest, so that the latter may find the nails in question and then, after going through proper ceremonies, pull them out again."⁷ Some negroes feel the danger of even naming an evil disease; in their eyes the name and the thing itself are the same, and might one not, at the name of the sickness, be suddenly attacked by it? So they call it "bad beast." The negro thinks of the disease as corporeal, "as a specter that slinks from village to village—a view which, *mutatis mutandis*—has its justification."⁸

In all cases which are fatal, excepting death from actual visible injury, the natives of British Central Africa ascribe illness to the workings of some person—"he having compassed the death of his victim either by making medicine against him or actual administration of some noxious drug with the idea of eating the dead body, the evildoer being possessed."⁹ The Bahima account for sickness in four ways: "1. It is thought to be caused by the departed king, who has been offended in some way; the Mandwa (chief priest to the king) is the only person who can assist in such a case; paralysis is attributed to this source. 2. It is set down to witchcraft (*kuloga*), which is practised by a person with the desire to kill another secretly; the illness may take any form of disease. 3. Fever is attributed to natural causes. 4. Illness is attributed to ghosts (*mizimu*), which take possession of people for various causes, and have to be exorcised." Witchcraft usually takes the form of chest complaints and skin diseases. The seemingly strange statement about fever is elucidated as follows: "Fever is brought on by local or climatic conditions of the country, no person is held responsible for it; it is a freak of nature." When a person becomes delirious, it is put down to possession by a malicious ghost, and the medicine-man has to come and smoke out the ghost. "A common complaint amongst these people is a deep-seated abscess; their cure for this is to transfer the disease to some other person by obtaining herbs from the medicine man, rubbing them over the place where the swelling is, and burying them in the road where people continually pass; the first person who steps over these buried herbs contracts the disease, and the original patient recovers."¹⁰

One of the commonest duties of the medicine-man in East Africa is the curing of sickness, "but of course he has first to discover its nature and causes, and this is very commonly found to be the anger or possession of a spirit. To a similar cause barrenness in women may frequently be attributed by the medicine man. His cure may be quite simple: it may be the construction of another doorway to the village, presumably because the existing one harbours a malignant spirit, or he may even recommend entire abandonment of the village. Frequently a sacrifice is offered and the names of many deceased members of the family are called until that of the particular spirit molesting the patient is mentioned, when the trouble will abate."¹¹ "The Akikuyu apparently do not believe that a demon enters into a man during illness, but they say if Ngai foreordains that he will live, he will do so, and *vice versa*. A medicine

man, however, is generally called in if the illness does not leave the sick man for several days."¹² In Uganda it is thought that either the sick are bewitched or a snake has crept into them.¹³ The Hausa theory of disease is implied in the manner of treatment: the illness, or part of it, is induced to enter a cock, then a hen; the medicine-man then places the fowls upon the ground and, treading upon them, opens the mouth of the cock, holds the tongue to the mandible, and cuts its throat. He throws it upon the ground at some little distance from him, treats the hen in the same way, and finally sticks his knife into the ground. "The reason for opening the beaks was to give the disease-bori [spirits] free exit."¹⁴ In southern Tunis certain Mohammedan saints are worshipped in order to secure cures of illness or sterility.¹⁵ Among the Arabs of the Sahara occurs the exceptional belief that disease is a blessing; for if a person is sick over three days his sins are remitted. "Allah says to the angel on the left: 'Cease writing his bad deeds.' And he says to the angel on the right: 'Write down his good deeds as better than they are.'"¹⁶

One tribe of India has a legend that God sleeps and that while he sleeps a snake causes diseases and carries men off in death. This is the serpent that interfered at the creation by devouring every night, while God slept, the man and woman whom he had made during the day. This went on until God made a dog, which frightened the snake. But the latter has grown bolder now and the barking of dogs when a man dies does not drive him off.¹⁷ The Saoras, "believing all ills of the body to be the work of ancestral spirits, or little further removed deities, they will have nothing to do with medicine as an alleviative."¹⁸ The Palaungs hold that "if sickness has been caused by a water-spirit, the patient, if he has not been far from his home, has probably offended a spirit living in a neighbouring spring, stream, or well. He therefore takes an offering of cooked rice, curry, and flowers, in separate bowls; these he places near but not in the water, saying, 'I have offended thee by accident, not intentionally, O spirit! In future I shall not do so. I did not intend to do so. O spirit of the water! please let my illness disappear.'"¹⁹

The Veddahs have no system of medicine. In cases of sickness they sprinkle water on the patient, invoking their deceased ancestors to heal them. Sometimes they simply utter the name of the spirits as they dance around the sick man; again they offer a garland of flowers to the spirit who has afflicted him. The whole affair is daimonistic. They believe in the so-called devil-dance but cannot perform it.²⁰ The Cingalese practise this dance to get rid of the spirit causing sickness. There are twenty-four types of devils and that costume and mask must be worn which will drive off the particular spirit in question. "The dance lasts often through two nights, until all the masks have been tried out and the right one found." The dancers work themselves up to great excitement and then ask for an object in which the spirit might have entered. Generally a friend or relative of the sick man provides a cock, which is variously munched by the teeth of the masks until it sinks down in a sort of stupor. This is a sign that the dance has worked, for the spirit is now in the bird. The latter is resuscitated by the use of water and tortured again; if it dies it is a sign that

the spirit has killed it and the sick man is free of possession.²¹ It is a sort of redemption-sacrifice. In Kafiristan, a husband who tried to do everything he could to save his sick wife, sacrificed a cow, distributing its flesh, and lit a big fire in the dying woman's room where he invited a large company to dance to squeaking pipes, while slaves banged an accompaniment on drums.²²

The Chinese believe that diseases and epidemics are simply the work of evil spirits.²³ The Annamites fear the ghosts of children who have died at birth or in tender years, for they are always eager to become incarnated and yet, when they have got into a body, are not capable of living.²⁴

"The Dyak theory of sickness is that it is either caused by the presence of evil spirits in the patient's body, or that he has been struck by one of them, or that one of them has enticed his soul out of his body. To expel *Hantu* from the human body, and to be able to see a vagrant soul, and then rescue it from the greedy clutches of the malignant spirits—in these things consists the perfection of the healing art. . . . Dyaks believe that every individual has seven souls, and that when a person is sick one or more of these are in captivity, and must be reclaimed to effect a cure. . . . The Dyaks regard small-pox as an evil spirit, with the notion which induced our English peasantry to use the same caution in reference to fairies—they never venture to name the small-pox, but designate it politely by the titles *Rajah* and *Buah-Kagu*." Here are examples of avoidance by silence and of deception and flattery.²⁵ "As the natives ascribe all men's illnesses to the influences of evil spirits, their whole medical art is confined to conciliating these spirits on behalf of the patient, or, when it is supposed that the spirits have entered the body, to driving them out again. Only a few roots and herbs are used as internal and external remedies." By food-offerings, drum-beating, and singing the spirits responsible for the illness are summoned and the assistance of the superior good spirits is invoked. The patient is repeatedly touched by the sorceresses with a leaf, which is then withdrawn with a shrill cry, as if to remove the curse resting on the patient. Solemn vows conditional on recovery are made to the gods.²⁶ "The Sakai idea with regard to sickness appears to be that diseases are generally, if not invariably, caused by spirits." According to one native, illness is caused by a spirit lying in wait for a human being and striking his shadow with a club. "If a young child should suffer from any itching complaint, the navel-cord, which appears to be usually buried under the house, is dug up and inspected: if this has been attacked by ants, they are killed with hot water, and it is re-buried in another spot. Similarly if a man is on a journey in the jungle and is troubled with a rash, or with itching sensations in his body, he will return to his last camping-place and dig up the ground on which he lay, to see if there is an ants' nest in the soil."²⁷

A Cheyenne Indian, by name Sun's Road, having built a cabin on Muddy Creek, soon after moving into it became sick and for a long time was in bad health. Nothing seemed to help him, though the tribal medicine-men and the agency physician did what they could. At length, however, he discovered the cause of his illness. "In the hills on the north side of the Muddy, standing out a little from the higher bluffs, is a peculiar conical peak, odd in shape and

color, and on the south side of the stream is another odd-looking peak. Sun's Road's house was in the line between these two peaks, and thus was on the trail traveled by the spirits dwelling in them, when they went from one peak to the other to visit. . . . This obstruction in their trail annoyed them, and to punish Sun's Road for troubling them, they made him ill. When Sun's Road awoke to the situation, he at once moved his house out of the line between the hills, and also turned it half round so that if they wished, the spirits might pass through the house, instead of climbing over it, if it still stood in their way. He became better at once, and in a short time recovered his health. Sun's Road often expressed astonishment that he could have been so careless as to build his house in such a situation, and so to have subjected himself to danger." The older Cheyennes formerly had much to say about the new diseases introduced by white men, which were very fatal, the cholera epidemic of 1849, for instance, being said to have killed half the tribe. On that occasion, one Indian, "a very brave man, donned his war-dress, mounted his war-horse, and rode through the camp with a lance in his hand, shouting, 'If I could see this thing [the cholera], if I knew where it came from, I would go there and fight it!' As he was doing this he was seized with the cramps, fell from his horse, and died in his wife's arms. Again the people rushed away in terror, and all night fled through the sandhills to the Arkansas."²⁸ Two epidemics at Zuñi, one of smallpox in 1898-1899 and the other of measles in 1910-1911, were both ascribed to witchcraft. "The two men held responsible, both youngish men at the time they were accused, are still living in Zuñi—thanks probably to outside intervention. The story goes that in the smallpox case the American school teacher got in a detachment of American soldiers to protect the 'witch.' He was saved [he had actually been hung up by his thumbs, the Zuñi method of witch-execution], but at Pescado some of the soldiers and some of their horses died of poisoned water. The medicineman who poisoned the water is now dead. It was his disciple, consequently a legitimate medicineman I infer, who was accused of causing the measles epidemic. He was so pestered to 'confess' that finally his family begged him to 'say something' and he did finally say that he had 'done something' to cause the bloody diarrhœal discharge that had been characteristic of the disease. Fortunately for him, after his 'confession' he was smuggled out of Zuñi for a few weeks to a settlement where the same epidemic had not been so fatal—there were too many Americans living there, it was said, and witches have no influence over Americans. Americans are 'raw,' they are *kwa akna* (not cooked), i.e., their mothers have not been confined on the heated sand bed Zuñi women lie in on."²⁹

Disease is accredited by the Yuchi to the presence of a harmful spirit which has been placed in the system by some offended animal-spirit or malevolent conjurer. "Herbs, which have names corresponding in some way to the name of the animal causing the trouble, are brewed in a pot and administered internally. By this means of sympathetic healing and by the use of song formulas the disease spirit is driven out by the shaman."³⁰ One of the most important of the final labors on earth of Teharonhiawagon—an imaginary anthropic being of the cosmogonic philosophy of the Iroquoian and other American mythologies—was his great victory over "the hunchback Hadu'i", the unborn primal being, Disease and Death, whose forfeiture of life was redeemed by his promise to

aid man by curing, on certain conditions, diseases arising from the infection of the earth with the malign potency of the body of Hadu'i' by his having first wandered over it. To this event the important Masked-face Society of exorcists of disease owes its origin. At the New Year ceremony its members essay to exorcise and banish disease and death-causing agencies from the community."³¹

The Jibaros of Ecuador make a distinction between evil caused by witchcraft and by disease. "The illness of a patient is generally attributed to witchcraft when it consists in violent pains in some part of the body, especially when the pain is accompanied by swelling of that part. Thus, for instance, headache, rheumatic pains, and colic are ascribed to witchcraft. On the other hand, to the category 'disease' (*súngura*) the Jibaros set down especially such illnesses as have originally been brought to them by the whites and which are not particularly accompanied by pains, like dysentery, smallpox, and most other fever diseases." When one member of a family is sick the rest have to diet in the same way as the patient himself, "for if they eat unsuitable food it would be the same as if the patient ate that food, and his condition would grow worse."³² Both sexes among the Pawumwa Indians wear a small short stick in the nasal septum, the ends protruding into the nostrils. "This peculiar custom is associated with a primitive idea of medicine. They claim that disease is something solid and travels in a straight line like an arrow, while air is like nothing and can bend corners. Hence, when they breathe the disease strikes the end of the stick and falls out of their nostrils, while the purified air passes into their lungs."³³

The Chaldeans thought all diseases were due to demons and lived in constant superstitious terror of them. Both the ancient Accadians and the modern Finns believed diseases to be the daughters of an ancient dame of the gloomy abyss and of the dead. Pleurisy, gout, colic, consumption, leprosy, and the plague were regarded as so many distinct personages. It is to be noted that all these ancient and evil spirits are female.³⁴ Among the ancient Aryans diseases were "universally regarded as due to the influence of evil spirits. Physician, magician, and priest may have been identical in the most ancient epochs of culture."³⁵ The Jewish belief in the uncleanness of the sick rests upon ghost-fear; for often illnesses were interpreted as visits from the ghosts of the departed. "Therefore on this stage is to be found, not the medical art but magic, which lies in the hands of the priests. In the Old Testament there are only a few instances."³⁶ It was Satan who brought Job's illness upon him; then, again, it is the arrows of the Almighty that bring illness.³⁷ Disease is believed today by the Fellahin in the Holy Land to be daimonic in origin. In their view "the three principal causes of sickness are: (1) Spirits or demons who are everywhere, in fact they fill out the space between heaven and earth and are organized in several hierarchies with princes at their head; (2) the evil eye, which again lurks everywhere, as its baneful potency is due to a poisonous substance inherent in all men which emanates through the eye, working its mischief unwittingly and unconsciously, even animals not being immune from its destructive effects; (3) the evil soul, secretions of dangerous influences from one's soul which pass through the breath of evil-minded peo-

ple. Secondary causes are the four temperaments in conjunction with the four elements, the planets and the constellations of the zodiac. Then there are malformations, due to the ungratified appetites of the pregnant women, congenital defects, and the harmful supernatural potencies and influences of a woman during the monthly period and in childbirth."³⁸

The story of the plague in the *Iliad* is a perfect exposition of the contemporary theory of disease: "no treatment was possible or thought of. The question was, 'How have we sinned against Apollo?' The real healers of the plague were the prophet who disclosed the sin and the appeased priest who prayed for its removal. The attack was due to arrows of the enraged god and the malady stopped short when that god had been propitiated."³⁹ Illnesses were either sent by the gods or were coincident with the appearance of certain stars.⁴⁰ It is a far cry from this to Hippocrates, who writes that "every disease has its natural cause and without natural cause nothing whatever happens."⁴¹ The Roman folk-belief regarded all illnesses as due to daemons, especially all sudden, burning, irritant illnesses, like fever and convulsions; and in German antiquity the same persuasion held. So magical means of all sorts, such as amulets, expectoration, etc., were much in use; great virtue was assigned to human excreta of all sorts. The physicians started from this view and tried to get divine help.⁴² Said Luther: "There is no doubt that pestilence and fever and other severe illnesses are nothing else than the Devil's work."⁴³ An English abbot could not be consecrated, in the thirteenth century, because he was a skilful leech; "the prejudice against the practice of physic as incompatible with the purity of an ecclesiastic was wide-spread and long-lived." Yet "in 998 Theodatus, a monk of Corvey, received the bishopric of Prague from Otho III. as a reward for curing Boleslas I., Duke of Bohemia, of paralysis, by means of a bath of wine, herbs, spices, and three living black puppies four weeks old."⁴⁴ A fresco of the sixteenth century shows God the Father shooting at men with a bow. The Mother of God protects them with her mantle against which the arrows crumple.⁴⁵ In Virginia, in 1610, there was a severe penalty against throwing soap into the open street. "This was because at that time it was thought in London that 'not only soap-boilers and venders of it, but all the washer-women and all they whose business it was to use soap—nay, they who only wore shirts washed with soap—presently died of the Plague.'"⁴⁶

The old views are still widely held by the ignorant. The Christian Imeritians of the Caucasus think disease is often a punishment for a broken vow; they make vows to the saints when ill.⁴⁷ The southern Slavs think the pest can be started by cursing,⁴⁸ and the Jews of southern Russia are similarly primitive in their body of beliefs about sickness and death.⁴⁹ Among the Mexican peasants "any disease whose origin is obscure or which refuses to yield to the usual remedies, is supposed to be the result of witchcraft"; an article⁵⁰ upon

Mexican superstitions concerning sickness relates a number of heroic but successful treatments based upon that theory.

§316. Diagnosis and Treatment.

DIAGNOSIS and treatment are difficult to segregate. It is often only in the treatment that the diagnosis appears. We have not tried to separate them one from another, either in the text or here. The present section will be found to run together, to a considerable extent, with the two which follow. In general, §316 will cover practices that have not resulted in any direct utility; §317 will review therapeutic agencies that square better with modern practice, whether or not their adequacy is accidental; and §318 will deal chiefly with medicaments of various descriptions.

In the procedure of the Tikopians there is nothing which can be regarded as treatment unless the laying on of "the hand of the ghost" is to be regarded in this light. "It is rather a method of divination to discover whether the invalid will recover."¹ Coughs, influenza, dysentery, and some skin diseases, the Tannese attributed to their intercourse with white men, and called them "foreign things." "When a person was said to be ill, the next question was, 'What is the matter? Is it nahak or a foreign thing?' The opinion there was universal that they had tenfold more of disease and death since they had intercourse with ships than they had before. We thought at first it was prejudice and fault-finding, but the reply of the more honest and thoughtful of the natives invariably was: 'It is quite true. Formerly people here never died till they were old, but nowadays there is no end to this influenza, and coughing, and death.'² In the D'Entrecasteaux Islands the remedies are numerous: bleeding for headaches, counterirritant for stomach-ache, sucking, magic songs, and sprinkling with sea-water. Sickness with no cause, such as pneumonia and dysentery, the natives set down to sorcery.³

Sickness in South Africa is diagnosed as caused by witchcraft, and the procedure is to smelt out the witch. In the Congo the natives "recognise an evil spirit who causes sickness through the instrumentality of someone he has possessed." An individual accused of possession is forced to drink a poisonous decoction; "he then runs about the village followed by his friends and enemies, the former proclaiming his innocence, the latter his guilt. His innocence is proved by his vomiting the *whole* of the poison he has swallowed; if he fails to vomit, or vomits only a small quantity, he is killed."⁴ The Bangala have many specialists among the medicine-men or *nganga* who diagnose and treat the various ailments. If the spirit causing the illness takes refuge in the house, "the *nganga* springs forward, enters the house, darts his spear in all directions, yelling loudly and screaming terrifically; then a frightful cry is heard, and in a few moments the *nganga* comes out with the blade of his spear well smeared with blood." Another group is composed exclusively of women who deal with a spirit that causes debility. "They dance, chant, and shake a rattle until the patient says he has the *bwete* spirit stirring in him, by the way he jerks and sways his body. . . . This *nganga* makes all the necessary medicine for a pregnant woman, attends her at confinement, helps at the delivery of

³ Jenness and Ballentyne, *D'Entrecasteaux*, 137-141.

⁴ Torday and Joyce, in JAI, XXXVII, 151.

the child, and conducts the ear piercing on the fifth day after birth." A *nganga* whose fee is comparatively small operates with a saucepan of water; "placing it in a good position he then pours some sugar-cane wine by the side of it, as the *bilimo* [embodied spirits] are very fond of this wine; then he calls the *bilimo* by putting a leaf on the closed fist of the left hand and striking it with the palm of the right hand; thereupon the *bilimo* show themselves in the saucepan, into which only the *nganga* is allowed to look. . . . By-and-by, a spirit appears that persistently refuses to show its face after being repeatedly ordered to do so by the *nganga*, and at last the *nganga* stabs the spirit with a splinter of bamboo, and the owner of that *elimo* who is the *moloki* [the witch] is supposed now to die very soon, and release the *nganga's* client from its malign influence." Another *nganga* "looks at the arteries in the stomach of a dead person to discover whether the person died by his or her own witchcraft or by the witchcraft of someone else." If there is smallpox in the district, the nervous go to a special medicine-man, "who makes some small cuts in his client's body and sucks out some blood which he spits on to a leaf, and examines carefully. If some small threads are seen in the blood, the *nganga* points them out to others, and says, that as he has sucked out the *likundu* the person will not die even though he may become infected with smallpox. . . . It is a very cute performance. The person's blood is sucked and the threads are shown, and if he does not have smallpox then the *nganga* has the credit of drawing the *likundu* out of him. If, however, he has smallpox then he has his own *likundu* in him and the only way to recover is to confess his guilt; this exonerates the *nganga*. If no threads are seen and the person has smallpox then his own *likundu* has given it, and he must confess, and here again the *nganga* is cleared. If a person has not been operated on by the *nganga*, and gets smallpox, he must confess to bewitching others, and should he recover, well, his confession cleared him, should he die then someone else bewitched him. If a person did not get smallpox then he was not bewitched by anyone and had no *likundu* himself." For sleeping sickness the patients go to a *nganga* who makes numerous small cuts on their bodies and then sprinkles them with hot water and rubs pepper paste in the cuts, and puts a drop or two of pepper juice in each eye. That ought to keep them awake. For madness a patient immerses his face in a saucepan of water in which some medicines have been mixed and then has some juices dropped into his eyes. In the practice of some medicine-men an offering of food is required; if the food partly disappears this is accepted as evidence that the spirits have partaken of the feast and the patient will get better. From a study of their diseases it will be seen that they fall into two classes: "(1) Those whose symptoms are observable and easily diagnosed, as gleet, dysentery, insanity; and (2) those whose symptoms, while apparent, are difficult to diagnose because their causes are hidden, as those named *lela* (great debility) and *luwa* (sleeping sickness)." The former are regarded as simple sicknesses, but the latter are put to the credit of spirits or to the evil influence of *moloki* or witch. In the first case, herbs are used, medicines are made, and taboos inflicted; when sickness is caused by evil spirits, stick-charms are erected before the patient's house and he is put under various taboos; and finally, in cases due to witchcraft, the first object is to discover the witch or, failing that, by powerful charms to counteract and overcome the malign influence. The *nganga's* verdict that the deceased died as the result of his own witchcraft has a marked effect on the people. "It exonerates the *nganga* from all blame, for while he may drive out *mêts* or spirits, and deal with other

spirits by his powerful charms, and while he may overcome the witchcraft used by someone else against his patient, if he is innocent of witchcraft himself, yet how can it be expected of him to save a patient who himself is full of *likundu* or witchcraft? Thus, to 'save his own face,' the *nganga* after his post-mortem examination declares in ninety-nine cases out of a hundred that the deceased died by his own witchcraft. The result of the verdict is that the corpse is buried and no one is accused of being a witch, and consequently no one has to take the ordeal." It should be noted, finally, that the diseases diagnosed as originated by the spirits are believed to be due to the latter affecting "the life springs, that is the soul of the individual."⁵

Among the Bahima, "the origin of illness is determined by examining the entrails of fowls, sheep or goats, or by a pot of water into which powdered herbs are cast to make it froth, and four coffee beans are dropped. The positions of the berries in the water, or the specks on the entrails of the animals, enable the medicine man to decide who has used magic. Once the person is discovered by these tests, the relatives of the sick man go and accuse the person, his plea of innocence is useless, he must prove it; in most cases the accused acknowledges his fault, states his reason for committing it, and tells what drugs must be used to heal the sick man. Should a person continue to deny the charge brought against him, the case goes before the king, and, if he still persists in asserting his innocence after the king's verdict, he is put to the fire ordeal; if he comes out without hurt he is acknowledged to be innocent; but if he is burned he is heavily fined."⁶ If the sick person among the Bageshu is a rich man, "a goat or cow is killed, a small hut is built near the sick man's house in honour of the ghost which is supposed to be troubling the man, some of the meat and the blood are put into the little hut, whilst a large piece of the meat is placed upon the spike upon the top of the house. When the people gather together for the ceremony the medicine-man climbs on to the house and cuts the meat up into small pieces and throws it amongst the people, who snatch it up and eat it. In this way the sickness is scattered over a large number of people and is harmless, and they suffer no ill effects from it, whilst the sick man recovers."⁷ In the East African Protectorate there are charms to protect against returning disease besides many others which are used to relieve pain or to assist in the speedy healing of a sore. The ordinary spirits causing sickness are more or less bound to one locality; hence if the shaman's performances will not get rid of the troublesome spirit, the only remedy is for the whole family to move elsewhere.⁸ The medicine-men of the Akamba carry round with them a miscellaneous assortment of powders, "which are usually of a herbal origin; some of these are magical and some only ordinary medicinal remedies, but there is no hard and fast line between magic and medicine in the minds of the natives of this country." If a person is bitten by a poisonous snake, a medicine-man with power to cure snake bite is called in; such a person has a cut in the end of his tongue into which certain medicines have been put. "If a medicine man or a person so inoculated spits on a person bitten by a snake the patient recovers forthwith."⁹ In Kenya Colony, "illness is generally attributed to the shade or spirit, *oiindet*, of a deceased ancestor or relative, and the advice of a 'wise woman' is generally sought. . . . The

patient should sneeze the following morning, and relatives and friends visit him to enquire whether he has sneezed; if he has, then his illness was a sickness, and not due to ancestral spirits."¹⁰

According to the Nigerian head-hunters all deaths are due to black magic, so when a person is sick it is necessary to discover who is responsible. "An ordinary individual cannot see these evil souls, but a witch-doctor (*tenshi*) can, and is invited to 'smell out' the owner. . . . The accused is then caught and shut in a house with a fire in it, into which pepper is thrown, and he is kept there until he agrees to remove his curse. If he 'really returns the bowels' the sick man recovers."¹¹ African-American "voodoo doctors" advertise that they can diagnose any disease and furnish medicine to cure every ailment. One of them, since prosecuted for using the mails to defraud, had his patients spit on a piece of white cloth and send it to him; several days later the patient would receive some "medicine" with directions. Here is a sample reply: "Dr. Sir Yos Received Listen Emty contents in A Pint Bot fil it with clen water take a table Spoon 3 times A Day Before meals Shake the Bot till all ReSolve x x x x is the Cause Yo Being like yo ar to Cure you & make you luck & never go Brok & get all the Work yo can do & Bor All the Money Yo want to run eny bus yo Want will cost 21 Dols."¹²

In a certain district in India "a man was discovered sitting outside his house, while groans proceeded from within. He explained that he was ill, and his wife was swinging on nails with their points upwards to cure him."¹³ Again, a hideous mud figure is moved three times up and down before a patient's face and three times around his head. It is then put into a basket along with scraps of food and flowers and removed after dark to a path or cross-road. The spirit afflicting the patient has taken up its abode in the mud figure but will not stay long. The basket is put down and a lamp lit and put into it. When anyone is seen or heard approaching, a fowl's throat is cut over the basket and the operator decamps. The newcomer, seeing the hideous figure and the blood, is supposed to start; the spirit has then taken up its abode in him. There is no compunction felt about passing on the unwelcome spirit.¹⁴ In Hindustan, "chronic complaints are sometimes cured by a magician who draws cross lines in the middle of a road, and makes some worship; the first person who passes or crosses the figure carries away the complaint and the original sufferer is cured." Figures, with sacrifices, and recitations, and incense are effective in the house of the afflicted.¹⁵ The Khonds provide a meal for the fever-spirit, to induce him to leave the sick man he has possessed; the meal was laid in a set of circles of saffron-powder, charcoal-powder, rice, and some sort of yellow powder, with an egg or a small chicken in the middle.¹⁶ "A distorted part of the body is cured by passing over it the foot of an individual who had been born with his feet foremost."¹⁷ In ancient India there were three ways of healing: surgical, medical, and by incantation or formula; the last was the purest and most effective.¹⁸ "Where the Mündā believes that a certain trouble is due to the wrath or malice of some spirit, the Orāon thinks the spirit is merely a tool in the hands of some magician by whom it has been put

up to the mischief. So, if a Mündā gets a sudden attack of headache or griping in the stomach, or pain in the legs, or falls down in a fit of epilepsy, he at once concludes he must have come in collision with some spirit, that he must have trodden some spirit under his feet, or jostled against it while walking or working on his fields or elsewhere. As a means of conciliation with the offended spirit, he scatters a little powdered turmeric around himself. The Orāon, who suspects magic or witchcraft where the Mündā scents a spirit, always takes particular steps to ward off the evil eye of witches or the malicious intentions of sorcerers."¹⁹ By means of a diagram, divided into twenty-one parts, the wise man among the Palaungs finds out the number of the part of the hand in which he has found the pulse to be the strongest. He then refers to the corresponding number in the table and finds the cause of the illness.²⁰

In the East Indies, noise, fire, and light were used against disease. Amulets were common, and people who could get a little written exorcism, such as a verse from the Koran, were supposed to be well protected. It is clear that every one cannot know all the means of exorcism; hence the power and influence of the shaman.²¹ Of the Dyaks it is reported that "there is nothing like assurance and utter deceit for making way among these people. Their medicine-men look wise, chew some leaves, colour them, spit on the people who are sick, rub them up and down, tie a piece of string round the neck, fasten a stone, bone, or piece of stick to it, finally ask a high price for the charm, and so get on, and are sent for from all parts. To be able to do this they must have a lot of dreams in which the antu [spirit] tells them of a drug or plant, or stone, bone, pig's, dog's, or deer's tooth, which is in a certain place and possesses certain properties. Having first caught their hare, they skin it. They get the tooth, etc., and narrate their dream, which is the best part of the charm."²²

The *manang* manipulates the ailing part of the body and pretends to draw something out—a stone, for instance—which is exhibited as the cause of pain. He always has a medicine-box filled with scraps of wood, curiously twisted roots, pebbles, and quartz fragments. "These medicinal charms are either inherited, or have been revealed by the spirits in dreams." Treatment is in a darkened room, whence issue sounds of scuffling, clashings of weapons, and shouting. Then the door is opened and the disease-spirit is said to be dead. "He was cheated into coming to torment his prey, and instead of a weak and helpless victim he met the crafty and mighty *manangs*, who have done what ordinary mortals cannot do—attacked and killed him. As a proof of the reality of the deed lights are brought in, and the *manangs* point to spots of blood on the floor, and occasionally to the corpse itself in the shape of a dead monkey or snake, which they say was the form the spirit took for the occasion. The trick is a very simple one. . . . There is a good deal of deceit and humbug and a little clumsy sleight-of-hand on the part of the *manang*, and an unlimited amount of faith on the part of the patient. The *manang* must be conscious of his own deceit, but he believes that his incantations do good, and I have often known cases of *manangs* having these ceremonies for members of their own family who are ill. But as a rule a *manang* is not a truthful man at all. There can be no doubt that the average Dyak knows that there is a great deal of deceit connected with the *manang's* profession, but he also knows he must sub-

mit to that deceit if he wishes to have his help, and he believes that in some way the incantations and remarkable actions of the *manangs* help to scare away the evil spirit which is the cause of the diseases."²³

Nieuwenhuis²⁴ made use of native methods against a cholera epidemic, securing a four days' taboo on unboiled water and green fruit, and a limitation on bathing. The disease-spirit was bound from the paths that led up from the river by a rotten cord, nude figures carrying arms, and phallic representations. The native taboos are themselves often of hygienic effect. In Sarawak the spirit of water is held responsible for dysentery, while a case of spontaneous blindness is ascribed to a spirit having hit one in the eye.²⁵ Goiter is widespread throughout the East Indies; the natives lay it largely to drinking-water and apply the steam of hot springs as a curative.²⁶ The medicine-men in the Malay Peninsula have some knowledge of the secrets of nature, but their actual acquisitions in that respect are not so great as is ordinarily reputed, and in fact "they are very little more clever than the others."²⁷ Polynesians had a religious mystery and a profane tradition of healing.²⁸ "The Samoans in their heathenism seldom had recourse to any internal remedy except an emetic . . . on some occasions, mud, and even the most unmentionable filth, was mixed up and taken as an emetic draught. . . . Shampooing and anointing the affected part of the body with scented oil by the native doctors was common. . . . As the Samoans supposed disease to be occasioned by the wrath of some particular deity, their principal desire, in any difficult case, was not for medicine, but to ascertain the cause of the calamity."²⁹

Among the Greenland Eskimo "none of the spirit-beings was the object of worship, love, or fear. Only through the *angakok* could one set himself in any relation with them, but a Tornarsuk's order, given through an *angakok*, men felt obliged to obey. If all went well, no one asked about another world, but if sickness or dangers entered, the *angakok* must take a so-called flight to Tornarsuk to get advice and enlightenment."³⁰ "Together with sickness is also reckoned a man's inability to catch seals or his wife's to have children." To cure the latter the *angakok* makes a journey to the moon whence a child is thrown down to the woman.³¹ An Eskimo shaman, in endeavoring to dispel a disease, parted several men from their wives, the latter being "compelled to dwell with other men who were at the bottom of the conspiracy. Other couples had to flee from that place to prevent being divorced, at least temporarily. . . . A more plausible scamp does not dwell in these regions than this shaman. . . . His power over the spirit controlling the reindeer is widely believed in and invoked by the other shamans, who feel incapable of turning the heads of the deer and thus compelling them to wander in the desired direction."³²

In the Northwest the word *tamankous* means guardian-spirit, or familiar spirit, and also a performance of magic for healing. It is used also as a verb covering the hocus pocus of healing.³³ The Apaches "minister to the recovery of fever patients by dancing, singing and beating drums the whole night

through."³⁴ Among the Omahas, when a man is threatened with death, the medicine-man goes into a lodge sweat-bath with him and sings, at the same time "pronouncing certain incantations and sprinkling the body of the client with the powder of the artemisia, supposed to be the food of the ghosts. . . . To say that a certain powder is the food of the ghosts of a tribe is to say indirectly that the same powder was once the food of the tribe's ancestors." This last comment will be clearer in the light of a succeeding paragraph.³⁵ The Apache shaman uses a "medicine cord": "If the circle attached to one of these cords is placed upon the head, it will at once relieve any ache, while the cross attached to another prevents the wearer from going astray, no matter where he may be."³⁶ The Mohave Indian medicine-men are nearly all specialists: the rattle-snake doctor, the fever doctor, and doctors for rheumatism, colds, dropsy, and wounds.³⁷ Among an Athapascan tribe, "a doctor when called in heats a stone in the fire, touches it with his finger, and with the same finger presses various parts of the patient's body in order to divine the seat and character of the malady."³⁸

The medical practice of the Cheyennes is reported rather fully and in a pertinent manner. "When a person was sick, it was thought that the cause of the disease existed in a certain place in the body. Over this place the doctor shook the rattle, to drive out the evil influence, and then with the mouth strove to suck out the cause of the disease. . . . Different doctors had different methods. In addition to the rattle, some used the wing of a hawk or an eagle, to fan and cool the sick person . . . the afflicted part being sucked, or, as the Cheyennes call it, 'bitten.' Then a tea was administered—a warm drink suited to the disease. The doctor bit off a piece of the medicine root, chewed it, and spat it on various parts of the patient's body, which were now cooled by patting and fanning with an eagle's wing. Then the pipe was smoked again. . . . At the conclusion of the singing, the pipe was smoked before the doctoring was continued. The doctor now mixed medicine with deer fat and rubbed the mixture on his hands, and held them over the fire until they were warm, when the hands were placed on the part of the body where the pain was felt. . . . After the nine songs were sung, the doctor, grasping the pipe in his right hand, held it up to the south, west, north, and east, to the sky and to the ground. The pipe was then changed to the left hand, and they smoked. This ended the doctoring." Added to the spiritual side of healing—that is, exorcising or frightening away the spirits or evil influences which cause disease—was the practice of medicine by administering remedies. "For the greater part these remedies were herbs, many of which unquestionably were more or less efficacious, and in not a few cases the Indians appear to have some practical ideas of the medicinal properties of certain plants. . . . In some cases it was a part of the administration of the remedy to stir (before the patient drank it) the water in which the medicine had been mixed, with the claw of the animal, or with the beard of the turkey, or perhaps with the little stone arrowhead which was tied to the bundle. . . . Cheyenne doctors were skilful and successful in treating such injuries as broken bones, gunshot wounds, and arrow wounds. In the treatment of wounds—i.e., where blood had been shed—rattles made from gourds were thought to be especially useful. Broken legs were often set, and

made excellent unions, so that no evidence of the injury remained." A case is described of the treatment for rattlesnake bite: "At last came a sister of Turkey Leg, who had some medicine which she moistened and wrapped on the wound. It ceased to be painful almost at once. The woman took hold of the patient's right great toe and shook it; then she took hold of the right little finger and shook it, and of the left little finger and of the left great toe in succession, and shook each; then she said to the young man, 'Now, you will see all sorts of snakes.' Arapaho Chief felt very sick, as if he were going to die, and he did see many snakes, more than he had supposed were in the whole world. The woman began to rub his leg from thigh to ankle, and soon the swelling commenced to subside. The pain left him, and before long he was able to stand on his feet."³⁹ Among some of the Southwestern tribes the *kaan* or medicine-man "will look into a bowl of water on the surface of which 'powder' is spread, in order to see into the machinations of the witches, senders, as always, of disease. The disease-causing things the witches have sent into the body the *kaan* take out with their eagle wing feathers—a familiar Pueblo Indian curing rite—and from the feathers are seen to drop into the *ollas* pebbles, bits of cloth, etc., and cactus points. This curing or exorcising motion is a motion of sweeping in, 'like catching a fly,' and then shaking down, shaking the things caught from the feathers to the *olla*."⁴⁰

Among the Guiana Indians, "independently of the treatment of disease as practiced specially by the medicine men, *e.g.*, the incantation of certain spirits, and their exorcism, the blowing of tobacco smoke, and the extraction by suction of the offending cause of the complaint, . . . there is a sort of routine treatment followed by the lay and medical fraternity in general." When attacked by fever, many natives set themselves up to the neck in water, "not inquiring into the cause which occasions it, until the paroxysm of fever is over or sudden death prevents his coming out again." It is not necessary to be a medicine-man to suck out pains, and a case is cited where a native hung on to his comrade's shoulder for half an hour "sucking out the rheumatism."⁴¹ Among the Araucanians, "the direct cause of illness is supposed to be either an invisible wound or some extraneous substance introduced into the body of the patient. This foreign element has to be extracted. For this purpose the *machi* [shaman] goes provided with a worm, grub, beetle, lizard, or other small creature that can easily be hidden, and made to appear as if taken from the sick person. If the patient dies, the *machi* saves his responsibility by declaring that he has been poisoned, and then proceeds to discover the poisoner. To avoid feuds and reprisals, the blame was generally cast on a *huacuvu* [evil spirit], who had taken the form of some living creature, revealed to the *machi* in a trance, but was sometimes imputed to some individual against whom the exorcist had a grudge, or else to a known enemy of the deceased or his family. . . . The *machis* have no hard and fast ritual for these ceremonies, but each one introduces the innovations he considers necessary."⁴²

In antiquity, incantations, together with purificatory ceremonial, were in wide use, and fetishes, such as the twigs of a holy tree and holy water from the sea or from sacred streams, were regarded as highly effective.⁴³ In Persia, washings and spells drove off the sickness sent by Ahriman. "In fact, the

medicine of spells was considered the most powerful of all, and though it did not oust the medicine of the lancet and that of drugs, yet it was more highly esteemed and less mistrusted."⁴⁴ Wounds were washed and bound up by the Homeric Greeks, though in one case the bleeding was stopped by incantation.⁴⁵ In connection with the most ancient phase of the art of healing, it is important to note that the Indo-Europeans possessed a tolerably thorough knowledge of their own bodies and to this they may have been assisted by the practice of sacrificing animals.⁴⁶ Phylacteries were used amongst the Assyrians as talismans against disease; they bound texts of the sacred books upon their heads and doorposts.⁴⁷ In the book of Tobit,⁴⁸ the heart and liver of a fish, burned before a sick person, relieved him of the evil spirit of disease; while the gall was "good to anoint a man that hath white films in his eyes."

As early as B.C. 323 Greek physicians at Alexandria were dissecting the human body but later such practice was regarded as profanation. Though Galen dissected apes, he could not, of course, distinguish the various differences between men and apes.⁴⁹ While, however, the Christians were entering into a period of obscurantism, the Mohammedans did not lose what had been gained. The difference between the intellectual status of the Crusaders and the Saracens is brought out in an anecdote related by a Moslem physician, who was called in, as was customary in desperate cases. "They brought to me a knight with an abscess in his leg, and a woman troubled with fever. I applied to the knight a little cataplasm; his abscess opened and took a favorable turn. As for the woman, I forbade her to eat certain foods, and I lowered her temperature. I was there when a Frankish doctor arrived, who said, 'This man can't cure them!' Then, addressing the knight, he asked, 'Which do you prefer, to live with a single leg, or to die with both of your legs?' 'I prefer,' replied the knight, 'to live with a single leg.' 'Then bring,' said the doctor, 'a strong knight with a sharp axe.' The knight and axe were not slow in coming. I was present. The doctor stretched the leg of the patient on a block of wood, and then said to the knight, 'Cut off his leg with the axe, detach it with a single blow.' Under my eyes, the knight gave a violent blow, but it did not cut the leg off. He gave the unfortunate man a second blow, which caused the marrow to flow from the bone, and the knight died immediately. As for the woman the doctor examined her and said, 'She is a woman with a devil in her head, by which she is possessed. Shave her hair.' They did so, and she began to eat again, like her compatriots, garlic and mustard. Her fever grew worse. The doctor then said, 'The devil has gone into her head.' Seizing a razor he cut into her head in the form of a cross and excoriated the skin in the middle so deeply that the bones were uncovered. . . . Then he rubbed her head with salt. The woman, in her turn, expired immediately. After asking them if my services were still needed, and after receiving a negative answer, I returned, having learned from their medicine matters of which I had previously been ignorant."⁵⁰

The Druids performed their healing by magic and incantations. As a safeguard against the poisonous weapons of the Bretons, a Druid recommended that the milk of twice seventy white hornless cows should be put in a trench on

the battlefield. Wounded men who bathed in it would be healed.⁵¹ Collections of medical charms used in early England have been made by Cockayne.⁵² The "girdle of St. Bridget" was a sort of straw collar through which the sick were passed by their friends.⁵³ The mediæval period was full of the use of relics and magic quite as benighted as that of heathen times; in fact, the development of scientific medicine was delayed well up toward the present.⁵⁴ In France there is a great stone of Ymare which now forms a roughly squared table with a cross engraved on one of its angles. It stands but eighty centimeters, or less than thirty-two inches, from the ground; but in order to be cured of rheumatism or even of madness the patient must not, in passing under, touch it with his back nor must his knees touch the earth.⁵⁵

Among the southern Slavs "one marries his fever to the willow, a favorite resort of tree-souls. . . . The wedging and corking of a sickness into a tree is known to south-Slav folk-belief as well as to the German." Creeping through a tree or bush which is split by nature or purposely by human hand is practised by the south Slavs only in attacks of fever, while the Germans take recourse to it in cases of spinal curvature and similar maladies. A tree-spirit may send disease by means of the insects and worms that haunt its bark, roots, and leaves. Spirits are often identified with worms, grubs, millers, and crabs; they creep into the body and cause pain. Diseases were also given human form, such as the Pest-woman. The Bulgars conceive of diseases as red-haired women who rove from village to village, shooting arrows at man and beast. All wood-spirits have red hair. Cakes smeared with honey, and made every Saturday, are left at cross-roads for the disease-spirits. It is even believed that boils can be banned by exorcistic means.⁵⁶ In tree-plugging as done elsewhere, something from the diseased body or which has been in close contact with it, is wedged, as a sort of "scape-goat," into a hole in a tree—preferably one that has been struck by lightning or a tree in a cemetery.⁵⁷

Among the Jews of southern Russia, in case of lumbago (called Hexenschuss or witch-shot), one lies face down on a door-sill and has the oldest child step over his body and, having done so, spit several times. An exostosis (morbid growth on the bone) is to be bitten every day by the eldest son; this is mentioned as a "really rational procedure." In stubborn cases this swelling is stroked by the hand of a dead person, which helps in the case of many other swellings and of rheumatism. The idea here is probably that a superfluous illness cannot harm the dead man and so can be shoved off on him; "the dead takes sickness along" is the expression used. In consumption woman's milk is not seldom used, and even pork. Eczema is helped by soot from a clay pot.⁵⁸ They work on the principle of *similia similibus curantur*: thus against roaring in the ears, shells (on account of the noise characteristic of them) are used; against vertigo crystal-glasses (looking into which causes vertigo); and against anæmia coral necklaces. For dropsy a spider, carried in a nut-shell about the neck, helps, for the spider will suck up the superfluous water. The notion of

passing disease over to the dead is not confined to the Russian Jew. The inscription ABRACADABRA on a card is good for toothache and fever.⁵⁹

"A correspondent of the *Lancet*, who seems well acquainted with the Highlands of Scotland, writes about the medical folk-lore there, and mentions among rational cures that for whooping-cough some recommend that the child should be taken across a ferry; others, that he should above all go to live in another property; others, that he should go to a house where master and mistress have possessed the same surname. All these procedures involve change of air, which has in such cases no doubt been found beneficial." The ferry-crossing looks like the stock water-exorcism, and doubtless the other cures are based upon ancient ideas wholly irrational to us. The quotation goes on to say that "colt's-foot is used in asthma, warts are washed in pig's blood, and a person with weak lungs takes with great advantage a preparation of twenty-four different herbs. . . . An infusion of adders' heads is used as a dressing in snake-bite, and, it is said, with excellent results. This is on the homeopathic principle."⁶⁰

§317. Therapeutics.

Massage. Cases are cited among the Melanesians in which the singing of incantations to exorcise a malevolent spirit is combined with massage and suction, terminating with the extraction from the patient of a number of foreign bodies.¹ Incantations are also combined with massage in the D'Entrecasteaux Islands.² Among the African Bangala, "simple massage was a favourite operation, and much enjoyed by the patient, and its curative qualities were not placed to the credit of friction, warmth, magnetism, but to the fetish power of the rubber." The operation was also performed by some quasi-medicine-men—men and women who had recovered from some serious complaint would set up as quacks to cure that particular sickness; "they used massage with hot or cold water, and no water at all, and simple herbs, and there was no doubt that they effected a considerable amount of good."³ A case is reported from East Africa in which "an old medicine woman treated a man for a pain in his side by rubbing on the affected part some fat, which she said was medicine, but it was perfectly obvious that what she was doing was simply massage, and she was doing it very well, too, with successful results." Dundas⁴ is convinced that she herself thought that the whole secret of her art lay in the fat she was using. A remedy in Algeria for bruises and strains is as follows: "Wrap a piece of camel's fat in cotton material, warm it over a fire and then gently rub the part affected with the cotton containing the fat. I have tried this myself," comments the author,⁵ "with beneficial results to my knee when bruised and twisted by a fall." Among the Palaungs, "if the wise man decides that an illness is due to the twisting or straining of the muscles of the stomach, a prayer is said over oil, and the abdomen and stomach are massaged with it."⁶ Turner⁷ states that "the advocates of *kinnesipathy* would be interested in finding, were they to visit the South Seas, that most of their friction, percussion, and other manipulations, were in vogue there ages ago, and are still

practised." Among the Tlinkits old women are rubbers or masseuses.⁸ These cases may be taken as typical of what is a widespread primitive practice.

Cupping. The sucking and biting of the afflicted part, together with the removal of some object secreted for the purpose by the shaman, is rather a stock procedure. In the Upper Congo cupping was often practised. "Sometimes it was simple bleeding, and at other times it was cupping proper with horn and suction. The part to be benefited was snicked with a knife, and a horn which had at the upper end a hole was put over the cuts. The operator put a pill of clay or soft wax into his mouth, sucked at the hole, and with his tongue put the wax over it. This he repeated until the air in the horn was exhausted and then the blood ran freely. The clyster was used for relieving pains in the stomach." The many cicatrices, like elliptical punch-marks, to be seen on the stomachs, chests, shoulders, thighs, backs, and arms of the natives were largely, if not entirely, due to the practice of cupping. "They were very fond of blood-letting as a cure for aches and pains in various parts of their bodies."⁹ In British Central Africa sucking of wounds is a common practice, while dry cupping is performed with small gourds and horns.¹⁰ With the Ba-Yaka, "cupping is practised by means of a portion of a gourd from which the air is exhausted by suction through a small hole, and the latter is closed with a plug of wax. The gourd is usually applied over small incisions made immediately in front of the ear, and is allowed to operate for half-an-hour at a time."¹¹ For ordinary diseases in Kenya Colony, "decoctions of bark, roots, and leaves are used, cupping and cauterizing are followed, likewise superficial surgery and bone-setting."¹² A Sudanese case of ophthalmia was treated by dancing and singing, anointing, breathing upon the patient, suction by mouth, and the alleged extraction of "worms."¹³ In Uganda, "it is sometimes noticed that there is a circular bare patch on a man's head where the hair has been shaved, almost like a tonsure. The explanation of this is that the tonsured individual is subject to fever or has frequent headaches. He therefore keeps a portion of his head shaved, so that it may be readily scarified and cupped."¹⁴

A British Columbia doctor sucked at the chest of a consumptive until he had actually perforated the chest-wall. "The operation was varied by the endeavor to draw the 'evil one' from his patient by dancing and singing. . . . The doctor was so terribly in earnest that it seemed impossible to doubt that he was fighting some unseen adversary."¹⁵ Sometimes the medicine-man has a sucking-bone which has all the qualities of a rude "cup." "Although witches and witchcraft did not exist among the Omaha, disease was sometimes supposed to have its origin in the magical introduction into the human body of a worm or other object, which could be removed only by means of magical formulas, by sucking, or by manipulation."¹⁶ A very common trick among Indian charlatans was to pretend to suck foreign bodies out of the persons of their patients.¹⁷ Among the Cheyennes, "when a person was sick, it was thought that the cause of the disease existed in a certain place in the body. Over this place the doctor shook the rattle, to drive out the evil influence, and then with

the mouth strove to suck out the cause of the disease. He appeared to draw out from the patient's body buffalo-hair, stones, and even lizards, which were thought to be the cause of the sickness. When the cause was removed, the patient would recover."¹⁸ In the case of an Athapascan tribe, the medicine-man "sucks the affected place, pretending to draw out the disease and spit it from his mouth, the performance being accompanied with the beating of a drum and the shaking of a rattle."¹⁹ In some cases among the Zuñi, "the theurgist makes no use of medicine, but, acting under the influence of the animal gods, with the mind's eye he penetrates the flesh, locates the cause of the disease which has been 'shot' into the body by means of sorcery, and extracts it by sucking, or he may merely manipulate the spot with his hand and draw the malevolent substance from the body. This is so dexterously done that, although the writer has been seated beside the nude theurgist innumerable times, she was never able to observe that he had secreted any object in his mouth or hand until Nai'uchi, in an almost dying condition, treated a patient who imagined a sorcerer had injured his eyesight. It was then evident to the writer, who sat by the side of the old man, that the pebbles he was supposed to press from the patient's eyes were held in the most remarkable manner in the palm of his right hand, which apparently was held in a natural position. Such treatment is usually practiced on one who imagines that he has been face to face with a wizard or witch and so subjected to malign influences."²⁰ Formerly the Guiana Indians had professional chupadores or suckers, but today anyone may suck out pains. A snake bite is always cut and sucked. "As to the extraordinary variety of visible objects inserted into the body of the victim by the invisible Spirit and similar agencies, and subsequently extracted by massage and suction, the following will give some idea: Fangs of the much-dreaded *Lachesis mutus*, 'bushmaster' snake, grass-roots, gravel-stone, fish-bone, bird's claw, snake's tooth, or piece of wire, a worm, a miniature bow and arrow. The last-mentioned is very interesting in view of the Arawak Indians' belief that all pain is due to the Evil Spirit's arrow. The medicos of the Otomac nation suck with such force as to extract blood from the patient, and when this is spat out on a cleared space, minute stony particles are to be seen in it."²¹ The Bororo shaman treats the sick in the usual way, at last sucking a bone out of the affected part. He operates at night only and never lets the bone out of his hand."²²

Scarification; bleeding. In the Island of Tanna, "local bleeding was a common remedy for almost every complaint; they did not open a vein, but merely made a few incisions with a bamboo knife. When the case was considered dangerous, their last resort was to burn the foot. I have seen, for instance, a poor fellow dying from an arrow wound in the neck; and the sole of his foot just burned to a mass of raw flesh."²³ The natives of the D'Entrecasteaux Islands practise bleeding for headache.²⁴ Phlebotomy is extensively employed by the natives of Lifu, "often to such an extent as to cause blindness, or, if the patient was a child, very serious injury. Macfarlane says: 'For all pains and bruises they cut with a piece of a glass bottle. A man with a pain in his head would never

suppose that it arose from the state of his stomach. He must cut his head at the very place where he feels the pain. They lance for the most trivial things. About two years ago (1871) a native on the south side of Wide Bay had a pain in his neck, was applying the usual remedy, cut his throat, and died. If their children get the least knock they must be lanced. I have known a child to fall, or rather roll off, a board only raised three inches from the ground, on which account the parents felt that they must lance it."²⁵

Bleeding is very common among the Tlinkits.²⁶ The only medical practises which Jetté²⁷ witnessed among the Ten'a are "puncturing, and the preparation of spruce-tea, and of a decoction of a bush resembling juniper. The puncturing, which consists in thrusting a small pointed blade through the skin previously seized and held up between the thumb and forefinger—just as whites do with the hypodermic syringe—is their method of blood-letting." In cases of rheumatism and congestion the American Indians draw blood and scarify the whole body in the most cruel manner.²⁸ Medicine-women of the Ojibwa chiefly treat women and children and also tattoo for the cure of headache and chronic neuralgia. "The mark consists of round spots of one-half to three-fourths of an inch in diameter immediately over the afflicted part, the intention being to drive out the demon. Such spots are usually found upon the temples, though an occasional one may be found on the forehead or over the nasal eminence."²⁹ Among the Omaha, "bleeding was commonly employed in treating ailments; for this purpose gashes between the eyebrows were made with a flint knife or cupping on the back was effected by the use of the tip of a horn."³⁰ The theory of disease accepted by certain California Indians "is that it all resides in the blood. To prove this, they cite the fact that the blood always collects under a bruise and makes it dark; also that drawn blood coagulates. Hence the favorite remedy was scarification with small flints. When they became acquainted with the process of cupping, they wearied the reservation surgeon with applications to have it performed for every little ailment."³¹

In Central America bleeding has been long in practice; it is done generally on the middle of the forehead and on the temples, or on the inner surface of the elbow.³² In Guiana, next to the use of heat and of water comes blood-letting, which is used in almost all cases of illness and even for some insignificant discomfort. It is practised both as a preventive and as a cure. They open the vein nearest the seat of pain or make long perpendicular cuts in the skin, stopping the bleeding at length with an astringent and mordant juice.³³ As a therapeutic agent, blood is also employed for anointing another person, "but in these circumstances there would appear to be some intimate relationship existing between the giver and the receiver. . . . As to other therapeutic properties, I append the following extract: "The only remedy is the voluntary submission of Aaron to have blood taken from his body and with it to wash the girl he has poisoned."³⁴ "I have seen no native," writes Ehrenreich,³⁵ "whether aged man, aged woman, boy, or girl, who did not carry on himself

the scars of such barbaric bleedings. Severe fasting accompanies the rest of the healing processes. Other South American tribes scratch the seat of pain till the blood runs; in fact, they do this to increase their strength when they are not sick at all. Boys have the face and upper arm scratched in order to give them a good eye and a strong arm for shooting. Scratching is a universal cure, and perhaps is in many cases effective as a counter-irritant to congestion or inflammation."

A peculiar case of scarification is reported by Hanbury.³⁶ An Eskimo woman had a white speck on her eyeball. Another woman caught a louse and tied it on a hair leaving its legs free; then dropped it on the eyeball and drew the lid over. It scratched the eye and the patient said it felt better.

Surgery. Primitive medicine-men often show skill in surgery and even attempt trepanning. "It is strange," write two authors³⁷ on the Central Australians, "but the latest treatment by the German Doctor Bier has its exact counterpart in our aborigines' surgical method. It is carried out amongst them with a piece of fur string. This is bound firmly round the inflamed or painful part and then tied off. First, however, if you are a blackfellow, you will get your string 'sung,' that is, you, or the local *koonki* [doctor or magician] will chant over it, exhorting it to cure. I have tried using the rubber bandage, but have never used fur string that has been sung. . . . Round wrists, arms, forehead, ankles, thighs, everywhere the little tie of twisted fur obtruded itself." Hagen³⁸ maintains that skull trephining or trepanation is done in Melanesia and the French doctors Malbot and Verneau³⁹ report that it is in practice in Algiers. In the New World also it was known. Says Ray⁴⁰ of the Loyalty Islanders: "The natives of Lifu had considerable skill in surgical operations. They have wonderfully trepanned, removing a portion of the skull and replacing it with a piece of coconut shell. Pressure on the brain is frequently relieved by scraping, and thus making thin a part of the skull." Turner⁴¹ confirms this and says that at Uea "the cure for headache was to *let out* the pain at the crown of the head by the following horrid surgery: The scalp was slit up and folded over, and the cranial bone scraped with a fine edged shell till the dura-mater was reached. A very little blood was allowed to escape. In some cases the scraped aperture was covered over with a thin piece of cocoa-nut shell, in other instances the incised scalp was simply replaced. The 'cure' was death to some, but most of the cases recovered. To such an extent was this remedy for headache carried on, that the sharp-pointed clubs . . . were specially made for the purpose of striking that weak part on the crown of the head, and causing instant death."

In Kenya Colony, East Africa, superficial surgery and bone-setting are commonly done by the medicine-men.⁴² "An almost incredible piece of surgery, to which, nevertheless, a whole village bore witness," is reported from among the Ba-Yaka: "It was said that a certain man, who was pointed out to me, had had an artery severed by an arrow, and that an old man had tied it with fine copper wire."⁴³ Hilton-Simpson⁴⁴ has written convincingly of trepanning in Algeria, giving a careful description and showing plates of the tools used.

It is a real surgical operation, he says, known "all over the desert." The cases he mentions are those where the skull had been fractured by accident and also where the idea was to get the "bad bone" out. No antiseptics is employed, the surgeon working with dirty hands and using dirty rags. An Arab is reported as saying that such an operation was "a little bit dangerous," but, states the author, "he certainly did not consider it a critical one."

Among the Palaungs, "to open a boil, a piece of a broken pot is perforated and placed on the swelling, so that the head of the boil comes under the hole; a nail, which has been sharpened and heated, is then driven through the hole. No anesthetics are ever used to prevent pain during an operation; but opium is sometimes given to a lad while he is being tattooed." An operation on a goiter is described as follows: "He used as a surgical instrument a small piece of sharp glass, fixed near the end of a flat strip of green bamboo, and projecting about a eighth of an inch from the surface. The sharp point of the glass was laid against the goitre; the wise man, with one hand firmly holding down the lower end of the bamboo, with the other hand bent back the end with the glass, and then let it spring forward with such force that the glass pierced the goitre to the depth of about the eighth of an inch. This was done in fifteen or more places, according to the size of the goitre. As much blood as possible was then pressed out, and a paste was well rubbed in."⁴⁵ The Samoans "lanced ulcers with a shell or a shark's tooth, and, in a similar way, bled from the arm. For inflammatory swellings they sometimes tried local bleeding; but shampooing and rubbing with oil were the more common remedies in such cases."⁴⁶

In Mexico a skull is reported, the opening of which "is almost filled with new bone, which indicates a long survival of the subject after the operation"; yet the tribe in question, the Tarahumari, apparently have no implement for such an operation.⁴⁷ In the Peruvian skulls "there are many indications that the operators were (1) inexpert in manipulation, (2) ignorant of physiology, (3) skillless [*sic*] in diagnosis and treatment, and (4) regardless of the gravity of the operations performed. . . . In short, there is nothing to indicate definite plan or deft execution in any of the operations. The extravagant incision and violent elevation characterizing many of the operations necessarily rendered the artificial lesions much more extensive and dangerous than necessary. . . . The only definite suggestion of post-mortem operation found in the collection arises in the reckless and inhuman slashing of integument, bone, and brain. . . . In short, Peruvian trephining . . . can only be regarded as crude in plan and bungling in procedure; and study of the procedure only occasions surprise that the results were not worse, and awakens admiration for the powerful vitality which enabled so large a proportion of the victims to survive." The authors⁴⁸ think "the treatment may have been for vertigo, headache, or other disease; for coma, produced by shocks or blows of such character as to leave no marks, or for trifling wounds; but it is safe to consider the trephining thaumaturgic and (albeit perchance beneficial) wholly independent of physiologic knowledge and etiologic skill."

Recent translation of a papyrus dating from the seventeenth century B.C. has uncovered much of Egypt's medical lore. Breasted,⁴⁹ the translator, has

the following to say concerning the parts of this treatise dealing with surgery: "The first group deals with wounds in the head, of which the first seven are knife or sword wounds penetrating to the bone. They vary in character according as the skull itself escapes injury or suffers contusion, a gash, a fracture, etc. In all these cases the surgeon is instructed in the examination: 'You should probe the wound.' If he finds only a contusion of the skull or no injury at all, the verdict is favorable; a gash in the skull, doubtful; a fracture in the skull (several kinds), unfavorable. Case 7, which occupies over two columns and is the longest case in the treatise, describes three different conditions of the injury to the skull under the knife wound, gives two verdicts (one doubtful, one unfavorable), and in the third condition says to the surgeon: 'You should have made for him a wooden brace padded with linen (and have) the head fastened to it. His treatment should be sitting, placed between two supports of brick, until you know whether he is making any progress.' These contrivances are evidently devices familiar enough to the Egyptian practitioner to need no further description. The first might be variously explained, but the second, built of sundried brick like the beds of the poor, is obviously intended to prevent the sufferer from lying down and disturbing a badly injured skull. It may be mentioned also that the examination in this case notes a feeble pulse and fever as among the symptoms. . . . Case 8 deals with a 'fracture of the skull under the skin.' When examination has demonstrated the presence of the fracture the surgeon is unconditionally charged to operate, to open at the point of contusion, and 'to elevate the depression outward.' It may be for the modern surgeon to decide whether this could be done without trephining; if trephining is involved, as would seem probable, we have here the earliest reference in literature to this famous operation. Although an operation known to have been practiced by peoples in a primitive state of culture, trephining has not yet been unmistakably identified on surviving ancient Egyptian skulls. In any case, the proposed operation was a desperate measure. The verdict was unfavorable, recovery doubtful and the patient was to be treated sitting up, as in Case 7." The treatise devotes twenty-seven cases to the head and then proceeds lower. The fourth group of cases (six in number) concerns the throat and neck. References are made to dislocation of the neck and other injuries. "Among the mechanics employed on the great buildings of Egypt, like the pyramids and temples, there must have been many such cases. A single excavation campaign, which exhumed between 5,000 and 6,000 bodies, disclosed one person with a fractured bone among every thirty-two people." Following the cases of trouble in the cervical vertebrae comes a group consisting of five cases devoted to the collarbone and shoulder. "The operations for a dislocated clavicle and scapula are both described. In both the patient is laid out on his back and to repair the shoulder the arms are spread out 'in order to stretch out the shoulder until the dislocation falls into place.' . . ." With the forty-eighth and last case the treatise passes to a seventh group, cases of the spine. "In these forty-eight cases . . . only one mentions or makes use of a magic charm, and it is evidently not an accident that this case, which resorts to a charm, is also the only one which lacks any verdict. The physician evidently excluded it from his list of cases to be treated by other than magical means. We have here, then, a group of the earliest recorded observations in natural science made by man. Here was a realm where the physician was confronted often enough, to be sure, by the unknown; but not by the demoniacal. Here was the physician's exclusive realm, to be dealt with by the physician's skill. He

knew it and recognized it and applied to it the phrase 'art of the physician,' as he repeatedly calls it in contrast with the 'art of incantations,' applied to ailments arising from demoniacal causes."

In modern Montenegro "native surgeons have a great local reputation for dressing wounds and setting bones. The traditional way of dressing a wound is remarkably antiseptic. It was on no account to be washed with water, but cleaned out several times with strong wine. . . . The local surgeons had also a great reputation for trepanning. In such a rocky country plenty of people tumble over cliffs and dent their skulls in. I have not seen any of the instruments. When the piece of bone had been removed a lump of sheep's wool was used to swab out the hole."⁵⁰

Obstetrics. In the Indian Archipelago the woman must not bear her child in a house; she goes into the bush and is assisted by a person who exercises strong pressure.⁵¹ In one of the backward Borneo tribes the woman is smoked and the next day resumes her duties.⁵² Again, kneading is the only means known of assisting; and hæmorrhages cannot be arrested.⁵³ Among the Sea Dyaks one doctor takes charge of the lying-in room and another enacts on the veranda an imitation of the process of forcing-down applied by the *manang* inside, utilizing a stone to represent the child.⁵⁴ Kneading may even go to the length of treading with the feet.⁵⁵ In Sumatra delivery scarcely halts the woman's activities, and the presence of a *sage femme* is often deemed superfluous; but there are midwives who have some real skill.⁵⁶ The shamaness is generally called in, in Celebes, when a woman bears her first child; later on, she attends to herself in the bush or by the river. After bathing, the mother goes about her usual duties.⁵⁷ In Malacca, the midwife has a house apart, tabooed to men, and differently constructed from ordinary dwellings. The assistance rendered is the usual pressure and manipulation. A half-hour after delivery the mother takes a bath in the sea.⁵⁸ The case is not much different in Luzon and the Pelew Islands.⁵⁹

Jetté⁶⁰ reports the case of a young woman among the Ten'a who was in the pains of labor. "As these were unusually severe, she sent to Nulato for some medicine, which I gave to the messenger, instructing him how she should use it. She did so, but as the result was not instantaneous, accounted it null, and called in the medicine-man. He gave her a cup of water to drink in which he had blown, and immediately she was delivered. When she related to me the fact, I felt almost sorry that I had given her anything at all, but I could never persuade her that the first medicine had contributed more than the second to the desired result."

Among the Indians all sorts of taboos surround the women during pregnancy, the menstrual periods, and childbirth, owing to the belief in their "uncleanness."⁶¹ Also fastings and food-taboos accompany childbirth, and the Mohave mother must diet for forty days, during which she must not wash or

comb her hair.⁶² The Pima mother bathed in the river immediately after delivery, during which she is attended by women friends.⁶³

Water and Vapor. Sprinkling sea-water on a patient is one method of treatment in the D'Entrecasteaux Islands. A native expression for getting well is to say a man has bathed.⁶⁴ In South Africa a cap or any sort of clothing worn by a witchdoctor until it has become saturated with filth "is considered the most infallible cure for all kinds of diseases, poisonous bites, etc. On emergencies a corner of this treasure is washed, and the dirty water thus produced is given to the patient—beast or man—to drink."⁶⁵ Among the Palaungs, who always speak of the illness disappearing or being overcome and never of the patient recovering, the rule is: "To cure stomach-ache make stones very hot in the fire, then throw them into cold water to cool their surface, then lay them upon the painful place. . . . If a person is clawed or bitten by a tiger or by a leopard, dip a cat under water in a vessel—all but its head, for it must not drown. Stroke its fur under water, then use water to wash the wounds. If this is done, Palaungs believe that the poison will not take effect." Water poured over a magnet is believed to be good also for healing wounds. In order to drive away the spirits causing an epidemic, the people sprinkle sand, paddy, rice, and water on the floor of every house in the village and beat the walls of each room with sticks; sometimes they go through the streets firing guns.⁶⁶

The Alfurs of the East Indies bathe to remove disease and all ill. In bathing they say: "May the water remove sickness, weariness, and evil dreams and bestow them on those who are bad." They bathe *en masse* against epidemics, which are ascribed to evil ghosts. Water is a prime means of banishing ghosts and hence ghost-sent disease.⁶⁷ "Those who have had intercourse with Malays often try their remedies, after the attempts of their own priests have failed to cure. All remedies are external, either rubbing, washing, or sprinkling." The writer⁶⁸ has never known a Daya doctor to give a drug or any internal medicine or to interfere with the diet. "If one excepts, therefore, such few cases where rubbing or washing would rationally be of use, the whole medical treatment of the Dayas rests on their heathen system of superstition, in some cases approaching sympathetic cures professing to transplant sickness." A case is reported where the contents of three water-receptacles were poured over a woman suffering from eczema, an affection which should be kept quite dry.⁶⁹ On the island of Ponapé, "the fundamental principle of their medicine is hydrotherapy, for in almost all their maladies they use hot water, applying a moistened sponge, renewed frequently, over the location of the illness, whether the patient complains of pains or whether it is a question of ulcers or wounds, tumors or eruptions."⁷⁰ Incantations and prayers, cold-water bathing and sprinkling seem to be the principal stock-in-trade of present-day medicine-men in New Zealand.⁷¹

All the men among the Cheyenne Indians took a morning plunge. "This was for good health, to make them hardy, and also to wash away all sickness."⁷² A cure for fits, among the Guiana Indians, is to drink water in which singed

tapir hoofs have been placed.⁷³ Water is used by "the wise women" in Montenegro today as a cure or rather charm for rupture. "The wise woman puts some water, which must be freshly drawn, into an *ibrik* [long-necked metal pot]. She puts it on the fire and crosses it three times. When it boils she says, 'Water, I call on you three times from Heaven to earth. If Mr. So and So of such an address is ruptured, let his bowel return like this water.' So saying, she turns the boiling water out into a metal dish, and holds the *ibrik* mouth down in it. As the hot metal pot cools some of the water rises again into the *ibrik*, the more the better. A fee of 2d. is asked, and the operation should be repeated till relief is obtained. It is usual also to give the operator some eggs or a cheese to induce her to begin."⁷⁴

On August 15, most of the bathing beaches in this country and Europe are taxed to capacity, the reason being that on this date which is the feast of the Assumption and one of the most important holy days of obligation in the Roman Catholic Church calendar, the salt water is supposed to be possessed of peculiar curative qualities, not characteristic during the rest of the year, and he who bathes on that day believes that he will be free from bodily ills for another year at least.⁷⁵

In some places steam or fumes are applied to the patient, while sweating is also employed. In South Africa, "should a boy fall sick, it is said that an *i-shumba* spirit has taken possession of him and finds his quarters uncongenial. He must, therefore, be transferred to a girl. This transference is carried out by killing a goat and putting some of the blood into a broken vessel. Herbs and leaves of certain trees, and heated stones or burning charcoal are placed in a vessel causing a dense steam. A blanket is placed over the rising steam, and the girl to whom the spirit is to be transferred is placed under the blanket with the possessed boy kneeling beside her. By inhaling this steam she is supposed to receive the spirit, and the boy to be dispossessed."⁷⁶ The tribes of British Central Africa use a medicated vapor bath for sick children.⁷⁷ The Nilotic Kavirondo in sickness use smoke, which probably has the quality of fumigating. "While the sick man is dying his relatives howl in chorus round his hut, while the doctors rattle stones in gourds and puff clouds of tobacco smoke around the invalid, their object, undoubtedly, being to drive away the evil spirits."⁷⁸ In Morocco and Algeria, where the chameleon is largely used for medicinal purposes, "privet or mallow leaves, fresh honey and chameleons split open alive are considered good for wounds and sores, while the fumes from the burning of the dried body of this animal are often inhaled."⁷⁹ Among the Arabs and Swahili, "as soon as the spine of the sick person becomes arched, a fire is lighted in the sick room. A mixture is then made from donkey's dung, dog's excreta, garlic, *mvuge*, (asafoetida), sulphur and *sunduna* (a black kind of seaweed). All this is made into a paste by the addition of castor-oil, and lumps of it are cast on to the fire, from which then emanates acrid smoke with an appalling smell. This is supposed to relieve the patient."⁸⁰

In the East Indies the steam of hot springs is regarded as therapeutic in cases of goiter.⁸¹ Sweating was employed by the Cheyenne Indians in the following manner. "Stones were heated in a fire outside the sweat-house, passed

in by a woman, who handled them with two forked sticks, and placed in a shallow rectangular hole dug in the center of the lodge. Water was then sprinkled on them from the mouth or by means of a brush made of a buffalo-beard, creating dense steam and heat, which were confined by a covering of skins or canvas or blankets spread over the framework. While the sweat was being taken, the doctor prayed, sang, and used his rattle. After the sweat a plunge in the river followed."⁸² Among the Omaha, "both men and women took sweat baths but not together; these were employed to relieve headache, rheumatism, weariness, snow-blindness, or any bodily ailment. . . . The Omaha used the sweat lodge not only for curative purposes but to avert disaster, as impending death, and also as a preparatory rite."⁸³ In general among the American Indians sweating was important in medical practice for the cure of disease. "The underlying idea was doubtless analogous to its religious and ceremonial use, since it was intended to influence disease spirits and was usually prescribed by the shaman, who sang outside and invoked the spirits while the patient was in the sweat-house. It was sometimes the friends and relatives of the sick person who, assembled in the sweat-house, sang and prayed for the patient's recovery. Among the Plains tribes all priests who perform ceremonies have usually to pass through the sweat-house to be purified, and the sweating is accompanied by special rituals. Whether the Indian's therapeutic theory was rational or irrational, sweating was an efficacious remedy in many diseases to which he was subject, though used with little discrimination." A third purpose for which sweating was practised may be designated as social and hygienic—"a number of individuals entered the sweat-house together, apparently actuated only by social instinct and appreciation of the luxury of a steam bath."⁸⁴ Among the Guiana Indians, "a steam or vapor bath is often resorted to in the case of fevers."⁸⁵

As an illustration of medicine upon a considerably higher stage, and with at least a considerable element of the rational, and very little of the daimonistic, in it, stands the case of Père Ripa's description of the treatment he underwent in China after a severe fall. He was thrown from his horse and lay fainting in the street until he was carried into a house, where a native surgeon attended him. "He made me sit up in bed, placing near me a large basin filled with water, in which he put a thick piece of ice to reduce it to a freezing point. Then stripping me to the waist, he made me stretch my neck over the basin, while he continued for a good while to pour the water on my neck with a cup. The pain caused by this operation upon those nerves which take their rise from the pia mater was so great and insufferable that it seemed to me unequalled, but he said it would stanch the blood and restore me to my senses, which was actually the case, for in a short time my sight became clear and my mind resumed its powers. He next bound my head with a band drawn tight by two men who held the ends, while he struck the intermediate parts vigorously with a piece of wood, which shook my head violently, and gave me dreadful pain. This, he said, was to set the brain, which he supposed had been displaced, and it is true that after the second operation my head felt more free. A third operation was now performed, during which he made me, still stripped to the waist, walk in the open air supported by two persons; and

82 Grinnell, *Cheyenne*, II, 133.

85 Roth, in BAE, XXXVIII, 705-706.

while thus walking he unexpectedly threw a basin of freezing cold water over my breast. As this caused me to draw my breath with great vehemence, and as my chest had been injured by the fall, it may easily be imagined what were my sufferings under this infliction; but I was consoled by the information that if any rib had been dislocated, this sudden and hard breathing would restore it to its natural position. The next proceeding was not less painful and extravagant. The operator made me sit on the ground, and, assisted by two men, held a cloth upon my mouth and nose till I was almost suffocated. 'This,' said the Chinese Esculapius, 'by causing a violent heaving of the chest, will force back any rib that may have been dislocated.' The wound in my head not being deep, he healed it by stuffing it with burnt cotton. He then ordered that I should continue to walk much, supported by two persons; that I should not sit long, nor be allowed to sleep till ten o'clock at night, at which time I should eat a little thin rice soup. He assured me that these walks in the open air while fasting would prevent the blood from settling upon the chest, where it might corrupt. These remedies, though barbarous and excruciating, cured me so completely that in seven days I was able to resume my journey."⁸⁶

Heat. Among certain Melanesians "the wound is bathed with hot water and leaves are then put on again and the wound is thus dressed daily till it is healed. For a pain in the back a hot stone is applied locally."⁸⁷ A case is reported from among the Hausa of a man who was quite helpless with rheumatism but was cured by means of a hot iron—after all, only our mustard plaster in a more severe form.⁸⁸ For water on the knee, the Algerian prescription is: "Make some oil very hot; wrap a little salt in a rag, dip it in the hot oil and gently 'dab' the swollen knee with it. The oil used is presumably that of the olive. Massage is also recommended for water on the knee. Both these forms of treatment were recommended to me when suffering from water on the knee at El Kantara, but I noted a far more drastic remedy some years ago in the Sahara. One of my camel men [a native of Morocco] had 'fired' his knee with a red-hot knife when fluid had formed on it during a long journey, and this treatment had been successful."⁸⁹ Marks are occasionally seen on the wrist and other parts of the body among the Todas; "in men these are always the result of treatment for pain or illness and are made . . . by means of a hot stick."⁹⁰ Among the Palaungs, "the giving of medicine is almost always accompanied by incantations, and a fire must be burning close at hand while these are being said. It is good to burn a light near a sick person. It is left to the wise man to decide where it should be placed."⁹¹ In Guiana, "Indians will allow abscesses to develop and apply heat with fire until they burst."⁹²

Branding around the navel is a cure for colic in India; one man showed a series of large and small branded discs on chest and abdomen for illness when he was a baby. A newly born child is branded with a hot needle in twenty vital parts. Children who have fits are branded with a heated twig or glass bangle and branding on the forehead is held to cure sore eyes. Branding is a regular dedicatory religious ceremony; it is sometimes merely a pretence when the child is very young, for sandalwood paste is interposed between the skin and the heated brass instrument. "In some cases, disciples, who are afraid of being

hurt, bribe the person who heats the instruments; but, as a rule, the guru [priest] regulates the temperature so as to suit the individual." It is high for a strong man, cooler for a weakling, and in the case of babies the instrument is pressed against a wet rag before application.⁹³ In Algeria the branding is done on a goat, probably with the idea of imitative magic; this is the treatment for enlarged spleen. "Take the spleen of a goat and lay it upon the patient's left side over his spleen. Then take a 'minjel,' the small sickle hook with a serrated edge in use all over Algeria, and, having made it very hot in a fire, apply it as in branding to the goat's spleen lying against the patient's side. Repeat this seven times. . . . Hang the goat's spleen up in the house so that the patient cannot fail to see it directly he awakes in the morning. When he sees it he must say, 'It is my own spleen that grows smaller,' for as the goat's spleen dries and shrinks so does that of the patient decrease in size until it resumes its normal proportions."⁹⁴ A Guiana Indian who falls ill rests for several days in his hammock, with a small fire underneath.⁹⁵ The Shingu Indians cover the seat of pain with warm pitch in which feathers are thickly planted. Decoration with feathers was itself a remedy for disease, so that the line between remedy and ornament could not be drawn.⁹⁶

Rhythm; faith-cure. Many of the performances of the medicine-man have a beneficial effect on the patient's mind; they, combined with the faith of the latter, often aid in his recovery. This is especially true in mental ailments. In South Africa women "dance around the person afflicted by the spirit, calling upon the spirit to come out of the woman and leave her in peace; they work themselves into a great state of excitement, and it is dangerous for the men to go near them when they are going through this dance."⁹⁷ Among the Bangala, the medicine-man "beats his drum near the patient, talks excitedly, chants various phrases, the sense of which neither he nor the people very often understand, but the lilt of the metre together with the rhythm of the drum make the patient sway to and fro and have a hypnotic effect on him." Confidence in the shaman aids in the cure. "Whether the *nganga* deceives himself—believes in himself—is a question difficult to decide. Undoubtedly through generations of inherited knowledge concerning herbs, etc., they have remedies that do good to their patients, and there are many faith cures, the result of an implicit belief in their *nganga* and the means used. The system is founded on quackery, but, like quackery in Europe, the remedy sometimes meets the disease, and such successes are remembered and talked about, and the failures are forgotten."⁹⁸ The Swahili cure for *pepo*, a word equivalent to the Arabic jinn or evil spirit, is principally drumming. "The natives of Africa are particularly sensitive to rhythm, pure and simple, even more so perhaps than Europeans. The rhythm of certain kinds of drumming has the effect of exciting the nerves to an ecstatic degree, while other rhythms appear to have the contrary effect upon the nervous system of Africans. It is the latter rhythms that are used as a cure for *pepo*. This physiological effect of rhythmic drumming is, however, unknown to the inhabitants of the coastal zone, and believing as they do, that the nervous disturbance known as *pepo* is caused by the presence of evil spirits in the body, they set about propitiating the *jinn* and putting him in a good temper by giving a drumming entertainment in his honour, so as to

induce him to depart from the body of the person possessed. . . . If, however, success is attained in making the *pepo* speak through the lips of the patient, which is very often the case owing to leading questions being asked by the *fundi*, and perhaps to a certain amount of mental ascendancy on his part, to which a hypnotic element may not be foreign, arrangements are then made to fulfil the desires of the *pepo*, which invariably take the form of an *ngoma* or dance repeated every day for seven days, with or without a *pepo* feast, and a male goat to be ridden by the *pepo* on the last day of the dance."⁹⁹

Rhythm is used in therapy by natives of Sarawak. "When a person falls sick, the mode of procedure is as follows: a medicine man (*orang bayoh*) is called in to diagnose, and he decides which spirit (*antu*) must be considered to be responsible. Then he returns home, procures a log of sago palm, and the next day appears at the patient's house with a *dakan* representing the *antu*. Then, sitting down by the patient, he begins to beat a drum, not loudly, but in a peculiar way that cannot be mistaken, reciting a monotonous chant in a semi-obsolete language the while: thus calling on the spirit to enter his image and beseeching him to stop the sickness, he now spits on it with *sireh*, which marks the end of his incantation, and then he pours water over the *dakan*, letting it trickle from the image over the affected part of the patient." In treating the sickness, therefore, there is no need whatever to administer medicines, the treatment simply being the pacification of the spirit by sacrifices and by injunctions offered through the medium of pith images. "It will be seen, in fact, that their method of healing is but a form of the world-wide faith cure and that to the great healer, Dame Nature, the Milano patient owes his recovery after the ministrations of the witch doctor."¹⁰⁰ In New Zealand there are today medicine-men of a sort, but "those who so style themselves are chiefly really faith-healing 'bush-doctors,' who travel from place to place practising their particular brand of the Christian-Science doctrine amongst the natives. They use incantations or prayers of meaningless and unintelligible character, often composed by themselves, over their patients, . . . but they are very often successful, for the Maori imagination is strong, and the patient's faith works wonders."¹⁰¹

Strange as they may seem to us, the performances of the medicine-men of the Ten'a, in Central Alaska, inspire faith in the patient. The doctor sings while he dances with a blanket over his head and shoulders, he works himself up to a frenzy, sweats, his face becomes distorted, he gets hoarse from yelling, and saliva drips from his mouth. This may go on for from one to three hours. All the assistants get excited too, and the patient's imagination and credulity are stimulated. The medicine-man then squeezes the patient with his hand, pretending to extract something, which he generally introduces into himself or throws into the fire or out of the window. On one such occasion, "the sorcerer came to the window to despatch his captive spirit into the aerial spaces, when he unexpectedly beheld the missionary's head laughing at him through the window. He lost all self-control: 'The priest! the priest!' he exclaimed. An indescribable confusion followed. The lights were put out, and the audience skedaddled in all directions." If the patient fails to recover the medicine-man is expected to return the gifts he has received; they are given

⁹⁹ Skene, in JAI, XLVII, 420-421, 424.

¹⁰¹ Cowan, *Maoris*, 117.

¹⁰⁰ Lawrence and Hewitt, in JAI, XXXVIII, 389.

not to attempt a cure but to effect it. "This practice is so constant, that the Ten'a, at first, expected that the white physicians would conform to it." The medicine-man generally imposes abstinence of some sort, temporary or for life. These orders are scrupulously observed. In this way he gets a stronger hold on the people's minds; they are trained to obey him.¹⁰² Of course, if they do not, some coincidence will confirm him. Rhythm, dance, and faith play their parts in the performances of the Kwakiutl shaman, by which he undertakes to restore the soul. In one case a woman was about to be placed in her grave-box when the shaman made her sit up, whereupon "the great shaman swung his rattle, and all the time-beaters beat time. Then the shaman went towards her, opened his right hand; and as soon as he came to the sick woman, he gave his rattle to his friend the shaman, who was holding up the sick woman. And he made the soul sit on her head. For a long time he blew on the top of her head; and when he finished blowing on it, he pressed the top of the head of the sick woman. Then he finished. He arose and spoke. He said, 'Now let our sisters dance.' Thus he said to the four women who were to dance merrily, because he had recovered the soul of the one who had come back to life, the one who had been walking with the spirits. Thus he said. Then he sang with slow time-beating, and the time-beaters began to sing. Now the four women danced and the great shaman also danced. As soon as the song ended, they finished. Then they were paid by him with one hundred blankets, and one hundred blankets were given to the time-beaters of the shaman. Then the woman came back to life after this."¹⁰³ Among the coast Salish the cure is brought about by a dramatization of the restoration of the patient's guardian-spirit from the spirit-world, whither it has wandered. By an elaborate performance, including much fine acting, the shamans undertake the perilous journey to recover the lost soul. "If the sick person did not get up and dance, it meant that the shamans had not brought back the right guardian-spirit. In that case, the shamans had to return the payment which they had received at the beginning of the ceremony."¹⁰⁴ Among the Omaha, "as all medical aid was given with more or less ceremony and with songs accompanied by the beating of a small drum, these noises evidently exercised a psychical influence on the patient and did not injuriously affect the nervous system, as they would have done in the case of one to whom the sound was without meaning. The patient knew that the songs were sung to invoke supernatural aid and that on the efficacy of the appeal he must largely rely for relief."¹⁰⁵

The dramatization mentioned above is not unlike the practice of the ancient Chaldeans who thought the gods fought with the evil spirits of illness and that the shamanistic operations performed according to receipts were the weapons of the gods in this fight. "The healing incantations describe the sickness, its nature and course, but they are much more interesting in their dramatic form, in that the gods themselves are introduced discussing and arranging what shall be done in the patient's case."¹⁰⁶

Belief in mystic healing is still common, as judged by the many cases of faith cures reported in current newspapers. The scientific basis underlying such seems to be either that anything will cure the patient when actually nothing is the matter with him, or that many of the ills and complaints of

mankind are fostered by the mental attitude of the sufferers and the symptoms complained of are aggravated by anxiety, in which case the remedy is the popular "cure" of the hour to which human-kind accords temporary faith and allegiance. In this way probably millions have been "cured" of their ills or at least restored to happiness through belief in their delusions.¹⁰⁷

Miscellaneous. Here are grouped other primitive methods of treatment including counter-irritants, fasting, dieting, and some practices that are purely irrelevant. Sometimes the natives' physical condition is due to immunity to certain diseases or to high resistance. It is said that the resistance of the Central Australian to inflammatory trouble is marked, and "though the power of combating the germs of disease such as consumption, measles and smallpox is low, the opsonic index for strepto- and staphylococci is high; which means that the black's resistance to inflammation is great compared with that of the whites, although he more easily contracts other diseases."¹⁰⁸ As a counter-irritant for stomach-ache, the natives of the D'Entrecasteaux Islands rub on something like stinging nettles. Some of their remedies are really curative.¹⁰⁹ It is said in Central Angoniland that if the wind blow from the west for seven days then smallpox will come. "There seems to be something in this, for such a wind would come over Portuguese territory, where variola is endemic."¹¹⁰ Emetics and purges are the most popular kinds of medicine among the Dinkas. "Counter-irritation is believed in for most local illness. A headache is treated by a tight cord round the head; and bronchitis, and other chest affections (to which the Dinkas are very prone), are similarly alleviated by a tight cord round the thorax. It is possible that this latter treatment may have gained a reputation by placing the chest-wall at rest, and thus relieving the pain of, say, pleuritis. 'Firing' with a hot iron, cutting with knives over the seat of pain, and 'cupping' with a cow's horn after first scarifying the surface, are all tried for local diseases. These methods are all, probably, copied from the Arabs, who believe in counter-irritation as the sovereign remedy for every disorder."¹¹¹ In East Africa, "where there are injuries due to mauling by lions or leopards, tobacco and water are given as an emetic."¹¹²

Among the Palaungs, "if a young unmarried boy or girl becomes ill, a wise man may find that the only remedy is marriage. Sometimes no girl can be found at a moment's notice who is willing to marry the boy, or no boy can be found ready to marry the sick girl, so a cock or a hen is made to play the part of bridegroom or bride. . . . If the sick child is married to another child of the opposite sex, they are not in any way bound to each other when they are of a marriageable age."¹¹³ The Singhalese of Ceylon believe in demons, despite Buddhism which teaches that they exist but cannot hurt the virtuous; hence the shaman is called in at every turn. An altar is set up before the sick and an animal, often a cock, is sacrificed on it; meantime the sorcerers dance in masks representing the demons.¹¹⁴ The natives of British North Borneo believe they can call into spears certain spirits which will attack the smallpox-spirits.¹¹⁵ An unusual rite is reported from New Zealand: "A sick person would be

taken to the village latrine, where, while the priest recited a charm, he would be told to bite the horizontal beam of the latrine. This would cure him, at least so sayeth the Maori. Likewise, a person about to start on a journey to distant parts would go through a similar performance, in order that the evil spells of enemies might be rendered harmless, or 'toothless,' as my informant put it."¹¹⁶

Fasting is often required of patients among the Tlinkits.¹¹⁷ When a Tsimshian shaman believes that a disease is going to visit a village, "he will sing his song at midnight to warn his or her people of the coming of the disease. Thus they invite in all the people of the village; and when they are in the house, the shaman opens his rattle-bag, takes out a small leather bag filled with red ochre, and passes it around among all the people in the house to paint their faces—men, women, and children. After all the people have painted their faces, the shaman takes a dried sea-lion bag filled with eagle down, and passes it about among the people to put the down on their heads."¹¹⁸ Among the Zúñi, during the period of treatment for rattlesnake bite, a male patient must not look on the face of a woman who is nourishing an infant, otherwise "his poisoned limb would swell and he would surely die within four days."¹¹⁹ A sort of routine treatment followed by the lay and medical fraternity in general, among the Guiana Indians, consists of "restrictions in diet, emetics and purgatives, ablutions and vapor baths, bleeding, counterirritants, and drugs, but as to how far and in what order one or all of these procedures are carried out will depend upon circumstances—generally upon how long the poor patient's condition is able to survive them. The restrictions of diet may vary from the limitation of several foods to a cooked drink of cassava meal, often an absolute fast. But the curious part of the affair is that similar taboos may be, and are, simultaneously imposed upon the sick person's kinsfolk. The majority of the medicine men on the Orinoco demand that no one belonging to the household should eat anything hot, anything cooked, or peppers. Similar restrictions are observed in cases of snake bite. Let the disorder be what it may, an emetic is first administered, followed by a purgative. Both of these are of such proportions that many die from sheer exhaustion." Certain biting ants are used for counter-irritants. "For the cure of fever the patient [Carib] picks up a yoku ant and causes it to bite him on the temple. For a headache the ant is placed so as to bite the crown of the head, and it is applied to any part of the body to relieve by its bite the particular part affected. . . . A still more effective manner would seem to be that which I have known more than once to happen, where the patient afflicted with fever has deliberately lain down and rolled himself in an ant's nest." These natives believe, probably because of the fetishistic power of the breath, that blowing on a person will cure him. A number of travellers have reported the custom. "When on the point of leaving, a woman stepped forward to an old Indian in one of our canoes, and held up her head. He tapped her forehead with his fingers, muttered a few words, and then blew on her temple. This was done to charm away a pain in the head, the old fellow being a peaman, and capable of effecting such cures. On our arrival at villages I have sometimes seen a woman carry her infant round to one after another of the Indians of my party, each man as she passed stooping down and blowing gently on the face of the child. . . . The Serekong women brought us several of their sick children for us to breathe upon their faces,

and so restore them to health. . . . A pretty-looking Makusi mother insisted upon my blowing in the face of her sickly infant, which she believed would act as a charm, and restore her child to health. . . . With the same tribe, the piái will blow upon the girl after the menstruation ceremony with the object of disenchanting her."¹²⁰ The instruments of the healer among the Araucanians consist of the following items: a flint lancet, small stones which he pretends to pass through the body of the patient (if they come out bloody, there is no hope), a stone pipe, a wooden spitting bowl to receive what the doctor sucks from the sick body, a dish for preparation of remedies, a syringe consisting of a bladder and bone tube for clysters, and chief of all the drum; no doctor begins operations without a drum, to which, indeed, healing powers are attributed.¹²¹

With the Greeks as with other peoples of antiquity, medicine was practised by priests in temples. "In the *Iliad* it appears that the Greeks before Ilion had physicians, who in all cases of wounds went to work quite rationally, in that they washed the wounds and bound them with healing herbs." The patient in the temple must fast and diet; then he was shown the holy tables and images, the mementos of former miracles. Prayers and holy songs followed, which the sick one sang with the priest. Offerings were made to the gods. Both anointings and rubbing with hands were practised, and fumigation with various herbs; the patient then went to sleep and a dream announced to him the result, though not even then did he always recover.¹²²

§318. Medicines.

IN Central Africa the medical treatment for babies and children consists in a perhaps excessive use of purging, by means of a clyster with an infusion of herbs and peanut-oil.¹ The native pharmacopœia in East Africa, though associated with irrelevant practices, is said to comprise efficacious remedies for all kinds of diseases; "and when the time comes for it to be investigated thoroughly and extensively, it will probably add some invaluable and quite unforeseen data to our own store of medical knowledge. Native doctors are notoriously reticent. For years, in German East Africa, Europeans have tried in vain to find out the cure of the Wahehe tribe against syphilis—a cure which, at least as far as all outward symptoms are concerned, is wonderfully effective. Doubtless there exist, among native tribes, secret medicine about which we know nothing at all."² Sir Charles Dundas³ states of other East Africans that "many herbs and natural medicines are known to these people which are of real use."

In Uganda is found the custom of using cows' urine regularly for medicinal purposes; there are antidotes for snake-poison, remedies for diarrhœa, constipation, and ulcers, salves for wounds, and even drugs supposed to prevent miscarriage. Cows are bled and the blood greedily drunk; this is said to be "the only way in which the Masai warrior obtains the salt necessary to his well-being. Cows' blood is often thought to be (and no doubt is) a cure for dysentery."⁴ Splinters of a tree struck by lightning are taken as medicine

against headache.⁵ The peoples of the eastern horn of Africa think all cures come from drinking liquids, and drink any chemical with simple faith. They eat the salves. Whatever has a drastic effect, however poisonous, pleases them; vitriol is a universal remedy through Galla-land, being sprinkled in powdered form upon wounds; and sulphur is much in evidence. Pepper stands beside the vitriol in high estimation, clearly because of its drastic effects. Woman's blood is used for wounds sustained from snakes and scorpions.⁶ Thick vapors of resin are used by the Berber women to cure headache; the sufferer must dance thereafter; "in fact, however bizarre the thing may seem, the sick woman always recovers on the next day, by the triple force of the dance, the prayer, and the resin."⁷ A drastic remedy of the natives of the Egyptian Sudan against the Guinea-worm and snake-bite is hyæna-dung taken internally.⁸ The therapeutic action of drugs is not understood by the Asabs of the Niger: "any given medicine cures because of a spirit resident in it. Each medicine-pot around a house has its resident or attendant spirit."⁹ As medication for a pain in the stomach "an Arab wrote a text from the Koran upon a piece of dried skin taken from a sheep that had been killed for the 'Sheep Feast,' and bound it over the boy's stomach so that the text lay over the seat of the pain. This put an end to the trouble." The hedgehog is known to possess a high immunity to a great many poisons; "it seems possible that this immunity may be known to the Shawia, who have, perhaps, observed the animal after having been bitten by a snake, and this may be the reason for their supposition that the burnt body of the hedgehog can be useful in medicine. Hedgehogs are systematically hunted . . . and are sold for medicinal purposes."¹⁰

The aborigines of Siberia often believe in the superiority of their own medicines over the European variety. When a Samoyed boy was once taken sick, as a Russian doctor happened to be staying in the village, the boy's father called him in. Medicine was prescribed, but was received with some reservations: "Only such a little drop of medicine in much water, and he so ill!" The father waited for a week, and still the child was no better. Then he lost patience. He solemnly collected all his ikons, and carrying them to the roof of the house, spread them out to the weather in ignominy, to show his contempt for the Russians and their beliefs. Then he returned to the gods of his own people. The boy recovered.¹¹

In southern India the urine of a wild monkey is a remedy for rheumatic pains, if applied to the affected parts with a mixture of garlic; and for chronic fever its blood is sometimes taken. "The Burmese believe that, when the powers above quarrel, they throw celts at one another, and that, when one misses, it falls to the earth. They attach considerable importance to them for medicinal purposes, and powdered celt is said to be equally good for a pain in the stomach or an inflamed eye."¹² "There is but one medicine current among all the Tounghtha; this is the dried gall bladder and the dung of the boa constrictor, which is supposed to be, and is used as, a remedy for everything."¹³ "Epilepsy may be cured by drinking water out of the skull of a suicide, or by

tasting the blood of a murderer"—a belief still surviving in Britain.¹⁴ In northern India and adjacent countries lizard oil is a popular remedy for loss of virility. "The natives also extract from them an oil which is used for rheumatism and as an aphrodisiac."¹⁵ The Orāons believe that water under certain circumstances acquires more than ordinary energy or soul-power. "Thus, rain-water collecting in the old hollow trees is a beneficent power which cures fever that has baffled the art of the medicine-man." A fever-patient "goes to such a tree with a handful of rice, a pinch of red-lead, a few yards of thread, and a small new earthen pitcher. . . . The red-lead mark is probably the reminiscence of a blood-covenant. . . . Any weed or other plant growing on such a cleft tree is used as a medicine for various diseases. The unusual appearance of the tree invests it with such power in the minds of these people."¹⁶ Other Hindu medicinal substances include hair, bones, tiger's tongue, and stones.¹⁷

Many seemingly foolish practices may actually follow sensible laws of hygiene. In India "a pregnant woman will not touch papaya or papita if she wants her child to live. The Indians say that for a pregnant woman, papaya is 'unclean.' Conversely, many prostitutes, and even married women, especially of the very poor class, will eat papaya purposely in order to bring on abortion. They believe the abortions are brought on because they have eaten something 'unclean,' that is, religiously unclean. As a matter of fact, medical experts of India hold that there seems to be some agent in papaya which actually does cause abortion. For a non-pregnant woman, papaya is clean, and may be eaten with impunity. . . . A child is often seen with a small bag of asafetida strung around its neck along with a lot of silver and brass charms. The people think it 'keeps away the evil eye.' Asafetida, the doctors say, is a good germicide. Indian mothers oil their babies and put them in the sun for a little while. It is the religious duty of a Hindustani mother to do this. The mothers say it makes their babies nice and fat. The Indian sun is a powerful disinfectant. . . . Oiled and sunned babies were healthier than those not so treated. Children are often seen with great black daubs underneath the eyes. This, the Shastras declare, will keep away the evil eye, and the mothers not only believe that, but believe also that it very much enhances the beauty of their children. The blacking is lampblack made of the soot of sesamum oil, and it gives protection to the eyes by acting as a shade from the glare of the sun. One may accept a drink of water from one's own caste fellows or from a Brahmin. The water is always poured into one's own cupped hands, or into one's own drinking bowl. One never drinks out of another's drinking bowl. Here we have the precursor of the individual drinking cup."¹⁸

The following are a few of the most popular remedies among the Palaungs: "To cure rheumatism it is good to tie a cord of twisted cotton thread round the leg, or a young shoot of a rattan cane may be used. A finger-ring made of rhinoceros horn is good for warding off plague or cholera, also for curing diarrhoea. If a buffalo is killed by lightning, its horns—which may be sold for a considerable sum—are carved into dagger-like charms, and the water in which they are afterwards soaked is used as medicine. . . . Whiskers of tigers or of leopards are carried as a protection against the attacks of evil

18 Pendleton, in *Jour. Soc. Hyg.*, X, 361-

spirits, or they may be burnt and the ashes swallowed as a strengthening medicine. . . . A strengthening medicine for a woman who is pregnant, is made by pouring rice-water over a magnet; she then drinks the water, which should also be smeared on the body from the head downwards." A paste rubbed in the wound, after an operation for goiter, had the following ingredients: alum, vitriol, sulphur, arsenic, saltpetre, cuttle-bone, sulphate of copper, and borax. "Most of these ingredients are more or less medicinal, but to them a mixture of the ashes of the following things was added: a piece of an old cap that had been worn by a child; feathers from the tail of a peacock; part of the skin of a Barking deer; a piece of cotton; some hair; the excrement of man, pig, and dog. These were burnt, equal parts of the ashes of each were weighed and mixed together, and then added to the vitriol, alum, etc. All these were pounded together in a mortar, with a little petroleum and a very little of the water in which rice had been boiled. This mixture might be kept for future use, but when it was used it was to be made thinner with a few drops of the juice of a lime. The paste was to be well rubbed on the goitre twice a day, and, at the same time, as much of the paste as would stick to the point of a finger dipped into it, was to be swallowed."¹⁹ The killing of a single rhinoceros is said to place the wealth of a Punan village almost beyond the dreams of avarice, for the flesh is coveted food, while the horn, nails, hair, skin, and even the contents of the stomach are traded at the highest rate of exchange to the Chinese, who use them all for medicinal purposes.²⁰ A report of the Third Asiatic Expedition refers to the use in China of fossil dust as drugs. "China is one country where fossil teeth and bones have a considerable value, quite aside from their scientific interest. Fossils have been used as fertilizer, it is true, . . . but in China they have quite another use, as medicine, and have been mined for centuries to supply the Chinese drug-shops with 'dragon's teeth' and 'dragon's bones,' a regular article of the Chinese pharmacopeia. There are, it appears, four ways of administering them. They may be ground to powder in a mortar and eaten raw. Or they may be ground and fried with oil in a skillet. Or the powder may be stirred up with sour wine and either drunk off fresh or the mixture left to settle, decanted and the clear liquid drunk. They are specific for certain nervous diseases, heart troubles and disorders of the liver. Without recommending the remedy for adoption in this country, it is perhaps permissible to point out that mixing with sour wine would result in a combination of bicarbonate and acid phosphate of lime that might really have some medicinal value, just what may be left to physicians to decide."²¹

The American Indian medicine of today is not very different from that of our forefathers a few hundred years ago; it is a mingling of charms and herbs. "If occasionally the administration of a plant remedy appears to be followed by good results, they try it again, and presently come to have faith in it. On the other hand, many of the plants are used less for their material than for their spiritual effect. . . . A variety of things, organic or inorganic, are thought to transfer to the individual possessing them the special attributes or powers that they possess. . . . In administering plant medicines, two methods are commonly used. Either an infusion is made, to be taken internally

or used as a lotion; or occasionally poultices of the pulverized plant wet with cold water are applied and renewed as frequently as may be." The author²² lists ninety-four medicinal plants in use among the Cheyennes, with a statement as to what each is supposed to cure. A number of these remedies are efficient, while some, though possessing no medicinal properties known to science, appear to effect cures. Among the Omaha, "herbs were used not only in the treatment of disease but for the purpose of healing wounds. That success often attended the cure of wounds and other injuries is well known."²³ Such faith was placed in the Wyandot medicine for war and other purposes that it was treason, punishable by death, to divulge the medicine-preparations.²⁴

The Cherokees have a myth which accounts for the appearance of diseases and for the existence of counteracting medicines. The animals, being crowded and slaughtered by men, and the insects, being crushed without mercy, resolved to consult upon measures for common safety. They devised and named various diseases, and had not their inventiveness fallen short, not one of the human race would have survived. But "when the plants, who were friendly to man, heard what had been done by the animals, they resolved to defeat their evil measures. Each tree, shrub, and herb, even to the grasses and mosses, resolved to furnish a balm for some one of the diseases and each said: 'I shall appear to help man when he calls upon me in his need.' Thus did medicine originate, and each plant furnishes an antidote for the evil wrought by the revengeful animals. 'When the doctor is in doubt what treatments to apply for the relief of a patient, the spirit of the plant suggests to him the proper remedy.'" Hence the shaman in search for medicinal plants recognizes this helpful attitude, and when he pulls a plant up by the roots he drops a bead into the hole and covers it up. It is unnecessary to comment upon the essentially daimonistic viewpoint here revealed. "In one of the formulas for hunting ginseng the hunter addresses the mountain as the 'Great Man' and assures it that he comes only to take a small piece of flesh (the ginseng) from its side, so that it seems probable that the bead is intended as a compensation to the earth for the plant thus torn from her bosom." There are, however, animal-medicines such as buzzard-flesh; for that bird is believed "to enjoy entire immunity from sickness, owing to its foul smell, which keeps the disease spirits at a distance."²⁵ The Indian proposed to appropriate some of this offensiveness.

The Navaho prepare a porridge from baked green corn and water which is eaten sacramentally and with prayers by the sick person and the others present. Certain fetishes, such as peculiarly shaped stones or wooden objects, lightning-riven wood, feathers, claws, hair, and figurines of mythic animals are supposed to embody a mysterious power capable of preventing disease or of counteracting its effects.²⁶ Medicines are said never to be used by the Mohave but singing, laying on of hands, and blowing, accompanied by a spray of saliva;²⁷ saliva itself, however, is a common curative as well as a fetish-substance used in magic.²⁸ The Karok root-doctor follows the barking diagnostician, "and with numerous potions, poultices, etc., seeks to medicate the part where the other has discovered that the ailment resides. No medicinal simples

are of any avail, whatever their virtues, unless certain powwows and mummeries are performed over them. Another California tribe, for bowel diseases "boil up a mess of a large and very stinking ant, and give it internally."²⁹ Among the Mokis the mother of the Snake Priest was versed in spells and herbs above the rest, and she only knew the secrets of mixing the medicine used in ceremonies.³⁰

Among the tribes farther north, "recent circumstances have developed the fact that poison is used by these Indian doctors to hasten the death of patients considered incurable. I have been told that a poison made from toadstools was formerly used."³¹ The doctors, aside from their mysteries, have really some valuable medicines. People apparently in the last stages of consumption have been cured by them. For blood-spitting they use a decoction of the fibrous roots of the spruce; for rheumatism, the root of the soap berry (from which lebine is made), while the berry itself is used with success as a stomachic. A decoction of swamp poplar bark and spruce roots is used in syphilis. The wild-cherry bark and tansy root are much used by the women. . . . The wild cherry is used both as a tonic and expectorant, and is good for consumptives. There is a plant resembling the anemone, the root of which when bruised makes a powerful blister; and another resembling the geranium, the root of which will cure ring-worm and dry up an old sore. The inner bark of the pine is used early in spring when the sap is rising; the tree nettle is used as physic, also as a wash for the hair, which it renders thick, soft, and glossy. Wild strawberry acts as an astringent.³²

Some of the tribes in the Southwest use the offal of animals as medicine.³³ Among the Zuñi "it is usual for the doctors to treat the patient with his personal or fraternity medicine for ordinary ailments; if the disease does not yield, he knows that his patient is not suffering from some minor enemy, such as ants (ants cause many cutaneous troubles because of their anger over the disregard shown for their houses. 'Ants shoot tiny pebbles into the flesh,' the Zuñi say), but has been bewitched by man. Then he acts in the capacity of theurgist, employing the medicines of the gods, whom he invokes for their spiritual presence and bestowal on him of power to heal the disease." When operating, these medicine-men use what appears to be a real anæsthetic, a species of the thorn-apple. A case is cited. "The late Na'uchi, the most renowned medicine-man of his time among the Zuñi, gave this medicine before operating on a woman's breast. As soon as the patient became unconscious he cut deep into the breast with an agate lance, and, inserting his finger, removed all the pus; an antiseptic was then sprinkled over the wound, which was bandaged with a soiled cloth. . . . When the woman regained consciousness she declared that she had had a peaceful sleep and beautiful dreams. There was no evidence of any ill effect from the use of the drug."³⁴

The Guiana Indians use some one-hundred and forty medicinal herbs; a list of diseases and treatments is given.³⁵ In Brazil an organ of a monkey is regarded as a remedy against fever and, indeed, against all sorts of illness. It might almost be said that woman is a medicine on the principle referred to in

a former connection of "*venenum veneno*."³⁶ The Bolivian Indians "have no anesthetics, properly so called, but the constant use (or I might say abuse) of *coca* creates insensibility. The plant is always applied by them to wounds, bruises, and contusions, and it certainly tends to deaden pain, if not to eliminate it. In this manner the Indians unconsciously employ an anesthetic, although they believe only in its healing qualities."³⁷ In the Gran Chaco, spittle is the medicine-man's chief reliance.³⁸

Von Humboldt is quoted as referring in his travels in the tropics (1803) to the fact that native shepherds in the Mexican Cordilleras believed in the protection afforded by vaccinia against smallpox, and Brun is said to have made a similar statement in reference to the clan of Elihots in Baluchistan. Peasants in different parts of Europe, especially in Germany and England, were firmly convinced of the fact. "It was known to most Oriental peoples, from whom the idea was introduced into England by the communications of Tinsoni and Pilarini to the Royal Society in 1713."³⁹

The Greeks probably owed much of their medical lore to the Egyptians. In addition to various therapeutic practices they used medicaments such as hemlock juice, oxide of iron, hellebore, squills, lime water, and drugs to allay pain.⁴⁰ Pliny is the chief source of information regarding Roman folk-medicine, but some can be picked from Cato, Livy, Tacitus and Lucian. There was a touch of magic in their mode of treatment which had drifted down from Chaldæan days, and is still to be found among ourselves. George Eliot termed it "the medicine given with a blessing." Folk-medicine of the Romans was probably as separate and distinct from the practice of the Greek physicians in Rome as the Negro remedies in the South are different from the usages of the medical practice of today. Among the notions connected with Roman folk-medicine we find the following. "The dung of goats was supposed to expel the stone, as was also the ashes of the hair; the roasted flesh was used for falling sickness, the roasted liver for dimness of sight, the eyes being held over the steam. Mixed with honey, the liver was given for dropsy, and with bran was used for dysentery. For gout in the left hand the tooth of a field mouse killed in a manner prescribed was taken and was stitched to the skin of a freshly slain lion; the skin was then bound around the left leg, when the pain was supposed to cease. A bronze statue in the garden was extolled for tertian ague, and a bronze statue of Hippocrates would cure as Hippocrates did in life. A charm with the mighty name of Solomon would drive off tertian fever. The liver of a hedgehog roasted and eaten, the grease rubbed on the eyes, followed by an application of asses' dung, was claimed to cure the night blindness. An application of crabs' eyes was used for swollen eyes. Augustus was said to have been cured of sciatica by a sound thrashing with a stick. A ring of myrtle wood that had never been touched by iron was said to be a specific for swelling of the groin. Onions and goose grease were recommended for deafness. Four seeds of heliotropium were said to cure quartian fever, three to cure tertian. Dittander attached to the arm on the suffering side was used for toothache. Root of parsley was worn around the neck for affections of the uvula. Another cure for tertian fever was as follows: "Take three grains of

coriander or parthenium, hold in the left hand, mention who it is for and look not back.' Hoarhound and stale axle grease was claimed to cure the bite of a dog, and the juice of mallow taken daily was said to prevent all diseases. Erynga boiled with a frog was used as an antidote for aconite and other poisons. Nettle leaves beaten with bear's grease were used as a cure for gout and nine grains of barley held in the left hand and traced three times around a boil and then thrown in the fire was said to give immediate relief. To cure scrofula, the following procedure was recommended: 'Trace a circle around a quince root, pull it with the left hand, state for what and for whom, pull and wear as a charm.' The calyx of blossom of a pomegranate plucked with the thumb and fourth finger, rubbed on the eyes and swallowed without touching the teeth was supposed to prevent maladies of the eyes for a year. Scrofulous sores were treated as follows: 'Bite off a knot from a fig tree without being seen by anyone, then wear it in a leather bag suspended by a string around your neck.' A sprig of myrtle, that had touched neither the ground nor iron, worn on the person, was said to prevent ulceration of the glands, while a sprig of poplar held in the hand was used to prevent chafing. Red pimples were treated by scourging with a bunch of elder. Tamarisk sprigs if not allowed to touch earth or iron were supposed to allay pain in the bowels. A smilax sprig of an even number of leaves was used for headache. Jaundice was treated with madder worn as an amulet and looked at now and then. Wild madder was supposed to prevent hydrophobia and the person bitten needed only to look at the plant and the flow of corruption from the wound would be staunched at once. Pliny discoursed on pennyroyal, anise, saffron, dog's tongue, wormwood, dill, fennel, cumin, rue, parsley, savin, myrrh, acacia, elecampane, melissa, catnip, lovage, althaea, symphetum, betony, chelidonium, asarum and galbanum. Mustard was recommended as a rubefacient and as a blister; linseed meal with figs was used to ripen abscesses; forests of pine and hemlock were known to be beneficial to patients suffering from phthisis; to breathe such air was more beneficial than a voyage to Egypt. Tar ointment cured itch, as did crude petroleum."⁴¹

In treating wounds, the Montenegrins, until recently at least, were content to follow the old-time Scriptural usage of oil and wine. All wounds are washed out several times with strong wine or *rakija*, a term really referring to the spirit of wine. Herein was displayed more science than they realized. "The traditional way of dressing a wound is remarkably antiseptic."⁴² The discovery of salicylic acid for rheumatism is said to have been the result of an idea that, for every ailment prevailing in a locality, the deity had placed a corresponding cure in the same region. "In the eastern part of England, rheumatism had for centuries been a curse to the inhabitants. The idea that now sprung up caused the natives to search assiduously for the magic herb, root or extract which grew as a rheumatism panacea in the rheumatism country. Crushed grass, boiled clover, chopped dandelion and mashed thistle were applied to the aching limbs and swallowed with no results. Finally after a trial of almost all the native flora had proved unsuccessful, some one skinned off the bark of the willow tree, and making a crude extract from it, swallowed the draft. The stiffness in his joints disappeared. He reported his relief, and the cause of

⁴² Durham, in JAI, XXXIX, 95; Pycraft, "Curious Customs," in Boston *Transcript*, July 5, 1913.

it—the willow bark—in the form of salicylic acid capsules, has persisted as a legitimate ameliorative ever since.”⁴³ In an article on executed criminals and folk-medicine are collected instances of belief in the medical effects of the touch of the body of an executed criminal.⁴⁴

In a lecture on “Drugs, Old and New,” recently delivered at the City of London School by the Gresham Professor of Physic, it was stated that castor oil was employed 5,000 years ago by the ancient Egyptians, that rhubarb was used in China long before the Christian era, that saffron was in vogue in remote ages, and that opium was well known as a potent drug by Greek and Roman writers. The use of animal-products as remedies dates back to very early days, as Egyptian, Greek, and Roman physicians prescribed them. But these agents became so revolting in character that the marvel is how patients could submit to such treatment. “Fox’s lungs for a cough, pigeons cut in half while alive and applied to the feet warm, a dried toad put into the armpit or tied to the head for fever, hedgehogs, earthworms made into syrup, snails, vermin, cats, new-born puppies—all figured among old remedies, many up to comparatively recent times. One was advised to cut off a lock of one’s hair and drink it with wine or beer to cure plague. A live spider rolled in butter to form a pill and then swallowed was recommended against jaundice. Vipers used to be held in the highest esteem, and the belief in their virtues as medicine has not entirely died out among some country folk in England. Broth of vipers, salt of vipers, vipers boiled, vipers stewed or pounded, all were believed in and swallowed with infinite faith. The belief in the virtues of unicorn’s horn dated from very early times, and the value of these horns, which were possibly the horns or tusks of the narwhal, was immense. It was said that one brought to the King of France in 1553 was valued at £20,000. Most remarkable, however, was the belief which our ancestors had in man as a medicine: The skull, the blood, the hair—nothing came amiss or was too revolting. Most valued of all were the skulls of persons who had died violent deaths. The heads of criminals who had been hanged were, therefore, highly prized, and fetched as much as 8s. to 11s. apiece, if moss had grown on them. A sympathetic ointment was made of this moss in the seventeenth century—an infallible remedy against epilepsy. The skull itself was powdered. Charles II., when he suffered from a stroke of apoplexy, was ordered by his four physicians twenty-five drops of spirit from human skulls. In the seventeenth and eighteenth centuries there arose a profound belief in powdered mummies as internal remedies. But a few skeptical spirits denounced the use of this remedy because it led to much fraud, for far more mummies were prescribed than ever came out of Egypt. Judging by the herbals of the fifteenth, sixteenth, and seventeenth centuries ague and dysentery were among the most prevalent diseases. After these the most common allusions were to hair dyes, baldness, complexion improvers, and melancholy, which was considered a common affliction curable by drugs. The constant recommendation of drugs for ‘blacknesse or bruisinge cominge of strypes’ was striking. . . . Paracelsus was the first prominent advocate of the so-called ‘doctrine of signatures.’ According to him, medicinal herbs had distinct outward signs to proclaim their virtues. Thus the leaves of the cyclamen, which had some resemblance to the human ear, must be useful for aural diseases, and so forth. The doctrine of the connection between astrology and medicine dated from Babylon, where it first arose. The importance of herbals

⁴³ N. Y. Times, Dec. 28, 1923.

⁴⁴ Peacock, in *Folk-lore*, VII, 268 ff.

declined as a finer distinction came to be drawn between botany and medicine, and for the study of drugs the pharmacopœias took their place, the first pharmacopœia published under authority being that of Nuremberg, which appeared in 1542." It is quite probable that some folk-medicine notions are connected today with the use of so-called "patent medicines." To the ignorant and credulous the term stands for secret medicine. "If the composition of most of these drugs were truthfully, patently declared, it would probably ruin their sale, for their success rests chiefly in the mystery which surrounds them."⁴

§320. Social Position of the Shaman.

TRILLES¹ has a queer idea concerning the position of the medicine-man among the Fan. He thinks that the chief, being absorbed in political and social matters, delegates religious authority to the medicine-man, who then tries to create a social unity of which he will be recognized chief. The association of young warriors, under his influence, gradually evolves an ensemble of secret practices. Here the chief is secondary to the medicine-man; admission into the secret societies, which are creatures of the latter, comes completely under his control; all must render absolute obedience to him. In East Africa, "among many tribes the medicine man is a person of importance second to none, or the chief medicine man may be practically the ruler of the tribe. Among the Akamba this is not so. . . . More particularly the medicine man's importance must suffer from the fact that many of what one would expect to be his most important duties are performed by the elders, such as the curing of Makwa and the offering of sacrifices."² With the Bahima the office of priesthood is hereditary, which tends to augment its importance; "the priest's children live with their father in the forest, and become acquainted with the duties of the office in their early days."³ The priests among the Nigerian head-hunters get presents, but no regular salaries. The head priest is much more powerful than the chief.⁴ When certain African natives are asked what would happen if they did not pay up after being cured, they declare that "the cured patient would immediately fall ill again, and, if he persisted in his refusal, die."⁵ This belief both aids in the collection of fees for professional services rendered and otherwise strengthens the position of the practitioner.

The Siberian shamans occupy an exceptional position in society; because of their supernatural powers they are allowed to do things denied to other people. They really form a distinct class. Where they cannot keep on their own side of the boundary line between themselves and the other classes, they cease to be such; for instance, the shamaness during menstruation or childbirth belongs again to the community of women.⁶

Priests and other holy men form over half the male population of Mongolia.⁷ They are the teachers of the young in Persia, Central Asia, and India.⁸ In Tibet, half of the property of the deceased is given away in charities and half to the Lamas, "who are invited to read the sacred books to his intent and entertained while so doing." Relatives get none of the personal property. Among some pastoral tribes the sons may divide the flocks and herds of their

father only "after deducting a large proportion for presents to the clergy."⁹ Again, "all the property which a person had in actual personal use at the time of his death, such as clothes, boots, saddles, horses . . . goes to the lama on his demise."¹⁰

In India the king receives in the first place from a Brahman the divine sacrament of initiation; he can take nothing from the priests. All that is in the world is in some degree the Brahman's property and he is set in the highest earthly rank.¹¹ "The spirit of a deceased Brahman (man and woman) is the most difficult of all to propitiate. A timber merchant at Calicut some time ago spent more than a thousand rupees (over three hundred dollars) for this purpose. He had built a new house, and on the morning after the kutti pūja (house-warming) ceremony his wife and children were coming to occupy it. Just as they entered the grounds, a cow ran against one of the children, and knocked it down. This augured evil, and, in a few days, the child was attacked with small-pox. One child after another caught the disease, and at last the man's wife also got it. They all recovered, but the wife was laid up with some uterine disease. The astrologers said that the house was once a Brahman's, whose spirit still haunted it. It had been disturbed, and must be propitiated. Very expensive ceremonies were performed by Brahmans for a fortnight. The house was sold to the Brahman priest for a nominal price. An image of the deceased Brahman was made of gold, and, after the purification ceremonies, taken to Rāmēsvaram where arrangements were made to have daily worship performed to it. The house, in its purified state, was sold to the maternity hospital. The astrologer had predicted that the displeasure of the spirit would be exhibited on the way by the breaking of dishes and by furniture catching fire—a very strange prediction, because the bed on which the woman was lying in the train caught fire from the engine. After the spirit had been thus propitiated, there was peace in the house."¹² The sacred thread was the sign of priesthood, signifying a rebirth. This thread was not spun but twisted in the fingers, in the good old primitive style.¹³

The medicine-man among the Sema Nagas "is not as a rule a man of any social standing or personal influence, and is almost invariably poor, so markedly so that it is generally held that a *thumomi* is unable to acquire riches, a belief which assists credulity in the *thumomi*'s impostures as it meets the most obvious criticism as to the *thumomi*'s object in deceiving. No stigma attaches to the activities of a *thumomi* or to his practice of magic."¹⁴ The Nairs "never accepted the superiority of the magician, and never accorded him any privilege. The magico-medicine man is, on the other hand, considered to be a sort of servant-in-attendance on a noble-man's family, something like a family doctor."¹⁵ At funerals in Southern China, Buddhist priests or Bonzes generally officiate; "though in general this class of Wo-shongs or Bonzes is despised, they are quite indispensable to the people when contact with the world of spirits is required."¹⁶ Veth¹⁷ calls the shamans of Borneo "harpies."

According to one writer the habits of the priests of Tonga were precisely the same as those of other persons of the same station; and when they were

not inspired, the respect that was paid to them was only that which was due to their own rank. Another writer asserts that "the office of the priests was hereditary, and that their power was second only to that of the chiefs, they exercising powerful influence even over warrior chiefs. They took their rank from their gods and chiefs, the worship of the former determining in a great measure the popularity of the latter. According to Mariner, the veneration offered to a priest depended upon the rank of the god that inspired him. He says that a priest, when inspired, commanded the reverence of the whole people; if the king happened to be present he retired to a respectful distance and showed his deference by sitting down among the body of the spectators." In the Society Islands, "all the priesthood, wearers of some sacred emblem or sign, always obtained more or less veneration and respect; and everyone, even chiefs, bowed down, and dared not speak, when a priest, wearing such an emblem, passed by announcing some taboo, feast or ceremony. The priests were regarded with fear and respect, as it was known that a word or sign that displeased them involved death, for not only did they announce the sacrifices exacted by the gods, but they were believed to be able to take away life at will, the gods avenging their offended ministers in this way. . . . They had the highest authority among the people . . . referring to a famous priest of the island of Borabora, they say that he enjoyed great wealth in land, pigs, etc., and exercised a corresponding influence by power and terror, even kings and chiefs being in awe of him." On the other hand, the priest might be "only an emanation of the power of the chief—simply a delegate—in what concerned the religious ceremonies; the king was a direct descendant of the god. . . . The power of the priests of Mangaia [Hervey Islands] is indicated by the statement that ordinary people were the slaves of their warrior chiefs, and the warrior chiefs the slaves of the priesthood. All people, except the priests, sucked the milk from a coconut through the natural aperture; but for a priest the opposite end had to be knocked off, so that he might quaff freely, thus symbolizing the doctrine that the power of life and death lay with him; this symbolism was based on the idea that the nut represented the human head, and was connected with the war oracle of splitting open the nuts of Rongo, all human life being at that god's disposal. It was an unpardonable offence to offer a nut to a priest without first splitting it open. The priests of Mоторo, in particular, are said to have ruled the island from the time of Rangi downward." The chief priest of Paumotu is described as being "a great person and very holy, enjoying the highest privileges. He was exempt from ordinary work; the smoke from the cooking ovens was not to touch him or come near him; the only authority superior to him was that of the king, while at times his influence was as powerful even as that of the king. . . . Passing now to the general body of priests . . . there were a great many of these. . . . They saw to the carrying out of the sacred rites, and exercised the greatest influence over the people, and the king himself submitted to the yoke of their authority, and if he tried to shake it off, they threatened him with the anger of the gods. . . . The sorcerers were simply vile charlatans, belonging to the lowest class of society, prevented by the vulgarity of their birth from aspiring to the rank of true priests, but wishing to rise above the common people in order to enjoy honours and riches. . . . They gained the favour of the masses by flattering their credulity, and so secured complete independence, even as regarded the priests, who, not wishing to attract the anger of the people to themselves, were forced to tolerate these sorcerers, and even to treat them in public with high

consideration, while, among themselves, they regarded them with the utmost contempt." In Rotuma, "the priests were doctors, and their knowledge, held by families, was a mystery handed down with the office from father to son." Apparently there were different priests for different gods. In the Ellice Islands, the priest had more influence than the king because of his supposed supernatural powers. "He was consulted about the weather, and as to the attitude, favourable or otherwise, of the spirits towards proposed camping out and fishing expeditions." Finally, it is said that in Easter Island "the priests were simply wizards and sorcerers, who professed to have influence with evil spirits, and to be able to secure by incantations their co-operation in the destruction of an enemy; also that they uttered the wishes of the gods oracularly, and declared the divine requirements of human sacrifice, and subsistence by which they themselves lived."¹⁸

Among the Ten'a of Central Alaska, the medicine-man "is influential, feared, respected to a certain extent, receives abundant gifts from his fellow natives, but he is not loved, nay, he is strongly disliked. He may win the gratitude of patients who believe they have been cured by him; but he is always considered a dangerous person, who may at any time turn against his best friends and cause their death, either willingly and by witchcraft, or even unwillingly by the inadequate protection of his spirit. He is aware of this feeling, too, and though he generally disregards it, it weighs at times heavily upon him. He then wishes that he had never become a sorcerer. But it is too late; to renounce his profession, he would need courage enough to withstand the general discontent of the people, who, though they dislike the sorcerer, firmly believe that they are in need of his services. To them he is a necessary evil. To abdicate would be to incur the popular disgrace, and there are few Ten'a who have the strength to do so. . . . Although a medicine-man, as such, is considered to be above the common people, his ordinary life and his daily occupations in no wise differ from those of his fellow tribesmen." His gains come to him as gifts, and he always has plenty, even playing upon the credulity of the people to get what he wants; for instance, if he notices that someone has a desirable article such as a fine blanket, a valuable gun, or a new cooking-stove, he will go to the owner and confidentially warn him that "he has had sad intelligence communicated to him, concerning the said person, and this he discloses, as it were, reluctantly; the unfortunate man is doomed to die within a certain space of time, say, for instance, before the next spring." By thus scaring the person into seeking his aid, he secures the article as a gift. "Even now there are few Ten'a who will start on a long hunt, or set to work during the salmon run, without giving a bribe to the medicine-man, or at least promising him a tithe or commission on the catch. The sorcerer has not to perform any extraordinary conjuration, but just directs his spirit to give help, and if the catch is good, obtains a goodly addition to what he may get himself by his own exertions, thanks to the spirit." This trickster used to drop through a hole in the ice every year on a pretended embassy to the powers of the fish kingdom to induce them to provide for the annual catch. "Nowadays, however, the shaman no longer goes to call the salmon, and still these well-meaning fish continue to swim up the rivers every year, as well as if they responded to the yearly in-

vation. We should draw an inference of no small moment from this fact; a Ten'a won't."¹⁹

Not one of the Kwakiutl shamans names the price to be paid for a cure; a common man generally gives two pairs of blankets to the shaman, while a chief gives "as much as is proper for the greatness of his position."²⁰ Nor did the Cheyenne doctors set a price for their services. "When they first entered the lodge they were told what would be given them—it might be a horse or a blanket—and they doctored the patient, taking what was offered."²¹ Among the Creeks, the high priests were persons of consequence and exercised great influence in the state, particularly in military affairs.²² The Pima have always given a special burial to the priests.²³ The high priest of a confederacy of East Texas was fed and clothed, we are told, by community gifts, to insure which he sometimes preyed upon the superstition of his people. "At the house of each *caddi*, or civil chief, and of each of the other dignitaries, a special seat of honor and a bed were scrupulously reserved for the use of the *winesi* during his visits."²⁴ The influence of the shamans among the Araucanians is not political, and they take no active part in the government of the tribe, save in times of tribal or national peril. They officiate as priests in the religious ceremonies of the people.²⁵

Among some of the civilized peoples of antiquity, while the king ruled and commanded, he had the clergy to thank for his scepter, and woe betide him if he forgot it. In Assyria, at least, as the power of the priesthood increased, that of the king declined.²⁶ About the temples in Hellenistic Egypt grew up much industrial activity: trade, agriculture, cattle-breeding; and finally money-transactions were represented there.²⁷ The Hebrew priest was the "knowing" one, who fathomed the will of god and inclined it through sacrifice. The sacrifices and presents which he at first received as recompense for his services later became necessary to the exorcism of disease-producing daimons. In time the sacrifice for the convalescent became a duty and a tax for the deity and his priests. Because the deity revealed himself through his priests, they were in position to decide between right and wrong; for where customary law did not reach, the god decided through an oracle. In this manner the priests won influence on the administration of justice. When, later, jurisdiction was claimed by the rising kingship, they appeared, along with the prophets, as advocates of moral rights.²⁸ Among the sins of King Ahaz was the diverting of the brazen altar to his own offerings; King Uzziah, waxing proud, invaded the priest's office, and was smitten with leprosy.²⁹ In case of defilement of serious or unusual nature, the Zoroastrian could not himself undertake the ceremonies but must refer the matter to a priest. The religious observances of the priestly caste were innumerable and minute, but the virtues which they imposed upon themselves won for them unlimited influence over the minds of the people.³⁰

In Greece, where the priests have any real and abiding power, they obtain it only by participating to the utmost of their ability in the spiritual prog-

ress of their age, and by appropriating its results. "This is the religion of humanity in its noblest sense."³¹ In the early days of Rome there was no priestly caste;³² it came in with the oriental religions of the imperial period. The initiated were associated for mutual support in sacred gilds. The priesthood of Isis formed an aggressive and powerful caste. "The sacerdotal colleges of the Latin religion were never, except in the case of the Vestals, separated from ordinary life. The highest pontificate was held by busy laymen, by consuls or emperors or great soldiers. After the performance of his part in some great rite, the Roman priest returned to his civic place and duties." Later all this was changed. The abstinence, which was required of ordinary votaries as a preparation for communion, became a lifelong obligation on the priest. "The use of woollen garments, of wine, pork, fish, and certain vegetables, was absolutely forbidden to them. Chastity was essential in the celebrant of the holy mysteries, and even Tertullian holds up the priests of Isis as a reproachful example of continence to professing followers of Christ. The priesthood is no longer a secondary concern; it absorbs a man's whole life, sets him apart within the sanctuary as the dispenser of sacred privileges, with the awful power of revealing the mystery of eternity, and preparing souls to meet the great ordeal."³³

Several facts show that in northern Europe the chiefs bore a more or less sacred character. In the prehistoric age they were, according to the legends, liable to be sacrificed in times of misfortune. Such was the fate of two Swedish kings, who were believed to have been responsible for famines occurring during their reigns—calamities which showed that the god was not satisfied with his representatives. Again, popular chiefs were sometimes worshipped after death. From the Norwegian evidence it is clear that from the king or earl down to the village chieftain, priestly duties were everywhere combined with temporal power. There is but one distinct reference to the existence of priestly officials at the Upsala sanctuary: "Assigned to all their gods they have priests to present the sacrifices of the people." Though these priests may have been identical with the councillors, the position of high-priest seems to have belonged properly to the king. Priestly duties are everywhere combined with temporal power; the temporal chief is both judge and sacrificial priest.³⁴

Among the Tartars, silver spoons were regarded as evidence of luxury, wherefore out of respect to the clergy they might not be used in the latter's presence.³⁵ It is said that the Pope's collectors were the first Christian professional money-lenders.³⁶ The sale of indulgences, thinks Lea,³⁷ illustrates effectively the sacerdotalism which formed the distinguishing feature of mediæval religion. "The believer did not deal directly with his Creator—scarce even with the Virgin or hosts of intercessory saints. The supernatural powers claimed for the priest interposed him as the mediator between God and man; his bestowal or withholding of the sacraments decided the fate of immortal souls; his performance of the mass diminished or shortened the pains of purgatory; his decision in the confessional determined the very nature of sin itself." A vast hierarchy was built up, from God through saints down to demons; the priests formed a caste within it.

§322. Alleged Absence of Religion.

"THE Australian aborigines do not recognize any divinity, good or evil, nor do they offer any kind of sacrifice, so far as my knowledge goes."¹ According to the observations of people who have lived a long time among the tribes of New South Wales and Queensland, it is perfectly certain that with the most of them there is no vestige of a belief in any higher superhuman being. There does exist a general belief in ghosts, in the spirits of the deceased who have not received the right order of burial or who have been bewitched by sorcerers. This the author² has experienced among the blacks he has known. Their fear of ghosts showed itself particularly in their unwillingness to leave the surroundings of the fireplace at night and in the fact that they strictly refrain from nocturnal hunting. Some of the more developed tribes have risen to a somewhat higher level of religious ideas. They believe in several good and bad spirits who have separate names and also separate qualities and attributes. Combined with these they possess some very simple cosmogonic ideas. A certain spirit is considered as founder of the tribe and at the same time as creator of the entire world. Probably he was originally a celebrated warrior and patriot whose ghost was soon regarded not only as a spirit or demon but as a god—a passage onward from daimonism, such as may be observed in the development of many races. "Apparently there were no idols or signs of religion, but the people believe in a Devil Devil, who comes out of the water, and goes about at night, and they are therefore afraid to do so themselves."³ Certain of the natives, "as far as is known, have no religious belief or ceremonies. . . . They are not fond of entering upon abstruse subjects, and when they are induced to do it, it is more than possible, from our imperfect acquaintance with the language, and total ignorance of the character and bent of their thoughts upon such points, that we are very likely to misunderstand and misrepresent their real opinions. It appears to the writer that different tribes give a different account of their belief, but all generally so absurd, so vague, unsatisfactory, and contradictory, that it is impossible at present to say with any certainty what they really believe, or whether they have any independent belief at all."⁴ The fact is that the Australians exhibit a crude variety of ancestor-worship.⁵

The Papuans are said to be without a conception of a god or creator and in this respect to fall in with other Melanesians.⁶ The Papuan "has no idols, he has no form of worship, he offers no prayers to any god or spirit, and he has no temples. . . . To begin with, we find he believes in a spirit-world. He believes in ghosts, and his ghosts are the spirits of the dead, who return sometimes and haunt the places which were familiar to them when they lived on earth. He believes in a future life. He buries his dead in some faint hope of meeting them again. He has his charms; he practises his sorcery; he puts himself in touch with the unseen and what we call 'supernatural' powers, when sickness threatens his life and when he starts upon an expedition to attack his enemy. There is little more than this in his life which can be dignified by the name of religion."⁷ He has no "real religious conception"; but he fears and

tries to placate the ghosts of the dead.⁸ "There is no belief in a good spirit, though there are any quantity of evil ones. All dead ancestors are on the watch to deal out sickness or death to anyone who may displease them, and natives are very particular to do nothing to raise their ire."⁹ Of other tribes in New Guinea it is reported that they worship nothing and make offerings only to the sorcerer. "The people are very superstitious on nearly everything, but are wonderfully free of fear, going about at night without lights or even clubs or any other weapon. . . . Their only guardian spirits are those of father and mother and to these they appeal in distress or want by land or sea."¹⁰ Of another tribe it is said that "religion is lacking"; yet they fear, like the New Britain islanders, an evil spirit that prowls at night, and "there is no lack of all sorts of superstitions."¹¹ "The religious conceptions of the Papuans are crude, and their sole cult is a sort of worship of ancestors, to whose images, carved in wood, special reverence is paid."¹² In New Britain, "unless one wants to regard the . . . festivals for the dead as religion, there can be no talk of it among the contemporary natives. They possess neither idols, temples, or priests, but fear ghosts, which . . . may be in part the dead or even shooting stars. . . . There are no genuine ghost-exorcisers, but there are rain-makers, and people who exorcise illnesses."¹³ Of the Andamanese, Man¹⁴ reports: "Though no forms of worship or religious rites are to be found among them, yet there are certain beliefs regarding powers of good and evil, the Creation, and of a world beyond the grave." It is impossible to believe that the natives did not repeat to this author the things they had learned from him or others about theology. After citing certain notions that appear to be reflections of those of more developed minds, Man adds: "For all this, their belief in and dread of evil spirits is much greater; almost all sickness and death is attributed to them."

Ratzel¹⁵ says that "the Bushmen have religious notions, but no religion in the higher sense." They all carry amulets to ward off evil spirits and get luck in their undertakings, and cast lots to find out the will of the spirits. He generalizes vaguely as to the negro, to the effect that whether or not he believes in God, he feels the need of bringing into connection with one highest being a group of notions which pertain to the supernatural. Coming to more specific evidence, we find that "the early travellers could discover no traces of religion among the Hottentots. They were believers in witchcraft and had a superstitious reverence for some insects and animals, for the moon and other heavenly bodies, for the spirits of their ancestors. Their notions of a Supreme Being were extremely vague and contradictory, and there was no belief in a future existence."¹⁶ "The fact that their tongue possesses terms for God, spirits, and even for the Evil One, seems to show that they were not utterly ignorant in these matters, although there is nothing else available in the expressions of the language or in ceremonial usages and superstitions, that could afford proof of anything more than a rude idea of a spirit-world. . . . They have much more confidence in magical powers than in religion." Similarly with the Bushmen, who cling to superstition and magicians.¹⁷ The Bushmen are reported as not believing in a god, but having only "great fear of the

ghosts of their deceased grandparents, into the exorcism of which their whole cult ran out."¹⁸ In reply to the question, "Do you believe in the existence of a God?" the Mavenda of South Africa answered: "Undobona linyi," "Who has seen him?" The author comments: "Although the conclusion, or belief, is not reached by any process of mental or moral reasoning, they undoubtedly are materialists, for they assert that the *monya*, i.e., 'breath,' or 'spirit,' goes into the grave with the body, and that constitutes the end of everything. Whether the Mavenda sacrifice to appease the spirits in case of illness or domestic calamity, as is the invariable case with Zulu, I did not ascertain; but, singularly enough, in the early spring of every year some twenty or thirty head of cattle are slain under the directions of the chief, when they pray for 'peace, prosperity and plenty;' and so we find even among a people absolutely devoid of any idea of a hereafter, some vague and misty notions which connect with a spirit world."¹⁹

Holub²⁰ noticed no signs of religion among certain South African peoples, but found in one case esteem for a certain snake, in another "a kind of free-masonry," and in a third a belief in fetishes. "Previous to the introduction of Christianity, the Bechuana appear to have had only very vague religious ideas, and their attention was chiefly occupied by the detection of wizards and witches. The word Morimo for God (also used in the plural to signify the Manes of the dead) appears to have meant a great and angry personage living in 'the great hole in the north.'" They have no word for God, though they have a term for the spirit of the departed.²¹ The Bantu of the southwest coast is vague on religious subjects as compared with the West African; he gives to one accustomed to the latter "the impression that he once had the same set of ideas, but has forgotten half of them, and those that he possesses have not got the hold on him that the corresponding or super-imposed Christian ideas have over the true Negro."²²

In Angola, one people "has not the least idea of any religion whatsoever. They live with their fetishes and give no thought to the existence of a Supreme Being who directs all things." Another people have no idea of religion, "do not adore sun, moon, or idol, and live with their fetishes and divinations." They believe the soul will be troubled in the other world if due vengeance is not taken for death.²³ A belief in witchcraft may prevail, or there may seem to be "no trace of religion at all, beyond a wavering fancy that the spirits of the dead return after death."²⁴ In some cases hunting fetishes are employed; "otherwise there is not much to notice among them in the way of religious usages."²⁵ "We could not learn whether the Banziris have any elements of religion. They wear no amulets and have no visible fetiches. We observed only one sign of superstition among them. Before starting a-fishing they planted some twigs in the ground, put in the midst of them a handful of cowries, and sprinkled them with fat. The ceremony was supposed to secure an abundance of fish to the one who performed it, but I never learned to whom the sacrifice was offered."²⁶

In Uganda, "the Bahima have no very clear idea of an over-ruling God, and but little definite belief in a future life on the part of any individual man or

woman; though it is to be assumed that they believe in the spiritual continuance of chiefs and prominent personages, since they worship them as spirits. They have, however, a name for God, though, when questioned, they can only associate the overruling Power with the sky, the rain, and the thunderstorm." The Wanyoro appear not to believe in a future state.²⁷ The Azande have no religion but divination.²⁸ "The only conception which the Shillook entertain of a higher existence is limited to their reverence for a certain hero, who is called the Father of their race, and who is supposed to have conducted them to the land which they at present occupy. In case of famine, or in order that they may have rain, or reap a good harvest, they call upon him by name. They imagine of the dead that they are lingering amongst the living and still attend them. . . . The Bongo have not the remotest conception of immortality. They have no more idea of the transmigration of souls, or any doctrine of the kind, than they have of the existence of an ocean. . . . All religion in our sense of the word is quite unknown . . . and, beyond the term 'loma,' which denotes equally luck and ill-luck, they have nothing in their language to signify any deity or spiritual being. 'Loma' is likewise the term that they use for the Supreme Being, whom they hear invoked as 'Allah' by their oppressors." Evidently these people go back with singular directness to the aleatory element. The author,²⁹ though he is disposed to see little or no religion here, goes on to say: "Quite amazing is the fear existing among the Bongo about ghosts, whose abode is said to be in the shadowy darkness of the woods." A chief is reported to have said: "Can a dead man come out of his grave unless he is dug up?" There was here no belief in ghosts.³⁰ "The Jaluo religion is extremely slight. They worship the sun, and to a less extent the moon. They regard the sun as a deity seldom beneficent, more often malignant, and usually apathetic; as one of them said to the writer, 'It does not matter how much you pray, you fall sick and die just the same.' The offerings made at all important occasions in their daily life they make more with the idea of appeasing him than of obtaining positive benefits."³¹ "The Suk may be said to believe in an Unknown God; that there is a belief seems certain, but it baffles description not only to the European but amongst themselves. . . . *Tororut*. (the heavens) and *Ilut* (thunder and lightning) are in some fashion associated with supplication and with fear. . . . There is no ascertainable belief in a future life."³² All negroes, according to Stuhlmann,³³ have more or less notion of a supreme being but they have no abstract conceptions, so that they never credit him with interference until they need him to explain some phenomenon for which their notions do not suffice, such as a fire in the village or a sudden death. He is the scapegoat upon whom they lay blame. They do not worship him but sacrifice in his honor after the harvest. In Ruanda religion is a superstitious fear of a higher being; amulets are worn to keep off disease and sorceresses supported to exorcise evil spirits.³⁴ The Abyssinians fear night and its shadows, while the Somali and others show no such fear.³⁵

Among Siberian tribes "fear is the beginning of religion,"³⁶ and it does not get far beyond that beginning. It is reported of the Tibetan that "as to reli-

gious convictions, he has absolutely none, a result of the profound ignorance in which the lamas leave the people, either on account of their incapacity to teach them, or perhaps so as to keep the business of worship in their own hands, as it insures them a large revenue. The religious acts of the people are only performed through routine; they do not understand them or care to understand them; hence ignorance in the lower classes, scepticism and indifference in the others, principally among the mandarins and lamas."³⁷ Waddell³⁸ speaks of "the earlier animistic and fairy worship of the Lepchas, which can scarcely be called a religion." "On the subject of religion and a future state the Angami appears to have no definite ideas."³⁹ The tribe of Bhils "is almost devoid of native religion, but is particularly noted for truth, honesty, and fidelity."⁴⁰ "The Chin is often described as a devil-worshipper. This is not correct, for he worships neither god nor devil. The northerners believe that there is no Supreme Being and although the southern Chins admit that there is a Supreme God or 'Kozin' to whom they sacrifice, they do not worship him and never look to him for any grace or mercy, except that of withholding the plagues and misfortunes which he is capable of invoking on any in this world who offend him."⁴¹ The Angamis are said to have "practically no religion," though they recognize a supreme creator for whom they have two terms. "They also believe in the existence of evil spirits which reside in rocks, trees, and pools of water. These are usually propitiated in cases of illness by offerings of fowls, pigs, or cattle. Customs similar to these are common to the whole of the Naga and Kuki tribes within this district. Of a future state after death, their ideas are extremely vague. They certainly believe that the soul does not die with the body, but what becomes of it they cannot say, resembling in this respect more civilised nations."⁴²

As is so often the case, alleged absence of religion turns out to be merely undeveloped religion, and following the principle of consistency of the mores, is associated with a general state of rudimentary development. Such is clearly the case of the Sungei Ujong in the Malay States, an isolated, unwarlike, very primitive group. A number of correlations may be discerned in the following quotation. "They possess no idea of warfare or racial strife, and freely admit their preference for a life of seclusion and peace. The Orang Bukit is born, arrives at man's estate, is married, and eventually dies, without the performance of any ceremony or rite to mark any one of the events. Marriage is merely a mutual compact entered into by the two parties concerned, and co-habitation is sufficient to acknowledge a man and woman as husband and wife. Death is treated in much the same casual way. The corpse is laid to rest on its back in a hole a few feet deep, the relatives mourning the loss for three days; but the 'mourning' consists merely of voluntary confinement to the camp. In the event of two or three deaths occurring in the same camp at short intervals, the place is deserted and a fresh camping ground is selected. They have no belief in a spiritual existence in any form after death; and, in one instance, when first questioned on the subject, it seemed to strike them as rather humorous, evoking much laughter. Of ghosts, phantoms, good and evil spirits, supernatural signs or warnings, they apparently know nothing; and I have known

many instances when, without the slightest hesitation, they have felled jungle, denounced by Malay and Chinese wood-cutters as haunted."⁴³

The Burmese "utterly deny, in theory at least, an intelligent and Eternal Creator, yet they distinctly recognize and apprehend future punishment for sin, or rather the violation of the Buddha's commandments."⁴⁴ The non-Buddhistic Karens of Burma totally lack "higher religious conceptions." If asked about the life after death, they say: "Concerning that we know nothing and do not think about it either." Though they know no kind of worship they fear magic above all things. Yet "need teaches prayer, for if ill-luck comes, then they remember two daimons who strike them with these woes and thereby give notice that they want to be fed."⁴⁵ In Korea there are no temples or other signs of religion. Ancestor-worship and a propitiation of daimons, the result of a timid and superstitious dread of the forces of nature, take among the Koreans the place of religion. The author⁴⁶ regards both practices as the result of fear, the worship of ancestors being dictated far less by filial piety than by the dread that their spirits may do harm. "Multitudes of Chinese will testify that the only act of religious worship which they ever perform (aside from ancestral rites) is a prostration and an offering to heaven and earth on the first and fifteenth of each moon, or, in some cases, on the beginning of each newyear. No prayer is uttered, and after a time the offering is removed, and, as in other cases, eaten. . . . There are hundreds of square miles of populous territory in China, in which there is scarcely to be seen a single priest, either Taoist or Buddhist. In these regions the traveller will generally find no women in the temple, and the children are allowed to grow up without any instruction in the necessity of propitiating the gods. In other parts of China conditions are wholly different, and the external rites of idolatry are interwoven into the smallest details of every day life." . . . One observer states: "If religion is held to mean more than mere ethics, I deny that the Chinese have a religion. They have indeed a cult, or rather a mixture of cults, but no creed; innumerable varieties of puerile idolatry, at which they are ready enough to laugh, but which they dare not disregard."⁴⁷

The Mangyans of Mindoro, Philippine Islands, emphatically denied any belief in a future life, and said, "When a Mangyan is dead, he is *dead*!" They are said to have no words for gods and to offer no evidence of idolatry, spirit-worship, or any kind of cult. The only clew to a belief in supernatural powers found among them is the theft-ordeal, in which the hands, holding a red-hot iron, are raised to heaven.⁴⁸ The Araucanians of South America are said to be in a similar state as respects religion; their "belief is not exactly the ghost-worship of many of the tribes of North America, animism having little place in their theories. Neither do they believe that all inert objects are endowed with a spirit; considering that such objects may become temporarily the abiding place of an invisible being, but always attributing to it a concrete form. The Araucanos recognise no supreme being with definite attributes. They have no temples, no idols, no established religious cult, and no priesthood in a religious sense, although they occasionally sacrifice to one or other of their divinities, but without a fixed ritual, and only as a conciliatory or expiatory act." Yet these Indians display all sorts of ghost-fear, as the author says else-

where, and "besides the coarse pottery used for domestic purposes, the Araucanos make a finer kind such as is frequently found in their burying places."⁴⁹

Ratzel⁵⁰ discusses, in his usual diffuse manner, the question whether there is any people without religion and concludes that it is the more correct conception that elements of religion are to be recognized in everything which belongs to the domain of unknown causes, when men extend their thoughts and feelings beyond the things of daily life; hence he thinks there is no people without religion. The opinion presented by Brinton⁵¹ is an exceptionally clear and positive statement from a writer whose contentions are not ordinarily so well expressed, "All statements that tribes have been discovered without any kind of religion are erroneous. Not one of them has borne the test of close investigation. The usual mistake has been to suppose that this or that belief, this or that moral observance, constitutes religion. In fact, there are plenty of immoral religions and some which are atheistic. The notion of a god or gods is not essential to religion. For that matter, some of the most advanced religious teachers assert that such a notion is incompatible with the highest religion. Religion is simply the recognition of the unknown as a controlling element in the destiny of man and the world about him. This we shall find in the cult of every nation and in the heart of every man." The Reverend James Carmichael,⁵² combating Sir John Lubbock's assertions that many if not all of the most savage races are entirely without a religion or an idea of deity, finds the original meaning of the word religion to be "that of binding fast the human mind to a sense of the obligation which it owes to supernatural powers." He then goes on to say that "the most indefinite belief may—and indeed, as a rule, does—lead a savage to fashion his conduct in accordance with what he believes to be the will of higher powers; as far as personal actions are concerned, he stands on exactly the same platform as the most devoted believer in natural or revealed religion." Says Quatrefages:⁵³ "When the lowest savage admits the existence of a superior Being whom he regards as the agent of the good or ill which he experiences, when he addresses prayers and homage to that Being, when he conforms to certain rules which he thinks have been established by that Being, it is impossible for me not see in that *faith* and in those *acts* so many facts identical at bottom with those which, as we know, are produced among Christians. If then the latter have a religion, the savage also has one."

§324. Conservatism of Religion.

THE use of ancient instruments and methods, despite knowledge of more modern ones, the employment of archaic language and ceremonies, and the punishment of variants from established custom are the main forms of the conservatism of religion illustrated in the cases which follow.

In Central Australia a special stone knife is used "exclusively for surgical work, circumcision, subincision, for the making of the marks on the chest and back, or for opening veins."¹ Being old it is holy. In the Island of Tikopia, "when a yam is being prepared for eating the skin is always removed with a shell. Similarly, the taro is sacred to the Taumako who regards the eye of the tuber as especially the *atua* [spirit], and they also have an objection to

the use of a knife in preparing the plant for food. The Tafua have the coconut as their *atua* and again will not have it opened with a knife but use a stone."² In the D'Entrecasteaux Islands, "many songs are quite unintelligible even to their singers. They have been handed down from one generation to another, often incorporating words that have long gone out of use; or they have been brought from some other place and the clue to their meaning has not been transmitted with them. Often, too, they are changed and mutilated in the transfer, especially if the dialects are somewhat different. Topical allusions of course soon cease to carry any meaning."³

In South Africa, "the Masarwas practise circumcision according to the Bechuana mode of performing the rite, usually with a stone knife. They circumcise the boys when they are about twelve or fourteen years of age. I inquired if they had the practice independent of the Bechuanas, and the reply was in the affirmative."⁴ Among the Ba-Yaka, all food is cooked except in time of famine, when manioc is eaten raw.⁵ This is probably propitiatory. It is necessary for the investigator among the Fan to have a profound knowledge of their language, and not only the actual language but also the archaic, for the latter is almost always employed in their chants. "One finds there a number of words and expressions which have today fallen into desuetude; moreover, one must know the hieratic language, where a certain number of words are diverted from their usual meaning so as not to be understood by the non-initiated. When one does not combine these three conditions—a profound knowledge of the language, of the archaic words, and of the hieratic speech—it is easy to remain unaware of a number of cult facts and, consequently, sometimes to deny even their existence, through a regrettable misapprehension. Finally, the situation is complex for a third reason. The Fan does not like to talk about his religion, rites, or cult. If you are 'initiated,' your questions are idle. If you are not, what is the use?"⁶

Weeks⁷ points out in a significant statement how the religious beliefs of the Bangala put an effective check on the acquisition of new ideas; by way of contrast, in the field of self-maintenance they are rather alert to see the advantages of superior articles. "The natives are quick to imitate where imitation is possible. . . . No sooner did they perceive the advantages possessed by our larger houses over their huts, than they began to build houses of three rooms, and made tables, chairs, forms, cupboards and bedsteads. They saw the advantages of a hammock chair over their uncomfortable wooden stools, and imitated it. We exchanged tools, screws, nails, hinges, etc., for fowls." Now observe the other side of the picture. "Some twenty-five years ago I knew a blacksmith who made a very good imitation, from old hoop iron, of a trade knife, and when the king heard of it he thought he was too clever and threatened him with a charge of witchcraft if he made any more like it. If the man who made our locomotives had lived here, in Africa, and had given play to his inventive genius, he would not have been honoured, but killed as a witch. The native had a deep-rooted feeling that anything out of the ordinary was due to witchcraft and treated it as such. Some years ago I knew a native medicine woman who was successful in treating certain native diseases, and as she

became wealthy, the natives accused her of giving the sickness by witchcraft in order to cure it and be paid for it; for they said, 'How can she cure it so easily unless she first gave it to them?' She had to abandon her practice or she would have been killed as a witch. . . . Through this fear of being charged with witchcraft, the natives would never of themselves have made any progress in art, science or civilisation. This fear was so real and so widespread that it stultified and killed every tendency to change and progress. . . . For generations it has been the custom to charge with witchcraft anyone who has commenced a new industry or discovered a new article of barter. The making of anything out of the ordinary has brought on the maker a charge of witchcraft that again and again has resulted in death by the ordeal. To know more than others, to be more skilful than others, energetic, more cute in business, more smart in dress has always caused a charge of witchcraft and death. Therefore the native, to save his life and live in peace, has smothered his inventive faculty and choked all initiative skill." Among Kikuyu and Kamba beliefs is that of purification of woman by a decoction composed of the fat and meat of a slain animal cooked in a pot "with some bitter herbs."⁸

Furness⁹ once tried to persuade the old tattooer of a Naga village to accept some fine needles as substitutes for the thorns she used, but "she maintained that although they might be all right for white people, their use would surely make Nagas sick. Very probably she was right and spoke from experience; without proper care rust would soon collect on them, and then blood poisoning would inevitably follow." A custom which this writer found constant throughout Borneo and the Naga hills, on all ceremonious occasions when fire is necessary, is that of making new-fire by means of the fire-saw. "When a new house is built, it is by this method alone that the fire may be started, and when a family goes out of mourning for a dead relative the first food cooked must be prepared over a fire started by this method. It is probably the most primitive process for obtaining fire, and on this account looked upon as the invention of the demigods who were ancestors of all mankind, and therefore sacred. It is a striking instance of the tendency to return to the primeval in all ceremonials." Among the Palaungs, "it is very important that when the fire is lighted for the burning of the dry jungle, only flint and steel should be used. Were matches used, the Palaungs fear that they would not be able to control the fire, as it would spread so rapidly that jungle on ground not required for the paddy would also take fire."¹⁰ Similar examples may be found in an earlier paragraph on fire and religion.¹¹ At a feast in Assam, "villagers do not use their bamboo cups or bowls to drink from but make cups from leaves."¹² "Nothing shows so much the extreme persistence of primitive culture, even in the face of higher civilising agencies, than the wide and almost universal acceptance of spirit-worship, and the almost entire absence of religious life among the Nāyars after at least twenty centuries of contact with Hinduism. . . . Yet, with all the great religions of the world to choose between during the last two thousand years, it is nothing short of marvellous to see the Nāyars, who have, it must be remembered, assimilated a very great deal of the material and intellectual culture of their neighbours, and, more than that, excelled them in literature and music, still maintain with undiminished vigour their

spirit-worship, black-magic, and demoniacal ceremonies, and are devoid of almost every element of true religious life."¹³

In common with other tribes, the Omaha conserved in his religious ceremonies those articles which had contributed to the betterment of the people in their long, slow struggle upward. "One of the earliest, if not the earliest, garment which served to protect the body from cold and storm seems to have been the unfashioned hide. This garment retained the semblance of the animal and the comfort the skin contributed to the body seems to have served to increase the native confidence in the close relation he conceived to exist between all other visible forms and himself. Although in later times his ordinary clothing ceased to exemplify this close relation, yet when the Omaha entered on sacred ceremonies with the desire of securing supernatural aid there was a return in his apparel to the primitive form. . . . Many of the mythic stories found among this group of cognate tribes are in some of their details obscene, a characteristic for which no adequate explanation is to be found in the daily life and customs of the people or in the rites as practised during recent centuries. Offensive as some of these stories are, they often exhibit a titanic audacity that gives to them a kind of grotesque dignity. Even mythic stories of this class may also be survivals, which have suffered not only from the wear and tear of ages but from accretions of minds not of the highest type. Natural functions have demanded explanation, and in the absence of teaching based on knowledge of physical laws, man's fancy here as in the world around has run riot. Among all peoples there is an undercurrent of indecent stories that show a strange kinship and that may have a common psychical origin. . . . An interesting example of the conservation, in ceremonies, of early types of useful articles is found in the requirement that one of the gifts essential in the rite of tattooing was a number of the strong, red-handled knives of the kind first known to the tribe. . . . The lock of hair taken from the head of the male child when he was consecrated to Thunder was cut by a flint knife; only a flint knife could be used when bleeding for curative purposes. . . . The stone implements connected with the daily needs of the people were the first to be displaced by iron ones."¹⁴

Persistence of old religious forms is seen in the rites of tribes that have been converted to Christianity: "The Iowa and Winnebago both use the Bible as a sacred object, placing it near the sacred peyote, and include in the service Bible reading, sermons, confessionals and prayers as well as songs with a Christian flavor. In fact, the Iowa ceremony . . . bears some resemblance to a revival meeting. After the initial eating of the peyote and a round of singing, while incense is burned on the fire, the leader reads the Bible and preaches and then calls upon the members to confess their sins and repent, in response to which the members rise and testify that they have given up such habits as drinking, smoking, or chewing. . . . The use of the Bible and the Christian interpretation of ancient symbols represents a second accretion, and usually entails no serious change in the ritual. The prayers once made to the Indian spirits are redirected to the Christian God. The Bible is added and Bible reading introduced. The talks become sermons. The songs are patterned after Christian hymns."¹⁵ Among the Jibaro Indians, in one of their important reli-

gious ceremonies, "a number of short formulas are repeated, the exact meaning of which seems to be unknown even to the dancing Indians themselves. We are here dealing with an archaic or ceremonial language which, at the most, is understood by some of the oldest Indians."¹⁶

§325. Religion Is Evolutionary.

THERE is said to be much in the religion of Mahomet which appeals to the African and suits his conditions. "It sanctions polygamy, which is natural to the tropics. It not merely approves the institution of domestic slavery, but has done much harm by countenancing the ruthless raiding for slaves. It has the attraction of an indigenous religion spread by the people themselves, or by men of like race with similar social standards, and not depending on the supervision of alien teachers. Its great strength lies in the fact that it combines a social code with simple religious forms, and is thus interwoven with the daily life of its followers. Originating in the tropics, it is essentially a code and a religion of the tropics, which has never made headway in the temperate zones, just as Christianity has been the religion of the temperate climates. . . . Christianity, on the other hand, has not proved so powerful an influence for the creation of political and social organisations. . . . Christianity is, I think, sometimes apt to produce in its converts an attitude of intolerance, not intended by its teachers, towards native rulers, native customs, and even to native dress, especially when wholesale conversions have overtaxed the supervision of the European mission staff."¹ In a word, it is all a question of adaptation. A writer on East Africa warns us: "The fact must not be lost sight of that, in the vast majority of cases where an up-country native embraces Islam, his conversion begins and ends with the rite of circumcision."²

If Christianity is not tolerant, the religions of Asia are. "Among the yellow races . . . it was never considered necessary to kill your neighbour because he differed from you in his religious beliefs, unless these threatened the security of the State; and in Japan we have what is to most Europeans the puzzling phenomenon of two religions, which might be expected to be mutually exclusive, professed at the same time by the same individuals. Shintoism, the State religion, is a development of animism, which in Japan has never quite fallen to the disreputable position occupied by animism in Burma. It is now honoured by the State as the official wife, whereas in Burma animism is a mere concubine. But a concubine is often powerful, and the cult, with its thousands of years of life behind it, is so ingrained in the nature and instincts of the people that even their Buddhism, real and deep as it is, has never been able to kill it."³

There are a number of striking parallels between evolved and simple religions. In the natural religion and folk-lore of the natives of the Malay Peninsula occur "world-cataclysms" such as the Flood, and other parallelisms.⁴ The Samoans have a Jonah: "One of their people, they say, fell into the sea, and was immediately swallowed by a *whale*. After a time the projecting pieces of wood, which he wore horizontally as earrings, pricked the inside of the whale

and made it vomit him forth again. He was still alive, but as he walked up from the beach he was thin and weak! . . . A story is told at Vate of a man who was standing on a projecting rock out at the reef, and amusing himself by whistling on his bamboo fife. A large fish came and swallowed him up, fife and all. He split up the bamboo flute, made a knife of it, and commenced cutting the inside of the monster. It died, floated ashore, and the man got out alive."⁵

Astonishment has been expressed by some writers at the resemblance between the institutions of the American Indians and those of ancient Rome and the modern Catholic Church. "The Spanish conquerors of America, good Catholics as they were and innocent of any knowledge of comparative religion, were nevertheless made curious by the likenesses between the Old and the New World religions. Unfortunately their embryonic studies in religious anthropology were curtailed by the pious conclusion that the Devil had been masquerading in the New World. This complacent theory quelled their wonder over the likeness, among others, between Peruvian Sun-bride, Roman Vestal, and Christian nun. Perhaps their naïveté is hardly to be criticized when three centuries later it is merely re-expressed by their nineteenth century compiler."⁶

It is a question to what extent primitive people may actually take on a more evolved religion; normally the old beliefs merely persist under a new form. Of the Araucanians it is reported that Christianity "has made little headway among them, probably because they cannot even conceive of, much less understand, the principal dogmas and tenets of a highly developed religion. The stories of numerous converts are inexplicable to one who has probed the Indian's mode of thought and state of intellect. At most they can be only nominally Christians, accepting certain moral ideas and outward forms, such as baptism, crosses in their burial grounds, etc., and all that appeals to the senses, but in the real bases of their ideas they are as pagan as they were three centuries ago. As a proof of this I have seen sacrifices made during a dry season to *Nguruvilu*, the god of rain, by nominal Christians at less than half a mile distance from the Quino mission. It is also shown by their adhering to their old burial customs. They would never consent to the Spanish mode of burial, alleging that to do so would be to leave their dead without resources for their journey to the other world. It seems to be a futile task to engraft an intensely spiritual religion on a mind that is entirely materialistic, as it only leads from one form of paganism to another. Not that missionary work should be discouraged, on the contrary it is of the highest benefit when properly undertaken, but the only immediate results are from material and moral teaching, and only after long generations can we hope to find practical results from a strictly religious point of view."⁷

§334. The Making of Marriage.

IN Central Australia, a native exhibiting an abnormal craving for sexual intercourse is held in much contempt.¹ Among the Papuans, the sex-function is regarded as not different from eating, sleeping, and other functions of the body. No secret is made of it and there is no sense of propriety in respect to

¹ Spencer and Gillen, *Nat. Tr. Cent. Aust.*, 471.

it. Yet the women are as chaste as European females, "wed in artificial prudery and hypocrisy."²

There is considerable uncertainty about the whole matter of impregnation and birth. "On the very rare occasions on which the child is born at a very premature stage as the result of an accident, nothing will persuade them that it is an undeveloped human being; they are perfectly convinced that it is the young of some other animal, such as the kangaroo, which has by some mistake got inside the woman."³ Madame Pommerol⁴ states that she was once taken to be a man, in spite of her female costume, because the native women were convinced that "the female species existed only among the Saharan races." The women eyed her fearfully, as if in the presence of an unknown animal.

As respects conception otherwise than by sex-union, several examples additional to those cited in the text may be given. In Australia, "when a woman conceives, her condition is said to be due to the action of some particular member of her tribe, who is spoken of as the *woruru* of the child after it is born. If a man of the right relationship gives a woman some food and after eating it she becomes pregnant, this man becomes the *woruru* of the woman's child. Sometimes the *woruru* does not give the woman food to eat, but when he is hunting and has speared a kangaroo or an emu, as he is killing it he speaks to the spirit of the kangaroo and tells it to go to a certain woman. The spirit of the kangaroo follows the man home to the camp and goes inside the woman indicated, who thereby becomes pregnant."⁵ Fox⁶ thinks the physical fact of fatherhood is probably recognized now in San Cristoval; "but there are certainly a number of facts on the other side; and the embryo . . . is said to be put into the womb of women by an *adaro*" or ghost. The African Pygmies believe that impregnation eventuates from the sucking of a certain grass-stalk.⁷ Among the Hausa, "according to the folk-lore a woman can conceive by swallowing. Thus, a man who had transformed himself into an iguana so as to be eaten by a girl whom he desired, caused her to bring forth a son like him. In another tale a cow eats flowers, which are really children, and later on they are born and become children again. If a woman wishes to have a son like her husband, she will kneel over him while asleep and take seven sips from a cup of water while in that position, making her request each time either to Allah or to the bori [spirits], according as to whether a *mallam* (priest) or a *boka* (medicine-man) has directed the proceedings."⁸ This last item is significant of the distinction between priest and shaman.

Wilken's⁹ editor, Ossenbruggen, cites several sources, in particular Hartland's *Primitive Paternity*, upon the subject of ignorance of the causes of conception.

§342. Normality of Marriage.

IN Tikopia Island, Melanesia, by exception, "many people never marry. Children call the unmarried sister of their mother . . . 'my mother unmarried' . . . and such a woman will help her married sister to look after her children and

will take care of them when the mother goes out to work."¹ In East Africa there is a "large number of unmarried adults in many of the villages"; yet the females do not outnumber the males, as the author² had at first inferred. Much more normal are the following cases. In Nyasaland, "marriages between natives are essentially *marriages de convenance*, and sentiment rarely plays a part in them. But it is an ill wind that blows no one any good, and the great advantage connected with this materialistic attitude lies in the fact that enforced celibacy is practically nonexistent among natives."³ Again, "celibacy is rare, in fact only the result of poverty or ugliness amounting to deformity."⁴ In East Africa, "a widowed woman is very rarely, excepting in the case of the big wife, left unmated. . . . Spinsters are, so far as I know, non-existent, and bachelors are very rare; I have, in fact, hitherto only heard of one or two in the whole country."⁵ Serpa Pinto⁶ relates the custom of asking in marriage the daughter of a pregnant woman. If a girl is born, the suitor must provide clothing for mother and child up to the latter's puberty, that is, age of marriage. It is a usage of rich people. If the child is a boy, the suitor must clothe mother and son.

In ancient Indo-Aryan usage, it is conceived to be a sin if a marriageable maiden remains unmarried; such delay amounted, as it were, to contraception. Girls were betrothed early so as to pass to the husband at puberty.⁷ This explains to some degree the custom of child-marriage. In China, by the "complete luck-blessing" is understood in the case of woman the possession of husband, sons, virtue, and long life; in the case of man, a wife, property, sons, and grandsons.⁸ The conviction of the normality and even necessity of marriage leads to unions of the dead. "In the northern parts of the Realm it is customary, when an unmarried youth and an unmarried girl breathe their last, that the two families each charge a match-maker to demand the other party in marriage. Such go-betweens are called match-makers for disembodied souls. They acquaint the two families with each other's circumstances, and then cast lots for the marriage by order of the parents on both sides. If they augur that the union will be a happy one, (wedding) garments for the next world are cut out and the match-makers repair to the grave of the lad, there to set out wine and fruit for the consummation of the marriage. Two seats are placed side by side, and a small streamer is set up near each seat. If these streamers move a little after the libation has been performed, the souls are believed to approach each other; but if one of them does not move, the party represented thereby is considered to disapprove of the marriage. . . . Such go-betweens make a regular livelihood out of these proceedings. . . . Posthumous marriages are peculiarly interesting as showing that the almost unlimited power of parents in choosing wives or husbands for their children does not cease to exist even when the latter have been removed to the Realms of Death, so that in fact children are there subject to the will of their parents."⁹ It was, in fact, ancestor-worship that led the Chinese to marry their children off when very young. This caused population to be excessive and kept the vast majority of the people on the verge of famine.¹⁰ Early marriages caused the disability

to marriage known as "disparity of position on the family tree," which debarred a man from marrying a kinswoman or connection of any generation senior or junior to his own. "It is by no means an unusual thing for a woman to have a sister 30 or 40 years younger than herself, and supposing her to marry at 15, and her son at 16, the fact of her grandson being able to marry her sister becomes easy of credit."¹¹ In China, as in India, occurs the so-called "rearing-marriage" by which "the girl is made over to the family into which she is to be married, and is by that family brought up and married whenever their convenience dictates."¹² Formerly among the Osetins the boy married at eight if he could pay for a wife, but the Russian government forbade this, and the limit is now fourteen. As soon as the Cheremis boy is sixteen or seventeen betrothal and wedding are in order. The Crimean Tatar girls marry at fifteen or even thirteen. With these instances may be joined the statement that "in Russia the natural labor unit, if I may use such a term, comprises a man, a woman, and a horse. As soon therefore as a boy becomes an able-bodied labourer he ought to be provided with the two accessories necessary for the completion of the labor unit." Hence the early marriages.¹³ Among the Transcaucasian Armenians, betrothals of children at the breast or even unborn children are common, "in order to forge a firm bond between the two families."¹⁴

Wilken,¹⁵ in an article on "Defloration in Child-marriages," cites a number of cases of such early unions. Girls are married to old men for the sake of protection against seizure by agents of the ruler. Puberty is said to appear before the age of ten, a number of cases in evidence being cited. In Sarawak, as the children grow up they are encouraged to associate with one another and presently "the parents no longer hesitate to allow them their own fire-place,"¹⁶ that is, their domestic establishment.¹⁷ Little girls are sometimes married to older men; Jacobs¹⁸ knew a girl of about thirteen, and not nearly full-grown, who was already the repudiated wife of a third husband. This was not a rare case. The consequence is that a wife of twenty-five who has had two or three children is already an old woman.

An Eskimo marriage is stable only after there is a child, but children are delayed because they marry before they are full-grown.¹⁹ Turner²⁰ knew of girls of thirteen and fourteen having children. Child-betrothals are found, and even ante-natal arrangements; the boy goes to the girl's family and when she reaches puberty, after a taboo of a month, he enjoys the rights of a family-head.²¹ Among the Tlinkits "there are no old maids . . . nor do widows long remain such. It is considered a disgrace for a girl to remain many months without being married after she becomes a woman."²² Among certain Indians there is a sort of "rearing-marriage."²³ In British Guiana the girl becomes a wife at ten, and at twenty loses all charm; the author²⁴ saw mothers of eleven or twelve with children a year or two old.

Says Seymour²⁵ of the Homeric period: "Of course the normal state of

woman in such a civilization is in the marriage relation. No arrangement is made for her except as part of a family, and on her marriage she becomes a member of her husband's family. She has no property of her own, because she needs none." The feeling of the later Greeks is expressed by Antigone in her lament concerning her unmarried state.²⁶ We are told that mere children were affianced in ancient Rome.²⁷ Roman citizens were exhorted by the censor to marry, although marriage is represented as a necessary evil.²⁸ Furnivall²⁹ has collected more modern cases of child-betrothal, and regards property-arrangements as the main cause, with the desire to evade the feudal law of the sovereign's guardianship—which amounts to a tax or fine. In Montenegro children are betrothed shortly after birth and married at thirteen or fourteen;³⁰ and a similar situation prevails among certain Jews of southern Algiers.³¹

Says Starcke:³² "The unmarried whether man or woman are and must always remain the exception, and they must accept whatever is arranged for them. It would be impossible for their sakes to imperil all which the experience of a thousand years has shown to be the best means of promoting the development of those aspects of human life which are the most productive of happiness. The movement for the emancipation of women has not always been mindful of this general law."

§343. Rudimentary Regulation.

THE Dokos of Abyssinia are reported to lack, along with the use of fire, also marriage and the family.¹ Wolff² has the novel idea that peoples who were formerly free with their women, in the matter of lending them, as did several Siberian tribes, gave up the custom with the increasing menace of sex-disease. The Eastern Finns had loose forms of address which did not distinguish between boy and son, woman and wife, etc. "Professor Smirnov maintains that these facts can only be explained by assuming the existence of communal marriage or general hetairism as the basis of the family, and presupposes a state of society in which every adult woman of a group was the concubine or potential wife of every adult man in it; the children being children of the group, no distinction could be drawn between boy and son, girl and daughter, woman and wife."³ Such inferences must be taken with reservation. The sharp concept of a child of a pair was a relatively late development among the Yakuts; such a conception has never yet got a name except through the use of the Russian words. Even now the kin-group claims authority over all children in certain respects and under certain contingencies.⁴ Wilutzky⁵ cites from India an ancient law-book according to which a bride is given over, not to an individual man but to his whole family.

A case of what may be taken as "expiation for marriage" is reported of the Todas. This people is divided into two strata or classes between which there are reciprocal duties. "Certain ceremonies are performed shortly before the girl

reaches the age of puberty. One is called . . . 'mantle over he puts,' in which a man belonging to the Tartharol if the girl is Teivali, or to the Teivaliol if she is Tarthar, comes in the day-time to the village of the girl and lying down beside her puts his mantle over her so that it covers both and remains there for a few minutes. Fourteen or fifteen days later a man of strong physique, who may belong to either division and to any clan, except that of the girl, comes and stays in the village for one night and has intercourse with the girl. This must take place before puberty, and it seemed that there were few things regarded as more disgraceful than that this ceremony should be delayed till after this period. It might be a subject of reproach and abuse for the remainder of the woman's life, and it was even said that men might refuse to marry her if this ceremony had not been performed at the proper time."⁶ "Miklucho-Maclay heard from Malays and members of the Catholic Mission at Malacca that communal marriage existed among the Sakai. . . . Some days or weeks after marriage the girl was said to leave her husband with his consent and take up with the men of his family in turn. She then came back to her husband, but kept up these irregular liaisons, which were regulated by chance and her own wishes."⁷ Wilkens⁸ lists a number of tribes in the Archipelago which, it was alleged, lived in a marriageless state; "the Semang women, like those of the ancient Massagetæ, . . . are said to be in common like their other property."

Rivers⁹ finds the traditional accounts of a condition approaching promiscuity, in Hawaii, to be rather doubtful; but he states that "side by side with the presence of individual marriage as a social institution there existed, especially among the chiefs, a state of very general laxity, while the claims of the chiefs on the women of the ordinary people (and of the women of chiefly rank on the men of the lower class) extended this laxity to the relations of the whole community. Part of this laxity was due to the existence of certain definite institutions. One was the claim which a chief had over the virgins of his district, a right allied to that of the *jus primæ noctis*, which appears to have existed in the Hawaiian Islands, but without the limitation which is implied in the title of that right. Another and more important institution is that of the *punulua*. There existed among the Hawaiians a definite system of *cicisbeism* in which the paramours had a recognised status. Of these paramours those who would seem to have had the most definite status were certain relatives, viz., the brothers of the husband and the sisters of the wife. These formed a group within which all the males had marital rights over all the females."

Among the Eskimo to the west of Hudson Bay free love is reported to have been universal, there being no marriage-rites and no divorce.¹⁰ By others of the Eskimo "promiscuous intercourse between married or unmarried people, or even among children, appears to have been looked upon simply as a matter for amusement."¹¹ Among the Aleuts, "promiscuity and the most bestial practices obtain."¹² One writer¹³ generalizes concerning the North American Indians, asserting that "the traces of communal marriage appear everywhere," while another¹⁴ thinks that promiscuous sex-relations occur occasionally in a

few tribes. Of one Athapascan tribe it is reported that they "take and divorce their wives at pleasure, there being no marriage ceremony among them. Although the men outnumber the women, polygyny is common among them."¹⁵

Among the Apaches, at times there was outright promiscuity.¹⁶ Certain California Indians "may be said to set up and dissolve the conjugal state about as easily as do the beasts";¹⁷ the early Spanish missionaries found there no word for marriage, which fact seemed to correspond to the actuality of things.¹⁸ In the Sia community there was an indiscriminate living-together of the sexes.¹⁹ The Botocudos are said to have no regular alliances, though they "have advanced beyond the stage of promiscuous intercourse";²⁰ they show, says another writer,²¹ "commercialism of wives or a changing concubinage." Von Martius²² states categorically of one South American tribe that "the chief has *jus primæ noctis*." Fitzroy²³ thought that parties of Fuegians "lived in a promiscuous manner—a few women being with many men."

The Chinese annals record that men once lived like beasts and women were in common; children never knew their fathers, but only their mothers. Then the Emperor instituted marriage.²⁴ In an argument against the Babylonian gods we read: "The women also with cords about them [to form lanes between them by which men passed to select] sit in the ways burning bran for incense, but if any of them, drawn by some man that passeth by lie with him, she reproacheth her fellow that she was not thought as worthy as herself."²⁵ The legend ran that in ancient Athens there was no regulated marriage, but that Cecrops introduced individual unions. Before that, connection had been random and wives held in common.²⁶ This condition was later ridiculed by the comedians.²⁷ The Ichthyophagi of the south Asian coast were believed to have women and children in common, like cattle; all notions of decency and shame were foreign to them.²⁸ Of the Massagetæ, it is reported that each man had a wife, but she was free to all. When a man wanted a woman he indicated it by a conventional act and had her without ceremony. The Agathyrsi, along the Carpathians, are reported to be all related to each other, and to have their women in common, while the Garamantes lived in "promiscuous concubinage with their women."²⁹ Strabo³⁰ reports communalism in women in Arabia. The Galaktophagi had women and property in common, and their terms for father, son, and brother are explained³¹ as equivalent to older, younger, and contemporary. Tyrrhenian children were brought up in common, as the parents were unknown, and the ancient Etruscans had a similar communalism.³²

Says Gomme,³³ concerning these cases of loose regulation, or even of absence of regulation: "Just as there is no excuse for calling this system of temporary

monandry by such a historical term as family, so there is no excuse for using the term 'utter promiscuity.' There is no reason again to suppose that 'paternity' was uncertain and was, therefore, incapable of being recognized. Both paternity and maternity were certain, and they were fully recognized. . . . In short, the relationship between the sexes was a *natural* and not a *political* relationship. Because primordial men did not, throughout life, recognize a bond of affection for offspring, and did not use the potent fact of kinship to constitute a social unit, it does not follow that they did not know of the paternal and maternal instincts, were not influenced by sexual jealousy, and did not know of the connection between parent and child. All that can be said of them is that they did not use these several natural facts to produce artificial, or, as it is best to say, political combinations." This is a sample of reasoning about a situation without much attention to actual cases, but it conveys a warning against tenuous theorizing in any direction when materials are scanty and inconclusive. It is safe to conclude that in the most primitive cases regulation was minimal.

It is possible to interpret the instances collected by Lubbock³⁴ as exhibitions of pure licentiousness, but their ceremonial character does not accord with that view. They appear, rather, as formal reversions to previous practice. Other cases shade off into increasing uncertainty.

In Australia, youths were not allowed to marry during initiation or probation, but during the latter had full license as respects the unmarried, including those of their own clan and totem.³⁵ As indicated in a former case, it is not necessarily all the men who have the first or any right to the marrying woman, but certain individuals whom some think to be representative of the group-right.³⁶ In British Central Africa "a virgin on her marriage is 'broken' by a friend of the bridegroom before the latter cohabits with her. The friend is said 'to eat new things.'"³⁷ In East Africa, "at marriage, four friends of the bridegroom pursue the girl, who is soon captured with much show of resistance, and conveyed to the hut of the groom's mother, where she is kept a close prisoner for five days. Meanwhile the young people dance and carouse to excess. The girl is now accessible to these four friends, and afterwards the husband claims her."³⁸ Such capture-ceremonies are interpreted by those who wish to refute promiscuity³⁹ as a recognition of the share-claim of the participants in the results of the enterprise. Lippert⁴⁰ sees a deeper significance in them, and in the Serbian custom of assigning a special right to the groomsman prior to the groom, and in the modifications of that ancient custom whereby the groomsman avails himself of his right only ceremonially, or where a mere boy is chosen as groomsman. In North Luzon a six to eight years old boy lies between the pair the first night, and the couple may not address one another. Ceremonial priority of others' rights over those of the groom are found among the Slavs. The representatives of such rights are commonly brothers of

the bridegroom.⁴¹ Lippert cites also the *Polterabend*, where every guest kneels before the bride on a pillow, kisses her, and leads her to the dance—the groomsmen demanding from each a piece of money, as another modification of an original communalism in women.⁴² It is unsafe to dismiss the survivalistic interpretation of such ceremonial in favor of plain intuition and guess-work. Is it "symbolic" only? Then why this particular symbol?

In Fiji, when a man of note is dangerously ill, a circumcision takes place as a propitiatory measure, the exuvial parts being offered to the ancestral spirits, with prayer for recovery. "Then follows a great feast which ushers in a period of indescribable revelry. All distinctions of property are now forgotten," including property in women. The nearest relationships form no bar. Said the local chief: "While it lasts, we are just like pigs." In a few days the ordinary restrictions recur: "rights of property are again respected, married couples are recognized in place of the abandoned revellers, and brothers and sisters may not so much as speak to one another. . . . This rite seems at least open to interpretation as a remarkable case of 'consanguine marriage' being kept up as a ceremonial institution," for it appears that tribal brothers and sisters are intentionally coupled.⁴³ It should be noted that the suspension of the taboo touches property when it touches marriage and is re-applied to the one when it is again enforced as respects the other.⁴⁴

The Hottentots allow the most unbridled freedom at the festival of the pot-dance, making away with any children whose conception might go back to that time.⁴⁵ The latter practice prevents uncertainty as to legitimacy and inheritance. A case is reported from Madagascar, where on the birth of a child in the royal family, complete sexual license was allowed. Death could not then be inflicted for any offense, as there was a general suspension of regulation. Here is an interrelation of marriage and governmental institutions: both were abrogated at once. The author quoting this case⁴⁶ aligns similar practice in India⁴⁷ and Peru and believes that these instances, together with the removal of restraint shown in the Tahitian Arerei festivities, fall into the same category with "the licentiousness witnessed among the Australians on the occasions referred to by Mr. Fison." A brief period of license is reported at a fertility-feast in Borneo.⁴⁸ Formerly, at the death of a Hawaiian chief, "houses were burnt, property plundered, even murder sometimes committed, and gratification of every base and savage feeling sought without restraint."⁴⁹ This is another of the cases aligned with Mr. Fison's; here there is a simultaneous relaxation of property-rights, marriage-ties, law, and order, and primitive chaos and anarchy return.

At the festival of Sedna (female spirit of death), Eskimo men and women pair off as man and wife for a night and a day.⁵⁰ Of the Point Barrow Eskimo it is reported as follows. "I am informed by some of the whalers who winter in the neighborhood of Repulse Bay, that at certain times there is a general exchange of wives throughout the village, each woman passing from man to man

till she has been through the hands of all, and finally returns to her husband. All these cases seem to me to indicate that the Eskimo have not wholly emerged from the state called communal marriage, in which each woman is considered as the wife of every man in the community."⁵¹

Relaxation of sex-regulations at the time of religious festivals has been common. In Mexico there appear to have been obscene practices in connection with the worship of the mother-goddess, which recall similar conditions among the people of antiquity. The Mother of the Gods, by her sex-activity to bring about growth, became goddess of lewdness and filth, as the German Cornmother became a harlot. The same was true in the case of another goddess, one by whose activity the earth bears flowers; she was honored at a festival at which nine and ten year old boys and girls became senselessly drunk and committed fornication.⁵² The Arabian Lât was worshipped by the Nabatæans as mother of the gods and must be identified, thinks Robertson Smith,⁵³ with the virgin-mother worshipped in South Syria. At Carthage the mother of the gods seems to be identical with Dido. "The foul type of worship corresponding to the conception of the goddess as polyandrous prevailed at Sicca Veneria, and Augustin speaks with indignation of the incredible obscenity of the songs that accompanied the worship of the Carthaginian mother-goddess; but perhaps this is not wholly to be set down as of Punic origin, for the general laxity on the point of female chastity in which such a type of worship originates has always been characteristic of North Africa." The cult of the Great Mother of the Gods attained a notable development in Rome, probably because "there was something more genial and satisfactory to the soul in the religion itself than in the formal, stately, and passionless religion of the ancient gods of Rome. . . . Her devotees were brought nearer the divine and nearer each other than the worshippers of the classical divinities."⁵⁴

§344. License.

"IN the part of the Solomons which I know best, Eddystone Island, sexual relations before marriage are very general and are the subject of social regulations which show that they are recognised as legitimate and even orthodox. After marriage, however, relations with any but the consort are strictly prohibited, and customs of avoidance between relatives by marriage which might indicate the possibility of wider relations are completely absent. Individual marriage in these islands seems to have reached an exceptionally high degree of development."¹ Seligmann² cites a number of cases of regular cohabitation prior to marriage; it is a phenomenon of courtship and winds up in proposal by the women. In one part of New Guinea, "girls are quite free sexually before marriage, and promiscuous intercourse between young people is the rule."³ "General sexual morality can hardly be said to exist among the Mekeo people [of British New Guinea], though immoralities are not openly practised. Boys and girls, unmarried men and women, and husbands and wives all indulge in immorality, and the marriage tie is very loose. Girls are especially free when they are under the marriageable age at which childbirth could occur. There is

no punishment for immorality, but the parents of a girl whose indulgence in it is discovered will be very angry with her, if she has reached the marriageable age."⁴ In the Trobriand Islands, "the *katuyausi* are expeditions of amorous adventure, in which the unmarried girls of a village go *en bloc* to another village and there sleep with the youths of that village. Any single male who fancies one of the girl-guests gives her (through an intermediary) some small present. . . . If accepted, the two belong to each other for the night. Such expeditions, though well established and sanctioned by custom, are strongly resented by the young men of the village from which the *katuyausi* starts, and they end as a rule in a sound thrashing administered by the male to the female youth of the village. . . . The sexual freedom of unmarried girls is complete. They begin intercourse with the other sex very early, at the age of six to eight years. They change their lovers as often as they please, until they feel inclined to marry. Then a girl settles down to a protracted and, more or less, exclusive intrigue with one man, who, after a time, usually becomes her husband. Illegitimate children are by no means rare."⁵ A similar condition existed in the Loyalty Islands.⁶

In the Congo region, "from early age to puberty the boys and girls had free access to each other. After puberty, restrictions were placed on the girls, and the act was regarded as adultery." The author⁷ saw only one prostitute in Monsembe, who was treated with little or no respect. Sir Charles Dundas⁸ says of East Africa: "Professional prostitution within the tribe is practically unheard of among all these peoples, and if now thousands of prostitutes are found in our townships and centres they are detribalized women cut off from their own families. . . . Native women may leave their homes and live as prostitutes in the towns, or in concubinage with aliens, but prostitution among women within the tribe seems to be unknown." Unnatural offenses are equally rare. Among the Ba-Mbala, "virginity is not considered of the slightest importance, consequently unmarried women indulge freely from a very early age, even before they have reached maturity; one result of this is that solitary and unnatural vices and prostitution are unknown; but, on the other hand, sexual excess is having an evil effect upon the mental and physical characters of the race." The authors⁹ quoted speak elsewhere of the Ba-Huana, among whom sexual morality "is conspicuous by its absence; the unmarried indulge as they please from a very early age, the girls even before puberty. Hence virginity in a bride is never expected and never found. Indulgence of this sort is not considered in the slightest degree shameful, and parents do nothing to check it. Marriage seems to make little difference, in spite of the fine with which adultery is punished when discovered, and it may be said that the only time during which a woman contents herself with her husband is during pregnancy, since it is believed that adultery at this period would prove fatal to the child. . . . One of my men asked my permission to marry a girl who was certainly under six years of age; when I was angry and wanted to punish him the girl's chief told me, 'It is a long time now since she knew the first man.'" "Prostitution is common among the Sungu, and meets with no disap-

proval; the northern Batetela tolerate it though they regret it, while the Olemba frankly condemn it."¹⁰

Roscoe¹¹ reports that among the Bageshu, at the time of initiation, "there is the fullest license given to both sexes, men and women have promiscuous intercourse without any restraint." He records what is something of an exception in that the Bahima end restriction after marriage, whereas premarital license is often followed by strict chastity of the wife. "Once a woman is married all restrictions are ended, she may welcome to her bed any of her husband's friends or relations with impunity; the children resulting from such intercourse belong to the husband. When a friend visits a man he sleeps on the same bed with him and his wife; the rules of hospitality are such, the man must leave his wife to his friend in the early morning; when a man is away from home and a visitor arrives, the wife must entertain him, and if he desires it act as his wife. It is also customary to exchange wives; for instance, when a man and his wife visit a friend, they invariably exchange wives during the time of the visit." Elsewhere in East Africa, "free love is permitted amongst the unmarried men and girls, but on her marriage it is the duty of the girl to tell her husband the names of all those Ngoromo who have had connection with her, and they must each bring a goat to the husband's village."¹² Among the Suk of Kenia, "free love is usual amongst the youths and girls, but not approved by the elders; after marriage the women are usually very faithful to their husbands, and conjugal disputes on this head are rare; there is real affection between middle-aged and old couples." The author¹³ just quoted goes into considerable detail concerning the peculiar arrangements of the Lumbwa. "In European morals the tribe would be deemed flagrantly immoral, in fact, they are non-moral. The incest prohibition is never broken, and the prohibited degrees of affinity are wider than those of the Prayer Book. There is, moreover, more than a mere regard for chastity and virginity, despite the fact that the youths and girls are prone to free-love. . . . The old people prefer a settled home, the warriors must go far afield to good grazing areas, they set up men's club-houses, and girls visit them to take back the milk to the parents, and are necessary for their dances; the rest naturally follows. . . . Each youth has a sweetheart in particular, with whom he sleeps from time to time away from her mother's hut; if she is a virgin, he respects her virginity for years while sleeping with her. . . . A number of youths and girls may sleep in one hut. There are no indecencies, indecency in the European sense is as yet unknown when living in the tribal state. . . . The striking thing about these youth-and-girl friendships is the real affection shown, most noticeably absent in married couples until they reach old age; unfortunately, the lover rarely marries his sweetheart, she is married to an older and richer man. A man may not have relations with his wife if she is a virgin; she is deflowered by her former lover with his tacit and uninquiring consent. . . . Every woman has a lover and every man a number; it is literally true that the common practice is for a wife to bring girls to her hut for her husband's gratification, and the more lovers he has amongst the unmarried girls the prouder woman she is."

Among the Akamba, "chastity is neither expected nor valued among women before marriage, and after all dances, in which young men and girls unite,

¹⁰ Torday, in JAI, LI, 375.

¹³ Barton, in JAI, LI, 96; and in JAI, LIII, 68-69.

promiscuous connection is indulged in and connived at by the parents of the latter. In the same way all married women have lovers. . . . Although it sometimes happens that in the case of unmarried girls pregnancy results from their intercourse with their lovers, this condition of the girl is no bar to her marriage with another man, but rather a recommendation, since he is sure of at least one child from her."¹⁴ Again, "an unmarried woman who has reached the age of puberty may have as many friends, as they call them, as she likes, provided that they come from another clan; after marriage she must confine her attentions to her husband."¹⁵ Among the Nile tribes, "female chastity before puberty is not much regarded, though it is generally considered reprehensible if more than what might be termed 'philandering' takes place between the sexes. Adultery with a married woman is regarded as a serious crime."¹⁶ The absolute immorality of the women of Nyasaland, strange to say, goes along with a modesty, both of word and gesture, in both sexes, which could not be excelled in the most respectable and *collet-monte* community of white people. Exceptions occur only when a woman gets drunk. . . . The Masai woman . . . is a model spouse; but the unwritten law of the nation imposes upon her husband the duty temporarily to surrender his house and its inhabitants to any one of the Elmorao (members of the warrior caste, who are bound to celibacy as long as they belong to it) who desires to take possession of them, and to keep away as long as he sees the latter's long spear sticking in the ground in front of the door. This husband was an Elmorao himself before his marriage."¹⁷ The Tuareg father may, before marrying off his daughter, demand reimbursement from her for what she has cost the family. This is "collected upon her body," and the girl, "dishonored according to our ideas, redeemed according to local views," is the more sought in marriage the greater the success in trading on her charms.¹⁸

"In the Chukchee language there is no term for 'girl,' for virginity is not required or expected. . . . Still, many of the Chukchee girls are chaste until their marriage; and in comparison with the other tribes of this country, the Chukchee are considerably more decent." If a woman "has children before marriage they are treated in the same way as children born after marriage." Among the Yukaghir, "men of authority or of wealth can choose any woman, married or unmarried. Officials, Cossacks, merchants, and even missionaries introduce these habits into the villages and camps of non-Russian tribes." Recurring to the Chukchee, we find them celebrating a so-called "trading-dance," which "takes place between the members of a 'compound marriage,' beginning with a dance in which a male member of the group has one of the women for his partner. . . . After the dance, the man must give some present to the woman; and the following night they sleep together, leaving their respective mates to arrange matters between themselves. On the next day the husband of the woman and the wife of the man perform a similar dance, in which the man gives an equivalent of the present of the day before, and each newly-mated couple sleep together for another night. Such dances are arranged chiefly among cousins or other relatives, who, among the Chukchee, frequently assume the bond of compound marriage. Conversely, a new bond of compound

marriage may be concluded through a trading-dance."¹⁹ In Mongolia, a girl need not keep her virginity until marriage; it is rather against her if she does.²⁰ Votyak women up to marriage are entirely free; but the wives are remarkable for strictness of morals.²¹ The Ostiaks allow freedom but regard the birth of a child to an unmarried woman with disfavor; "hence infanticide is frequent."²²

Among the Hill Tribes of India, "it may be said that any mode of connection between the sexes which does not contravene the rules of exogamy and is approved by the kinsfolk, ranks as a marriage with all its usual incidents and privileges. It is a later development of custom which draws any distinction between the children of a bride married as a virgin, a widow or other woman whose connection with a man is legal under their marriage code."²³ Several tribes that allow premarital freedom insist upon chastity after marriage.²⁴ "Among the hill tribes and many menial castes in the Plains prenuptial infidelity is recognized or tolerated. It is true that this refers only to members of the group, and an intrigue with an alien is sharply punished. Women, once married, are said to be generally chaste, but the relaxation of moral control in early life must inevitably suggest miscegenation."²⁵ "Among most of these tribes much freedom is accorded to unmarried girls, as success in the courts of Venus is a sure passport to the Lushai heaven."²⁶ The Nairs, as has been seen, show some possible relics of primordial communism in women; among them "a system of sexual relationship, the laxity of which made it in many cases indistinguishable from promiscuity, seems to have been prevalent . . . even as late as the eighteenth century. The literature of the time abounds in allusions as to how fickle ladies jilted their husbands and married others. A child was supposed to be legitimate as long as a man was willing to meet the expenses of child delivery, and that phrase still survives as a form of reproach against a father who does not treat his son well. . . . The *Talikettu* ceremony was, under these conditions, the actual and religious marriage. After that custom the girl was allowed to choose her own suitor, and when such a suitor, who was her husband, dies, she does not mourn his death, or become a widow, while, when the man who actually tied the *Tali* dies she undergoes certain formalities of mourning. Also the man who tied the *Tali*, though he never sees the girl again, is called 'little father' by all the members of the family. All these go to prove that the actual marriage ceremony was the *Talikettu*. It must be remembered that *Tali* (an ornament round the neck) is a symbol for marriage for all Hindus, and among Brahmins all over India the *Tali* round the neck is only broken when the husband dies. If this, then, was the real marriage, what was the actual position occupied by the priest or warrior who tied the *Tali*? The fact that he is conducted to the house after the ceremony seems to point to at least a latent conjugal right. . . . In this connection it is well to remember a like ceremony performed with great festivities among the *Deva-Dasis* or the 'Temple-girls' in other parts of India. They also have a form of marriage which lasts for four days. On each day the girls puts on the dress of the women of different communities, and sits in a big hall, where are

gathered together all the women of her local community. This ceremony, it seems, must precede before the girl devotes her life to 'temple service.' Since the . . . women, in olden days, do not seem to have had any settled form of marriage, and were free to cast off one husband and choose another, the religious rites of marriage had to be performed without any definite marital relationship with any particular man. This seems to be the explanation of *Talikettu Kalyanam*.²⁷

License prevailed rather widely in other parts of India.²⁸ In the East Indies, Wilken²⁹ finds much indifference to premarital chastity. Say the Bataks of Sumatra of a young woman who has had few premarital love-affairs: "It is no delicious cake upon which not even one fly settles." Young girls are wholly free and are habituated to wide license; but "the woman who, being betrothed, is unfaithful to her groom, or, married, commits adultery, pays for her transgression with her life." This is the case with many peoples of the Archipelago. Whether or not premarital chastity is insisted upon, wifely fidelity is demanded. The married woman is viewed differently from the young maid whom they regard more as common property; in the case of the former, the smallest freedom is a punishable offense. Love is regarded like hunger, as a natural appetite that needs satisfaction; it is as foolish to speak of prostitution among savages as among animals. Only within the institution of marriage is it delimited, and even there the husband often has the so-called right of prostitution over his wife. Where young girls are not held to chastity and where a married woman, by the will of her husband, may have relations with others, there is no place for prostitution as a trade, and for money, carried on by a special class of persons. In fact, the practice is not found in the Archipelago, except in the case of the public singers and dancers of the Javanese and Sundanese. These courtesans are not held in contempt at all but share in the favor of the people. There are many cases where dancers, after having led several years of loose life, make a good marriage, for example with a village head-man, and are regarded by village associates, female as well as male, as worthy members of society. Other authorities corroborate Wilken. In Sumatra, one tribe will inflict the death penalty upon an unchaste girl, while another will at most favor an attempt to conclude a legal match.³⁰ In Borneo, one very backward tribe admits license, while the Dyaks and Kayans generally attach disgrace to premarital pregnancy.³¹ Among the Mentawai Islanders the birth of children to an unmarried woman hurts her standing in no way, but seems to advantage her; for "they are the unquestioned property of the mother, and the father, even when known, can raise no claims to these children."³² In the Philippines morals were loose and virginity was an impediment rather than an advantage. There were professional violators.³³

In Polynesia, premarital relations were generally pretty free: in Tahiti, the Society Islands, Samoa, Easter Islands, the Pelew group, and New Zealand. In the last, "formerly every woman was *noa* or common, and could select as

many companions as she liked, without being thought guilty of any impropriety, until given away by her friends to some one as her future master; she then became *tapu* to him, and was liable to be put to death if found unfaithful."³⁴ "Young girls were allowed to do pretty well as they pleased, and they and the boys enjoyed full liberty in sexual matters, unless the girl was a *puihi*, like the *taupo* or village maid of Samoa, or was *tapu'd* or betrothed to some young chief. But when a girl became a wife all that was changed, and promiscuous love-making was interdicted, punishable by a *taua muru* [punitive plundering of village or family] or often the tomahawk."³⁵ License prevailed widely in the Caroline and Gilbert Islands.³⁶

In East Greenland, "there is no shame in an unmarried girl having children but, on the contrary, blame attaches to a full-grown, married woman when she cannot have offspring."³⁷ The women prefer the commonest European to the best Eskimo hunter and on the west coast there is scarcely a pure-bred native to be found.³⁸ Among the Omahas, "prostitution, as practised in a white community, did not exist."³⁹ Along the northwest coast, promiscuous rights in unmarried women were obsolete when the whites first came.⁴⁰ Some of the Guiana Indian celebrations end with promiscuous mating; in fact, "this intermixing really occurred, as it still does, throughout the whole performance, so soon as the effects of the liquor are felt. Thus, Van Berkel says 'In the meantime I here . . . found the old tag to be true that a drunken woman is an open door. . . .' What Schomburgk has stated of the Makusi can be repeated with equal truth of all other Guiana Indians. Every girl, without in the slightest degree damaging her reputation, can enjoy the favors of many lovers, but as soon as she is married the most inviolable observance of her honor is demanded. . . . Speaking in general, the Indian girl, after her first menstruation, will take up with some young fellow for a month or so, then make a change and live for some years, perhaps, a life of pleasure. Finally, she will meet her life companion and become a true and hard-working wife. As a rule she will not bear a child during her years of freedom; if she does, she will probably settle down. . . . Free love is quite the ordinary thing among these people, and that there should be anything wrong in this so-called immoral life is absolutely unintelligible to them. . . . Once married, however, the Indian expects fidelity to his bed, and the older records would show that he seldom hesitated to take drastic steps to enforce and punish it." Numerous cases are cited.⁴¹ The Chibchas of Colombia pay no attention to virginity but rather regard it as an indication of inability to inspire love.⁴² Of other American peoples Bancroft⁴³ writes that, while jealous of their wives, "to their unmarried daughters, strange as it may seem, they allow every liberty without censure or shame. Latham⁴⁴ attributes much of the Araucanians' sexual immorality to drunkenness; at their feasts "they give themselves up to a sexual promiscuity that respects no condition of relationship, each one taking forcible possession of any woman that strikes his fancy or happens to be nearest at

hand. . . . Absolutely no bonds of relationship [were] . . . recognised in their drunken amours, even incest being of the most frequent occurrence. . . . Chastity is not prized among unmarried girls, and few of them are virgins at the time of their marriage. Once married, however, they are generally modest, chaste and faithful."

Wilken⁴⁵ collects considerable evidence concerning the extreme license of Beduin manners; "dogs are better than we are," was a common expression of theirs. Their temporary unions were at best no more than trial-marriages; no idea of a durable tie existed.

§346. Group-marriage.

As is intimated in the text, there is considerable doubt concerning the applicability of the term; that there is a form of union which amounts to local absence of regulation within a circumscribed group admits of no denial. It has been called limited promiscuity. Several cases which might well have been ranged under §343 have been reserved for special illustration.

Among the Masai, "though individual marriage is recognised, sexual communism or something very like it prevails between all the men of one age-grade and the women of the corresponding age-grade, subject to the rules of exogamy and relationship, which forbid a man to marry or have sexual intercourse with a woman of his own clan or with a near relative. In other words the Masai may be said to live in a state of group marriage, based on the organisation of the whole community in age-grades, and restricted by the exogamy of the sub-clans and the rules regarding incest."¹ Miss Czaplicka² records the existence, among certain Siberians, of what she calls "supplementary unions." They have been called group-marriage. "The husbands belonging to such a group are called 'companions in wives.' . . . A man has a right to the wives of all his companions, and may exercise this right when visiting the camp of any one of them. . . . In former times this custom embraced only members of the same family, except brothers; but now friends, unrelated, may join such a group, after which they become like relations, helping and supporting each other. As in the case of individual marriage, a similar rite is performed, consisting also in anointing each other with blood, first in one camp and then in the other, and sometimes the man will even serve with the herd in order to be received into the group. . . . Sometimes such unions become polyandry, if a bachelor is accepted as a companion. Bogoras heard of certain cases in which each companion takes the wife of another and lives with her for several months, or even permanently. At the present time all Chukchee families take part in such organizations. . . . Such relations with the Eskimo have existed for a very long time, and are undoubtedly due to trade intercourse." The authoress notes that "the Chukchee form of supplementary union does not correspond by any means exactly to any of the types of group-marriage instanced by Prof. Westermarck in his *History of Human Marriage*." She quotes from several authorities to show the merging of the supplementary union into survivalistic forms.

Naturally, in the case of such an ancient and obsolescent usage, it is difficult to define such a term as group-marriage; but there is an unmistakable kinship

⁴⁵ In VG, II, 7, 8, 16, 17, note, 26; Barton, *Sem. Orig.*, 61.

¹ Hollis, in JAI, XL, 480.

² *Aborig. Siberia*, 78-80, 100, note.

between the variants. Among the Todas, "wives are constantly transferred from one husband, or group of husbands, to another, the new husband or husbands paying a certain number of buffaloes to the old." There results a sort of consort-shifting within the group that is alignable with the group-marriage type, though representative of variation about it rather than identification with it. Rivers³ continues: "The amount of the compensation or *ter* is settled by a council, and from this the transaction has received its name of *terersthi*, or 'compensation he tells (decides).'

. . . It would be impossible that such a custom as that of *terersthi* should remain limited in scope, but there is no doubt that at the present day it has become the custom for any man who takes a fancy for the wife of another to endeavour to obtain her for himself, and I was told that he would give large bribes to the elders of the Todas to attain his object. It seems quite clear that, at the present time, it is not considered necessary to obtain the consent either of the wife or of the husband, and in some cases the wife has been taken from her husband by force."

The curious phenomena of concubintancy deserve further illustration here. "In the Gilbert Islands it was considered unworthy for a man to exercise his physical rights over the persons of all his potential concubintants, the relationship being esteemed as a means of guaranteeing him against childlessness primarily, and secondarily of providing for surplus female population. Nevertheless, all *Taua-ni-kai* were theoretically at the disposition of their householder, and any infidelity on their part was an adultery against him. He might elect to give one of his wife's sisters intact to a friend, in which case, as a virgin, she would have the right to become the ceremonial bride of her husband. Hence a curious result, for as *Rao-ni-kie* she would carry to her husband the right of *Taua-ni-kai* (a name applying equally to the relationship and to the persons subject thereto) over all her uterine sisters, one of whom was married, while she herself could never be free of the obligations of *Taua-ni-kai* to her sister's husband. Thus two men might share the same rights over a single group of women, the wife of each being the concubintant of the other, and upon this was established the system of *bita-ni-kie*, *changing of mats*, or *wife-exchange*, so common in the Group."⁴

§348. Consanguine Marriage.

MELANESIA shows cases of royal incest. "The highest kind of marriage was that between a brother and sister, children of the same father and mother of the highest rank. . . . Such chiefs were so sacred that all had to prostrate themselves in their presence and they were not allowed to take off their clothes in the presence of others." A lower grade of union was where the spouses were half-brother and half-sister. "The usual case was that a woman had two husbands; the first child would be regarded as the offspring of the first husband and the second child as belonging to the second husband and, if they were male and female and married one another, the marriage would be *naha*," that is, of the type under review. "People had to sit in the presence of chiefs of this rank." Other types follow. "It was said that marriage between father and daughter might also occur. . . . It seems to be quite clear that these consanguineous marriages were carried out with the very definite aim of main-

taining the purity of the royal blood."¹ Such closeness of consanguinity in marriage was not confined to the higher classes. In New Caledonia, "no laws of consanguinity were observed in their marriages, the *nearest* relatives united."² In a number of African tribes "the marriage of brother and sister, or a man with his sister's child, is permitted to compensate for the law by which a man's property goes to the son of a stranger, but nothing of the kind is allowed among the Yaos. Indeed, they view any incestuous union with particular horror, and such must be very rare. I have heard of a case of a man committing incest with the idea that he would thereby become endued with supernatural power, but all he gained was ostracism; in the old days he would have been burned."³ Among the Bahima, "no man may marry into his father's clan; all women of that clan are his near relations, and are called either mothers or sisters, etc. These restrictions do not apply to princes, they may marry their sisters, and have intercourse with their married sisters; only betrothed or unmarried princesses are forbidden them."⁴ In Uganda, "the king's actual sisters are also his wives, for it is illegal for princesses to marry anyone but the reigning king or his gods"; if they do not marry the king-brother, they are forced into celibacy, if not chastity. Royalty follows the *muziro* or totem of the mother, where common people follow that of the father; it clings to the old and holy.⁵ Among the Hovas, where also blood and rank follow the mother, unions between brothers and sisters are not rare.⁶

Among the Chukchi of Siberia, marriages between relatives, especially between cousins, is the most frequent form. Sexual relations between father and daughter have been reported, and there are "examples of Chukchee tales relating to marriage between brother and sister, which in actual life are considered incestuous." The authoress⁷ cites one of them. "The Maritime people living in that country were exterminated by famine. Only two were left: a full grown girl and her infant brother. She fed him with pounded meat. When he grew up she asked him to marry her. 'Otherwise we shall remain childless,' said the sister. 'We shall have no descendants, and the earth will remain without people. It cannot be peopled otherwise. And who sees us? Who will say "shame"? Who will know about it in the world? We are all alone in the world.' The brother said, 'I do not know, I feel bad; it is forbidden.' . . . One child is born, then another. The family multiplies and becomes a people. From them are born all the people in the camps and villages." Other legendary matter is quoted with respect to the Yakuts: "Thy sister was thy wife; thy mother was thy wife; the wife of thy brother was also thy wife. . . . Of old when the youth could draw the bow he took to wife his sister and led her to a quiet place. . . . In ancient times when an older or younger sister was given in marriage into another clan, the brothers did not let her go before they had lain with her. . . . When strangers take to wife from her brothers a woman who is still a virgin, the brothers account it a shame for themselves."

The Yakuts laugh at the Russian horror of incest; among them occur unions of brother and sister, mother and son.⁸ Fraternal incest existed among the Kamchadales.⁹ The only limits recognized by the mediæval Mongols was

as respects mothers, daughters, and sisters by the same mother.¹⁰ Among the Veddahs the marriage of a man with his younger sister was once the one proper marriage: "To marry an elder sister or aunt would, in their judgment, be incestuous, a connection in every way as revolting to them as it would be to us—as much out of the question and inadmissible as the marriage with a younger sister was proper and natural." Among the Singhalese royal families, marriages of brothers and sisters were common.¹¹ Much has been made of these cases from Ceylon.¹²

The only taboo recognized by the Kukis is that prohibiting a mother to wed her son.¹³ The Pulluvans, or medicine-men, of Malabar, are said to permit marriage between brother and sister. "Whatever the truth may be, it is probable that something of the kind was once the case, for, when a man is suspected of incest, they say 'He is like the Pulluvans.'" ¹⁴ In the *Rig-Veda*, Yama, the first man and king of the Dead, and Yami, his sister-wife, "indulge in a moral conversation on the propriety of wedlock between brother and sister."¹⁵ Such unions were evidently once in the mores, though they became later an abomination. Where such a marriage was regarded as wrong, sex-intercourse could take place.¹⁶ Incest is reported of the Annamites and Cambodians and out of the Chinese classics.¹⁷ In old Japan occurred a curious exception to the taboo on fraternal incest. "The birth of twins of opposite sex is not of frequent occurrence, but it is not considered wise to separate them through life. These marriages rarely result in issue, it is said by native authorities."¹⁸ With this treatment may be compared the strange Melanesian custom reported by Fison:¹⁹ When twins are born they are allowed to live if they are of the same sex, but if they are of different sex they are both killed as violating the consanguinity law of exogamy.

The Alfurs, several decades back, practised incest between parents and children, brothers and sisters; the Kalangs of Java regarded a son's marriage with his mother as sure to bring luck and wealth; in Timorlaut there was no conception of incest; while among the Balinese there existed, again, the strange case of the twins—if of different sex, and especially among the highest castes, they were regarded as betrothed and were united when they had attained marriageable age.²⁰ In Sarawak, "members of the same family are allowed to contract marriage, nay, even the nearest relations, brothers and sisters, parents and children."²¹ Dyaks of the Borneo coast strictly taboo close in-marriage, while those of the interior allow it in all grades.²² By another tribe which practised fraternal incest, "that sort of union was preferred over all others as the most appropriate and most natural."²³ The Dyaks of the Barito region allow brothers and sisters, parents and children to marry, and the Kalang son lives with his mother as man and wife, as a means to secure luck. cites a number of cases from the Malay Archipelago; they are both legendary and also observed.

Missionaries to the Sandwich Islands speak of a chief and his five young queens; "two of them are his half sisters, and one of them was formerly the wife of his father."²⁵ Again, in another part of Polynesia, where now fraternal incest is tabooed, among the gods and goddesses "the first thirty-six divine married couples were supposed all to have been brothers and sisters, whilst afterwards this kind of union had ceased."²⁶ Boas²⁷ quotes as follows, in his article on the Kwakiutl Indians: "When the father [of a princess] dies, then her brother has her for his princess. Then he is no longer her brother, for she is now the princess of her brother who is now her father. Only the eldest one of the brothers has his youngest sister for his princess." Whatever formalism there may be in this arrangement, it falls in with the other cases of royal procedure. There are a number of cases reported from Guiana of the union of nearest kin. Thus a widow may take her son, or a widower his daughter, to replace a dead mate. Some Island Caribs marry their own daughters; in other regions, "incest between father and daughter, son with mother, brother with sister, is common. . . . If a Roucouyenne marries a woman (widow), she already having daughters, he becomes the spouse not only of the woman but also of her children."²⁸ This last case is, of course, non-incestuous, but it illustrates the matter-of-course quality of the disposition of females.

Details of royal incest in Egypt are rather well known. Thus Rameses II married his daughters by his sisters in order to annul their claims to the throne; the king, in fact, had to marry all women of the solar blood. The Ptolemies exhibit a complicated interrelation. Persian examples are likewise to be found, though the code of Hammurabi countenances nothing such.²⁹ Semitic literature reports close unions, together with reprehension of the same.³⁰

"When, in the Song of Solomon, the bride is called 'sister,' this simply points to the fact that among the ancient Hebrews men were wont to woo their half-sisters—a thing which the actual cases likewise teach us."³¹ Abraham says of Sarah:³² "And moreover she is indeed my sister, the daughter of my father, but not the daughter of my mother; and she became my wife." Isaac says the same, falsely, of Rebecca.³³ It is noteworthy that Solon allowed marriage with a half-sister on the father's side, but forbade it with one on the mother's, an arrangement which the Lacedæmonian law reversed.³⁴ A union of this order was denounced by Ezekiel,³⁵ who cites incest as one sin of the Jews. The relation of Lot's daughters with their father is not represented in the primary narrative as noteworthy or abominable, considered as incest. The law about incest varies through the Old Testament; the success of the Deuteronomic

prohibition seems to have been slight.³⁶ At a much later time, in the early Church, incest was represented as permissible.³⁷ The Phœnicians permitted fraternal incest, but it appeared only "when there was a legal claim hereditary in the female line which the male did not possess."³⁸

In Homer unions appear between mother and son, brother and sister, nephew and aunt, uncle and niece.³⁹ No shame is attached to any of these except the first, the Œdipus case, of which more later on. Also it is to be noted that fraternal incest is a practice confined to the gods or demi-gods. Hermann⁴⁰ says there was in Greece no limit to consanguine marriage except in the ascending and descending scale; that, except in the old times, fraternal unions were disapproved; and that when fraternal incest was excused by showing that the incestuous parties did not have the same mother, that was only an excuse. In Greek tragedy incest is referred to as a practice of barbarians.⁴¹ Wholesale incest was exhibited in the marriage of the children of Dionysius of Syracuse.⁴² Cases of incest occurred in the Roman imperial family.⁴³ Strabo⁴⁴ cites with some reservations the custom of incest in the small islands about Britain; and among the heathen Germans there were all sorts of unions, barring only those between parents and children; "everywhere among the Germans there was ignorance of the doctrine of forbidden grades of kinship."⁴⁵

Remoter Degrees of Consanguinity. Among a number of Australian tribes "the proper person for a man to marry is his second cousin, being his mother's mother's brother's daughter's daughter, or his father's father's sister's son's daughter, or some person who stands to him in the same relation and is denoted by the same term."⁴⁶ This may be contrasted with the Papuan usage, that "a man may not have connection with sister, half-sister, aunt, and first cousin, and it is considered hardly correct in the case of second cousins, though this is winked at. . . . The only reason given for this is 'shame,' and that it is 'dirty,' and the children would have bad skins."⁴⁷ "The young Fijian was from his birth regarded as the natural husband of the daughters of his father's sister and of his mother's brother. They were born his property if he desired to take them." In Tonga and Fiji, "the marriageable relationship between cross-cousins was extended so as to include rights to demand or order marriage and an obligation to comply."⁴⁸ "The Torres Islands, and especially Hiw, are noteworthy for the number of cases in which those related by blood may marry or are even expected to marry. In Hiw there appeared to be a definite connection between marriage with the father's sister and marriage with her daughter. It was said that if the father's sister was young enough a man would marry her, but if not, he would marry her daughter. The cross-cousin marriage was spoken of as a kind of substitute for marriage with the father's sister. If a man marries the daughter of his mother's brother he does not pay anything for her. A man desires especially to have his sister's son as a son-in-

law and will not look for payment. . . . In the island of Loh a man is not now allowed to marry his father's sister though there seems to be no doubt that this form of marriage was once practised." The author⁴⁹ quoted says that Melanesian marriage has apparently "undergone a progressive change from a condition in which it was orthodox and habitual to marry certain relatives to one in which marriage with relatives was wholly prohibited. At the same time, there seems to have come into being the custom of purchasing a wife which has gradually become more definite and habitual." Rivers connects the existence of this cross-cousin marriage with the dominance of the old men under the system of dual organization. "In Fiji, as in many other places, cousin-marriage was not merely permissible, but imperative. But the Fijians made a distinction among cousins. The children of two brothers were not allowed to marry. So, likewise, the children of two sisters were not allowed to marry. But the children of a brother and sisters were compelled to marry. And the progeny of such marriages was more numerous, and the physical conditions of it much superior, than in the case of the progeny of mixed or outbred marriages. The greatest vitality is found among the inbreds."⁵⁰

"Practically all the old regulations with regard to marriage have broken down among the Hottentots. . . . All my older informants are agreed that the marriage of direct cousins was out of the question in the old days. With regard to the cross cousins there is some difference between the tribes. . . . The terminology for these relatives seems however to show that in the past marriage with both the mother's brother's daughter and the father's sister's daughter was allowed, and the behavior towards these relatives confirms this."⁵¹

"If a Gilyak woman has a son, she usually asks her brother to betroth the boy to his daughter. . . . The typical Gilyak marriage-right includes cousins (though it is exogamic)." Among the Ostiaks it is held "sinful and disgraceful to marry relations of the same name; yet they attend only to the male line. If a woman has married into another family, and has borne a daughter, the brother of the mother, or his children, may legally marry that daughter. In short, all marriages are legal, if only the fathers of the bride and bridegroom respectively are of different families."⁵² The Ostiaks marry any relative on the female side but none on the male.⁵³

Among the Chukchi, "marriages are usually restricted to their own kindred. Unions of couples closely related by blood are very common, and the bond is regarded as stronger than when the pair are not consanguineally related. In such cases no payment is made for the bride, but the family of the latter have a right to expect an equivalent from the groom's family should they need it later."⁵⁴ A number of Asiatic cases of similar tenor, where the restriction is a formal one, are given by Mucke.⁵⁵ Among the strictly patriarchal Ossetes, "a marriage with a mother's sister is held to be quite proper while one with a father's sister is punished as in the highest degree incestuous."⁵⁶

In China, "children of brothers and sisters may marry at pleasure, while those of brothers cannot be united on pain of death."⁵⁷ "It is also permitted that a girl marry the son of a sister of her father, whereby the sister's son is,

so to speak, restored to the ancestral house. . . . This is, however, the only case in which a marriage union between relatives in the male line is regarded as allowable; a man may never . . . marry the daughter of a sister of his father."⁵⁸

In southern India a boy is married to his paternal aunt's or maternal uncle's daughter, however old she may be. Again, "the bridegroom's sister meets the newly-married couple as they approach the bride's home, and prevents them from entering till she has extracted a promise from them that their child shall marry her child." Elsewhere, "the most proper alliance is one between a man and the daughter of his father's sister; and, if an individual has such a cousin, he must marry her, whatever disparity there may be between their respective ages." Failing a cousin of this sort, a boy "must marry his aunt or his niece, or some near relative. If his father's brother has a daughter, and insists upon his marrying her, he cannot refuse; and this whatever may be the woman's age." The author quoted⁵⁹ cites many other cases. In one district the brother has a prior claim to demand two daughters from his sister for marriage with his sons.⁶⁰ "The Tamul system, which to Morgan represents the Asiatic folk-groups, rests upon the fact that marriage within the closest grade of relationship in the side line ('brothers' and 'sisters') is forbidden, but in the more distant grade ('cousins') is precisely the rule."⁶¹ In one district of Baluchistan, marriages are contracted between persons as closely related as possible, so long as they are outside certain prohibited degrees; a man will, if possible, marry his first cousin.⁶² Among the Veddahs, whole districts must inevitably have come to be blood-related; there seems to be little objection to consanguine unions. The normal marriage is with a cousin.⁶³ The Singhalese exhibit the formal distinction alluded to above and below: marriage between a sister's son and a brother's daughter is regarded as the most proper one, while marriage with a daughter of a father's brother is regarded as incestuous, for such parties are looked upon as brother and sister.⁶⁴ Among the Todas, Rivers⁶⁵ "failed to find a single case in which marriage has taken place between the children of two own sisters, or of marriage between the children of two women who would call each other 'sister' whose names occur in the same genealogical table. . . . While marriage with the daughter of a father's brother and a mother's sister is prohibited, the daughter of a father's sister or a mother's brother is the natural wife of a man. The orthodox marriage is marriage between *matchuni*, the children of brother and sister. Thus it is obviously not nearness of blood-kinship in itself which acts as a restriction on marriage, but nearness of blood-kinship of a certain kind." The Hindu law-giver imposes a heavy penance upon one who has approached the daughter of his father's sister, "who is almost equal to a sister" or of his mother's sister or full brother. Wise men will not wed any one of these three, for they are *sapinda* relatives; "he who marries one of them sinks low."⁶⁶

The Nair "may not marry his mother's sister's daughter, who is to him as his own sister. All his sisters, own and collateral, together with ladies of a previous generation in his family, form a legal incestuous group. A man has, there-

fore, to marry either entirely out of the circle of his relations, or from among his *cross-cousins*. . . . Your maternal uncle's daughter . . . is your *a priori* wife, if such an expression could be used. She is spoken of as the *Mura Pennu* (*Mura* = customary, and *Pennu* = female or wife, meaning customary wife)."⁶⁷ "The common rule regulating marriages among Brahmans, and indeed people of almost every caste in Southern India, is that the proper husband for a girl is her mother's brother or his son." In some cases, while a girl may not marry her mother's brother, "the children of a brother and sister may marry, and should do so, if this can be arranged, as, though the brother and sister are of the same *khilai* [kin-group], their children are not, because the children of the brother belong perforce to that of their mother, who is of a different *khilai*. It very often happens that a man marries into his father's *khilai*, indeed, there seems to be some idea that he should do so if possible. The children of brothers may not marry with each other, although they are of different *khilais*, for two brothers may not marry into the same *khilai*."⁶⁸ In the Malay Peninsula too it is found that "the children of brothers might not intermarry, but those of sisters or of a brother and sister might do so."⁶⁹

This same rule is in evidence in the Archipelago, in the Aru Islands and elsewhere. Among the Letinese, as among the Hovas of Madagascar, unions between brothers' children and between those of brother and sister are allowable, but not those between sisters' children. Again, while children of two brothers or two sisters may not marry, those of brothers and sisters may. The inconsistencies are due to the presence, in one place and another, of descent in the female or male line. Wilken,⁷⁰ who records these cases, goes on to say that in the Minahasa district of Celebes, though marriage between cousins is allowed, the feeling that it is not quite right has not wholly disappeared, so that parents on both sides feel that they must make a small sacrifice of atonement. A goat is killed and blood sprinkled on the steps of the houses of officials, while the flesh makes a meal for all the village head-men. It seems that unions between brothers' and sisters' children have always been permitted. In Amboina there are two terms for female cousin, according as she is the daughter of a mother's brother or a father's sister. These are, respectively, *anamakain* and *tauli*. With the former a male cousin may allow himself all sorts of liberty: laugh at her, jest, dally, without hindrance from his elders. Marriage with her is allowed and often takes place. Quite different is his conduct with his *tauli*; the two are closer, regard each other as brother and sister, and may not marry. The impropriety of union with a *tauli* is expressed by the expression that one thereby "returns to his own source." Here, evidently, relationship is closer in the male line, according to local ideas; from the standpoint of consanguinity as we understand it, however, *anamakain* and *tauli* are equidistant, and the distinction is arbitrary. Meerwaldt⁷¹ supports such cases by evidence from the Batak system. This tribe forbids union between the children of two brothers or between a brother's son and a sister's daughter; but a marriage between a man's daughter and his sister's son is preferred and, though not prescribed, is expected. A man's sister marries outside and he regards her daughters as his daughters; he will not give them to his son, who would, in such case, become his son-in-law. He gives his actual daughters to his sister's sons in order to

establish the relationship which he formed when his sister married out. Tradition says that formerly a man took the daughter of his father's sister to wife, but that to such eventuated calamities. The author believes that descent in the female line is due to Malay influence. By contrast, in parts of the Philippines incest is extended to include first cousins; it is "the most serious of all crimes and merits the severest punishment."⁷²

In Samoa "they say that, of old, custom and the gods frowned upon the union of those in whom consanguinity could be closely traced. Few had the hardihood to run in the face of superstition; but if they did, and their children died at a premature age, it was sure to be traced to the anger of the household god on account of the forbidden marriage."⁷³ Yet in central Polynesia, "the union of the grandchildren (and occasionally even of the children) of a brother and sister was . . . regarded as a fit and proper custom for the superior chiefs, but not for the common people. . . . The approval of marriages between the children of the cross-cousins more generally than as between the cousins themselves would probably be based upon the fact that their kinship was not so close." Coming down to special localities, we find that "in the island of Niue . . . the children of two brothers, or of a brother and sister, might marry without shocking the sentiments of the country; but the marriage of the offspring of two sisters was absolutely forbidden, this prohibition dating from the time when a man who married a girl had the right to marry all her sisters, so that it was never certain that children of sisters had not the same father. . . . In Rotuma marriage within, the *hoang* was forbidden. The *hoang*, the smallest unit, except that of the individual man, in the social system of the island, was . . . a consanguine family, occupying a number of houses, placed together and forming, if the family was large enough, a small village." In Easter Island, the restriction went down to and included second cousins; third cousins might marry. "There was no other restriction as to marriage within the clan nor with any outside its borders." The author⁷⁴ quoted cites Moerenhout to the effect that in the Society Islands "marriages between near relations were not common; they were repugnant to the natives, and only took place when political interest made them absolutely necessary. . . . One cannot conceive an idea of the horror with which marriage contracted between near relations inspired the people." The author has a chapter on exogamy, containing chiefly taboos on consanguinity.

The relatives of the Thlinkit girl "are very desirous, as a rule, to marry her to some one on the father's side of the family. It may be an uncle, a cousin, or a grandfather. . . . Such marriages are not only considered very proper among the natives, but they more heartily desire them than marriages of any other connection."⁷⁵ One traveller, noting that certain Indian chiefs married the daughters of their younger brothers, asked the reason for this usage. "The one whom I asked said to me that they do this because they do not want their privileges to go out of their family. They keep their privileges among themselves by doing so."⁷⁶ Among the Tsimshians, "the normal type of marriage, as described in the traditions, is that between a young man and his mother's brother's daughter."⁷⁷ "Both on the islands and on the mainland, certainly in Cayenne, . . . it was customary for the Carib to marry their cousins german

as a matter of right. Thus, they have a privilege to take all their cousins german, and have no more to say than that they take them for their wives; for they are naturally reserved for them." It is said that the Surinam Indians also commonly marry their nearest relatives, cousins or nieces. Of the Arawak it is written that, "unlike our families, these all descend in the female line, and no individual of either sex is allowed to marry another of the same family name. . . . That this arrangement neither checks nor prevents consanguinity is easy to recognize, for according to it, a woman can cohabit with her father's brother, but not with her mother's brother, or she can live with her cousin on her father's side, but not with the cousin on her mother's. With the Makusi, where descent was likewise claimed through the mother, . . . almost the very opposite rules would seem to have been enforced. For here the uncle on the father's side cannot marry his niece, because she is regarded as a relation next in degree to his brothers and sisters; he is called 'father' also. On the other hand, he is permitted to bind himself to the daughter of his sister, the wife of his dead brother, or his stepmother when the father is dead." An Arekuna "can not live with his mother's sister's daughter, but he can with his mother's brother's daughter; also with his father's brother's and father's sister's daughter."⁷⁸ Among the Araucanians, "it is probable that formerly exogamous customs prevailed, but at present the only restrictions imposed are that a man may not marry his mother or sister."⁷⁹

In antiquity consanguineous unions were practised to keep the blood of a small minority of nobility pure.⁸⁰ It was customary, among the ancient Arabs, to marry a paternal uncle's daughter; her designation was also a term for "lover." By survival of maternal descent, the paternal relationship was not regarded as consanguine. It was a regular right of the Beduin to marry his first cousin, and there were no ill results. Wilken,⁸¹ who reports this, quotes from Burckhardt: "All Arabian Bedouins acknowledge the first cousin's prior right to a girl, whose father cannot refuse to bestow her on him in marriage, should he pay a reasonable price; and that price is always something less than would be demanded from a stranger." Burton also is cited: "Every Bedouin has a right to marry his father's brother's daughter before she is given to a stranger; hence cousin . . . in polite phrase signifies a wife."

In Homer, Arete is the niece-wife of Alcinous.⁸² In the *Institutes of Gaius*,⁸³ it is lawful to marry a brother's daughter but not a sister's. Among the heathen Germans "only the marriage of brother and sister was already, as it appears, forbidden."⁸⁴ In later times, in Corsica, "the marriages between consanguines are frequent and are regarded as the most auspicious."⁸⁵ In Europe, first cousins may marry except in Spain, Austria, and Hungary, where the canonical prohibition persists, and in Russia, where no nearer unions than those of third cousins have been allowed.⁸⁶ In this country, first-cousin marriage is forbidden in about twenty states.⁸⁷

§349. Taboos of Narrower and Wider Scope.

THE following sets of cases are arranged roughly in the order of declining consanguinity: first come the taboos upon known relationship, then those upon what may be called probable relationship through common clan-membership, and, finally, those upon artificial kinship, where there is in reality no consanguinity. It is to be noted throughout that horror at the breaking of the taboo is horror of incest, whatever that may be taken to be. Certain of the cases will be similar to those reviewed in the preceding section, but are viewed from a somewhat different standpoint.

In parts of Australia, a man may marry a woman who stands in a certain denominated relationship to him and no one else may become his wife. This may mean that he is constrained to marry his cousin: "indeed we may say that the proper person for a man to marry, if it be possible, is his own first cousin. In the genealogies collected by me I found that in nearly every case where such a marriage was possible it had taken place." The case is complicated by the custom, common in most Australian tribes, of exchanging sisters. Two men who bear a certain relationship to one another, marry each other's sisters. "As a result of this practice it often happens that a man's father's sister is at the same time the wife of his mother's brother. If these two have a daughter she will in the ordinary course of events become the man's wife." The woman to whom a man has the first right as a wife is preëminently the daughter of his own mother's brother, or, failing this, of his own father's sister. The author¹ quoted sums up the Australian usage as follows: "In all the Australian tribes about which we have detailed information marriage is regulated by relationship. In all tribes a man may only marry women who stand to him in a certain relationship of consanguinity." The taboo extends to all others, related or not in our sense. There are two types here distinguished, the first being the one cited above, where "a man marries the daughter of his mother's brother, or some woman who stands to him in an equivalent relation. Where the marriage law is of Type II, a man marries his mother's mother's brother's daughter's daughter, or some woman who stands to him in an equivalent relation." The second type is very much more widespread in Australia than the former. "Corresponding to each type of marriage rule there is a type of relationship system." But the marriage laws "are not in any way whatever affected by the existence in the tribe of two or four named divisions. . . . The fact that a tribe has two or four named divisions tells us nothing whatever about the marriage law of the tribe, which can only be ascertained by a careful study of the system of relationship." Furthermore, the prohibition of the marriage of first cousins is shown by observed facts not to be due to change from maternal to paternal descent of the totem.

In Southeast Papua "it is forbidden to marry blood relations on the mother's side. Susu includes all these relations. A village is made up of various Susu separated by clear boundaries. Marriage may be contracted in a village outside of the mother's Susu." Evidently the criterion of consanguinity is passing into one of a territorial order. "It is also forbidden to marry in the father's Susu, but only because by so doing rules concerning mourning feasts would be broken. Marriage does not admit into the Susu. Proper respect must always be

¹ Brown, in JAI, XLIII, 155-156, 184-185, 188, 190-194.

paid to married relatives. There must never be too much familiarity with the spouse's Susu."² Among certain Melanesians, "ultimately, the regulation of marriage depends on the avoidance of marriage within the forbidden degrees, which extend to third cousins; . . . marriage within the *iduhu* [clan] is, and always has been, rare, in spite of there being no avowed objection to the practice. . . . A large proportion of marriages take place between individuals of the same or neighbouring villages. This fact, perhaps, gives a clue to the rarity of marriages within the *iduhu* in spite of the fact that there is no avowed objection to the practice. Since even third cousins are not allowed to marry, experience may have shown that it is generally impossible for men and women of the same *iduhu* to marry without infringing the law of consanguinity."³ In Tikopia Island, "within each class marriage is regulated purely by kinship. . . . The social divisions have no significance in connection with marriage. Provided two persons are unrelated it is a matter of no importance whether they are of the same or a different division."⁴ In Lifu, Loyalty Islands, "there was no division of the people for marriage purposes as in the islands of Melanesia northwards, and there were no restrictions as to whom a man might marry, except near kinship. Marriages between cousins (first and second) were prohibited."⁵

On the Upper Congo "a man cannot marry his mother, his sister, his aunt, his daughter, his grandmother, nor his granddaughter. Neither can he marry his nieces or cousins—they are his brothers, sisters or children. He can marry his father's wives but not that one who is his own mother."⁶ In British Central Africa, "a man may not marry any member of his wife's family, nor of the same clan names, nor two sisters, nor a deceased wife's sister."⁷ In East Africa, "marriage is prohibited between persons of one family, one clan, and between children of men who have entered into blood-brotherhood."⁸ Among the Dinka, "by 'incest' is meant the offence of sexual intercourse between persons related by blood from either the father or mother of either of such persons. . . . This is carried back for many generations, and appears to be limited only by the accuracy with which family tradition can trace the genealogy of persons so offending. . . . Any children born from the offence belong to the father or guardian of the girl, but go with her when married, an increase of 'marriage payment' being required on this account."⁹ Among the Masai, "first cousins and second cousins may not marry, but there is no objection to third cousins marrying if the relationship is no nearer than" certain grades established by local nomenclature. "Thus, a man's son's son's son may not marry the man's brother's son's son's daughter, nor may a man's son's son's son marry the sister's son's son's daughter, but there would be no objection to a man's son's son's son marrying the brother's daughter's daughter's daughter or the sister's daughter's daughter's daughter. Likewise though a man's son's son may not marry the man's maternal uncle's son's son's daughter, he may marry the maternal uncle's son's daughter's daughter. These unions are always contingent on the two parties not belonging to the same sub-clan. The rules of consanguinity and affinity which regulate marriage also apply to the sexual intercourse of warriors with immature girls before marriage and to the rights of hospitality after marriage. . . . Members of the various sub-clans are

usually to be found in all the districts and sub-districts. Marriages are not affected by geographical considerations, and a man has the same lawful marital relations in all the sub-districts as he has in his own home sub-district. . . . The rules are quite simple if one remembers (i) that though the clans are not exogamous, the sub-clans into which the clans are divided are exogamous; and (ii) that no man may marry a nearer relation than a third cousin, and then only if the terms of address," the local designations, are as prescribed.¹⁰

In Samoa, "all the evidence points to the spreading of the family net, within which matrimonial alliances were prohibited, very widely. . . . The conception of the family or related group, within which marriages were not allowed, showed no clear distinction between relatives on the father's side and those on the side of the mother. . . . If we are told that persons of specific degrees of relationship might not marry, this is, I gather, a question of incest. But if the statement is that a man might not marry a woman loosely described as of his own family or social group or clan, it seems to become a question of what the evidence means. . . . Marriages between members of the same domestic family, or other relatively small social group, would generally come within laws against incest; but, as groups became larger, this probability would diminish. . . . It follows therefore that we cannot always say whether the evidence points to mere rules against incest, or whether it also indicates a system of group separation for matrimonial purposes the character of which went beyond what was necessary for the avoidance of incest. . . . The recognition of fictitious bonds of kinship would perhaps enlarge the conception of kinship even as regards questions of incest. . . . I may say that the evidence as to the practices connected with courtship and betrothal, and the ceremonies of marriage, and what occurred afterwards, points to a common custom for a man to seek a wife in another village or district, or whatever it may be called, than his own."¹¹ In the Gilbert Islands, "a native was forbidden to marry—(a) Lineal kin; (b) All descendants of a common ancestor, on male or female side, out of his or her own generation; (c) Descendants of a common ancestor in his or her own generation, to the second degree of cousinship. Adoptive relationships and those of half blood were counted the same as those of full blood. The native catchword concerning the marriage of kinsfolk was, and is, . . . *the fourth generation goes free*; thus if three generations separated each of the parties to a marriage from a common ancestor, no ban of consanguinity rested upon them. Several such unions have taken place within my own experience; . . . nevertheless, they were not regarded with any great favour by the old people of the respective families, who considered that, in the ideal state, collaterals should await the fifth generation before coming together."¹²

Among certain Indians of Oregon, it seems that "the exogamous tendency was local and extended to villages rather than to tribes. The expressly forbidden degrees extended to any recognized relationship."¹³ In one British Columbia tribe, the only bar to marriage discoverable was "sameness or nearness of blood. It was not lawful for any of near blood to intermarry. The only reason they could give for this bar was that it was considered 'shameful' for those of the same blood to marry or have intercourse with one another. . . .

¹⁰ Hollis, in JAI, XL, 479.

¹² Grimble, in JAI, LI, 26.

¹¹ Williamson, *Cent. Polyn.*, II, 127, 130-132, 135.

¹³ Farrand, in AA, III, 242.

The old people expressed astonishment that first cousins, who with them are regarded as 'brothers' and 'sisters,' should be permitted by us to intermarry."¹⁴ Elsewhere there was an epithet "kiyuksa ('breakers,' so called because the members broke the marriage law by taking wives within prohibited degrees of kinship)."¹⁵

"A comparison between the forbidden degrees of Greeks and Romans clearly shows where we have to seek for the real cause of the prohibitions. Among the former, even very close relationship was no hindrance to intermarriage, whereas, among the latter, it was not allowed between rather distantly related persons. This difference . . . was due to the fact that the family feeling of the Greeks was much weaker than that of the Romans, among whom in early times, a son used to remain in his father's house even after marriage, so that cousins on the father's side were brought up as brothers and sisters. Later on, the several families separated from the common household and the prohibited degrees were considerably retrenched."¹⁶ "The Talmudists, by reason of anxiety over the possible infringement of the Mosaic order, extended the scope of the prohibition to more distant grades of relationship"; this extension was indefinitely widened later on.¹⁷

The clan was an extension of the closer consanguine group; when, now, the prohibition rests upon inter-clan unions, it is passing into a phase where consanguinity is theoretic rather than demonstrable. Among certain Australians, a man "may not marry a woman of his own clan," nor of any other clan that has the same totem as his own. He may not take a wife from his mother's clan, or that of his father's mother, his mother's mother, his father's father's mother, or his mother's father's mother. "He may marry into any other clan, but he may not marry a woman who is related to him by any of the recognised blood-relationships." Sometimes marriage gets to be "difficult to arrange owing to the excessive limitations imposed by the system. In different parts of Australia we find attempts to get over this difficulty by modifying the system in some way or other. . . . There is a tendency, easily perceived in some Australian tribes, and probably present in all, to maintain the unity of the clan as a part of the system of relationship by means of a rule that if an individual stands in a close relation to one member of the clan, then that must determine his relation to all the members of the clan." Following this out, as the author¹⁸ does, he finds it issuing in a very serious restriction on marriage which would not exist if there was a large number of smaller clans. He then describes certain curious so-called blood-divisions which operate to reduce restriction.

Among the Akamba, "if a man visits his friend belonging to the same *Mbaya* or clan he is given a temporary wife during his stay, the wife however must of course be of a different clan, e.g., if a Mweombi man visits another Mweombi he will be given one of the wives of his host, who will, say, be of the Mutangwa clan. Sometimes a very intimate friend not belonging to the same clan may also receive this honour while on a visit, but it is a rare occurrence."¹⁹ In East Africa, "excepting for the prohibition which forbids a man to marry a girl out of his own clan, there are no restrictions in the choice of a wife."²⁰ "If a

man find that he has married a woman of the same clan as himself, the following procedure is resorted to. The man and his wife climb on to the roof of the hut and after swallowing a blue bead both cry out: 'Now we have no longer any clan.' Descending they enter the hut and shut the door. An old man then comes to the door and calls to them: 'Come forth now, for you have no longer any clan'; and they leave the hut and sacrifice a white goat, from the belly of which a strip of skin is cut with which the man ties his right hand to the woman's left hand; this is then severed. After this they may live together as man and wife."²¹ Each Bageshu clan "seeks wives outside itself from one of its neighbours. . . . Blood relationship is a bar to marriage, that is, a man may not marry any one of his father's clan and he also avoids his mother's clan; all the women of that clan are his mother's near relations, those who are her real sisters he calls his mothers. . . . The people are all polygamists and may marry sisters of the first wife if they wish; there are no restrictions as to the number of wives, nor how many they may take from one family."²²

Rivers²³ writes, in connection with the Toda system: "In nearly every known community, whether savage, barbarous or civilised, there is found to exist a deeply rooted antipathy to sexual intercourse between brother and sister. In savage communities where kinship is of the classificatory kind, this antipathy extends not only to the children of one mother, but to all those who are regarded as brothers and sisters because they are members of the same clan or other social unit. In some communities, such as those of Torres Straits, this antipathy may extend to relatives as remote as those we call second and third cousins, so long as descent through the male line from a common ancestor and membership of the same clan lead people to regard one another as brother and sister. It is very doubtful whether this widespread, almost universal abhorrence is shared by the Todas. I was told that members of the same clan might have intercourse with one another." Yet they have definite restrictions on freedom of joining alliances. "One of the most important of these is that which prevents intermarriage between the Tartharol and the Teivaliol. These groups are endogamous divisions of the Toda people. . . . Each of these two divisions of the Toda community is divided into a number of septs or clans, and these are definite exogamous groups. No man or woman may marry a member of his or her own clan, but must marry into another clan. . . . In the whole of the genealogical record given in the tables at the end of the volume there is not a single case in which marriage has occurred between two members of the same clan. Among many races at or below the stage of culture of the Todas prohibition of marriage within the clan is usually accompanied by prohibition of sexual intercourse, and such intercourse is regarded as incest and often as the greatest of crimes. It is doubtful whether there is any such strict prohibition among the Todas. . . . The Todas have never married people outside their own community, and a strong prejudice against such marriages still exists." Intercaste union is tabooed among the Nairs. "The men that a girl could possibly marry were strictly restricted by certain conditions. A . . . girl is not allowed to contract a marriage with men of a lower subcaste. She can marry either in her own subcaste or in castes above hers. She is not allowed to marry one who is not at least two years older than herself. She cannot marry anyone who shares pollution with her (that is descended from the same ancestress on the

21 Dundas, K. R., in JAI, XLIII, 30-31.

23 Todas, 530, 508.

maternal side, however remote). There are cases when the common ancestress lived nearly four hundred years ago, but still her descendants are supposed to be so closely related in blood as to preclude matrimonial relationship of any sort."²⁴

Wilken²⁵ is quite copious in illustration of the prohibition of intra-clan union. Among Malays, union with a clan-mate is considered by all exogamous peoples as incest, with some departures where a marriage outside the village is in question. The Bataks adhere strictly to the taboo; formerly those who broke it were killed and eaten. In South Sumatra, persons who trespass against the taboo are destroyed, along with their offspring, by the gods. Nor may children marry into the *sumbai* (kin-group) of their parents. With regard to grandchildren, these limitations do not exist, so that these may marry freely into the *sumbai* of a grandparent, provided that they themselves or their parents do not belong to it. Everything depends wholly upon whether the grandfather was married with the brideprice or not. In the former case, the grandchildren may not form a union in his *sumbai*, but only in that of the grandmother; in the latter, just the opposite. Sometimes in Sumatra the prohibition is relaxed, so that a man may marry a woman of his kin-group if she is not of his family. Thus the taboo has been shifted from the larger kin-group to its constituent families. Still, one may not marry within that larger group without first giving a feast and paying a sum of money in order, as it were, to make good the transgression. Where, among the Malays, "exogamy does not exist, or at any rate no longer exists, the punishments for incest are very definite. As a rule, the guilty are condemned to death and there is no composition through fine allowed."

In Albania, "a *fis* or tribe . . . consists of one or more *bariaks*, that is, groups of men that fight under one standard. . . . In some tribes all the *bariaks* trace descent from a common male ancestor, and the divisions have only been made for convenience when the tribe grew large. In other cases certain *bariaks* are of other blood, and have been adopted into the tribe. . . . The tribes are strictly exogamous. That is, they invariably take wives from outside the tribe, excepting when a *bariak* within it is of different blood. Male blood only counts. . . . The rule is so strict that even tribes who trace origin from several brothers will not intermarry. . . . All descendants of a common male ancestor rank as brothers and sisters, and their union is looked on as incestuous and in the highest degree horrible. . . . So deeply rooted is the feeling that in all my eight months of wandering I heard of only one instance in which the law was broken. A girl eloped with a distant cousin on her father's side. He was far enough removed for the Roman Church to marry them. But it was incest in the eyes of the outraged family. The luckless couple fled to another tribe for shelter, but were hunted down. The bridegroom was shot down within the year, as was also his brother, who had aided the elopement and the bride's life was only saved by the intervention of the Franciscans." That such strictness does not preclude actual inbreeding appears from the following. "As it has been the almost universal practice to take a wife from the tribe next door and to marry the resultant daughters back into it (unless of course the tribe be one that is consanguineous), it follows that certain tribes must be very closely inbred on the female side. So far as I could learn among

²⁴ Panikkar, in JAI, XLVIII, 271.

²⁵ In VG, I, 306-307; II, 223-226, 335, 347, 478.

the Moslems, two tribes will go on exchanging daughters backwards and forwards for generations (I ascribe to this practice the very marked type of the Moslem tribes); and it has only recently been checked among the Christians. But the people declare that such tribes are in no way related—have not one drop of the same blood. I said a child had some of its mother's blood, but they said, 'No, only the father's.' The people all know most exact lists of their relatives on the male side. The fact that I could not enumerate my paternal cousins beyond second cousins was reckoned as a proof of the barbarous state of English society. 'Just like dogs or cattle.' In fact, many of our habits, about which they perpetually questioned me, filled them with contempt or disgust, and they explained the superiority of their own."²⁶

The cases that are to follow show, on the face of them, little or no element of consanguinity. They are, for the most part, wholly irrelevant to any contention that taboos on marriage arose from appreciation of the ill effects of in-breeding. Thus, in Melanesia, Rivers²⁷ thinks he has shown that several of the taboos upon unions where there can be no community of blood demonstrated are due to "a social system characterised by dominance of the old men." Seligmann,²⁸ citing Hobley,²⁹ records that among the A-Kamba there is "a special curse used for a bad wife, the husband draws a little milk from her breast into his hand, and then licks it up, this is a curse which has no palliative, after it the husband can never again cohabit with the woman." Then Seligmann, having put this illiterate statement into italics, goes on to remark: "I venture to think there can be little doubt as to the significance of this ceremony, especially when it is remembered that in the Hamitic area it is not infrequent for foster children to be looked upon as related to each other in the same degree as blood relations. Thus milk affords as valid a bond as blood, and the ceremony just described can only mean that the husband purposely makes himself of one blood (milk) with the woman and thus cuts himself loose from her for ever." Among the Kabyles, "though custom does not prohibit it, the man of good family will never take a wife from a family whose members practise a profession reputed to be dishonorable, such as those of butcher, dancer, saddler, or cobbler."³⁰ This is almost a caste-taboo. Miss Czaplicka³¹ records a series of taboos from Siberia: among blood-relations a man is forbidden to marry his mother, daughter, own sister, cousin, father's sister, mother's sister, brother's daughter, own sister's daughter. "Between all other blood-relations marriages are permitted." As for relatives by affinity, a man may not marry the following: "(1) stepmother; (2) sister of living wife (i.e. simultaneously two sisters); (3) cousin of living wife (i.e. simultaneously two cousins); (4) younger brother's widow; (5) deceased wife's elder sister; (6) nephew's widow; (7) sister of brother's wife (i.e. two brothers cannot marry two sisters); (8) cousin of brother's wife (i.e. two brothers cannot marry two cousins); (9) simultaneously an aunt and her niece; (10) two brothers cannot marry, one an aunt and the other her niece; (11) two male cousins cannot marry, one an aunt and the other her niece; (12) an uncle and nephew cannot marry two sisters, two cousins, or two women of whom one is an aunt and the other her niece; (13) a step-daughter." To a questioner concerning

these taboos, a Koryak answered that "relatives of the categories mentioned would die soon if they should enter into cohabitation with one another."

In China, "the degrees of unlawful marriages are comprehensive, extending even to the prohibition of persons having the same *sing*, or family name, and to two brothers marrying sisters. The laws forbid the marriage of a brother's widow, of a father's or grandfather's wife, or a father's sister, under the penalty of death." There was a prohibition of intermarriages between Manchus and Chinese, as between conquerors and conquered. The honorable and the mean "cannot intermarry without the former forfeiting their privileges; the latter comprise, besides aliens and slaves, criminals, executioners, police-runners, actors, jugglers, beggars, and all other vagrant or vile persons, who are in general required to pursue for three generations some honorable and useful employment before they are eligible to enter the literary examinations."³² Among other detailed proscriptions are marriage with the step-daughter and with female relations within the fourth degree of relationship, with the widow of a relative of the fourth degree, or with the sister of the widowed daughter-in-law. "Marriages with widows of relatives of a nearer degree are considered incestuous."³³ Legislation regarding marriage occupies a prominent place in the Penal Code of China. It strictly prohibits parties who labor under certain specific disabilities from entering into the state of matrimony, and renders its obligations fully as sacred and secure (taking into consideration the peculiar notions of the Chinese) as they can be with ourselves."³⁴

The Land Dyaks do not allow union with a deceased wife's sister, while the Sea Dyaks almost universally permit it; it is often encouraged for the very good reason that the children will then be brought up as one family. In the Indian Archipelago, social position counts heavily in the contracting of alliances; "there is no absence of rank and position, and almost nowhere is to be found the idyllic equality of which some dream." There are distinctions between free people and slaves, including pawns, also a species of nobility or aristocracy composed of those stocks favored by fortune and treated with respect, among whom the chiefs and other officials and their families take first place. "As a general rule it can be stated that among the peoples of the Indian Archipelago difference in position is taken strictly into consideration in marriage, so much so that not alone are unions between free and unfree, but also those between the aristocracy or nobility and the common people, reprobated, here and there even forbidden." Position comes under consideration especially when the woman is of higher rank; there is less repugnance at a union of a nobleman with a woman of the people, because by payment of the bride-price the children, following the father, belong automatically to his rank.³⁵ In Samoa, "the widower may marry his deceased wife's sister; the widow her deceased husband's brother. Both cases often occur at the wish of the dying parent in order to secure loving treatment for the children. Such wishes do not constitute a command, although often complied with from superstitious reasons." The author quoted³⁶ cites a novel twist in the mores. "The effect of division in war of a tribe is specially interesting, for here the question of marriage restrictions depended not on degrees of relationship, but upon what Gill calls 'clan

law. People who could not marry so long as the tribe was all one tribe could do so when it was regarded as having been divided into two; and the clan idea appears to have been so strong as to enable marriages to take place between people who under laws of incest would not be allowed to do so." It is a "curious fact that marriage in a group might be allowed if, as the result of internal war, the group was regarded as having been split up into two groups." Certainly such a case is strong evidence of the arbitrary nature of restrictions. On the island of Yap cousins might not marry and earlier it was regarded as a transgression against custom if a pair of brothers married a pair of sisters. It is allowed to marry the sisters of one's dead or separated wife, but the father may not marry his widowed or divorced daughter-in-law or a man his foster-child.³⁷

In the code of Hammurabi, the following punishments were listed: for incest with a son's betrothed, a fine; with a son's wife, drowning; with a father's wife, disinheritance.³⁸ Among the Mohammedans of Spain the reprobation of marriage with two sisters is represented as law but not yet in the mores.³⁹ Marriage between believer and unbeliever was forbidden.⁴⁰ In the regular Moslem law the union of those related through the nurse (foster-relations) was not allowed, nor might two sisters be married together. Two living in vice may not marry until after confession and punishment. There must be no marriage with a relative of a woman with whom one has had illicit relations.⁴¹ In Roman law marriage might not be concluded between persons who stood to each other in the relation of guardianship, as *tutor* and *pupilla* or between a *præses provincie* and a woman of his province.⁴² A curiosity is the provision that at the feast of the Bona Dea and the astum Cereris, a purification-ceremony for women, the mere presence of a man counted as incest and even the representations of male animals were covered. On this day and the preceding the women refrained from all sex-relations.⁴³ An example of a rational taboo is given by Plutarch,⁴⁴ he says of Cato that "in the belief that his slaves were led into most mischief by their sexual passions, he stipulated that the males should consort with the females at a fixed price, but should never approach any other woman."

At times of famine in Iceland marriage was forbidden to those who had no property, and eighty-year-old persons or weak-minded might not marry without the consent of their relatives.⁴⁵

The year 1907 saw the eventual passage of a bill by the British House of Lords permitting a man to marry his deceased wife's sister. The authority for that taboo lay in the Mosaic Law, as understood. But the abrogation did not carry with it the repeal of the law against a woman marrying her deceased husband's brother, which is distinctly commanded and prescribed by the Mosaic Law. As late as 1920, Mr. Lloyd George declined to introduce a bill in the House of Commons to legalize the latter union. It took half a century to pass the bill first mentioned, and the church has yielded only reluctantly. "That English Church Council, which at its recent session in London, condemned marriage with a deceased wife's sister by a vote of 224 to 14, has no

real authority," reads a communication of 1909. "Bishops and other ecclesiastical dignitaries were members, but it is a purely voluntary association, and we are surprised that it should undertake to vote on the subject, and to reprobate the use of the Prayer Book in solemnizing such unions. Parliament, the only authority which has any right to rule in the matter, has decided that such marriages are legal. There is no Bible against them, and if there were a Mosaic prohibition it would have no more validity than the command to sprinkle the ashes of a red heifer, or to raise up seed to a brother who has died childless. The action of the council is not simply impertinent; it prejudices the public against the meddling Church. Is it not plain that when the state has decided such marriages lawful, it is well that they should be solemnized with all religious weight by the Church? Of course, it will be declared that it is not the State but the Church, that rules in marriage; but the whole world knows better."⁴⁶

§350. Causes of the Taboo.

It is evident from foregoing examples that primitive peoples are almost universally horrified at incest, whatever they may consider that to be. The following few cases may serve to complete the list cited in the text.

"Bula! is said to the circumcised boys, i.e. confess your incest; when they heal slowly, they are understood to have been guilty of impurity with relatives; bula! confess your incest, is said to a woman in child-bed and to her husband, when the child refuses to take the breast, which according to their superstition is caused by the man or woman having been unfaithful in heart at least."¹ If the harvest fails for the Macassars and Buginese, that is a sure sign that incest has been practised and that the ghosts are angered. In 1877 and 1878 the west monsoon failed utterly, the rice did not thrive as a result, and besides thousands of buffaloes perished from the cattle-pest. At that time there was in prison a condemned man who had earlier committed incest. A part of the people of the district where that person belonged sought his release, since it was the universal persuasion that there would be no end to the trouble so long as the guilty one had not undergone the proper punishment. All his powers of persuasion, says the controller, were necessary to persuade them to go back home again quietly, and when the condemned man shortly thereafter came to the end of his sentence, he was given the chance, at his own request, to escape in a boat, he not believing that he would be safe in his own country.² "Incest was punished on Tamana and Arorae by laying the offenders face down in a shallow pool of water and suffocating them; in the Northern Gilberts the culprits were lashed to a log of wood and set adrift in the ocean; the lightest punishment seems to have been to put the incestuous couple aboard a small canoe, with a few coco-nuts, a paddle but no sail, and thus abandon them to the elements. The belief was that the sun would hide his face from the place in which two such offenders were allowed to live unpunished."³ Among the Salish Indians, "first and second cousins fell within the prohibited degrees, but beyond those limits there seem to have been no hard and fast

⁴⁶ N. Y. *Tribune*, August 25, 1907; N. Y. *Times*, July 16, 1919; Nov. 9, 1920; Nov. 9, 1924; *The Independent*, LXVII, 381-382 (quoted). The Levitical law is stated in Levit., XVIII, 16.

² Wilken, in VG, II, 335.

³ Grimble, in JAI, LI, 26.

rules. When questioned concerning the reason of these prohibitions they could give no other reply than that it was their 'custom,' and that it was considered 'big shame' for persons connected by blood to intermarry. This is in keeping with the general practice and belief of the Salish. . . . Whatever may have been the origin of these prohibitions among the Salish, it is certain that marriages between those nearly related were held in abhorrence long before there was any possibility of missionary influence making itself felt among them."⁴

The genesis of the view that in-breeding causes certain specific physical ills would form a protracted and engrossing study. "Gregory the Great placed the objection to the marriage of cousins wholly upon physical or sanitary grounds. Impressed with the popular belief which then prevailed, and which still prevails to some extent, he believed that such marriages were not fertile and declares: 'We have learned from experience that from such marriages offspring cannot grow.'"⁵ Wilken⁶ quotes a hardheaded writer of 1768 who combats the alleged "horror naturalis" of incest. "I hope it will be permitted also to ask whether we really have such a natural impulse or horror? And it is not enough merely to allege it: investigation is easy, for if there is some such natural impulse, everyone must perceive it clearly in his own case—yes, it must be found not merely in the case of one and another, but must be common to the human species. If this is not so, then it must be held to be, not a natural impulse but a consequence of education."

§352. Divisional and Tribal Endogamy.

MATHEWS¹ makes a sweeping denial of the presence of exogamy in New South Wales, Victoria, Queensland, and in northern and western Australia. This is consonant with the backward condition of the tribes in question. In Mombasa, East Africa, "marriages outside the tribe are discouraged, the elders requiring an assurance of the girl's consent before allowing her departure. This should act as a deterrent, for a girl of thirteen or fourteen is not often willing to change familiar for strange surroundings. In periods of famine however such unions are very frequent, owing to the wholesale migration of a starving tribe into the territory of its more fortunate neighbours."² A case of this order supplies hints as to special variations in the direction of exogamy which may well have supplemented general trends toward that form. "Marriage between persons of different tribes is of course hardly contemplated by tribal law, and in so far may be considered as no marriage. It is perhaps for this reason that among certain tribes smiths and hunters may not marry women of other classes, they being originally not members of the tribe, but aliens, such as the Derobbo and other aborigines."³

"All our earlier evidence concerning the Koryak seems to point to endogamic marriage. In the 'Description of people living near Yakutsk, Okhotsk, and in Kamchatka,' compiled by the local administration *circa* 1780, . . . we read that the Koryak 'do not take wives from another *ord*, and do not give their daughters for wives out of this *ord*, but marry among themselves.' Though the term *ord* is not defined, one may suppose that it corresponds to a clan or

local group. . . . 'They take their wives mostly from their own stock, first cousins, aunts, step-mothers; the only people whom they do not marry are sisters, mothers, step-daughters.' Jochelson himself asserts that in Koryak mythology only marriage with a sister or a mother is held to be a crime, but there are many instances of marriages between cousins. Thus we may suppose that most of the marriage prohibitions are of later introduction. . . . This most important regulation of Gilyak marriage is implied in their saying: 'Thence, whence you came forth—from the clan of your mother—you must take your wife.' The Gilyak system, while it prescribes a certain type of exogamy as between the sub-divisions of the clan, is characteristically endogamous. "The Gilyak calls not only his own mother *ymk*, but also all her sisters and all the wives of his father's brothers, real and classificatory, as well as the sisters of these women. He calls not only his own father *ytk*, but also the husbands of his mother's sisters, and his father's brothers. . . . A Gilyak woman names by the term *pu* not only her husband, but his brothers and the husbands of his sisters. The Gilyak calls not only his wife *angey*, but also the wives of his elder brothers (real and classificatory), and these wives' sisters, and similarly all sisters of his wife. He used the same term for all daughters of his uncles (proper) and all daughters of the brothers of the women whom he calls *ymk*. These classes could only originate under a rule by which all men in one class, A, had to take wives from another class, B, so that the men of class A are destined from birth to marry the daughters of their mother's brothers." This is the important regulation alluded to above. The following schematic table showing the original marriage-regulations of three family-gentes, forming one clan, is given:

<i>Gens A</i>	<i>Gens B</i>	<i>Gens C</i>
Male A marries female B (sister of male B). Their sons marry daughters B; and their daughters marry sons C.	Male B marries female C (sister of male C). Their sons marry daughters C; and their daughters marry sons A.	Male C marries female A (sister of male A). Their sons marry daughters A; and their daughters marry sons B.

"Inside the clan there is an endogamic arrangement, while each gens is exogamic. . . . All people who are in the relation of *angey* and *pu* have really the right of sexual intercourse, not only before, but also after, the individual marriage. In the absence of her husband, a wife can have intercourse with any man who is *pu* to her."⁴ Such usages appear to verge upon survivals of a much looser form of union, approaching group-associations. The terminology is characteristic of systems of address later to be considered.⁵ The essentially endogamous nature of the regulations comes out clearly enough upon scrutiny; in fact, evidence for closeness of in-breeding appears in connection with any such loose systems or survivals.

Among the Kuki-Lushai of India, "marriage among nearly all the clans, . . . is endogamous, as regards the clan, but exogamous as regards the family. . . . A man may marry any woman, except his sisters, mother and grandmother; maternal first cousins marry freely, but there is a certain prejudice against paternal first cousins marrying."⁶ "The Nilgala Veddahs,

⁴ Czaplicka, *Aborig. Siberia*, 82, 98-99.
⁵ §423, of the text.

⁶ Shakespear, in JAI, XXXIX, 381.

who still maintain an almost total isolation from other people, are rapidly disappearing. The Veddahs of Bintenne, who have abandoned the pernicious custom of marriage between a brother and younger sister, and still intermarry among themselves, are becoming extinct, though more gradually.”⁷ In Borneo, “though it is not forbidden to marry into a neighboring, non-related group, yet that comes about so seldom that Tamans and Kayans have lived a half-century and longer next to each other without mingling, the while they retain their own language and customs. Most aliens have come over from related groups and remain attached through marriage for a shorter or longer time.”⁸ The Alfurs of the Minahasa and the Dyaks have some tendency to and phenomena of endogamy.⁹ “In the typical case of the Seri [Indians] interclan marriage is continued in order that tribal union may be maintained. Mating or even sporadic connection with aliens is strictly forbidden, that the integrity of the tribe may be preserved.”¹⁰ The Araucanians of Chile show little propensity to marry outside their own people; they never submitted to the yoke of Spain and preserved what might be called race-endogamy.¹¹ Here was a kind of political basis for in-marriage; and the religious basis has not been lacking in history. Mixed marriages were the horror of the old Persian priests who thought that the influence of the alien mothers, since the early years of the child were so predominantly under that influence, must lead to heterodoxy.¹² The feeling of the orthodox Hebrews toward union with the Gentiles is well-known; modern rabbis still emphasize the ill effects of mixed marriages. “We are opposed to intermarriage because we believe in our own religious mission and we feel that whatever tends to weaken that mission ought not to be encouraged. By intermarriage we understand the union of two persons of different faiths who after marriage still cling to their respective religions. The Jews never objected to that kind of intermarriage as the result of which the non-Jewish party became a convert to Judaism.”¹³

§353. Divisional and Tribal Exogamy.

WHEN one approaches the subject of marriage-prohibitions, he finds the materials in evidence both copious and complicated. We are seeking here to illustrate rather than to explain; explanation, whether persuasive or not, is a highly technical matter.

Brown,¹ in treating of three tribes of West Australia, writes as follows: “The Kariëra tribe is divided into four parts that I shall speak of as *classes*. The names of these are Banaka, Burung, Palyeri, and Karimera. . . . A man of any given class is restricted in his choice of a wife to one of the other classes. Thus a Banaka man may only marry a Burung woman and a Burung man may only marry a Banaka woman. The two classes, Banaka and Burung, thus form what will be spoken of as an *intermarrying pair* or simply a *pair*. This does not imply that a Banaka man may marry *any* Burung woman, but only that he may not marry a woman of any other class. . . . The rules of marriage and descent of the Kariëra tribe are shown in the following table:—

7 Bailey, in *Trans. Ethnol. Soc. London*, II, 296.

8 Nieuwenhuis, *Borneo*, I, 77; index sub “huwelijk.”

9 Wilken, in *VG*, I, 453.

12 Spiegel, *Eran. Alterthskde.*, III, 679.

13 Krass, reported in *N. Y. Times*, March 3, 1924.

1 In *JAI*, XLIII, 147-148, 159

Father.	Mother.	Child.
Banaka.	Burung.	Palyeri.
Burung.	Banaka.	Karimera.
Palyeri.	Karimera.	Banaka.
Karimera.	Palyeri.	Burung.

This may be expressed more concisely by means of a diagram.

The sign = connects the two classes of an intermarrying pair, and therefore shows the relation of husband and wife. The sign \curvearrowright connects the class of a mother with the class of her child. I propose to speak of the classes so related as together forming a *cycle*. In the Karimera tribe Banaka and Karimera form one cycle and Burung and Palyeri the other. The children of a woman always belong to the same cycle as herself, but to the other class of the cycle. The sign \diagup connects the class of a father with the class of his child. I propose to speak of the two classes so connected as together forming a *couple*. In the Karimera tribe Banaka and Palyeri form one couple and Karimera and Burung form the other. The children of a man always belong to the same couple as himself, but to the other class of the couple." Native terms express these several relationships. "It is obvious from the above account that a man can never marry a woman of his own local group, since such women are either *kandari*, *toa*, *turdu*, *mari*, *kundal*, or *maeli* to him. We therefore find in this tribe the condition often called 'local exogamy' by ethnologists. On analysis, however, we see that this local exogamy is simply the result of the regulation of marriage by relationship, together with the peculiar constitution of the local group."

It is evident enough that such complicated taboos go back to the local idea of what consanguinity is, and that the constant trend is to get away from what is considered to be in-breeding. And whatever the taboos may be, there is no question about their power; mating is controlled by an iron system, backed up by religious considerations of the most compelling sort.

Singular complications arise in the cases represented in Cunow's² schematic arrangement, based on a southeast Australian system which prevents marriage between individuals in the same life-status group, and so amounts to a new restriction under the one based upon age. Here, after the phratries are formed, each consisting of a collection of totem-groups, four marriage-classes are distinguished, which consist of males and females and run through the totem-groups, including parts of each. The divisions are as follows:

	Phratry A		Phratry B	
	Male	Female	Male	Female
1. Parents of married:	Kumbo	Buta	Murri	Mata
2. Adult married:	Ippai	Ippata	Kubbi	Kubbotha
3. Not marriageable:	Kumbo	Buta	Murri	Mata

² *Australneger*, 2, 5, 14; Mathew, *Eaglehawk and Crow*.

There are thus two marriage-classes in each phratry and each comprises males and females, whose names alternate in the life-status strata. A man in the third stratum who comes to marry is, for example, in some totem of phratry A and is, being a male, a Kumbo. He must marry in the other phratry and in the same life-status stratum. His wife is a Mata; if he were a Murri of phratry B, she would be a Buta. For the same reason any Ippai of the older generation must, when he married, have taken a Kubbotha, and any Kubbi an Ippata. Also the oldest stratum must have combined like the youngest; but, owing to the age-taboo, no Kumbo of that stratum could marry a Mata of the youngest. If the family is under father-descent, the children of Kumbo are Ippai if male and Ippata if female; of Murri, Kubbi and Kubbotha; of Kubbi, Murri and Mata; of Ippai, Kumbo and Buta, respectively. If it is a family under mother-descent, the children of Buta must be Ippai and Ippata; of Mata, Kubbi and Kubbotha; of Ippata, Kumbo and Buta; of Kubbotha, Murri and Mata, respectively. Curr³ has constructed a table in which he endeavors to illustrate, with English names, this type of restrictions to marriage.

First Generation.	Second Generation.	Third Generation.

In New Guinea, "Mekeo marriages are governed by a rule of exogamy which makes it improper for a man to marry a girl of his own clan, or even of his own *ngopu* group, of whatever village she may be, though he may marry a girl of his own village who is not of his clan or *ngopu* group. . . . Marriage between the children of two sisters (first cousins) is not allowed, and even marriage between the children of those children (second cousins) is not strictly regular, though as regards the latter they constantly shut their eyes to the irregularity and permit it."⁴ Seligmann⁵ speaks of these same people: "In

³ *Aust. Race*, I, 113.

⁴ Williamson, in JAI, XLIII, 275.

⁵ *Melanesians*, 365, 366, 486.

spite of the statement that no one marries within the *pangua*, Father Egidi's genealogies show that to a limited extent the members of large clans . . . have contracted endogamous marriages. The figures given in the table indicate that such marriages were never frequent and the genealogies show that no cases have occurred recently." Specifically, "*ongoi*, the breadfruit tree, and a palm called *imöu*, were in each tribe assigned to one of its *pangua* which stood in the reciprocal relation of *ufuapie* to the other *pangua* of the tribe. Since in both tribes marriage is not, and never was, allowed within the *pangua*, the original *ufuapie* groups were intermarrying groups, but this does not seem to have been due to any conscious desire to avoid marriage between individuals having the same *iauafangai*, for in the past as at the present day the only bar to marriage was identity of *pangua* or near blood relationship." A curious case is reported by the author quoted, as he writes of the Southern Massim: "Formerly, children approaching puberty captured in war were sometimes adopted into the clan. In these cases whatever the sex of the prisoners, they assumed the totems of the man adopting them, so that it became impossible for a man to marry a female prisoner adopted by himself or, in the old days, to have prolonged intercourse with her. It was repeatedly stated that these rules were formerly most stringently adhered to, and a female prisoner adopted into the clan was in fact looked upon as the sister of the man adopting her." It is evident, again, that the taboos had little to do with actual inbreeding.

Haddon⁶ has "more than once called attention to the fact that among some Papuans marriage restrictions are territorial and not totemic. Dr. Rivers has shown that in Murray Island [in the region of Torres Straits] marriages are regulated by the places to which the natives belong. A man cannot marry a woman of his own village or of certain other villages. The totemic system which probably at one time existed in this island appears to have been replaced by what may be called a territorial system. A similar custom occurs in the Mekeo district of British New Guinea, and it is probably still more widely distributed. I was informed by a member of the Yaraikanna tribe of Cape York, North Queensland, that children must take the 'land' or 'country' of their mother; all who belong to the same place are brothers and sisters, a wife must be taken from another 'country': thus it appears that marriage restrictions are territorial and not totemic. The same is found amongst the Kurnai and the Coast Murring tribe in New South Wales."

In general the East African tribes are exogamous. "Marriage with sisters is unknown and strict endogamy is nowhere the rule. . . . Marriage within the clan is unlawful among the Wakamba, Wakikuyu, Watheraka, Wachagga, Wasove, and Bagwe. . . . With several tribes marriage between children of blood brothers is unlawful by reason of the spiritual relationship between their parents." There is in East Africa a peculiar usage of reckoning by generations which has its effect in the marriage-taboos. Each generation, like each circumcision-group, has its own name; and, strangely enough, "there is in every age one generation which is the ruling one, or, as the natives say, 'the generation which owns the country.' . . . This retiring of one generation, and the assumption of their place by another, takes place at a great ceremony . . . at which

6 "Totemism," in *Brit. Assoc. Adv. Sci.*, 1902, 14. His reference to Rivers is JAI, XXX, 78.

7 Dundas, C., in JAI, LI, 261.

the succeeding generation is said to 'buy' the country. . . . We are accustomed to think of one generation as comprising persons of a certain age, although this is not its real meaning. If we would compare the genealogy of any two Europeans we might find that although their ages might be equal, the order of their respective generations might be vastly different. In polygamous societies there is of course a much greater range of age between the sons of one father, and in fact there is often a surprising difference of age between members of one generation in Kikuyu; illegitimate children are reckoned to the generation of their legitimate brothers and thus it is possible for a man to beget a son who belongs to a generation senior to his own."⁸ Among the Masai such generations are connected with circumcision and are restricted to the male sex. "Women do not have *poror* [generations], that is to say they are not circumcised or operated on in groups but at odd times when they are considered old enough." These generations, irrelevant as they are to any considerations of consanguinity, constitute a basis for marriage-taboos. "A man cannot marry the daughter of a man of his own age—he must marry the daughter of a man of a previous age to his own. Like many other races it is the custom among the Masai for a man to be provided with a temporary wife when he sleeps at a kraal" encountered in the course of a journey. "He can however only cohabit with the wife of a man of his own *poror* or age; these relations are looked upon as quite lawful."⁹ In the Kenya colony these age-grades "partake of the nature of a social division; it is impossible, for instance, for a man to marry a woman whose male compeers are of a senior grade to his own and a nominal respect is paid to the senior grades." A number of cases follow. Age-grades may occur every five years.¹⁰

"Sexual intercourse between persons of the same exogamous group is not approved by the custom or sentiment of the Semas, nor indeed by that of the neighbouring Naga tribes."¹¹ Thus the rule does not confine itself solely to marriage. Again, the rule may prescribe in-marriage and yet be constantly infringed: the Chinese law "forbids intermarriage with some of the savages, but this is not carried out in practice. In Formosa the Chinese constantly intermarry with the savages."¹² Another arbitrary rule concerning unions is where a younger sister may not marry ahead of an older, unless the latter is deformed or otherwise incapable; again this can be done only upon payment of a small sum to the older sister or mother. In some cases there is a fictitious marriage of an elder brother to some inanimate object to clear the way for a younger brother's union.¹³

Among certain Indians of Oregon, "there was no well-defined rule against marriage within the village, but as it must very often have happened that practically all the residents of a village were related, it was customary to look beyond the village for a mate, and in many cases even to marry into some neighboring tribe of alien speech."¹⁴ Among the Tlinkit, "to marry one of the same great totemic phratry, though no blood relation, is a matter of deep disgrace, and in earlier times one who violated this custom was punished with death. Any who offend in this matter now are deeply execrated."¹⁵

Among the Arabs, "one shall not seek a bride outside of his circle, his village.

Yet endogamy is not alone legitimate." Exogamous unions appear "very frequent and show how extended, despite all feuds, peaceful relations must have been between the tribes."¹⁶ "The old Serb custom of exogamy is illustrated in almost all the ballads of the weddings of Serb heroes. Nearly every one begins: 'When So-and-so wedded he sought a wife from afar.' We see, too, how the wife is usually chosen in order to make a strong alliance with her family."¹⁷

§355. The Ascendancy of Exogamy.

It is said of some Melanesians that "avoidance of marriage within the clans holds out, but even this begins to weaken. I know of one case in which a man is married to a woman of his own totem. He is jeered at by the others who say: 'This man has married his sister.' Cases of sexual connection between people of the same totem are not infrequent, but great secrecy is maintained, and there is a feeling of shame about admitting it."¹⁸

Among the Asaba people of the Niger, "a man marrying into a neighbouring village derived a certain advantage in regard to intercourse with that village, as he could, in the troublous times existing some twenty years ago, pass freely without danger of murder or robbery from his own to his wife's town."¹⁹ How exogamy may strengthen a tribe for war is indicated in a case from New Zealand. "If a well-born member of one tribe marries into another, he or she will act as a 'cord' to draw that tribe to our assistance in war. The two tribes will call upon each other for assistance at such times."²⁰

"It has been noticed by good observers in India that the comparative liberty of intermarriage permitted by Mohammedanism is part of the secret of its success as a proselytising religion. It offers a bribe to the convert in relieving him from the undoubtedly vexatious restraints of the Brahmanical law of marriage."²¹

Roth²² notes that it seems very possible that the spread of agriculture was due to the system of wife-capture. "In North America there are all the elements for such conclusion; exogamy was almost universal among the Indians, and among them also agricultural and hunting tribes dwelt side by side, while agriculture was in every stage of development."

We do not attach enough importance to the various theories about the origin of exogamy to attempt any survey or critique of them. Perhaps the classic explanation is that of Lubbock,²³ which emphasizes the favored position of the man who possesses a stolen woman. As she has no defenders and therefore no rights, her owner can do what he pleases with her. This renders him enviable and also an object of imitation. This theory seems plausible on the face of it and is as good as any other; it has been adopted by eminent writers;²⁴ but we find it no very valuable key to the cases.

For the several theories, together with a rather elaborate discussion, the reader may refer to Lang, *Social Origins*. An illustration of this author's

manner follows; discussing the views of Westermarck,⁸ who sees in propinquity—the feeling toward those with whom one lives—the factor deterrent of in-marriage, he writes: “As to exogamy, Dr. Westermarck explains it by ‘an instinct’ against marriage of near kin. Our ancestors who married near kin would die out, he thinks, and they who avoided such unions would survive, ‘and thus an instinct would be developed’ by ‘Natural Selection.’ But why did any of our ancestors avoid such marriages at all? From ‘an aversion to those with whom they lived.’ And why had they this aversion? Because they had an instinct against such unions. Then why had they an instinct? We are engaged in a vicious circle.”⁹ This criticism may seem to be a mere piece of dialectics; the fact is that Westermarck is not clear as to the distinction between evolution as it appears in two of its main phases, the organic and the societal.

What is in some respects the most interesting of all the theories is that of Atkinson,¹⁰ a man “far from books” and who developed his ideas around a few remarks of Darwin in *The Descent of Man*. Darwin believed that jealousy led early man to guard his mate or mates against other men; that the older and more powerful male drove off the younger one who, “being thus expelled and wandering about, would, when at last successful in finding a partner, prevent too close interbreeding within the limits of the same family.” Atkinson starts with this suggestion thrown out by his prophet and goes on concerning extra-family marriage: “If I am correct, we shall find that it was connected with the sexual relations of primitive man, *whilst in the animal stage*, and especially with the mutual marital rights of the males within a group. Such idea in travail, hastened and sharpened by needs of environment, created issues which necessarily gave birth to a ‘Primal Law’ prohibitory of marriage between certain members of a family or local group, and thus, in natural sequence, led to forced connubial union *beyond* its circle, the family or local group—that is, led to Exogamy.”

Reflection upon theories as to the origin of exogamy reveals them as more or less ingenious speculations, analogous in differing degrees to those of the philosophers. They will sustain little weight of superstructure. As we have nothing better to suggest, we have ignored the question of origins,¹¹ assumed the existence of variations toward exogamy, and compared the merits of the two systems of in- and out-marriage.

§358. “Capture-Marriage.”

Among some Australian tribes who practised wife-stealing, if the offending party was caught by the pursuing tribe when travelling in company with the kidnapped gin, the guilty pair were brought back to the place of departure and the man made to undergo the ordeal of spear-throwing. “This consisted in having 100 spears cast at him, when stationary, by five men, as fast as possible. The dexterity displayed by the culprit in avoiding them is said to have been wonderful. If he escaped without fatal injury, the matter was considered settled; honor was satisfied, and the woman was allowed to remain with him as his wife. If, on the other hand, the runaways should be found cohabiting at the place of refuge, dire vengeance was immediately administered,

¹¹ §454 of the text.

the man killed, and his body disposed of.”¹ Sometimes the Solomon Islander steals a woman from a neighboring tribe, “and takes her to wife, if the tribal mark allows of it—if not, then he sells the stolen woman to a native whose mark allows him to enter a matrimonial union with her”; but wife-purchase is by far the commoner procedure.² Though in some parts of British New Guinea capture now occurs, it leads to quarrels and is rare; subsequent payment is required to give satisfaction.³

The Fan used to attack neighboring tribes, kill and eat the men without further formality, and capture the women as wives. This led to a constant contribution of new blood to the tribe, which explains, the author⁴ thinks, both the profound vitality of the race and the traces of successive crossings. The militant Zulus stole their wives freely.⁵ In Mashonaland the revenge for woman-capture was the seizure of the thieves’ cattle.⁶ Again, the woman was held inviolate for ransom. An African chief said he had not taken a certain captured virgin to wife because he ought not; for her father had given notice of his intention to redeem her and she was to be restored as she was obtained.⁷ Among the Dinkas a wife is obtained by purchase or by capture from hostile clans or tribes. “The wives obtained in the latter way are inferior in position to the purchased wives; but their children are the equals of those of the superior wives.”⁸ Capture-marriage of the female barley spirit is ceremonial in Morocco.⁹

All the evidence goes to show that Yakut wives were originally war-captives. If a man while hunting saw a handsome woman, he and his friends watched their chance, killed her husband, and took her like a war-captive. In the Yakut epic tales one of the great motives is to steal women; in all war stories maidens are won by the victors. They are given to conciliate and to avert threatened war, and as amercement for men killed or cattle stolen; thus they are property and booty and the wedding might be a ceremony connected with peace negotiations and settlement. At a wedding the attitude of the two parties is one of hostility or suspicion, of watchfulness and of readiness to fight or flee.¹⁰ Among some peoples of Russia, wife-stealing exists; the abduction of a woman from her parents’ home is considered by others as a great piece of boldness for which the perpetrator often pays very dearly. Among the Cherkes a woman who has been promised to a man is regarded as his even while in the house of her parents, and if she is stolen, it is an insult to him which demands exemplary revenge, and has led repeatedly to bloody scenes. If the parents have connived in the enterprise they have to repay the bride-price and the prospective groom often seeks vengeance on them; the abducted girl remains the wife of the robber.¹¹

“A young Badaga of the Nilghiri hills, who cannot obtain the girl of his choice, makes known that he will have her or kill himself. Understanding which, some friends place him at their head, go, if need be, to seek reinforcements among the Todas, and return with a band of sturdy fellows. Generally the abduction is successful.”¹² While Sema marriage is still practically a matter

of purchase, capture is not and would seem never to have been a basis for marriage. "The women of a Sema's enemies are regarded as the possessors of heads to be taken and of long hair to be made into ornaments, not as possible wives or slaves."¹³ "The Hindus had a special name for marriage by abduction: the *rakshasa* form, which was confined to the *Kschatriya* or warrior class;" and cases of abduction are celebrated in the *Mahabharata* epic.¹⁴

In the Dutch East Indies it sometimes happens that young men abduct girls of their choice. This is a rather dangerous proceeding, for if the man is caught he can be killed unless he belongs to a higher rank than the girl. If the abducted girl was already betrothed to another, the abductor must pay indemnity.¹⁵ In this case, abduction is almost elopement. In northern Sumatra, Jacobs¹⁶ found a combination of usages connected with marriage, dating from various periods, which prove that in ancient times and before the matriarchate was here introduced, marriage took place through violent abduction of the woman. If two communities in the Malay Peninsula were at feud and the young people had no opportunity of making a choice, matches were effected by capture and both the women and their dowry taken by force. This was done through organized attacks.¹⁷

Speaking of the peoples on the western border of China, Ratzel¹⁸ says there are no pure races at all; slavery and wife-stealing have been long at work to mix them. In the *Shiking*, or Chinese Book of Odes, are found traces of marriage by capture.¹⁹

By the side of marriage by purchase, wife-capture existed among the Indo-Germanic peoples in antiquity.²⁰ Clytemnæstra recounts how Agamemnon slew her former husband Tantalus and, tearing her babe from her arms, dashed it on the ground and then married her by force; yet she boasts what a good wife she has been to him after she was reconciled to him on this footing.²¹ Traces of wife-capture may be found both in the Bible and in the Talmud.²² Up to the time of Mohammed, woman-stealing was in vogue in Arabia.²³

Survivals. In British New Guinea a man arranges with the girl of his choice, and at night goes stealthily and carries her to his father's house, where they sleep together. "The girl is supposed to be stolen by the young man and his friends. In the morning, the girl is missed, and her father or uncle and his friends arm, and, amidst great appearance of wrath and loud shouting, make for the house of the young folks and surround it, demanding their girl. The young man's party issue out sometimes, and arrows are fired, and many hard and angry things are said. The girl's father is supposed to be very heart-sore at the loss of his girl, and he returns with his party again and again for several days, to the great delight of the girl, who feels she is a much loved daughter, and thinks how much she will be valued by her husband's family."²⁴ In the island of Tikopia the relatives decide on a day to sally out and seize the woman who has been chosen, the bridegroom remaining in the house. "The

seizure of the woman is resisted, and a fight takes place with clubs and bows and arrows in which no one is ever killed though some are often badly wounded. At the end of the fight the father and maternal uncle of the woman are given presents of mats and cloth, and the woman is taken to the house of her future husband. . . . On the fifth day the wife goes to her father's house and helps to prepare food which she takes back to her new home, and after this the marriage is consummated."

The procedure in Pentecost, New Hebrides, is as follows: "Some man is chosen to go into the house, pretending that he has come to fetch fire, and he goes quietly to the girl and, seizing her by the wrists, says 'Marry.' The girl is very much astonished and begins to cry and before she knows what is happening she is wrapped up in the new mat brought the day before by the future husband. This is done by his sister who has come into the house. . . . The man who has told the girl to marry then seizes a stick which he knows will be wanted and goes out of the house to encounter a man belonging to the moiety of the father of the girl. This man has a club with thick thorns on it with which he strikes at the man who comes out, it may be so severe a blow as to break his arm. . . . As soon as the blow is struck all the men of the village produce sticks prepared the night before and begin to fight with the party which has come to fetch the girl. . . . The girl is then taken to her future home, the people of her own village standing in the way and resisting her removal, and anyone who offers much resistance is appeased with a present." Rivers,²⁵ from whom these cases are taken, suggests that the simulated capture came into existence as the result of the social condition which he has called a gerontocracy; the marriage of a girl while still an infant, he is convinced, was the result of an attempt to escape from the dominance of the old men and from their monopoly of the younger women of the community. "In the early stages of the breaking down of the dominance of the elders, the younger men could only obtain wives by the gift of their maternal uncles during the lives of the latter or by marrying the widows of their uncles. This being insufficient to satisfy their needs, the younger men were driven either to elope with, or carry off by force, the young girls of the other moiety, either marrying them at once or putting them in the charge of their mothers till the girls were old enough to marry. . . . To the older view of McLennan and others that such a custom as that of Pentecost is a survival of capture from a hostile tribe, the fact that the capture is so obviously a sham, so evidently carried out with the connivance of the relatives of the captured woman, has long been a difficulty, to many an insuperable difficulty. This connivance, which seems so difficult to understand as a survival of capture from a hostile tribe, becomes perfectly natural if the so-called capture was merely intended to keep the women from the clutches of the old men of their own community. The sham nature of the whole proceeding is clearly intelligible if the belief in the magical powers of the old men, which I have taken to be the original source of their dominance, still persisted sufficiently to make it desirable to disguise from the old men the understanding which existed between the relatives of captive and capturer. If I am right, just as the ceremonial capture is the survival of a real capture, so is the ceremonial connivance the survival of a real connivance."

Especially in East Africa are there numerous examples of mock-capture and of survivals in the wedding-ceremony. Among the Bahima, "the bride-

groom enters, takes the bride by the right wrist, and leads her out of the house; she is still closely veiled in a finely dressed cow hide, so that nothing of her face or form is visible. Directly the bride is brought out her relations produce a strong rope, one end of which they tie to her leg, and the relatives of the bride and bridegroom take sides and have a tug of war for her, the bride's party struggling to retain her, while the opposite party try to drag her off. During this tug of war the bridegroom retains his hold of the bride's wrist and she stands weeping and sobbing at being carried off from her father's house. This contest always ends favourably to the bridegroom's party. The bridegroom hurries his bride along a few yards to a spot where a few of his friends stand ready, with a large cow hide spread on the ground; the bride is placed upon this, and the young men hoist her up, and rush off with her in triumph to the bridegroom's father's house. . . . On the third day the marriage is consummated."²⁶ Again, "marriage is by capture, the young couple coming beforehand to an understanding with regard to its time and place."²⁷ A survival of capture is seen in the Wagogo ceremony where a friend of the bridegroom takes the bride on his shoulders and runs away with her in triumph to her new home. The bride is veiled.²⁸ A kind of marriage by capture, with or without the consent of the girl, is found among the Wangonde. The bridegroom, assisted by friends, lies in wait by the water-supply, seizes and carries her home. The relatives are in honor bound to rescue her if the groom is "so maladroit as to make it impossible for them to affect ignorance of the abduction." A present to the girl is necessary before consummation.²⁹

After preliminary payments, among the Wawanga, "the bridegroom proceeds with at least four of his kinsmen to the bride's village and there seizes her by force. The girl at once commences screaming for help, and in answer to her cries the women of the village come running up. The bridegroom beats and drives them off with a stick. The girl is then carried away to the village. In the evening the bride's girl friends and relatives proceed to the bridegroom's hut, where they are witnesses to the consummation of the marriage and the bride's virginity."³⁰ In the case of the Akamba, "in former days on the day of the marriage the bridegroom went with five or six brothers and friends and seized his prospective bride in the fields near the village, the girl would call out and her brothers would assemble and attack the bridegroom's party; they would fight with sticks and even swords and if the girl's brothers won they would take their sister back to their village."³¹ "When a man has paid dowry, or as much of it as was stipulated, and the time has come for him to take the bride to his village, the relations are very fond of protracting this event in order to extort presents from him by vain promises that such and such shall be the last gift demanded. But when he has given as much as he considers reasonable he will go and steal away the bride at night. In any case this is done in Ukamba, the parents affecting not to be aware of the intention, and if the bridegroom be a young man his friends will act a sham robbery. At other times there is less fiction about this, and the girl is carried off by stealth because she cannot be got by other means."³²

Among the Somali the girls willingly let themselves be carried off while tending sheep, "and precisely this sort of woman-stealing is said very often to wipe

out existing blood-feuds, because in this way restitution is made to the tribe robbed of labor-forces, and so complaints and feud-conditions can have an end." Among the Galla there are several forms of bride-abduction: in one, "several young men take to horse, in order to carry off the girl at some one of her ordinary occupations. The one who gets hold of the bride and with her on his horse seeks the open country is called brother and protector of the girl. . . . He brings the bride to a place of safety, kills an ox, streaks the abducted girl's neck with the animal's blood, and at the same time gives her some of the blood of the sacrificed animal to drink, out of his hand. The relatives of the girl soon learn of her location and hurry with weapons and with insults to her abductor. The bridegroom calls together the village elders . . . and these determine the sum which the bride-stealer must pay the girl's father so that she may become his wife."³³ Among the Dinkas, the bridegroom's party arrives and demands the bride. "The women reply that without gifts she cannot be given up. Bargaining then commences; the young men saying 'for what will you give her?' and the women replying 'for so much.' Or sometimes the young men pretend to try to force their way in and carry the lady off; and while this mock strife is going on, one of the party cuts a hole in the grass wall of the hut, from behind, and carries the bride off to her husband's quarters."³⁴

In southern Tunis the groom keeps hidden with his friends for eight days before the wedding.³⁵ Berber ceremonial exhibits survivals that are becoming less obvious. After the wedding-feast, when the bride is to go to the groom's tent, the latter "mounts the bride and himself upon a mare and gallops amongst the tents of the village, the girl screaming out the while, and striking each tent three times with a stick, as if to call attention to the fact that she is being abducted by force. None of the writer's informants could give any idea of the origin of the ceremony, beyond stating that 'formerly' brides *were* abducted. A like custom exists to-day in the neighborhood of Tangier. When the women congregate in the fields to weed the green barley or reap the crops, a straw figure, dressed like a woman, is taken with them. This figure is placed standing in the field amongst the corn. Suddenly men appear from a neighboring village, mounted on horses, and galloping into the field, the figure is lifted to a horse and stolen, amidst the screams and cries of the women. A fresh body of horsemen then appear upon the scene and the straw lady is rescued, and handed from one to the other and fought for, until, generally in a very dishevelled condition, it is returned to the women again." The day and hour for this ceremony are made public previous to the event. "Each village formerly practised this mimic struggle for the possession of the imitation lady, but now-a-days it has dropped largely out of practice and is seldom seen."³⁶

Among the Yakuts, "whether the stealing of women was the cause of . . . hostilities, or the relatives gave the woman voluntarily in compensation for a man who had been killed, or for stolen cattle, is immaterial. In any case she was regarded as *booty*, and the wedding resembled a *peace negotiation and conclusion*. To this day both the parties who come into relations with each other at a wedding behave to each other during the feast with respect, yet still with a certain concealed distrust and jealousy. They are constantly on the look-out lest the others get the better of them in the gifts, or cheat them." The

horses of the groom's party are saddled, as are also those of the bride's relatives who have come to the wedding. "A Yakut who was asked why he did not unsaddle his horse at a wedding answered, 'Differences are apt to arise at a wedding.'³⁷ Here is a typical transition toward composition of differences and peace, such as can be observed in the case of any other sort of booty-raiding³⁸ as it evolves distrustingly toward a more developed system.

Among the Koryak, "the marriage ceremony itself, which gives husband full right to his wife, is the act of 'seizing' his wife, described by all our authorities with only slight variations. Most of them agree . . . that the bride must not surrender to the bridegroom without a struggle, nor will the bridegroom take her without encountering the usual difficulties. . . . The girl herself resists, and tries to run away, and besides this, her girl friends attack and try to beat the bridegroom back; and if the girl does not care for the man she tries to hide among the neighbours." On the marriage-day the friends and relatives are invited; and, "to the accompaniment of the drum and songs, the bride runs round the *yurta* [tent]. The groom pursues her, and at each corner is attacked by the women, who try to stop him with their feet, and beat him unmercifully with branches of the alder-tree. Finally the bride slackens her speed, or she would not be caught at all. . . . When the bride approaches the house of her bridegroom's parents, the latter come out with firebrands taken from the hearth to meet her." Although a Kamchadale has obtained permission to take his bride, he is still obliged to capture her, "because now all the women of the village protect her from him. She is dressed in several heavy gowns and closely wrapped up so that she looks like a stuffed figure. . . . There is a case on record of a man who for ten years had been trying to obtain his wife, and his head and body were much disfigured by his struggles, which were nevertheless quite in vain." According to the customs of the northern Altaians, "the bridegroom is supposed to capture the bride. As a matter of fact, the girl has been apprised beforehand of his intention, the matter is settled with her, and she gives to the young man's envoy a kerchief from her head as an earnest of the fulfilment of her part of the compact. Then the bridegroom comes with one or two friends on good horses, and carries her off at night." Among the exogamous Buryat, a symbolical representation of the capture of the wife is the essential feature of the wedding ceremony. "The bride hides herself within a ring which her girl friends form around her, holding hands, and strengthening the chain with their kerchiefs. When men try to break through the ring, the girls do their best to prevent them, weeping and shouting aloud. . . . After the feast the bride goes into the bridegroom's *yurta*, and then at last the veil is removed from her head." The Samoyed bride is forcibly placed on a sledge by the women and tied on. When an Ostyak bridegroom visits his bride before the purchase-price is fully paid, he must observe a certain custom of avoidance with regard to his father-in-law: "Should he meet him by accident the bridegroom must turn his back or cover his face; and he must make his way as quickly as possible to his bride, and as quickly return from her."³⁹

The first day's ceremony in a Mongolian wedding is the "attack" on the bride's camp, delivered peacefully enough nowadays, however. "At various times during the day women of the bride's people and men of the groom's

have mock disputes. In one of these, one of the women takes a bottle from one of the men. A heavy argument ensues, and finally she draws out the cork, breaks the string with which it is attached to the bottle and hands back the latter, signifying that the relationships of the bride-to-be with her family are broken."⁴⁰

In Assam "the chief's marriage ceremony includes a mimic fight and mock capture of the bride, as she is *en route* to her new home." In southern India the groom carries his bride off on his back, being surrounded by twenty or thirty young fellows who protect him from the desperate assaults of a party of young women who seek to regain possession of their comrade. Again the bride is handcuffed until the third day with brass bracelets weighing from twenty to thirty pounds, to prevent her from escaping to her old home. The bride is supposed in other cases to weep loudly and deplore her fate. Otherwise she is considered an "ill woman"; "when she can no longer produce genuine tears, she must proceed to bawl out. If she does not do this, the bridegroom will not marry her."⁴² In the mock-conflict the groom's party always wins.⁴³ If a Saora man wants a girl but cannot afford the liquor and other presents for her people, he carries her off. If she likes him she stays; if not, she runs away to her home. He will carry her off thrice; if she runs away the third time, he leaves her. The Saoras say that formerly everyone took his wife by force.⁴⁴ Again, "a Bengali bridegroom is often likened to a thief, because he has to put up patiently with all sorts of liberties which the female members of the bride's family take with him on the day of his marriage, just as a thief, when caught, patiently suffers the maltreatment which he receives at the hands of his captors."⁴⁵ "Sometimes the bridegrooms mark their foreheads with blood, which seems, indeed, to be the origin of the singular and nearly universal custom in India . . . of marking the forehead of the bride with vermilion. The vermilion has apparently replaced the blood, and the blood may, and doubtless does, symbolise a violent rape."⁴⁶ Among the Palaungs, "the bridegroom must still be careful to cover his face with his blanket if he goes out of doors, as he must not be seen by any of the relatives of the girl. Should they meet and recognize him, custom demands that they should greet him with insulting remarks."⁴⁷

In Cochinchina, "if a young fellow is much in love with a maid and her parents repulse his proposal, then it may happen that, during the twilight when the house door stands open, he suddenly enters her dwelling, embraces his loved one, and entwines about her and himself a scarf or girdle. Then he only has to bear patiently the insults and blows of her family, who may mishandle him so long as they do not severely wound him; and in that case the girl belongs to him," on condition, however, that he gives her parents money as indemnification for the disgrace he has brought upon them.⁴⁸ Laos parents hide the bride, at the time of the wedding-feast, in the woods, and the groom must find her; marriages are therefore not celebrated in the rainy season.⁴⁹

Sham fights occur in some districts of Tibet, Sikkim, Bhutan,⁵⁰ and in Korea, where the fight is "often more than a make-believe one, for serious blows are

exchanged and on both sides some are hurt. Death has occasionally ensued." The worsting of the groom's or bride's party forecasts ill luck for him or for her respectively.⁵¹

Wilken⁵² writes extensively of such customs in the Indian Archipelago, where abduction *de facto* appears as a regular form of marriage. He regards it as a transition from the matriarchate to the patriarchate, the whole affair being finally reduced to ceremony. Among the Amboinese every marriage is preceded by an abduction, and among the Alfurs of Buru it is not uncommon. He stresses the fact that "the abduction itself represents the marriage without the parents of the girl having the right to utter a veto on it." In many cases abduction is pretended in order to bring about marriage in the traditional form. The Javanese and Sundanese word for getting a wife means "to seize the bride before the house door with both arms about the hips and so carry into the house—a custom at a wedding." It is usual for the Alfur boy to seize the girl away from her parents, although he has paid the bride-price, she ostensibly resisting; this usage is called "to be taken away." In the northern peninsula of Celebes the groom must feign to get his wife from her relatives by violence. If the marriage is in Mohammedan fashion, the bride need not be present, but may be represented. Connected with marriage there are always many formalities which cost not only time and trouble but money. This is the reason why, among the Balinese, recourse is taken to elopement or abduction in about nine-tenths of the marriages. The battle is sometimes a sort of tournament, together with a cock-fight, in front of the public assembly-hall, care being taken that the girl's relatives are defeated; there are also armed parties that strut about threateningly. The same applies to the Macassars, while among other tribes marriage amounts to little unless there is a feigned abduction of the bride either in secret or openly. Further survivals, thinks Wilken, are to be seen in the throwing of sand and rice and in splashing the bridal pair with mud—like shoe-throwing among other peoples. Further examples are the fencing-in or hindering the pair, which degenerate into stretching a beam or rope across the path, the throwing of a broom before the groom's door to keep the bride from entering, the presence of a man with a sword, and other methods of obstructing the way to the chamber.

Among some of the tribes in the Malay Peninsula occurred a dance, in the midst of which the bride elect darted off into the forest, followed by the bridegroom. "A chase ensued, during which, should the youth fall down, or return unsuccessful, he was met with the jeers and merriment of the whole party, and the match was declared off. Elsewhere during the banquet a large fire was kindled, all the congregation standing as witnesses; the bride then commenced to run round the fire; the bridegroom, who was obliged to run in the same direction, following her; if he succeeded in catching her the marriage was valid, if he could not, it was declared off."⁵³ In New Zealand, "the ancient and most general way of obtaining a wife was for the gentleman to summon his friends, and make a regular *taua*, or fight, to carry off the lady by force, and often times with great violence." If the girl had eloped with someone she liked, her father and brothers would refuse consent; in any case

⁵¹ Bishop, *Korea*, 116.

⁵² In VG, I, 475-476, 477, 478, 480-481, 485-486, 490, 492, notes 37 and 38, 494, 498; 155 ff., 150-152, 155 ff., 165, 167-168; 47-48.

⁵³ Skeat and Blagden, *Malay Penin.*, II, 82-83.

there would be a fight to regain possession of her, during which the girl would suffer considerably. If the weaker party saw itself losing, some member of it was likely to kill her to prevent her from becoming the property of another. "Even when all were agreeable, it was still customary for the bridegroom to go with a party, and appear to take her away by force, her friends yielding her up after a feigned struggle; a few days afterwards, the parents of the lady, with all her relatives, came upon the bridegroom for his pretended abduction; after much speaking and apparent anger, it ended with his making a handsome present of fine mats, etc., and giving an abundant feast." Inter-tribal raids were frequent. "Nothing could be done without the semblance of war." When the war-party was expected, "food and various garments were placed in order as presents, so when the rush took place, they were taken as plunder, and all terminated amicably."⁵⁴

Among certain Indians in Guiana, "there is no particular ceremony at marriage, except that of always carrying away the girl by force or making a show of doing so, even when she and her parents are quite willing."⁵⁵ What seems to indicate that exogamy was an ancient practice among the Araucanians is the fact that "all marriage ceremonies begin with the pretended rape, or carrying off of the bride, which of late years has given way to a simple elopement, unless the bride be unwilling, when the older custom is resorted to. The marriage ceremony consists of two parts: the rape. . . . and the payment. . . . Having arranged the price with the father or eldest brother of the girl, the bridegroom arranges the details of the rape. He calls together his male relations, and while one of them goes to the bride's house on some pretext or other, the rest make a sudden attack on the dwelling. This is energetically resisted by all the womenfolk, the men of the household remaining passive spectators. One of the raiders seizes the struggling girl, and none too gently drags her to where the bridegroom is waiting on horseback. . . . This custom of carrying off the bride is only practised in the case of the first wife."⁵⁶

The Arabian bride was like a war-captive. "After the women had brought the bride into the house, the groom took possession of her, by clutching her front hair while she knelt; then he prayed with her and performed the rites to avert evil omens or influences."⁵⁷ Among the Spartans, after the elders on both sides had come to an agreement, the bridegroom brought his bride to a female relative who cut off her hair and led her into the bridal chambers, where the young groom could visit her only surreptitiously.⁵⁸ The Dorians kept capture as a symbol; the Roman bride, having fled to the lap of her mother, was torn away and forcibly brought into the house of the bridegroom.⁵⁹

§359. Elopement.

It is stated of certain Australians that what looks to the observer like capture "is in reality an elopement, in which the woman is an aiding and abetting party."¹ Howitt and Fison² think that the monopoly of the women by the

² In JAI, XII, 36, 39.

older men, which is found in many tribes, has been a great stimulus to elopement, though perhaps not so effective in reality as it appears at first sight likely to be, for "the monopoly is an assertion of the old men of property in the women, not of exclusive marital rights over them. It claims the right of regulating their intercourse with the younger men who are their 'husbands' by hereditary status." Among the Yuin, where marriage was arranged by the fathers of the parties, "elopement of the girl with a preferred suitor was also severely punished—the man having to stand up in an arranged fight with clubs, until either he had been knocked down four times, when he was free, but lost the girl, or until he had knocked down all 'her men' when he kept her." It is stated further that the *jus primæ noctis* was exercised only in the rare cases of elopement where the parents' consent could not be obtained.

Elopements often occur in British New Guinea. "The girl will probably steal some of her parents' property, and the pair go off together to another village, or into the bush, and remain there until the anger of the girl's parents has been appeased, which may be in two or three days or not for months. The propitiation of the girl's parents is secured by the relatives of the boy by offering a marriage price of articles and pigs; but in the case of an elopement the price is not so great as it is in that of a regular marriage, as there is a certain amount of shame in the girl's family."³ Of the Roro-speaking tribes it is written that "elopements, which seem always to have occurred, are common at the present time, and may be expected to become even more frequent, since the members of the Sacred Heart Mission having found that such love matches commonly turn out well, exert themselves to conciliate the offended parents. The chief cause of elopements seems to be unwillingness on the part of the girl's father to accept what is generally considered to be a fair price for his daughter. The young folk will then take to the bush for a couple of days, after which the bridegroom leaves the bride in charge of his clan and bestirs himself to make his peace with the girl's relatives, the gift of a pig being an early and generally successful step in this direction, after which a price agreeable to both local groups is arranged."⁴

In East Central Africa, "the bridegroom elopes with the girl, the mother conniving. The father then has to dun his son-in-law for a considerable time for the bride-price, which he extorts only in small instalments. The son-in-law appoints a friend to deal with him, and this friend is remunerated according to his success in whittling the price down."⁵ Sometimes among the Akamba a young man and girl agree to elope; "if the father does not approve the girl has to return to her father."⁶ "Among the Waseguha, Wachagga, Sumbwa, and Wanyamwesi abduction of girls is commonly done with their consent, when the suitor is unable to pay dowry or the parents are unwilling to let her go after dowry has been paid. In Ukamba parents often withhold the bride in order to exact further gifts from the suitor, and in such cases she will arrange with him to come at night and steal her away. Where such practices are in vogue it will be found that the abduction is accepted in place of the ordinary marriage ceremony, and though the parents may deny the husband's right to the girl unless dowry is paid at once, a lawful marriage is considered to have been contracted. . . . The girl's consent is a necessary condition, but notwith-

standing this it is regarded as a point of decency that she should protest and scream loudly."⁷

That the Hindu girl had some choice in determining her destiny is indicated in the laws of Manu, which permitted a damsel to wait three years and then choose for herself a husband of equal caste; but in this case she was not allowed to take any ornaments with her.⁸ Among the Alfurs of Buru, as elsewhere in the Indian Archipelago, the groom, when sure of a girl's liking for him, abducts her, with the foreknowledge of her parents, and hides in the bush with her, during which time the parents and clan of the girl are talked to about the bride-price.⁹

The elopement, which is part of the wedding-ceremony in many of the Palaung clans, though not in all, generally takes place at night. "The time has been chosen by the soothsayer of the village, with due regard to the days of the week on which the lovers were born. This being settled, the young man invites a number of his friends, young men and maidens about the same age as himself, to help him in the elopement. Sometimes he sends a friend to the mothers of the girls, to get their permission for their daughters to be out at night; sometimes he invites the girls himself, and they tell their mothers. . . . The lover chooses friends with persuasive tongues, who can help him to talk to the girl, to give her courage to run away should she grow timid at the last moment. The girls are generally the special friends of the eloping damsel. Sometimes there are six, eight, or ten girls and young men, an equal number of each sex. . . . If the bride happens to be alone, matters may be arranged very quickly; but it sometimes happens that other young men, who have no idea that an elopement is pending, may be already there in possession, talking to the girl. . . . When no men remain but the bridegroom and his friends, they urge her to set out. She, however, with real or pretended shyness, refuses to go. She throws more wood on the fire, and, pushing tobacco or betel-nut near them for their refreshment, continues to sit by the hearth, as if she expected to be there all night. . . . When it is past midnight the bridegroom grows impatient; he whispers to the girl, 'It is surely time to go!' She answers, 'Why hurry? Outside it is cold, here the fire is warm.' Another hour may pass and she finds it difficult to keep the conversation going. Each time it flags her lover urges her to set out. He says, 'Surely now is a good time to start! It will soon be rice-pounding time, when thy mother will rise and call thee.' The girl says, 'Why art thou in such a hurry? Who pounds rice in the middle of the night? Perhaps I shall not go at all!' Her lover answers, 'Do not say so, little sister, why should we not set out?' As she shows no signs of rising from her place on the floor, the young men try to persuade her. . . . Not every girl, however, requires so much persuasion. At last she rises and takes a few steps towards the entrance-door; then she stops, and turning again towards the hearth, with her hands palm to palm, she makes a deep reverence towards the place by the fire where her father is accustomed to sit. . . . The eloping couple generally go to the house of some elderly relative of the bridegroom, who has a wife or a sister living with him, and who receives from the bridegroom a small present of money, to be spent on tobacco and food for the runaway pair and their friends. Sometimes, however, the bridegroom takes the bride, with her escort, to his own home if his father is dead. His mother may be living with him, and if

⁷ Dundas, C., in JAI, LI, 253. Dowry = bride-price.

⁸ Bühler, *Manu*, IX, 90.
⁹ Wilken, in VG, I, 48.

not, there is sure to be some elderly woman who is willing to act as chaperon. . . . If the young people are both poor, the bride's parents give their consent in a few days—if they approve of their new son-in-law—so that their stay at the house of the relative is not long; but, as in European countries, when the parents are rich, there may be much more ceremony connected with a wedding, and more money spent on it than when the people are poor; the father of the bride, if a rich man, may not give his consent for ten days or more." When the mother understands that her daughter has run away, she generally sits down and cries. "This rouses her husband, who anxiously asks what is wrong. When the husband knows that his daughter has eloped, he is, or pretends to be, very angry, saying that the girl is far too young to think of marriage, and that he requires her to help with the work in the house and tea garden. He works himself up into a rage, scolds his wife because she has not prevented the elopement—though he has to admit that he himself ran away with his wife when she was as young as his runaway daughter—and finally sits down beside the fire." Except the actual elopement, the bridegroom does not take an active part in the proceedings and is practically ignored by the relatives of the bride during all the preliminary arrangements. "The girl, although she protests that she does not wish to return, generally obeys and accompanies the three women back to her home. When she enters the house nothing is said—if the parents are satisfied with the young man—and the day passes as if she had never run away at all. Sometimes a girl, after she has been brought back for the first time, discovers that she is not really so much in love with the young man as she thought: in such a case a marriage is sometimes broken off, after the first elopement. This elopement would be no obstacle to her engagement, later on, to another man, and would not in any way compromise her. Indeed it would rather enhance her value in the eyes of other young men, if they knew that a man was so desirous of making her his wife that he was willing to run away with her." To resume, the girl spends the day after the first elopement in doing her usual work in the house, though she would not be seen out of doors. In the evening, when the bridegroom and the young men come for her, she is quite ready to go with them. Three women go to her father and say that she will not return. He replies, "Go again and bring her back. Her mother and I do not consent. Tell her that she must wait till next year." The matter is then taken up by the father of the young man, but the girl's father still refuses. A Pa-jau or professional go-between is called in. "The Pa-jaus have nothing to do with the lovers during their courtship, they are only called in to help when the elopement is a *fait accompli*. The Pa-jau is usually an elderly man who has studied his profession by assisting other Pa-jaus and has learned to repeat the long speeches which must be said, and who knows well all the ceremonious etiquette connected with marrying and giving in marriage." After the Pa-jau has spoken the father replies. "If the father really meant that he would insist on the return of his daughter, the Pa-jau would understand this from the tone of his voice. This time the voice of the father expresses no indignation, so the Pa-jau knows that all is well and that the words of the father really mean nothing." When it is known that the parents of a girl really object to a young man who is paying court to her, and the man has a bad character, it is not easy to find an escort for her when she elopes. "When the father knows that his daughter has gone off with a man whom he dislikes, he sends his wife to his female relatives to ask them to bring back the runaway girl as quickly as possible. . . . The Pa-jau is sent

to her father, but is received badly, the father saying angrily, 'Take away thy tobacco! I do not like the young man. Bring back my daughter. When she comes back I shall tether her to the house.' If a father is really very angry, he may go himself to bring back his daughter, but this is considered a most undignified proceeding. If he goes, he does not enter the house where the girl is staying, but stands at the foot of the housesteps and calls her to come to him." What is more like real elopement occurs where the father has definitely refused to give his consent. "When a girl is determined to marry a man against the wishes of her father, she elopes several times, following the usual customs; but after she realizes that the consent of her father will not be given, the young man comes to fetch her, on an evening previously arranged, bringing only one friend—a man—to be her escort. When he reaches her home, he gives some signal—by coughing or whistling—to let the girl know that he is waiting. She then tiptoes through the entrance-room as softly as possible, in order not to wake her parents, and hurries down the steps to her lover, while the friend gently closes the door. Tobacco and rice are not left in such a case. Sometimes a girl cannot easily escape from the house, as she is well watched by her family, but unless they tie her to one of the house-posts—this is occasionally done by an angry father—she generally manages to escape. They go at once to a tea garden at a distance from the village, and live together there, unchaperoned, as husband and wife, in one of the huts built for the tea-pickers. The father of the young man, or some one else favourable to the marriage, calls the Pa-jau to make another attempt to gain the consent of the girl's father." The girl's mother and the relatives may also plead for the girl. If the father is obdurate, he says: "I am too angry to give her in marriage, let her uncle arrange." Arrangements for the wedding then go on, the uncle acting precisely as if he were the father. "The young man's father gives the usual amount of money, and the Elders are invited and feasts are held at the houses of the young man's father and of the girl's uncle. There is little ceremony and no gongs or drums are beaten. The parents of the girl are not present and often they refuse to receive their daughter and her husband until after the birth of a child, when the young couple are generally forgiven. Such a runaway marriage and the forgiveness of the parents form the subject of many Palaung songs."¹⁰

Among the Samoans, "if there was a probability that the parents would not consent, from disparity of rank or other causes, an elopement took place; and, if the young man was a chief of any importance, a number of his associates mustered in the evening, and walked through the settlement, singing his praises and shouting out the name of the person with whom he had eloped. This was sometimes the first intimation the parents had of it, and, however mortified they might be, it was too late. After a time, if the couple continued to live together, their friends acknowledged the union by festivities and an exchange of property."¹¹

With the Omaha, "marriage was usually by elopement. The claims on a girl by men holding a potential right to marry her almost necessitated her escaping secretly if she would exercise her free choice in the matter of a husband. When a young couple during their courtship determined on taking the final step of marriage, they agreed to meet some evening. The youth generally rode to a

¹¹ Turner, *Samoa*, 95-96.

place near the lodge of the girl and gave the proper signal; she stepped out and they galloped off to one of his relations. . . . In the course of a few months the father of the bride generally presented his daughter with return gifts about equal in value to those he had received and the young husband was expected to work for a year or two for his father-in-law. This latter claim was frequently rigidly exacted and the father-in-law was sometimes a tyrant over his son-in-law's affairs."¹² Among the American Indians in general, elopement was more or less necessitated by the marriage-customs, as Powell¹³ points out: "A group of men may greatly increase in number, while the group of women from whom they are obliged to accept their wives diminishes. At the same time another group of women may be large in proportion to the group of men to whom they are destined. Under these circumstances, certain men have a right to many wives, while others have a right to but few. It is very natural that young men and women should sometimes rebel against the law, and elope with each other. Now, a fundamental principle of early law is that controversy must end; and such termination is secured by a curious provision found among many, perhaps all, tribes. A day is established, sometimes once a moon, but usually once a year, at which certain classes of offenses are forgiven. If, then, a runaway couple can escape to the forest, and live by themselves until the day of forgiveness, they may return to the tribe and live in peace. Marriage by this form exists in many North American tribes."

According to an edict, in 497 A.D., of Theodoric the Ostrogoth, "the abductor of a free woman or virgin, with his accessories or agents, when the facts are proved according to law, we command shall be put to death and if the abducted woman shall have consented to her abduction, let her likewise be put to death." If the parents or guardian of the woman do not prosecute, but make terms with the abductor, they are to be exiled. A slave who knows that an abduction is being compounded and who gives evidence, shall get his liberty. After five years no accusation for abduction shall hold, especially if children have resulted from the marriage.¹⁴

Among Italian immigrants in the United States may be found survivals which partake partly of the nature of elopement and partly of abduction. With reference to the Sicilian colony in Chicago it is stated: "Sometimes a girl is coveted by a man considered undesirable by her parents, or by one who did not know her before she was engaged. In such a case the man may try to force his attentions on her in the hope of attracting her in spite of her parents or her promise. If she does not respond and will not elope voluntarily, it is not unusual for him to try to take her by force, either carrying her off himself or getting his friends to kidnap her and bring her to some secret place. When a girl becomes engaged her family is on the lookout for just such occurrences, and if they have any suspicion that she is being pursued she is kept a prisoner until she is safely married. If the man is known he is dealt with in no uncertain way—told to stop or take the consequences. If a girl permits herself to be kidnaped the affair is usually ended with the blessings of all concerned, though the jilted one sometimes makes it necessary for the couple to move to another part of town, at least until he consoles himself with another wife. If a girl is carried away entirely against her will there may be bloodshed as a result. Not

¹² Fletcher and LaFlesche, in BAE, XXVII, 324.

¹³ In BAE, III, ix.

¹⁴ Haimensfeld, *Collectio Const. Imperialis*, III, 18.

all kidnappings occur in this way; often impatient men, tiring of the long and ceremonious period of betrothal and failing to persuade the fiancée to elope, try to carry her away. A well-bred girl will put up a good fight to escape, and if she succeeds the engagement is broken; but if she is forced to submit the family accept the situation and all is forgiven. There are, of course, many voluntary elopements by young people who are attracted by one another and who, because of family differences, could never get the consent of their parents."¹⁵

§361. Wife-Purchase.

IN some Australian tribes, a man can only obtain a wife by giving a woman in exchange; "in rare cases a woman might be married without having been paid for by another given in exchange, but this was looked upon as a disgrace for the woman herself and for the clan into which she married."¹ Among the Narrinyeri and other tribes, "women were bartered as wives by their male relatives for goods, such as skin rugs, weapons, etc., and a perpetual reproach lay against a woman if she went to her husband for nothing."²

Among the Mekeo of New Guinea, "a girl must always be solemnly bought; otherwise her family would be dishonoured." The procedure of collecting the purchase-price and related ceremonies are described as follows. "The girl's family, having accepted the offer, take possession of the things actually handed to them, and immediately, or within a day or two afterwards, make an armed raid upon the boy's clan in his village for the pigs, and perhaps dogs. They go to the houses of the boy's relatives, and carry off everything they find there, and they make a general raid upon the pigs, dogs and coconuts of the entire clan in the village. The raid, however, has been anticipated and prepared for by removal and concealment, and the raiders, so far, at all events, as pigs and dogs are concerned, do not get more than had been promised them. . . . There may be reluctance on the part of one or both of the couple to consent to the marriage, and the girl will probably feign reluctance, even if she does not feel it. Family persuasion may, therefore, be requisite, and during its continuance the couple remain seated back to back on the verandah. Then, the boy being willing, and the girl having overcome her genuine or feigned hesitation, the girl passes behind her back to the boy a piece of betel, or perhaps a pipe, into which she has inserted a cigarette, which she has lighted and smoked, so as to fill the pipe with smoke, in the usual way; and his acceptance and chewing of the betel or smoking of the pipe is the signal for one or other of those present to call out the names of the boy and girl and announce the marriage in a loud voice, whereupon all the others applaud, and the ceremony is completed."³ Throughout British New Guinea the usual essential feature of a marriage contract is that the woman shall be paid for. "The word for 'wife' (or 'husband'), *a-dava-na*, pretty clearly contains the root *-dava*, 'paid for' or 'payer,' combined with a suffix *-na*, indicating a substantive, and a prefix *a*, probably indicating a person. Thus *adavana* would equally denote the payer (the husband) and the paid for (the wife). Curiously, in one small district . . . there is no payment, and the only requisite for a native marriage

¹⁵ Park and Miller, *Old World Traits Transplanted*, 156-157.

³ Williamson, in JAI, XLIII, 275-276.

would seem to have been that the woman should make the man's leglets and shall cohabit with him. . . . On the north-east coast a similar exogamous marriage by payment is very common. But occasionally a man will marry inside his clan, when no payment is made."⁴ When a youth of the Roro-speaking tribes is of an age to be married, his father asks the members of his local group to help him to collect the bride-price for his son. "The head of the girl's family, usually her father, will say that the bridegroom's folk have not offered enough. The latter dissent, but add further valuables, until the girl's people are satisfied. . . . If all goes well the girl's father piles the bride-price into a heap, and, taking an areca nut from the bunch brought by the bridegroom's father, tears off the husk with his teeth, and biting it in half gives one piece to the bridegroom's father." The author's comments significantly on the stabilizing effect of property—conspicuous by its absence among some of the southern Massim, with the result that marriages last only a short time, being dissolved by mutual agreement and without any strong opposition. "Where no considerable wedding price is paid by either party, and where the wedding celebrations consist rather of reciprocal presents of equivalent value and often of identical nature, one strong element tending to the permanence of marriage is obviously absent." In Santa Cruz, "when a man is betrothed to a woman he gives at first to her father a sum of money; this sum makes the woman *tapu*, lest anyone else might buy her."⁶

The system of payment of a certain number of cattle by a bridegroom for his bride, which is a universal custom among South African tribes, obtains also among the Mavenda. "The number is determined by the father of the girl and the son-in-law elect, and varies according to the position of the contracting parties. In the event of marriage being sanctioned without the prior payment of cattle, then, in accordance with native law, the issue of the marriage becomes the property of the bride's father, until the number of cattle agreed upon have all been delivered."⁷ What may be regarded as a perversion of the property-interest exists in British Tropical Africa, where the custom of elderly women procuring young girls, whom they call "wives" and with whom they go through a marriage-ceremony, prevails. "The purchase money is misnamed 'dowry,' and the woman-husband becomes absolute owner of the girls. The same thing is sometimes done for an identical purpose by very old and decrepit men. In some few cases it may be that the purchaser wishes to assure herself of a 'wife' who will tend her in her old age, but the more usual reason is in order to claim fees for adultery, and to gain possession of the children of such intercourse, who by native custom are the property of the 'husband' who has paid the dowry. In such cases, no doubt, the woman, who is in fact the keeper of a brothel, would be prosecuted on a criminal charge, and awarded no compensation for the loss of her 'wives' and their dowries." One such woman was found to have nineteen "wives."⁸ Marriage among the Bageshu is said to be "purely a financial transaction between the elders or parents of the couple, though a man seeks to find a woman who is strong and able to work to be his partner."⁹ Among the Ibo, "the sons-in-law at the present day bring powder, cowries, and one goat if the bride price is finished; in former days they had also to bring a slave. If any of them have not completed

payment of bride price they are reminded that it is necessary for them to do so."¹⁰

On the Niger, payment in cloth, gin, coral, or other commodities is made to the parents or to the brothers, sisters, or guardians of the girl.¹¹ An indication as to what is being paid for in wife-purchase, as well as to the relation between parents and children, may be seen in the case of the Nigerian head-hunters. "When a woman conceives, or within a certain time after the birth (three years is the outside limit), the husband, if he wants the child, must make a present of three goats to his father-in-law. . . . A child always belongs to the woman's father unless the husband has paid the proper fee within the proper time, and never to the woman herself."¹² Ownership of the woman extends then to her offspring, as was noted also among the South Africans. In West Africa the payment exacted varies with the rank of the girl. "The amount to be paid is fixed by the family of the girl, and the marriage is arranged without, as a rule, any reference being made to her wishes, though she cannot be forced into a union that is absolutely repugnant to her. The payment of 'head-money,' as the sum paid for a wife is termed, constitutes a marriage; and the head-money may be paid in actual coin or cowries, or, as is more commonly the case, in merchandise and rum. Amongst the poorest people the sum paid may be merely nominal; but something, even if it be only a bottle of rum, must be paid as head-money, in order to give a union the dignity of marriage."¹³ This connection between marriage and property¹⁴ appears regularly elsewhere, "the poorest always pay a small sum for their wives, so as to give the unions the title of a marriage, and distinguish it from concubinage." But the bride-price is often stated to be "compensation to her parents for the loss of her services in the household, and the transaction is not in any sense the purchase of a chattel."¹⁵ The bride's family remains responsible for the payment made, in case she runs away, and must replace it also if she should die.¹⁶

In West Africa the virgin ranks first in price, then the divorced woman, and last of all the widow. The payment is by instalments and is supposed to be completed in one or two years after marriage. Other relatives beside the girl's father, such as her brothers, sisters, and cousins, may make demands upon the would-be husband, this illustrating the complexity of interests surrounding marriage. In fact, there is always a more than individual interest present, for no young man saves up enough to buy a wife; he squanders what he gets and his family must contribute to get him one. They have a claim on her for various services and work, though he owns her; and neither he nor she could refuse these claims. On the death of a wife, a part of the money received for her is returned to the widower as compensation for loss on his investment, though if she dies childless there is no repayment. Though sometimes a woman is actually "paid" over as a fine, this does not alter the marriage custom; those who paid her over in lieu of penalty may come and ask a portion of goods for her as a wife. A father, thus discharging his obligation, has no claim on her as a daughter; he will get the goods, however, for the common belief is that if they are refused the children of the marriage will die early.¹⁷ Reimburse-

ment of parents for the rearing of a daughter is often delayed so that the husband may remain a debtor all his life; and since obligations of this sort are incumbent upon the family, they may be handed on for a long time.¹⁸

It is not easy for an African without means to marry. If he negotiates for himself he must satisfy the demands of the chief, who can exercise an absolute authority in these matters, and then he may succeed in obtaining a wife without previously paying down any sum by way of compensation.¹⁹

Purchase is the common form of marriage through Uganda; Johnston's²⁰ account is rather complete. Goats and iron hoes are the stock articles given for a wife. Beer-drinking at the groom's expense commonly accompanies marriage-negotiations. The chief's consent is needful, and he sometimes provides the purchase-price. A girl may be betrothed at the age of six or seven, and the intending husband then makes repeated small presents to her father, paying up in full at the time of marriage. If the girl does not prove to be a virgin at the public consummation, she is restored with contumely and all the goods paid in instalments must be restored, plus an amount equal to the whole purchase-price, as an acknowledgment of the disgrace entailed by the girl's real or supposed misconduct. Again, while the cattle of the marriage gift become the property of the wife's father, their offspring go to the son-in-law or his heirs. The total of the marriage payment may amount to six cows or their equivalent. In the case of instalments, if the man stops paying, his wife will return to her home till he resumes. If the wife does not bear a child within a year of marriage, the husband may stop paying, though he has no claim for restoration of what has been paid so long as his wife remains with him. If she dies childless, her purchase-price is returned unless the husband agrees to accept one of her sisters, for whom only a small complimentary present is given. A woman may refuse to stay with her husband; but if she goes to another man, whatever the latter gives for her is paid over to the first husband. If a woman who has a child is ill treated, though she may leave her husband, the child must remain with him. If a woman finds herself unmarried after a long period, it is customary for her to go to a chief or rich man and state that she has come to stay and cook for him. In such case she is usually taken to wife, with a small complimentary payment. Chiefs may have from ten to forty wives. This device disposes of the old-maid question and almost forces polygyny upon the rich.²¹

By far the most common disputes in the East African Protectorate are those regarding the bride-price when a father takes back his daughter or she runs away. "In such cases a man can take two courses: either he can claim back all dowry paid, with its increase, and also all presents made at the time of purchase, or he can drop his claim to this and retain the children, in which case he can also claim all children the woman may have by a later husband. In such a case it seems pretty clear that the woman is not regarded as legally married, or belonging to the man she has gone to, for if she dies at the latter's village, or if any of the children die there, the man has to pay full blood money to the first husband. The fact is, that so long as a woman is not properly bought she is not married, and thus it is that the husband, by refusing to accept payment for her, can prohibit her ever marrying again." The price of

²¹ §§398, 399, of the text.

a Mkamba wife varies from two to five cows, besides one bull. There is much haggling over what the groom shall pay. "In any case, however, he will be required to make many presents of blankets, knives, and honey beer to the father and other relations, who are, therefore, always bent on prolonging the negotiations as long as possible, always putting him off with hints that another present is desired, until finally he may steal her away at night. Later on the girl's family may regret their greed, for if ever she leaves the husband he will claim every present given, besides the price paid for her: every item has been carefully recorded by a little stick which is added to a bundle treasured up in the hut." The death of a woman does not usually entitle her husband to make any demands on her family, but in Ukamba and Kikuyu, as also in Ukena, it is customary as an act of goodwill to refund a portion of the bride-price; in Ukamba, if no child is born, one cow is refunded, in certain sections of Kikuyu two-thirds of the purchase-price if no children are born, or one-third if only one or two children. Such returns cannot, however, be demanded as of right.²²

If the man cannot pay the bride-price, he must work it out. In Ukamba, "chiefs like to marry their daughters to poor men for if their sons-in-law are poor they can call upon them to work for them. If a son-in-law of a chief refused to work for his father-in-law the latter would call his daughter back to his village, and the husband being a poor man, with probably only one wife, would then have no one to work for him and would soon go and make terms with his father-in-law. The marriage price is paid by instalments and the girl is married before the payments are complete."²³ So among the Turkana, "should the bridegroom not be in a position to pay the full amount, he may, provided of course the parents agree, pay instalments, in which case he moves to his father-in-law's village, and his wife, and any children she may have, then live at the expense of her parents, until the final payment is completed."²⁴ Again, "on the wedding-day the bride is led by her paternal grandmother or, failing her, by the aunt whose name she bears, to her future husband's hut. One of the most essential points in the conclusion of the matrimonial arrangements is that her conductor must see with her own eyes what has been paid of the bride-money before performing her part of the function, otherwise the marriage is null and void."²⁵ In Kenya, "it being settled that the clans of the contracting parties have intermarried before, elders of the groom's clan, his mother's clan, the bride's clan and her mother's clan meet to discuss the bride-price; this varies from a few goats with the Hill Suk to up to eighty head of cattle with the Pastoral Suk. . . . The bride demands a present before leaving her mother's hut, demands a present when she crosses a stream, demands a present before entering the village of the groom, a present before she sits down, a present before she eats, and on every possible contingency. The groom mentions certain cattle in his holding which he will place to her credit, and these particular cattle may not be used for the purpose of other subsequent wives and ultimately descend to the bride's youngest male offspring."²⁶

Though the wife is bought as chattels are, this does not mean that she can be sold by her husband as a chattel can be. The Galla husband sometimes exercises such a right, but not often. Among both the Somali and others the bride-show, with the girl magnificently attired and heavily perfumed, is held with

26 Barton, in JAI, LI, 95-96.

intent to excite the bridegroom and thus extort a higher purchase price from him.²⁷ In one section of Africa goats are the stock means of exchange for wives; "for woman and goat are there almost equivalent conceptions."²⁸ In Fantiland the payment varies from three pounds, twelve shillings to seven pounds, four shillings (that is, one or two ounces of gold); but ten or twelve pounds are paid for an educated girl and even twenty for a mulatto.²⁹ Elsewhere the price varies from ten to one hundred and fifty milch camels, ten to fifteen horses, two hundred to five hundred sheep, or, in the case of poor people, from ten to twenty goats. Where the Maria Theresa dollar is current, prices range, for the rich, from one hundred and fifty to a thousand, while the poor pay from eight to thirty dollars.³⁰

Among the Dinka laws are the following. "If, after taking possession of the girl, the man fails to pay the remainder of the 'marriage payment' as arranged by the council, the father of the girl can apply to a Dinka court, and if the man does not satisfy him, he can take his daughter back and any children she has borne, returning to her husband all the cattle already paid for her and all their young." From this it will be seen how inappropriate the term divorce is to the tribal "breaking of marriage." Again, "a 'marriage payment' not completed is binding on the heirs of the man should he die, and is due not only to the father or guardian of the wife, but to the heirs of the creditor. Example.—A marries B's daughter. He still owes two cows. A and B die. B leaves no heirs, but his daughter buys a 'wife widow' in his name and the girl gives birth to a son Z. Z claims from A's heirs two cows. They must be paid him."³¹ The list of presents given by a Hausa at marriage include: asking-money, that is, the first present to the girl's parents; binding marriage-money, when the wedding has been arranged; "glory-box," or presents sent to the bride by the groom and displayed at the marriage; presents to the bride both to unveil and to speak to the groom; and finally, the rest of the dower, due at marriage, "but seldom given before divorce."³² Among the Kabyles a girl is sold in marriage and the laws of humanity and modesty are not respected in the bargain;³³ but a Saharan Arab father is ashamed to sell his daughter, although the form of marriage is by purchase. He gives as much as he gets, and the groom pays only half the petty price agreed upon.³⁴ Here is the germ of dowry.³⁵ It is said that Sudanese profiteers now ask eight spearheads for a wife: "In the Sudan before the war, a wife could be got for four spearheads. Now the price has doubled. In the cattle country it used to be four cows; now the price is seven cows."³⁶

Among the aborigines of Siberia occur many instances where the man performs services to get a wife, instead of purchasing her, and also where a marriage-negotiator or go-between is employed. The following is typical. "When a Kamchadal wishes to marry, he looks for a woman in the next village, very seldom in his own. Having chosen one, he asks her parents to allow him to serve them for a certain period: this permission is easily obtained, and during the time of service he endeavours to win their favour. When the period is at an end, he asks to be allowed to take the woman, and if he has found favour in

the eyes of her, her parents, and her relatives, he marries her; if not, they recompense him for his services." Among the Gilyak, "the custom of payment for a wife exists, but this is either merely a formality, or what is received is divided among relatives. . . . The higher the price of a wife, the greater is the respect paid to her in her husband's family." With the Altaians, "a rich son-in-law pays his *kalym* at once, a poor one in instalments covering several years. . . . To enable the bridegroom to pay the *kalym*, his bachelor friends help him by making each a small offering from his store. But the larger the *kalym*, the worse is the position of a woman in her widowhood. Her father-in-law treats her as property bought for much money, and if she wishes to marry again, he demands from the suitor as large a *kalym* as the deceased husband formerly paid for her. Sometimes the widow marries her brother-in-law."³⁷

Among the Cherkes of the Caucasus, who live as joint-families in big houses, wives are bought or captured in common. Darinsky³⁸ thinks that this arrangement has been threatened by allowing those who so desired to buy separate wives. Polygyny is permissible but is not practised because the bride-price is too great an expense. It is related that some Cherkes women, on their way to Constantinople, were taken by a band of Russians and offered the choice of marrying them and returning home or of going on, which meant to be sold. All without hesitation chose the latter. There was no shame in being sold; it was in the mores; that was the way in which one became a wife.³⁹ It is said that in the dominion of the Great Khan of Tartary the poor who could not afford to give their daughters a dowry brought them into the market place with the sound of war-trumpets; there the girls exposed first their backs to the shoulders and then their front parts and were married to such as liked them best.⁴⁰ The Tartars of Kasan have a tradition concerning the origin of a similar bride-show, which relates that a rich Tartar who had many daughters gave a feast and invited all the young people to it, in order to find husbands for them. The festival, kept up ever since, offers an occasion for acquaintance between men and women and for marriages of inclination.⁴¹ Whereas the Mongolians used to capture their wives, nowadays they purchase them, the price being five or six head of cattle and ten sheep.⁴² According to an Associated Press dispatch, the Turkestan Government in 1926 issued a decree prohibiting polygyny, the exploitation of women, and the sale of infant girls in marriage. The professional marriage-brokers, who thrived on the sale of women, were suppressed; it will no longer be necessary for a man to pay a price for a wife, and those forced to do so may later recover in court. In a trial preceding this decree it was revealed that young girls were often sold into marriage without their consent, frequently becoming third or fourth wives of old men they had never seen before. It was also disclosed that parents who sold their immature daughters into marriage encouraged divorce so that the girls could be sold a second time. Some girls were resold five times.⁴³

Just outside of Hsuan-hua is a poplar grove where in the fifth moon is celebrated the bride-show, known as "airing-the-feet-festival;" the women walk up and down, dressed in their best, and the men admire, criticize, or condemn the shape, as well as the size, of each one's feet. The author⁴⁴ has never heard

of this feast being celebrated elsewhere in China. Only in case of dire necessity do the Sifan Tibetans make a foraying expedition for wives; the method more generally employed consists of wife-purchase with much bargaining. When a man desires a wife, he waits upon the father of the girl who has attracted his eye and makes an offer of marriage. "The father, after weighing the matter carefully, for a refusal is likely to provoke a long and disastrous feud, in turn waits upon the priests and acquaints them with the nature of the offer, at the same time paying to them a munificent bribe in order to secure the answer of the deities as to whether the marriage should be entered into. The young man, should he be diplomatic enough, meantime has carried a larger bribe to the lamas, who 'bleed' both father and suitor to limits of safety, when a decision is given invariably favoring the claims of the latter. This, however, is but the commencement of the ordeal through which the lovelorn suitor must pass. During an entire month he must keep the family of his favored one supplied with meat and other luxuries, and must also be constantly on his guard against rival suitors, who are bound to enter similar offers. At the end of a month the chosen one is invited to a grand feast provided by the father of the girl, where the betrothal is sealed by each cutting a small incision in the arm and mingling the blood flowing from the wounds. . . . The girl is then brought forward in all her native charms, smeared with grease and variously colored pigments, adorned in all her finery, and with a rope tied round her neck as a badge of subservience. Then ensues a scene of the shrewdest bargaining, the father dilating on the good points of the girl much in the manner that a connoisseur of blooded stock would expound the good points of an animal, while the suitor, having calculated how many cattle he is willing to give, strives to secure her at the lowest possible price. The wishes or inclinations of the woman are never consulted, but the bargaining goes on for days and even weeks until a final settlement has been arrived at. The requisite price having been paid, she is led to the house of her husband, where she is subjected to a severe beating, in order to humble her spirit properly, and made to run round the village loudly proclaiming the merits and valor of her husband, and touching those objects that are supposed to have a potent influence over her future welfare, such as the teats of the cattle or the little stone idols placed in front of each dwelling. By her sale, however, the father does not relinquish his claims upon her, but may sell her time and time again to suitors who may come after, until she may have half a dozen husbands."⁴⁵

Woman's purchase-price seems, in the case of a certain tribe of India, to be independent of the law of supply and demand; "it is strange that the bride price should be so high amongst the Lusheis, as the women of this tribe largely exceed the men in numbers."⁴⁶ In this tribe, "if a man is willing at once to marry a girl whom he has seduced he is not expected to pay more than the usual marriage price." Again, a woman may discharge debt to a man by marrying him; but after she has borne a child or two all talk about her indebtedness, in case of divorce, is out of order.⁴⁷ Not only the nearest male relative of the bride, but also her aunt, her elder sister, her maternal uncle, and a special chosen male and female guardian, all have to be paid certain sums, and traces of this custom are found among many other clans.⁴⁸ In some

communities the custom of exchange is definitely connected with the bride-price, which may be so large as almost to compel a man to give his sister in exchange for the wife he takes from another clan, but among the Todas "the bride-price is so inconsiderable that it is unlikely that it would form a motive for exchange."⁴⁹ Betrothal by exchange is common in the Punjab, and in case of disparity of age the party giving the older girl must be paid something extra.⁵⁰ Among the Sema Nagas marriage is never made against the girl's will, though it may often happen that she does no more than passively acquiesce in the arrangements made by her parents or guardian. "The prices paid for wives vary very considerably indeed according to their station in life, ranging in value from Rs. 20/— or even less to as much as Rs. 400/— or Rs. 500/—," the rupee being valued at 32 cents. "Besides the girl's birth, her capabilities are also taken into account, a girl who is thrifty, can weave, or is a hard and good worker in the fields commanding a higher price accordingly. Personal appearance has little bearing on the marriage price."⁵¹ Similar conditions prevail in the Chin Hills, where parents practically sell their daughters to be wives, demanding a certain price for them. "The facts are that the girl cultivates her parents' fields and performs the household duties, and if any man wants her to do the same for him, he must compensate the parents for the loss of an able-bodied servant." In the Southern Hills the eldest brother is the guardian of his sisters, and if a man aspires to the hand of a woman he must address himself to the brother and not to the parents. The price of the bride is divided among her relations, the eldest brother taking the largest share and the remainder being divided among the parents, sisters, brothers, cousins, uncles, aunts, and the chiefs of the tribe. Even the slaves of the house expect presents. "It is not rare to find men quarrelling over the still unpaid portion of the marriage price of their grandmothers and other female ancestors. More feuds have their origin in the payment for wives than in the killing of men."⁵²

One of the laws of Manu reads: "If after one damsel be shown another be given to the bridegroom he may marry them both for the same price." This seems astonishing after reading another section where the sale of daughters is forbidden; it shows in fact that wives were purchased. The section last referred to reads: "No man who knows the law may take even the smallest gratuity for his daughter; for he who through avarice takes a gratuity is a seller of his offspring." One may also discern the custom of wife-purchase in the law which states that if a man who has a wife weds a second, having begged the money to pay the expenses, he gains only sensual enjoyment, while the issue of the second marriage belongs to the creditor.⁵³ As a matter of fact, as Jolly⁵⁴ points out, despite the ideal conceptions of the nature of marriage, it is founded on purchase, robbery, or deception. Though the law-givers protested against wife-purchase, the custom still prevails in many parts of India, while in the south it is today almost the only form of contracting marriage. The opposition of the Brahmans to wife-purchase has had little effect. "While it is found in Bengal prevailing only among the lower castes and wild tribes, on the other hand it is widespread in the presidency of Bombay even in the case of the higher castes. In Guzerat the sale of girls

is said still to occur frequently and secretly, even among such castes as openly condemn it, and in the city of Bombay an earnest is commonly given by a deposit of valuables. With the Samvedis, an esteemed and strictly religious caste of Brahmans in Thana, from two hundred to a thousand rupees are received as the purchase price. Also in the presidency of Madras is the payment of a bride-price customary with different castes, just as in the Punjab. In Assam marriages are concluded almost solely through wife-purchase, this prevailing even among the Brahmans. To be sure, in Bengal and elsewhere there often appears a bridegroom's price alongside the bride-price, as the custom of child-marriage has greatly increased the demand for men in the marriage-market."

Among the Palaungs, one of the tasks of the Pa-jau or go-between is to arrange for a certain sum of money to be given by the young man's father to the father of the girl. "The money is given to the father of the bride, to be spent by him in food for the wedding-feast at his house. Sometimes, if the bridegroom is very poor and his father is dead, the girl's father asks for a merely nominal sum; indeed, if the young man bears a good character, and the father of the bride likes him although he is poor, he is privately supplied with money by his future wife, given to her by her father, and they all pretend that the young man has given it. . . . The father leaves this pretended bargaining to his kinsfolk; he sits quietly by the fire, smoking, seemingly unconcerned. When they name the sum that the father of the young man is prepared to give, and the bride's father to accept—a usual amount is forty rupees and two large baskets full of rice—the relatives say, 'If thou art not able to give this amount, then we shall take back our daughter.' The Pa-jau again makes three bows and sits up, no longer looking so humble, while a satisfied expression comes over his face as he says, 'Now it is good. If this amount satisfies you, we too are satisfied.'"⁵⁵ Among the poor in China "the expenses of a wedding are much lessened by purchasing a young girl, whom the parents bring up as a daughter until she is marriageable, and in this way secure her services in the household. A girl already affianced is for a like reason sometimes sent to the boy's parents, that they may support her."⁵⁶

The Malay term for bride-money goes back to a stem meaning purchase-price. The case of the Timorese is very clearly one of purchase, the size of the bride-price varying chiefly with the social position of the parties. In many cases early marriages are held up by the institution: the mores allow marriage without bride-price, but in that case the man is forced into a sort of debt-slavery, being obliged to live with the woman's parents and perform certain services; this is sufficient to deter many from taking the step. Among the Alfurs, if the man dies before he has paid the whole bride-price, the wife and children remain in her fenna (clan) until the fenna of the deceased pays up in full. Numerous cases are cited of the exact amounts of the bride-price.⁵⁷ Among the Mohammedan Buginese and Macassars the bride-price takes the chief place in the marriage contract; priestly sanction is of little or no value so long as it is not paid. If not, then the union is illegal and the children belong to the mother.⁵⁸ As illustrating the power of taboo in relation to wife-purchase, Wallace⁵⁹ relates how a Balinese woman, who lived with an English

trader in a relation which the natives recognized as honorable, once accepted a trifle from another man during a festival, this being against the *adat* (mores) for women in such condition. The rajah tried to seize and execute her despite the remonstrances of the trader, who refused to give her up. He desisted for a time but later sent a man who stabbed her at the door of her house. Among some of the more powerful and rich Malay tribes, the rights derived from the purchase of a wife caused many quarrels, so that a century ago this was mentioned as the most fruitful source of misunderstanding.⁶⁰ Among some of the tribes in the Philippines, if the suitor offers the price set by a father on his daughter, and the father is unwilling to accept, the latter must pay a fine to the injured man.⁶¹

Among the East Greenlanders, "a young man may sometimes pay the father with a harpoon or the like, to wed his pretty daughter, just as, *vice versa*, good hunters are paid by fathers to take their daughters to wife. Girls are obliged to marry as the father wills. They often act as if they are forced although they have nothing against it, and are therefore glad to be taken by force."⁶² Exchange of property stabilizes marriage among the Tlinkits, where "the presents are given not in the sense of a purchase of the girl, but as the binding feature of the contract. This is to make the union solid, and generally is very effective, especially on the girl's side; for if she proves unfaithful or should run away from her husband, her people must pay back to his people what they gave as a dowry [bride-price], or its equivalent. This inclines them to encourage and advise the girl to be faithful and to stand by her husband."⁶³ "Marriage among the Kwakiutl must be considered a purchase, which is conducted on the same principles as the purchase of a copper. But the object bought is not only the woman, but also the right of membership in her clan for the future children of the couple. . . . Many privileges of the clan descend only through marriage upon the son-in-law of the possessor, who, however, does not use them himself, but acquires them for the use of his successor. These privileges are, of course, not given as a present to the son-in-law, but he becomes entitled to them by paying a certain amount of property for his wife. The wife is given to him as a first installment of the return payment. The crest of the clan, its privileges, and a considerable amount of other property besides, are given later on, when the couple have children, and the rate of interest is the higher the greater the number of children. For one child, 200 per cent of interest is paid; for two or more children, 300 per cent. After this payment the marriage is annulled, because the wife's father has redeemed his daughter. If she continues to stay with her husband, she does so of her own free will (*wulē'l*, staying in the house for nothing). In order to avoid this state of affairs, the husband often makes a new payment to his father-in-law in order to have a claim to his wife."⁶⁴ Marriage among the Hidatsa is usually made formal by the distribution of gifts on the part of the man to the woman's kindred. "Afterwards presents of equal value are commonly returned by the wife's relations, if they have the means of so doing and are satisfied with the conduct of the husband. Some travelers have represented that the 'marriage by purchase' among the Indians is a mere sale of the woman to the highest bidder, whose slave she becomes. Matthews regards this a misrepresentation

60 Ratzel, *Vhde.*, II, 430, 431.

so far as it concerns the Hidatsa, the wedding gift being a pledge to the parents for the proper treatment of their daughter, as well as an evidence of the wealth of the suitor and his kindred. Matthews has known many cases where large marriage presents were refused from one person, and gifts of much less value accepted from another, simply because the girl showed a preference for the poorer lover."⁶⁵ Among the Indians of the Oregon coast, marriage was by purchase, the family of the man assisting him in procuring the purchase-money for the bride. The money thus paid was later refunded by the bride's family, apparently chiefly in the form of gifts and feasts, though the exact method is not clear. In certain ways the potlatch system of Vancouver Island is suggested, for there was an apparent effort on the side of each family party to contract to keep the other family in debt to it.⁶⁶ In the case of certain California Indians, "a wife is seldom bought for less than half a string, and if she belongs to an aristocratic family, is pretty, and skillful in making acorn-bread and weaving baskets, she sometimes costs as high as two strings—say \$80 or \$100. . . . No marriage is legal or binding unless preceded by the payment of money, and that family is most aristocratic in which the most money is paid for the wife. For this reason, a young man does well to accumulate shell-money and not to be a niggard in bargaining with his father-in-law. So far is this shell aristocracy carried, that the children of a woman for whom no money was paid are accounted no better than bastards, and the whole family is held in contempt."⁶⁷

Among the Warraus of British Guiana the parents of a girl choose a bridegroom for her when she is very young and later give her over to him without further ceremony. "Beginning with the day on which the girl is destined to him, the bridegroom must serve her parents until he attains manhood. In the meantime he pays his youthful bride every attention, adorns her with pearls and brings her the best that he can capture in the hunt."⁶⁸ Among some of the Guiana tribes, good connections replace the bride-price. "Girls may be offered to a man by their father, mother, or by themselves. Among the Arawak of the Moruca, if a father wants some celebrated person as husband for his daughter, he lets her place food before him during the course of a visit. If he eats of it, the marriage is concluded; if not, the father knows that their wishes do not correspond. But with the Island Carib there were occasionally circumstances when the young man dared not refuse the girl so offered him. . . . He who had killed most enemies had much ado that day to escape with one wife, so many would there be proffered to him; but cowards and persons of no worth were wanted by none, for, to be married among them there was a necessity of being courageous. . . . Happy did the father think himself . . . who could first approach and seize about the body some one of those valorous sons-in-law whom the captain had commended."⁶⁹ Among certain tribes in Brazil the bride-price consists of game and fruit, which, thinks Von Martius,⁷⁰ serve more as a symbol that the man can support the woman than as an exchange present for her. With the more developed tribes the bride-price includes weapons, adornment, European goods, especially iron implements, horses, or slaves, which are given now and then before the marriage. If an Araucanian bridegroom cannot pay at once the whole of the price agreed

upon, he lives with his father-in-law till the debt is cancelled. "Generally he puts the whole of his relations under contribution, and, as this debt is considered one of honour, it is usually paid in a very short time."⁷¹ The Fuegian works for his wife's parents both before and after marriage, until she bears her firstborn, when the husband is exempted from further duty, save occasional gifts of fish, blubber, canoes, and spears, and a willingness to help his father-in-law in difficulties.⁷² Among other South American Indians, where wife-purchase obtained, prices were often so high that marriage was delayed.⁷³ In one case, "the husband was obliged to subtract one-tenth of the game he killed for the relatives of his wife and he was not exonerated until a girl was born to him who became the property and sometimes later the wife of her maternal uncle."⁷⁴

Wife-purchase was generally in vogue among the ancient Babylonians. "The bridegroom was obliged to give a present to the girl's father, which consisted of gold or slaves and naturally varied according to the position of the contracting parties: the sum fluctuated between a shekel and a mina"—a mina consisted of sixty shekels, and was in value about eighteen dollars. "As compensation therefor the young woman brought a marriage-portion to her husband, which usually consisted of household utensils."⁷⁵ The Jews at first purchased their wives by goods or services, prices varying up to fifty shekels of silver. Saul desired no bride-price for his daughter Michal but "an hundred foreskins of the Philistines."⁷⁶ This recalls the Galla practice of taking the foreskins of slain enemies as a necessary preliminary to marriage.⁷⁷ At one time in Egypt no marriage was legitimate unless sanctioned by a transfer of property from the man to the woman or *vice versa*. Under a system of free contract a woman could rent herself, in which case she was lower than if she sold herself permanently or gave herself away.⁷⁸ Marriage arrangements among the East Iranians took on the character of a purely business affair, in which the sentiments of the persons most concerned were not considered.⁷⁹ Wilken⁸⁰ says that the bride-price among the ancient Arabs was not a purchase, for it was given to the bride herself. He mentions four kinds of marriage as prevailing among them, in none of which did purchase occur. Among the southern Arabs, Ratzel⁸¹ finds both purchase of wives and exchange of maidens. Formerly in Mecca occurred a bride-show, when daughters and slave-girls, upon coming of age, were dressed in their best and taken to the mosque and once around the Kaaba unveiled, that they might be seen and call out offers of marriage. Later this was given up.⁸²

Schrader⁸³ makes the categorical statement that "Indo-European marriage was based on the purchase of the bride. This fact appears clearly and plainly enough amongst Indo-European peoples, and amongst some continued in its effects up to the threshold of the present." In the Homeric age concubines had values set upon them, were given as prizes and bought like cattle; they were mere slaves and treated as such. "A wife, on the other hand, was regularly

sought with gifts, that is, was bought in a more formal and distinctive way. Gifts in the case of the (supposed) widow Penelope were presented to the woman herself before she made any decision; they were apparently turned over later to the possession of her husband's house. A wife was called *polydōros*, and maidens were 'those who bring cattle.' These 'gifts' to the bride's father and family were usually cattle, and the woman went to the highest bidder. A preliminary meeting of the managing parties, for the sake of bargaining and settling terms, is indicated. Payment was sometimes made in part and promised in part, and in one case where the bride's father retained a child, some idea of payment may have been in question."⁸⁴ The stages through which wife-purchase went at Rome have been set forth by Rossbach⁸⁵ as follows: "First step. *Manus* [marriage with bride-price] originated in the remote antiquity of the Italian people and was the result of their common development. The bases of contracting marriage, namely, purchase and religious wedding-usages, were both equally requisite. All marriages were *cum manu*, there was yet no difference between *manus* and marriage, nor between the marriage contracts of different ranks. Second step. The mores came to disdain actual purchase of a wife. The patricians completely did away with purchase, at least in so far as their marriages qualified them for duties of the priesthood. Their marriage therefore consisted merely in the *consensus* and in the religious wedding-feast, which was directed by priests (*confarreatio*). The old unity of purchase and wedding-feast was preserved indeed for the patricians as for the clients and plebeians, but the purchase was symbolic, the religious customs were not conducted by priests and they declined in significance (*coemptio*). All marriages were still contracted *cum manu*. Third step. The endeavor to avoid the *manus* made its influence felt . . . ; marriages *cum manu* remained in existence and for a long time were still the more usual. But the concepts of *manus* and marriage were separated; there could be marriage *sine manu*. Fourth step. Free marriage won an independent form. Thus four forms existed together. Fifth step. Free marriage prevailed and supplanted the restricted, . . . the *confarreatio* no longer entailed *manus*, and only two marriage forms stood opposed—free marriage and *coemptio*. Sixth step. Even *coemptio* fell into disuse after the third Christian century, and free marriage became the only form; it was severed completely from the old family situation and was regenerated by Christianity."

The custom of bride-purchase prevailed throughout Teutonic antiquity. It was in vogue among the Thracians and Lithuanians and also ruled among the southern Slavs, where girls became so high in price that at the beginning of the nineteenth century the price to be paid for one girl was limited to one ducat, or about \$2.32.⁸⁶ The bride-price among the Norse did not allow possession of the bride's person, but bought for the man and his kin the guardianship over the bride; "it was thus a purchase of a right, not that of a human being."⁸⁷ The son of a woman not obtained by purchase was disinherited.⁸⁸ In the fourteenth century in Germany *kaufen* was the term used to signify taking a wife or a husband. The author⁸⁹ suggests that the word for marriage (*Heirat*) may be derived from *heuern*, to hire. He quotes a law of Ethelbert in England (560-616), to wit, "if a free man lies with a free man's wife, he

shall purchase her with her wergild and acquire another wife out of his own property and bring her home to him." A subsequent English law deals with the case of a person who buys a wife and does not pay the purchase-price. Lippert⁹⁰ states that in some German districts the custom still remains of having a bride-show on the evening of the wedding-day, when every respectable guest may claim a dance with her, giving a piece of money, which, however, goes to pay the musicians. In Lapland a bride remains for eight days before the wedding in the house of the groom, veiled; anyone who wishes may see her by giving a few kopecks.

§363. The "Ambil-Anak" and Allied Forms.

THE modes of marriage according to the original institutions of the Sumatrans are by *jujur*, by *ambil-anak*, or by *semando*. The first is a certain sum of money given by one man to another, as a consideration for the person of his daughter, whose situation, in this case, differs not much from that of a slave to the man she marries, and to his family. It is marriage *cum manu*. His absolute property in her depends, however, upon some nice circumstances. The other forms are variations from it. In a marriage *cum manu*, the wife, in one *sine manu*, the husband, is the one who leaves his family and suffers loss of the power of inheriting from agnates, including first of all the parents. Among the Rejangs, besides the *batang jujur* or main sum, there are certain appendages or branches, one of which, the *tali kulo*, of five dollars, is usually, from motives of delicacy or friendship, left unpaid, and so long as that is the case, a relationship is understood to subsist between the two families, and the parents of the woman have a right to interfere on occasions of ill treatment; the husband is liable to be fined for wounding her, and there are other limitations of absolute right. When that sum is finally paid, which seldom happens except in cases of violent quarrel, the *tali kulo* (tie of relationship) is said to be *putus* (broken), and the woman becomes to all intents the slave of her lord. Among the Lampongs the father of the girl never admits of the tie of relationship being broken, or the whole sum being paid, and thereby withholds from the husband, in any case, the right of selling his wife, who, in the event of divorce, returns to her relations. Where such is the case, the husband has property in her little differing from that in a slave.¹ On the island of Serang a youth belongs to the family of the girl, living according to her customs and religion, until the bride-price is paid. He then takes both wife and children to his tribe. "In case he is very poor, he never pays the price and remains perpetually in his wife's tribe."²

Throughout Sumatra the man married in *ambil-anak* must work for his wife, aid her in cultivating her land, and be helpful to her family in all their enterprises; in case of divorce he has no claim. The oldest daughter is regarded as the preserver of the line and when she marries she stays in her parents' house while the man must come to live with her. If there are no daughters, then the oldest son is head of the family. If he dies, his widow takes his place. "Through the daughters, therefore, the line is carried on and it is only in default of daughters that the sons come into consideration." The daughter thus fills a rôle which in other tribes generally falls to the son, while the son functions as a daughter. More complete in South Sumatra than elsewhere is the cognate

⁹⁰ *Kochte.*, II, 21.

¹ Marsden, *Sumatra*, 257-258, 300.

² Thomas, in *Am. Jr. Soc.*, III, 771.

or parental inheritance. What a man and his wife gain together remains common to them, while a distinction is strictly drawn between what each brings into marriage. The last type of property falls to sons and daughters; if there are no children, it goes back to its original source. Some of these parental forms look like the old unions *cum* and *sine manu*, for now the man follows the wife, now *vice versa*. The system of relationship based upon a like division of the children between the parents is found only in three places in the Indian Archipelago, among the Rajat-Laut, Macassars, and Buginese. The first child belongs to the mother, the second to the father, and so on in alternation. As to the origin of the *ambil-anak*, one writer would have it that a certain Rajah in Sumatra abrogated the *jujur* system because he did not like to see daughters sold. Wilken,³ from whom these facts are derived, points out that such humanitarianism is not characteristic of the Malays, while such a change could not be made on the initiative of a few people. Another view is that the *ambil-anak* was introduced by the Mohammedans for propaganda-purposes: their daughters, well raised in the Mohammedan faith, must remain heads of families and not be lost by marrying unbelievers. This view, says Wilken, is not improbable; but the first enthusiasts for Islam did not have to bring in the *ambil-anak* as a new thing; more probably they met it along with the *jujur* and preferred it for the reason given.

Several other forms break away from purchase in the same general direction. Nor is *ambil-anak* confined strictly, except in name, to Sumatra.⁴ Among the Bataks, where marriage by purchase is the rule, the so-called *angkap*-marriage, where no price is paid and the son-in-law goes to live with the father-in-law, is popular.⁵ The people of Timor show matriarchal alongside of patriarchal marriage, without bride-price, where the man goes to live with the bride's parents, and has services to discharge. Children follow the mother-kin and the father has no rights over them. In one place there is an actual purchase of the groom. "According as the payment of the wedding gift thus goes out from the side of the bridegroom or from that of the bride, does the patriarchal or the matriarchal marriage take place, or does the latter go to live with the former or the former with the latter."⁶ The Pelew type is thought to be of the primitive Malay variety which was once widespread over Oceania.⁷ Mazzarella⁸ thinks he proves the *ambil-anak* marriage to have been universal in one epoch and cites many peoples who practised it; but he uses the term in a very wide sense to cover all cases where the man goes to the woman's home. "The grade," he says, "of purity and diffusion of *ambil* institutions is always proportional to the multiplicity and importance of the survivals of mother-family."

A form like the *ambil-anak* is reported from East Africa: "In Upare a poor man may voluntarily become a slave by marrying a woman of a rich family without dowry [by which term the author means bride-price]. His children then belonged to the woman's family, but the slave owned property and could acquire freedom by payment of dowry. His sons were given wives by the master, who took the dowry for all daughters. Such a person is called *mzoro*, and is much in the position of a serf."⁹ In certain rare cases, among the

Siberian Koryak, "it is the son-in-law who comes to live with the bride's family. In such cases he is adopted into the family. The young wife coming to the house of her husband must join him in the cult of his ancestors. Nevertheless, to a certain extent, she is always under the protection of her blood-relatives." It is said that if a Chukchi wife bear only daughters her husband remarries until he obtains a son; but another investigator did not notice this as a rule, "because a daughter can replace a son very easily among reinderebreeding people. He saw some families consisting only of daughters—also in this case sons-in-law may be adopted. Among the Maritime Chukchee, however, a girl cannot replace a boy."¹⁰

In India there is a marriage-form called *beena*, wherein the groom lives with the family of the bride. It prevails widely in the Hills, and is thought to be a survival of the adoption of the groom into the bride's kin.¹¹ The bride has the right of inheritance in common with her brothers.¹² Among the Sema Nagas, "the adopted son-in-law now becomes a son and an absolute member of his adoptive parent's clan and family and entitled to all the rights of a son, sharing with other and genuine sons in their father's property at his death on equal terms. . . . No formality seems to accompany this adoption except the casual present of a cow, but the results of its taking place are permanent, and involve an entire contradiction of the otherwise imperative custom of exogamy. It seems to be resorted to but rarely."¹³ In the Arab *mota* marriage, which Smith¹⁴ thinks the same as the *beena*, the man is a mere "sojourner" in her tribe, and the children stay with her and belong to her tribe. It was an exception to Arab patriarchal usage, practised by women of high rank, as it is, to some degree, by modern female rulers. Usage limits the *mota* form to very temporary unions; indeed, the term is often applied to relations which should not be designated as marriage.¹⁵

India shows a form resembling *ambil-anak* in several particulars. So-called "Basivis"¹⁶ are daughters "who have been dedicated to duties, who take a son's place in performance of funeral rites of parents and in inheritance of property. . . . They live in their father's house; they do not marry, yet they bear children, the father of whom they may choose at pleasure, who inherit the family name. . . . Failing male issue, one daughter must be dedicated as a Basivi; there is no alternative." She really bears sons for her father; "if she has only a daughter, she makes her a Basivi, and so it goes on until there is a male child, whose birth may put an end to such dedication."¹⁷ This form is evidently a variant of procedure calculated to get male heirs by renunciation of bride-price and insistence upon retention of the daughter. It starts like the *ambil-anak* and works out into a sort of sacral harlotry.

One reads in the laws of Manu: "He who has no male child may charge his daughter to give him a son, who shall become his and shall perform the funeral ceremony in his honor. To that end, the father must appear before the husband of his daughter and pronounce this formula: 'I give you, adorned with jewels, this girl who has no brother; the son who will be born of her shall be my son and shall celebrate my obsequies.' The usage was the same at Athens; the father could have his lineage continued through his daughter by giving

17 Fawcett, in JASB, II, 322 ff.

her to a husband with this special condition. A son born from such a marriage was reputed the son of the wife's father. . . . In Hindu law this child inherited from his grandfather as if he had been his son; it was exactly the same at Athens. When a father had married his only daughter in the manner we have just described, his heir was neither his daughter nor his son-in-law, but the *son of his daughter*. . . . Under some Punjab usages, the daughter, when there are no sons, inherits a limited interest in her father's property; but she must resign it when she marries. It is usual, however, for the husband of such a daughter to be adopted by his father-in-law." The Bâsques, continues the author,¹⁸ showed the female line of descent in some cases: the first-born inherited, irrespective of sex; if a daughter, she was in the position of exclusive heir, head of the house and of the possessions of the family. "She chose for herself a mate and he came to live with her; he lost his name, to take that of his wife, while the children too were named after her." A similar situation appears to prevail in Japan. "Should there be no son, but a daughter, the father will provide a suitable man for her, whom she then takes into her house instead of following him into his. He then takes her family name and occupies the place of the oldest son of the house. This procedure we call 'yoshi' (adoption). A young man does not like to let himself be adopted in order to marry the daughter, no matter how beautiful she may be, for in her house he can exercise no such authority as in his own. This is the only case in which the Japanese wife has some power over her husband."¹⁹ There appears likewise to be only one Chinese situation in which a child takes its mother's name: when a man who has only a female child brings into his house a husband for her; then if more than one son is born to her, the second takes her family name.²⁰

Under certain circumstances a form of marriage similar to the *ambil-anak* appears among some California Indians; the relative position of man and wife is determined in connection with the balance of interests. "The Yuroks of Northern California are monogamists, and marriage is illegal without the prepayment of money. When a young Indian becomes enamoured of a maid, and cannot wait to collect the amount of shell-money demanded by her father, he is sometimes allowed to pay half the sum and become what is called 'half married.' Instead of bringing her to his cabin and making her his slave, he goes to *her* cabin and becomes *her* slave. This only occurs in the case of soft, uxorious fellows." Or, "a bride often remains in her father's house and her husband comes to live with her, whereupon half the purchase money is returned to him."²¹ Among the Winnebago, "a man generally lived with his parents-in-law during the first two years of his marriage. During these two years he was practically the servant of his father-in-law, hunting, fishing, and performing minor services for him. Many Winnebago interpreted these enforced services of a son-in-law as part of his marriage obligations toward his father-in-law."²²

Certain Iranian forms appear wherein a first-born son was not regarded as a son of his father but was to inherit his maternal grandfather's or uncle's property in default of male heirs; "the woman obtained her son's share of

her father's property, and she was remarried to her husband when her first-born son was fifteen years old."²³ Among the southern Slavic house-communities, in cases where men are few, a man is taken in as the husband of a girl and adopted.²⁴ The marriage of an heiress in old Israel was in a certain sense a marriage with mother-right, similar to the situation among the Hindus, Greeks, and South Slavs. "He who would marry into the family of the heiress must, in so far as we take it, renounce his father-right, since the child to be begotten bore the name, not of his father, but of his maternal grandfather." Take as example the case of Zelophehad, who had no sons, but daughters. "Why," demanded the daughters, "should the name of our father be done away from among his family, because he hath no son? Give unto us therefore a possession among the brethren of our father." And when Moses brought their cause before the Lord, the Lord spake unto Moses, saying: "The daughters of Zelophehad speak right: thou shalt surely give them a possession of an inheritance among their father's brethren; and thou shalt cause the inheritance of their father to pass unto them. And thou shalt speak unto the children of Israel, saying, If a man die, and have no son, then ye shall cause his inheritance to pass unto his daughter . . . and it shall be unto the children of Israel a statute of judgment, as the Lord commanded Moses."²⁵ To resume with Klugmann's²⁶ exposition: this customary right could not be maintained permanently. "Indeed, when in after-days the matriarchal views were completely overcome by the patriarchal, it must even have appeared undignified to marry a brotherless girl, for through such a marriage a man renounced his paternity as respects the children he might beget. Accordingly it is readily understandable that in one place in the Talmud it reads: 'He who would marry must take into consideration the brothers of the wife he is to choose'—even though it is here not so distinctly expressed as, for example, in the Hindu law-books: 'For fear (of giving up his paternity a man) should not marry a girl who has no brothers.'"

§364. Dowry.

IN British Tropical Africa, "dowry is, properly speaking, given to a wife only. If a concubine has received presents from her master, they should be regarded as having been liquidated by his sexual relations with her, and if she asserts her freedom (as she has a perfect right to do when the legal status is abolished), he can neither claim their return, nor any rights over her on the grounds that she is in his debt, nor can he retain her children as being his slaves."¹ The East African bride always brings with her a few household utensils, but not infrequently she also brings a small amount of livestock which she may have acquired by gift from her parents or by her own industry. Thus among the Wachagga a girl is always given a little stock according to the wealth of her parents. "It is customary for a father to give his daughter at least one cow to provide her with milk, and wealthy men such as chiefs may give as many as ten cows. Actually the Chagga woman often brings to her husband's hut more than her husband pays in dowry [bride-price] for her, but most usually she leaves all but one cow with her parents until she has children, when she

will make a gift of her livestock to these. . . . With two exceptions women are otherwise sole owners of all property which they bring at marriage or subsequently acquire, and though the husband has, of course, the benefit, he cannot lay claim to any such property."²

A number of Siberian tribes have the custom of dowry. If we take into consideration the fact that the reindeer and other presents exchanged during the marriage-ceremonies of the Yukaghir are fairly equal in value, we cannot regard any of them as the purchase-price of the bride. Among the Altaians, "sometimes the bride's parents give the whole *kalym* [bride-price] as a dowry to their daughter, and even make it larger by adding presents from themselves." So among the Buryat, "a father not only bestows on his daughter at her marriage a dowry consisting of cattle, household utensils, etc., but makes similar gifts to his son-in-law, so that the value of the dowry together with these other gifts offsets that of the *kalym*." As soon as a Samoyed youth has paid the *kalym*, "the father-in-law loads him and his company with reindeer meat. . . . A father always gives with his daughter in marriage a certain quantity of clothes. . . . Some time after marriage the young wife pays a visit to her father, and stays with him a few weeks, during which time she has the liberty to receive her husband. At their taking leave, the father must make her a number of presents, and do the same at every visit; so that the young woman for a length of time shall have no occasion to apply to her husband for anything. In cases of divorce the *kalym* is returned." Among the Ostyak the bride-price is proportioned to the fortune the father gives with his daughter. "The woman's dowry is provided, strangely enough, from the *kalym* which has been paid for her."³ In one of the Hindu epics is an episode which illustrates how the father may secure his daughter's position in marriage by imposing conditions at the time.⁴ There is a suggestion of dowry in the Chinese custom whereby well-to-do fathers, at a daughter's marriage, add to the outfit wherewith she is sent to the house of the partner of her future joys and sorrows, a coffin of gilded silver, a few inches in size. "This is to signify the old man's willingness to provide his child not only with all the requisites of life in the form of a trousseau, but also with those of death, amongst which none is so important as the coffin."⁵

With some of the Filipinos, marriage centered about the dowry and was a species of trade. A man could renounce his wife at any time without justifying the divorce, but he had to pay back the dowry or its equivalent. If a woman contracted marriage for the first time, she kept the dowry carefully until she had children, when it became common to both spouses.⁶ There is a Samoan legend concerning dowry, to the effect that Sun-beam (born from a union of the Sun with a mortal woman) "married a Fijian woman, the daughter of the king of Fiji. Then were brought two fine mats, the dowry of the wife of Sun-beam. . . . Then the man took a voyage to Fiji to bring the property to his father the Sun."⁷

The Kwakiutl ceremony of providing a marriage-gift for a chief's daughter is described briefly as follows. "Not long after she has been married to her husband, her father pays the marriage debt; and she has for her canoe mast an expensive copper. And he gives as a marriage-gift a name to the

husband of his princess and much food with it, and also canoes. This is what is called 'paying-the-marriage-debt, sitting-in-the-canoe-of-the-princess;' for generally there are twenty who sit in the canoes of the princess of a real chief, when they put down the copper bracelets and small coppers and many dishes and the anchor-line of many spoons."⁸ Among the Salish there appears no longer to be any idea of barter or profit in the mind of the father in the disposal of his daughter in marriage, and he makes nothing out of the occasion. "Etiquette demands that he shall return to the bridegroom gifts of like value to those he himself received from him. Indeed the acceptance or rejection of a suitor is not left to him individually, but is the decision of the whole family in council assembled."⁹ It is said of the Mayas that "it was no unusual thing for parents of the lower orders to send their daughters on a tour through the land, that they might earn their marriage portion by prostitution."¹⁰

In the Code of Hammurabi can be traced the beginning of dowry. A present to bind a betrothal is made to the bride's father, which is to be returned to her at marriage or held in trust for her by the father. If the groom breaks the engagement, he forfeits it; also, a like sum is forfeited by the girl's father if he break the contract. Should the husband divorce her without cause, he forfeits a duplicate sum; if the wife die childless, her father restores the betrothal present to the groom; if not restored, the groom deducts it from the dowry given by the father-in-law, which he must restore.¹¹ The word for bride-price is later used to mean dowry; there is also a word for "gift" from the father to the bride herself.¹² Wife-purchase was rare in Babylon; generally the wife brought a dower of money or outfit which remained hers. There were cases of marriage-contract in which the fathers on both sides specified what they would give to the young couple. Receipt of dower was acknowledged sometimes in the contract, while there also occurred cases of suit for unpaid dowry.¹³ Often the dower was paid in instalments; it was a debt. The bridegroom got it, though in case of land it belonged to the woman, while the usufruct went to the man. A married woman bore the name of her father and the master of her family. In the marriage-contract the husband was put under penalty if he took another woman; in that case, his wife was free to go where she would.¹⁴ In ancient Egypt, in the class of nobles, every woman brought to her husband some land as dower, but her daughters took it away again, so that the chances of a family in this respect were at the sport of fortune.¹⁵ At a later date no marriage was recognized as legitimate unless sanctioned by dower or property-transfer from man to woman or woman to man. A woman not dowered was a concubine.¹⁶ Among the ancient Arabs the marriage-portion belonged to the wife. It was also the rule that the bride-price was given, not to the father-in-law but to the bride herself, and thus became her private property.¹⁷

"There is absolutely no dower as such in Homer, nor more than the beginning of return-gifts to the bride,"¹⁸ but in later times Greek women regularly brought dowries to their husbands. "The significant difference between

Homeric and later times lies in the fact that in the first case the bridegroom buys his bride and accompanies his wooing with a tender of cattle, which ceases only when the girl's father offers her and gives her in addition something for herself; while at the other time she receives at most a part of the bride-price as her dowry, which in case of separation is returned to the father, just as, on the other hand, the purchase-money can be reclaimed if the wife is guilty of adultery. Only in a later period, . . . in any case before Solon, did it become the custom that the father or, in case he was not living, the other relatives to allow the girl a marriage-portion, occasionally with the obligation of doubling it if offspring were obtained."¹⁹ The Spartan lawgiver Lycurgus forbade any marriage-portion on the side of the bride, but later on, with increasing wealth, the law was not seldom evaded.²⁰ According to Plutarch, Solon strove to check the practice of giving gifts to daughters, though this regulation may have been rather a sumptuary law to restrict the magnificence of the trousseau, and Euripides makes Medea complain of the lot of women in that they are obliged to "buy themselves masters."²¹ In general, the dowry came in Greece to be thought almost necessary to make the distinction between a wife and a concubine; while the Romans thought it a great misfortune to be an unendowed woman.²²

§365. Group-Consent and Test.

SINCE group-consent is given or withheld upon the basis of test, these two topics merge indistinguishably in a number of cases.

Group-Consent. In central Cameroons marriage is regulated by the head-chief. "When there is a likely girl or woman in the tribe, the head-chief is informed. Instructions are issued to one of his attendants to have her handed over to the head-chief's mother or one of his head-wives. If she is already betrothed the father is informed of the head-chief's instructions, from which there is no escape. . . . At certain times the head-chief decides to change his younger attendants, and he issues orders that they make preparations to be married. The selection of eligible girls is made by the head-chief himself, not only from the townspeople, but from his own relatives. . . . In the event of a man and woman disagreeing, the matter is referred to the head-chief for settlement. If the dispute cannot be settled, then the head-chief may transfer the woman to someone resident either in one of his own sub-towns or else to someone resident in an outside town."¹ The marriage arrangements of the Baganda are as follows. "After sunset two torch-light processions start, one from each place, and meet half way between the two houses; the bride wears a lovely bark cloth, brass, copper, and ivory armlets and anklets, and bead necklets, she is veiled and carried on the shoulders of a strong man; her brother escorts her with all their relatives. The other party is headed by the bridegroom's sister and his relatives. . . . When they reach the door of the bridegroom's house the bride is set down, but refuses to enter until the bridegroom comes out, welcomes her, and gives her two or three cowries. Again, when she enters the

house, she won't sit down until two or three more cowries are given her by her husband; later on when food is served she refuses to eat until he has again given her a few more cowries. These are tokens of his love, and should he refuse them or neglect to give them, the bride is free to return home and the marriage can be broken off. . . . For a month the bride is secluded, and only receives near relatives; she wears her veil all this time. . . . At the end of the month the bridegroom chooses four men called *Bazala* (they who give birth), who come to the house; the husband and wife give in their presence mutual promises to be faithful to each other, to respect each other, and the wife promises obedience to her husband. These men are not only witnesses of these promises but also act as judges and peace-makers in case of any disagreement or difference arising between the husband and wife. . . . When the *Bazala* come the marriage is disannulled if either contracting party wishes, but if they agree to continue together the husband may in the future appeal to the authorities for the restitution of his wife if she leaves him."² The group's interest in and regulation of marriage are especially to be noted.

Initiation-ceremonies may be construed as tests the passing of which confers group-consent. At the present day in British East Africa, and particularly in Taveta, "the people seem to assume that the initiation must be followed by marriage, and since they include the youngest boys in the celebrations the result is that absolute child marriages take place. The boys and girls so married do not, however, necessarily live together."³ When a Niam Niam resolves upon matrimony, the ordinary rule would be for him to apply to the reigning prince or the sub-chieftain, who would at once endeavor to procure him a suitable wife. "In spite of the prosaic and matter of fact proceeding, and notwithstanding the unlimited polygamy which prevails throughout the land, the marriage-bond loses nothing of the sacredness of its liabilities, and unfaithfulness is generally punished with immediate death." Festivities observed on the occasion of a marriage are on a limited scale: "there is a simple procession of the bride, who is conducted to the home of her future lord by the chieftain, accompanied by musicians, minstrels, and jesters."⁴

In a Palaung marriage the securing of consent and the placing of responsibility are important matters. "When the father of a girl who has eloped is dead, and she has only small brothers, the proposals of the Pa-jau [go-between] would be made to her oldest uncle, on her father's side, or, failing an uncle, to a cousin. If she has a brother twenty years or more of age, the proposals would be made to him. He would not, however, give his consent without sending for all his kinsfolk—the men of his family—and asking for their consent also. . . . When the Pa-jau has finished speaking, and has again bowed, one of the old men says, 'O Pa-jau! do not be too hasty. What if this young man, who wishes to take this young girl, does not respect his father-in-law and the Elders? We fear that some day he may divorce his wife.' The Pa-jau again makes three bows and says, 'Do not be afraid, O Elders! I and his relatives, who are before you, will be responsible for him.' Some of the bridegroom's relatives, who are married men, now come forward, saying, 'We shall be responsible.' The Elders reply, 'If the young man does not keep his promises, we shall cause him to pay a fine.' The relatives answer, 'If the young man does not keep his promises, we shall see that the fine is paid.' The old men say, 'It is

good,' and the Pa-jau again bows low to them. After this he lifts the bowl with the roll of velvet and the money and sets it before the mother of the bride, saying, 'This is for the mother's milk.' Sometimes he says, 'This is for the tears of the mother.' The offering is made in recognition of the mother's care and trouble when the bride was a little child."⁵ The bride-price, it will be recalled, is often alleged to be recompense for rearing.⁶

When a boy, among the Indians of British Columbia, had arrived at marriageable age, "his parents would ask him if he looked with favour upon any girl of their acquaintance. Upon his replying in the affirmative, and on learning his choice, they would select one of the eldersmen of the kin-group to act as intermediary. It was not etiquette for the youth or his parents themselves to make the first move. . . . Two eldersmen of the bride's family now rise, go over to the bridegroom, take him ceremoniously by the arms, conduct him to their side of the house, and seat him next his bride. This constitutes the marriage. . . . These customs were those observed by the chiefs and notables of the tribes. The marriage ceremony among the base folk was less formal. . . . It is this formal inclusion in the family circle of the bride that constitutes the marriage."⁷ The essential and fundamental characteristic of marriage among the Seri is said to be the collective motive under which marriage is prescribed for the welfare of the group, rather than inspired by individual appetite and selfish inclination.⁸

According to the opinions of the Roman philosophers and legislators, marriage was not a bond of souls, it was only a union formed in the interest of the state for its perpetuation. The censor Metellus told the people that marriage was only the sacrifice of a particular pleasure for a public duty; one recalls that soon the public duty was sacrificed to particular pleasure, and celibacy was preferred to a union for life with a tiresome mate.⁹ In the Massachusetts Bay Colony, "none were allowed to marry except they entered into bonds with sureties to the governor, to be forfeited in case there should afterwards appear to have been any lawful impediment. Magistrates still continued to join people in matrimony. Other provision could not immediately be made. There was but one episcopal minister in the country. . . . Sir Edmund considered the congregational ministers as mere laymen. Randolph wrote to the bishop of London, 'I press for able and sober ministers, and we will contribute largely to their maintenance; but one thing will mainly help, when no marriages shall hereafter be lawful but such as are made by the ministers of the church of England.'"¹⁰

Marriage-Tests. In British New Guinea, "no young man could marry, as no woman would have him, without skulls. Often a family would leave, and go far away for a length of time, and then return with skulls—perhaps all of them were bought—so that it might be said they had skulls. Sometimes a young man would go to friends at a distance . . . and would remain there for many months, and on his return home would have several skulls, which he bought from or through his friends, but on reaching his village, he would put on a solemn and sacred air, and, although in confidence to his relatives only, it was soon known by all in the tribe he was a great brave, and the lady he loved

would soon be his."¹¹ While quite young, a girl of the Roro-speaking tribes accompanies her mother to the garden, and "insensibly begins to pick up a knowledge of the work, and to be a help to her mother. . . . When the girl is considered to be of marriageable age the buttocks, legs, and last of all the face, are tattooed, a small feast being given before work on the buttocks is begun. . . . Decked in her finery, the girl parades ceremonially up and down the centre of the village for a short time, and for five days after this she should sit upon the verandah of her father's house for the greater part of each day, wearing all her ornaments."¹² This is presumably to let the world know that she has passed inspection and is nubile.

In earlier days, among the Akamba, "no warriors but those who had killed a Masai or helped to kill one were supposed to be able to marry. As however in practice this proved to be an impossible condition, a successful combatant would secretly meet his friends in the woods and would distribute among them portions of the outfit of the dead enemy [say a few ostrich feathers out of the dead man's headdress]; they would then go back and successfully pretend that they had assisted in the *mêlée* and this would be accepted as qualifying them for a bride."¹³ This recalls the Galla practice of taking the foreskins of slain enemies as a necessary preliminary to marriage.¹⁴

It is said of a rude tribe under Russian rule that stealing is a badge of merit. A girl will often say to a youth, "You haven't yet succeeded in stealing even one horse or redeeming a single captive." A mother blessing her son prays God to help him get much booty.¹⁵ Among a group in the Punjab, "when a girl is marriageable, an athletic competition is held, and the competitors jump, run, and so on. The winner has a right to marry the girl, but she has no choice."¹⁶ As a rule among the Manchu, a day is appointed when the marriage go-between introduces the bridegroom to the parents of the bride in the presence of all the relatives. "This introduction is called 'making the acquaintance of the young man,' and is a veritable crux for the pitiable youth, who must submit to a formal examination without being told what is the matter in question. He is simply commanded to put on his gala-dress and in company with the match-maker pay a visit to the family concerned, whom he often does not know personally at all. If he guesses at the purpose of the visit, which is usually the case, he must nevertheless play innocent, which makes his already uncomfortable situation all the more painful."¹⁷

Furness¹⁸ says that the fairest of bridal gifts, and one which no female Kayan heart could possibly resist, is "a lovely, fresh, human head." Wilken¹⁹ supports this: "Among some peoples one may not marry until he has brought his beloved several heads." But Schwaner²⁰ insists: "The generally prevalent opinion that it is obligatory to present a severed head to the bride when contracting a marriage, belongs to the realm of fiction." From the Malay Peninsula is reported a case of canoe-race where love usually unnerves the girl.²¹ It must not be overlooked that the initiation²² was a group-test for marriage. "The age at which a male Gilbertese married lay somewhere between 25 and 28 years. The actual date of a young man's marriage depended upon the length

of time it took him to pass through his initiation into full manhood, while the inception of that initiation depended again on his physical development. A healthy, lusty boy might begin younger than a weakling, but as a rule it was not muscular development that was watched so much as the growth of axillary and pectoral hairs. When these were well in evidence, and not before, the lad was considered ripe enough to be *kaunaki*, i.e., *made into a warrior* (lit., *made angry*); this, among a people by no means given to great hairiness, would not normally be until he was 23 or 24 years old. Taking his age to be 23 at the beginning of the initiation period, we must allow a minimum of three years for the completion of the various rites he must undergo. . . . A girl would be given in marriage on her release from the *Ko* (*Bleaching-house*), wherein she was confined, as a rule, for about two years after the first menses appeared. Her age would thus normally be about 14 or 15 years at marriage."²³

In America the test is common, even among the most backward tribes. The primary mating of the Seri is attended by observances so elaborate as to show that marriage is one "of the profoundest sacraments of the tribe, penetrating the innermost recesses of tribal thought, and interwoven with the essential fibers of tribal existence." The groom has to go through a two-fold probation, one material and one moral. He must for one round of the seasons provide for and protect the entire family of the bride, displaying "skill in turtle-fishing, strength in the chase, subtlety in warfare, and all other physical qualities of competent manhood." Then also, although sharing his future wife's sleeping-robe, he must maintain continence. "The would-be grooms who fail in their moral tests are ostracized and at least semi-outlawed, and range about like rogue elephants, approved targets for any arrow, until they perish through the multiplied risks of solitude, or until some brilliant opportunity for display of prowess or generosity brings reinstatement."²⁴ If he passes his ordeal satisfactorily, "he is formally installed in the family as a permanent consort guest, and his children are added to the clan of his mother-in-law."²⁵ Among the Diggers, the girl enacted the performance of Atalanta. If she "opposed her suitor, she might run a race with him. She was allowed a certain number of feet the start when the signal was given to run. If she won she was free, but if he caught her, she had to go without a murmur."²⁶ In Nicaragua "the bridegroom must first wrestle with a strong man of his tribe; if he is defeated he must, without twitching, let himself be flogged by his tribal fellows. And if he cries out during the whipping, he may not marry, but must go through the same test again later."²⁷

In British Guiana the test is calculated to show ability to support a family rather than physical endurance. Before marrying, the youth must "within a defined time clear of all trees a piece of land measured off for him—which land later serves him as a means of support—or he must fell a big tree within a given time. . . . If he emerges victorious from the ordeal he possesses the qualities of a man, may appear in the men's council and take part in its deliberations. If he does not pass the test, he must subject himself to it again later."²⁸ Here, as often elsewhere, the maturity-test is also a marriageability test. Among certain tribes of Cayenne, an ordeal to be undergone by the male aspirants for marriage consists in the main of submitting without a

murmur to the stinging of certain ants or wasps. "The victims invariably faint and are carried to their hammock in a shed, where they have to remain 15 days, eating only a little dry cassava and small fish roasted on ashes." Among the Caribs of this section the medicine-man applies ants to the chest and wasps to the forehead, the whole of the body being subsequently stung by these insects. In some instances, "with their backs turned, the candidates for marriage have to throw cassava pellets at a piece of board on which a circle has been traced, and those who fail to hit it three times running are subjected to another ant and wasp stinging." The natives believe that the ordeal renders young men skilful, clever, and industrious; and "certainly the obligation of publicly braving severe bodily suffering has an assured intrinsic value." Women may have corresponding proofs to show of their fitness for permanent sexual union, indicated first and foremost by the advent of puberty; "the first signs of which, by the Makusi and others, were met with a whipping. With the present-day Pomeroun, Arawak, Warrau, and sophisticated Carib, the general practice is for the parties not to 'marry' until the girl has given proof of her child-bearing capacity by becoming pregnant. An Indian requires his wife mainly for this purpose, being always able to satisfy his lust elsewhere." In some cases the young women are also subjected to the ant-ordeal. For example, "in order that the Arawak girl, now become a woman, may henceforth have strength and willingness to work, some old stranger whose character is known to be strong and good, and a willing worker, is chosen to place an ant-frame on the young woman's forehead, hands, and feet. The ants are attached at their middles in the interstices of the plaited strands forming the framework, the frame itself being applied on the side from which all the little heads are projecting." In olden times the Orinoco Indians, before marrying their daughters, subjected them to a forty days' fast. The reason for this semi-starvation was given by a chief as follows: "Our ancestors observed that wherever women, at their monthly periods, trod, everything withered, and if any man trod where they had placed their feet his legs swelled. Having studied the remedy, they ordered that we should starve our women so that their bodies might not contain poison." It was asserted for the Carib girls on the Islands, who were treated similarly, that the idea of the fasting was "to prevent them becoming sluggards, not likely to work when married."²⁹

It is said of a half-vagabond tribe in Brazil that the women are mostly won through a fist-fight in which all the lovers of the girl join. In the case of another tribe the young man must work a long time for the bride promised to him when a child and must bear all the cares of the house-father before he is married to her. This might be interpreted as service in lieu of purchase, as well as a test of the man. Again, "only tested marksmen receive the desired bride, because they have demonstrated the capacity to take care of her."³⁰ Among the Bororo Indians "every young man who wishes to marry must have killed either five peccaries or one jaguar, thus giving proof that he can support a family."³¹ In the Gran Chaco, the youth must kill a jaguar to prove his manliness.³² In Paraguay the groom must, "in order to demonstrate his capacities as a future paterfamilias, undergo a test as hard as it is original. Dressed in

festal array, he makes music for eight full days before a little hut into which the maiden has been brought for this purpose by her parents."³³

It is said of the Essenes, a strict Jewish sect, that "they test their wives for a three years' space, and then, after they have given evidence by three purifications that they are fit to bear children, they marry them. They have no connubial intercourse with their wives when with child, showing that they do not marry for gratification, but for the sake of offspring."³⁴ Strabo³⁵ has a report of a tribal custom whereby "no one marries before he has cut off the head of an enemy and presented it to the king, who deposits the skull in the royal treasury." Ritual cannibalism accompanies the act. Among certain Mohammedans the groom must have put an end to war between two tribes.³⁶ A report to the Pope made by an archbishop from the Albanian mountains in 1702 states: "Among the execrable customs of the mountain people, the wretched parents are in the habit of buying young girls for a price for their sons who are of tender age, and of keeping them in their houses till of age to cohabit, and of omitting to contract matrimony unless a male child be born, even after fifteen years of sinful cohabitation."³⁷ This custom illustrates trial marriage as a test for women, to which we now turn.

Marriage of Trial or Term. As an accompaniment of trial marriage may occur a birth out of wedlock. Such a situation is no cause of reproach among the tribes of British Central Africa. The child belongs to the mother.³⁸ In Akkra temporary unions are contracted by the man giving the woman a skirt; when that garment is worn out she may return to her parents. In the Congo region there are marriages of test, while in Abyssinia marriages may be for the duration of the market.³⁹ Nothing is said to be simpler than the process by which, in Nyasaland, a man and a woman enter matrimony. The author⁴⁰ asked a native how he got his wife; "he said: 'I met her on the road and gave her tobacco. Shortly afterwards she came in to my hut and brought ugali (porridge). I asked: 'For whom is this ugali?' She replied: 'It is for you.' I then asked her: 'Why do you bring me ugali?' She replied: 'Because I want you very much.' I said: 'But you have a husband already.' She replied: 'No! my husband left me a long time ago.' I said: 'This is surely a lie.' She said: 'It is not a lie: go and ask my brother.' I then went and asked her brother, and he said: 'She has told you the truth: her husband left her a long time ago.' I then went to my own brother [his eldest brother] and asked him if he had any objection to my courting that woman. He said he had none and so she came to live with me.' In due time, when the two came to the conclusion that there existed no radical *incompatibilité d'humeur*, the preliminary arrangement became a permanent one." Of a tribe near Victoria Nyanza it is said that girls and young soldiers live in a kind of trial marriage with each other. When a girl becomes a mother she is restricted to a husband, not before.⁴¹

In the case of a Hindu king's daughter who was destined to carry on the royal line, the important thing was that she should have issue; her marriage was a matter of quite secondary concern. "This may explain the *swayamvara*, which allowed her not only to choose her husband, but possibly also any man,

to be the father of the heir to the throne. The only limitation on her choice of a husband seems to have been a rule that she must choose the winner in the tournament, if one was held."⁴² This case resembles the *ambil-anak* form, with a test of the man superadded. The connection of trial marriage with illegitimacy comes out in the case of the Palaungs. "An unmarried woman very seldom has a child by a man who afterwards deserts her, but if this happens, she goes for advice to one of the village Elders. He in turn calls other Elders, and they discuss the matter; then they try to persuade the man to marry the girl. If he refuses, but owns that the child is his, they oblige him to pay to her a fine of about thirty rupees; and, if the mother is willing to give up her child, the man generally takes it to his home after it has been weaned. In such a case it will rank as a legitimate child in the household, and should the man at a future time marry some other woman, the step-mother is kind to it. I have never heard of a case where a step-mother was unkind to her husband's children, whether legitimate or illegitimate. In after-life no one will reproach the child for its unfortunate birth."⁴³ It is asserted that trial marriages are centuries old in Japan and are still practised. "The mother-in-law insisted that the girl selected for her son should live with him for three or four months, under close inspection, before a formal marriage occurred. Often the poor girl then was rejected."⁴⁴

Of the Tlinkits it is written that "in former years men and women commonly took each other on trial. If, after having lived together for some weeks or months, they found that they liked each other and were satisfied to live together permanently, then, by a mutual understanding, they became husband and wife for good."⁴⁵ It is said that among the North American Indians unions for a time only and on trial were common. After the fixed term they were dissolved or, where mutual consent and marital affection were present, they might be protracted for the same period and then established for good. Among the Hurons marriages were concluded for not longer than a few days; among the Muskogean they were entered into for a year only, thereafter to be regularly renewed, especially if there were children. Again, in New England marriage was for a time; only in case the parties liked each other would it be established for good. In Virginia the chiefs, who had many wives, were married originally with the first one alone, and with the others only when they had lived together more than a year.⁴⁶

In ancient Egypt it was permissible to have a year of trial in marriage, which was then dissoluble by payment.⁴⁷ Among the Semites, and in particular the Arabs, occurred the *mot'a* marriage, where the woman received her lovers for a time. The term seems to mean marriage of pleasure or convenience.⁴⁸ It was a temporary union, a sort of trial marriage, though it might be aligned with monandry.⁴⁹ Wilken⁵⁰ has written much about it, claiming that marriages where the woman was bound for good to a definite man were unknown to the ancient Arabians, who joined marriage for a time only. It is said that the Saracens hired their wives for money for a definite time following a contract, and in order that there might be an appearance of marriage, the wife offered

to the man, under the name of marriage-gift, a spear and a tent, that she might after the fixed day leave him. The twenty-eighth verse of the fourth sura of the Koran reads: "It is allowed to you to take women for your money. . . . Give her her pay for what you have enjoyed from her." A later orthodox version says that this refers simply to common marriage and that the word pay means bride-gift. Some think this verse refers to the *mot'a* relation; one translates it: "Give her her pay for what you have enjoyed from her for the completed term." If so, it refers to a temporary marriage-bond. There is no other reference in the Koran but the traditions are fuller and agree that Mohammed allowed *mot'a* marriage to his followers. The Shiite chalfs tried to bring it in again. The *mot'a* was a marriage for a definite time, dissoluble of itself at the end of the period without any form of divorce. It had no formality, official, or witness. The man paid a certain compensation to the woman. In the earlier days of Islam such temporary unions were suited to special circumstances such as when the men were on war-expeditions and did not have their wives with them, and also when they were in foreign cities for a time. Wilken quotes a traveller's account of conditions in Mocha: "In all the streets there are brokers for wives, so that a stranger, who has not the conveniency of an house in the city to lodge in, may marry, and be made a free burgher for a small sum. When the man sees his spouse, and likes her, they agree on the price and term of weeks, months or years, and then appear before the cadjee or judge of the place, and enter their names and terms in his book, which costs but a shilling, or thereabout. And joining hands before him, the marriage is valid, for better for worse, till the expiration of the term agreed on. And if they have a mind to part, or renew the contract, they are at liberty to choose for themselves what they judge most proper; but if either wants to be separated during the term limited, there must be a commutation of money paid by the separating party to the other, according as they can agree; and so they become free to make a new marriage elsewhere." The trial marriage of the old Arabians was readily dissolved if the spouses had no pleasure in each other's company. It is related of one woman that she had in swift succession more than forty husbands belonging to twenty different tribes. Each who came to her said simply, "I ask you in marriage;" to which she replied, "I take you in marriage." "Hassanyeh Arab wives," we read, "enjoy at times a freedom from the ties and responsibilities of the marriage state, unknown, I believe, to any other race in the world. When the parents of the man and woman meet to settle the price of the woman, the price depends on how many days in the week the marriage tie is to be strictly observed. The woman's mother first of all proposes that, taking everything into consideration, with a due regard to the feelings of the family, she could not think of binding her daughter to a due observance of that chastity, which matrimony is expected to command, for more than two days in the week. After a great deal of apparently angry discussion, and the promise on the part of the relatives of the man to pay more, it is arranged that the marriage shall hold good, as is customary among the first families of the tribe, for four days in the week; and, in compliance with old established custom, the marriage rites during the three remaining days shall not be insisted on, during which days the bride shall be perfectly free to act as she may think proper, either by adhering to her husband and home, or by enjoying her freedom and independence from all observation of matrimonial obligations."

§366. Chastity.

Among the western tribe of Torres Straits, three cicatrices cut on a girl indicated marriageability. "If a girl was too free in her favors to the men, the other women cut a mark down her back to make her feel ashamed; she subsequently married without difficulty. A man in a corresponding delinquency would only have a charcoal mark painted on him, for it must be remembered that 'woman he steal man.'"¹ Of certain Papuans it is said: "The woman has invariably been deflowered before marriage, and in fact they prefer such a woman to a virgin."² "Illegitimate, or according to the Kiriwinian ideas, fatherless children, and their mothers are regarded with scant favour." Malinowski³ cites several instances in which girls were pointed out to him as being undesirable, "no good," because they had children out of wedlock. "If you ask why such a case is bad, there is the stereotyped answer, 'Because there is no father, there is no man to take it in his arms.' . . . This by no means implies that a girl who has been a mother finds any serious difficulty in marrying afterwards." Both in an encampment and at home the Andamanese are careful to place the bachelors and spinsters at either end of the camp or building and the married couples in the space between.⁴

A writer on the negroes of the Gold Coast comments favorably on local conditions of morality, at least as regards the native attitude toward European women. Unmarried women teachers often go alone from station to station.⁵ The native women of Central Africa are said to be extremely well behaved. "They flirt, it is true, but without affectation or false prudery; they have complete self-respect. They do not treat boys with preference but surround their girl children with tenderness and care, in which the brothers join. . . . After marriage they care for the house and observe a little more reserve with the men."⁶ Boys and girls in British Central Africa play at being man and wife, building little houses in the bush and sleeping together. "Promiscuous sexual intercourse among girls before puberty is common."⁷ Coudenhove⁸ comments on the variation between tribes concerning the conduct which is expected from unmarried girls. "The Zulu of South Africa punishes girls who have disgraced themselves, by death through warrior ants. The Wataweta of the Kenia province allow their young a license as great as that of the Wayao. On the other hand, the Wapare of the Tanganyika province, near neighbors of the Wataweta, in order to keep their young girls out of harm's way, were, and perhaps still are, in the habit of shutting them up for periods sometimes extending to four years, often in solitary confinement, in lofts built into the roofs of their huts! . . . It is to be feared, however, that those tribes which are concerned about the proper behavior of their maidens before marriage, are not so from any appreciation, or even comprehension, of 'virtue' in the white man's sense of the word. Chastity merely increases the girl's value as a commercial asset. That this is the case follows from the fact that it is insisted upon chiefly in those tribes where the girl is bought from the parents by the bridegroom, without being herself consulted; while it is treated as a negligible quantity where the girl's consent is a condition of marriage."

Among the Bahima, "should a girl go wrong before marriage she is degraded

and cast out by her clan; if she is with child she is sent out of the country until her child is born. . . . After the child is born the girl may return to the country, but no one of position will marry her, only a serf or some disgraced person who is unable to obtain another wife."⁹ Among the Ba-Yaka virginity on the part of the woman is considered essential; in fact, "if she is found not to be a virgin she can be repudiated. . . . Sexual intercourse is forbidden to the unmarried; should it occur, the man must pay a fine to the father of the girl, the latter is not punished, but it must be remembered that great stress is laid upon the virginity of a bride."¹⁰ So far as the information of Sir Charles Dundas¹¹ goes, free love is nowhere in East Africa recognized as the normal and approved custom for unmarried adults. "At the same time it is not punished, and the tendency has been in the direction of increased immorality of this sort during recent years. . . . Where a young couple consort sexually it is generally understood that they must subsequently marry. Such is the strict rule among the Wabunga. In practice such relations are in fact and invariably only a prelude to marriage, and the long period of betrothal customary among most of these tribes more or less ensures that the girl either remains pure or consorts only with her betrothed. . . . Europeans are, of course, often misled as to the actual nature of native practices. Thus I have found that it is popularly believed that the Wakikuyu permit free sexual intercourse between the unmarried girls and youths. Actual sexual connection is, however, not permitted nor indulged in excepting in rare cases, but the girls and warriors may and do indulge in any other extreme of intimacy." Among the Unyamwesi, if a man begets a bastard he is obliged to make a payment to the girl's father and to marry her, without paying any more.¹² Amongst themselves the Pygmies are said to be very moral; "their women, however, soon degenerate into immorality when they come into contact with Sudanese or Swahilis. But even then they observe outward decorum and assume an affectation of prudishness."¹³ Among the ruling class of the Niam-Niam, if a man is disillusioned as to the virginity of the bride he has purchased, "he simply returns the girl to her father, upon whom the opprobrium falls, and gets back all his presents."¹⁴

In Baghirmi, the girls "were in maiden fashion retiring, and witnessed through their bearing the well known fact that modesty and chastity are not connected with clothing."¹⁵ It is reported that morality among negroes varies inversely with the amount of clothing worn, the most fully clothed being the most immoral.¹⁶ Galla and Somal girls are scrupulously guarded; "any young woman who . . . is not a *virgo intacta* . . . cannot, among the Galla, be legally married."¹⁷ Again, the death-penalty falls upon seduced and seducer, prostitution scarcely appears, and chastity and nakedness are correlative.¹⁸

Mongol women are chaste and nothing is heard amongst them of lewdness; this was so in the thirteenth century and is reported to be true still.¹⁹ The Yakuts use straps that go about the body and are tied in intricate knots to guarantee the fidelity of wives and the virginity of daughters; but they see no

immorality in illicit relations unless someone is materially injured, in the matter of property-rights, by it. The conduct of girls is restrained lest it injure their marriage-value.²⁰ If the bride-price has been partly or fully paid, the parents do not take any further interest in preserving the girl's chastity. In other words, "the real legal marriage precedes the actual official wedding ceremonies sometimes by several years; and, in fact, is accomplished when the suitor formally hands over to the father of his bride a certain portion of the *kalym* [bride-price]. During this time the husband has to visit his wife in the house of her family, and any children born in this period live with the mother." Contrary to the custom of all neighboring tribes, Koryak girls must have no sexual intercourse before marriage. "It is considered shameful for a girl to bear a child before marriage; she must go out into the wilderness to be delivered, and afterwards she kills and buries the child. . . . When taking the census of the Maritime and Reindeer Koryak families, Jochelson did not find a single illegitimate child, while among the Yukaghir, northern Tungus, northern Yakut, and Russian settlers in northern Siberia, it was almost impossible to find a family not including such children."²¹ In Korea "daughters have been put to death by their fathers, wives by their husbands, and women have even committed suicide, according to Dallet, when strange men, whether by accident or design, have even touched their hands, and quite lately a serving woman gave as her reason for remissness in attempting to save her mistress, who perished in a fire, that in the confusion a man had touched the lady making her not worth the saving."²² Cambodian maidens rarely go astray.²³ Certain Turkomans, by exception, exact chastity of the man till marriage.²⁴

Among the Sema Nagas free intercourse with bachelors is not allowed to unmarried girls as in the Angami and Ao tribes. "This is not to say that the unmarried Sema girl is invariably chaste, but she is a good deal more so than the girl of any neighbouring tribe. The care which is taken of her is partly due to the desire not to damage her value in the marriage market, as a girl who is known to have had an intrigue commands a much lower marriage price as a rule. Accordingly the fine for an adultery with a girl of position is much higher than that for a similar affair with the daughter of a man of none, since the marriage price of the latter is in any case much lower than that of, say, a chief's daughter."²⁵ Among certain Borneans the punishment for sex-relations with a girl, who as a consequence has an illegitimate child, is eighty dollars, which goes to the injured parents or the nearest blood-kin.²⁶ Of the Rejangs of Sumatra it is said: "Chastity prevails more, perhaps, among these than any other people. It is so materially the interest of the parents to preserve the virtue of their daughters unsullied, as they constitute the chief of their substance, that they are particularly watchful in this respect." In the country prostitution for hire is unknown; it is confined to the more polite bazars. In the case of crimes against nature, neither the things nor terms for them are known in Sumatra.²⁷ Among the Sea Dyaks, "the women are so keenly sensitive to disgrace that they will not part with their virtue for fear of the consequences." Death is preferred above a life of shame and suicide is not infrequent for this cause. If a man prove false, which is unusual, and the woman commit suicide, he is

very heavily fined.²⁸ Young unmarried girls are secluded from danger.²⁹ Among the Sengirese who have a matriarchal system, morality is strict, while the Alfurs of the Minahasa are patriarchal and somewhat lax.³⁰ Over against the many peoples in the Indian Archipelago who hold virginal chastity in small honor, there stand others who strictly insist that even before marriage the woman must be chaste and who punish the least misstep with the severest penalties. "If even the rain falls for a while, then all the maids in the village are narrowly spied upon whether one of them may not be suffering from vomiting."³¹ Examples are given.

If, on any island of the Gilbert Group, a girl was discovered at the marriage-ceremony to have failed in the test of virginity, the bridegroom's mother, on establishing the fact, would cry aloud, "An old woman! An old woman!" and proceed to drag the naked girl from the loft. "But as a rule the unhappy girl was disowned from the moment of detection; she was branded with the name of *nikira-n-roro* (lit., the remnant-of-her-generation) and earned her living by the favour of promiscuous suitors. . . . Wilkes mentions that women were offered in traffic to his sailors by the people of Tabiteuea and other islands, and deduces that the islanders had a low standard of morality. The fact was that the girls offered were *nikira-n-roro*, whose existence argues a high standard of virginity."³² Insistence on virtue varies with class: on the Nauru islands, "before marriage a girl can do what she will, as no limitations are imposed; but in the families of chiefs there is more stress laid on purity. If a girl has a child it is looked upon as a shame" and the ignominy descends to the child. Abortion is frequent.³³ Heathen Malays of the Philippine mountains guard the virginity of daughters, who are sometimes educated apart by the old women.³⁴ In Samoa "chastity was ostensibly cultivated by both sexes; but it was more a name than a reality. From their childhood their ears were familiar with the most obscene conversation; and as a whole family, to some extent, herded together, immorality was the natural and prevalent consequence. There were exceptions, especially among the daughters of persons of rank; but they were the exceptions, not the rule."³⁵ By the old navigators the women of Easter Island "are said to have been the most bold and licentious in Polynesia, if the reports are correctly stated, but we found them modest and retiring and of higher moral character than any of the islanders."³⁶

A waning custom among the Tlinkits is that of confining girls when approaching womanhood in some cramped, coop-like place. "In these little dungeons, not high enough for them to stand in nor long enough for them to stretch out in, girls are confined anywhere from four months to one year. When they come out they are fairly bleached, and the great wonder is that they ever live to come out at all. . . . In most cases she is spoken for before she leaves her solitary confinement, and she steps out of her little prison only to step into matrimony."³⁷ Pre-marital chastity was not considered a virtue among the Cree Indians, though infidelity of a wife was sometimes severely punished.³⁸ Among the Omaha, on the other hand, "young girls were carefully guarded; they never went to the spring or to visit friends unless accompanied by an older

woman—mother, aunt, or relative. Young married women seldom if ever went anywhere alone. Custom permitted only elderly women to go about unattended.”³⁹ Among both Mandans and Yuroks the sexes bathed apart, the bathing-place of the women being guarded against the approach of men.⁴⁰

In Homer the young of both sexes conversed freely, and the young woman of the house bathed and anointed the guests; yet the mores were strong and modesty was formal, not instinctive.⁴¹ Letourneau⁴² holds that life in society brought shame and modesty; it was not delicacy but the brutal egoism of the man that determined modesty and sexual morality. The woman was his personal property and chastised for unauthorized intercourse. Whatever other causes may have been at work to produce the demand for chastity in unmarried girls, Starcke⁴³ believes that “its chief source is to be found in early marriages and in the consequent habit of desiring and enforcing discreet behaviour in young girls.” Westermarck⁴⁴ has collected a number of examples of chastity, as disproof of the theory of free cohabitation before marriage. The Serbs derided harshly the young wife who became a mother early in married life.⁴⁵

§367. Courtship.

As respects courtship in Melanesia, “over a large area marriage does not normally take place except after more or less prolonged sexual connection which must be looked upon as the normal method of courtship, but it is equally clear that connection may occur under circumstances which do not lead to marriage and which are not expected to do so. . . . Certain houses are dedicated to the use of unmarried girls above the age of puberty who habitually pass the night in them. These, like the local man-houses, are called *potuma*, and are usually old houses, which, when their owners build new ones, are given over to the girls. The girls resort to these houses in the dusk, and after dark a number of young bachelors of the community will proceed to such a *potuma*, and with the exception of one of their number, squat down outside. This youth enters the house and asks the girls if any of them are willing to receive any of the boys whose names he repeats. . . . If after their first night together the girl asked the boy to return, he would do so, but not otherwise, and the proposition to spend a second night together never came from the male. . . . A more or less prolonged period of connection precedes marriage, and that this, in the ordinary way, constitutes courtship is shown by the method in which betrothal is brought about. After a time, said to extend from one to three months, during which a girl has constantly received the same boy, she may propose marriage.” In certain sections a custom called *viagagavu* prevails as a preliminary to marriage: “A boy and girl pass the night together, sleeping in each other’s arms, either in a rough shelter built in the bush, or in the house of the girl’s parents. . . . In many, perhaps the majority of cases, connection does not take place; . . . a widow or widower about to marry would practise *viagagavu* with his or her future spouse.”¹

When a native of Choiseul Island makes a proposal for the hand of the girl

of his choice and is accepted, "he immediately informs his father, or should the father be deceased, the chief of the village, of his intention to marry. When the parent, guardian, or chief, is satisfied that all is well he hands over to the bride's father or guardian a portion of the purchase money. The balance is paid at the end of the probationary period (which lasts from a month to three or four months) provided that all is satisfactory and the parties are agreed that they can live happily together."² In the D'Entrecasteaux Islands there is said to be plenty of idle flirtation, both by day and by night. "A lad, for example, may find a girl alone in the woods or on the shore, and invite her to sit beside him and share his betel-nut or tobacco. Kissing is quite unknown." A girl's heart will glow with pride that so gay and fine a youth should come to woo her love, but she will not admit it for a single moment. "On the contrary she will deny it emphatically, even to her bosom friends, and roundly assert that she will never marry him. Nevertheless the youth's suit prospers." The typical method of courtship is as follows. "At night, when all is silent, the lad steals quietly beneath her hut and plays a soft tune on his jew's harp till she wakes. Her father may hear him and ask him what he wants, and the lad will answer that he has come to court his daughter. Possibly fathers are more indulgent in this land, or it may be they have greater self-control, for the girl will merely be told to go below and stir up the fire and do her courting there. More usually though the girl at this period will be sleeping in the maidens' hut. Then when her lover's serenade awakes her from her dreams—if, that is, she needs awakening—she rises, stirs the fire, and with her own jew's harp she plays an answering tune. The lad responds, and the girl then softly calls to him and bids him enter. There they sit beside the fire, conversing in low tones and chewing together the betel-nut which he has brought until it is time for him to retire again. . . . Most lads, however, are too shy to go alone to the maidens' hut, at least in the beginning of their courtship. They club together, share their betel-nut, and visit the hut in a body and play their jew's harps. The girls invite them in, and they separate off in pairs, the acceptance of the betel-nut which each lad offers as he enters being a token of consent; any poor unfortunate lad left over must go sadly home."³

Courtship with gallantry much after the European style is reported among the Banziri of the Congo basin.⁴ With the Akamba, "if a young man sees a girl he fancies he will talk to her now and again, and eventually tell her he wants to marry her."⁵ In Nyasaland the girls have absolute freedom of movement. "They will go to a young fellow 'on trial' without first informing their parents, until, perhaps, one day, the father asks casually: 'Where are you always going to, taking food-stuff with you?' The girl then replies: 'I go to a young fellow whom I like very much.' Then the swain, after having been informed by his fiancée that the father is beginning to manifest curiosity, will go to the latter and tell him that he wants his daughter; and then the father will say: 'Go and speak with her brother.' It is always the brother, or the uncle on the mother's side, who is consulted as the weightiest authority."⁶

A case of real wooing is reported among the Malays;⁷ but among the Karens of Burma it is not respectable.⁸ The Palaung suitor has the aid of religion, for

it is their belief that the spirit, when in the body, does not pervade the whole of it, but moves through it, being sometimes in one part and sometimes in another. Thus, "on Sunday the spirit or life of a woman is in her left thigh; on Monday in the chin; on Tuesday in the nape of the neck; on Wednesday in the middle of the back; on Thursday in the left wrist; on Friday in the right thigh. This should be remembered by every lover, because it is the spirit and not the body that can feel love; therefore, if on a Tuesday he can put his hand—especially a charmed hand—on the back of the neck of a girl, or put his arm round her waist on Wednesday, or take her left hand and stroke her left wrist on Thursday, while he is saying nice things to her, she will be more inclined to listen than if he held her right hand on Thursday or stroked her cheek instead of the nape of her neck on Tuesday." But the way of the suitor is not always so smooth. "The first man who comes to the house where a young girl lives to whom he wishes to talk, finds out where she sleeps from his sister or from a girl-cousin. Then at night, when her father and mother are still talking in the entrance-room, he cuts with a sharp knife a hole near the place where he thinks her pillow should be. He then gently inserts his hand and feels round the hole for the girl. If he should touch her, he tries to wake her by pulling her blanket or a lock of her hair if it has escaped from under the bed-clothes. . . . It may happen that, as a joke, he has been deceived as to the place where she sleeps. In such a case, when he puts his hand through the hole that he has cut in order to wake the girl, he may catch hold of the hair or blanket of the father, who, if he is a nervous man—and has not realized that his daughter has begun to have sweethearts—probably cries out in fear, thinking that a ghost has seized him. The young man of course runs away and does not wait to explain. The first man to arrive in the evening may talk through the hole as long as he pleases, other men coming later must wait till the first man goes away, then the next-comer has the right to the hole till he retires, and so on. . . . The girls have distinctly the best of the game, as the young man is sometimes hanging in a precarious position outside in the cold night wind, which often blows fiercely among the Palaung hills, while the girl, cosily wrapped in her blankets, squats in the house."⁹

The Rejangs of Sumatra show little of courtship; their manners do not admit of it, for the young people are kept carefully apart and the girls seldom trusted from under the maternal wing.¹⁰ A Macassar youth presses a coin upon the forehead of the girl he wishes; if it is not given back, he is accepted. He may also show his love by smashing a coconut so that the sweet juice besprinkles the girl. In one district, young men and women meet in the evening to pass the time; they exchange mutual compliments in singing tones, and "most of the love-affairs are brought to pass in connection with these circumstances." In Java, the rice-harvest, in which all take part, offers the finest chance for young people to court, and wedding-feasts are never more numerous than in the first weeks of harvest time. Also during other festivals, when the opportunities for the sexes to meet are generally pretty free, the young people have a good chance to make choices. In a number of cases proposal of marriage is made by the girl. Generally the young man declares himself and tries to find out how the girl feels; in this the use of betel is very common, as it also is later, in the exchange of love-tokens between engaged people. Among the Alfurs and others the word for wooing means to ask each other continually

9 Milne, *Eastern Clan*, 114-115, 121-122.

10 Marsden, *Sumatra*, 265.

for betel. After puberty the girl sleeps with a full betel-vessel near by, so as to be able to make use of it at will. Wilken,¹¹ from whom the above is taken, quotes from a tale as follows: "The crown-prince embraced his wife now long and heartily and begged her to give him her betel-chew. Mutually they offered them to each other." The offering of a chewed-out quid is a great proof of affection. To continue, "The prince took a chew of betel, embraced his wife, kissed her, and gave her a chewed quid." There are cited cases analogous to the evening wooing described above, though not so complicated. If the girl "blows up the fire," it is a sign of negation. There are also instances, especially among the Bataks, where the young couple spend the night together in chastity, the man leaving early in the morning. Among the Alfurs, however, there is some immorality. Again, there is the same flowery, symbolic talk as among the Palaungs. Wilken cites cases similar to "bundling" and aligns them with the placing of a naked sword between Siegfried and Brünhilde and the traces of this custom in Switzerland, Tyrol, some parts of Germany, Norway, Sweden, and Heligoland.

Among the Samoans a pig was sometimes used as a courting present.¹² In the island of Ruk, the lover uses a "recognition-staff," with shallow notches in the end. He sticks this through the house-wall, when he calls at night, at the place where his chosen sleeps. She knows whose staff it is by the shape of the end and by the notches and accepts or refuses the summons to a tender tryst. There is here an element of romance elsewhere most exceptional in the whole region.¹³

There is said to be no such thing as courtship among the Tlinkits, the girls not seeing the men who are designed to become their husbands until they are wedded to them.¹⁴ Among the Salish tribes, "the common way in which a man sought to learn whether he was acceptable to the parents and relatives of the girl he desired for wife or not, was to take a large bundle of good firewood to her father's house or apartment and offer it to the family. This constituted a formal request for her hand, as it were. . . . The significance of the gift is fully understood by all, and a family council is immediately held. The youth awaits the decision of this council."¹⁵ As Omaha custom did not permit the young men to visit young women in their homes, the opportunities for the young people openly to become acquainted were limited to gatherings for tribal ceremonies and during the confusion incident to breaking up or making camp when the tribe was on the annual hunt. "The stream and spring were at all times the favorite trysting places. Men sometimes composed their own love songs and by the song the girl not only identified her lover but became aware of his nearness. . . . It has been stated that a true love song, one that had for its purpose the honorable wooing of a maid, did not exist among peoples living in the stage of development represented by the native tribes of America. This statement does not hold good for the Omaha and their close cognates,"¹⁶ as the authors demonstrate by a number of examples. Proposal of marriage among the Osage was accompanied by gifts of horses and blankets.¹⁷ Of the Winnebago it is said that "if the young girls have any lovers they always come to the menstrual lodges at night. This is therefore the time for wooing. It

11 *Vide.*, 283; and in VG, I, 503-504, 507, 508, 509, 510, 511-514, 517, note 31.

15 Hill-Tout, in JAI, XXXIV, 318-319.

16 Fletcher and LaFlesche, in BAE, XXVII, 319.

17 LaFlesche, in AA, XIV, 129.

is said that the girls cohabit with their lovers in these menstrual lodges. Those girls who have parents are attended by watchers, so that no unworthy men may visit them. They are especially guarded against ugly men, who are very likely to have love medicines. However, generally it is of no avail to struggle against such men, for they are invincible."¹⁸ With some of the Apaches, "a young warrior seeking a wife would first bargain with her parents and then take a horse to her dwelling. If she viewed his suit with favor she would feed and water the animal, and, seeing that, he would come and fetch his bride, and after going on a hunt for the honeymoon they would return to his people. When he took two horses to the camp of the bride and killed one of them it signified that her parents had given her over to him without regard to her consent."¹⁹

Among the Seminole Indians the girl's feelings are considered. A proposal is handled in the following way: "A warrior of twenty sees an Indian maiden of sixteen and wishes to marry her. He calls his immediate relatives in council and tells them his wish. If the girl is not a member of the lover's own gens, and if there is no impediment in the way of the alliance, some one from their own number is selected, who, at the proper time, goes to the maiden's kindred and tells them that they desire the maid to receive their kinsman as her husband. The girl's relatives then consider the question. If the decision is favorable, they ask the girl her wishes. If she is willing, news of this is conveyed through the relatives, on both sides, to the prospective husband, and there is excitement in both households. The young man's female relatives take to the girl's mother a blanket or large piece of cotton cloth and a bed canopy. There is returned to the young man thence a wedding garment—a newly made shirt."²⁰ Among the Guiana Indians "engagement and courtship are out of the question, while kissing and cuddling are said to be practically unknown. Among Arawak, as well as Carib, the beauty of a girl is judged by her feet, her face being of secondary importance. . . . Even at the present day, the comparatively civilized Surinam Carib regards kissing as a stupidity peculiar to the white race."²¹

On one of the Balearic Islands, Vuillier²² was startled by several loud reports. On inquiry, the priest led him to the foot of a little hill, where he saw a girl slowly walking home from church. A youth with a musket was hurrying after her and as he reached her, he suddenly fired at her feet, raising a cloud of stones and dirt which almost hid her from view. But without so much as the quiver of an eye-lash the girl continued to walk serenely on and, the young peasant placing himself by her side, they both continued their road chatting amicably together. This, it appears, is the customary form of salutation between man and maid throughout the island, the girls making it a point of honor to betray no emotion at the firing, though always taken unawares. Here is a variety of courtship analogous to the "showing-off" of the small boy. But the firing is also more serious, for while a caller discharges his musket in the middle of the room at farewell, adding "Buenas noches," he may say goodbye first and fire afterward. That is a challenge to a rival suitor which is always accepted, the challenger waiting outside the door.

§368. Betrothal.

AMONG the natives of Port Darwin, "infants are betrothed spouses, and in some cases the bestowal is made, sex being favorable, antecedent to birth."¹ With both the Koita and Motu, "betrothal results as soon as a boy and girl who have been enjoying a period of unwedded happiness consider it well to get married. The proposal in the first instance always comes from the girl, while they are together at night, and is never directly refused by the boy. . . . The young couple continue their nocturnal meetings during the whole time of betrothal," the bridegroom meanwhile setting about to collect the price he will have to pay for his bride.² Betrothal-ceremonies are elaborate in southeast Papua. "A man proposes to a woman by first getting the woman's consent to his sleeping with her in her usual sleeping place; then repeating his visits for several consecutive nights. The woman now speaks to her mother, who tells her husband. If the man is accepted, the woman informs him that her friends know, and that he may help them in their gardens. The woman's brother will take the man to the future mother-in-law's garden. The first day he works all day, and his relatives are informed of the fact. Then commence betrothal ceremonies and the Tabu, which apply also to the betrothal of children. *Tabu I.*—The betrothed pair must not eat in the presence of their respective relatives-in-law. *Tabu II.*—The betrothed boy or man is expected to sleep with his betrothed in her mother's house, but only as brother and sister. Should the man go further than the compact allows, and the woman become pregnant, her relatives will reproach him with having anticipated the proper course of betrothal, and angrily hand the woman over to him without further ceremonies—an act which will be a constant disgrace to the woman in the future. In quarrels with her sex she will often be brought to tears by their reminding her of her premature marriage. If the woman is of good rank the man has to pay much native wealth to appease the anger of the woman's relatives. From the commencement of the betrothal, feasts are exchanged between the relatives of each party. The man has to help the woman's relatives in gardening, house-building, etc., his family often joining with him. The woman helps the man in his private garden, and after a time there is exchange of help between the relatives of each party. The parents of the man or woman may call the betrothed parties son-in-law or daughter-in-law, but the couple cannot call the parents father or mother-in-law; nor can the betrothed call each other spouse. If a man and woman wish to be betrothed and the woman's relatives object the man withdraws generally. In some cases when the man's relatives object and he persists, they tell him to marry by himself, as they will not help him to give the food and presents necessary to complete the betrothal. Proper betrothal ceremonies cannot be carried on without both families are agreeable." The completion of the betrothal-ceremonies, terminating in marriage, includes such acts as the exchange of presents and the cooking of food for the relatives on both sides.³ "The Andamanese look upon a girl betrothed by her parents as so far a wife that with her pre-marital unfaithfulness is accounted a crime."⁴ The Bushman generally employs his sister as intermediary, sending by her a present to the girl of his choice. If the present is not returned, he knows that

4 Man, in JAI, XII, 136.

his proposal has found favor.⁵ The engagement of the Bawenda is a very ceremonious affair, if not performed when the girl is yet a little child, as is often the case. Sometimes the child is promised conditionally even before it is born. "The uppermost question to be settled is that of the number of cattle to be handed over to the girl's father by the bridegroom. With the payment of the first instalment the engagement is considered complete. The girl's wishes are of no moment in the matter. The two middlemen are the legal witnesses of the engagement and the subsequent marriage."⁶ In West Africa, "betrothals are made by the payment on account, by the intending husband, of a portion of the head-money demanded for a girl; or, between children, by a present made by the parents of the male child to those of the female child. In the first case the girl need not be of a marriageable age; she may be a mere child, and sometimes even she may not yet be born. . . . Betrothal seems to confer all the rights of marriage upon the male contracting party, except that of consummating the union and of deriving benefit from the girl's services." If she dies, her family must find a substitute.⁷ Girls of the lower classes are not betrothed and may live with great freedom, but those of the upper classes, who are almost always betrothed, must be chaste.⁸ In Togo betrothal even precedes birth, with the approval of the fetish and on condition of proper sex. "If now it is really a girl, the youth works for his later wife and deposits the earnings with his future parents-in-law."⁹ The Galla have a sort of ring and chain ceremony; in fact, proposal consists sometimes in the casting of the suitor's neck-chain into the girl's lap, without a word being said. "If the chain is accepted, the betrothal is concluded thereby."¹⁰ The African children play father and mother and the girls are often betrothed at ten years of age. This is a sort of temporary surety, but it makes the girl a calculating being, for she compares her gifts with those of others and loses all idea of sentiment. The boys save in order to give these gifts and also the big purchase-price; but the richest presents may not hinder the girl, after four or five years, from accepting a man she likes better.¹¹ In South Africa, a woman betrothed to a chief wore on her neck a large white whorl of shell as an emblem. This was transferred to the neck of her child. Men wore such whorls as love-charms and would not part with them.¹² In Madagascar, a betrothed girl is called by a term meaning "bespoken or engaged wife," and it is considered quite proper for her to become a wife in fact previous to actual marriage.¹³

The young people of the Cherkes are often married at sixteen or seventeen without having seen each other before. In such cases, evidently, both courtship and proposal are absent so far as the immediate parties are concerned. The betrothal-ceremony culminates in putting out the fire and joining hands, the parents not being present.¹⁴ Until she marries, the Ainu girl is quite free in her intercourse with men. "Some of the myths mention that some time after a girl was married to a man, she married him again 'for good.' In this case we must understand the first 'marriage' as in fact a betrothal, accompanied by sexual intercourse; while the second marriage referred to was the real marriage, after which the woman was called *macipi*, 'the wife.'"¹⁵ During the pre-

liminaries of a Khond marriage, a knotted string is put into the hands of the so-called "searchers for the bride," and the girl's people retain a similar string. The reckoning of the date of the betrothal-ceremony is kept by untying a knot every morning.¹⁶ In the Punjab, when once the promise has passed the lips of the girl's father, it can be withdrawn for grave causes only. "Betrothal thus effected creates a kind of relationship, so that if one of the parties to it dies, the other is counted impure for three days. . . . Amongst the Hindus betrothal is a contract, and is, as a rule, an indispensable preliminary to the marriage of a girl, though a woman once married cannot again be betrothed according to the ceremonies of a first betrothal." Betrothals are of three kinds: one in which the girl is given by her parents as a quasi-religious offering to her future husband; another, called exchange, in which two or more families exchange brides; and a third, in parts of the southwest Punjab, where a bride-price is more or less openly paid. "Thus betrothal in the South-west Punjab is a solemn rite and the tie it creates is irrevocable, so much so that it can only be annulled owing to impotence or incurable disease, and even when the boy or girl is thought to be dying the tie between the pair is solemnly cancelled by the following rite:—the boy is called to the girl's death-bed and made to stand by her pillow and drink some water. The girl also drinks, and then the boy says, 'Thou art my sister.' This, of course, dissolves the betrothal, but it is understood that if the patient recover the tie will hold good. . . . Briefly, the essentials of a valid contract of betrothal are the public acceptance of the match, feasting and the exchange of gifts, the religious rites, if any are observed, being of secondary importance, even indeed if these are necessary to the validity of the contract. It may be said generally that a contract of betrothal is irrevocable, except for certain definite causes, or in cases when it has become impossible of fulfilment. Even when its literal fulfilment is impossible owing to the death of the boy, there is a widespread feeling that an implied contract subsists to marry the girl to another member of his family. . . . It would appear that the castes or tribes which allow widow re-marriage have a strong feeling that the betrothal duly effected gives the boy's family a claim on the girl's hand, so that, in the event of her original fiancé's death, she may be married to another boy of the family. . . . Thus the advantages of the contract are all on the boy's side, in having secured a valuable chattel, little is thought of the girl's claim on the boy, only very exceptional circumstances would make the boy's family refuse to find another match for her in the event of his death. . . . Speaking generally, the contract is considered much more binding on the girl's relatives than on those of the boy, so much so that among the Jats of Lahore this principle is pushed to an extreme, and it is alleged that the boy can break off his betrothal at pleasure, whereas a girl cannot." There is a tendency to defer betrothal among the higher castes to a somewhat later age than is usual among the middle castes: "in Lahore, Jats betroth from four to six, and Rajputs from twelve to fourteen; in Shahpur, Hindus betroth from eight to twelve, and in Jhelum, before ten. Generally speaking in the Western Punjab girls are betrothed at a very early age, much earlier than is customary among the Muhammadans, but boys are often not betrothed till puberty or later. The feeling that it is a disgrace to have a grown-up daughter

unmarried is very strong among Hindus. Throughout the Punjab pre-natal betrothal is unusual, but not unknown."¹⁷

Betrothal affords one of the resources, it will be recalled, which a Batak girl can employ to get her own way in marriage. It generally takes place together with an exchange of love-guerdons, and formally, before the groom sends his relatives to arrange about the purchase-price. If the girl's relatives try to coerce her into marrying an old and rich suitor, she can fly to the giver of her guerdon, who is obliged to take her in, and then his relatives must arrange about the price. Regularly the proposal comes from the boy, though sometimes the opposite is the case. Wilken¹⁸ thinks *a priori* that this would be so where the mother-family exists, the woman being the head of the group and the man following her into marriage. This view is supported by the facts; in the *ambil-anak* form the proposal comes from the father of the girl. If one party refuses, the other is limited to pecuniary damages. In Sumatra, if the union falls through by will of the groom, he must pay ten gulden [four dollars]; if the bride is responsible, she pays five. If an engagement is broken without lawful reason, the guilty one has to pay an amount equal to the bride-price agreed upon. Not seldom when an engagement is broken capriciously, the betrothal-pledge is forfeited; this is the case in Java also. Throughout the Indian Archipelago occur instances of child-betrothal. Among the Igorrotes of Luzon the engaged couple live together despite the rigid insistence upon chastity. Here is a type of trial-marriage. As soon as the betrothal is made "the girl's parents arrange for the youth to live in concubinage with their daughter, for the most important matter is to test her fecundity."

In China the father and elder brother of the young man send a go-between to the father and brother of the girl to inquire her name and the moment of her birth, that the horoscope of the two may be examined, in order to ascertain whether the proposed alliance will be a happy one. If the characters seem to augur well, the boy's friends send the go-between back to make an offer of marriage. If that be accepted, the second party is again requested to return an assent in writing. Presents are then sent to the girl's parents according to the means of the parties, and the go-between requests them to choose a lucky day for the wedding. The preliminaries are concluded by the bridegroom going or sending a party of friends with music to bring his bride to his own house. The match-makers contrive to multiply their visits and prolong the negotiations, when the parties are rich, so as to serve their own ends. From the time of engagement until marriage a young lady is required to maintain the strictest seclusion. "The office of match-maker is considered honorable, and both men and women are employed to conduct nuptial negotiations. Great confidence is reposed in their judgment and veracity, and as their employment depends somewhat upon their tact and character, they have every inducement to act with strict propriety in their intercourse with families. The father of the girl employs their services in collecting the sum agreed upon in the contract, which, in ordinary circumstances, varies from twenty-five to forty dollars, increasing to a hundred and over according to the condition of the bridegroom; until that is paid the marriage does not take place. The presents sent at betrothment are sometimes costly, consisting of silks, rice, cloths, fruits, etc.; the bride brings no dowry, but both parents frequently go to expenses they can

ill afford when celebrating the nuptials of their children, as the pride of family stimulates each party to make undue display."¹⁹

In the Gilbert Islands "children might be betrothed at a very early age, sometimes before birth. Two friends not yet married would sometimes make a compact that if they should ever beget children of opposite sex, they should marry one another. When the girl child whose fate had thus been arranged was born, she was taken by the parents of the prospective husband and brought up by them." On two of the islands there was usually no betrothal and no marriage-ceremony, "a wife being simply appropriated and carried off by her suitor;" this existed side by side with more formal institutions. On another island marriages were often made without preliminary betrothal, by a fictitious fishing-ceremony.²⁰

Among the Eskimo, "frequently there are child betrothals, but these are not considered binding."²¹ Among some of the Athapascans, "girls are often betrothed at 10 years of age and married at 14. After betrothal they must look no man in the face."²² With certain Apaches "often girls were married when only 10 or 11 years of age." Again, "couples were often betrothed in marriage while children, the arrangement of course being made by their parents, although the engaged couple had a voice in the question of the final marriage. When between 10 and 15 years the boy went to live with the parents of the girl, but they were not married until the boy was able to support a wife."²³ "At 15 years the Cora reach the marriageable age. Marriages are arranged by the parents of the boy, who on five occasions, every eighth day, go to ask for the bride they have selected."²⁴ According to Osage marriage customs, the initiatory steps must come from the family of the young man; it is the duty of the parents or other near relatives to seek a suitable wife for him. When a suitable maiden has been found the parents summon four old men, each of whom has the title of Good-man, which belongs to a person who has been married according to the established customs of the tribe, has successfully raised and married off his own children, and lived to become a grandfather. They "are employed to conduct the negotiations between the family of the youth and that of the chosen maiden, and for their services they receive a fee. When the four men present the proposal of marriage, they extol the character of the family of the young man and also that of the young man himself."²⁵ Among some of the nations on the Orinoco it was customary, when a boy was born, "to have a look around and wait for the first little girl to appear and then to ask the parents for her, alleging that they ought to be helpmates, through having come into the world one in pursuit of the other. On that day the marriage would be settled, and as the youngster grew and began to use his bow and arrows, everything that came to his hands he took to the little girl, were it fish, birds, or fruits, a consideration (*tributo*) which he recognized and paid until the time arrived for her to be given him as wife. Makusi may be betrothed by their parents from their earliest youth, in which case the young man is bound to serve his girl's elders until she develops into womanhood. But this betrothal is in no sense binding, though while it lasts the man shows her

every attention, brings her beads, and the best that he can get from the chase."²⁶

According to the views of the North Germans, betrothal was not merely an act preliminary to marriage, but also a part of the contract of marriage itself. In the ancient Icelandic law it is stated that only he is legitimate whose mother was betrothed and wedded. The two acts of betrothal and wedding were necessary for legal marriage, and the assumption is that betrothal was the original requirement.²⁷ The office of marriage-broker still prevails among modern peoples, especially the Jews. Recently a case was brought before an Arbitration Court in New York in which a match-maker sued for his commission of ten per cent of the dowry, citing as expenses incurred in bringing about the marriage, the money he spent on cigars and the time he devoted to playing pinochle—whether profitable or not was not disclosed—with the girl's father.²⁸

§369. Reason for the Ceremony.

In Melanesia "a binding marriage is constituted by the relatives of the girl and boy exchanging certain presents of food and by the young people living together publicly." In some cases, besides reciprocal presents of food, the boy's father takes an arm-shell and gives it to the girl's mother; the next day the girl's father makes a return present of a similar gift or one of equivalent value to the boy's mother.¹

In central Cameroon "no special ceremonies are held if a slave woman is married."² Along the Upper Congo, when the time arrives for the marriage, "the parents will take some plantain, cassava, fish, and various other kinds of food, and a calabash of sugar-cane wine, and together with the girl will go to the house of the husband, and hand over the girl by putting her hand in the man's hand in the presence of some witnesses. . . . The girl borrows all the finery she can of her female friends, decorates herself with oil and camwood powder, and for two or three weeks walks about the town with her husband—a sign to all that she is now his wife. If the man has already a few wives they will help to 'dress her' by the loan of their own trinkets and will lead her about the town, as a proof that she is now a fellow wife and belongs to their husband."³ The marriage which was regarded by the Baganda as most honorable and binding was the one by contract, when both parties agreed to come together as husband and wife. "The engagement is recognized by the relatives when the man sends the girl's parents two or three large gourds of plantain beer; each gourd contains about two gallons. The beer plays a most important part in the ceremony; it is the official sign of recognition by the parents on both sides, and relatives, of the engagement, and signifies the girl's consent has also been obtained. . . . The giving and receiving the beer is of greater importance than the dowry, it is the contract which proves the legality of the marriage if any dispute arises afterwards."⁴

There are eight forms of marriage among the Hindus, ranging from those with little or no formality to the higher type involving elaborate rites. Transfer of property is characteristic only of the latter.⁵ Cases exist among the East Indians of no special marriage-ceremony, but there is always some form of

publicity, however slight. A number of tribes have the custom of a common meal like the Roman *confarreatio*. At a Dyak wedding there is smearing of blood, to summon the ghosts to bless the union with many children.⁶ "Among all the wild tribes of the Peninsula, as indeed among the Malays, an important ingredient of the marriage rite is a form of ritual purchase, commonly followed by a repast which is shared between bride and bridegroom, with their relatives and the chief of the tribe as witnesses. Among the Negritos these two ingredients appear to constitute the entire ceremony, though even the act of purchase alone is said to be regarded as sufficiently binding, so long as it is performed before proper witnesses." After the meal gifts are presented to the bride's parents, and one of the minor chiefs of the tribe then inquires: "What about these children of ours? Are we to make them one?" To this the parents reply in the affirmative and the head of the tribe then gives both bride and bridegroom new names. Among the Sakai the form of marriage was extremely simple: the groom and bride, together with their relatives, went to the tribal chief's house where the chief investigated the prospects of the joint *ménage*, after which, if no obstacles were encountered, "he formally declared them married, and all was over." One author declares that there was no religious ceremony, but scrutiny of other evidence shows this an error. Sometimes the groom is catechized: "Have you built a hut?" "Do you know how to smoke cigarettes?" The details of the wedding show little or no ceremony, but the presence of publicity is clear enough.⁷ The marriage-ceremonies of the common people in Samoa were performed in a house, with less display than in other cases. A prominent feature was the test of the bride's chastity.⁸

The groom among the Seminole Indians goes at sunset of the appointed day to the home of his mother-in-law, where his bride receives him. "From that time he is her husband. The next day husband and wife appear together in camp and are afterwards recognized as a wedded pair."⁹ Among some of the Guiana tribes dancing and drunkenness constitute the whole ceremony of marriage. "The relations on both sides are invited on such occasions. The men bring along with them materials proper to build a hut for the young pair and the females present them with fish, fruit, bread, and drink. The former chant couplets to the bridegroom and the latter to the bride. As soon as it becomes dark the young wife is presented to her husband, which concludes the ceremony. . . . The same ceremonies prevail among all the tribes inhabiting the banks of the Orinoco." In some cases old hags who accompany the bride cry out, "Ah, my girl, if you only knew what troubles your husband will bring you, if you only knew what pains of travail are, you would not get married," and in this manner, "with the men dancing, the old women weeping, and the brides out of their wits, they make the round of the whole village." The formal offer and acceptance of food is a subject of common mention in the description of the marriage-ceremonies. "Besides the acceptance of food there are traces of certain customs connected with the hair as symbolic of consent or consummation of marriage. Thus, it is said of the Carib Islanders that some, without saying a word, go and lie down near the girl that pleases them best, and the mother acquaints her daughter that it is time to get married, though, often, she is only 12 years of age. The next morning she combs her master's hair before

6 Wilken, in VG, I, 529-532, 544, note, 551-553; Schwaner, *Borneo*, I, 197; Perelaer, *Dajaks*, 51-52.

the others, and brings him cassava. Through this public act, their wedding is declared. In Cayenne, . . . when they want to marry, and everything is agreed upon, both parties throw one of their hairs into the air . . . and sling their hammock under a tree, where they proceed to consummate the marriage."¹⁰

In the laws of Hammurabi marriage consists of a contract made before witnesses.¹¹ Among the Mohammedans, too, there is an expression of consensus before two witnesses, with a statement of the morning-gift and other terms in the contract.¹² In the case of kings and nobles the custom of witnessing marriage and its consummation was longest retained, because for them legal technicalities were more important.

As was pointed out in the text, the chief reason for primitive marriage-ceremonies is to give publicity to the event. In the absence of any means of registration, such a device is necessary. Modern civilized peoples, realizing the importance of recording these events, aim at compulsory registration of marriages, births, and deaths. The value of such records both to the individual and to society may be illustrated by the use of birth-certificates. These are necessary in order that sanitarians and the government may have a complete record of vital statistics. They are also used as the basis for calculating infant mortality-rates, and for testing the results of child-hygiene. Birth-certificates often have a great value to those persons whose births are registered. The following are some of the personal uses to which birth-records are put: to provide evidence of age on entering school; to prove age and relationship in inheritance of property; to establish age of consent in court; to secure marriage-licenses—a birth-certificate being required in some European countries; to acquire passports—evidence of birth being required by the United States Government; to obtain working-papers, which in many states are not issued without evidence of age; for entrance into or exemption from the military or naval service of the United States.¹³

§370. Nature of the Ceremony.

IN western Australia, "when a girl is old enough to be claimed as a wife she is handed over by her father to the husband, who takes her away to his own camp. There does not seem to be any ceremony on such an occasion."¹ In Lifu, Loyalty Islands, "there is no marriage, all is decided by consent of the parties, who take up with or leave one another according to the caprice of the moment."² In New Britain, "after two or three days the bridegroom begins to pay a daily visit to the bride, she giving him a meal. Then he may go with her to her field work. After some weeks he builds a house and the first night the couple spends in it the marriage is considered to be finally contracted."³ Less rudimentary are the ceremonies in New Hebrides. "At twelve the East Malekula girl is usually married. The marriage is arranged by her father, who offers her to the highest bidder and receives for her ten pigs at least. The evening before the wedding the bride calls together her childhood friends, and they play together on the beach. The marriage ceremony is held at the

village of the bridegroom, and the bride's relatives and friends attend. The bride's face is painted bright red. She is seated on a log in an open square where everyone can see her. The relatives of the bridegroom first carry across the square beautiful *Dracæna* leaves and poisoned arrows, and hand them over to the relatives of the bride as a token of peace between the two villages. Then ceremonial mats are trailed across, and after each mat a tusk-pig is led by a rope tied to its leg. Each pig is tied to a post till the full price has been paid. A return present, consisting of one tusk-pig, is made to the bridegroom's friends, conch-shells are blown and the bridegroom goes over to claim his bride. He sticks a poisoned arrow into the mat she has about her shoulders. This action signifies that he has the power of life and death over her, and also that he must defend her with his life." At the death of a husband, his brother has first claim to the widow, who is paid for again with pigs, but there is no second marriage-ceremony.⁴

At a Sea Dyak wedding two iron staves are laid on the ground where the bride and groom take their places, probably as a sort of insulation from the spirits, while in the hands of each are placed a cigarette and a quid of betel. The priest then takes a pair of fowls and waves them above the young people, invoking blessing. Then he knocks the heads of the couple together thrice, whereupon the groom puts betel in the mouth of his bride and a cigarette between her lips, while she later does the same with him, thus recognizing him as a husband. Among the Alfurs in Celebes the groom takes a piece of betel and chews it with lime, gives it to a young man who further masticates it, and then to the bride for the same treatment. No one may spit out any of the juice.⁵ All the information that could be obtained concerning the marriage-ceremonies of one of the Mindoro tribes was that "the old folks get together and talk."⁶

In accordance with the marriage-customs of the Kickapoo Indians, "the young man goes to the woman's lodge at evening and spends the night with her. This he does for two or three or more evenings and nights, leaving each time at morning. This marks the beginning of their career as man and wife. The next stage in the ceremony is a visit to the bride by a woman who stands in relation to the husband as a sister's daughter. She might be called his niece in English; she certainly would be if she was really the daughter of a sister. She takes to the bride a horse and all kinds of presents."⁷ In another case, "if the presents of a young warrior were accepted by his mistress, she was considered as having agreed to become his wife, and, without further explanation to her family, went to his hut, which became her home, and the ceremony was ended."⁸ In California, "people are said to have been married and parted without ceremony, mothers taking their children with them, and men often took whole families of sisters for their wives."⁹ Again, "marriage among the Pima is entered into without ceremony and is never considered binding."¹⁰

Among more developed peoples we find a different situation. In the Chinese Li Ki or Ritual of Propriety it is stated that the extreme manifestation of reverence is illustrated in the great rite of marriage, when the bridegroom in his square-topped cap goes in person to meet the bride. "The duke said, 'I wish that I could say I agree with you, but for the bridegroom in his square-

topped cap to go in person to meet the bride,—is it not making too much (of the ceremony)?” Confucius looked startled, changed countenance, and said, “(Such a marriage) is the union of (the representatives of) two different surnames in friendship and love, in order to continue the posterity of the former sages, and to furnish those who shall preside at the sacrifices to heaven and earth, at those in the ancestral temple, and at those at the altars to the spirits of the land and grain;—how can your lordship say that the ceremony is made too great?”¹¹ A Hindu marriage is a kind of drama in three acts. At the age of about nine or ten and before he is really marriageable, a Hindu boy is made to go through the second matrimonial act with a girl of about seven, his previous betrothal having constituted the first, and cohabitation at the age of fifteen or sixteen with his child-wife at the age of twelve constituting the third. “The second is the religious and legal ceremony, and is a most tedious process, involving large fees to the priests and festivities prolonged for many days, at a cost, in the case of the rich people, of perhaps 100,000 rupees [a rupee is valued at about thirty-two cents]. Often the savings of a whole lifetime are so spent. This is one of the greatest evils of Indian society. Every well-to-do parent is compelled to squander large sums on mere idlers and pleasure-seekers, instead of giving the money as a grant in aid to the newly-married pair on first starting in life. He knows, in fact, that if he were to allow the wedding to be conducted with an eye to economy he would sink irretrievably in the estimation of his friends and caste-fellows. He would never be able to hold up his head again in his own social circle. Nor must it be supposed that he spends his money unwillingly. On the contrary, the more lavishly he spends the more pride and satisfaction he afterwards feels in looking back on what he regards as the most meritorious act of his life.”¹² Thus does vanity reinforce the mores.

For marriage the Homeric Greeks had no formal ceremony of words: “the feast and the sacrifice which accompanied every feast were the only formalities of which we learn; very likely the hand of the bride was placed in that of her husband, but the poet has no occasion to mention this.” The feast was the marriage, just as the funeral-feast was the funeral. “As a rule it was held at the home of the bride’s father, and the bride was then conducted to her husband’s home. Such a procession is represented on the Shield of Achilles.”¹³ Among the Jews, formal betrothal was considered proper in rabbinical days and came to be the real wedding. There were three modes: (1) by gift of valuables or money, the smallest coin sufficing; later, a ring, which should not be considered as a pledge to marry at a future time but as a pledge of good faith in marriage to duty as construed then by the mores; (2) by a document; and (3) by copulation. Words and acts before two witnesses were required, with the formula: “Be consecrated to me” or, later, “Be consecrated to me according to the law of Moses and Israel.” Each mode of wedding was of equal validity, but in the third century A.D. the third was forbidden. The three ways corresponded to appropriation of property. A feast was given in the house of the bride and then the husband and friends gave her presents. The bride remained some time, regularly a year, in the house of her father; if a widow, thirty days. Then came the real wedding, or delivery of the bride; the groom came for her and took her to his house. In the evening the bride

¹³ Seymour, *Hom. Age*, 146.

was led to the bridal chambers; later a tent into which the pair entered was ceremonially substituted, while still later the survival existed of using a scarf for the tent.¹⁴

Among the Romans, on the day before her marriage the girl laid aside the *toga prætexta* which she had worn up till then, dedicated it and her toys to the gods, and received the woman's attire, the *toga pura* and *tunica recta*, the *vittæ lanæ* and the veil which was called *flammeum*. At the same time her hair was cut and parted with a *hasta calibaris*. This act was performed by the *pronubæ*, or women who as a good omen were present at the first marriage and at the wedding were busied about the bride. They led the trembling and reluctant bride to the man, encouraged her, managed the *dextrarum junctio*, accompanied her at the home-coming, had her lifted over the threshold, prepared the *lectus genialis* and put the bride to bed upon it. Each act of dressing had its analogy in the *tirocinium fori* (first public appearance) of the boy. It thus appears that the Roman maidens were married at their entrance into womanhood. Then for the first time were they regarded as grown-up; before this they were children. It was the duty of the father to give his nubile daughter in marriage as soon as possible, so that her youth might not be lost. The age which was regularly regarded as the time of puberty for the girl was the twelfth year, a reckoning which reaches back into antiquity and which was maintained until the latest imperial age.¹⁵

§371. Survivals and Symbols.

On the wedding-day, among the Roro-speaking tribes, "a party of men belonging to the bridegroom's local group but not including the bridegroom, surround the house of the girl's parents and carry it by mimic assault, with great fury and shouting. The bride rushes out, and runs away as fast as she can, and although she is soon overtaken and caught, she defends herself to the best of her ability, with hands, feet and teeth. Meanwhile a sham fight rages between the adherents of the bride and bridegroom. In the midst of the commotion is the bride's mother armed with a wooden club or digging stick, striking at every inanimate object within reach and shouting curses on the ravishers of her daughter. Finding this useless, she collapses, weeping for the loss of her child. The other women of the village join in the weeping. The girl's mother should keep up the appearance of extravagant grief for three days, and she alone of the girl's relations does not accompany the bride to her father-in-law's house."¹ Further survivals of capture and hostility occur on the morning after the wedding, when "the bride's father takes up his stand outside the house of the bridegroom's father and, although he has already been paid-up, proceeds to indulge in abuse. He has to be pacified by the present of a dog. Three days later the bride's mother visits her to weep and groan until a pig is killed for her. Then her bewailment gives place to praise of the generosity of her son-in-law and his family."²

The most essential item of the ceremonial wedding-proceedings in East Africa is usually the conducting home of the bride, who is generally carried. "In some localities mock fights take place during the procession to the bridegroom's

hut; among the Wabunga pretence is made of enticing the girl, small gifts being made at intervals on the way. These practices are reminiscent of wife robbery in former times, and in fact although forcible capture of wives is not actually recognized to-day, it does occur, and mock abduction as a form of marriage ceremony is not uncommon."³ Among the Akamba the groom, when he gets to the gate of the girl's village, takes hold of her and leads her off. The following day the girls of the village and her clan go off to his village to wail. "They cry all day and sleep that night in the bridegroom's hut. They sleep there three days; on the fourth day they return and the bridegroom gives them each a present of beads; they will not leave him alone with his wife until he has paid them to go."⁴ After the wedding-feast the Kabyle bride is dressed and a charm suspended about her neck to preserve her from all evil. She is veiled and lifted upon a mule by a negro, if one is to be found in the village.⁵

At a Yakut wedding the sister of the bride keeps her hair covered.⁶ The marriage-rite among the Chukchi consists of sacrificing to the hearth and, generally, of anointing with red ochre instead of blood. The Samoyed couple sit side by side, and the bridegroom feeds the bride meat and wine. "This is held to be the essential symbol of the consummation of the marriage."⁷

"The remarkable peculiarity amongst the Lolos [of West China] is that invariably, some days after marriage, the bride escapes and runs home to her father's house. The husband sends presents to her father to induce her to return, but often she will not go back without much persuasion; and in the event of several requests for her return being unheeded, the husband is permitted to go for her, and beat her until she yields."⁸ Good form demands, among the Manchus, that the mother and daughter break out into tears at the marriage festival, a custom which popular wit has characterized by the following adage: "A bride, upon leaving her parents' house, laughs inwardly when she weeps; a rejected candidate inwardly weeps when he laughs."⁹ In the coiffure of a Chinese bride is put a silver hair-pin with a head of precious stone; "such an instrument has been considered from the highest antiquity an indispensable object for consummating a girl's marriage."¹⁰ A peculiar custom is the so-called brawl-room: "During the first three nights the newly married couple are constantly disturbed by practical jokes executed by relations (in some provinces even by complete strangers), everybody trying to obtain clothes or other necessary or valuable objects from the bridal chamber, which the groom has to redeem the next day with wine, cake, etc."¹¹ According to the *Li Ki* the ceremonies of marriage are symbolic of the beginning of a line that shall last for ages, through bringing together parties of different surnames, and of the position of the woman in the new household. "The gentleman went in person to meet the bride, the man taking the initiative and not the woman,—according to the idea that regulates the relation between the strong and the weak (in all nature). . . . In passing out from the great gate (of her father's house), he precedes, and she follows, and with this the right relation between husband and wife commences. The woman follows (and obeys) the man;—

in her youth, she follows her father and elder brother; when married, she follows her husband; when her husband is dead, she follows her son. . . . Husband and wife ate together of the same victim,—thus declaring that they were of the same rank. Hence while the wife had (herself) no rank, she was held to be of the rank of her husband, and she took her seat according to the position belonging to him. . . . The father and mother-in-law then entered their apartment, where she set before them a single dressed pig,—thus showing the obedient duty of (their son's) wife. . . . Next day, the parents united in entertaining the young wife, and when the ceremonies of their severally pledging her in a single cup, and her pledging them in return, had been performed, they descended by the steps on the west, and she by those on the east,—thus showing that she would take the mother's place in the family. . . . Thus the ceremony establishing the young wife in her position; (followed by) that showing her obedient service (of her husband's parents); and both succeeded by that showing how she now occupied the position of continuing the family-line;—all served to impress her with a sense of the deferential duty proper to her. . . . In this way when the deferential obedience of the wife was complete, the internal harmony was secured; and when the internal harmony was secured, the long continuance of the family could be calculated on. Therefore the ancient kings attached such importance (to the marriage ceremonies).¹²

The arranging of a Palaung marriage is a piece of elaborate acting from beginning to end, and although the father and mother may be delighted with the choice that their daughter has made, they must pretend to be very much annoyed and disturbed; and the girl, though happy at the prospect, must give way to copious tears. "On the day of the blessing the bride weeps at intervals all through the day, both at the house of the bridegroom's father and in her father's home," and she weeps loudly when she reaches her new home, crying out, "A tiger has caught me, a tiger has caught me." As it was the custom some years ago in England to interpolate Latin phrases in an eloquent and studied speech, so here is it the custom of the Pa-jaus or go-betweens to use whole sentences in Shan—"indeed many of the wedding-speeches are almost entirely in that language—with many expressions from Burmese, and even from the ancient Pāli, the language of the Buddhist scriptures. One sentence may be in Palaung, followed by another, meaning exactly the same, in Shan; and the Burmese and Pāli words are sprinkled all through." The day of the blessing by the Elders, which is the final ceremony of the marriage, is chosen by a wise man, according to the days of the week on which the bride and bridegroom were born. "A chosen groom's relative will attend to the tea; he will go to the head-man of the village, to ask for the loan of the dishes, the cups, the plates, and the carpets, which belong to the village, and are either, it sept at the monastery or at the head-man's house. . . . On the day before the wedding, young girls, who from childhood have been the companions of the bride, go to the house where she is staying, in order to weep with her. In fact the bride and her friends sometimes spend together more than one day in tears. . . . Then they sob and cry, and often it is no pretence at all, and they are really much distressed when a favourite companion marries. It is in vain that the bride assures them that she will love them just the same, and that marriage will make no difference to her; but they all know that marriage will

make a very great deal of difference in their lives, for girls are always together, and the young married women keep by themselves, so that as soon as a girl is married she can no longer join her unmarried girl-companions. At this time it is considered the proper behaviour for the bride to show that she has no appetite. If she eats at all, she should do so very sparingly, and only when her friends insist that she must take the food that they have brought to her. . . . When the old men have smoked and have been given food, the Pa-jau comes forward, bearing in his hand the hood of the bride and the turban of the bridegroom. These must belong to the young couple, but it is not necessary to take those they are actually wearing. The Pa-jau, assisted by the mother of the bridegroom, folds the hood into an oblong shape, then winds the turban round it. As he is doing this he says, 'May these children live peacefully together! for they are now united as this turban and hood are bound together.' The combined hood and turban are then set on a layer of tobacco in a large lacquer bowl. . . . There is very little sleep for any one that night, and early next morning the young couple go to eat their first meal together in the house of the bride's father. . . . The newly married pair go into each house, while the other young people, who act as an escort, wait outside. When every house where there is an old man has been visited—and sometimes the blessing of a good old woman is asked for as well—the young people return to the house of the bridegroom's father. From this time the bride is treated as a daughter by her father- and mother-in-law. . . . The bridegroom generally spends the second night, after the bride has been brought to live in his house, with his bachelor friends, returning to his home and his bride before dawn. In the evening, and for several days afterwards, when he meets any girls they pretend to beat him, saying, 'O married man! run away home.'"¹³

"Among people," comments Wilken,¹⁴ "who look at forcible abduction as a lawful way of attaining possession of a woman, the parents, in order to safeguard their daughters against it and to prevent their own plans concerning her from being upset by others, can do nothing else than take recourse to the means of child-marriage." Universal in the Indian Archipelago is the custom of feigned abduction, for however satisfactorily the preliminaries have been settled, the girl must be ostensibly abducted. On the island of Sumba the parents on both sides arrange the marriage and come to a settlement about the price; then the groom is told to be on guard at a certain place in the bush with several of his friends. The girl is sent thither to get water or the like, and is abducted. At the first news of the abduction the relatives of the girl arm themselves and follow the abductor, but they arrange it so that they never overtake him anywhere else than at his house. There the girl who has been ostensibly abducted is demanded back, is refused, and the previously arranged bride-price is paid. It appears that this public ceremony belongs to the marriage of the more prominent. In the Lampong district of Sumatra the young man abducts the girl, with the connivance of her parents, and hides her in his house. "In the space before the public assembly-house there takes place a sort of tournament between both parties, and a cock-fight is held in which they take care that the party of the father of the bride shall be conquered; following that, the amount of the bride-price is determined." Veiling accom-

panies abduction, the girl being covered so as to be unrecognizable.¹⁵ The closing act of the marriage-ceremony in some places is the removal by the husband of all his wife's ornaments and jewels, which she never again resumes unless she wishes to commit that supreme crime in the eyes of her husband, of appearing to wish that she were a maiden again. Wilken mentions a number of symbolic acts, such as stepping on the foot, taking the bride on the lap or putting a child on her lap, bumping the heads of bride and groom together, possibly so as to bring the souls together—the head being the seat of the soul—and joining the right hands, which last is done much after the ancient Roman method.

On certain of the Philippine Islands the groom's and bride's messengers fight, the former always winning the bloodless duel.¹⁶ In the Gilbert Islands, "the bride's kinsfolk would have been much disappointed and ashamed had she surrendered herself without demur to the embraces of the bridegroom, for that would have denoted a lack of modesty unseemly in a well-born maiden."¹⁷ After the Tsimshian Indian's suit has been accepted, he takes a number of armed slaves and embarks with them in a canoe to the bride's house. "As soon as her clan relatives see them coming, they arm themselves with clubs and stone hammers, and rush down to the landing-place. They break the canoe, and try to drive off the companions of the young man." They fight seriously, and sometimes one of the slaves is killed. "This foretells that the couple will never part. After the fight is over, the bridegroom and his companions are carried into the bride's house. Then her friends strew on the companions of the bridegroom eagle down. . . . Her father puts on his headdress and dances, while her friends sing. Then a feast is given, during which the young man pays the remainder of the purchase money. . . . Her father and brothers give the groom a new canoe in place of the one which was broken in the morning. Then the bride is carried down to the canoe, and she departs with her husband to his village, where they live."¹⁸

"Jewish law emphasizes in the strongest manner the *copula carnalis*;" this is the essential idea of marriage. Advance of the mores made this into mere ceremonial use of a tent and then a scarf, as was mentioned in the preceding section. A similar survival exists in Germany, in taking off a shoe or loosening the girdle; now the pair retire to a special room and take a meal together.¹⁹ The Jews of today also have the symbolic "penny purchase," though in the old Mosaic law there was no bride-price. This is aligned to the wedding-usage in Little Russia, where as a prank the youngest brother of the bride sells her nominally for a couple of ducats.²⁰ The marriage-ceremony of the East Iranians consisted in the recitation of prayers and holy formulas while the hands of the youth and his bride were joined together. "The joining of hands made the union a legal contract."²¹ Among the Beduins the groom cuts the throat of a lamb before the tent of the bride's father; the marriage is complete when blood falls to the ground. Soon after sunset the groom shuts himself up in a special tent outside of the camp, the bride runs about it and is caught by some women who make her enter it, the groom helping to force her in. She cries out as a proof of maiden timidity. In some cases the bride-

groom rides up to the tent of his bride and swings his whip over a "bride-doll" which is offered to him. In a tribe near Nazareth the groom's father gives the bride's father a green leaf and calls on all present to witness. Some tribes regard it as scandalous for the girl's father to take a "daughter's price." At Mt. Sinai the lover wears for three days a sprig of green given him by her father; the girl must pass the first night with him but may leave the next day, whereupon she is captured.²² In Moslem law a morning-gift is required for valid marriage; it may be a survival of purchase, though it is given by the man to his wife, the amount being set down in the contract.²³

At Athens the bride fled to the hearth, was taken therefrom and carried to her husband's house, where her hair was cut off as a sign of servitude.²⁴ The ingredients, especially sesame, of Greek wedding-cakes were thought to have vital relation to the future fertility of marriage. This was unquestionably the case with quince, which Solon ordered the bride to eat before receiving the groom in the bridal chambers.²⁵ Also at a Greek marriage a child of free-born parents, crowned with acanthus and acorns, carried about a basket of bread. As he offered this he said: "I have fled from the bad; I have found the better," meaning the acorn food given up for bread.²⁶ At Rome the bride went to the house of the groom and was led to the hearth before the images of the lares and penates. After having sacrificed and uttered prayer-formulas, the young pair ate together a sacrificial cake (*panis farreus, libum farreum*) in the presence of the Flamen Dialis, the Pontifex Maximus, and ten witnesses. "It was especially the joint eating of the cake that made marriage. So in old Athens, as a seal of the marriage tie, bride and groom ate a sesame-cake, in India a common meal. Still to-day, here and there in Germany, in Thüringen and the Harz Mountains, the engaged pair, especially on the morning of the wedding, must eat out of the same dish, while the custom of the inevitable bridal cake, that always must be cut by the young woman, is in England a survival of the same usage. . . . In place of eating of the same food sometimes the drinking of the same drink appears. Up to the beginning of this century, in Sweden, especially in the northern provinces, the so-called 'brudköp dricka' belonged to the ceremonial of the wedding, and today in Serbia the bridal couple must three times drink a little red wine out of the same glass."²⁷ Macedonian marriage-custom prescribes that a loaf of bread be cut with a sword and then eaten by the couple.

Rosshach,²⁸ who reports the preceding case, says that the Roman *libum farreum* was employed not only at the *confarreatio* but frequently in the cult also. It was a sacrifice to the gods who presided over marriage, not a symbol of the table-companionship which took place in marriage. It was carried in front of the procession to the altar, then thrown into the sacrificial fire and burnt, but not eaten. As a symbol of fertility the bride was set upon the phallus of a Priapus or in the lap of a phallic god. The *pronuba* led the bride to the groom and joined their right hands; this, thinks the author, was not symbolic but a token of power. The bride spoke the formula, *ubi tu Gajus, ibi ego Gaja*, before the house of the bridegroom, rubbed the door with fat, and decorated it with woollen bands; then she was lifted over the threshold and "with fire and water taken into the community of the household." The employ-

ment of fire and water was so common at weddings that *aqua et igni accipi* was used even in later times for marriage-celebration. Water and fire signified the community of hearth and house. "Servius says that even in his time torches were carried ahead, while on the other hand the old custom of washing with water the feet of the betrothed was discontinued, although water was still brought by a boy or girl from a spring." Similarly in Vedic India, the nuptial-fire which was never to be extinguished went before the pair, while fire and water were employed when the wife entered the house. "The children who, with the Bretons, are put in the nuptial bed of the spouses, recall the Vedic usage of putting a handsome child on the breast of the bride for the same augury of fecundity."²⁹

Among the ancient Scandinavians, a ring of relatives and witnesses was formed around the couple, whereupon the representative put to both groom and bride the question whether they would marry one another, and then through some symbolic act, probably by passing over of sword or ring, consigned to the husband rights over the bride. The fiancé then placed a ring on the bride's finger; sometimes the two were tied together with a thread, as a sign that their destinies were inseparable. The bride received from the man also a shoe which she put on and was then regarded as under his power. It must be a right shoe; if the bride could fool the man into giving her a left shoe there would be woman rule, so-called slipper-rule. The couple drank a goblet together, first pledging Thor, the protector of marriage and the home, and then Odin and the other gods. The bride was led to the room where the groom waited. By touching her body with the sacred hammer the marriage was consecrated and the vows strengthened. Finally, after the couple had gotten into bed and were covered up before witnesses, the marriage was legally concluded.³⁰ From Martin Luther's "Table-Talk" Friedberg³¹ takes a reported instance which supports the theory of the shoe as a symbol of authority. In old German marriage the bride had to conceal her hair which she had hitherto worn flowing as a sign of her freedom; with its concealment began the husband's rule over her.³² According to old Portuguese law, a maid must leave her hair flowing, a married woman must gather it in a knot as a token of conjugal submission; a widow covered it with a cap.³³ When the Princess of the Asturias was married according to Spanish custom, a white satin ribbon, called a yoke, was tied about the necks of the couple, the knot being made between them signifying their union.³⁴ In the wedding-practices of Berry, a district in the heart of France, the bride is quite as unmistakably bribed as is the Fijian. Barred out, the bridegroom's party sing to her: "Open the door, open, Marie, my darling. I have some beautiful presents for you. Ah! my love, let us enter." And then the song goes on to specify all the charming things they have for her—ribbons and lace, a fine apron, a hundred pins, a cross of gold.³⁵

In the rotogravure section of the *New York Times* for August 15, 1926, is a picture of a bride and groom jumping over a bench. The legend reads: "Jumping into Matrimony: The bride and bridegroom, after their marriage at the Parish Church at Alnmouth, England, follow the old village custom of leaping over a bench placed by fishermen outside the door of the church."

§372. Religious Aspects.

For good fortune, states a law of Manu, there should be recitation of benedictory texts and sacrifices at a marriage.¹ Should there be an eclipse when the Palaung wedding-procession is setting out, "it would be considered so unlucky that the proceedings for the day would be stopped: to see a barking deer, or to hear one call, would also be considered unlucky; or to hear a dog howl. On the other hand, to hear cats caterwauling, or to see a cat cross the road in front of a wedding-procession, would be considered lucky."² According to ancient Chinese tradition, the day and month of the marriage should be announced to the spirits of ancestors with purification and fasting. "One must not marry a wife of the same surname with himself. Hence, in buying a concubine, if he do not know her surname, he must consult the tortoise-shell about it."³

The Chaldeans feared spirits at a wedding. The priest blessed the couple and said: "All which is bad in this man do ye [gods] put far away and give him strength. Do thou man give thy virility and let this woman be thy spouse and do thou woman give that which makes thee woman and let this man be thy husband." The next morning a ritual was performed to chase away the evil spirits.⁴ In a Hebrew marriage the rabbi joins the hands of the pair and blesses a cup of wine from which they sip; the groom puts a ring on the bride's finger and says, "Behold, thou art consecrated unto me with this ring, according to the rites of Moses and Israel." The rabbi then reads the marriage-contract and blesses another cup of wine with seven blessings, all about luck.⁵ In Homer the gods presided over marriage but no priest or sacrifice was needed.⁶ Euripides⁷ has Orestes say that mortals are happy who marry wisely, while misfortune betides those who do not, both in public and in private; to which the chorus, giving the opinion of women on marriage, replies, "Women always cross the fortunes of men to their sorrow." Electra opines: "He who, looking at wealth or rank marries a wicked woman is a fool. A humble home-companion is better than a proud one, if good." The chorus answers that chance rules a woman's marriage; some turn out well, some ill. "There is unmistakable evidence that a marriage ceremony of a religious nature existed, and that this ceremony stood in close relation to a part of the ritual of the mysteries. In fact, the marriage was, as it were, a reproduction by the bride and bridegroom of a scene from the divine life, i.e., from the mystic drama. The formula: 'I escaped evil; I found better,' was repeated by the celebrant who was initiated in the Phrygian mysteries; and the same formula was pronounced as part of the Athenian marriage ceremony. Another formula: 'I have drunk from the kymbalon' was pronounced by the initiated, and drinking from the same cup has been proved to have formed part of a ceremony performed in the temple by the betrothed pair."⁸ In Attica the wedding was a religious festival, a holy consecration of marriage, at which the gods presided.

In Rome, "if purchase were omitted, there was lacking the consent of the father or guardian; if the wedding customs were omitted, there was lacking the consent of the gods." No marriage in olden times was concluded without

sacrifices. A marriage based on *confarreatio* was a true sacrament. The formalities of marriage were clung to even to the point of utter superstition. "The *tunica recta* was white in color and woven in the ancient manner. So superstitious were they that the way of weaving the wedding-clothes could not be changed." What occurred without the gods had no power and no fortunate consequences, what happened against their will was a transgression and brought evil. "As in the old Roman state-affairs no important act was valid which had not received consecration by the gods, so in marriage it was essential to interrogate the gods, consult the auspices and offer sacrifice." Servius said that nothing was so unfavorable for marriage as thunder and earthquake. "There can scarcely be any doubt that sitting on a skin was united with the religious acts of the *confarreatio*. This is indicated by the veiling of the head, which was indispensable at every sacrifice, that distraction and evil omens might be avoided." It is said that since at one time the patricians at Rome had under their control the auspices and other religious functions necessary to marriage with *manus*, their marriages were in consequence of greater sanctity than the plebeian; this was one ground of rank-distinction. Auspices at marriage ceased in Cicero's time, though the form was kept up, it being formally stated that nothing unfavorable to the marriage had taken place. "Toward the end of the pagan imperial age Roman marriage had no longer any religious element; only the civil remained. Christianity restored the religious element, which at first had place only in the discretion of the individual, but later became more and more fixed and finally became necessary."⁹

§373. Defensive and Propitiatory Measures.

WITH all their priestcraft, the Brahmins never claimed power to marry.¹ One reads in the ancient Chinese *Ritual of Propriety*: "When a son had done everything (for his sacrifice) that he could do himself, he proceeded to seek assistance from abroad; and this came through the rites of marriage. Hence the language of a ruler, when about to marry a wife, was:—'I beg you, O ruler, to give me your elegant daughter, to share this small state with my poor self, to do service in the ancestral temple, and at the altars to (the spirits of) the land and grain.' This underlay his seeking for that assistance (from abroad). In sacrificing, husband and wife had their several duties which they personally attended to."² In Fuhkien, "when the lucky day for the wedding comes, the guests assemble in the bridegroom's house to celebrate it, where also sedans, a band of music, and porters are in readiness. The courier, who acts as guide to the chair-bearers, takes the lead, and in order to prevent the onset of malicious demons lurking by the road, a baked hog or large piece of pork is carried in front, that the procession may safely pass while these hungry souls are devouring the meat." When the bride takes her seat in the marriage sedan, she is completely concealed. "As she approaches the door the bridegroom conceals himself, but the go-between brings forward a young child to salute her, while going to seek the closeted bridegroom. He approaches with becoming gravity and opens the sedan to hand out his bride, she still retaining the hat and mantle; they approach the ancestral tablet, which they reverence with three

⁹ Rossbach, *Röm. Ehe*, 49, 56, 92, 113, 115, 119 ff., 223, 254-255, 255-257, 276; Cicero, *De Div.*, Bk. I, ch. XVI, 1-3; Moscatelli, *Condizione della donna*, 103.

bows, and then seat themselves at a table upon which are two cups of spirits. The go-between serves them, though the bride can only make the motions of drinking, as the large hat completely covers her face. They soon retire into a chamber, where the husband takes the hat and mantle from his wife, and sees her, perhaps, for the first time in his life."³ It is still customary in some provinces of Japan, on the occasion of the marriage of a very unpopular farmer, to make the bridegroom feast Jizō. "A band of sturdy young men force their way into the house, carrying with them a stone image of the divinity, borrowed from the highway or from some neighboring cemetery. A large crowd follows them. They deposit the image in the guest room, and they demand that ample offerings of food and of saké be made to it at once. This means, of course, a big feast for themselves, and it is more than dangerous to refuse. All the uninvited guests must be served till they can neither eat nor drink any more. The obligation to give such a feast is not only a public rebuke: it is also a lasting public disgrace."⁴

"The Jewish marriage," asserts Freisen,⁵ "had no ecclesiastical character. The blessings pronounced at betrothal and delivery of the bride prove nothing to the contrary. They only gave character of publicity to the ceremony of marriage. They are not priestly blessings and are not essential to the validity of the marriage." Bergel⁶ corroborates this and states that while a certain religious tinge was given to the ceremony, there were no priests present, everything being arranged and performed by the family without requiring any ecclesiastical consecration. In Greece, "marriages were generally, though not always contracted at the divine altars and confirmed by oaths, the assistance of a priest, however, not being requisite. Before the marriage was solemnized the gods were consulted and their assistance implored by prayers and sacrifices, which were usually offered to some of the deities that superintended the union of the sexes, by the parents or other relations of the persons to be married. . . . From the Homeric age we have no instances of marriages being contracted with sacrifices and religious rites, but we must not therefore take for granted that they were entirely wanting."⁷ Later, marriage received its religious consecration chiefly through a great sacrifice, which occurred on the day of the wedding and was followed by a feast in the house of the bride's father.⁸

Rosbach⁹ speaks of a nuptial sacrifice by which the Roman marriage was concluded in sight of the gods, and sums up the sense of a relief on a sarcophagus as follows: "The betrothed, with the assistance of Juno, goddess of marriage, solemnly make the covenant of their love, to which Venus and the Graces are favorable, by prayer and sacrifice, before the gods. By the aid of Juno love becomes a legitimate marriage." Before the sacrifice was made, the procession of participants walked around the altar from left to right, a boy carrying the wedding-water and torches, and perhaps also the spelt-cake. "Probably we are not amiss when we see in the *certa et solemnia verba* holy formulas which were directed to the gods for their blessing and consent to the marriage about to be performed. The gods to whom these applied could not have been other than the usual marriage-gods Juno, Ceres, Tellus, and Mars Picumnus. . . . These formulas were apparently once used at every mar-

riage, but later they were maintained only by the patricians in their ancient form (at the *confarreatio*). The significance of the *certa et solemnia verba* was that the betrothed were united in the presence of the gods and placed under their protection." The author notes that at a Hindu wedding certain holy words were spoken, consisting in part of prayers to the gods and in part of responses by the betrothed pair concerning the purpose of their marriage. In the early days there was no mention of priests being present at a marriage; each paterfamilias was priest in his own household and had the right to apply to the gods himself, and, without the intervention of a priest, to offer sacrifice and prayers. As the ancients feared sorcery most when they were happy and prosperous, marriage was an occasion for the employment of devices to ward off magic.

§374. The Continuance of Precaution.

IN southwest Victoria the married pair are kept apart for two months, during which time they may not see one another; the bride keeps her head covered. They sleep on opposite sides of the same fire, but a man stays with him and a woman with her.¹ In Geelvink Bay, New Guinea, the newly married pass the first four nights sitting up back to back, awake; they sleep in the daytime, separating before light lest the wife see the husband's face.² No sexual intercourse is permitted the Papuan bride and groom till they have planted two gardens and fattened up a pig and sold it, that is to say, for one year after marriage. At the end of that time, "when a feast is given the girl has connection with a man not her husband and is then free to the husband."³ In German Melanesia, when all the preliminaries to marriage have been made, the bridegroom goes into the bush for three months, where he lives on the fruits of the forest. During this time he may not be seen by any member of the family or village; whoever sees him is forced to give him a present. The girl is taken by her mother to the man's house, where he gives a big feast. For completion of the wedding the young husband must change his name and take a new one.⁴ Among the Roro-speaking tribes, "although the young couple have been reconciled to each other, cohabitation is not supposed to begin for a few weeks, and the boy still sleeps in the *marea* [men's house], while his wife sleeps in her father-in-law's house. It appeared, however, that in most cases intercourse takes place in or near the gardens soon after marriage. It was stated that formerly it was not customary for a woman to have children until her garden was bearing well, that is to say, until she had been married from one to two years."⁵ In Pentecost, New Hebrides, "when she first goes to live in the house of her husband's mother, and if she is young it may be for several years afterwards, the girl will not speak to her husband, who does not live in the house but continues to spend all his time in the club-house. The man may sometimes come into the house to give food to his mother but even this would be exceptional. When the girl is old enough the husband will tempt his wife to speak to him and may offer her food but so long as she does not speak there are no sexual relations between them. This state of things may last for years and it was said that a wife would sometimes die without having spoken to her husband, in which

case marital relations between the pair would never have taken place. When she speaks, even if only a single word, the man will tell his mother that his wife has spoken and the pair will live together as man and wife."⁶ "For five days a New Britain bride stays alone in the bridegroom's house, while he hides away in the forest or in some place in the high grass known only to the men."⁷

The Samoyed bride sleeps by her husband, but undisturbed for the first month. "The bride does not go to her husband's home until some time has elapsed. When she arrives certain ceremonies are held which symbolize the capture of the bride."⁸ Brahmans may not shave for six months after marriage, for a year after the death of a parent, and till the birth of the child when their wives are pregnant.⁹ In some groups in Assam, "the young couple are forbidden to come together until they have slept under the same roof at least three nights without intercourse. This prohibition is relaxed in the case of the marriage of widows."¹⁰ For many months after a Palaung wedding "young husbands and wives are very shy about appearing in public. They rarely go out together, and, even in their own home, hardly exchange remarks if any one else is present to hear. After a child has been born to them, they no longer have any feeling about appearing together and talking together."¹¹ In the Indian Archipelago, consummation is deferred for four days among the Sundanese, for seven in Atjeh. Cases are cited where an old woman, or a boy six to eight years old lies between the couple as they sleep.¹² The Dyak bridal pair not only do not spend the first night together but do not sleep at all, for fear, says Perelaer,¹³ that spirits will make them sick or that they will have unlucky dreams. Schwaner¹⁴ confirms this interpretation. Probably an analogous case is where the ears are stopped the day before a wedding so as not to hear ill omens from the birds' cries.

An ecclesiastical law of 505 A.D. ordained: "When the bride and bridegroom are to be blessed by the priest, let them be offered by their parents or grooms-men; and when they have received the blessing, let them remain the same night in virginity, out of respect for the blessing." A marriage was regarded as clandestine unless such abstinence was practised for two or three days.¹⁵ It is asserted that "it was for a long time the practice of the French Roman Catholics not to touch their brides during the first three nights (Mme. de Sevigné mentions this when writing of the marriage of her son), and that the Armenians still observe a similar custom, because of their fear of the spirit displaced by the bridegroom."¹⁶

§376. Sex-Rights in Marriage.

A MODERN publicist¹ holds forth rather testily upon the inequalities between the sexes in woman's favor; he is somewhat irritated by the accusations brought against man for his oppression of the weaker sex. Woman, he says, gets the vote but incurs no obligation for military and other services to society. In marriage man assumes the burdens, assuming the responsibility for woman's

financial obligations. He is answerable for the debts his wife contracts as well as for her support. There is no reciprocal obligation; she can keep her property and is not required to assist him. He must support her even if she has means, while she need not care for him, though he is ill and infirm. Woman's property is her own and she has an equity in her husband's; in a few states a husband has a dower right in his wife's property, but she always gets a definite proportion of his. In the matter of alimony, the husband is always liable for support, alimony being in some cases a preferred claim. Man has had to perform military service, as aforesaid, and must do jury duty and assist the police; and while he has been at the front woman has taken his place and will not let go. Society considers discriminatory legislation in favor of women as an added safeguard for itself.

Consider the relative positions of the jilted woman and the jilted man. Where does popular sympathy lie? Consider the suit for breach of promise. Can a man bring such suit and still retain a position of dignity? He is laughed at. There are all sorts of discrimination in the mores in favor of modern woman which it is convenient to overlook when making out a case for man's selfishness and brutality. So long as women admitted inequality men protected them. What is going to happen if they insist upon genuine competition with men? Will men still defer to them when that means deference to rivals and the surrender of advantages in the struggle for existence carried on by men for themselves and their families?

We have expanded slightly upon the text provided by the writer whose views are summarized in order to point the contrast between what women have had and what they now possess in the way of rights. There is, in his comments, together with somewhat of the exaggeration that goes with polemic mood, a very real core of truth. We are interested only in having such controversy carried on in the light of evolutionary perspective. When women object, on account of the discrimination involved, to laws prohibiting female labor under certain conditions of bodily health and strength, it seems to us that theory has quite run away with fact. One does not need to espouse either side of a theoretic controversy to the extent of ignoring plain physical facts; and he will always come out better in the end for a knowledge of how the race has grappled with the perennial condition of bi-sexuality. For many a notion of the present, hailed as novel, is not new at all, but has been tried out and has failed, sometimes over and over again, in the long course of societal evolution.

§379. Liberty-Rights.

Seclusion of the Wife. Niekrassoff,¹ in his poem, "For Whom is Life Happy in Russia?" introduces a woman who tells her own life-story of ill-treatment and misfortune, but also of kindness, and sums up the lesson of it in these words: "You were not clever when you sought the happy ones amongst women." She then quotes an aged pilgrim woman as follows: "God himself threw away and lost the keys of woman's happiness and liberty. Hermits, holy women, and learned men have sought them, but never found them. Probably some fish swallowed them. Warriors worn by cold and hunger traversed deserts and towns, and asked sorcerers, and tried to read the stars; but the keys were not to be found. They searched through all God's world, in mountains and subterranean

¹ *Poems* (Russ.), II, 233.

caverns. At last heroes found priceless keys, but not those keys. All assembled and for God's chosen people there was a grand festival. They came to the prisoners and the prison doors were opened. Over the earth there came such a joyful sigh of relief—but yet the keys of our woman's freedom were not,—they were not! Great champions still to this day strive; but nowhere, nowhere are those keys to be found. Alas! they will hardly be found ever! Those forbidden keys have been swallowed by some fish, and in what sea that fish swims God has forgotten."

There are a number of ways of exercising control over women and restricting their freedom. In the Gulf of Papua masked men "run and dance through the village carrying a short stick of hard wood, and frighten women and children."² An Indian tribe on the lower Sacramento have a ceremony of raising the dead and another of raising the devil; but both are employed for sordid purposes. "The former was in early times used merely to keep the women in subjection, but now merely to extort from them the gains of the prostitution into which they are forced by their own husbands and brothers!"³

The chief method, however, of limiting woman's freedom lies in the custom of seclusion. Annexed to the temples in ancient Mexico were large buildings used as seminaries for girls.⁴ The Hindu woman is partially veiled; she is not allowed by custom to converse with her husband. One should never address the women of a house nor ask for them. Poor people cannot seclude their wives, but would like to.⁵ Owing to the extension of trade at Cawnpore many men have become wealthy and aim at a standard of social respectability much higher than that of their rural brethren, and "some have begun even to seclude their women, which every native does as soon as he commences to rise in the world."⁶ The more prominent Hindus at least send their daughters to school if possible; a Mohammedan girl, on the other hand, never has this opportunity. Tamil women may on occasions appear on the streets; when they meet a man they draw only a tip of their dress over the face. On the other hand, one sees Mohammedan women only when some pressing occasion forces them to leave the house, and then they appear dressed in thick, tasteless clothes and barricaded behind shades and curtains.⁷

It was impossible for the Jesuit missionaries to penetrate into Chinese family life and especially to learn about the women, for, as the ancient book of moral catechism instructs, "men do not speak of such private matters." When a foreigner asks about the "honored ladies," the Chinese host assumes that their inquiries refer to his mother, not to his wife.⁸ Up to the age of eight the boys and girls of the respectable classes in Korea are allowed to grow up together, "but after that age the girl retires into the women's quarters where she lives in utter seclusion until her marriage. Marriage for her means but the exchange of one person for another. She is taught that the most disgraceful thing a woman can do is to allow herself to be seen or spoken to by any man outside her own family circle. After the age of eight she is never allowed to enter the men's quarters of her own home. After her marriage, which takes place usually at the age of sixteen or seventeen, she is allowed to see no man but her husband. The boys in the same way are told that it is unbecoming and undig-

nified to enter the portion of the house set apart for the females. The men and women have their meals separately, the women waiting on their husbands. . . . In Seoul (the capital) they have a curious curfew called *pem-ya*. A large bell is tolled at about 8 p.m. and 3 a.m. daily, and between these hours only are women allowed to appear in the streets. In the old days men found in the streets during the hours allotted to women were severely punished, but the rule has been greatly relaxed of late years."⁹ It is only with difficulty that an European gains an intimate view of Japanese family relations, for according to Japanese notions it is forbidden to speak of one's own family or to ask another about his family.¹⁰

In Chaldæa all women, even princesses, were cloistered in the harem, and were never found by the side of their husbands or brothers, as in Egypt.¹¹ The Jewish woman led a simple quiet life for her husband who treated her with consideration but showed her no special tenderness; to public life she remained foreign.¹² In Homer, the wife's place was at home, though she was not cloistered; a princess was veiled.¹³ In a Greek play a woman apologizes for her boldness in coming out, for it is a woman's greatest merit to be silent and discreet and stay at home.¹⁴ In Periclean Athens the best woman was the one least spoken of, whether well or ill, amongst men. Women of the higher classes were locked up with Asiatic jealousy.¹⁵ Mohammedan countries are the classic ground for female seclusion. It is against all propriety to greet the wife or grown daughter of the house or to ask concerning their health.¹⁶ The wife is excluded from all social intercourse with the other sex and from all intellectual interests; she remains throughout life restricted to the narrow circle of the home, which makes it impossible for her to develop mentally.¹⁷ "An impenetrable veil of ignorance and obscurity separates her from the world." There exists a wide gulf between an educated man and his wife.¹⁸ In Arabia, women, young or old, never sit at table with the men of the family, rarely join in their pleasure-meetings, and above all may not in seemliness thrust themselves forward to welcome guests or strangers and converse with them. "Of course, in the dwellings of the poor women and men all live together, and little separation is or can be kept up; a narrow home going far to bring its tenants on a level. But in richer families and chieftains' houses the women are bound to occupy a separate quarter, whence, however, curiosity or business often draws them forth into the apartments of the other sex. Nor is the covering veil, though generally worn, nearly so strict an obligation as in Syria or Egypt. It is a matter of custom, not of creed, and readily dispensed with when occasion requires. Indeed, in some parts of Arabia . . . it is barely in use. Nor are Bedouin women apt to impose on their grimed and wizened faces a concealment that might on the whole be for their advantage. Among the rigid Wahnâbees alone the veil and the harem acquire something like exactness, and there Arab liberty consents to inflict on itself something of the ceremoniousness of Islam."¹⁹

Self-Disposal in Marriage. Many cases illustrate the liberty of women in this respect, and in addition the reader is referred back to the section on elopement.²⁰ In the Upper Congo, a girl sometimes objects to being handed over in the usual fashion of wife-purchase, and, "if her protests are disregarded, she will run away to a neighbouring town and select her own husband, and her parents will have to make the best bargain they can in the way of marriage money. . . . If a free woman did not want to marry the man who was trying to arrange for her, she would tell him frankly that if he persisted in marrying her she would run away from him. If, in spite of this threat, he completed the arrangements, then one day she would escape to a neighbouring town, and put herself under the protection of the chief by tearing his cloth. The chief would give the husband notice of what had happened, and before he could get his wife back he would have to pay the chief 600 brass rods = 39s. If the man would not then permit her to marry the man she wanted, she would run away again, and again, and every time she ran it would cost her husband 600 brass rods. A sensible man would take warning by the first threat and would not marry her. If a free woman were badly treated by her husband, she would resort to the above method of making him pay for his ill-treatment of her, and would thus force him to use her more kindly. A slave wife he could kill for acting thus, but a free woman has a family not far away who would avenge her murder." There is an even more drastic way of punishing a husband for ill-treatment. "A woman has been very badly treated by her husband and in spite of her protests and warnings he continues to ill-use her, so one day she runs to the *nganga* [shaman] and smashes the *eboko* = the fetish saucepan of the 'medicine man,' and in so doing she commits a very great offence. The *nganga* therefore holds her as a hostage until her husband redeems her by the gift of a slave and the payment of a sum of money to replace the *eboko* and make fresh medicine. Having paid the money he will treat his wife better in future, or she will again break the *eboko*."²¹ Among the Ba-Yaka, "the consent of the woman is regarded as absolutely necessary."²² With the Wa-Giriama, the girl is asked by her brother whether she wants to marry the suitor. "If she declines the honour the matter is finished." Even after negotiations have begun, she may change her maidenly mind, whereupon the gifts are returned and the affair ended.²³

Coudenhove²⁴ has discovered feminism in Nyasaland. "When I tried to explain to a husband that it cannot, in fairness, be expected from the mother of a family to collect firewood in the forest, to bring water from the river, and to carry all the household goods on a journey, I was invariably met by that vacant stare which natives who cannot, or will not, understand know so well how to assume; and as to the women themselves, my discomfiture amounted to a fiasco! They had two attitudes in response to my veiled incitements to rebellion: the one was that of benevolent toleration, if not exactly approval, of my intentions rather than my words, the humoring, so to speak, of the harmless hobby of a good-natured eccentric; the other, more humiliating still, was that of boundless merriment, finding expression in peal after peal of laughter, to which the listeners gave way, and which kept on reaching me from the distance, growing fainter and fainter, as they moved away from my camp." Hard as

24 In *Atl. Mo.*, CXXII, 186-188.

he might think their lot, the women knew better. "Undoubtedly, the relations of native men and women to one another are based, not on an idea of inferiority of the one sex to the other, but on division of labor. If, in some tribes, like, for instance, the Wayao, the woman throws in, by way of *pour-boire*, an outward show of extreme humility and submission, she does so, as I will show later, on an entirely noncommittal understanding, merely, I am afraid, because the cunning creature is well aware of the weak spot in the cuirass of the lord of creation. When, in the last-named tribe's country, I saw a woman kneel in the dust when addressing her husband or handing him anything, I could not repress a feeling of indignation with the male, for what I considered to be the outcome of insufferable arrogance on his part; nor would I believe him when he replied to my outspoken comments with the words: 'Have I told her to kneel down? She is following her own heart.' I subsequently found out, however, that this excuse was quite correct. In most of the Nyasaland tribes, permanent connubial life is preceded by a term of probation, which can be broken off at will by either party. When the woman has finally made up her mind to stay, she punctuates her decision by kneeling when she addresses her husband. . . . By thus humbling herself, *she has taken possession of her husband*. . . . Barring a few concessions to traditional custom, native women in British Central Africa enjoy to-day a liberty greater than that of most European married women."

There are many cases in East Africa in which not only is the girl consulted as to her marriage, but it is she who, in fact, commences the negotiations and decides the question. "The fact is that at the dances, where it is the girl who chooses her partner, she has the opportunity of declaring her affections by always selecting the same young man, and if he can pay what the father asks for her the matter is practically settled." The author,²⁵ with his usual discernment, discourses further on the liberty a native girl has as to her choice. "The betrothals made in early childhood are but family arrangements which may or may not be fulfilled, and are in no way binding; in general, it may be said that no betrothal exists until the couple themselves have contracted to marry. The marriage ceremony always includes a formal signification of consent on the part of the girl, and everywhere it will be found that it is considered bad custom to coerce a girl into marriage. I do not say that girls will not marry to please their parents, or that the influence of the family may not decide for her, but those who know natives will appreciate the difficulty of forcing their women to do anything against their inclinations; and native custom was never so foolish as to permit coercion in these matters, for even if a girl does submit to a forced marriage, it is certain that she will not long abide by it. Parental persuasion has, of course, its weight in Africa as well as in Europe," but the native parent is extremely indulgent towards his children, and is no less anxious than is the average European father that his daughter should exercise her own choice in the matter." Instead of being improved by European example and rule, the marriage-customs of the native tribes have tended to degenerate, and with this decline follows a loss not only in morals but in the standing of native women. "The ideal native marriage presumes the free consent of the woman; as a wife she then becomes the mainstay of the village, the provider of comforts, and the idol of her children, for to the African a

²⁵ Dundas, C., in JAI, XLIII, 519; and in JAI, LI, 257, 263.

mother is all in all. Unfortunately, our methods and mistaken conceptions of what marriage is to the native have loosened the ties of matrimony and given it a commercial character. We have freely granted divorces in favour of frivolous girls, and permitted them to run from one man to another, heedless of the bad example thereby set."

Among the Nigerians, "the girl has a right of veto though not exactly of choice, as the father's fee must be paid before she is supposed to know that she is being sought. A father will therefore, sometimes accept presents secretly from several suitors, and after he has spent the money, simply tell them that his daughter—or ward—will not marry them."²⁶ Shuli women have a voice in the choice of their husbands and their status is better than usual in Africa.²⁷ Parental refusal of a maiden's hand occurs but seldom and then the girl can create an uproar that leads the elders of the tribe to declare her marriage legal. Poor girls, unwelcome to the parents of the groom, may jump the hedge and remain in the house. "Rich Gallas, therefore, provide their houses, when their sons are marriageable, with high hedges, so that poor girls cannot intrude."²⁸ Berber women are independent, uncloistered, and unveiled; they eat with the family, even when guests are present, and are free to go out and buy in the market whatever they need; in short, they enjoy the same freedom as European women. This applies also in Kabylie, in the Sahara and with the Atlas tribes. The Kabyle girl enjoys premarital freedom, and will mount her camel alone and go to visit her lover who may be twenty or thirty hours away, without injuring her reputation at all or hindering her from finding a husband.²⁹

In India the groom may even be abducted, though he modestly pretends to run away. Also the girl may get into his house and the effort to dislodge her may include the throwing of red pepper on the fire; "but if she endures this ordeal without leaving the house, she is held to have won her husband and the family is bound to recognize her."³⁰ Again, the woman's tribe is insulted if a man asks for her; or her consent may be indispensable. Princesses select husbands out of a review of suitors. In Sikkim a present of eggs to a young man is a proposal of marriage.³¹ Even Manu, who put all periods of a woman's life under guardianship, allows her an independence in matters of marriage—in some cases a full independence by withdrawing her wholly from parental control. The latter is especially true in the *gandharva*-marriage.³²

"A Palaung girl is free to marry whom she will, provided that the young man wishes to marry her. Parents do not often interfere, or object to men who visit their daughters. Indeed it is not very easy for them to know who the men are who come at night to their house. The father and mother retire to the inner room to sleep, about ten o'clock, and if they want anything from the outer room, where their daughter is sitting, they must on no account go to fetch it. . . . A young man, when he visits a girl in the evening, always wraps himself in a large grey blanket, which completely envelops the body and head, shading the face; a disguise that is not easy to penetrate when a man is

sitting on the floor."³³ The Dyak girl inveigles the man she wants into her house, closes the door, hangs cloths and ornaments on the wall, serves food, and informs him of her wishes. If he declines he must pay the value of the hangings and ornaments. Parental consent is seldom refused, though it is possible to anticipate matters by not allowing the visits of the enamored swain.³⁴ Elsewhere, "in their marriages the will of the girl plays the chief rôle"; she proposes by presenting the chosen youth arms or a shield. In northern Sumatra a girl is consulted only when she has lost her virginity.³⁵ Parental permission is not indispensable in certain Pacific islands. In Samoa the girl's consent is asked, but she has to agree if her parents are in favor of the match. Maori girls have a cord ready, to hang themselves with in event of parental refusal.³⁶

Eskimo women are ordinarily forced; still they have some small chance of postponement, which may discourage the suitor.³⁷ Tlinkit girls, acting in obedience to the dictates of their relatives and the rules of the people, seldom have any choice in their own marriage, but "occasionally headstrong youth defy all customs and marry as they will."³⁸ Among the Indians "often, though less directly than among whites, the girl exercises the right of acceptance and the married woman the privilege of separation."³⁹ Algonquian maidens "were allowed to signify their desire to enter matrimonial life, upon which a marriage would be formally arranged."⁴⁰ An Iroquois myth tells the story of a girl who ran away and tried to drown herself over Niagara because she was to be forced to marry a hideous old man. The Osage girl may present an ear of maize as a proposal to a great warrior. Among the Pueblos, "no girl is forced to marry against her will, however eligible her parents may consider the match." In fact, "the usual order of courtship is reversed; when a girl is disposed to marry she does not wait for a young man to propose to her, but selects one to her own liking and consults her father, who visits the parents of the youth and acquaints them with his daughter's wishes." The woman occupies a comparatively high place in Tarahumari family life and the girl does the courting. Her mother goes to the parents of her choice and praises her as an expert weaver and housekeeper; then the matter is referred to the young man. "Actual proposal consists in the girl throwing small pebbles at him; if he does not return these the match is off, but if he throws them back they are betrothed." Bears' entrails, smoked and seasoned, are a common gift of Indian girls to their lovers; "for, when cast around the neck as a necklace, it means 'I love you.'"⁴¹ Consent of parents is not asked in certain Brazilian tribes, husbands being chosen by young women from the young men gathered at festivals. The girl almost always chooses the man, in one case by making a mark upon a tree. In one region, "the women make their stipulations before marriage—what they are to do in the household, whether the marriage is to be polygamous or polyandrous, and the like."⁴² Among both the Bororo In-

dians and the Chaco tribes the proposal of marriage comes from the woman.⁴³ In the case of the Patagonians, "marriages are always those of inclination, and if the damsel does not like the suitor for her hand, her parents never force her to comply with their wishes, although the match may be an advantageous one."⁴⁴

Von Kremer⁴⁵ says that the ancient Arabian women had the freest rein in the choice of their husbands and it even happened that the wife of a caliph, after his death, married another husband of her choice. She brought to him from the first marriage limitless possessions, but finally repudiated him because of her suspicion that he was having relations with a female slave. Wilken⁴⁶ cites a number of cases in substantiation, and states that in some of the islands off the west coast of France the young girls ask the young men in marriage.

§380. Woman as Property.

In Australia woman is a domestic animal, a servant or slave who feeds after her master on the leavings.¹ To the Zulu a purchased wife represents an outlay of capital and he hopes through the work she does and the children she bears to derive interest on his investment. If this does not eventuate—if his wife becomes sick, weak, or is childless, so that he fails to recoup expenses, he sends her back to her father and seeks the return of the cattle he paid.² Among the Ba-Mbala a woman is merely "a variety of domestic animal."³ While the Unyamwesi man is away from home, his wife must eat no meat and she must save up for him the layer burned on to the bottom of the porridge-pot.⁴ Among the Wagogo, men and women eat apart, the father and sons first, the mother and daughters later eating what is left.⁵ Customs such as these show that the wife is mainly a servant.

If one of the problems of civilized man is how to live with a wife, the question that worries many Africans is how to get along with only one. To have many wives means to control many workers. "A Mkamba may have as many wives as he can afford to buy. A large number of them are a sign of wealth and consequently they bring their husband respect and position: not a few invest all their riches in wives, considering them more profitable than cattle, for they are first and foremost workers, but also they bear him children who, in the case of girls, are valuable assets, and sons are much desired to strengthen the family." The alignment of women with property is further illustrated by the fact that compensation for injury done to a female is appropriated by her father or husband, as the case may be. "In Ukamba, however, that which is paid or due ultimately belongs to the husband when the girl gets married. If it is already paid, the husband will claim it from the father; if the injury was caused at any time previous to the girl's marriage, but was not compensated at the time, the husband may claim it from the offender. The Atheraka have some curious and primitive rules in this respect. If a man severely injures a girl, he is obliged to take her in marriage, and to pay full dowry [bride-price] for her; if he injures a man's wife so as to impair her usefulness, he must pay

the amount of dowry to enable the husband to buy another wife."⁶ Among the Dinkas, in case of seduction, the offended person is the father, owner, or guardian of the girl or woman seduced. The guilty man is liable to a fine of from one to five cattle. Should the girl give birth to a child, the child becomes the property of her guardian, "who demands a larger 'marriage payment' for her in consideration of passing the ownership of the child to her husband with her."⁷ "As a Kagoro woman very seldom sleeps away from her home her children are nearly always born there; the husband would very seldom allow his wife to go to her father's house, for if he did the father-in-law would probably keep the child and marry the woman to someone else when possible."⁸ Women are very cheap in Uganda, as they far exceed the men in number; a man may sell his wife into slavery for any misdemeanor. "The purchase-price for the woman is like a compensation to the labor-force of the family from which the woman is withdrawn, and . . . may legally be demanded back in case of divorce."⁹

To the Krumen a woman is an investment. He ships on a European vessel and by strenuous labor earns a small sum, of which he is allowed to retain, in the family division of spoils, only enough to buy a wife. "When the honeymoon is over he goes to sea again, and anew does he subject himself for a year or two to the severest renunciations in order to be able on his return to celebrate a second wedding. In this manner he goes on until his harem numbers enough members so that he may be comfortably supported by them and can enter into carefree retirement."¹⁰ Serpa Pinto¹¹ found that as a rule the African women he saw were the most abject slaves of their husbands. It is thought that the low status of woman in Africa is due to "overproduction of women" and that it appears chiefly among warlike tribes.¹²

Among some of the aboriginal tribes of Siberia, the men get the best pieces of food and the women receive what is left over. Thus among the Reindeer Koryak, "only the men sit around the food which is served in the inner tent; and, besides the children, only the mother or the eldest wife is present, who distributes the food, or treats the guests. The other women and girls receive the leavings, which they eat in the outer tent. Among the Maritime Koryak, too, the women and girls eat separately, by the hearth, after the men have eaten."¹³ Women among the Kirghiz are valued as property along with weapons, beasts, and slaves; the husband has absolute power over them and their children.¹⁴ Tungus women, on the other hand, though not much more than slaves of the men, may not be injured with impunity.¹⁵ The Yakut woman has no rights in the family and no property; once she was a war-captive, now a purchased slave.¹⁶ In Tibet, woman, though a valuable commodity, is a miserable slave.¹⁷ Among the Turkomans she "is regarded as a very costly ware, but only just as a ware," and the same is true among many of the wild tribes of Russia. Young girls bring great buckets of water from the river, while boys of the same age and older do nothing; the women become old early and

are misshapen. "The man considers it a shameful thing to help a woman in her work, even when she is sick. The death of a wife makes a mountaineer poor in the fullest sense of the word." Among the Usbeks, women do all the work and are treated like cattle; the men ride around and visit each other. The position of woman is, if anything, lower and more miserable among the western Russian tribes.¹⁸

In China "custom required mourners to divest themselves for a time of their wives and concubines, who constituted mere objects of wealth, as is nearly always the case among uncivilized and semi-barbarian peoples."¹⁹ Jolly²⁰ states with reference to the position of woman among the ancient Hindus: "Rich in hostile expressions about the female sex, the Hindu law not only subordinates women wholly to men, but in general does not recognize them at all as independent, as possessors of rights." The *Code of Manu* states: "During her childhood a woman depends on her father; during her youth, on her husband; her husband being dead, on her sons; if she has no sons, on the near relatives of her husband; or in default of them, on those of her father; if she has no paternal relatives, on the sovereign. A woman ought never to have her own way." A child belongs to the master of a wife as a calf to the owner of a cow. "As the product comes to the owner of a field, who also may have sowed the seed, so is the child of him to whom the mother belongs, through whomsoever it is begotten." A woman must serve her husband as a god and do nothing to displease him, even if he is devoid of every virtue. The wife is referred to as "servant" and "slave," the husband as "master" and "lord." She should not call her husband by name nor eat with him.²¹ According to Tamil principles the man is ruler, the wife a slave. He addresses her with the familiar "thou," while she must use the most honorary plural, which signifies "gracious lord." When she speaks of him, she must never mention his name but refer to him in the third person, as "my master." This usage is so much in the blood and flesh of the people that even Christian Tamil brides, who hold to the English form of the marriage vow, are moved only with great difficulty and pressure to speak out the name of the groom at the marriage-ceremony.²² A modern Hindu lady is quoted as follows on the duties of a wife: "The husband is the wife's religion, the wife's sole business, the wife's all in all. . . . To a chaste wife her husband is her god."²³ If a married girl who is not yet nubile dies while still dwelling in her parents' home, her blood-relations must mourn for her a rather short time, while, under other circumstances, they do not mourn for a married daughter at all.²⁴ She resides and belongs elsewhere.

On the island of Nias, "in spite of the fact that the woman is so fully the property of the man that she goes over as a piece of heritage to his immediate family, her position is less bereft of rights than it is, for example, among the Batak." In the latter case, a wife has neither property nor rights. "The Batak regards the female sex only as a useful domestic animal; he never concedes to women the same civil rights as men, and excludes them from all possession, from all his councils, pleasures, and amusements." Wives are regarded not as persons but as things. "A wife can really never possess anything;

she herself is rather always the possession of another—be it her father or brother, if she is still unmarried, or her husband, who has purchased her, or his heirs, whether brothers or sons, after his death.” In South Sumatra, “as soon as the *jujur* is paid the wife is the inalienable property of the man.” Her position is one wholly without rights. She is an article of possession, as well for the parent who sells her as for the man who buys her, or for his brother or other blood-relations to whom she passes as a heritage by virtue of the levirate marriage.²⁵ In northern Sumatra the girl has no right over her own hand; she is the property of her father or guardian, who can sell her when and to whom he likes. In marriage the woman merely changes masters.²⁶ Among a number of tribes in the Malay Peninsula the men always eat before the women, which may be a sign of the inferiority of the latter or, as some assert, may be merely because they have to look after the food.²⁷

Among certain American Indians, woman held a servile position; “whether maiden or widow she was owned by her father or brother, to be sold, with her children, if any, at his pleasure. Marriage was a matter of bargain and sale.”²⁸ It is reckoned indecent in the man, among the Guiana Indians, to caress or notice the women in public, and “our practice in this respect appears to them highly contemptible.” The Surinam Carib woman “is the servant, or rather the slave, of her husband, although this is more imaginary than real. Nevertheless, she does the hardest work and carries the heaviest loads; and she often does this with a suckling on her back. Only in his presence or in that of his family folk may she speak to another man. Only when he has eaten may she venture to partake of something, so that when he is sick she sometimes hungers. All the money that she earns in making hammocks, pottery, etc., goes to the husband, who generally squanders it. . . . No wonder need be aroused at unhappy marriages and husbands ill-treating their wives, especially when they are drunk. But woe to the woman if she dare offer resistance or attempt to give her man a sound thrashing, because on his recovery she would receive double in return. And if a man allows himself to be led or ruled by his wife, he is regarded with the greatest contempt.”²⁹ A Paraguay Indian “found it quite natural to rest in the hammock from fancied fatigues, while his poor little wife, hardly a dozen years old, lay upon the bare ground at a nearly freezing temperature, although she was in a delicate condition.”³⁰ The Araucanian wife “is considered the absolute property of the husband, and he can dispose of her as he thinks fit, even to killing her, without anyone interfering any more than they would at the disposal of his other property.”³¹ Among the Fuegians, though the women win a large part of the nourishment, they get less of it than the men; at certain times they are allowed only fish.³²

The laws of Hammurabi state: “When anyone becomes a prisoner of war and in his house there is enough to live on, but his wife leaves the house and domestic establishment and goes into another house; because that wife has not kept her home but has gone into another house, she shall be legally convicted and thrown into the water.”³³ Among the Israelites the position of woman was characterized by the fact that she was always the property of her hus-

band. "As long as she was unmarried, she belonged to the household of the father and had to do her share of the domestic work. If she became married, she was sold for a price to her husband and became his property. Her duties as housewife were first to bear him children and second to do all sorts of work in his house. For that she could claim from her husband clothing and food. . . . She was indeed merely his property and through marriage entered into no intimate relationship with him; wherefore even the priests mourned for their nearest blood-relations but not for their wives. . . . According to all these customs the wife was always dependent, which also finds expression in the fact that the vow of a woman is valid only when her father or husband confirms it."³⁴ In the commandment, "Thou shalt not covet thy neighbour's wife," the connotation is one of property.³⁵ According to Biblical-Talmudic law the father could sell his daughter. The Persian wife was in a similar position. Zarathustra said: "The wife must honor her husband as god." Later follows the precept: "In the morning the wife must stand before her husband, fold her hands and nine times repeat the words: 'What wilt thou that I should do?'" Then she had to kiss his body, lay her hand three times from the forehead upon the earth and from the earth upon the forehead, and then set out to execute his commands.³⁶ Among the ancient Arabs the female sex was wholly excluded from inheritance. A wife could not inherit from her father, since by her marriage through purchase she left her family for good; nor could she inherit from her husband at his death; on the contrary, as a purchased thing, that is, as a part of his possessions, she herself belonged to the heritage.³⁷ The wife of the fellah belongs to his movable possessions which he can alienate at any time; her purpose is merely to satisfy his wishes and take care of his children. Should she prove sterile, he takes a second wife and separates from the first or she becomes the maid of her happy successor.³⁸ The *Koran* states that men are superior to women because of the qualities by which God has placed them above women and because men employ their wealth to endow women. The virtuous woman is obedient and submissive.³⁹ No tribesman in Albania eats with his wife; and "the odd custom still prevails of a married couple never addressing each other by name. To eat with a woman seems to be thought very degrading. The men eat first and the women eat up the bits left over afterwards at the other end of the room or, if Moslems, in their own quarters."⁴⁰

§382. Types of Disposition over Women.

It is still the general custom in Papua "to 'lend' wives to the guest for the night, and in this the wife has no say whatever, whether she likes the man or not." Also, "permanent exchange of wives is carried on, and the women have no say in the matter. They are 'thrown away' for bad temper, bad work, and continued unfaithfulness."¹ In both Nyasaland and Uganda it is a common practice for wives to be lent to friends and guests.² Among the Bantu tribes of

East Africa, "it is customary for a man to offer a visitor the hut of one of his wives, and the *usus* of his wife, provided that the visitor is of about the same age as his host. Children born of such, or of unlawful unions, are in all cases taken possession of by the father or husband of the woman, as the case may be, but the child of an unmarried woman is taken by her husband when she marries."³ Among both the Maritime Koryak and the Chukchi, "when friends exchange visits, or when guests come to the house, they sleep with the wife and daughters of the host, who leaves the house for the night, in some cases to spend it with the wife of the guest."⁴ The Sea Dyaks and Kayans lend daughters to visitors as wives.⁵ On the west coast of Borneo men often trade wives among themselves for a shorter or longer time and anybody coming into a kampong or village where he has a name-comrade has the right to go to him, and to expect that he will turn over not only his house but also his wife, in the literal sense of the word. Among certain peoples of Billiton it is reckoned as a duty of guest-friendship to loan wives to guests.⁶ The leader of an expedition to the Arctic reports that it is a mark of friendship among the Eskimo for a man to trade his wife to another. "They trade mates for days, weeks, months, years and sometimes always. It seems to be mutually satisfactory. One man told me that he had a perfect wife except that she didn't like to be traded."⁷ Exchange of wives and the offering of the wife to a guest are among the practices of the Athapascan tribes in Canada.⁸ Among the nations of the Orinoco and to the westward of it, "the practice of making a temporary exchange of wives for a limited time was in vogue. At the expiration of the period agreed upon they are received back without the smallest objection being raised on either side. . . . By mutual contract they will exchange their wives for a definite number of months; and the day of settlement over, each woman returns to her husband's house."⁹

In addition to exchanging or lending wives, primitive men may sell them along with their other property. "The Mkamba wife is bought and sold, and may even be traded as a piece of goods."¹⁰ Some Polynesian husbands sold their wives for a small payment.¹¹ The old Norseman could make over his wife in his last will and testament, give her away, or sell her with his house and furniture. "The hardest and most offensive was the sale. A Norse example shows how deeply the wife felt this injury. The Iclander Illugi the Red sold his domestic establishment with all movable property, including his wife . . . who, however, hanged herself because she could not endure this traffic in human beings. Among other German peoples the sale of wives is likewise demonstrated."¹²

Wives may also be inherited. As regards the inheritance of a father's wives in East Africa, "the Agricultural Hill Suk do not take their father's wives, old or young, but maintain them unless they re-marry; the Pastoral Suk have adopted the custom of the Turkana and Karamojo and take their father's wives, but not their own mothers. They discard the older women but maintain them. As regards the inheritance of brother's wives, these go to the next elder brother, and he may give permission to marry elsewhere if he wishes, or pass

them on to a younger brother of the deceased. Failing sons and brothers, the women pass to the husband's clan as other property wanting heirs."¹³ Among the Sungu, widows follow the property of their deceased husband but can free themselves entirely by restoring the bride-price; among the Olemba they can choose a husband among the brothers of the deceased; while the northern Batetela allow them no say whatever in the matter.¹⁴ In the case of certain Russian tribes, if a man dies, his wife goes to his brother, and if that one dies, to the next brother, and so on—if they are unmarried, for a man can have only one wife at a time. If the brothers are already married, then the widow is free to marry anyone she likes.¹⁵ Among the Bataks, a slave is more of a person than is a free woman; she, in consequence of the payment of bride-price, is a family-possession which, just like other goods, goes over by inheritance.¹⁶ Among the Israelites the widow did not inherit from her husband; "rather, as the property of the husband, she originally went over to the possession of the heirs. Only what she had brought into the marriage—usually her slaves, and what the husband had given her—was her property. . . . If she did not re-marry, it was the duty of the heirs to care for her."¹⁷ The widow among the ancient Arabs was inherited along with the rest of the property, by the brother, uncle, nephew, or stepson of the deceased.¹⁸ With the ancient Germans, upon the death of the husband, the *mundium* or guardianship of the woman descended upon the nearest male relative, usually upon the son of an earlier or of the last marriage.¹⁹

A recent example of wife-inheritance is reported from Afghanistan. In 1926 a native of this country, who was married to a German woman, died, and when the widow applied to the courts for possession of her husband's property, she was informed that the clan to which her husband belonged still held to the old custom that the brother of the deceased gets all the property, including the wife, whom he is allowed to marry or sell. The brother in this case offered marriage, which was rejected, and he then used the clan prerogative of bringing the wife to the auction place. In order to save her from being sold as a slave the German Minister at Cabul was obliged to purchase her in the name of his Government.²⁰

§383. Infidelity.

IN Central Australia, an adulterer, when found guilty by the elders, may be killed.¹ In West Australia, if a woman who is promised or married to a given man runs away with another, and the two who thus elope are not *nuba* to each other, they are separated by the tribe and punished, the woman being beaten by her female relatives and the man speared through the thigh. "If they are of the proper relation, that is, if they are *nuba* to each other, it rests with the husband of the woman to get her back if he can. This often leads to a fight in which one or the other gets killed. Practically all the quarrels amongst the natives are about the women."²

In the New Hebrides men are said to be very jealous of their wives. Women

dare not enter the premises of an unmarried trader or of a Romish priest.³ The Lifu women are stated to have everything to fear on the part of an excessively jealous husband.⁴ The original male ancestor of the Elema tribe is accredited with having decided that theft of property and immorality of the sexes were identical; "hence both evils became known by a common name, and the death penalty was recognized as the common punishment for both crimes." Adultery carries with it "unspeakable disgrace in the minds of the Ipi people, and is never referred to openly, except as an incitement to fight with bows and arrows on the occasion of a quarrel."⁵ Severe punishment is sometimes inflicted upon the guilty pair in the New Britain group. "The woman is speared immediately and without mercy. The man may fall into an ambush formed by the husband and some friends. They pounce upon him, beat him fiercely with a stick, and then twist his neck as far as it is possible for them to do so. They then leave him in fearful agony in the path for any to help him who care to do so. He never speaks again. He lingers for a few days, the tongue swelling to a great size, and he dies a dreadful death."⁶ If a wife in New Caledonia misbehaved, "the chief did not divorce her, but made her work all the harder."⁷

Grant⁸ mentions a case among the Mavenda of South Africa in which one of the chief's most prominent indunas (sub-chiefs) had been guilty of a misdemeanor with the wife of an induna of equally prominent rank. "In the whole of my experience among Zulu," he comments, "a similar case had never once come under my notice, and had it occurred, the crime would have been expiated by death. In connection with the case in point, a fine only, of 14 head of cattle, was imposed, and the induna sent to Coventry for a month or so. His short term of banishment from the chief terminated only a few days prior to my arrival, and I found him in office discharging his accustomed duties." In West Africa, "adultery is often only the matter of laying one's hand, even in self-defense from a virago, on a woman—or brushing against her in the path. These accusations of adultery, next to witchcraft, are the great social danger to the West Coast native, and are often made merely from motives of extortion or spite, and without an atom of truth. To escape heavy punishment, a woman will accuse some man of having hustled against her, or sat on a bench beside her, etc., and the accused man has to pay up. If he does not, in the Calabar district, Egbo [the secret society] will come and 'eat the adultery,' and there will not be much of that man's earthly goods left. Sometimes the accusation is volunteered by the women, and frequently husband and wife conspire together and cook up a case against a man for the sake of getting damages. There is nothing that ensures a man an unblemished character in West Africa, except the possession of sufficient power to make it risky for people to cast slurs."⁹ Among the Ewe, "it is an offence punishable by fine to praise the beauty of another man's wife, it being considered adultery by implication."¹⁰ In Togo the husband has the right to kill the adulterer or to castrate him, according to the council's decision, "whereby the culprit has his sex parts crushed with stones."¹¹ With the Bangala of the Upper Congo, among whom it is said to be impossible to find a girl above the age of five years who is a virgin, "the only thing a man can do is to see that his wife does not commit adultery after

he has married, without his consent and receiving compensation for it. Should she do so the man is punished by a fine, but the woman goes unpunished. If she were punished she would not confess, and without her confession the husband could not enforce a fine on the man. The woman's word is always taken against a man." Weeks¹² has strong suspicion that this power is often abused, first, by the woman so as to pay off a grudge against someone who has slighted her and also so as to be regarded by the other women of the town as one after whom the men run; and, second, by the husband as a means of replenishing an empty purse—the fine being shared by husband and wife. "There are, undoubtedly, women who remain faithful to their husbands, but there are very few." In the Congo, "the name of a married woman may not be pronounced by any man except her husband or brother; she must be addressed as 'wife of so-and-so.' Neglect of the rule is a great insult and would be regarded as an excuse for manslaughter; it is punishable, at the least, by a heavy fine."¹³ With the Baganda, "adultery was invariably punished by death, both the man and woman being put to horrible tortures to extract confession, and afterwards killed. If a peasant or slave looked at one of his master's wives he was liable to have his eyes gouged out. If a woman who is pregnant by her husband commits adultery she will be sure to suffer; either she will die with cross birth, or fall ill of *amakiro* (insanity in which she tries to kill and eat her child). If a woman dies in child-birth her relatives fine the husband because they say they did not marry her to two men, and he has allowed by negligence some one beside himself to have connection with her. He has to pay two women or two cows, two goats, two hoes, and two bark cloths. Cross birth is a sure sign of adultery, they affirm."¹⁴

No native woman in Nyasaland is said to be capable of even faintly suspecting that her white sister's attitude toward certain problems of life is either beautiful or reasonable. "A redeeming, although rather ludicrous feature of the question is, that Isolde is expected to make, without delay, full confession of her fault to her husband, who otherwise would die if he partook of food in company with Tristan. This is implicitly believed in by the natives of Nyasaland, and confessions of this kind are of very common occurrence. A somewhat similar idea is the universal belief that a woman whose husband has been unfaithful will grow ill and die of her next child; or that a child at the breast will die if its father is unfaithful to the mother. All the deaths of women with child, or of a child at the breast, are attributed to this cause. Nothing, however, appears to happen nowadays to the guilty father, except that he is excluded from the family mourning ceremonies."¹⁵ In case of adultery among the Ayao the woman's husband demands a present from the culprit; if the present is not suitable, the case goes to the chief. Sometimes the co-respondent, instead of a present, lends his wife for the same number of nights as he slept with the other man's wife.¹⁶ Although free love exists amongst the boys and girls of the Suk, who meet by assignation in the bushes, adultery is a very serious offense, and the offender is liable to forfeit the whole of his property to the clan of the injured party. "Usually, however, he is allowed to compound by slaughtering one or two bullocks and inviting the husband and his friends to a feast." With the Turkana, "the price of a wife being so high, it follows

12 In JAI, XXXIX, 442-443.

that adultery is a most serious crime, and, if caught, the offender is condemned to death by the community and executed. If however he abscond, the whole of his property, or, if he be a poor man, his wives, or, if they be too old, his marriageable daughters, pass into the possession of the injured party. After the lapse of a few years the fugitive may return, but to the end of his days, whatever property he may become possessed of is claimed by the family of the man whose wife he seduced. As regards the woman, if she be old, no action is taken against her; if she be as yet childless, she is sent back to her father, and the marriage price is returned; but if she has already borne children, her husband divorces her, allowing her however, for the sake of her offspring, to remain in the village. As may be imagined cases of adultery are not of very frequent occurrence."¹⁷ In Uganda, on the other hand, adultery entails little or no punishment. Among some tribes the woman is beaten and the man let off; among others the man is beaten and the woman let off, unless the co-respondent cannot be found and the woman refuses to give his name, in which case she is severely beaten.¹⁸ At the present day, among the Bantu tribes of East Africa, adultery and other sexual offenses are dealt with according to the law of compensation, and the amount paid, though high in some districts, is moderate in others; but compensation was far from being the only means whereby crime was punished in former times. "While the husband may prosecute for adultery committed with his wife, the wife can never complain of adultery committed by her husband, but unfaithfulness on the part of the husband is very commonly the reason for her desertion. The guilt lies entirely with the man, and mostly the husband will not even reproach his wife for unfaithfulness. . . . A peculiar custom of the Wachagga suggests the view taken by the native: here a man who betrays the adultery of a woman to her husband must himself pay as much as the adulterer pays. It is argued that it is not his business to watch another man's wife, and that by so doing he usurps the rights of a husband, which in point of fact is the essence of the offence of adultery. The same idea, and also the total disregard of the woman's share in the blame, are reflected in the law regarding rape. Strange to say, the compensation demanded for this crime is in most cases the same, or practically the same, as in the case of adultery." The author¹⁹ is convinced that the killing of an adulterer was not permitted under any circumstances; "in fact, it is often said, though not rigorously adhered to, that if a man had not been an eyewitness to the adultery of his wife he could claim nothing."

There is said to be practically no adultery among the Nigerians—"the change of husbands with the woman's father's consent being legal—but if a husband were to find a man with his wife he would beat him, and perhaps her also. . . . There are no prostitutes. Women are not allowed out of their houses at night for fear of ghosts, and this, no doubt, is a great check to immorality." In case of adultery, "the woman would not be killed, for she would be a loss, also no other woman would marry the slayer."²⁰ The Alur used to punish adultery by death; now the man is beaten until he buys off. If he cannot or will not, the chief makes him atone in some way.²¹ Junker²² found a number of cases in Africa where the man's fingers were cut off as a punishment for adultery. Among the Tuaregs adultery is punished by death.²³ Kabyle society not only

punishes by fine or sometimes with exile the person who brings dishonor into a family, but it demands that the husband, even the kinsman, try at least to take vengeance on the culprit.²⁴

The Reindeer Koryak are reported as being very jealous, "so that a man will kill his wife merely through suspicion, and if he find her with a lover, will rip open with a knife the abdomens of both offenders. Owing to this, married women make themselves as repulsive-looking as possible, having uncombed hair, unwashed feet and hands, and worn-out clothing. On the contrary, among the Maritime Koryak, as among the Chukchee, when friends exchange visits, or when guests come to the house, they sleep with the wife and daughters of the host, who leaves the house for the night, in some cases to spend it with the wife of the guest; in consequence of this the women are very careful as to their appearance."²⁵ In ancient times the Chinese husband's adultery was punished by castration.²⁶ According to the Legacy of Iyēyasu, a ruler of sixteenth century Japan, the injured husband is confirmed in his ancient right to kill, but with this important provision, that should he kill but one of the guilty parties, he must himself be held as guilty as either of them. Should the offenders be brought up for trial, Iyēyasu advises that, in the case of common people, particular deliberation be given to the matter, suggesting that among the young and simple-minded some momentary impulse of passion may lead to folly, even when the parties are not naturally depraved. But in the next article he orders that no mercy whatever be shown to men and women of the upper classes when convicted of the same crime. "These," he declares, "are expected to know better than to occasion disturbance by violating existing regulations; and such persons, breaking the laws by lewd trifling or illicit intercourse, shall at once be punished without deliberation or consultation."²⁷ The same ruling has applied up to recent times, the husband being liable to imprisonment for ten years if he fails to get the adulterer.²⁸

Half a century ago, in southern India, adulterers were seated on an ass, face toward the tail, and marched through the village. The public disgrace was enhanced by placing garlands of the despised *arka* leaves on their heads.²⁹ Should a wife among the Lushai be led astray, custom decrees that the various sums paid to her relatives as bride-price are to be returned to the husband, the co-respondent getting off scot free; among other clans the latter compensates the husband and takes the lady. "The former system is found in practice to be more conducive to morality, as under it a woman feels that her fault will bring shame and loss on her relatives and friends, whereas under the latter she becomes a mere chattel, and a husband is often a consenting party."³⁰ Among certain groups in the Dekkan, adultery is considered the gravest of caste-offenses. "This is not, however, because the women are so very moral, for they are just the opposite when away from their husbands for the purpose of selling milk and butter-milk in the towns. In former days, an unchaste woman, if detected, was tied to a tree and severely flogged with the twigs of the tamarind tree. This form of punishment has now been changed to that of excommunication, re-admittance to caste privileges being purchased by payment of fines. A male, found guilty of the same thing, is made to appear, dressed in female

attire, before an assemblage of caste-men, and is subjected to further indignity. After being thus put to shame, he is made to pay a fine, varying according to his means, from Rs. 2 to Rs. 100,"³¹—a rupee being valued at about thirty-two cents. "Never," states a law of Manu, "must a prudent, well-trained man who knows the Vedas . . . and desires long life, cohabit with another's wife." Following the principle of property in women and hence in their offspring, men who commit adultery benefit the owner of the woman, not themselves, for the children, if such there be, go to the husband. For violating a guru's (wise man's) bed, the female part is branded on the forehead. Other penalties include the devouring of the unfaithful wife by dogs in the public place, roasting the guilty man on an iron bed, cutting off his genitals, and seizing all his property.³²

Regarding the Palaungs, Milne³³ was told by a village-elder that in the time of one of the old chiefs a guilty wife and her lover, if caught, were shut together in a small room for three months, and were supplied day by day with just sufficient food to keep them alive. "He said that when at length they were set free they never wished to see each other again. Under another Chief the guilty pair were marched from the village where they were found, to the next village on the way to the frontier, and handed over to the head-man, to be passed on in a similar manner from village to village until the frontier was reached. They were then expelled from the State. The injured husband was allowed by public opinion to put to death the guilty pair, but this was not considered a wise proceeding on the part of the husband, as he would suffer for the act in his next existence." Adultery, again, frequently occurs among the Kubus of Sumatra, yet it gives no occasion for bloody revenge.³⁴ On the Mentawai Islands, free love comes to an end with marriage, and both parties guilty of adultery are put to death.³⁵

Jealousy is said to be unknown amongst the Indians of south Alaska and northern British Columbia, and sanctioned prostitution a common evil; "the woman who can earn the greatest number of blankets or the largest sums of money wins the admiration of others for herself, and a high position for her husband by reason of her wealth."³⁶ Though their women are reputed to be extraordinarily beautiful, "you will seldom find a jealous husband, either among the Hurons or the Five Nations Indians."³⁷ Among the Apache, faithless wives were punished by whipping and cutting off a portion of the nose, after which they were cast off.³⁸ Among the tribes of the Nahuatl race, death was the penalty for seducing a woman who had taken a vow of chastity or a married woman belonging to the same clan. The adulteress was quartered, her limbs being divided among all the men of the clan.³⁹ Religion acts as a check on adultery among the Warraus of the Orinoco. "On the death of a woman, the husband lies down in front of her. He remains there a few minutes, weeping and singing, and then makes way for each and all who have ever had connection with the deceased. As no Indian will willingly act contrary to the established usages of his tribe. . . . such a custom seems calculated to prove a check upon persons who are not desirous of having their actions exposed

to public notoriety."⁴⁰ Among a tribe of the Rio Negro, the adulterer has a bath of Spanish pepper, while the woman is subjected to the bites of big ants.⁴¹ If a Bororo suspects his wife of infidelity he puts her at the disposal of the young men in the *bahito* or men's house, and she becomes what is known as a tribal prostitute. She remains permanently there, and is prohibited from attending the more important religious festivities. "She receives many presents from the young men, is painted with *uruku*, and in general enjoys a fairly comfortable life." The authors⁴² never met more than two such women in any village. Among the Araucanians, "adultery was not considered as an outrage to the honour of the husband, but a damage to the feminine property of the offended, and was punished by him at will, either by the death of the wife, or her sale, but most frequently by a heavy compensation by the co-respondent, except in the case of the culpable parties being caught *flagrante delicto* when the husband was within his right in slaying them both." In some cases, instead of selling her, the husband would return her to her father as damaged goods, insisting on the price paid for her being given back.⁴³

The Code of Hammurabi makes several pronouncements on adultery. "If a man point the finger at a priestess or the wife of another and cannot justify it, they shall drag that man before the judges and they shall brand his forehead. . . . If the wife of a man be taken in lying with another man, they shall bind them and throw them into the water. If the husband of the woman would save his wife, or if the king would save his male servant (he may). . . . If a man force the (betrothed) wife of another who has not known a male and is living in her father's house, and he lie in her bosom and they take him, that man shall be put to death and that woman shall go free. . . . If a man accuse his wife and she has not been taken in lying with another man, she shall take an oath in the name of god and she shall return to her house. . . . If the finger have been pointed at the wife of a man because of another man, and she have not been taken in lying with another man, for her husband's sake she shall throw herself into the river."⁴⁴ Among the ancient Arabs adultery was punished by death, but "adultery occurred solely in association with a woman of another tribe."⁴⁵ Three instances of adultery are mentioned in the Homeric poems—Helen with Paris, Clytæmnestra with Ægisthus, and Aphrodite with Ares. The word itself does not occur, only "adultery-fines." Moral reprehension for the adultery itself, considered from the standpoint of what we regard as conjugal rectitude, was utterly lacking. In the famous case of Helen, the offense was that Paris violated guest-friendship and stole property. The affair of Ares with Aphrodite was regarded as a sensual jest.⁴⁶ With the poets of a later age adultery appears to have been both condoned and reprehended. In one of the plays of Euripides a nurse states: "How many sensible men when they see their wives unfaithful pretend not to see; how many fathers assist their sons in amours when they see that they are entangled. It is wise to conceal shame." In the same play, Phædra says. "May that wife perish in all ill who first did shame her couch for lovers other than her lord"—which would indicate that the marriage-vow was exclusive. Hecuba

wanted Helen killed and a law to be established meting out death to every traitress to her husband. Herakles's wife knew not how to harbor indignation against him for his amours and took to her heart Iole whom he loved. "But who that is a woman could endure to dwell with her, both married to one man? . . . He will be called my husband but her mate, for she is younger. Yet no prudent wife would take this angrily." Clytæmnestra refers to her husband's escapades: "He is fallen who shamed me in dalliance with Chryseis and the rest before Ilion. And here is his captive [Cassandra], his prophet-mistress, that faithfully shared his bed and his bench in the ship. . . . She too now lies in death."⁴⁷ Greek law let the husband avenge himself on his wife's paramour, but she was never put to death. The guilty man might be dishonored and fined. At Kyme the woman was exposed on a stone in the market place and paraded around the city on an ass.⁴⁸ Human mores were in advance of those of the gods: Zeus rehearses his adulteries to the number of seven when wooing Hera to his side.⁴⁹

In Rome, until Constantine's time, the law gave the woman's father the right to kill her if caught in adultery.⁵⁰ "Adultery was not only a violation of the most sacred bond, it was at the same time a crime against the Republic. Epic-tetus wanted to base marriage on reciprocal fidelity, on the chastity of each of the two spouses. The most beautiful ornaments of women are modesty and shyness; the stern and delicate conscience of the philosopher was indignant at the corruption of the Roman ladies of his time, who had forgotten those virtues and who, to justify their libertinism, cited Plato's advocacy of community of women."⁵¹ In the *lex Julia* of the time of Augustus, the penalty for adultery was severe. Besides property-penalties attended by disgrace, the man was banished to a remote island and the woman to another. In Justinian's time deportation was dropped, and bodily punishment and imprisonment in a cloister were substituted.

According to Bohemian folk-justice, if the husband did not himself punish the guilty pair, their genitals were mangled in a public place. Among the Saxons the husband had the right to kill; if he did so in *flagrante delicto*, he was required to sit on the slain pair and send to court. The judge would then allow him to tie the pair together, take them under the gallows, and there bury them, "after he had driven a stake through their bodies, 'whether they were living or dead.'" The Christian Church widened the scope of adultery and narrowed the penalty. Pope Alexander III. had adultery placed among the *crimina minora*. Clerical adultery was treated leniently though it was shameless. But the offended husband, or even the bridegroom, who caught the priest and killed him, was not excommunicated but could receive absolution.⁵² German law of the twelfth century provided that the guilty man should be drawn through the city *per veretrum*. Adultery of a Jew with a Christian woman was punished by cutting off the genitals and putting out the eyes. Between the thirteenth and fifteenth centuries the law made no distinction between seduction and rape which were punished by the sword or by burying alive.⁵³

The Bulgarians punished an adúlress by placing her backwards on an ass, holding its tail in her hand, while her paramour led the beast through the

entire village amidst the laughter and spitting of the people.⁵⁴ Among the North Albanian tribes, who still have local laws and courts, Miss Durham⁵⁵ found that the woman in such cases was rarely if ever punished. "She was regarded as not responsible and as the property of her family, who took vengeance for damaged goods. . . . Nose-cutting appears to have been a very old Serb custom. In the laws made by the great Tsar Stefan Dushan in 1349 we find that a married woman guilty of libertinage shall have her nose and ears cut off. When I was first in Montenegro I was told that there was a woman still living near Podgoritzza whose nose had been cut off by her husband, who suspected her of infidelity, and at the Serb village of Vraca, near the shore of Lake Scutari, I have heard of more than one case. The French Consul, Degrand, recorded one about 1890. In this case the husband continued living with his wife. I expressed surprise to my guide, who was a quite uneducated mountain tribesman, and he cheerfully said that now it would be all right; she would be so hideous there was no fear of her finding any other man to carry on with."

§384. Other Rights and Disqualifications.

Woman's Property. Papuan women are by no means slaves, but have a voice in all the concerns of family and village. "In many duties the women have a distinct sphere from the men, but in general matters they have an equal voice. They have ownership in land, and frequently prevent the men from selling native wealth."¹ Throughout New Guinea women do the trading and take care of the most valuable property.² In the New Hebrides, "the women own the plantations, and land is inherited through the mother. When a woman marries into another tribe she loses her right in the old tribe, though a child sometimes inherits land in the old tribe through the mother. The women, as well as the men, own tusk-pigs and fowls, and they have a right to these even against their own husbands. A man may have two wives, but each wife must have her own hut. Some women attain high enough rank to have club houses or sacred lodges of their own. To each hut belongs a storehouse built on piles, in which the women keep their yams, vegetables, cocoanuts, and bananas."³

Despite the fact that among certain Africans the wife is regarded as the property of her husband, her position is one of independence. She owns her own hut, field, and poultry, and provides for her husband's necessities. Under these circumstances, the man is of course unable to rule his wife. Where these conditions exist, the female line of descent generally prevails.⁴ A big chief in West Africa will have three or more wives, each of them living in her own house or, as in Calabar, in her own yard in his house, having her own farm away in the country, where she goes at planting and harvest times. She possesses her own slaves and miscellaneous property, which is really that of her family, just as most people's property is in West Africa.⁵ Among the Bangala, "every woman had her farm, which was her exclusive property, and not even a fellow wife had any rights over it."⁶ In East Africa, "women cannot be said to have any rights to land or stock, but are often recognized as trustees or guardians of property during the minority of their male children.

Should any such children die in infancy the estate reverts to the nearest male relation."⁷ In one case three distinctive phases of ownership are represented in the same tribe: the Sungu woman may own practically anything, and at her death her property returns to her own family; the Olemba woman may own certain things, but at her death they revert to her husband; and, finally, the northern Batetela woman cannot own at all.⁸ Among the Wawanga, "every wife receives from her husband a certain quantity of stock. The chief wife is given most, unless she prove incompetent. On the death of the husband this property is divided up amongst the woman's children. If one of the wives have a larger number of children than the others, their portion is increased from the common stock. Every woman has also her own banana plantation, which goes to her eldest son."⁹ The Tuareg wife is mistress of her fortune. As among the Berbers and Abyssinians, the children belong to her and bear her name. She marries as she likes, eats with her husband, smokes, inherits, and controls most of the property.¹⁰

Among the ancient Hindus the husband's right to chastise, far from being a right of life and death as in early Roman law, was limited to relatively harmless blows, not on a "noble part." In the range of rights to property there gradually developed a not insignificant independence of women.¹¹ "In East Turkestan bazaars it is not only men who do selling, but not seldom also women."¹² In the East Indies the woman is often at the head of the family and the man an underling. Where this is not the case, the woman still has great influence in the house, is recognized in all important situations, and has in common with the man control and disposal of the goods of which she is often co-owner. If a traveller wants to buy anything of a man, the latter must speak to his wife first; yet, strangely enough, this is where the wife is regarded as the man's slave. In South Sumatra, as elsewhere, distinction is made between the possessions which a man has won by inheritance and those which he has got by his own diligence, the inherited goods and those self-won. The last are generally known under the name *harta-pentjarian*; this is of course individual property, and although it consists for the most part of movable goods it may also include land that one has got for himself. The inherited goods, called *harta-pusaka*, are mostly the communal possession of the family. To them all members of the family have equal rights, the head of the family being the controller and regulator. In general, with unions following the agnatic system, especially with those *cum manu* (with a bride-price), the marriage-goods are exclusively the property of the man, and the wife possesses none of them. The conception that the wife was bought must itself have excluded the idea that she, herself a piece of property, could have any property-right in what the man brought into marriage. Even the self-won goods, the *pentjarian*, in the winning of which she had participated with her work, she might not call her own; all belonged exclusively to the man, as a number of examples indicate. From this it appears that the woman who is in *manu mariti*, the wife of a *jukur* marriage, possesses nothing, so that when she dies she leaves nothing and nothing can be inherited from her. There are only a few exceptions to this rule in South Sumatra. Besides the *cum manu* marriage stands the *sine manu* type, without bride-price. Here the regulations touching the right of property

are in general wholly different from the above. In such a marriage it is the woman alone who has any property-right, the man possessing nothing. Where, in default of sons, the daughter must carry on the line, she is the one who brings to marriage the property, especially the *pusaka*; the man comes empty-handed. Furthermore, there is in *sine manu* marriage also the other kind of property, things which the spouses have won by common labor. Of these the wife is sole owner and the man can make no kind of claim to them. All writers are unanimous on this point. Among the Macassars, Buginese, and others there is no community of goods in marriage; the possessions of each spouse are sharply distinguished, movables as well as immovables. If a man gets into debt, it is his property alone that can be attached, except where the debt is contracted with the knowledge of the wife, whose goods in that case can also be attached, as she appears as a guarantor.¹³ Among the Mohammedan families in Java the same holds true, and the giving and selling of property between spouses are allowed as between strangers. The man pays the wedding-gift, which goes to the wife as her property, and to it she or her heirs have irrevocable claim after the consummation of the marriage or her death or that of her husband. The latter must support her and pay the cost of the domestic establishment; even if the wife is personally rich and the man poor, she need not contribute.¹⁴

Among the Tlinkits, "the husband's earnings are wholly turned over to his wife. She is, therefore, the banker of the household. If he desires to make a purchase he must appeal to her and get her consent."¹⁵ Private ownership of property on the part of women was common in North America. Among the Eskimo the lamp belonged to the women; in many Indian tribes all raw materials, as meat, corn, and, before the advent of traders, pelts, were woman's property. Among the tribes of the plains the lodge or tipi was the woman's, but on the northwest coast the wooden structures belonged to the men of the family. In some cases individual houses were built and owned by the women. Like the houses, the small garden-patches were also the property of the women, who alone cultivated them. Cooking- and eating-utensils, the mortar and pestle for grinding corn, and the packs for storing food and clothing—all these things which pertained to the household were the property of the wife.¹⁶ In California and on the northwest coast "wives are consulted in matters of trade, and in fact seem to be nearly on terms of equality with their husbands." In divorce, "a strict division of property and return of betrothal presents is expected, the woman being allowed not only the property she brought her husband, and articles manufactured by her in wedlock, but a certain proportion of the common wealth."¹⁷ Wives have much to say concerning property in Brazil; a certain European was unable to purchase a canoe because the owner's wife refused.¹⁸

The free Accadian woman was not the creature of her spouse; she had her own rights and her own fortune. Even under the control of her husband she could possess personal property and take the necessary steps to acquire it. Her husband's creditors could not touch it. A rich wife managed her own property and used the revenues at her pleasure.¹⁹ The ancient Egyptian wife

administered her own property; she was also absolute mistress of her dowry. If she contributed to the family support she did it of her free will and not by law or contract. In the marriage-contract the husband promised not to claim authority, to give her certain slaves and let her thereafter dispose of them without his interference, and to assign to her all debts due her. The woman joined her husband in property-deeds, while at Nineveh occurred a case where a married woman sold a share in some property wholly without her husband's coöperation. So high was the wife's position that Herodotus made fun of the Egyptian husband and said that the wife went to market while the husband stayed at home and wove.²⁰ The *Koran* provides that women shall inherit. The Prophet's wife, before her marriage to him, carried on large commercial transactions on her own account.²¹ The veneration of the Teuton for woman is strikingly illustrated by the Anglo-Saxon marriage-laws. A bridegroom had to produce sureties and a pledge before the marriage-ceremony could be legally performed. His *morgengabe* corresponded to the modern settlement, and a wife who had brought forth children alive and survived her husband obtained half his property. It was only in very early ages that the morning-gift reverted to the donor if the wife was sterile. Women both inherited and disposed of property, and appear frequently in Domesday as tenants-in-chief. A widow was protected by legal penalties, varying in proportion to her rank, from any outrage or wrong.²²

*Public Functions and Influence.*²³ What is said to be the only exception to the general oppression of women among the Australians is the custom of the West Australians to make an old woman grandmother of the tribe, which gives her a prominent position and qualifies her to reconcile strife, to separate fighters, and to summon to war.²⁴

Although South African women are not supposed to enter the assembly-place, Livingstone²⁵ reports one exception. Among the Banyai the chief is elected, and they chose the son of the deceased chief's sister in preference to his own offspring. With the Manganya the chieftainship is hereditary in the direct line but in case of doubt the descendant of the king's sister is preferred. These people have been tormented by robber-bands and slave-hunters, but one of the least burdened of the tribes was one ruled by a woman.²⁶ Among the Basuto, besides prostitution, the career of prophet and the exercise of civil power, even as chief, are open to women.²⁷ In every town among the Yorubas is a local female magistrate to whom are regularly referred all disputes between women.²⁸ In Dahomi the women-soldiers are stronger and more skilful than the men; in Ashanti the sister of the king has a power over his female subjects which gives her an almost independent position.²⁹ Among the Baganda the new king elects a queen-mother or dowager-queen, who is his real mother if the latter is living. She has many privileges, an enclosure, and officers like the king. The queen-sister also has an establishment with lands and officers; she takes charge of the king's tomb at death.³⁰

In the early philosophical period in India, "wise priests meet together to discuss theological and philosophical questions, often aided, and often brought to grief, by the wit of women disputants, who are freely admitted to hear and share in the discussion." The very fact that in the *Mahabharata* a woman is the disputant "gives an archaic effect to the narration, and reminds one of the scenes in the Upanishads, where learned women cope successfully with men in displays of theological acumen."³¹ Perhaps nowhere in the Indian Archipelago does woman take so high a rank as among the Macassars and Buginese. "Among the nations of Celebes, the women appear in public without any scandal; they take an active concern in all the business of life; they are consulted by the men on all public affairs, and frequently raised to the throne, and that too when the monarchy is elective. Here the woman eats with her husband, nay, by a custom which points at the equality of the sexes, always from the very same dish, the only distinction left to the latter being that of eating from the right side. At public festivals, women appear among the men; and those invested with authority sit in their counsels when affairs of state are discussed, possessing, it is often alleged, even more than their due share in the deliberations."³² Woman-rule among the Dyaks is not rare, but with the Macassars and Buginese its existence seems the more remarkable since we here have to do with Mohammedan people, and Islam sets itself against the rule of woman. That the woman comes out in the open and even urges troops to the fight, is not seldom reported. If she takes such a sure rank in public life, she must have no less power in the kin-group. Dyak women participated in the assembly. In 1847 the separated wife of the Sultan of Kutei ruled as princess over the Dyaks on River Kutei. After getting out of her marriage, she had a harem of men and punished infidelity with death. Armed and clad as a man, she led, in her youth, many a pillaging raid. A more remarkable case of woman-rule in the Archipelago was in the kingdom of Atjeh, north Sumatra; in the seventeenth century, over a period of fifty-eight years, this country was ruled by four successive sultanesses. Even among the Bataks, whose women are described as slaves, the female sex is not entirely excluded from public consultations. Often the women shriek their opinions and advice into the council houses; not only are they listened to but, especially when they are old sibyls, their words are taken to heart. In one place some old women passionately advised that a certain European be killed as a spy and eaten. Other Bataks allow women to have a voice in choosing chiefs. Again, in council they stand by the men, advising them, and even themselves speaking up. The women, further, take part in war by stirring the men to strife.³³

In the Caroline Islands "the oldest women of the clan exercise the most decisive influence on the direction of its affairs and the headman does nothing without a previous thorough taking of counsel with them, which relates even to state and external political affairs."³⁴ In the Marianas Islands women held property and could speak in council;³⁵ while in the Friendly Islands discoverers found a woman above the king, honored by him as all others honored him, but without governing power.³⁶

In many cases among the American Indians women held a place in the

management of tribal affairs. They nominated and deposed chiefs and took part in the government which was democratic. Where they held no official position in the tribe they were nevertheless consulted on important matters.³⁷ Especially among the monogamous Iroquois did they have great political influence.³⁸

A queen of the Arabians figures in the wars of Tiglath-Pileser III and Sargon. From 740 B.C. a college of priestesses at Thebes became the real governing authority in that city and district; its power later became concentrated in the chief priestess.³⁹ The women of the harem got up a conspiracy against Thothmes III of Egypt, drawing their male relatives into it; this was no slight affair.⁴⁰ Scythian women, according to Diodorus,⁴¹ were equal to the men in warlike spirit and gave them their most renowned leaders. The king did not have as much honor as the queen. In Judah the mother of the ruling king had an influential position, and there is offered even an example of a ruling queen. The women in Israel took part in the great sacrificial meals.⁴² Goddesses played a great part in Semitic religion, and not merely in the subordinate status of wives of the gods.⁴³ While the majority of the Oriental cults accorded to women a considerable rôle in their churches, and sometimes even a preponderating one, finding in them ardent supporters of the faith, "Mithra forbade their participation in his Mysteries and so deprived himself of the incalculable assistance of these propagandists."⁴⁴ Gide⁴⁵ says: "Nothing proves better the important part played by women in the primitive Church than the great number of tracts concerning them in the works of the Fathers. Saint Jerome, out of a hundred theological letters, addresses fifty to women; fifteen of his treatises out of twenty have the education of women as their subject." The same may be said of Saint Cyprianus and Saint Ambrose.

A modern example of woman-rule is reported from Russia. As the men of a certain village leave for work in Moscow and other large cities, the only representatives of the strong sex remaining are a few old men and some boys. These will not accept the responsibility of attending to certain current community-affairs which require immediate action, and so the men have arranged, during their absence, to transfer their votes to the women. Community-affairs have by no means suffered through this arrangement; on the contrary, the women are better acquainted with local needs than the men, who live for the greater part of the year in the large cities, and they take their tasks more seriously, do not let themselves be influenced in their decisions by wretched "Schnaps," and attend the councils with the greatest regularity.⁴⁶

Respect for Women in the Home and Community. In southeast Papua, "the men seem generally content to let the women have their own way in domestic and general affairs, as long as they are themselves allowed to rule in war, and carry out trade expeditions. Occasionally a woman will be thrashed, but she has her remedy in divorce if the thrashing is too cruel or unjust. Occasionally,

too, a witch will be drowned."⁴⁷ Among the Melanesians generally, "a man may address his wife by her personal name though the wife should not take this liberty, but should speak of her husband as *I gene* if he has no children, or as the father of his child '*Taman X*' if there have been children of the marriage.

. . . I was told that there are no less than three women in the district of Veverau alone who address their husbands by name, thus showing that they do not respect them. There is little doubt that this is the result of external influence, and that in former times the usual signs of respect would have been enforced." There are five different ways of referring to a wife: by name, as *Ro gene* (of which no meaning is given), as the mother of her children, as the children themselves, or as the wife of her husband.⁴⁸

Unlike Bantu wives, those of the Bushmen are life-companions, and each sex has its share of toil. "Sentimentality is certainly little to be found in the conjugal life of the Namaqua; rather does the wife employ off-hand the wonderful facility of her tongue and her equally marvellous wealth in most insulting epithets, even against her husband; the latter, by reason of the inequality of his verbal shafts, then sees himself obliged to employ 'striking' answers to her offensive songs. Right afterwards, however, they are again the best friends in the world and joke together like the tenderest lovers."⁴⁹ Domestic slavery and that of women do not exist among the Pygmies to the same extent as with the surrounding tribes. The women have a good position as compared with those of agricultural negroes. They seldom marry into other races, "because they do not know the work."⁵⁰ Among the Kimbundas, who believe death to be the result of magic, when a wife dies her relatives try to have the guilt fastened on her husband, because then he will be obliged to pay them damages. "With this in mind he pays her respect in proportion to the power of her kinsfolk."⁵¹ A husband in the French Congo may whack his wife or wives with impunity as long as he does not draw blood; "if he does, be it ever so little, his wife is off to her relations, the present he has given for her is returned, the marriage is annulled, and she can re-marry as soon as she is able."⁵² In the Upper Congo "men slaves were sold at 500 to 600 brass rods, worth about 6s. 6d. per hundred. Women slaves were worth from 2,000 to 2,500 brass rods on account of their farm work, and child-bearing capacity."⁵³ Such valuable property should be treated with care. Among the Akamba, women are not subjected to rough treatment as an African conceives of it.⁵⁴ A writer on Nyasaland pays his respects to the native women. "If the native woman's conduct as a spouse, looked at from the white man's point of view, leaves much to be desired, it must be proclaimed, on the other side, that no words of praise could even approximately do justice to her in her character as housewife and as mother. Her thrift, her patience, her endurance, her uncomplaining and quiet cheerfulness, are the incomparable qualities against which her husband has nothing to put into the balance except official representation and the prestige of masculine strength, which, as a protection, is becoming more and more superfluous. . . . When one asks the men what part of the work is left for them to do, as the women do practically everything, they invariably reply: 'Oh, but do not we get the money for the women to buy cloth with, by hiring ourselves out to Europeans? Where are the women to get money from, if we do not get it

for them?" . . . The adaptability of native women to their surroundings, and their equanimity under all circumstances, are remarkable. They are very like gypsies in this respect."⁵⁵

The Koryak husband will often advise with his wife about affairs, and a daughter's preference is frequently consulted with regard to her marriage. "Generally, the attitude towards a wife is one of kindly protectiveness." Though the uncivilized Ostyak considers his wife but as a necessary domestic animal, and scarcely favors her with a good word for all her hard labor, yet "he dares not strike her, even for the greatest crime, unless he has consent of her father; for, in such a case, the provoked wife would run to her parents and persuade her father to return the *kalym* [bride-price] to his son-in-law, and she would marry some other man."⁵⁶ "The position of women among the Semas is on the whole far from the degradation sometimes alleged of Nagas in general. . . . The women have to work very hard in the fields, but their husbands do the same, and both as daughters, wives, and mothers they are treated with real affection and respect by their parents, their husbands, and their children."⁵⁷ The Hindu epics venerate women: "The best medicine of the physician is for man not so good, in every pain, in every need, as a true and loving wife." Again: "Because you, oh slender of form, chose me, a man, before the gods, so know that I, your spouse, am always mindful of your word; so long as life's breath holds out in my breast, oh lovely one, so long do I not withdraw from you;—that I swear to you, sweet-laughing one!"⁵⁸ And in the Laws of Manu: "Women must be honored and adorned by their fathers, brothers, husbands, and brothers-in-law, who desire their own welfare. . . . Where women are honored there the gods are pleased, but where they are not honored no sacred rite yields reward. . . . In that family where the husband is pleased with his wife and the wife with her husband happiness will assuredly be lasting."⁵⁹ While many Hindus may despise women socially, they have a high esteem for motherhood and pay almost exclusive adoration to the female deities.⁶⁰

Although women in the Indian Archipelago often work beyond their strength, field-labors are divided in quite definite manner between man and wife. "A Batak woman generally knows how to get her husband to do what she wants; often she employs, when other means do not help, the threat of suicide. To prepare a rope, and with it to make a motion as if to hang herself, is sufficient to bring the man to terms." Wilken⁶¹ goes on to tell of a case where a village was in uproar because a woman was found busy hanging herself to a coffee-tree—"an innocent performance, for she could see over the tree. The reprobation of the man who through his obstinacy had brought his wife to any such pass, was universal." Among the Alfurs, the position of the wife as compared to that of the husband is indicated by the names given to her, *viz.*, cook, pounder (with pestle), and nurse. Man and wife call each other "fellow-eater," the term indicating equality of sexes, since they eat together. Although hard work is woman's portion on the island of Nias, "she does it with spirit, for she is not handled as a slave but as a housewife; if not honored, at least recognized; and as to this her lot is not harder than that of most women of the lower classes in Europe." In the Malay Peninsula, "should a Mantra woman

offend her husband, he might complain to her parents, who would themselves chastise her. The wife, on the other hand, had a reciprocal right to appeal for protection to the parents of her husband. Should the husband commit any serious offence against his wife, her relatives might complain to the Batin or chief of the tribe, who would authorise them to deal summarily with him. They would then repair to the offender's house and strip it of every article that it contained. The goods thus summarily appropriated were carried to the Batin, who would give one portion to the wife's relatives, and distribute the remainder between himself and his officers."⁶²

Among the Tlinkits, "the husband chastises his wife, sometimes beating her unmercifully. The wife does not always tamely submit to this, but defends herself to the best of her ability. Often she is more than a match for her husband in brute strength and in the science of handling her fists." Her relation is not that of a slave to her master. "She is as independent as he, and she asserts her independence, too. In truth, the average husband stands more in fear of his wife than she does of him. . . . No person is more stubborn than the average Thlinget woman. You can neither coax nor drive her. She would sooner be beaten to a pulp than have to admit she was compelled to do a thing. If she did she would be sneered at as a slave, and that would be worse than death, for slaves are despised as the very lowest of creatures."⁶³ Women were respected by the Omaha, the value of their industry was recognized, and their influence was potent in all affairs pertaining to the home.⁶⁴ Among other Indians also the woman held a comparatively high place in family life, being consulted as to bargaining and other matters.⁶⁵ Gynæocracy was not inconsistent with drudgery of women.⁶⁶ The Guanches of Teneriffe were chivalrous in the extreme. "If a man met a woman in a solitary place he stood aside to let her pass and could not even look at her nor speak unless she first addressed him. Transgression of this law was severely punished."⁶⁷

The most striking feature of the condition of the free Accadian woman was the importance attached to the mother in relation to her children, which was superior even to that of the father.⁶⁸ In the Chaldean marriage-contract the man could be called on to promise that he would not take a second wife, and an indemnity was provided for the woman in case he broke his word. Women of rank and property were protected by the marriage-contract so that they retained independent power in marriage for the control of their property, with competence to make contracts. This also made their husbands treat them well.⁶⁹ The spouses in ancient Egypt were on an equal footing; they could make contracts with themselves or with others.⁷⁰ Although polygyny was allowed by the East Iranians, the wife was not the slave, but the comrade and helpmeet, of her husband.⁷¹ Among the Israelites the wife actually stood much higher than one would expect from their customs; practice was much better than the law. Father and mother stood side by side in family authority.⁷² Before Mohammed, the position of the Arabian wife was one of dignity and worth. There

is no lack of examples of love and fidelity between spouses, even among the Arabs of today. "The wife was mistress of the house, the unlimited ruler in the circle of the family." To wound or kill a woman was always regarded as the most offensive, the most dishonorable act. An old Arabian writer asserts: "The true Arab had only one love and did not give her up till death; the same was true of her." Among the rich city-dwellers, women freely associated in society; they adorned the meals at which guests were present and took part in the religious festivals; indeed, a knightly *Minnedienst* developed, as later occurred in the Occident. During this period poems glowing with love celebrated the beauty and nobility of women. Thus for a long time there remained in the circle of Arabian aristocracy a higher and freer position of woman than that granted to her by Islam.⁷³

Among the Homeric Greeks, to bear children was woman's destiny and her honor. The women were far from being kept in semi-Oriental seclusion; they were freer and more influential than their daughters and successors of the historical period.⁷⁴ The status of women was probably higher in Sparta than elsewhere in Greece; Plutarch thought it was too high, for the husbands appear to have been ruled by their wives. In many marriages the wife dominated by force of character, by arrogance, or because of her property. If no other factor could assure her independence, she might resort to excess of tenderness or to female tyranny, as Aristotle warned. Socrates declared that by her nature woman was not inferior to man; she merely was lacking in reflection and force, which it was the duty of her husband to supply by instruction. Euripides would satisfy the modern feminists. Like any suffragette, Medea knew the answer to the argument that man's superiority before the law is founded upon the fact that he alone performs military service: "They say we lead an unperilled life within the home, while they contend with the spear. An ill thought! Thrice to stand forth with shield would I choose, rather than once to give birth."⁷⁵

At Rome the key to state subordination lay in the *patria potestas*; this almost monarchical principle preserved from disorder. *Patria potestas* was not a burden but a beneficent thing—a protection to non-weapon-bearing women. Women had care of the hearth, the holy center of the family; they took part in family religion, were married into religious relation with their husbands, and came under the special care of the gods. All this united to keep the marriage bond clear and strong; hence the high position of woman. "The farther we go back in antiquity the more dependent is the woman on her husband, but also the more dignified is her place in the family, the greater her influence on the form of societal relations. This principle may be set up as one generally effective for the whole Indo-germanic race." It was in the family that the Roman citizen learned to subordinate himself; this was a lesson in citizenship. The position of woman was characterized by the term *manus*, which, with the house-master's power, was as old as the oldest Indo-germanic family. "When

the people of our race were all together in inseparable unity, language, religious consciousness, and family-organization all formed themselves." The Romans brought all under one will, the expression of which was the state. All were alike before one law. Men lost their power over slaves and wives; *patria potestas* and *manus* declined.⁷⁶ Even in the worst reigns there were homes with an atmosphere of old Roman self-restraint and sobriety, where good women wielded a powerful influence over their husbands and sons, and where the examples of the old Republic were used, as Biblical characters with us, to fortify virtue. The position of woman was improved with the adoption of Christianity which imposed duties on the husband as well. "If, leaving aside for a moment the juridic formulas, we observe what woman was in their customs, in their social life—in a word, in reality—we see the scene, so to speak, suddenly change: she was no longer a powerless and oppressed slave; she was the matron, the mother of the family, revered by the slaves, clients, and children, respected by her husband, cherished by all, mistress in the house, and extending her influence outside to the midst of popular assemblies and the councils of the Senate. The Romans did not relegate woman to the solitude and silence of the gynæceum; they admitted her to their theatres, their festivals, their meals; everywhere a place of honor was reserved for her; everyone gave precedence to her, the consul and lictors cleared the way for her. Besides, one rarely met her in a public place or in popular gatherings: as sedentary by virtue as the Greek woman was by constraint, her habitual place was by the domestic hearth, in the atrium."⁷⁷

An early Swedish law established "the housewife's right to her sphere of honor and activity as mistress of the home, to lock and key, to half the bed, and to a lawful third of the homestead." Women were equally under the law's protection with men, and favored as regards penalties. Some crimes involving the death penalty to men could be paid for by women; if condemned to death, that manner of execution was chosen which was regarded as easiest and least dishonorable.⁷⁸ A case from Iceland is cited where a woman, enraged because her husband had betrothed their daughter without her knowledge, decided not to raise any more children and had her next child exposed. "She explained to the despairing father, after the deed, that she would rear no more children to be given away against her will."⁷⁹ In spite of the harsh conditions of life, the ancient German wife had a high and dignified position. In the twelfth and thirteenth centuries homage was paid to womankind by the minnesingers, while throughout the Middle Ages the motto, "Honor to God and women!" resounded in the combats as in the festivals, among all peoples of the Germanic race.⁸⁰

Today, among certain peoples in East Prussia, the husband is as a rule subject to his wife; separations seldom occur, for both parties would be thereby economically ruined. The author⁸¹ who states this regards as empty talk the common statement that the South Slavic wife is more of a beast of burden and less esteemed by her husband than her Central European sister, and asserts that the Serbian folk-songs, from which the detractors get their weapons,

demonstrate the opposite. The present Magyar standard of comfort and decency is attributed largely to the high position always held by their women, who are honest, self-respecting, and industrious. "Everyone—peasant, overseer, shepherd, cowherd, or swineherd—kisses the hands of the ladies of their master's house, and there is no servility, only graceful courtesy, in the act."⁸² The Russian wife is said to enjoy a freedom much greater than that accorded to the German spouse. Besides, separation of the possessions of man and wife is the legal rule in Russia, and the wife, by administering and disposing of her fortune, has more independence than is the case in the rest of Europe. French law has thrown into relief the general idea that the married woman is subject to the authority of her husband, to whom she owes obedience. The theory is the same in the laws of Belgium, Holland, and Spain. The author quoted⁸³ thinks, however, that in fact if not in law there is no woman more independent than the French wife. He believes that in general the effect of Christianity has been to raise the status of women and to restore the dignity of marriage. Certain authors⁸⁴ hold approximately true the frequent statement that the position of woman is the surest gauge of a people's civilization. Fritsch⁸⁵ quotes with approval the following sentiment: "The one sex is just exactly as important, indispensable, as the other; the one is unthinkable without the other; neither is self-sufficient; they tend toward one another and each demands and takes from the other what it itself has not and what the other only can give." This relation, he says, holds true despite all modern strainings.

§388. The Sex-Factor in Status.

AMONG certain tribes in East Central Australia, "the left foot of a woman is considered unclean."⁸¹ Among the Koita, "there is no special ceremony when the catamenia first appear, nor is a girl at this time specially avoided or considered especially dangerous."⁸² The Tshi peoples of West Africa cause women to retire at the periods to huts prepared for the purpose in the bush, because they are offensive to the deities.⁸³ In Nyasaland, "a native woman is very little upset by the occurrence of menses, and works in the fields or carries loads just the same as usual, but a string or bit of grass is generally tied round the head, as for head-ache."⁸⁴

Woman is generally considered unclean by the Samoyed and she may not eat of bear's meat. At times her presence is considered a misfortune which can be condoned for only by fumigation with bear's fat.⁸⁵ Among the Todas "the seclusion-hut of a woman has attached to it the same ideas of impurity which attach to a corpse or its relics."⁸⁶ During menses the Igorrote woman wears a breech-cloth, but she will not remove her skirt. If at any time, even at the ford across the river, where both sexes uncover themselves as a matter of course, men should see women wearing only the breech-cloth, they would ridicule them; consequently women are sensitive about exposing themselves with it. The author

has ascertained that the women on the west coast of Luzon avowedly wear this garment "to hide any possible evidence of menstruation."⁷

The Kwakiutl believe that a sick person at once becomes worse if a menstruating woman comes near him. "Also they do not allow young people who are just married to see the sick one, because they believe that they are always in bed together, and that is the same as menstruation. Their exhalation is bad for the sick one."⁸ Among certain Athapascan tribes in Canada fear is inspired by menses.⁹ Winnebago women "always take their blankets with them when they go to a menstrual lodge, for they never lie down but remain in a sitting posture, wrapped in their blankets. The women are always watched, so that when their menstrual flow comes everything is in readiness and lodge poles are placed around them and a lodge erected above their heads just about large enough to fit their body. They are not permitted to look upon the daylight nor upon any individual. If they were to look out during the day the weather would become very bad, and if they were to look at the blue sky it would become cloudy and rain. If they looked at anyone that person would become unfortunate. For four days they do not eat or drink anything; not even water do they drink. They fast all the time. Not even their own body do they touch with their hands. If they ever have any need of touching their bodies they use a stick. If they were to use their hands in touching their own body their bones would be attacked with fever. If they were to scratch their hands their heads would ache. After the fourth day they bathe in sight of their home. Then they return to their homes and eat. . . . If any women have to stay longer than four days they have to fast for that entire period. They always fast during this period and often some spirits bless them. When a woman who has stayed in the menstrual lodge for 10 days is ready to return to her lodge, she bathes herself and puts on an entirely new suit of clothes. Then her home is purified with red-cedar leaves and all the sacred bundles and medicines removed. Only then can she enter her parents' lodge. As soon as she returns to her parents' lodge after her first menstrual flow she is regarded as ready to be wooed and married."¹⁰

The Karoks of California think that if a menstruating woman approaches any medicine about to be given to a sick man, she will cause his death.¹¹ A peculiar feature of the customs among the Menomini is that "if a menstruating woman should, contrary to rule, enter a house in which there are sacred objects, this can do no harm."¹² A Cheyenne girl purifies herself by allowing smoke from sweet grass, cedar needles, and white sage to pass over her body inside of her blanket. Swanton,¹³ from whom this case is taken, has written concerning the menstrual customs of the Indians in general. The dishes, spoons, and other articles belonging to a girl who had just entered womanhood were kept separate from all others and had to be washed thoroughly before they could be used again, or, as with the Iroquois, an entirely new set was provided for her, while salt especially was tabooed at this period. "Among many tribes it was believed that the supernatural beings were especially offended by menstrual blood. Therefore a Haida girl at this time must not go down to the beach at low tide, lest the tide come in and cover one of the chief sources of food supply.

¹³ In HAI, II, 314, 315.

She must not step across a small stream, lest the old woman who resides at its head leave and take all the fish with her. When her people went to a salmon creek to dry fish she must get out of the canoe just before they reached it and approach the smokehouse from behind, for if she saw a salmon jump all the salmon might leave." Among other misfortunes caused by a woman in such a condition is the belief that "if a hunter's glance happened to fall upon a girl during her menstrual period, blood would be injected into his eye, preventing him from seeing game, and a crust of blood would surround his spear, making it unlucky." This recalls the Alaskan Eskimo belief that a girl was surrounded by a sort of film at this time which would attach itself to a hunter who came too near and enable every animal to see him. On the other hand, the imagined effect was not always deleterious, for "armed with the blood of a menstruant woman a man would attack and destroy hostile supernatural powers or put to flight any by which he was himself assailed;" and again, "if a menstruant girl scratched any place where one felt pain, the pain would stop."

The Makusi of British Guiana forbid women to bathe during the period and also to go into the forest, for they would risk bites from enamoured snakes.¹⁴ On returning from her first bath after the first menstrual period, "the Makusi girl must during the night sit upon a stool or stone, to be whipped by her mother with thin rods without raising the slightest cry to wake the sleeping occupants of the hut, an occurrence which would prove dangerous for her future welfare. The whipping takes place also at the second menstrual period, but not subsequently." Among other tribes, "the 'Devil' who three days before has been making terrible music in the forest at last enters the house of the poor young girl, who tries to take to flight. A piat [shaman] at this moment runs up and, binding her eyes, leads her through the village while the Devil all by himself is making a frightful hubbub. Now is the time for the festival of the beating with the sticks, when the men strike the unfortunate girl, who dares not complain. At last a young man, admiring her courage, takes her place, and exposes himself to the blows of the company; if he bears the pain without murmuring she chooses him for her husband." We have here to do also with puberty-ceremonies and the marriage-test. "With the Warraus the girl must not speak or laugh or eat during the two or three days of the period. Were she to do so, she would lose all her teeth when she grew into a big woman. . . . The Pomeroun Carib girl who, for the space of three days had to do without food or water, was not allowed to utter a word. She was subsequently starved for a month on a diet of roots, cassava bread, and water. Girls may die under this treatment." A chief on the Orinoco has rationalized about such customs as follows: "Our ancestors observed that wherever the women, during their monthly periods, happened to tread, there everything dried up, and that if any man trod where they had placed their feet, his legs would swell: having studied the remedy, they ordered us to starve them, so that their bodies should be free from the poison."¹⁵

In the chapters of Leviticus on uncleanness in general is included that of both men and women in their issues. "If a woman have an issue, and her issue in her flesh be blood, she shall be put apart seven days: and whosoever toucheth her shall be unclean until the even. And every thing that she lieth upon in her separation shall be unclean: every thing also that she sitteth upon shall be unclean. . . . And on the eighth day she shall take unto her two turtles, or

¹⁴ Schomburgk, *Brit. Guiana*, II, 316.

¹⁵ Roth, in *BAE*, XXX, 308-309, 310-311.

two young pigeons, and bring them unto the priest, to the door of the tabernacle of the congregation. And the priest shall offer the one for a sin offering, and the other for a burnt offering; and the priest shall make an atonement for her before the Lord for the issue of her uncleanness."¹⁶ Among the ancient Iranians a menstruating woman was taken to a special place where she could not come in contact with people, particularly men, and where she could see neither fire nor the sun. "The food offered her was given in metal vessels and indeed at best in such as were made of useless metals. After the cessation of menstruation the woman had to cleanse herself. . . . Association with a menstruating woman was regarded as a grave offence."¹⁷ The Zoroastrians held that the menses of women were caused by the evil god, Ahriman. A woman, during the period, was "unclean and possessed by the demon. She must be kept confined and apart from the faithful whom her touch would defile, and from the fire which her very look would injure. She is not allowed to eat as much as she wishes, as the strength she might acquire would accrue to the fiends. Her food is not given to her from hand to hand, but passed to her from a distance in a long, leaden spoon."¹⁸ At this day in the house of a Parsee there is a room for the monthly seclusion of women. It is bare of all comforts and from it neither sun, moon, stars, fire, water or sacred implements, nor any human being, can be seen.¹⁹ Among the Greeks impurity in the temple was supposed to come from women, pork, and garlic; the last two were Asiatic, not Greek, and were so regarded in Cybele and Syrian Astarte worship.²⁰ The Romans held that nothing had more marvellous efficacy or more deadly qualities than the menstrual flow. The Arabs thought "a great variety of natural powers" attached themselves to a woman during the period. The gum of the acacia was thought to be a clot of menstrual blood, the tree itself a woman; therefore, the gum was regarded as an amulet.²¹

These few illustrations, considered together with those on the uncleanness of women in childbirth and on uncleanness in general,²² may serve to show how far-reaching was the influence on the mores of such notions. All the above-mentioned ritual created a feeling that women were dangerous to men, different from men by virtue of their subjection to influences which did not reach men. Men were free and independent but subject to harm from women, as is further illustrated in the following section.

§389. Mistrust of Women.

A LEGEND of the Euahlayi tribe in Australia avers that at first the tribes were meant to live for ever, but woman spoiled this design. "The women were told never to go near a certain hollow tree. The bees made a nest in this tree; the women coveted the honey, but the men forbade them to go near it. But at last one woman determined to get that honey; chop went her tomahawk into that hollow trunk, and out flew a huge bat. This was the spirit of death which was now let free to roam the world, claiming all it could touch with its wings."¹ She was the Australian Eve or Pandora. Among the Southern Massim a woman

can save the life of a man struck down in battle by throwing her petticoat over him, a custom explained by the statement: "The fear of witchcraft caused the man to be unmolested." It seems probable that this custom may be connected with the power believed to reside in the body of the woman, and it is significant that it is the petticoat worn nearest the skin that confers protection." It is also the belief that *labuni* or "sending" is a magic power possessed by women, which, like a shadow, emerges from a woman who appears to be sleeping at the time and produces disease by means of a sliver of bone or fragment of stone which is inserted into the victim's body. "A woman might be bribed to send her *labuni* to injure an individual against whom she had no personal grudge."²

In South Africa women may not enter the cattle-kraal or the place where cattle are accustomed to rest upon returning from pasture; they are forced to follow special ways around these places.³ On the Loango coast a married woman is forbidden to receive anything directly from any man's hand; the objects are laid down on the ground whence she picks them up.⁴ In the Upper Congo "the lobe of the right ear of a male child, or the left ear of a female child is pierced—the left is always a sign of inferiority."⁵ No sexual intercourse is permitted by the Katanga before going to war or when mining copper.⁶ Among the Akamba a man must pay a fine if he unwittingly sits on a stool belonging to a woman. "The fine is really for the purification of the man who is considered to have become ceremonially unclean through sitting on a woman's stool."⁷

Among the Ainu, "the ghosts of deceased women are greatly feared, and that of an old woman especially is believed to have an extraordinary capacity for doing harm to the living. Even while alive on earth old women have great power over men, and children are much afraid of them. Formerly the hut in which the oldest woman of a family died was burnt after her death to prevent the spirit returning to work mischief to her offspring and to her sons- and daughters-in-law. The soul returning from the grave to exercise its spells upon the living was thus unable to find its former home, and wandered about for a time in a furious rage. During this period the grave was carefully avoided. . . . Some of the Ainu hold that women, who are considered inferior to men 'both spiritually and intellectually,' have 'no souls; and this is sometimes stated as a reason why women are never allowed to pray.' But Batchelor thinks that the real reason for this prohibition is that the Ainu are afraid that the women will appeal to the gods against their ill-treatment by the men."⁸ In 1922 the Japanese press, bitter against President Wilson for not supporting a proposed amendment to the Covenant of the League of Nations, charged him with having "a female demon within him"—a term vividly denunciatory to the Oriental mind.⁹ The teaching of a certain type of Buddhism is that woman is unclean and a scapegoat.¹⁰

There is no doubt that women have a subordinate position in the Toda community. "The ceremonial of the dairy has a predominant place in the lives and thoughts of the people, and the exclusion of women from any share in this

ceremonial must have influenced the attitude of the community towards the sex. The laws regulating the relations of the dairymen with women also can hardly have contributed to raise the esteem in which they are held. . . . Not only are women excluded from any share in the work of the dairies connected with the sacred buffaloes, but they are also prohibited from any part in the milking of the ordinary buffaloes or in the churning of their milk, which is performed solely by males in a part of the hut with which women have nothing to do. . . . I am doubtful whether they are allowed to cook, at any rate to cook food in which milk forms one of the ingredients. With such occupations as divining and sorcery they have nothing to do."¹¹ In the conception of the Hindu lawgiver, women are a necessary evil, "in order to evolve one's self to the longed-for fruit of marriage." As an immediate consequence of the dependence of women appears the guardianship under which they remain their entire lives. It is expressly provided that they shall possess no property, bear no witness, undertake no legal business, especially sale, mortgage, and disposal by gift, and sign no contract.¹² In one of the epics we read: "Bad are the women in the world; to the husband who protects and nourishes them they no longer pay attention, as soon as misfortune casts him down. So is it characteristic of women that they no longer think of long-enjoyed fortune as soon as any misfortune, though quite trivial, hits them. It is hard to fetter their hearts; their feelings are extinguished in a moment. Not nobility, virtue, knowledge, nor gifts and affection can fetter woman's heart; for woman is of unstable heart."¹³ Manu¹⁴ declares that through their passion for men, their mutable temper and natural heartlessness, women become unfaithful however carefully they may be guarded. Since god made them so, man should guard them. In India of today, the women, being naturally impure and unholy in body, and bringing man to harm, may not eat offerings to ancestral spirits. If a man is thrashed with a woman's garment, "he is so much disgraced in the eyes of his fellowmen that he is not admitted into their society." A woman may worship village-deities only from afar; her personal offerings are never accepted by them. At the time of sacrifice women must veil their heads so as not to see. To rise in the scale of being, a woman must first be re-born a man. At marriage the bridegroom murmurs to himself prayers that the bride may not be fatal to brother, husband, or son. He adjures the fire-god to extirpate the substance dwelling in her that brings death to husband, children, the cattle, the home, and the husband's good name, pouring out water at every request. It is the waters drawn by the priests that avert death from the husband. Rites of purification abound, some of them highly ridiculous.¹⁵ It is a common custom, as in New Zealand, that "all men on a war party were *tapu* to women—they could not go near their wives till the fighting was all done."¹⁶ The same provision attended any other strenuous undertaking and doubtless contained a rational element.

Among the Eskimo the mammals are divided into two classes: the noble and the inferior beasts. "The skins of the former are used, though not exclusively, by the men, while the latter may be worn only by the women. No man would

debase himself by wearing a particle of the fur of the hare or of the white fox; the skins of these timid creatures are reserved for the women alone."¹⁷ In America, the coast-tribes of the Northwest do not allow women to enter the houses that shelter their venerated copper plates. Dakota women must not play ball or touch the ball-stick. They must not enter the sacred underground shrines or touch the god-masks. "The Indians of California take especial pains to kill the women of their enemies when at war; they say that one woman destroyed is equivalent to five men, because they have such trouble with their own." This procedure was rational in the sense that to annihilate enemies the best way is to extirpate the potential mothers. A Yucatan "captain," during his three years of office might know no woman, nor might his food be served by women. A Miranha chief informed a traveller that association with a woman cured fever; all ill came from women, hence woman, on the principle of poison to poison, was the cure.¹⁸

Both ancient Accadians and Finns considered diseases as so many distinct personages, the daughters of "the lady of the gloomy abyss and of the dead."¹⁹ In the popular poetry of Chaldaea occurs a slave's complaint that her master passed her by unnoticed; he feared her magic.²⁰ There are some pronouncements in the Old Testament disparaging women.²¹ Smith²² states that among the Arabs sexual intercourse was forbidden for pilgrims to Mecca. "The same rule obtained among the Minæans in connection with the sacred office of collecting frankincense. Among the Hebrews we find the restriction in connection with the theophany at Sinai and the use of consecrated bread . . . and Herodotus himself tells us that among the Babylonians and Arabs every conjugal act was immediately followed, not only by an ablution, but by a fumigation, as is still practised in the Sudan. This restriction is not directed against immorality, for it applies to spouses; nor does it spring from asceticism, for the temples of the Semitic deities were thronged with sacred prostitutes, who, however, were careful to retire with their partners outside the sacred precincts." Hartmann²³ comments: "It is well known how the Old Testament speaks of woman and that it is only the natural outflow of those ideas when the Jew in his daily prayers thanks God that he created him a man and not a woman. Similar crude notions are also to be found in the Koran, where women are characterized as those who grow up in ostentation and strive without reason. Man has to command, woman to obey, and if she is disobedient, she is flogged. . . . 'Men go before women because God gave the preference of grace to the one before the other.'" The Mohammedan woman is thought to be almost soul-less, and it is even forbidden her to enter the mosque at the public hours of prayer; "her moral consciousness is therefore shrunken and spoiled."²⁴

The question of woman from time to time engages the attention of the Greek tragedians. *Œdipus* refers, as a sort of contrast to Greek mores, to the Egyptian custom, whereby the men keep house and weave, sitting within doors,

while their wives are abroad, providing with ceaseless toil the means of livelihood. In the *Trachinæ* of Sophocles, Deianeira condones the love of Heracles for Iole, for whose sake he has sacked her father's town, subsequently sending her home to his own house: "No shame to either and no harm to me." Andromache, telling how she behaved as the wife of Hector, pictures the ideal wife; she stayed at home, did not gossip, was silent and modest before her husband, knew when to rule him and when to yield. She says a woman must be content with her mate, even though he is worthless, and not make demands or try to impose her notions or the ways in which she was brought up upon him. She must adapt herself. A chorus in the *Medea* hails the dawn of respect for the female sex. The base tongue of slander will no longer attach to women; the ancient poets wrote ever of their faithlessness, but this is to cease. If Apollo had given to women the gift of versifying, they could have answered men; for history contains many reflections upon the male sex as well as on women.²⁵ There was much attention given, in dialectics, to women.²⁶ In the learned commentary attached to Becker-Hermann's *Charicles*,²⁷ we learn that the poets had a high ideal of woman and that some lofty female characters appear in history, but that there was no need felt or, apparently, any interest, in developing the theme. The state had no use for woman except as a mother; she was let alone, in so far as she was good, and restrained when she did ill. Some citations may show "that the Greek perceived the correct idea, but not that he ever understood the proper means to realize it." Culture touched only half of the nation; hence stagnation was bound to ensue, at any rate for the women. Many citations are given. Athenæus²⁸ quotes many authors in vituperation of women and marriage. A Moorish sage of Cordova, writing in the twelfth century about women, remarks: "Our social state does not permit us to see how great resources women have. It seems that they are destined only to give birth to children and suckle them and that this state of servitude has destroyed in them the faculty for great things. That is why we see amongst us no woman endowed with moral virtues. Their lives pass like those of plants and they are burdens to their own husbands. Hence the misery which devours our cities, for the number of women in them is more than double that of the men and they cannot by their labor earn the necessaries of life."²⁹ A German proverb states that when the Devil cannot go on an errand himself he sends an old woman.³⁰

§392. Divorce.

Among certain tribes in East Central Australia, "the parents of the bride have a ball made of copi (gypsum) and the parents of the bridegroom have one made of red ochre. The red ochre ball is given to the bride and the gypsum ball to the bridegroom. If the bride cannot agree with her husband, she buries her ball in the sand, and vice versa; and if she wants to leave her husband altogether, she smashes the ball in pieces and throws the pieces into the air. The husband then gathers her belongings and burns them, and vice versa."¹

Among the Southern Massim, "a man would divorce a woman for prolonged neglect of her garden or if she were constantly careless or unpunctual in the cooking of his food. Such carelessness is, however, very unusual unless a woman has a liking for, or an intrigue with, some other man and desires to be rid of her husband, in which case one method of bringing this result about is for the woman to neglect the garden and her husband's food to such an extent that the latter returns to his own hamlet-group, or if living in his own hamlet, tells his wife to go to hers. Most husbands, however, before proceeding to such extreme measures will try the effect of one or more severe thrashings. A man may also get rid of his wife, if the latter prove barren or suffers from a chronic disease severe enough to incapacitate her." On the other hand, "a woman may divorce her husband for confirmed laziness when he will not do his share of the hard work in the garden, or for acts of infidelity; if the woman is living in her husband's hamlet she simply takes her children, petticoats and cooking pots and goes with these to her mother's hamlet. In such a case a man has no remedy, he has no right to bring his wife back by force, even if he were able to do so, nor is he allowed by public opinion to take vengeance on the people of her hamlet. If man and wife are living in the latter's hamlet and the woman wishes to be rid of her husband, she tells him to go and it seemed that under these circumstances a man would leave his wife's hamlet without making any difficulty. There is no special form or ceremony of divorce."² Among the Dobuans of Papua, "a wealthy man is not divorced readily; neither is a woman who is possessor of much yam seed. . . . A divorced woman is not paid for by her next husband. The divorced man does not receive anything back after divorce, unless the divorce occurs soon after marriage, in which case the valuable articles are returned or their equivalents." Twenty-two causes of divorce are listed, those applying to the woman being: extravagance with yams, stealing from the man's relatives, not cooking food for his visitors, adultery, talking very loudly in the man's village when strangers are present, rattling the spatula loudly as she takes lime from the gourd when the man's elders are present, and not cooking food properly. On the man's side the causes are: not gardening properly, his relatives not giving the woman cooked food occasionally as a sign of good feeling, not fishing or not helping to provide other food for the children, being too lazy to join in trading-expeditions, using the canoe of his wife's relatives without permission, thrashing his wife in the sight of her relatives, or severely thrashing her in his village. Mutually operative causes include: breaking etiquette in each other's village, entering a house in the spouse's village when the owner of house is absent, climbing on the platform of the spouse's elder while the elder is seated on the ground, filthy language, calling by the name orphan or bastard and saying that either party has no food, saying "Ugly mouth," "Ulcerous mouth," calling each other old (it is an insult for either spouse to tell the other that he or she was born first), and saying "Your ears are thick and stuffed up. What did your mother ever teach you?"³ Strictly speaking, there is no divorce in the D'Entrecasteaux Islands. "If the wife is guilty of misconduct her husband thrashes her; a man for the same offence is either speared or pays a heavy compensation. A woman who is tired of her husband goes off with another man, who makes an appropriate payment to the husband soon afterwards. For the husband the case is different; he may

² Seligmann, *Melanesians*, 511-512.

³ Bromilow, in *AAAS*, 1909, 481-482.

have as many wives as he likes to keep. . . . However jealous the natives may be of their wives, they show singular indifference to losing them provided only that they receive an adequate payment."⁴

Among the Zulus the childless wife is sent home and the morning-gift is demanded back.⁵ As long as the bridegroom in Nyasaland has incurred no expenses on behalf of his lady, and as long as the relations of both have not been formally and solemnly informed of the union, the separation is not treated as being of any importance, but "where all these conditions have been fulfilled, it is sure to be followed by litigation."⁶ In Kenya Colony, "divorce is extremely rare, and a woman who has borne children cannot be divorced, whether her children are by her husband or by a man with whom she has lived for years; harlotry is no ground for divorce." The author⁷ says there are some grounds for the statement that divorce occurs only where one of the parties has offended grievously against the family-group of the other, as in the case of a man killing his mother-in-law, or where he has relations with his wife's sister. Divorce is rare among the Suk; when it does occur, the reasons are sterility and "breach of the husband and wife food taboos." Among the Wayao, "owing to the abrogation of the drastic native laws regulating the sanctity of the marriage tie, marriages are becoming increasingly temporary in character. This is reflected in the system of relationship, as the relatives by marriage are becoming equally temporary."⁸

Sir Charles Dundas⁹ has commented at length on the situation in East Africa: "Divorce may arise in two ways: either the husband may return his wife to her parents—'drive her away,' as they express it—or the wife deserts. The former is more rare than the latter. I observe that some writers lay down specific grounds for divorce, but I incline to regard such as the result of attempting to give a European cast to native law and am sceptical of any such fine or hard and fast rules on the subject. . . . In the long run, of course, even primitive men have no method whereby they can compel a woman to live with a man she refuses to remain with, so that if she deserts and faces all the consequences there is no remedy, and anyone who has experience of Africans will know that if the woman claims few rights and liberties, she holds most tenaciously to what she conceives to be her right, and is not near so easily intimidated as is the average native man. In so far, then, a woman can divorce herself, but not by recognized right, not without penalty, as we shall see. As to her husband, if he rejects his wife, he will be the loser in one way or another, unless he can come to terms with her family. In every divorce there will be two questions in issue, namely, the possession of the children and return of dowry [bride-price]. As to the first, one rule can be accepted, that the husband has the right to retain his children. . . . In the matter of divorce, there are undoubtedly very strongly conflicting considerations at stake, for on the one hand payment of dowry gives an undisputed right to a woman's children, and clanship constitutes an inseparable bond between father and child, while on the other hand offspring is naturally attached to the mother; the adult child's affections will always lie more with the mother than with the father (among polygamous peoples), and for practical reasons the young children must remain

with their mother. Corresponding to such opposite interests there appears very frequently much vagueness and uncertainty in suits of this sort, where one would look for very definite laws. . . . Now when a woman deserts from her husband it is almost always because she is enticed away by another man, or if she goes back to her father she will eventually want to marry another man; but after much enquiry, I found that in Ukamba the old custom made this practically impossible, for the reason that if the husband rejected return of dowry and the woman or any of her children begotten by her husband, or subsequently begotten by another man, died out of her husband's custody, full blood-money could be claimed from the seducer, and moreover the husband would claim every child born of his wife, no matter by whom. When this custom was revived, it was found that in the first place the wife would not leave her husband, being faced with the prospect of remaining childless, and the would-be husband declined to accept the possible burden of blood-money for an entire family. The result was that nothing came of the affair: the numerous cases of desertion by wives transpired to be due merely to the convenient corruption of recent times, which admitted of women leaving their husbands on the slightest or no provocation at all, without any disadvantage to themselves, and this affords a striking example of the evils of laxity in tribal customs. . . . Talking on the subject with the elders, I was told by them that formerly no woman ever left her husband after she had borne him children, and that if she did so, the husband would certainly seek to kill the seducer. I imagine that similar provision against divorces and desertions may be found in the original customs of most or all tribes. It must be considered how greatly native society is founded in the family, wherefore this foundation would be preserved by many strict rules or religious precepts. Certain it is that divorces were formerly far less frequent than they are now. Asked about this, elders have repeatedly mentioned two causes for the present-day state of affairs: one, the spread of laxity due to Swahili influence, and the other immunity from private revenge, and to this I would add the uncalled for interference in domestic affairs by European officials; to these, foolish and obstinate women run on the slightest pretext, and, unfortunately, too often receive a ready hearing of their garbled accounts of imaginary wrongs done to them."

In northeast Africa, in each case of dissolution of marriage a part of the purchase-price must be returned and the wife recompensed besides.¹⁰ Among the Unyamwesi, if a man finds his wife lazy or sterile he may send her back and demand her sister.¹¹ Sometimes, in case of sterility, the wife is subjected to a test by the male relatives; and if she does not then become pregnant, is sold at auction.¹² "Divorce is almost unknown among Masai, and it is only barren women who may be divorced."¹³ In Kabylie, "the right of repudiation pertains under all circumstances to the husband, without limit and without cause, without being counterbalanced by the right of the wife to get a divorce. It is the necessary consequence of the nature of marriage, by which she is not united to the man but bought by him." Still "to the right of oppression corresponds the right of flight," by which she can extricate herself.¹⁴ "The idea of love between husband and wife was hardly thought of among the Hovas. Marriage indeed was compared to a knot so lightly tied, that it could be undone

with the slightest possible touch. . . . The marriage state was regarded chiefly as a matter of mutual convenience, each party carefully retaining separately his or her property." One of the tribes allowed any woman of noble birth who had married a commoner to divorce him, although he could not divorce her.¹⁵ "By men and women, rich and poor, barrenness is still considered, in the East, a curse and a reproach; and it is regarded as disgraceful in a man to divorce, without some cogent reason, a wife who had borne him a child, especially while her child is living."¹⁶ Among the Sahara tribes, "the woman is free in the matter of a second marriage; the father's authority is absolute only in the case of the first."¹⁷ Among the Nigerians, "when the girl is once married she will seldom leave her husband of her own free will, except on account of cruelty or impotence. . . . If she be given to another, the former husband has no power over her, and is supposed to bear his supplanter no malice, but he may try to persuade her to run away and come back to him." Although the rival husbands are supposed to feel no animosity, there is a belief that if they meet during a raid or a hunting-expedition one of them, usually the supplanter, "will be hurt by an arrow and die. As every man has his special mark on his arrows, and the arrow which kills the rival is unmarked, the death is put down to magic."¹⁸ In order to "break a marriage," as the process is called by the Dinkas, all that is necessary is that the cattle paid for the bride, with all their young, or an equivalent, be repaid to the husband. "She is then entitled to return to her own family, together with any children she may have borne. Various causes are enumerated for breaking the marriage; but the wife's unfaithfulness is not one of them, provided she be willing to remain in her husband's enclosure. . . . All the blame is laid upon the man, who is liable to pay full compensation to the aggrieved husband. Until recently, indeed, among the southern Dinkas he was liable to be killed. On the other hand, as among many of the negro peoples on the West Coast, the woman's character is unstained by an act of infidelity, and she is subject to no legal punishment." If a marriage be fully "broken" by the repayment of all the cattle, all children borne by the woman become with her the property of her father or guardian; but part of the cattle may be left with the wife's father, by arrangement, to permit one or more of the woman's children being left with her husband as his property. The husband may sue for breaking of marriage if the girl fails to give birth to a child within two years of marriage, if she runs away from him and refuses to return, or if there is quarrelling or ill-will between their families. In the first instance, before suing, the husband must have had recourse to the tribal custom of permitting one of his male relations to cohabit with the girl, to support the alleged inability to conceive.¹⁹

Among the Tungus "trivial causes are often sufficient to lead to a separation, for instance a birth-mark or a small bodily defect; for such things are regarded as brought about by evil spirits."²⁰ The Cherkes husband has power of life and death and may divorce his wife without subjecting her to any punishment. Divorce exists among the Kalmucks, but there must be important reasons. A woman can sue for divorce but a man need not submit to the demand of the court if, for instance, she is not a good housewife. It is reported

of the Armenians who fall within Russian boundaries that they have absolutely no divorce.²¹ Though divorcing a wife is easy among the Kurds, it is often repented if done in passion. The wife may not come back again till she has been re-married and divorced. But the Kurd is jealous, and if he wants his wife back, gets her married to a sort of functionary known as "the ass of the Kasi," who for a certain sum will go through the form of marrying and divorcing her. If this functionary is distrusted, she may be married to a clay pitcher, which her former husband "murders," thus freeing its widow to re-marry him.²²

In Korea a husband may repudiate a wife for seven reasons: incurable disease, theft, childlessness, infidelity, jealousy, incompatibility with her parents-in-law, and a quarrelsome disposition.²³ In China there are also seven causes for divorce of a wife, differing little from the above list. "Probably the most common cause is adultery, for the reason that this is the crime most fatal to the existence of the family." Indeed, a husband is liable to punishment if he retain a wife convicted of adultery. "If a wife merely elopes she can be sold by her husband, but if she marry while absent she is to be strangled; if the husband be absent three years a woman must state her case to the magistrates before presuming to remarry." There are three considerations that set aside repudiation: "first, the wife having mourned for her husband's parents; second, her having risen with him from poverty to wealth; and third, her having no home to which she can return." She cannot go back to her parents because there is no provision for her support, the land having been set aside for her parents' and then her brothers' maintenance.²⁴ Divorce has been in the past extraordinarily common in Japan; "for four marriages there is, on the average, one separation."²⁵

In some parts of India divorce is a very simple matter and is effected simply by a public declaration and the gift to the woman of a few cowries or coins which she throws away. A bad dinner is one of the trivial grounds for the frequent separations; and no stigma attaches to either party.²⁶ Among the Todas a man divorces his wife for two reasons, and for two only, "the first reason being that the wife is a fool and the second that she will not work." Barrenness is not generally regarded as a reason for divorce, though the author quoted²⁷ was told of one case in which a man had sent away his wife on this account; it was more usual in such a case to take a second wife. Among the Lhoosai, "if a woman has a son by her husband, the marriage is indissoluble; but if they do not agree, and have no son, the husband can cast off his wife and take another."²⁸ A Saora woman may leave her husband whenever she chooses and he cannot prevent her. Her next husband pays a buffalo and a pig.²⁹ In the Chin Hills a husband can always divorce his wife for her indiscretions, but if he does so he loses the price which he paid for her when he bought her. "He hence overlooks the matter as regards the woman, and he will, if he can, make the seducer pay him compensation; but he seldom succeeds, as

popular opinion is averse to the shedding of blood over the virtue of women.”³⁰ In the Naga Hills, “marriage and divorce are among the simplest of their rights and often follow each other within the year without comment or surprise. Incompatibility of temper is here quite sufficient for either the man or the woman to demand a divorce and take it. Although strictly monogamous, both sexes may marry [, divorce,] and remarry as often as they please; such offspring as require the maternal aid follow the mother, and are tended and cared for by her until able to look after themselves, when they return to their father.”³¹ “Divorce by mutual consent was easily arranged, the woman taking her property. A man might put away his wife with or without her consent.” At divorce there is an equal division of goods; a young man sometimes marries and divorces a rich old widow, “receiving half her property, when he is in a position to marry a nice young girl.”³² In one district a wife may divorce her husband for impotency.³³ Among the Shans, “divorce can be readily obtained, but except among young people of low rank, it is comparatively rare.” The applicant for divorce, or the one at fault, always loses considerably in the division of the property.³⁴ Among the Palaungs, “if a husband and wife should quarrel and separate, the money arranged by the Pa-jau [marriage go-between]—the ‘helping money’—must be returned to the man’s father, if it was he who supplied it at the time of the marriage; but money given after the wedding need not be returned unless the wife, after her return to her father’s house, has taken another husband. In this case the new husband is expected to find enough money to pay for all the presents given by the father of her first husband.”³⁵

In ancient India divorce could occur to a betrothed pair. The woman could regain her freedom if the bridegroom had “a flaw”—if he were very sickly or deformed, insane, impotent, expelled from his caste, entirely destitute, or was in disagreement with his relations. “The bridegroom on his side was free from obligation if a fault was disclosed in his bride which had been suppressed by her father or other guardian, such as loss of virginity, deformity, or an organic affliction.” Among the legal grounds for divorcing a wife were the following: adultery, sterility, giving birth only to girls, miscarriage, not loving her husband, eating before him, being quarrelsome, given to drink, sickly, deceitful, extravagant, dissolute, or an evil woman. One sees from this that the legal grounds for divorce were rather vague; moreover the character of the separation varied with occasions, for Manu speaks of the separation for three months from a wife who shows no respect to a dissolute, drunken, or sick husband. “Even in the case of repudiating the wife for a lifetime, the husband, so it seems, never entirely took his hands off her, but banished her to a neighboring house, whereupon sexual intercourse and a share in the religious usages, but not participation in the affairs of the household, came to an end.”³⁶ In the Code of Manu, a wife can never be repudiated so that she can become the lawful wife of another. “Once is the partition of an inheritance made; once is a maiden given in marriage; and once does a man say, I will give. Each of those three acts is done once only.” On the other hand, a wife who “drinks spirituous liquors, is of bad conduct, rebellious, diseased, mischievous, or wasteful, may

at any time be superseded." A barren woman may be superseded in the eighth year; she whose children all die, in the tenth; she who bears daughters only, in the eleventh; but she who is quarrelsome, without delay; while a sick wife who is kind to her husband and virtuous may be superseded only with her own consent and may never be disgraced.³⁷ In strong contrast to most primitive codes is that of the Veddahs. They have no divorce and are kind and considerate to their wives; few of their Kandyan neighbors could say, as the Veddah can: "Death alone separates husband and wife."³⁸

Among the Sea Dyaks divorce is unusual after the birth of a child, though common before that event. "A divorce is not absolute until the property has been divided and a ring is given by the man to the woman in token of her freedom to marry elsewhere."³⁹ "The Dyak men view marriage as an arrangement for the mutual convenience of both parties in order to obtain children. . . . I have known many [childless] Dyak couples who have continued to live together, and have perhaps adopted a child; but they have done so in spite of all that has been said to them and in opposition to the wishes of their friends. I have often heard Dyaks say: 'When you plant a fruit-tree you expect it to bear fruit, and when you marry you expect your wife to bear children.' The Dyak women generally regard marriage as a means of obtaining a man to work for them. A woman will often separate from her husband simply because he is lazy, and will not do his fair share of the work."⁴⁰

In Sumatra, the loosing of the marriage-bond, at least for the man, is as simple as the preliminaries to marriage are complicated. The woman has to go through considerable formality or buy her divorce from her husband, while the man needs the help of no third party to get rid of his wife. He has only to provide a sum sufficient to maintain her for three months and ten days. He never divorces her if she is pregnant and seldom when she is sickly or even insane. If he takes her back, and finally divorces her a third time, she must be married to another man and divorced from him before he can regain her. This may be only after the period of three months and ten days. A poor old man is selected and paid a small sum to marry the divorced wife and divorce her the next day.⁴¹ It is easy for a woman to divorce a man who comes "like a child" into her family; he can take away only the clothes on his body.⁴² In the Lampong district, "as soon as the *jujur* is paid the wife is the inalienable property of the man. Death alone can dissolve the marriage. As a consequence the *adat* [mores] does not allow divorce. I recall that a certain man was condemned to several years of hard labor in chains, and that nevertheless the effort of his wife to get a divorce was rejected on the ground that he had bought her." The closeness of the wife to the man appears also in the fact that a slave-family may not be separated when bought, not at all as a consequence of any right that the slave has, but simply because of the *adat* that the woman is the inalienable property of the man, so that there is no thought of separating a slave from his wife so long as they are bound in marriage. According to old custom among the Bataks, divorce is not allowed from either side; only in case of barrenness can the woman be returned to her parents, who are obliged to

furnish another girl. The parents have the same duty in case the woman dies without presenting her husband with children. "Neither protracted abandonment, nor the severest maltreatment, nor adultery give either to the wife or the man the right to demand divorce. In one sole case may it take place, namely, by an attempt of one spouse on the life of the other." On the island of Nias, where the father-family exists, if a man gets sick of his wife he can divorce her by sending her back to her family. With his consent she may marry again, he getting the bride-price. Even the woman may withdraw from marriage if mishandled or wounded by the man or if he fails to provide for her. Originally there was no divorce on either side, and today there are certain Nias people who allow divorce on no account, death alone separating the couple. Where, as among the Alfurs of Buru and Ceram, the woman goes to the man's tribe and is subject at his death to the levirate, divorce is impossible. The only case in which it is permitted is that of adultery, the paramour being obliged to marry the woman and to repay the price originally given for her, part of which goes to the offended husband and part to the village. The children stay with the father. "Every divorce must take place with foreknowledge and consent of the *fenna* [clan]." Among the Buginese and Macassars of Celebes, by way of contrast, divorce is frequent and is granted to either party, often for trivial reasons. One cause of this situation is stated to be the arrangement of marriage by the parents on both sides without consulting the young people, who sometimes meet one another for the first time at the wedding.⁴³ In the Mentawai Islands the husband may cast off his wife for any cause, and she may not re-marry without his consent, "for he has bought her by the presents which he has given his father-in-law at the wedding."⁴⁴

In earlier days, before there was much contact with the Malays, the peoples of Malacca did not regard divorce so lightly; quite the reverse, for it was unknown to some of the tribes and unpopular with all. A man did not cast off his wife, because he would thus lose the children and not easily get another mate; if, however, a clumsy, lazy, or disagreeable wife ran away and the husband made no effort to regain her, they were divorced and he kept the children.⁴⁵ In the Malay Peninsula, "the rule was that if the divorce was proposed by the husband, he lost the dowry he had given to the woman; but that if the woman asked to be divorced, she must return the dowry she had received at marriage. The children followed the father or the mother according to their own (the children's) wishes; if, however, they had not yet arrived at the age of reason, they followed the mother."⁴⁶ In southern Formosa, "divorces are frequent and infidelity is common, it not being considered a heinous sin."⁴⁷ In Samoa the dissolution of marriage is purely at the will of the man, and the wife cannot get away from an undesirable husband without his consent except in a case where the woman stands higher in rank than the man.⁴⁸ In the Gilbert Islands, divorce, unlike marriage, was effected without formalities. "It might lead to the surrender of land-forfeits on one side or the other, but there was no fixed custom by which bonds were dissolved or penalties assessed. For a man to put away his wife he had simply to eject her from his house; equally

well a woman might dissolve the partnership by returning to her parents, who, if there seemed good cause, would harbour her and take her part in any unpleasantness that might ensue. The right to decide in such a matter was thus accorded as freely to the wife as to the husband, and this is a fair indication of a woman's general status in the Group, where mother right and father right seem to have impinged upon one another and eventually come to a compromise. On every divorced woman was pronounced the charm . . . by which she was protected against the evil magic of her late husband's family, and at the same time absolved from her duty of concubintancy to him."⁴⁹

Among the Eskimo, "divorce is as informal as marriage; either party may leave the other on the slightest pretext, and may remarry. The husband may discard a shrewish or miserly wife, and the wife may abandon her husband if he maltreats her or fails to provide enough food." Among certain Labrador Eskimo the conjurers often separate man and wife on the plea that their union causes ill luck. On the Northwest Coast, "if a husband expels his wife from caprice he must return her dowry; if she has been unfaithful he keeps the dowry and may demand his wedding gifts." Among a number of the Plains Indians "the men had absolute power over their wives, and separation and divorce were common." Among the Hidatsa, Kiowa, and Omaha the women had a higher social position, and wives could leave cruel husbands. Each consort could remarry and the children were left in the custody of their mother or their paternal grandmother. Separation was never accompanied by any ceremony. During the dance among the Dakota any participant could divorce one of his wives by rising and declaring that he repudiated her. Among the Pima, "husband and wife may separate at pleasure, and either party is at liberty to marry again." There are other instances of the same sort, while in one case "divorces are granted only on the ground of unfaithfulness." A Delaware husband could put away his wife, especially if she had no children, and a woman could leave her husband. To the Iroquois "divorce was discreditable, but could easily be effected. The children went with the mother." In general, the marriage-bond could be dissolved by the wife as well as by the husband, and little ceremony was involved.⁵⁰ The same applies to certain South American Indians, divorce being pretty free, especially by the husband, though sometimes not permissible if there were children.⁵¹

In the Code of Hammurabi, if a man without just cause divorces either his concubine or wife who has borne him children, the woman takes the dowry and children, gets a share in the estate so as to rear her children, and is permitted to remarry as she will; if the husband makes over property to the children, she receives a child's portion. If a childless wife is divorced, she receives her dowry and an amount equal to the betrothal gift; if the latter were lacking, then one mina of silver.⁵² The frequent command in Semitic antiquity not to dissolve marriage indicates that divorce was common. "In such a case the man wrote a deed of separation, affixed his seal to it, and simply ejected the wife from the house." The only restraint on divorce was the requirement that the husband indemnify the woman.⁵³ Such statements as these may be read: "The man can

be divorced from his wife if he has found a more beautiful one. . . . The woman can legally be forced by the man to agree to divorce if she has found fault with him. If she had known of this defect before marriage, then she could say: 'I thought I could tolerate it, but now I see that it is impossible.' The following are grounds for divorce for the wife, as mentioned in the Talmud: if the husband either will not or cannot fulfil the marriage-duty, if he follows a loathsome trade, leads a disorderly, dissolute life, or, finally, if he mistreats his wife.⁵⁴ According to Moslem law, the husband can divorce without giving reason, but must give the woman her property and the morning-gift if he has not paid it. Among the Shiites the man gets the children, among other sects the woman, especially during their childhood. For formal divorce the formula must be pronounced before two witnesses. The woman too may apply for divorce, in which case she pays the husband an indemnity. She can demand divorce of the man if she says she intends to marry another who is better than he. A couple may divorce by mutual agreement. In Islam economic difficulties and sacrifices make divorce an unwelcome recourse for either party. A rich man or woman can do almost anything by paying the prescribed costs, but a woman with no property and no means of earning is slow to seek divorce entailing sacrifice of her dower.⁵⁵

In ancient Greece divorce was regarded as shameful for a woman. Menelaus says that he thinks it a serious matter for a woman to lose her wifely status; "all else that a woman can suffer is relatively secondary; but for her to lose her husband is to lose her life."⁵⁶ Later, and especially at Athens, divorce was easy and of very frequent occurrence.⁵⁷ A ground of divorce in olden times in Iceland was the presence of too many poor relatives who had to be supported.⁵⁸ For divorce in the Massachusetts Bay Colony, "female adultery was never doubted to have been sufficient cause; but male adultery, after some debate and consultation with the elders, was judged not sufficient. Desertion a year or two, where there was evidence of a determined design not to return, was always good cause; so was cruel usage of the husband."⁵⁹ In 1923 the British House of Commons passed by a vote of nearly ten to one the bill providing that Englishwomen may hereafter, like Englishmen, obtain divorce for infidelity alone, instead of having to bring additional charges of cruelty or desertion against their husbands. Such action may aid the theory of the moral equality of the sexes.⁶⁰

§394. Widowhood.

BEFORE considering cases illustrating the lot of the widow, we may cite, by way of contrast, the situation of the widower in East Africa. "In Unyamwesi, if a woman dies leaving only one child, the widower receives back half the dowry [bride-price], or one-third if there are two children; but in lieu of this he may demand another wife, and if he is given his wife's sister he will pay only five rupees [approximately two dollars and a half] in dowry for her. In Useguha the husband has an absolute right to marry his deceased wife's sister

without payment of dowry; the same rule applies among the Wasove, excepting that the widower cannot claim a right to his sister-in-law. In Sumbwa, again, only a very small sum is paid if the widower marries his sister-in-law, and among the Bakumbi he may demand another wife if he had no children by his deceased wife. In the Bungu and Banjika tribes it is usual for a man to marry his deceased wife's sister, but here it cannot be demanded, and dowry must be paid. In Ukarra, again, it is so much the rule for a widower to marry his sister-in-law that if he does not do so his young children will always be taken over by their maternal grandparents."¹

Among the natives of Port Darwin "a widow and orphans are kept alternately by her own and by her deceased husband's family, and in some instances," comments the author, "I know the time of relief is eagerly looked for." In Central Australia widows are sometimes not allowed to speak for twelve months; they use a gesture-language with considerable dexterity.² In British New Guinea, where as a rule a person is addressed by his own personal name or by his ceremonial double name, a widow or widower is denied this privilege and is referred to as "widow" or "widower," a practice which sometimes continues even after remarriage.³ Among the Koita, the dead man's brother's wife blackens the widow from head to foot, and her head is shaved. "For six months the widow wears her mourning ornaments; during this time she may show herself but little in public, she should not speak much or loudly, neither may she walk along the main village street nor leave her house by the front verandah. There are no cooking or fire *taboos* on the widow, but she and all other relatives of the dead man must abstain from such articles of food as he specially cared for until after the feast, called *ita*, some six months later."⁴ In Eddystone, Solomon Islands, widows sometimes follow their husbands to the grave. "Kera did not cry or she could not have died, for a widow who cries can not hang herself; she kept smoking and eating betel nut. . . . Widow Mali and Widow Pongo held up both ends of a pole, and Kera hung herself in the middle." The term *ungi*, meaning to follow, "is specially reserved for women who die to follow their husbands. . . . Men do not *ungi*."⁵

On the African Gold Coast loud singing at a man's funeral is to warn off women who are not relations, and whose own husbands would die within a year if they should see the widow. "The uniform custom among Negroes and Bantus is that those escaping execution on the charge of having witched the husband to death, shall remain in a state of filth and abasement, not even removing vermin from themselves, until after soul-burial is complete—the soul of the dead man being regarded as hanging about them and liable to injury." For the same reason they are confined to their huts. "They maintain an attitude of abasement and grief, sitting on the ground, eating but little food, and that of a coarse kind. In Calabar their legal rights over property, such as slaves, are considerably in abeyance, and they are put to great expense while the spirit is awaiting burial. They have to keep watch, two at a time in the hut, when the body is buried, keeping their lights burning, and they have to pay out of their separate estate for the entertainment of all friends of the deceased, who come to pay him compliment."⁶ The period of mourning may be

forty days or even six months, at the end of which "the widows wash, shave the head, pare the nails, and put on clean clothes, the old clothes, the hair and the nail-parings being buried."⁷ "The more eminent the husband was in life, the heavier are the duties that devolve on the widow after his death"; she is beaten by the dead man's relatives, on the burial-day, till she can reach the nearest water and bathe in it.⁸ In the Batanga interior, most widows are still required to go perfectly naked, sometimes for a whole year.⁹ Among the Ibo, "the widow takes off her neck ornaments and stays in the house during the day; at night she carries the ashes of her fire to the ajoifia ["bad bush"]. In twelve days the woman who removed the neck ornaments shaves her head and puts cotton on her neck; the hair is thrown in the ajoifia; they break down the wall at the back of her house for her to go out; she does not cook for anyone and no one cooks for her, except a small girl who has not yet put on neck ornaments; she may not touch any male person except a small boy who has not put on a loin cloth; only her son may go to her house at night; no one may go into the water where she is washing, nor step over her legs; after twenty-eight days they rebuild the wall, she uses the ordinary door and they go to market"; the final act is one of sacrifice.¹⁰

In Madagascar, in the case of the death of a man of position and wealth, his widow is dressed in her best and remains in the house until the family returns from the tomb. As soon as they enter the house, they begin to revile her in the most abusive language, telling her that it is her fault that her fate has been stronger than that of her husband and that she is virtually the cause of his death. "They then strip her of her clothes, tearing off with violence the ornaments from her ears and neck and arms; they give her a coarse cloth, a spoon with a broken handle, and a dish with the foot broken off, with which to eat." She remains under a coarse mat all day and may not speak to anyone who enters the house. She is not allowed to wash her face or hands. This lasts not less than eight months; "and even when that is over, her time of mourning is not ended for a considerable period; for she is not allowed to go home to her own relations until she has been first divorced by her husband's family."¹¹

A proverb in Punjab runs as follows: "A Jât, a Bhât, a caterpillar, and a widow woman, these four are best hungry. If they eat their fill they may do harm."¹² Wilkins¹³ quotes a Hindu widow's description of the treatment she receives. She is addressed as if she were to blame for her husband's death; her head is shaved; she is allowed only one meal a day; and must frequently fast. She says a suttee is better. The suttee¹⁴ went on probably for two thousand years until the English interdicted it about 1830. A trustworthy verse of the *Atharvaveda* testifies to the death of the wife with the deceased husband as an extremely old custom.¹⁵ The practice of wife-suicide has not entirely disappeared, and so long as the social stigma of widowhood exists sporadic cases are likely to occur. In 1923 a young Hindu wife is reported to have mounted her husband's funeral-pyre and to have been consumed in the flames.¹⁶

An old book refers to a similar practice in China: "Among the people of this country, one man hath manye wyues, whiche declare theyr loue to their

husbandes after this sort. When the husband is dead, euery one of his wiues pleade their cause before a iudge, to proue which of them was most louing to her husband and beste beloued of him: so yat she which by the sentence of the iudges is found to haue been most faythful and diligente, decketh her selfe moste gorgeously in all her sumptuous araye, and procedeth like a *Virago* stoutly and cherefully to the fire, where the corps of her husbande was burnte, castinge her selfe into the same fyre, embrasing and kissing the dead bodi of her husband, untill she also be consumed by the fyre, whiche she reputeth for an honourable sepulture: whereas his other wyues are esteemed to lyue in shame and infamie."¹⁷ In China today, when a girl "spills the tea"—that is, loses her betrothed by death—"public opinion honors her if she refuse a second engagement; and instances are cited of young ladies committing suicide rather than contract a second marriage. They sometimes leave their father's house and live with the parents of their affianced husband as if they had been really widows."¹⁸ They may even be formally united with the dead in marriage. After such a ceremony the widowed bride changes her costly bridal dress for the mourning-costume prescribed for widows, weeps and laments at the side of the coffin, and goes through all the mourning-ceremonies which are incumbent on a widow, pledging herself forever at the altar of her bridegroom's manes and waiting on his parents as if she were really their daughter-in-law.¹⁹

The general sign of widowhood among the Dakota Indians was loosening the hair and cutting it short in a line with the ears. "It was the wife's duty to light a fire for four nights on her husband's grave and watch that it did not die out before dawn."²⁰ Winnebago widows were supposed to continue single for four years. They were told to play or dance, or in fact do anything that would make them forget their sorrow, such admonition being usually given by the sisters or aunts of the deceased husbands.²¹ Sometimes the Guiana Indian widow is whipped, sometimes immolated. She cuts her hair and takes off her ornaments.²²

Among the ancient Germans the widow was free to choose whether to follow her deceased husband or not, but the general opinion was that a true wife would choose the former. This was especially the case in the north and among the Scandinavians.²³

§395. The Lot of the Widow.¹

Re-marriage. If the Australian widow has no near relatives, her re-marriage is arranged by the chief of her tribe. Her own inclinations are not consulted.² Of the aborigines of Tasmania it is affirmed that widows, unless given in marriage, were "the common property of the males of the tribes into which they had married."³ Among the Koita "no levirate exists, in fact it is stated that marriage with a deceased husband's brother does not occur; on the other hand, the marriage of a widow, with a son of a brother or sister of her deceased husband's father, although not compulsory, is considered an especially suitable match." Concerning the Louisiades, "it was stated that a man had the right to

marry his brother's widow after the latter had completed her mourning, and that the widow would not refuse such a marriage; it was even said that her new husband would not pay for her. If another man wished to marry the widow he would have to pay the dead man's brother the price that the dead man had paid for the woman, even if he were a clansman of the deceased."⁴ On Tikopia Island "marriage with the brother of the deceased husband is *tapu* or forbidden. If such a marriage were to occur, it is believed that the ghost of the dead husband would injure the brother who has taken his place." At the present time it is the established custom on the Banks Islands that "a man shall marry the widow of his mother's brother if he is not already married, while in the old times when polygyny was still practised it is clear that he would take the wife or wives of his dead uncle even if he were already married." This marriage with the wife of the mother's brother, states Rivers,⁵ may be regarded as an exceptional form of the levirate, but this institution also exists in its more usual form. "It is right for a man to marry the widow of his deceased brother and it seemed that the widow might be taken either by the elder or younger brother of the late husband. A third orthodox form of marriage is that with the wife's sister. At the present time or till recently a man naturally married the sister of his deceased wife while still farther back it often happened that in case of polygyny the wives were sisters." In the New Hebrides, "the wife of a deceased husband was taken by the brother of the departed."⁶ Among the natives of Choiseul Island, "when a widow wishes to marry again she cuts off her hair—which has grown to a great length during the period of mourning—bedecks herself with all her ornaments and finery, moves about from village to village and lets it be known that the first good offer of marriage will not be rejected."⁷ In the D'Entrecasteaux Islands there is no marriage-ceremony for widows. "Never can they return to the maidens' hut, never be wooed again with the vibrant jew's harp. If a widow finds a man attractive she may ask him to visit her at night and cohabit; and the man will make her a present for her favours. The relatives are sure to see it and keep watch, and finally her late husband's brother one night will squat down before her door and call to the couple within. The woman will begin to weep, and the man hurriedly cry out that he has just arrived to take her away. . . . At day-break a conch-shell is sounded in the hamlet, and proclamation is made that 'so-and-so' was found in the widow's hut. The man goes home, but presently her brother-in-law and the other kinsmen bring his new wife to him, and he makes them a payment as a peace-offering. This constitutes their legal marriage."⁸

In South Africa, "should a childless widow return to her own people, and the cattle be restored to her late husband's representatives, and she remarry, the restored cattle must again be handed over to her friends. In this case it is not she who failed as a wife, as is evidenced by another man marrying her."⁹ In Ashanti, "if the husband disappears for three years, his wife may marry again, but should the first husband return all the children of the second marriage will belong to him."¹⁰ "Widows enjoy in general no good reputation in Bassari, since they frequently fall into prostitution in case they do not soon

marry again after their husbands' deaths."¹¹ When a widow among the Ibo wishes to remarry "she sits down, legs stretched out in the house of a bachelor, and her suitor steps over her legs; he takes the string from her neck and waist and she takes them to the *ajoiifa* ["bad bush"] and washes; after second burial the widow can take her property to the house of the dead man. Before the marriage is finally completed an *Nri* man puts two cowries on a string round the waist of the husband saying, 'Oh, husband, take your hand from the woman, let the new husband come and take her.'" In another case the widows put black thread on their necks, which is worn for one year, after which "they shave and cut off the thread, rub cam-wood and mark the body with black stuff; the thread and the hair are thrown on the ash heap. After this they are free to marry."¹² There are no widows among the *Boloki*, for as soon as a husband dies, the woman becomes the wife of his heir.¹³ Among the *Bahima*, "the father's brother takes the widows, unless he happens to have two wives already; under such circumstances the eldest son takes charge of them, though they are regarded as the property of the uncle, and he pays them marital visits from time to time; any children born to these widows are accounted the children of the deceased, not of the uncle."¹⁴ In the case of the *Ba-Mbala*, widows can be claimed by the brother of the deceased.¹⁵ In *Kenya Colony* "a widow may not re-marry. On the death of her husband she falls to his eldest brother. If there are more widows than one the brothers take in order of seniority; should there be no husband's brothers living, they go to the sons of their husband's paternal uncles—failing these to a near member of the husband's clan. This only applies to women capable of bearing children. A widow is not strictly a wife to the man who takes her, for any children she may bear, by whomsoever begotten, take her dead husband's name, and on attaining maturity take the stock and its increase which their 'father' left; if he had mature sons living at his death, these post-mortem children have a claim to a re-division."¹⁶

Among the *Theraka* of East Africa a man states before he dies which of his sons and wives shall be married to each other; "if this is not done they cannot be married until the elders . . . have consented to it, in which case the brother of the deceased must first cohabit with the big wife [the first wife]. If this is not observed *Makwa* [curse] will ensue. If on a man's death neither he nor his wife have any near relations left, the woman can marry whom she pleases, but she must first have connection with a stranger. For this purpose a *Mkamba* is usually chosen, and as my informant added, 'a *Mkamba* never refuses because he knows that he will get honey beer.'" Probably both connections are precautionary—one against infringement of the levirate, the other to pass possible evil over to a stranger.¹⁷ The author¹⁸ from whom the above has been taken discusses in general the East African customs applying to widows, including the question of their remarriage. "One of the main principles of marriage, which is rarely disregarded, is that a woman can never be married twice,

in the sense that she is paid for twice, excepting in the following cases: 1. If her husband dies before she has borne children. 2. In Ukamba a woman who cannot be remarried is lent as a mate to another man, but if she leaves him and goes to a third man, her brother-in-law or son, as the case may be, may consent to accept dowry [bride-price] for her from that one, and she is then lawfully married to him. A lawful marriage may be said to exist only when the man to whom the woman is given has full claim to all her children. Herein lies the distinction between a man who is a mere companion to the woman, and a husband who may have paid nothing at all in dowry. The first wife married by a man (styled the 'big wife') can never be remarried to anyone after her husband's death; as widows they live either with the brother of the deceased or quite alone. . . . The idea that a single wife of a convert should remarry is repugnant to the pagan code of morality."

The writer goes on to state that it is at times difficult to distinguish the custom applying to widows and children from that of inheritance, but cautions us that it would be a mistake to regard widows in the same light as heritable property "merely because it is most usual for the widow to remain with her deceased husband's heir or other relative. Here, of course, it is of great consequence whether or not dowry [bride-price] has been paid in full, for whatever rights were accorded to the husband, the claims of his relatives will not be respected in like degree unless he had paid full dowry for his wife, nor will she consider herself bound to his family as she was to her husband unless the claims of her family were fully satisfied. Hence, in cases where men die without having paid full dowry, a dispute generally arises as to their widows and children. But provided full dowry has been paid, it seems that there is remarkably little variance in the customs of these various tribes in this respect, and I incline to think that original custom nowhere permitted a widow to marry outside her husband's clan or family. . . . The most common rule is that a widow is taken to wife by her deceased husband's brother, but it may be noted that, in Ukamba and perhaps elsewhere also, a man cannot marry the widow of his younger brother, because he stands in the relation of a father to the latter." The author states further that the reason why widows are not allowed to marry strangers is the desire to keep the children within their own clan. "For the maintenance of the clan and family strength is all important, wherefore it could never be held right that the offspring of one clan should go over to another clan. By consequence, provision has been made for the re-marriage of a widow to a member of her husband's family, lest she should lose her children, who must remain in the father's family. It is also the consideration of her children which will induce a widow to prefer marriage with her husband's relatives. Notwithstanding custom and common practice, at the present day, widows are very often permitted to marry strangers, but always against return of dowry and the loss of their children, which is not advantageous to the new husband either, for he will consider that he has less chance of rearing up a numerous progeny, which is the ideal of every African. For this reason it will be found that only rarely does a widow desire and find it possible to marry a stranger."

The Mongol widow does not re-marry, for she is to serve her husband in the next world. The youngest son inherits his father's wives and may take any of them but his own mother; for if they go back to his father in the next life he

does not care.¹⁹ Among some Siberian tribes, "after the death of one of several brothers, the next brother succeeds him, and acts as husband to the woman and father to the children, for whom he keeps the herd of the deceased. If the woman is too old, he does not exercise his right of levirate, which is here considered more as a duty than a right and only appertains to the younger brother, cousin, or even nephew, and never to the elder brother or uncle." The Koryak levirate rules are as follows: "1. The widow must be married to the younger brother, younger cousin, or nephew (son of sister or brother) of her deceased husband. 2. The widower must marry the younger sister, younger cousin, or niece (daughter of sister or brother) of his deceased wife. According to Jochelson, the Koryak levirate has for its object the maintenance of the union between two families." If this is so, then why, asks the authoress,²⁰ may not a widower marry his deceased wife's elder sister, and why may not a widow marry her deceased husband's elder brother? "To this question Jochelson suggests the following reply: That the elder brother and elder sister occupy the places of the mother or father in the family should either of the parents die, and so marriage of the widower with the elder sister of his former wife, and of the widow with the elder brother of her former husband, are held to be as incestuous as if these relations-in-law were actually the parents." Among the Gilyak, "after the death of a husband, his wife passes, without any *kalym* [bride-price], to one of his younger brothers, according to the decision of the clan."

In China it is considered censurable for widows to marry. "The widow is occasionally sold for a concubine by her father-in-law, and the grief and contumely of her degradation is enhanced by separation from her children, whom she can no longer retain. Such cases are, however, not common, for the impulses of maternal affection are too strong to be thus trifled with, and widows usually look to their friends for support, or to their own exertions if their children be still young. . . . It is a lasting stigma to a son to neglect the comfort and support of his widowed mother. A widower is not restrained by any laws, and weds one of his concubines or whomsoever he chooses; nor is he expected to defer the nuptials for any period of mourning for his first wife."²¹ In the southeastern districts of Fuhkien, scarcely any marriage-maker is inclined to accept a widow for a young man in whose behalf he is seeking a wife. "Such a woman, it is believed, must bring bad luck to her second husband and his clan, because of the revengeful manes of her first husband, which, offended at the infringement upon his ownership, will hover over them all. Consequently a second husband is almost always either a widower or a man of middle age, no longer under control of others regarding the choice of a wife, and moreover a man of small means who cannot pay the large sum of betrothal money generally demanded for a virgin." It is hard to find any one who is willing to draw up the contract, for "perfectly aware that holy antiquity condemns second marriages of women by the word of the Li Ki, he feels sure that, should he presume to write such documents, the gods, and the spirit of the first husband in particular, would send down punishments upon him and frustrate all his future endeavors to obtain a degree at the examinations of the State. . . . Only some old or pettifogging student who has lost all hope of ever taking a degree and obtaining a place in the service of the State, attracted by the pecu-

niary reward, can be found to do such debasing work. He must draw up the contracts in the open field; for, were they written in a house, great misfortune might befall the inmates. And on the spot where the rest of the water with which he has rubbed the ink, is poured away, no blade of grass, or moss, or weed, will ever grow. Such is the curse that sticks to a widow's marriage contract."²² In some parts of China a marriage between a widow and a widower, usually both of advanced age, is concluded with the understanding that the widow belongs spiritually to her former husband, that is, when she dies her body is claimed by his family and is buried with him.²³

Among the Palaungs, instead of the usual rice and curries, lumps of rough unrefined sugar are given to guests at the marriage of a widow.²⁴ It would seem that the Hindu code does not contemplate the case of a man taking a widow as his only wife.²⁵ Westernmarck²⁶ collects cases indicating the sense of degradation connected with the re-marriage of a widow in India. In instances where it is not prohibited, the higher families do not generally practise it. At such a marriage the ceremony is a maimed rite and there is no sacred fire. By the marriage of widows Rajput families lose their rank and precedence.²⁷ Marriage of widows and divorced women goes with the eating of mutton, pork, and fowls and the drinking of alcohol.²⁸ Widow-marriage may prevail among the lower castes and not among the higher.²⁹ Where divorced women and childless widows may re-marry at pleasure, "widows with children are not supposed to remarry, having to devote themselves to the bringing up of their children."³⁰ Again, where they may re-marry, widows with children refrain, "as a widowed mother is paramount in a son's house."³¹ Widow re-marriage is allowed, once more, provided the groom promises one daughter to the widow's family or a money-equivalent for her. Till mid-day of the day following the marriage, the couple should not be seen by any one.³² "Widows may marry, but never with the deceased husband's brother, nor with any member of the same sub-division to which the husband belonged. . . . In the case of re-marriage, the Brahmin or any experienced elderly man inverts the order of the prayer."³³ In Travancore, Hindu widows are incapable of re-marriage. A case is cited where there was given in marriage a young daughter who was only nominally a widow through the death of her betrothed. The Brahman father was excommunicated from the temple and from his caste, and the temple cleansed at great expense and with solemn ceremonies from the pollution caused by his entrance after the marriage.³⁴ In general, a man who marries a widow is boycotted and ostracized; he has to leave his home and take government employment at a distance.³⁵ This attitude is of long standing, for in the Code of Manu³⁶ a second husband is nowhere prescribed for a virtuous woman; indeed, a woman should "never even mention the name of another man after her husband has died." So strongly has the re-marriage of a widow been disapproved by Hindu mores that it had to be established by the English through a special law, in 1856.³⁷

Today, however, enforced widowhood is losing its hold, especially in Upper India. This has been accomplished partly through the efforts of an organization which seeks to promote the re-marriage of widows. Particularly noticeable in its report is the large number of re-marriages taking place among Hindu widows of the highest castes. The society has had more success in the Punjab than elsewhere, and it is estimated that if the present rate of re-marriage continues unchanged, there will soon be not a single young widow unmarried unless by choice. This re-marriage society conducts a sort of matrimonial bureau and also a boarding-house for the accommodation of widows desiring to be married.³⁸

In Sumatra, "on the death of a man married by *jujur* or purchase, any of his brothers, the eldest in preference, if he pleases, may succeed to his bed. If no brother chuses it, they may give the woman in marriage to any relation on the father's side."³⁹ Wilken⁴⁰ mentions cases where the betrothed of a dead man went over to his brother because the bride-price had been paid up as a whole and the father of the boy did not want to have made all the expenditures for nothing. Youth is no hindrance in this custom whereby the control of the widow belongs to the brother; children, even sucklings, are found for whom four, six, and sometimes more wives are waiting. It is simply a matter of inheritance that one gets his brother's widow. In the Rejang country this results in polygyny; one district-head is mentioned who had seven wives of whom five were widows of his deceased brothers. The children born of a levirate-marriage are nevertheless regarded as the dead man's offspring. Among the Alfurs the levirate-marriage does not prevail; "at death of one spouse, the survivor may never again unite with another. In that case he or she would be exposed to the hatred and vengeance of the family of the deceased."

In Samoa, "the brother of a deceased husband considered himself entitled to have his brother's wife, and to be regarded by the orphan children as their father. If he was already married, she would, nevertheless, live with him as a second wife. . . . The principal reason they alleged for the custom was a desire to prevent the woman and her children returning to her friends, and thereby diminishing the number and influence of their own family. And hence, failing a brother, some other relative would offer himself, and be received by the widow."⁴¹

Among the Tlinkits, "when a brother dies some one of his surviving brothers must take his widow to wife. If the deceased left no brother, then the next closest relative of his must make the widow his wife. On the other hand, if the wife dies, then a sister of the deceased, or a close relative, must be given to the surviving husband for a wife. . . . It will be seen that this form of marriage among the Thlingets corresponds precisely with that of the ancient Hebrews. It is also interesting to note that there is a correspondence in other respects between the marriage customs of the two peoples; for example, in the dowry, the choice of husband and wife by parents, etc. It is very common for the nephew of the deceased husband to take his widow to wife, the nephew being considered the nearest relation to a man next to his brother. Also for the niece of the deceased wife to marry the widower, as the niece is the nearest relative of a woman next to her sister. In levirate marriages no presents are passed from the man's people to the people of the woman he takes to wife, for

this is only making good his loss. . . . If a brother should refuse to take to wife his deceased brother's widow he would be disgraced among his people."⁴² This usage prevailed also among the Indians of British Columbia, a man's widow or widows going to his surviving brother. "It was also customary for a man to marry all his wife's sisters, who are always younger than herself, the eldest daughter being always the first to be disposed of in marriage among primitive people like the Salish. . . . A man might also wed a widow other than his brother's wife, and if she had daughters these also became his wives provided they were not akin by blood to him. A widow had the privilege of bestowing her own hand in a second marriage if she had no brother-in-law to claim her."⁴³ Among some Algonquians, "widows and widowers were left to their own inclinations."⁴⁴ The Omaha still observe the old rule of exogamy and "when a man dies, his widow feels that she honors her husband's memory by remaining in the family, a feeling shared by any unmarried brother of the deceased, who, even if much younger than the widow, promptly becomes her husband."⁴⁵ Among the Guiana Indians the husband's brother sometimes claims the widow; to be re-married she must be bought from him. In some tribes, on the occasion of the marriage of a widow, "after having covered her husband's remains with earth, they put her on the grave, and remove the rag which, for the time being covers her chest; she then holds her hands above her head: a man comes forward and strikes her breasts with a switch—this is her future husband: the other men hit her on the shoulders, and she receives the flagellation without a groan: her fiancé in his turn is struck with the switch, his hands joined above his head and without a murmur."⁴⁶

In Arabian custom a widow before re-marriage makes a bird fly away with the uncleanness of her widowhood.⁴⁷ It is regarded as a disgrace, especially for her son, if a woman remarries.⁴⁸ Although in the Homeric poems a woman is expected to marry again on the death of her husband, yet no widower takes a second wife.⁴⁹ Theseus consoles the ghost of his wife by a declaration that he will not marry again, Admetus promises to take no other wife after Alcestis, and Andromache hates the woman who loves her new husband after her former husband's death.⁵⁰ Re-marriage of widows was manifestly disapproved of by the ancient Germans; among some stocks it was even forbidden.⁵¹ The law provided that children born of a second marriage belonged to the first husband.⁵² Today, "an Albanian tribesman, whether Christian or Moslem, has but one wife at a time, unless he choose to take as well his brother's widow. This by tribe law he may do one month after her husband's death. As all men of a tribe rank as brothers, it follows that a man may take his cousin's or uncle's widow, or both, should there be no nearer male relative than himself surviving. . . . When there is no child, and the husband has been shot very soon after marriage, there is no doubt that the idea is to beget a child that is to rank as his. Children so produced are still reckoned by many people as the actual

offspring of the dead man, in spite of the Franciscans, who study medical works, and gravely assure their flocks that the thing is impossible."⁵³

§397. Polyandry.

IN reviewing this topic and the following, which have to do with plurality of union, it is of course to be borne in mind that mere sexual relation does not constitute marriage of an institutional type. Plurality of sex-connection is often nothing but lack of all organization whatsoever. If, then, several men have access to the same woman, the case is really as logically alignable with prostitution as with polyandry; in matter of fact, it is neither, for there is no institution present either to receive the name of polyandry or to be abrogated by lawless procedure subversive of institutional arrangements. Nevertheless these very instances of unregulation, like those reviewed in a former connection,¹ cast light from an especial angle upon institutional development. They reveal a tendency in the direction of adjustment to the governing condition of bi-sexuality. Under circumstances of extreme unregulation, or poverty, or disproportion in the number of the sexes, human beings move into such-and-such relations which may, if the conditions persist, ultimately approach institutional form. There is therefore no apology for inserting instances of what is, strictly speaking, not yet polyandry (or polygyny) under the present and following topics.

In Australia this sort of looseness or lack of organization, permitting of plurality in both directions, is to be found: "every man has one or more . . . women who are especially attached to him and live with him in his own camp, but there is no such thing as one man having the exclusive right to one woman"; and while one man may have a preferential right to a woman, other men have a secondary right. In this region "individual marriage does not exist either in name or in practice."² Multiplicity of husbands occurs under peculiar circumstances in the Fiji Islands: "polyandry is to be seen under our eyes here in Fiji among the 'imported labourers'; . . . the women being very few in proportion to the men became something like communal wives to those of their island, or group, one of whom they could have married at home." It is evident that there was no real marriage here, though the tendency to plural mating under great disproportion of the sexes is manifest. Among the natives who are not expatriated, "anything properly called Polyandry is unknown, nor is it easy for natives to conceive of it as a possible marriage state."³ In San Cristoval, Solomon Islands, there exists a custom which, if not true polyandry, is at least a variation of it. "A man gives money and goes and lives with a married couple. Often, it is said, he has no access to the woman, and lives with them merely to have someone to cook for him and help in the garden work; but if he wishes to have access to the woman, he may do so on payment, and will have children by her. In some villages there are three or even four men living thus with a woman, but never more; and all the children born are considered to be the children of the first husband."⁴

³ Codrington, *Melanesians*, 246, note, 245.

⁴ Fox, in JAI, XLIX, 118-119.

Among the Ba-Mbala of East Central Africa polyandry does not exist, but "a childless man will secretly introduce his brother to his wife in order that he may have a child by her; such a proceeding is, of course, a *secret de polichinelle*"⁵—that is, no secret at all. Sometimes among the Bahima a man finds himself too poor to marry; he has insufficient cattle or cannot afford the bride-price; "in such a case he asks one or more of his brothers to join him, and together they raise the necessary number of animals; a woman will readily agree to this arrangement and become the wife of two or three brothers. They have the right of sharing her couch turn and turn about until she becomes pregnant, when the elder brother alone has the right of access to her: the children born under such circumstances belong to the elder brother. Such an agreement, however, does not deter the younger brothers from obtaining wives themselves later when they can afford them." The only other Bantu people known to the writer⁶ to be polyandrists are the Baziba to the south of Uganda.

Scattered through India are several tribes which admit plurality of husbands.⁷ "Such as haue wyues, do often tymes chaunge theyr wyues, one frende with an other for th[e] increase of further frendship. . . . Among some of them, one woman is married to seuen husbandes. . . . And when she hath brought forth a child, she sendeth it to whiche of her seuen husbandes she list, who maye in no case refuse it."⁸ Of one tribe in the Nilgiris "it is said to be the custom for several brothers to take one wife in common."⁹ In the Sholapore District, "polyandry is permitted on the death of the husband or on his relinquishing his sexual prerogative."¹⁰ "There seem to be indications that fraternal polyandry may at some time have existed among the Santāls. Even now . . . a man's younger brother may share his wife with impunity; only they must not go about it very openly. Similarly a wife will call in her younger sister," who may be married as a second wife, to avoid scandal.¹¹ The fraternal polyandry reported of the Todas is now obsolete or nearly so. "This old custom of polyandry seems to have been the result of the custom of female infanticide once prevalent amongst them."¹² "It is probable that the latter custom still exists to some extent, though strenuously denied. There is reason to believe that women are now more plentiful than formerly, though they are still in a distinct minority. Any increase, however, in the number of women does not appear to have led to any great diminution of polyandrous marriages but polyandry is often combined with polygyny. Two or more brothers may have two or more wives in common. . . . It seems possible that the Todas are moving from polyandry to polygyny through an intermediate stage of combined polyandry and polygyny."¹³ All accounts of the Todas agree in attributing to them the practice of female infanticide, while the records of the population in the past all show a considerable excess of men over women. Rivers,¹⁴ writing in 1906, described their "completely organised and definite system of polyandry" as follows. "When a woman marries a man, it is understood that she becomes the wife of his brothers at the same time. . . . In the vast majority of polyandrous marriages at the present time, the husbands are own brothers. A

glance through the genealogies will show the great frequency of polyandry. . . . The arrangement of family life in the case of a polyandrous marriage differs according as the husbands are, or are not, own brothers. In the former case it seemed that there is never any difficulty, and that disputes never arise. The brothers live together, and my informants seemed to regard it as a ridiculous idea that there should ever be disputes or jealousies of the kind that might be expected in such a household. When the wife becomes pregnant, the eldest brother performs the ceremony of giving the bow and arrow, but the brothers are all equally regarded as the fathers of the child. . . . If a man is asked the name of his father, he usually gives the name of one man only, even when he is the offspring of a polyandrous marriage. I endeavoured to ascertain why the name of one father only should so often be given, and it seemed to me that there is no one reason for the preference. . . . When the husbands are not own brothers, the arrangements become more complicated. When the husbands live together as if they were own brothers there is rarely any difficulty. If, on the other hand, the husbands live at different villages, the usual rule is that the wife shall live with each husband in turn, usually for a month at a time, but there is very considerable elasticity in the arrangement. It is in respect of the 'fatherhood' of the children in these cases of non-fraternal polyandry that we meet with the most interesting feature of Toda social regulations. . . . Usually it is arranged that the first two or three children shall belong to the first husband, and that at a succeeding pregnancy (third or fourth), another husband shall give the bow and arrow, and, in consequence, become the father not only of that child, but of all succeeding children till some one else gives the bow and arrow. The fatherhood of the child depends entirely on the *pursūtṭipimi* [bow and arrow] ceremony, so much so that a dead man is regarded as the father of a child if no other man has performed the essential ceremony. . . . There is no doubt whatever as to the close association of the polyandry of the Todas with female infanticide. As we have seen, the Todas now profess to have completely given up the practice of killing their female children, but it is highly probable that the practice is still in vogue to some extent. It has certainly, however, diminished in frequency, and the consequent increase in the proportion of women is leading to some modification in the associated polyandry. . . . It seems to me that the correct way of describing the present condition of Toda society is to say that polyandry is as prevalent as ever, but that, owing to the greater number of women, it is becoming associated with polygyny. When there are two brothers it does not seem that each takes a wife for himself, but rather that they take two wives in common. It is probable that this will lead in time to a state of society in which each brother will come to regard one wife as his own; and in a few cases it seemed to me that there was already a tendency in this direction. If this forecast should be fulfilled, the custom of monogamy among the Todas will have been developed out of polyandry through a stage of combined polyandry and polygyny."

Some license in flirtation is permitted with a husband's younger brother in Bihar and Bengal, and marriage with him is allowed in case of widowhood.¹⁵ Polyandry is reported from Calicut.¹⁶ A peculiar form is where a woman of sixteen to twenty years of age, married to a boy of five or six or younger, lives

¹⁵ Mitra, in JASB, VI, 119.

¹⁶ Eden, *First Three Books*, 18.

with his father, uncle, or some other relative of her husband on the mother's side. When her husband grows up she is already old and he takes the wife of some related boy.¹⁷ Westermarck¹⁸ says that this occurred among the Russian peasants prior to emancipation. Polyandry in Ceylon is said to be practised chiefly by the rich.¹⁹ Indications of fraternal polyandry appear in the Hindu traditions; in one case a man who had won a girl in a contest for her hand gives her up as of right to his older brother.²⁰

The question of polyandry among the Nairs is a much debated point. "This can be said with certainty: there has been no authenticated case of it at least for the last fifty years. All the evidence that we have of this custom among the Nāyars in the sixteenth, seventeenth, and eighteenth centuries, are from foreign travellers who, it must be remembered, were not allowed to come within sixty yards of a Nāyar house. Their evidence, therefore, is an extremely unsatisfactory ground for dogmatising on Nāyar customs. On the other hand, the extensive Malayalam literature of that period contains no single allusion to polyandry. . . . McLennan, in his well-known book, *Studies in Ancient History*, divides polyandry into two classes, and calls one the Nair type and the other the Tibetan type. 'It is in the nature of the cases,' says he, 'that all the possible forms of polyandry must lie between the Nair and Tibetan forms.' A good deal of what McLennan says about the Nāyar customs is vitiated by the unsatisfactory character of the information at his disposal. Buchanan, on whom he chiefly depends, made a journey through Malabar, and his account is wholly untrustworthy. The loose character of the sexual tie and the licentious habits of the richer Nampudiri landlords, as far as their immediate Nāyar tenants were concerned, were naturally enough interpreted as polyandry by foreign observers. As a matter of fact distinct polyandry of any type was very rare in Malabar except among the Kāniyāns (or the astrological caste) and among them it is of the Tibetan type. . . . A wife, for example, is the only woman who is allowed to smear oil on a man's back; and when a woman does it to a man it is considered to be a sort of semi-marital function. A man can always ask his brother's wife to do it for him, and it is done very often, even in the presence of the brother. Such customs are, however, open to two interpretations. As we have seen elsewhere, the *Machuna* marriage (or the marriage of cross-cousin) is the orthodox form of marriage among the Nāyars. To all the brothers alike the girl stands in the same relation before the marriage. *She could have been, in fact, the wife of any of them*, provided she was not older than her cousins. Even after her marriage with one of them this potential relationship continues to exist, and therefore all the brothers treat her 'half as a sister and half as a wife.' . . . This does not seem to me to be true. Nāyar tradition gives no support to this view. We have no Nāyar stories that speak of one woman who was the commonwife of her cross-cousins. In fact we have no tradition of any polyandry at all. Nevertheless, we find McLennan giving the Nair name to a particular type of polyandry supposed by him to be practised universally among them."²¹

Polyandry in China proper is found exclusively in one city in the province

of Fukien; it has been carried by emigrants to Formosa but is of local origin, being caused by the extreme poverty of the district, in which only the very poorest practise it. Brothers live with a common wife alternately for some defined period. In the same place infanticide, which seems also to spring from poverty, is of common occurrence.²² In the Malay Archipelago, "no regulated polyandry appears." The writer²³ finds only one instance, among the Dyaks, reported; in this case a woman may have more than one husband without being the worse thought of. It is not done secretly and all the children belong to the first husband. In Borneo Schwaner²⁴ found something like polyandry without a marriage-ceremony, which is, of course, of little significance to us. One Macassar case is reported where, since two brothers had one wife between them, both could not be hired for an expedition—one had to stay home and look after her.²⁵

An isolated case of polyandry with brothers is reported from the westernmost of the Caroline Islands.²⁶ In Nukahiva, one of the Marquesas Islands, a woman had a real and an auxiliary husband, the latter being generally poor and handsome.²⁷ This is merely a case of a lover with perhaps a more than incidental standing. Cranz²⁸ says that an Eskimo woman with two husbands has been observed. In cases where the men were much more numerous than the women two-husband polyandry "is not uncommon."²⁹ Aleut girls reserve the right to take a lover at marriage.³⁰ In some Iroquois tribes a woman could lawfully have two husbands.³¹ The brother of the husband is regarded as a second husband by the Kolush Indians;³² this practice is interpreted as a survival of group-marriage.³³ The customs and traditions of the Seri Indians are thought to suggest a former polyandry.³⁴ In those cases among the Guiana Indians where the number of women is extremely small, a kind of polyandry has developed.³⁵

On the Canary Islands, many of the women "had three husbands, who held the position in turn by months, the one next to succeed to the honor serving until his time came to be lord."³⁶ It was the case in Sparta where "it is traditional law, and a matter of common custom, for three or four men to have one wife, or even more if they are brothers."³⁷ Roman epitaphs occur indicating that two men had a common wife.³⁸ The old Teutonic myths represent Odin's wife as married during his absence to his brothers.³⁹ Caesar⁴⁰ reports some tribes of Britain as polyandrous; but this passage and one from Herodotus⁴¹ about the Agathyrsi are believed to be no more than inferences from joint-household life.⁴²

men, with no idea of marriage, belong under prostitution.⁴³ It is stated that the Albanian, returning from work abroad, "shows in particular more attention to the wife of his eldest brother than to his own and will certainly never bring anything special for the latter";⁴⁴ but to align such procedure with polyandry would be a far cry.

§398. Polygyny.

POLYGyny is practised by the tribes of western Australia, but in the genealogies Brown¹ did not find a case of a man having more than three wives alive at the same time. "Where there are several sisters in a family they are all regarded as the wives of the man who marries the eldest of them. He may, if he chooses, waive his right in favour of his younger brother, with the consent of the father of the girls. . . . When a man dies his wives pass to his younger brother or to the man who stands nearest to him in the relation of *margara* [younger brother]. This man marries the widow and adopts the children."

In British New Guinea, "polygamy is practised among the Mekeo people, but the number of wives rarely extends beyond three, and generally only wealthy men can afford the luxury. The ceremony on a marriage with a second wife is somewhat similar to that on marriage with the first; but on the second wife coming to the man's house the first wife will often leave it, and he has, if possible, to appease her and induce her to return. One factor which makes for polygamy is the right of the eldest brother or nearest male relative (married or single) of a dead man to the latter's wife. . . . Her entry to her new home, even if agreed to by the first wife, is not a peaceable one—at all events in form. The husband has with him a number of his male friends, all armed with sticks, and the party on reaching the house find the first wife there, and with her they find all her women friends, and possibly some of her male relatives, all armed with sticks. A fight, generally a sham one only, takes place between the two parties, in which the first wife's party try to defend the house against the entry of the second wife, and the husband's party, acting only on the defensive, support her in her effort to get on to the verandah platform of the house."² In Papua "a man may have as many wives as he likes, but polygamy is mainly confined to chiefs. This is a matter of being able to pay, rather than anything else."³ Each wife has her own house and garden, but all must obey the first or chief wife.⁴ Throughout the domain of the northern Massim polygyny is a privilege theoretically restricted to the families of chiefs. This rule is not strictly kept since on the Trobriands wealthy commoners, especially if they have a reputation as sorcerers, not infrequently take more than one wife, knowing that no one will dare to challenge their right to do so. "It seemed that great consideration was shown to the senior wives even when they became old and ugly, and there is no doubt that the senior wives directed and exerted a good deal of influence over the younger wives."⁵ On Lifu, Loyalty Islands, "a common man might have several wives; a chief often had many, as the number of wives was regarded as adding to a man's position and influence

among his people."⁶ In New Caledonia, "chiefs had ten, twenty, and thirty wives. The more wives the better plantations, and the more food. Common men had one or two."⁷ The reason given for the recent diminution of polygyny in the Fiji Islands is that the men greatly exceed the women in numbers, so that those men who had no wives objected to others having three or four, and in time the matter was equalized by forbidding any man to have more than one. Even under this rule there are said to be many bachelors who would marry if they could.⁸

Among the Tati Bushmen "a man will have as many as four wives or even more. Plurality of wives is largely a matter of wealth, and it gives a man distinction."⁹ Polygyny among the Zulus seems always to have been limited by the expense of wife-purchase; it is now waning owing to the increased cost of living. In former years a man could purchase a wife for eight oxen, but now the price has gone up to almost twice that number. Some parents have adopted the expedient of disposing of their nubile daughters on the instalment-plan, the terms generally being two oxen down and the remaining at fixed intervals. Only the very rich now have several wives.¹⁰ In West Africa there are men "who must remain bachelors because either they are not rich enough to buy a wife, or because wives are not to be had."¹¹ In the Congo Basin "polygamy is general, but except with rich and influential persons, the Banziris rarely have more than one free wife. The other wives are slaves."¹² Among some tribes the chiefs have so many wives, sometimes five hundred, that there are no young women left for the young men to marry.¹³ It is said to be the ambition of every Bangala woman to have a house of her own, and "it is the invariable practice for a man to build a house for every one of his wives, which she will regard as her own and in which she will live and bring up her family. A man of any pretence to importance will also have a house built exclusively for his own use. To this house he invites the wife he wants for the time being, or sometimes he simply goes to the wife's house for the night." When a man acquires a new wife the old ones exhibit no jealousy but regard her as an acquisition—"the new wife being one more to help keep the husband." A man can marry as many women as he can afford to pay marriage-money for; monogamy is the exception, being the result of poverty.¹⁴ Among the Ba-Mbala "polygamy is common, but all wives have equal rights." With the Ba-Yaka, "polygyny is the general rule, and the number of wives possessed by one individual is conditioned solely by the length of his purse; monogamy, still more celibacy, is merely the result of slender resources."¹⁵ While among the Batetela who have been under Arab influence polygyny is practised as a sign of rank and wealth—important chiefs have harems of hundreds of wives—"the more primitive Batetela contents himself with a few spouses, even important chiefs being satisfied with a dozen or so."¹⁶ In British Central Africa the number of wives per ordinary man is from one or two to six or ten; for a chief, from thirty to forty.¹⁷

In Uganda a great chief may have a hundred sons and be the probable progenitor of a thousand grandchildren. Kavirondo women are in excess of the men, but "it is highly improbable that any woman goes to her death unmarried; for if no suitor asks for her in the ordinary way, she will single out a man and offer herself to him at a 'reduced price.' The man would be hardly likely to refuse, since a woman in that country is a first-class agricultural labourer." The Kavirondo are reported to be much more moral than their neighbors, or were so before being corrupted by foreigners, including whites.¹⁸ The daughter of a chief becomes, on marriage, the chief wife, women taken earlier sinking to a subordinate position.¹⁹ Where losses of life in war result in a sex-proportion of five females to three males, as among the Kilimandscharo tribes, polygyny exists and every man has as many wives as he can get.²⁰ Few of the Mombasa of East Africa indulge in the luxury of more than one wife, though the number permissible seems to be limited only by the means of the parties.²¹ "The Wa-Sania are polygamous, but are not permitted to marry more than three wives, as it is considered that no man is able to provide food, etc., for more than this number. Wives are obtained by purchase."²² Some of the missionaries are of the opinion that in a generation or so polygyny will practically cease among the Akamba owing to the shortage of women, but Hobley²³ says this will really be due to the greater percentage of survivals of male lives. The births of the two sexes are now about equal in number. So far as Sir Charles Dundas²⁴ is aware, polygyny is the rule with all Bantu tribes of East Africa with but one exception, and even there it has recently been introduced by certain chiefs. "Polygamy is the normal estate. A single wife is the indication of poverty; many wives mean wealth. They bring strength to the family and by consequence the husband of many wives is respected and esteemed. Excepting among the Wakarra there is in no tribe any limit to the number of wives a man may have. It depends only on the wealth of each one. I have known natives who had twenty, forty, and even over a hundred wives; but if it is possible to generalize at all, I should say that five is a number exceeded only in exceptional cases."

In East Africa "the system of polygamy is based upon a very sound principle. No man has more wives than his live stock and plantations warrant, and the wife or wives installed in the 'boma' seem utterly devoid of jealousy. A new wife is hailed with delight, and the established household exert themselves to the utmost to do her honor."²⁵ The curse, "May you be married as a second wife," and the proverb, "One hand cannot remove the louse from the head," sufficiently indicate the status of the head-wife and co-wives and the comfort of the husband of many. Wives generally vie in the effort to please a husband; but if they quarrel, none of them cook for him but each refers him to another; hence the proverb, "If a man has two wives, there are two hyenas in his home." The competition leads to mutual injury, through magic, of the competitors themselves and even of their children. Wives may so behave as to justify the saying, "Though you possess ever so many things and marry a wife, then you lose all of them." What the woman loses by polygyny she mostly regains as a

mother; her children cleave to her and sometimes a man fears to marry a widow with sons lest they grow up to force him out of his property.²⁶ Again, "because of polygyny, prostitution is excluded and actually does not appear."²⁷ Here, as in a number of the preceding cases, it is found that the wives live apart, each in her own house, unless the desire to evade the house-tax on the separate establishments enforces one big dwelling, presided over by the head-wife, for all. "Unfortunately nowadays the hut tax has played havoc with the old custom and very often two or three women are found in one and the same hut."²⁸ The nomadic tribes of the northeast hold strictly to the separate establishment; a man will have wives, up to four, located in different places.²⁹ This custom is explained as preventive of quarreling.³⁰ In Madagascar, "so invariably has the taking of more wives than one shown itself to be a fruitful cause of enmity and strife in a household, that this word . . . which means 'the making an adversary,' is the term always applied to it," that is, to polygyny. "The different wives are always trying to get an advantage over each other and to wheedle their husband out of his property; constant quarrels and jealousy are the result, and polygamy becomes inevitably the causing of strife, 'the making an adversary.'" Here also is one "grande femme" along with the "petites femmes"; and Christianity has had to compromise with the system.³¹

Among the Nigerians a man may have all the wives he can pay for, but six is generally the greatest number found.³² Polygyny is the rule among the Dinkas, where "the number of wives is only limited by the ability of the husband to support them."³³ In Mohammedan Africa the first wife remains the head-wife, at least in name, "even when the love of her lord has long belonged to another."³⁴ The toleration of polygyny, to which tradition and custom have familiarized the Africans, gives Mohammedanism an advantage over Christianity as a proselytizing religion.³⁵ In modern Egypt there is little polygyny on account of the expense and discomfort incurred, except in cases of barrenness of the first or succeeding wives; yet "a poor man may indulge himself with two or more wives, each of whom may be able, by some art or occupation, nearly to provide her own subsistence." The women do not approve of polygyny.³⁶ Where, as among the Osmanli, the common people are monogamous, the man changes his wife frequently.³⁷

The custom whereby a father procures an adult wife for an infant son and lives with her, is found in central Asia.³⁸ "A Gilyak will usually have two or three individual wives; rich people have more."³⁹ Although the Palaung chief has many wives, polygyny is not customary among the common people unless there is lack of children. "The rate of mortality among Palaung children is very high. Sometimes out of a family of five, seven, eight, or even ten children but few live to grow up. I knew the head-man of a village near Namhsan whose wife bore to him thirteen children. Twelve died young, some before they were one year old, others lived to be two to seven years old. The wife, who loved children, was greatly distressed. Her husband was a rich man who owned large

tea gardens, and she feared that the only remaining son might die too, and that there would be no one to succeed to the property. She therefore begged her husband to take another wife. When he consented, she chose a girl whom she liked. There were five children of the second marriage, and although both wives loved and cared for the children, all died young except one." In another case, "their children being all dead, the old lady persuaded her husband to take another wife, and he agreed, stipulating that she should choose the young lady. This was done, and they appeared to be a happy family. The younger woman did all the housework."⁴⁰ Williams⁴¹ thinks that polygyny in China finds its greatest support from the women themselves. "The wife seeks to increase her own position by getting more women into the house to relieve her own work and humor her fancies. The Chinese illustrate the relation by comparing the wife to the moon and the concubines to the stars, both of which in their appropriate spheres wait upon and revolve around the sun."⁴¹

In India the first wife is treated the best because she is more troublesome and expensive to get than the rest. Though separate establishments are common, the wives coöperate.⁴² Manu had ten wives. Only the great men practised polygyny and one wife outranked the others. The chief reason for plurality of wives was lack of children by the first wife. "In cases where seven years after marriage no son is born, the Law Books authorize a man to take a second wife, because the son is regarded as necessary to perform the funeral rites of his father"; still the percentage of men living under polygyny is never important; in Madras where that system is strongest, only four per cent of the men have two wives and in the Punjab those with more than one constitute less than one per cent.⁴³ The Sema Nagas at present practise polygyny, though "it is usually only chiefs and other rich men who keep more than one wife, the ordinary villager being unable to afford it. . . . One of the wives is usually regarded as the head wife, but she does not necessarily take the lead in regulating her husband's household, and her position as the principal wife does not seem to be very definite." In the case of a chief's son she would normally be the one married first.⁴⁴ The invasion of Bengal by the Mohammedans in 1203 had deep effect on the native matrimonial organization. The natural balance of the sexes had been disturbed, and keen competition for husbands set in among the three original groups. The demand was especially great for Kulin husbands, and a bridegroom-price supplanted the earlier bride-price. "In order to dispose of the surplus of women in the higher groups polygamy was introduced, and was resorted to on a very large scale. It was popular with the Kulins, because it enabled them to make a handsome income by the accident of their birth; and it was accepted by the parents of the girls concerned as offering the only means of complying with the requirements of the Hindu religion. . . . The honour of marrying a daughter to a Bhanga Kulin is said to have been so highly valued in Eastern Bengal that as soon as a boy was ten years old his friends began to discuss his matrimonial prospects, and before he was twenty he had become the husband of many wives of ages varying from five to fifty."⁴⁵

In the Malay Archipelago many tribes are monogamous or, to avoid quar-

rels, a man has only one wife in any one village.⁴⁶ The first wife must be appeased with presents if there is to be a second.⁴⁷ In South Sumatra the third wife is subject to the first and the fourth to the second, while the wives without status are subordinate to those who have it, the first wife standing above them all.⁴⁸ In Atjeh, while a man can seldom afford more than one wife at a time, divorce and re-mating are very easy. The fact that there are separate establishments to be maintained keeps the ordinary man from polygyny. Four lawful wives are the limit set by the Koran.⁴⁹ Among the Alfurs polygyny is confined to chiefs and the rich. Wilken⁵⁰ thinks the custom was adopted from the Mohammedans. There is very little polygyny in the Malay Peninsula, because of poverty rather than conviction.⁵¹ On the island of Mindoro, although a woman can have but one husband, a man may have as many wives as he can support.⁵² "On islands where the chiefly system prevailed, which is to say, on all the units of the Gilbert Group north of and including Abemama, only a chief might take more than one wife. Slaves were at the most monogamous."⁵³ Polygyny exists in a limited measure in the western Carolines; "no man may have more than four wives at a time, while in most cases monogamy prevails."⁵⁴ Polygyny of chiefs, and even concubinage where property is exchanged as in marriage, occur in Polynesia.⁵⁵ It has been noted that on Easter Island, where the women are scarce, they are treated with solicitude; and "polygamy, under these circumstances, does not, of course, exist."⁵⁶ Instances of polygyny for those who could afford it occur throughout Turner's book on Samoa and other islands. Among the Maoris, "a plurality of wives is in some quarters still considered the perquisite of a *rangatira*," or big man.⁵⁷

Among the Hudson Bay Eskimo a designing woman will often cause a man to cast off his legal wife and come and live with her. In such instances the real wife seldom resents the intrusion, but occasionally gives the other a severe thrashing and an injunction to look to herself lest she be discarded also.⁵⁸ Polygyny was permitted by the Cheyenne Indians, as was usual with the prairie tribes.⁵⁹ It existed among the Omaha, although it was not the rule. "A man rarely had more than two wives and these were generally sisters or aunt and niece. These complex families were usually harmonious and sometimes there seemed to be little difference in the feeling of the children toward the two women who were wives to their father. No special privileges were accorded to the first wife over the others. Polygamy was practised more among the prominent men than among any other class. On the former devolved the public duty of entertaining guests from within and without the tribe. This duty brought a great deal of labor on the household. . . . The question of domestic labor had a good deal to do with the practice of polygamy. 'I must take another wife. My old wife is not strong enough now to do all her work alone.' This remark was made not as if offering an excuse for taking another wife but as stating a condition which must be met and remedied in the only way which

custom permitted."⁶⁰ Polygyny, correlative with wealth, existed among a number of tribes, the wives in some cases being sisters.⁶¹ In polygynous marriages among the Winnebago, "the second wife was usually a niece or a sister of the first wife. According to a reliable informant it was the wife herself who often induced her husband to marry her own niece. This she did if she noticed that he was getting tired of her or losing his interest in her."⁶² Although both custom and tradition tell of former monogamy, with a suggestion of polyandry, polygyny has prevailed among the Seri, "professedly and evidently because of the preponderance of females due to the decimation of warriors in battle."⁶³ Morgan⁶⁴ says of the American Indians: "The females are usually more numerous than the males from the destruction of the latter in war. In some nations, as the Blackfoot and the Shiyann, they are said to be two to one." Plural marriages are no longer permitted and the number is declining, there being 588 in 1912 and but 187 in 1920.⁶⁵

Roth⁶⁶ cites many examples to substantiate his statement that polygyny was practised throughout the length and breadth of the Guianas, including the islands. "But, generally speaking, there are few who have many wives, not because they do not want them, but because they can not get them; or, granted they can get them, because they have not the wherewithal to pay the parents for them or because they do not care to complete the necessary tasks. . . . The Orinoco chiefs were accustomed to have, more by way of pomp and vanity than anything else, as many as 10 or 12 wives, and at times more. . . . The larger number of wives held by the chiefs and medicos as compared with the common crowd is repeatedly noted elsewhere. The plurality of wives was also proportionately dependent upon the ability of the husband to support a larger or smaller household. . . . Among remaining factors that have to be taken into consideration is the economic one of the value of woman's work and the number of women available." It frequently occurs that the wives are sisters. "Coudreau goes so far as to state that among the majority of the tribes one finds Indians having two or three wives, generally sisters. 'The marriage of two sisters to the same husband,' says Rev. Charles Dance, 'has often been justified by the elder sister as a preventive to family jars and conjugal jealousies. "Better," she says, "take my sister, who loves and will obey me, than take a stranger who will hate me."'" An instance of a Makusi Indian who had three wives and a progeny of eight children, with prospect of more, is cited as a rare case of numerous children among natives who practise polygyny. The following picture is given of a polygynous household on the Orinoco. "As might be expected, quarrels are not wanting among the wives, although they do not live together in the one house, but each one has her separate habitation together with her children and her separate hearth. The fish which the husband gets is divided proportionately among all of them according to the children which each one has. When mealtime arrives they stretch the mat, which is his table, on the ground and each wife, after placing in front of him his plate of meat, his cassava cake, or caizu of maize, retires. Whether he eats or not, no one speaks

to him. After the lapse of a sufficient time, each wife brings a drink of beer (*chicha*), which she places in front of him, and, this done, then retires to her hut to eat and drink with her children; and so strife is avoided. In the field a similar separation is arranged for. The husband divides the land, which he and his friends have cut into as many portions as he has wives, each woman sowing, cultivating, and looking after her own portion without meddling with the other's. Nevertheless, it is true that squabbles are not entirely wanting; e.g., over one having a better or bigger plot than another, over one wife's children stealing fruit from another wife's piece of land, etc."

While monogamy is general among the Bororo Indians, an exception occurs in the case of the priest who is enabled to support two wives through the wealth he obtains from his profession.⁶⁷ "Polygamy is very generally practised among the Araucanos, the only limit to the number of wives a man may possess being his ability to provide the purchase price, and to maintain them and their families. Formerly it was common for a chief of importance to have as many as twenty, but now the number rarely passes four or five. . . . As a general rule there is little jealousy among the wives."⁶⁸ In every district among the Peruvians there was stationed a special officer whose exclusive duty it was to pick out the comeliest young girls and take them for the Inca's disposal. Part he sent to Cuzco for the numerous human sacrifices, part he had shut up in women's houses, called "houses of the chosen," where they were excluded from the outer-world and brought up by matrons. There were three kinds of such houses. In some were enclosed the girls who were designated for the service of the Sun; it was their duty to prepare the objects needed for the sacrifices. From others the Incas got their inferior wives and concubines; and finally from the third type were taken girls to be given over to the officers as wives and bedfellows. The number of the "chosen" was considerable. In the selection of girls no kind of consideration was given as to how many had already been taken from a village. The official simply took those who seemed to him suitable, and "the parents could under no circumstances refuse or redeem them." The surrender of their daughters was very deeply felt by the population, and it would have been still more hateful had not the belief been spread abroad among the Indians that the souls of the sacrificed girls enjoyed full peace in after-life.⁶⁹ Letourneau⁷⁰ quotes de la Vega to the effect that various Incas left several hundred children apiece; they were properly termed "fathers of their people." In Mexico the father of Montezuma left one hundred and fifty sons.⁷¹

In ancient Babylonia polygyny was known as early as 2000 B.C., it being related, for example, that a man married two sisters. Many men, whose means allowed, had several concubines who came mostly from the slave-status. The relation between the different women was regulated and strife forbidden.⁷² The Code of Hammurabi permitted a man to take a concubine if his wife were barren or another wife if she were a chronic invalid. On the other hand, bigamy on the part of a woman, without the excuse of lack of support, was a capital offense.⁷³ Cases of a man having more than one wife occurred in every period among the early Egyptians. Frequently it was a case of a love-wife and a

status-wife, while harems were kept by the rich.⁷⁴ The Talmudists stated that a man might marry as many women as he could support, and at the same time they imparted the well-meant advice not to marry more than four, so as to do justice to the marriage-duty. It appears, however, that not much use was made of their precepts. In the Talmud mention is quite often made of the wife, but never of the wives, of one learned in Scripture. "Perhaps the monogamy which Zoroaster prescribed for the Persians was not wholly without influence on the practical life of the Jews."⁷⁵ Tradition states that Zoroaster was thrice married and had several sons and daughters, and that the three wives survived him. By the first or privileged wife the Prophet had one son and three daughters.⁷⁶ At the time of Herodotus the Persians had several wives, and concubines besides, while Strabo asserts that not only did the Medean kings have many wives but that the Medes living in the mountains could take no less than five wives. It appears that only the wealthy had a plurality of wives, the mass of the people having to be content with one apiece.⁷⁷

Euripides,⁷⁸ in his handling of the Medea-tragedy, causes his characters to display a situation of a tangled order. Jason has taken an alien woman to wife, being under deep obligation to her, both as respects life and prosperity. He had given strong pledges with his right hand. Now he is going to marry the daughter of a king. It appears that a man may marry a second wife so far as public law is concerned. Says the chorus to Medea: "If thy lord prefers a fresh love, that is his affair; do not be angry. Zeus will judge between thee and him in the matter." Medea calls upon the gods that guarantee oaths. "He who was all to me, my husband, has turned out to be the worst of men," replies Medea. "Of all creatures that are alive and have reason we women are the most wretched race. First we have to buy a mate at a high price, and get a tyrant." It is a very great question whether we get a scoundrel or a good man. Divorce is discreditable. Coming into a new situation and new ways of life, one has to be a soothsayer, not having learned how to act at home, to know how best to deal with her spouse. If she does this with tact, she is happy; if not, she had better die. The chorus admonishes Jason bluntly that he has sinned in casting off his wife; and Medea asserts that if he had not been a villain he would have got her consent and then made the new marriage, and would not have done it clandestinely. When Ægeus hears what Jason has done, he calls it a dastardly deed. Jason says women are weak, given to tears, and that it is natural for them to rave against a husband who is planning another marriage; that she could endure his second marriage if she had self-control. He excuses himself on the ground that what he is doing will be for the welfare of the children. "Men ought to get children from somewhere else, and there ought to be no female sex." Medea, after reminding him of the services she has done him, goes on: "And having been thus served, oh worst of men, by me, thou hast betrayed me and got a new love—and that when we had children. For if thou wast still childless, to desire this new union would be pardonable."

"Polygamy," says Ratzel,⁷⁹ "is an old Arabic, or rather old Semitic, tradition. In ancient times economic facts restrained it. In the midst of the wealth

of the conquerors it became a worm gnawing at the vitals of every nation which accepted Mohammedan doctrine." Ali, the son-in-law of the Prophet, married more than two hundred women. Sometimes he included as many as four wives in one contract and divorced four at one time, taking four others in their stead. An Arab is mentioned who married eighty women in the course of his life, while a certain dyer of Bagdad who died at the age of eighty-five is said to have married in all more than nine hundred women. If he began his marital career at the age of fifteen, he must have had on the average nearly thirteen new wives a year through his whole life.⁸⁰ This liberty is exercised in Arabian countries still. "Palgrave relates that the Sultan of Qatar in eastern Arabia married a new wife every month or fortnight, on whom the brief honors of matrimony were bestowed for a like period, and who was then retired on a pension."⁸¹ Burckhardt⁸² says: "I have seen Arabs about forty-five years of age who were known to have had above fifty different wives. Whoever will be at the expense of a camel, may divorce and change his wives as often as he thinks fit." The caliph of Cordova begot one hundred sons; the number of his daughters is not mentioned.⁸³ Von Kremer⁸⁴ explains the persistence of polygyny in the Orient through the facts that it quickly increases the family-group and thus satisfies the need for descendants and that valuable kin-unions with other tribes and families are thereby instituted. He draws attention to its maladaptation, however, by describing conditions in a typical harem, where, besides innumerable daughters, thirty, forty or even a hundred sons of different mothers are growing up, raised in the mutual jealousy and rivalry of their mothers. "This glow of passion and hate is kindled by ambitious and jealous women in the youthful souls. . . . Each sees in his brother a burdensome, evil-minded, and illegitimate rival. If one from their midst finally ascends the throne, all the others unite in one thought—to upset him in order themselves to rule." Pischon⁸⁵ remarks about such conditions: "Where there are several women in the house, jealousy and intrigues play their evil rôle. The Mohammedan women fear more the intellectual superiority than the corporeal charm of their comrades; for they know that every somewhat gifted man can be attached more closely by the former than by the latter. . . . Affection between brothers and sisters who are derived from one mother is seldom observed; between those who have the same father but different mothers, almost never seen. How could it, where it arises at all, maintain itself against the jealousy with which the mothers watch every expression of paternal attachment to children who are not their own! . . . From sun-set to sun-rise the man belongs in the harem. If he neglects his duties here, the women can make his life very hard (in case he is no tyrant) and can even make legal complaint against him." On the other hand, the author points out that brothels, women of the street, and complaints and trials for adultery are seldom found in the capitals of Islam, at any rate more seldom than in the main cities of Christendom. "But the satisfaction of the sex-impulse is made by the Moslem in the home so much the chief thing in the whole matrimonial association, spiritual relations between man and wife are so little attended to, the bodily strength of the male sex is so used up through association with slave-concubines, that the Mohammedan population shows a decrease of numbers that in any case merits no mean con-

sideration." On the woman's side, there is no means of self-expression outside of the harem.⁸⁶

While the Koran permits four wives, most Turks have long been monogamous, partly for economic reasons and partly, it is said, on principle. According to a recent news-item from Constantinople, a law has been passed which forbids marriage to more than one wife except in "unusual cases."⁸⁷ Polygyny is said to be fast disappearing in Turkestan because of disparity in the proportion of the sexes, the men outnumbering the women three to one. "Men who once had as many as nine wives are now having a hard time getting one." Owing to the shortage of women, the Moslem natives are marrying Russian and Christian women, who, unlike their Mohammedan sisters, demand no dowry or fee for themselves. Such marriages previously were unknown. By reason of the great demand for them as wives, the women of Turkestan are said to enjoy many privileges. "Their husbands do all the housework, cooking, washing, ironing and marketing and generally show their spouses the utmost deference."⁸⁸

§400. Monogyny.

THE major portion of this section will be devoted to a consideration of the position of the chief wife, the wife of status as contrasted with the concubine and courtesan—a contrast that has already appeared in the cases—and of other factors exhibiting a tendency toward monogamy.

In Australia, "most tribes live in monogamy and this because the scantiness of the population and the complex character of the marriage laws render it difficult enough to find even one suitable wife."¹ Although there is no limit in central Cameroon to the number of wives a man may have, "in all cases the first wife is the legal one, and her eldest child is the husband's heir."² Among the Kaffirs, should the great wife fail to have male offspring, a woman is appointed to bear a son for her who shall afterwards become chief.³ In Fantiland, "every wife of a polygamist was a free woman, became a member of her husband's family, had a protector during his life, and was provided for after his death. The case is a little different now. The second wife is little better than a slave kept as a concubine, for she has to do most of the drudgery, and to cook her husband's food, or even procure it for him. This is particularly true in the case where a negro has one wife, 'married in church,' and the other 'married in native fashion.'"⁴ Sir Charles Dundas⁵ generalizes about the situation in East Africa as follows. "Among the wives one is the senior or superior, generally called the 'big' wife, and so far as I am aware she is always the one first married. She supervises the other wives. . . . Actually she is mistress of the home to a far greater extent than the husband is the master, and contrary to the accepted theory it is a fact that the 'big' wife, at least in her own home, is very far from being the down-trodden slave of her husband. . . . Not that the senior wife will object to other wives, for apart from considerations already mentioned she will favour it because a single wife has always more work to do than one of several, and thus it comes that notwithstanding incessant

jealousy and resulting quarrels between the wives, a man is more often than not urged by his first wife to marry a second or more wives. . . . In Ukamba, Kikuyu, and Theraka the senior wife may not marry again on the death of her husband, and this distinction between her status and that of other wives suggests one reason why the position as a junior wife is not objected to, despite a certain inferiority attaching thereto. It also indicates very strongly that the position of the senior wife is not merely a matter of formal rank. . . . One thing I am sure of, namely, that while second and subsequent marriages are mostly matters of convenience, that with the first wife is generally one of affection, and hence in spirit and in fact the whole relationship differs in the one case from the other. It does not follow that a younger wife may not become the husband's favourite, but his right-hand and most intimate companion is in almost all cases his first and senior wife." In Abyssinia courtesans are reported to be highly honored; "queens and princesses are desirous to see their courts graced by fair adventuresses."⁶

The Belunese in the Dutch East Indies "can enter a lawful marriage with only one wife."⁷ Van den Berg⁸ says of the Mohammedan peoples of Java and Madura: "Islam knows only one sort of marriage and only one sort of spouse. . . . In some regions occurs the usage that the oldest of one's wives or rather the woman with whom one has been longest married has, in a sense, a higher position than the others and exercises over them a certain moral rule." In the Gilbert Islands, "strictly speaking, a man had only one true wife in a life-time, who was distinguished from the rest of his harem by the title *Rao-ni-kie*, signifying *Companion of the sleeping mat*. With her alone he underwent the marriage ceremony. . . . None of his other womenfolk were ceremonially married to him; they were of two orders—*Nikira-n-ro-ro* or Concubines, and *Taua-ni-kai*, which may be translated Concubitants. The *Nikira-n-ro-ro* were chosen promiscuously, for mere beauty, at the lust of the houselord. They were only to be found in the households of the high chiefs, . . . their status in the harem was regulated by favour, not right of custom. The *Taua-ni-kai* accrued by customary right; they belonged to either one of two classes of women marked out as a man's potential, though not necessarily actual, concubitants. These were: (a) The widows of his deceased brother, who passed into his care by a custom akin to, if not quite identical with, the Hebrew Levirate. They might be more precisely termed *contingent concubitants*, as they would become *Taua-ni-kai* to a brother-in-law only if their own houselord died. (b) The uterine sisters of his wife, who became his potential concubitants as soon as he married their sister."⁹ What is probably an exceptional case of concubinage is reported from Samoa. "When the newly-married woman took up her abode in the family of her husband she was attended by a daughter of her brother, who was, in fact, a concubine. Her brother considered that if he did not give up his daughter for this purpose, he should fail in duty and respect towards his sister, and incur the displeasure of their household god." Each such person took with her a dowry "which, perhaps, was the most important part of the business, for, after presenting her dowry, she might live with him or not, as she pleased. Often the addition of these concubines to the family was attended with all the display and ceremonies of a regular marriage."¹⁰ Among the Guiana Indians

"there is reason to believe that the first, generally the oldest, of the wives was specially intrusted with the performance of certain duties, the exercise of certain privileges and powers. On the upper Rio Negro she is never turned away, but remains the mistress of the house." Similarly among other tribes, "though the other wives may be young enough to be her daughters, and comparably far more attractive, the old hag will retain her position as head of the household."¹¹

Among more advanced peoples the custom of monogyny is more highly developed. In the case of a Russian tribe a man may have besides his lawful wife a number of others. The children of the latter constitute a special class deprived of many rights and becoming through inheritance the property of the legitimate children of the father.¹² A system of concubinage exists among the Chinese very similar to that practised among the Hebrews or that permitted under the Roman law. The concubine may be procured without the ceremonies prescribed in case of the wife, the simple exchange of a written contract and a pecuniary consideration being the only needful conditions for intercourse. "Concubines are principally obtained by persons in affluent and easy circumstances, and are generally chosen from amongst the lower classes, the confidential or favorite handmaidens of the wife, who follow her from her father's roof, being often selected for the purpose. The relative positions of the wife and concubine are distinctly laid down, and the law strictly prohibits the degradation of the wife to the position of a concubine, or the elevation of any of the latter to the rank of the former during her lifetime." By the wife the man is recognized as husband, and she is on equal terms with him; but with the concubine the case is different: she recognizes her partner, if he may be so called, as "head of the family," "master," one who has power over her person to do whatever he wills.¹³ While only one wife is permitted, there is no limit set by law to the number of concubines. The wife is considered the mother of all the children born in the family.¹⁴ Four classes of wives are reported from Siam: "the first is the wife of royal gift; the second, the legal wife; the third, the wife of affection; the fourth, the slave wife—that is, the handmaid who has borne children to her master, and in consequence is manumitted."¹⁵

In ancient India polygyny was hindered by financial considerations; still more discouraging to it was the custom of "always regarding one woman only as the really legitimate spouse, and with her completing the religious ceremonial." The tendency toward monogamy was also furthered by law. "As in the law of inheritance only the claims of the one legally married widow were recognized and she was designated as the surviving half of her husband, so also in the marriage-law man and wife were in duty bound to mutual fidelity, and in the religious law, e.g., at the sacrifices, man and wife likewise appeared usually as a duality." In the fifth century a.c. the express principle was laid down that a man might marry no other woman if he had one wife who took part in his religious operations and had borne him sons.¹⁶ In India today many men do not scruple to keep concubines, who, however, have a separate establishment; it is not uncommon for the children of these separate homes to meet together, fully aware of their common fatherhood. Only prostitutes used to

learn to read, but now English missions teach many.¹⁷ An honest woman would be ashamed to possess such knowledge. Courtesans alone dance and sing; an honest woman may sing at work but never in public.¹⁸

According to the Code of Hammurabi, "if a man takes a wife but closes no agreement with her, then is this woman not a wife;" that is, a contract is necessary. "If a man takes a wife and she gives him a maid-servant and the latter bears children, if that man purposes taking an accessory wife, it shall not be permitted and he shall take no additional wife. . . . If anyone takes a wife and she presents him with no children and he purposes to take an additional wife, then if he takes the latter and brings her into his house, this accessory wife shall not stand on an equality with the wife of marriage. . . . If the father during his lifetime have not said to the children which the maid-servant bore him: 'My children,' then, after the father dies, the children of the maid-servant shall not share in the goods of the father's house with the children of the wife. The maid-servant and her children shall be given their freedom."¹⁹ In Egypt the chief wife of Pharaoh was, if possible, his sister, as the only one who could be his equal in blood. She lived a free and equal life by his side, while his other wives were more or less cloistered.²⁰ Among the ancient Babylonians the wife had the right of disposal over her property, could independently conclude private contracts, and appear in her own interests to defend them. Later Babylonian marriage developed even more toward monogamy, in that the wife, as in Egypt, had the right to leave her husband if he married another woman, and to get a sum of money.²¹ There were concubines in Israel from the time of Abraham. Tradition distinguished concubinage from marriage in that there was no ceremony connected with it and no marriage-gift. The concubine became *de facto* wife and enjoyed *affectus maritalis* by the side of the wife, but the children were those of the wife.²² "Polygyny, as with all Oriental peoples, where it is still the rule, and with most peoples of the Occident—Romans, Slavs, and Germans—existed among the ancient Jews. But earlier there was a warning given against going too far, and besides there was a head-wife, who was bound to develop, as *prima inter pares*, to *prima par excellence*." This, with changes in social and economic views, gradually backed polygyny off the stage.²³ Among the ancient Iranians, in contrast to jural wives, concubines were mostly slaves whom one got as booty, bought, or even received as presents. The chief distinction was that children of concubines could not inherit.²⁴ In early Arabia wives sometimes bound their husbands in the marriage-contract not to take other wives or concubines.²⁵ Von Kremer²⁶ says that the most ancient polygyny may not be in any way compared with the later Oriental harem-economy. "In the house or tent of the tribal chief several wives of equal rights did not rule at the same time: one was the mistress of the household, namely the nobly-born, the full-blood spouse; the others were accessory consorts who took a place midway between that of the first and of the rest of the house-mates." In 1924 Turkey passed a law establishing monogamy, with this exception, that if the first marriage proved childless, a man, through legal procedure, might take a second wife, provided he could

support her. "As the average Turk was finding it impossible to keep more than one wife, the new Act is supporting merely what has become a custom. Many persons who have studied social relationships in the East credit the change in laws more to economic conditions than to a general shift to monogamic ideals."²⁷

Among the Homeric Greeks a sharp distinction existed between the chief wife and the others. "The prevalence of concubinage, together with one chief wife, marks the form of Homeric marriage as 'juridic monogamy,' [monogyny] in distinction from factual monogamy, which is, on the whole, quite rare, and as opposed to polygamy [polygyny], which is demonstrable only in the case of Priam among men. Yet even Priam had a chief wife; among the gods, as usual, the looser system was more pronounced. All such distinctions must rest upon the presence or absence of public ceremonies; whether the marriage was an 'open' one or not made all the difference in the world in Homer's time. Juridic monogamy allowed freely the gratification of affection, while the solidity and firmness of the house was assured by the offspring of the chief wife; this system was tempering polygamy toward monogamy in its modern sense." The ceremonially-bought wives were "recognised and sanctioned organs for the production of a line of descent and property-inheritance;" while the position of the concubine was one of far fewer rights. She was a piece of booty, won in war, kidnapped, or bought from some one who had acquired her in one of these ways.²⁸ "Concubinage had for the Greeks only this that was repellent, that its fruits lacked the civil or at least family-right advantages of legal offspring. . . . In the Homeric period it was not at all uncommon even for wives to raise the children of their rivals [concubines] along with their own." The author mentions betrothal as the essential precondition of a jural marriage; the offspring of a union without this essential were regarded as illegitimate.²⁹

Sentiment favorable toward monogamy is exhibited in the plays of Euripides.³⁰ Admetus says, "Since I had thee in life, in death too shalt thou be called my only wife." Hermione asserts that it is a shame for a man to have two wives; "all men who care to live honorable lives are content to devote themselves to one lawful love." Says the Chorus: "Never shall I commend a double marriage. . . . Let a husband love one wife." Orestes affirms that it is "an evil state of things for a man to have two wives." Courtesans, however, were common and had a rather high position. Athenæus³¹ quotes Demosthenes as saying: "We have courtesans for pleasure, concubines for daily companions, wives for mothers of legitimate children and for our housekeepers." He mentions a great number of courtesans and gives anecdotes about them and their relations with all the distinguished men of Athens. They were the emancipated women, the only ones who had education. Aspasia even instructed Pericles and Socrates; she tried to raise woman's position through education.³² "It was due to the hetairæ above all that the Greek wife in the Hellenistic period again became the companion of equal birth with the husband. When that was attained, the dominant rôle of the hetairæ in society was played out."³³ In Rome even more than in Greece, the marriage portion became a mark of distinction for a legitimate wife. She had her father as her protector, while the concubine was defense-

less against the husband.³⁴ Among the Icelanders only the children of the chief or legal wife inherited. "That man is not heritable whose mother was not bought with a *mund* of a mark or more money, or that had no bridal made for her, or that was not handfasted. . . . A bridal is lawful made if the lawful guardian handfast the woman and there be six men at the bridal at the least, and the bridegroom goeth with light in the same bed with the woman."³⁵

§403. Restriction of Numbers.

A FEW scattered cases of what may be termed a "population-policy," especially as it relates to restriction of numbers, are here cited. At the Australian puberty-ceremonies, "the elder men have a right to their young women."¹ A similar practice is reported of the African Bushmen.² Sodomy is said to have been practised in New Guinea for the purpose of restraining population.³ Papuan women will not have over two children, nor a second child till the first is three or four years old. If they conceive, they use abortion, so there are few mothers of three. The ways of inducing abortion are rude, cases being cited of tying a cord about the body and then treading on it with the feet.⁴ On Lifu, Loyalty Islands, "children were often suckled for a period of two years or longer, chiefly in the hope of delaying pregnancy."⁵ Among the tribes of British Central Africa the child is suckled for two or three years, "by mother, or grandmother if the former die," or by a maternal aunt. Suckling may be prolonged for four years in the belief that pregnancy is thus avoided.⁶ Dundas⁷ writes of the Bantu tribes of East Africa: "Intentional procuring of abortion cannot be common among people with whom offspring is so highly valued, but occurs with some tribes." Belgian oppression in the Congo Free State is reported to have caused a great fall in the native birthrate. Women refused to bear, saying, "It is difficult enough to save ourselves when the State soldiers arrive, and how could we save our children?"⁸

In many instances the harshness of primitive life tends automatically to restrict numbers, the deathrate of children being particularly high.⁹ With reference to conditions among the Congo tribes it is said: "It is truly a survival of the strongest; and this undoubtedly accounts for the absence of cripples, delicate persons, and feeble-minded folk. It is a struggle for life from birth upwards, and only the fittest survive in the fight."¹⁰ In Kenya Colony "infant mortality ranges as high as 45 per cent throughout the tribe, and is chiefly due to exposure to cold, and colic due to early part-feeding on half cooked meal."¹¹ "Before the introduction of Christianity probably not less than two-thirds of the Samoan race died in infancy and childhood. This mortality arose principally from carelessness and mismanagement in nursing; evils which still prevail to a great extent. Even now, perhaps, one-half of them die before they reach their second year. The poor little things are often carried about with their bare heads exposed to the scorching rays of a vertical sun. Exposure to

the night-damps also, and above all stuffing them with improper food, are evils which often make us wonder that the mortality among them is not greater than it is."¹²

Among the Cheyenne Indians "it was long the custom that a woman should not have a second child until her first was about ten years of age." Then they publicly announced their intention and were commended for self-control.¹³ "The red, barren clay from beneath a campfire is used by White Mountain Apache women to induce sterility."¹⁴ Analogous to the Australian and South African cases mentioned above is that of the Shingu Indians, where the doctrine prevailed that the old men should have the young wives and the young men the old ones.¹⁵ Among the Araucanians families are not large, even where there are several wives. One enumeration of 245 families showed an average of 2.77 children per family.¹⁶

War and other conditions may lead to a policy of increase of numbers. One-note, a former Cayuga village, "became greatly reduced in the war with the Hurons in the middle of the 17th century, and resorted to a common Iroquois expedient in perpetuating its people by sending to the Mohawk, their neighbors, 'for some men to be married to the girls and women who had remained without husbands, in order that the nation should not perish. This is why the Iroquois (Mohawk) name this village their child.'"¹⁷ It is written of the Egyptians of the century before Christ that every child which was born had to be brought up, because they were needed for the prosperity of the country. Strabo¹⁸ thought it a peculiarity of the Egyptians that every child must be reared.

§404. Infanticide.

A motive ascribed to the practice of infanticide among the Australians is the belief that the second son is superior to the first.¹ Among the natives of British New Guinea abortion is induced by violent exercise, especially jumping, by having a woman stand on the patient's back while the latter lies on her stomach, and by applying hot stones to the abdomen.² The modes of infanticide among the Dobuans are: "1. Putting foot on the throat. 2. Choking with hands. 3. Burying alive with deceased mother. . . . 4. Leaving child on beach in the sun. 5. Refusing to suckle the child." Illegitimate children are sometimes killed by these people, and a case is cited where a woman was taunted about such a child, "whereupon she put him in the sun to die, and finally poured salt water into his mouth." When the author³ asked her why she did this, she replied that she could not bear the taunting. Other occasions of infanticide are the death of the mother when the child is too young to run about; the birth of a child following a compulsory marriage, in which case the girl who has been forced to marry against her will kills her offspring in secret; when the mother's milk dries up and a wetnurse is not available; "when the husband turns out to be a rake"; and when the husband upon pregnancy deserts his wife for the time and marries a second wife. "A Tikopian family is usually limited to four children, any in excess of this number being killed by burying them alive in the

house or just outside it; occasionally five or six may be kept alive but never more. If the first four children are all girls, one or more of these may be killed in the hope that succeeding children may be boys, in which case the lives of the boys would be spared."⁴ In the New Hebrides "infanticide was sadly prevalent. As the burden of plantation and other work devolved on the woman, she thought she could not attend to more than two or three children, and that the rest must be buried as soon as born. There were exceptions to this want of maternal affection. At times the husband urged the thing, contrary to the wishes of his wife. If he thought the infant would interfere with her work, he forcibly took the child and buried it, and she, poor woman, cried for months after."⁵ In the D'Entrecasteaux Islands, if the mother dies in childbirth, the baby, whether alive or dead, is generally buried with her. "Everywhere there is a desire for male offspring in preference to female, and when food is scarce it is the girl child who suffers most. This is significant when we remember that in the census the males numbered 55 per cent of the total population, and that the proportion of the unmarried males to the unmarried females was as 100 to 82."⁶ To the Andaman Islanders infanticide is unknown, but the children are killed with kindness.⁷

Abortion is looked upon by the Kaffirs of South Africa as a crime, for which payment must be made to the chief who has lost by this practice one of his subjects.⁸ The Hottentots expose sickly infants and female twins.⁹ In one part of West Africa it was customary until recently to bury alive the tenth child of the same mother.¹⁰ Again, illegitimate children are killed and also those whose upper incisors appear first—for the latter will later kill their fathers. Other omens and portents have their victims.¹¹ In British Central Africa deformed infants are strangled by the women in attendance at childbirth.¹² Among the Ba-Mbala, monsters and cripples are buried alive.¹³ The natives of the Congo Free State are said to have practised abortion and infanticide during the period of Belgian oppression. Other reasons for abortion are the desire to avoid trouble incurred by children and from hatred of the husband.¹⁴ On the Zanzibar Coast weakly and deformed children were exposed to die; the Catholic missions having saved many of these, the people exposed more children, to get rid of them.¹⁵ The Malagasy kill all children born on unlucky days. One method formerly in use was to place the child at the entrance of the cattle-fold of the village, to be trampled to death by oxen. Should the child escape death from their hoofs, its life was spared; it was believed that such children would become extremely rich.¹⁶ Infanticide is common in Kenya Colony. "Invariably the child of an unmarried, that is uncircumcised, girl is smothered by placing a cow-dung pad over the mouth of the child; this is done by the girl's mother, the reason given is that the child could not live because the clitoris has not been excised from the mother, and no argument will convince the people otherwise." Infanticide also occurs when the child is delivered legs first and again when the child is born with teeth. Deformed children are

not made away with, nor is abortion practised.¹⁷ Among a number of other East African tribes the child born feet foremost is killed, for it is believed that if it should be permitted to live the crops would wither, the cattle die, and other ills afflict the tribe.¹⁸ In one case, if an infant cuts its lower before its upper teeth, it "dies," that is, they let it die, "since the suckling was painful to the mother"¹⁹—probably a rationalization. In Kabylie, children of incestuous or adulterous alliances are killed and have no right to a tomb; their mothers get rid of them to avoid punishment.²⁰

The Asiatic Hyperboreans practise infanticide because of food-difficulties.²¹ In India, female infanticide is ascribed to various beliefs rather than to tangible conditions: that it was divinely enjoined because one woman made the whole world suffer; that woman, as a mischief-maker, is better out of the world than in it; that it conduces to male issue. In addition there is the difficulty of providing marriage portions. It was a former Toda custom to kill children; the tribe was then very poor and could not support them. Only girls were killed and not the sickly or deformed, for that was regarded as a sin.²² The Khonds killed girls "from a feeling that intermarriage in the same tribe is incest."²³ It is reported of one tribe that, since widows are allowed to re-marry, "the murder of female infants has, therefore, never prevailed."²⁴ Wilkins²⁵ says that six-sevenths of the population of India have for ages practised female infanticide. Legends contain the story of the exposure of the Sun-god's son in a basket of rushes set afloat on a river.²⁶ According to a newspaper account a few years ago, an infant was burned alive by some villagers who believed that it was a demon because it began to acquire teeth so early.²⁷

The cases from India are mainly those of female infanticide, which, since they involve special motives based upon convictions as to woman's special qualities, are but slightly indicative of any population-policy. Female infanticide, by exposure and otherwise, was common in China and has been referred purely to need under conditions of overpopulation: but the Chinese took it over to Formosa with them and all classes practised it, to the horror of the aborigines, both civilized and savage.²⁸ There is no infanticide in Cambodia.²⁹ Female children, especially if illegitimate, were destroyed by native tribes of the Philippines. Among the poor the act of infanticide—casting into a river—was celebrated by a feast of all the relatives.³⁰

Infanticide was, in ante-Christian Polynesia, one of the most firmly established institutions. In Tahiti two-thirds of the children were killed; three or four were considered a heavy burden. The girls suffered most, as being of no use in war, service of the god, fishing, and navigation. Thus there were often four or five men to one woman. The cause was not necessity but laziness.³¹ There was no infanticide in Samoa and but little in New Zealand, where boys were wanted for war and girls for breeding and all children were idolized and

spoiled.³² In Central Polynesia, "in cases of unequal marriages there was a custom to kill the children of the marriage one after another, by which the parent of inferior birth was progressively raised in rank, and so reached a point of equality with the other parent, after which their offspring were allowed to live. . . . Williams says that if a woman of rank was united to a man of inferior grade the destruction of two, four or six infants was required to raise him to an equality with her; and that when this had been effected, the succeeding children were spared; and he refers to a case of a chief woman married to a man of inferior rank, and in which, after one child had been killed, a second and third were put to death on the insistence of the mother and her relatives, in spite of the opposition of the father."³³ In Nukuoro the population has dwindled through the destruction of children before and after birth, a practice not due to misery, although the formal excuse is the inability of the mother to provide for them. "The children of young women, who are not yet tattooed, all fall under the same fate."³⁴ On Nukufetau, as elsewhere in the Gilbert Islands, "infanticide or foeticide was the law of the land. Only one—some say two—were allowed to live in each family; the rest were strangled. But it was possible for the parents to ransom their offspring by giving presents to the chiefs, of whom at one time there were said to be forty." This ransom consisted of seven large bowls of taro prepared with the juice of the coconut.³⁵ Of special note is the Arreoi society of the Society Islands and other groups, a religious association whose members swear the grand oath that they will kill all children born to them. Thus they attain special divine protection and paradise after death.³⁶ Rivers³⁷ comments in general: "The practice of infanticide was confined to the Areois of the Society Islands and seems to have been wholly absent in other groups such as the Marquesas. Even in Tahiti it was probably a late growth, a special development of the practice of infanticide as it existed widely throughout Polynesia. Similarly, the licentious dances and representations of the Areois were limited to the lowest rank of the societies and seem even among them to have been only a fair sample of the morals of the people as a whole."

The heathen Greenlanders killed deformed and sickly children and those whose mothers died in childbirth. The conditions of life were such that they could not care for them.³⁸ The Bering Strait Eskimo used to kill, at birth or later, the female children who could not help with the food-supply and depleted it.³⁹ Infanticide is said still to exist among the Hudson Bay Eskimo, being reported by Rasmussen,⁴⁰ to be due to the rigors of existence. "If the girl baby prior to birth is pledged in marriage, the mother preserves it. If not, the infant is smothered. Boy babies are more valuable and are rarely killed." "A male child has always been a welcome addition to the Thlinget household. But not so a female. In earlier times, when they came too fast, their little lives were strangled."⁴¹ Among the Apache, Pima, Mohave, Navaho, Zuni, and other western Indians deformed and monstrous children were killed, and some normal ones; but the latter were generally half-breeds or children of an unmar-

ried girl ashamed of her condition.⁴² The Pimas have a horror of abnormality; inquiries concerning albinos met with the reply that "there never were any"; and they even tried to kill a grown man who had six toes. A woman does not care to have many children lest she be saddled with their support in event of the death of her husband.⁴³ Some tribes are said to have destroyed their female infants to prevent them being taken by their enemies and thus becoming the means of increasing the latter's numbers.⁴⁴

Among the Guiana Indians "infanticide would appear to have been more or less permissible under one or other of at least three circumstances, whether the child were one of twins, a cripple, etc., or a female. . . . Barrère, in writing on the Cayenne Indians, says that as soon as a child is born its fate is decided; if anything is wrong with it it is killed and buried without pity; hence, no dwarfs, hunchbacks, lame, and crippled are to be seen. . . . On the other hand, there is no less an authority than Schomburgk for the statement that the practice was not so general among the savages of Guiana as had been supposed. All the same it is very uncommon to see an Indian either lame or deformed."⁴⁵ On the upper Amazon, "when a mother dies, her young infant may be buried alive with her"; while not seldom sick children are killed.⁴⁶ Among the Araucanians, "owing to the continual warfare and the desire to bring up robust and warlike descendants, all misformed or delicate children were slain at birth." Twin children and children born feet foremost were considered unlucky and killed.⁴⁷

Readers of history and literature are familiar with the classic cases of exposure of infants in antiquity. The rescued infant who came to a high position, as for instance Oedipus, was a sort of stock figure in tradition. Infanticide was almost universally admitted among the Greeks, and supported by the authority of law-givers and philosophers; yet Aristotle⁴⁸ bears witness to the fact that such mores can lead to race-suicide, and Polybius⁴⁹ attributes to its prevalence the depopulation of cities and districts. "The Roman policy was always to encourage, while the Greek policy was rather to restrain, population, and infanticide never appears to have been common in Rome till the corrupt and sensual days of the Empire." Children of the poor and of slaves were long exposed, however; exposure, in fact, was a sort of evasion of infanticide; "it was practised on a gigantic scale and with absolute impunity, noticed by writers with the most frigid indifference, and, at least in the case of destitute parents, considered a very venial offence."⁵⁰

The early Arabs practised infanticide in the face of need, but one of Mohammed's commandments forbade killing children for fear of starvation.⁵¹ The early practice applied mainly to girls, who were buried alive. "Men killed girls in part to avoid care of raising them, also, in the frequent wars between tribes, to save them from a later imprisonment and dishonor and thereby save them-

selves from shame."⁵² The Hebrews showed no tendency toward infanticide but were eager for posterity. "That which appealed so powerfully to the compassion of the early and mediæval Christians, in the fate of the murdered infants, was not that they died, but that they commonly died unbaptised; and the criminality of abortion was immeasurably aggravated when it was believed to involve, not only the extinction of a transient life, but also the damnation of an immortal soul." Despite strong denunciation, however, the destruction continued.⁵³

The custom of allowing the father to lift up the child or not, thus conferring the right to life or refusing it, is familiar; if not taken up it was exposed.⁵⁴ In Iceland exposure might be ordered if dependency was likely to result or on account of an evil dream or of shame. Further, the ancient Germans, despite the assertion of Tacitus,⁵⁵ were accustomed to practise exposure; "all the Teutonic sagas are full of the exposure of children and there can be no doubt that in the early days of heathenism it was lawful."⁵⁶ A writer on Spain "has noticed the almost complete absence of infanticide in that country, and has ascribed it to the great leniency of public opinion toward female frailty." Abandonment took the place of the ruder custom, with the result of promoting vagabondage.⁵⁷

Twins. In East Central Australia, "when twins are born, and one should happen to be a male child, he is killed. Half-caste children of either sex, when born, are always killed and occasionally eaten by the tribe."⁵⁸ Among some Melanesians it is regarded as a good thing to have twins if these are both of the same sex. "If they are boy and girl they are regarded as man and wife, but my informant could not tell me what was done on such an occasion. It is probable that in old days they were killed." Among the Tikopians, "in the case of twins, called *masanga*, one or both are usually killed, the decision as to what shall be done resting with the mother."⁵⁹ The birth of twins is an occasion of infanticide with the Dobuans of Papua. "One twin is killed because of the great trouble in nursing. Generally the female child is preserved because of descent, but if the mother has no male child to climb cocoanut trees for her she may ask for the female to be killed. A case was mentioned in which both female children were kept alive. Triplets are apparently not known. When we asked some old men if they knew of triplets they laughed boisterously over the very idea of such a thing happening."⁶⁰ In another part of Papua, twins are accounted for as follows: "If a woman has given the cold shoulder to a man who wants her, either before or after marriage, he wants revenge; he takes a snip from the string of her *rami*, makes it in a parcel, folding it V-shape; taking a small stick, he buries the two objects deep in the ground. This will have the effect of causing her to suffer heavy labour, and she cannot be delivered till the stick is unburied; she will also probably have twins. The father of twins always wants to find the man who did this, as they believe it the only way twins are caused; they are not thought abnormal in any way, only some one's revenge."⁶¹ In the D'Entrecasteaux Islands twins are held to

be due to several causes; for instance, "if the mother had eaten two bananas which were joined along one side, or a man had tied together along some track two wisps of grass that grew on opposite sides, and the woman, not noticing perhaps, had caught her foot in it. A commoner method of causing twins is to lay side by side upon some track the two halves of a small green fruit called *bwaibu*, which the boys often use as sling-stones in their quarrels. Twins will result if the woman merely steps over them."⁶² There is probably a suggestion of imitative magic here.⁶³ In the Solomon Islands one of the twins is killed, preferably the girl if there is one;⁶⁴ again, the first child born is preserved and the second destroyed.⁶⁵

In Africa, there are a number of cases where twins are welcome, but in Mashonaland they are destroyed at birth, being considered "an unnatural freak on the part of a woman" and the phenomenon is supposed to indicate famine or some other calamity.⁶⁶ The Kaffirs put to death one of twins "through fear that if both are allowed to live, some calamity will overtake the father." But if twins are born to the Bunyoro king, the attendant celebration may last for months.⁶⁷ In Togo the belief is that an evil spirit has had a hand in a twin-birth and the children are killed. If a woman bears twins a second time, the infants are put in an ant-hill to prevent future recurrences. A woman who has borne twins is tabooed from field-work as dangerous to the crops; only after subsequently bearing a single child is she restored.⁶⁸ Where a twin-birth was once a scandal, the people believing that no woman could have two children by one man, it is now a cause for honor.⁶⁹ "Twins are killed among all the Niger Delta tribes, and in districts out of English control the mother is killed too, except in Omon, where the sanctuary is. There twin mothers and their children are exiled to an island. . . . They have to remain on the island and if any man goes across and marries one of them he has to remain on the island too." Elsewhere the mother is secluded for a year and elaborate ceremonial precedes her return to ordinary life.⁷⁰ "All over Africa the birth of twins is a notable event, but noted for very different reasons in different parts of the country. In Calabar they are dreaded as an evil omen, and until recently were immediately put to death, and the mother driven from the village to live alone in the forest as a punishment for having brought this evil on her people."⁷¹ The women who bear twins are as horrified as the rest and even Christianized natives cannot shake off the old belief. Interference in one case led to the chief's order to kill the twins and also two other persons as atonement.⁷² Twins who are raised must have everything at the same time from their parents or both will die.⁷³ In Central Cameroons twin-birth is not usual, and is greatly desired. Very rarely triplets are born, and "on such occasions there are great rejoicings in the tribe. Twins and triplets are considered to be under the special protection of the head-chief."⁷⁴ Among the tribes of the Upper Congo, "twins were not frequent, but when they did come they had to be treated properly. . . . At this ceremony

the names are given which are the same for all twins, and these names are retained through life. Other folk can change their names according to fancy, but twins never."⁷⁵ The Congo mother is sometimes proud of twins, who are a good omen.⁷⁶

Twin-births are said to be common in British Central Africa and to be liked, but the mortality of twins is high.⁷⁷ When twins are born the Bageshu beat drums with a special rhythm which conveys the information to the relatives. "The relations hurry together to the place and hastily collect building materials and build a hut into which both the parents and the children are put for three days. They leave a small aperture through which the food is handed to the parents inside. On the third day one of the relations comes and cuts a doorway into the hut." Then follow the usual bathing and purificatory ceremonies. Among the Bahima, when twins are born the father makes the fact known by mounting the house or by standing in the doorway of the kraal and shouting, "My wife has twins." They prefer twins to be of one sex; "it is unlucky to have them of opposite sexes. They are afraid to speak about them in a disparaging way lest a ghost should overhear them and be angry and cause illness in the clan." The Baganda make no announcement of the birth of twins, nor do they mention the word twins until the rejoicings are over, else the children will die. The father of twins is called by a special name and must go through certain elaborate ceremonies.⁷⁸

In the Baringo District of East Africa it is not regarded as lucky to have twins. Certain propitiatory ceremonies must be performed, else the twins will die and the mother go into decline. "A cow giving birth to twins is immediately slaughtered together with its offending progeny." Among the Wawanga, who do not generally bury the dead, the father of twins is buried and then the village is abandoned. A woman giving birth to twins must undergo purification-ceremonies before leaving the hut; otherwise ill luck will follow her through life. Many taboos surround her: "A woman who has borne twins may not look at a cow in calf for fear the milk will dry up. . . . In a village, where a woman has borne twins, a warthog's tusk, a hartebeeste's hoof or a piece of buffalo horn is hung round the neck of a cow to avert any evil effects; this charm is removed once the calf is weaned. Similarly a mother of twins may not cut grain at harvest time or sow seed in the plantations without first taking special precautions to counteract evil effects. Again, if she pass by fermented grain, for making beer, spread out to dry, she must spit upon it and take some in her mouth and put it back; otherwise the beer will be spoilt. Such a woman, therefore, smears white clay on her temples and forehead whenever she goes on a visit to another village, and this is supposed to counteract the evil effects of her presence. She does the same when she goes to reap or sow the crops."⁷⁹ Although neighboring tribes kill twins, the Wagogo do not, but they kill children born feet foremost.⁸⁰ The Akamba consider such a manner of birth to be most unlucky, and "a boy so born cannot get a wife or a girl so born a husband." If twins are born two goats are killed. "The birth of twins is not now-a-days considered as being of either good or bad omen, but it is said that a long time ago, if a woman bore twins of opposite sexes the female

child was always buried.”⁸¹ Among the Suk the birth of twins is a serious matter. “The mother and father may not leave their huts for three or four days, when people who have begotten twins collect and dance a secret dance; a he-goat is eaten, and the tail of a sheep is bitten off and eaten by twins. The parents may not wear sandals for three or four days. . . . The birth of twins is disliked and possibly this is due to an idea that more than one child at a birth is an animal trait pronounced in sheep and goats.”⁸² Sir Charles Dundas⁸³ comments concerning the Bantu tribes of East Africa: “Excepting a few isolated examples of tribes with whom it is customary to kill human beings at the burial of a chief, the only other permissible taking of life is in the form of infanticide, and this is very common, particularly in respect to twins.” Again, “twins are either not permitted to survive, or one is given to a family of another clan, and becomes the child of that family. . . . I recollect two Wapare who gave twin children to a Christian native because for one cause or another they were unlucky. To my arguments they had only to say that they themselves wanted to keep the children, but they knew well that so soon as any ill-fortune befell their neighbours they would at once be accused of having brought it, through these children. And if such a child years later is liable to be put to death as the bringer of disaster it must be admitted that the parents do it a doubtful kindness to allow it to survive. The originators and promoters of this evil belief are of course the medicine men.”

The Asabs of the Niger look upon twins with disfavor and “formerly both were thrown away, a proceeding justified by saying that the birth of twins is purely animal in its nature.”⁸⁴ This explanation recalls the one given in the case of the Suk mentioned above. Among the Nile tribes twins are considered to be lucky; but their birth is also “rather a tempting of Providence; and a woman who bears twins must live away from her husband’s village for some months, and on no account go near the kraal where the cattle are kept.”⁸⁵ On the Zanzibar Coast twins bring bad luck and are killed; in the Lake region they are a cause of rejoicing; again, they are unlucky, and the second born is killed or exposed, the father having to live retired for some months and to refrain from joining the hunt until another child is born to him.⁸⁶ Von Götzen⁸⁷ notes a peculiar case where, when one of a pair of twins dies, a puppet is made which is lengthened to conform to the size of the other, as it grows up. Twins are very seldom born in northwest Africa and are regarded as a remarkable freak of nature.⁸⁸

Twins among the Semas are more frequent than among neighboring tribes. “They are on the whole held unfortunate, partly owing to the added trouble to the mother, partly owing to a belief that they are less strong than single children, and that if one die the other will not long survive. . . . Some appear to think that the birth of twins is followed by the early death of both parents. More than two children at a birth seems to be unheard of.”⁸⁹ “Double bananas are not eaten by the women in the Ulu Kinta, as it is thought that a woman who eats one will give birth to twins, which are apparently not welcome, because, the Sakai said, one of them always dies.”⁹⁰

Among the things regarded by the Tlinkit as of evil omen is the birth of

twins. "In former years a man felt justified in leaving his wife if she presented him with twins, and she was looked upon by all as something uncanny. Twins were also put to death. In this age they are accepted as a matter of course."⁹¹ Boas⁹² gives attention to the peculiar place of twins among the Kwakiutl. Among them and the Tsimshian as well, twins are believed to control the weather. The parents of twins are fetish-persons;⁹³ "nobody ever succeeds in anything if the parents of twins wish ill to him." The father in such a case is not allowed by his tribe to do anything; "he is not even allowed to get fire-wood and water. His relatives always sit by his side in the house in order to get the fire-wood and the water and food for the couple. . . . As soon as the twins are four days old, when the navel-string comes off, the two cradles are put on the floor—one on each side of some woman who has already been the mother of twins. She cares for the twins, going through at the same time the most elaborate ceremonial practices." The parents "purify themselves every fourth day in water after the twins are four days old, and they do not forget to paint themselves with ochre after purifying themselves in water, the twins as well as the married couple. They continue to do this until the twins are ten months old." The requirement that the parents of twins do no work for four years after the birth may lead to infanticide if they have no relatives to do the work for them, for under such circumstances the mother asks the midwife to choke the twins "that they may go back home to where they came from; and the midwife is not allowed to disobey the wishes of the one of whom she is taking care. Then she at once strangles the twins. . . . She tries to do this before anyone else sees the woman who has given birth; and when the twins are dead, they ask the father of the twins to go and tell his relatives that his wife has given birth to two dead twins." Among some of the American Indians, "twins are usually regarded as uncanny, and are rather feared, as possessing occult power. With some Oregon and other coast tribes they were formerly regarded as abnormal and one or both were killed."⁹⁴ Among the Omaha, on the other hand, "the birth of twins was considered a sign that the mother was a kind woman."⁹⁵

The birth of twins was one of the several occasions among the Guiana Indians when infanticide was permissible. "On the Orinoco twins were regarded as dishonorable. Indeed, as soon as word went round that so-and-so had been delivered of a double birth, the other women, without considering that they might fall into a similar predicament, as was occasionally the case, would rush up to the patient's quarters and crack their jokes, that she must be like a rat which gives birth to four at a time, etc. But the mischief did not end here, for the Saliva Indian, as soon as one child was born, and she felt another remaining, would immediately bury it so as to avoid the chaffing and the joking of her neighbors as well as the displeasure of her husband. For he, on his part, deeming that only one of these twins could possibly be his own, was fully convinced that the other must be proof of his wife's disloyalty."⁹⁶ By the Araucanians "twin children were considered unlucky, and either one was brought up in the family of some near relative as their child, or it was killed at once."⁹⁷

§406. Sterility and Fecundity.

It is said of certain Papuans: "On the whole, they are not desirous to have children, though this is due mainly to the women, who dislike the pains of childbirth and the attendant troubles of nursing. Boys are much preferred, and girls are looked on only as a necessary evil."¹ A more nearly typical situation is that depicted among the Bageshu, where "It is essential that every woman should have children; if she fails to do so, her chief value in the eyes of her husband has gone. She is given a reasonable time to test her, and her husband will do all he can to assist her; he will pay the medicine men their fees to make drugs and thus give her every chance to become a mother. Should his efforts fail, he returns her to her parents, and demands the dowry [bride-price] he paid for her." So far is the desire for fecundity carried that "a woman who has a child prior to marriage is not despised, nor does this in any wise detract from her chances of marriage; on the contrary it is a proof to the man who wishes to marry her that she can have children, and thus adds to her value."² Among the Ba-Yaka, "if the woman dies before giving birth to a girl, the marriage-price is repaid."³ The fear of non-fecundity underlies a number of avoidance-usages among the Akamba.⁴ In East Africa exists a custom whereby "a childless woman, perhaps one of several wives, 'marries' a girl, and performs all the male parts of the . . . ceremonies; the girl lives with her, and if one of the co-wives of the 'husband' has a grown son he cohabits with the 'wife,' if there is no such son another man is chosen, and any children he has by her are the childless woman's not the mother's; bride-price is paid by the woman for this girl, it is small, and generally consists of the stock she received as presents when she was a bride herself. In one instance, a woman had as many as three 'wives,' there is no admitted trace of a servile status in the 'wife,' and no coherent answer is given to the question why, if a woman is childless, should not her husband marry another woman himself."⁵

Among certain aborigines of Siberia, "sterility is a punishment and a sign of disfavour on the part of dead relatives. A barren woman may ask the help of a shaman, who descends to the world of the deceased and persuades the soul of a relative to enter the woman's body, but such a child very often dies."⁶ Fecundity is a virtue among the Sema Nagas, and "a large number of children is a great source of strength to a trans-Tizu chief. His daughters bring him profit in marriage prices as well as alliances, and many sons are even as 'the arrows in the hand of the giant,' for they go out from his village founding buffer colonies in all directions and facilitating the taking of revenue from weaker neighbours, securing the parent village and one another from attack, and often creating a small league of villages, something after the manner of an ancient Greek city state and her colonies."⁷

A case is mentioned among the East Greenlanders where a mother wanted the Danes to lay hand on her married daughter's abdomen, probably with the idea of rendering her fecund; she was afraid that the husband would leave the daughter if she were to be childless; the daughter seconded the request but blushed vividly at so doing.⁸ To produce conception in women apparently barren, the Kwakiutl used to tie a male and female lizard together, chest to

chest, while they were still alive. These the husband was to tie on the right side of his waist and wear for four days. After removing them, he was immediately to cohabit with his wife, who would become pregnant.⁹ On reaching puberty, Hopi girls "dress their hair in whorls at the sides of the head, in imitation of the squash blossom, the symbol of fertility."¹⁰

The first duty of the Chaldean wife was fecundity.¹¹ Procreation was the sense of early Hebrew marriage. Every man was bound to marry and could be compelled to do so and to live in marriage until a son or daughter was born. Sterility of the woman was an obstacle to marriage. The Talmudists disputed over the number of children it was one's duty to have.¹² Lycurgus put a kind of public stigma upon confirmed bachelors. "They were excluded from the sight of the young men and maidens at their exercises, and in winter the magistrates ordered them to march round the market-place in their tunics only, and as they marched, they sang a certain song about themselves, and its burden was that they were justly punished for disobeying the laws. Besides this, they were deprived of the honour and gracious attentions which the young men habitually paid to their elders."¹³ The ancient Aryan woman was expected to bring forth children, as many as possible and preferably of the male sex. A woman who bore only boys was highly esteemed; to bear more girls than boys, or only girls, was a misfortune to her; to bear no children at all, a curse. Childlessness was held to be her fault, and "even the legislature of later times was guided by this idea, in that it exempted the husband from the punishment of childlessness (*orbitas*) when one child was born to him; the wife was not exempt until she had given birth to more children (in Rome three, in Italy four, in the provinces five). This is based on the idea that it is the wife's fault if there are not any more children; she, out of dread of the pangs of child-birth and of the trouble of bringing up children, had circumvented nature; if she had wished it there would have been more children; her first confinement showed that she was not barren; the man was exempt from all blame."¹⁴

The despair and rage of the barren wife, who supposes herself to be in that condition because of evil magic, are strikingly portrayed in the *Andromache* of Euripides. Characteristically, the sorceress is a foreigner and barbarian, hence under suspicion. The sentiments of the sufferer's father and of the onlookers faithfully represent the mores.

Teknonymy.¹⁵ Desire for offspring and a high regard for children are indicated in the practice whereby parents are named after their children. A man among the East African Akamba is generally called by the name of his first child, whether male or female. When a woman marries, "she is often referred to as the mother of 'so and so,' the name of her first child."¹⁶ Among the Gilyak, "after the birth of the first child, the father ceases to be called by his own name, and is known as 'the father of So-and-so.'" With the Yukaghir "it is still customary for the parents, after the birth of the first child, to be known by its name—thus, 'the Father and Mother of So-and-So.'"¹⁷ Among the East Indian Alfurs, "at the birth of the first child the parents, so to speak, give up their names and the name of the child is given to them, with the prefix of the

word: 'si ama ni . . .', that is to say 'the father of . . .', and 'si ina ni . . .', that is to say, 'the mother of . . .'.¹⁸ Among some peoples of the Malay Peninsula, "the birth-name was sometimes superseded (as being unlucky) before marriage, when misfortunes happened to the child, and the second name of the parents frequently gave place to the name of the eldest child with the prefix Pa' (Father) or Ma' (Mother). The latter was considered a peculiarly pleasing mode of address." Among the Jakun, who follow this system, if the child is called Bijan, then the father becomes Pa' Bijan, and the mother Ma' Bijan.¹⁹ The Palaungs have no surnames. "When a number of people in a village have the same name, they must be distinguished in some way from each other. After a son is born, the names by which his father and mother were known before his birth are seldom heard; if the name of the child is A-lön the parents become known as 'The father of A-lön' and 'The mother of A-lön'."²⁰ Among the Malayan and Papuan races in Polynesia, "on the birth of a child, the mother loses her own name, and is now called the mother of so-and-so—whatever the child may be named."²¹ Among the Tlinkits of Alaska, "the name of a man is changed when he becomes a father and he is called after his child with the word *ish* (father) appended."²² Again, among the Indians of the Pacific coast, "when a child is named, the father drops his former name and substitutes that of the child, so that the father receives his name from the child, and not the child from the father."²³ Finally, it is said of the Patagonians that the parents "are frequently known by the name of a child, which usurps the place of their own."²⁴

*The Levirate and Allied Forms.*²⁵ Livingstone²⁶ wrote of the Bechuanas that when an elder brother dies, the brother next in age takes his wives, as among the Jews, and the children that may be born of these women he calls his brother's also. "He thus raises up seed to his departed relative." In Kikuyu exists a practice whereby "if a man dies without male issue his widow may pay dowry [bride-price] out of his property for a girl who is then at liberty to cohabit with any male member of the deceased's clan; her male children subsequently inherit the deceased's property."²⁷ The Dinkas probably follow farther than any other semi-civilized people the practice of procuring artificially a son for the deceased. Many other African tribes regard the children born of a widow, at whatever distance of time from her husband's death, as his children, but O'Sullivan²⁸ is not aware of any others which "provide for the extreme case of a man's dying childless, or at least sonless, without near male relatives and leaving only widows beyond the age of child-bearing, by allowing the widow or daughter in whom his property may temporarily vest, to contract marriage in his name with a woman who is, by the act of marriage, to become his widow and bear his heir. It is absolutely certain that the son born of such a woman can have none of the blood of his 'father.' He is his son only by a legal fiction as ingenious as any ever propounded by lawyers of more civilised countries." It is a law among these people that "all children borne by a man's widow are his children and the property of his heirs, irrespective of who is

their natural father and of time elapsed since his death; and, if boys, are in name and rights of inheritance that man's sons." An example is cited. "A dies, leaving one widow and one daughter by another wife. He has no male relatives. The widow is beyond the age of childbirth. He leaves no cattle. The widow marries the daughter to a man for ten cows. With these cows she buys a girl as widow to her dead husband for eight cows, there being none of her husband's. She brings a man from her own people, if possible, and he lies with the girl. In the next few years the girl gives birth to two daughters and a son. The two remaining cows have meanwhile increased to five with their young. By the time the son has grown up the two daughters have been given in marriage, and the cows paid for them are held 'in trust' by A's widow who purchased his mother. The son inherits all the cattle, also his own mother, and her purchaser, A's widow. His own natural father has no claim of any kind on him, beyond such presents of cattle as A's widow paid him for his services. The son carries A's name." Under the term "widow" is included, in Dinka laws, not only the wives of a man who is dead but also any bought as wife (widow) in his name after his death by his daughter or his widow, in order to raise children in his name. "It is the duty of a widow to raise children to her dead husband's name. This she does by cohabiting with her husband's brother or other of his close male relations." If she is beyond the age of child-bearing, it is her duty to purchase a girl and arrange for some male relation to cohabit with her for that purpose. These people also have the custom whereby if a sheik is "too old to be sexually efficient, he nevertheless continues to take wives, but these cohabit with his sons. Children so begotten are regarded as the children of the Sheik, and as the brothers of their actual fathers."²⁹

There are a number of cases of the levirate in India, especially in connection with the dead husband's younger brother.³⁰ The Saora widow is considered bound to marry her husband's brother or his brother's son if he has no younger brother.³¹ They give the name *putra* to the "one who saves from put, a hell into which those who have not produced a son fall."³² That the custom is ancient is indicated by the fact that the *Vedas* and the laws of Manu report marriage with a brother's widow and the *Mahabharata* mentions it.³³ Jolly³⁴ says that while Manu chiefly lays weight upon this, that the sexual relation between the widow and her brother-in-law cannot be begun without special empowerment from the guardian, and after the birth of a son must not be carried on any farther, he offers also much more exact regulations over the protraction and even over the form of this relation and the mood suitable to it, which should be free from all lust of the flesh and governed only by the desire to beget seed for the dead. "Almost all the other old lawgivers sanction levirate in case of inheritance and otherwise, so the prohibition of it and the attempt to confine it to widowed brides and their brothers-in-law is only a later interpolation."

Closely allied to the levirate is the *niyoga*—a sort of injunction to a widow to have by her husband's brother or some more distant kinsman a son who shall be regarded as the son of the deceased and, on coming of age, inherit from him. Under certain circumstances the practice may even be put into operation while the husband is alive: "Since it is the expressed purpose of this

levirate-marriage to care for the propagation of the line, in order thereby to prevent the cessation of sacrifice for the dead and the loss of heritage, it appears only reasonable that the still living husband too, who on account of impotence or sickness no longer hopes for progeny, may himself evoke the levirate" (*niyoga*). "At present there still commonly occur marriages with the deceased brother's widow, if not the *niyoga*," especially in the Punjab where so much that is old is preserved. These often bring it about that a man has two wives at once. It is a Tibetan custom that Buddhistic monks beget a son and heir for a dead brother.³⁵ The custom of *niyoga* is still reported from India for the purpose of obtaining progeny from the widowed princesses—"a practice permissible in emergency, though not accorded recognition as an ordinary course of social conduct. It consisted in inviting some great sage to become the father of children who, being born of a widowed queen, were to be considered the offspring of her dead husband."³⁶ Wilken³⁷ reports the same institution from the East Indies, according to which the widow has the right to have relations with the brother of her deceased husband who has died childless, in order to get for him an heir and successor. Such a relation is merely temporary and should not be aligned, he thinks, with the levirate. There is, however, a genetic connection between the two and an author is quoted who thinks that levirate is the principal and original form of the *niyoga*. The latter, it should be noted, can be put into operation during a man's lifetime; the childless husband may have his brother or some other person take his place, and regard the child begotten of his wife as his own. Only one such case is known to Wilken in Indonesia.

The levirate prevails in the East Indies among the Bataks and other tribes and in New Guinea. In one district, "cases are known in which the betrothed of a dead man went over to his brother because the *jujur* [bride-price] was already fully paid and the father of the boy did not wish to have paid all the expenses for nothing." Thus may a woman become the wife of a younger brother who is a mere child, and such a child may have several wives. Among the Bataks the widow always goes to the younger brother. The marriage of an older brother with a younger brother's widow is regarded as incest and as such is punished by death. Union in the first case may take place even before burial, but it is without ceremonies. The rule that the woman through marriage belongs inseparably to the kin-group of the man and thus may never marry out of it, is insisted upon strenuously. The same applies to South Sumatra.³⁸ In Malacca there was a ruling custom of monogamy "which was broken through only by the existence of the so-called levirate-marriage."³⁹ In Samoa a man married his brother's widow, even when he had a wife of his own, to keep the children and the property in the husband's family.⁴⁰ Von Mollendorff⁴¹ comments that the levirate can never be of the same importance with the Chinese as with other people, e.g., to retain the family-property, for posthumous adoption, which the Chinese substitute for it, fully meets the object.

The Greenlanders see no moral delinquency in a childless man's wife having

children by some other man; payment is offered to such a substitute.⁴² Among the Indians of southwestern Oregon, if a man died, his brother was compelled to marry the widow, no matter how many wives he already had.⁴³ Of the Chippeways, it is reported: "Sometimes a brother of the deceased takes the widow for his wife at the grave of her husband, which is done by a ceremony of walking her over it. And this he has a right to do; and when this is done she is not required to go into mourning; or, if she chooses, she has the right to go to him, and he is bound to support her."⁴⁴ Among the Miwok, "the oldest brother is entitled to his brother's widow, and he may even take her home with him on the return from the funeral, if he wishes, though that would be thought very scandalous."⁴⁵ The levirate is reported of a number of other tribes.⁴⁶ Kohler⁴⁷ thinks the levirate-marriage is connected closely with polyandry: "How closely this levirate-right is connected with the present polyandry is shown in the life of the Tlinkit: here the wife has sexual relations, even during the life of the husband, with his brother as a secondary husband (as he is called) and then follows him when she becomes a widow."

In Mexico the levirate was lawful even when the husband's brother was already married.⁴⁸ The custom whereby the oldest brother or in his absence the nearest male relative takes the widow, is prevalent among almost all Brazilian savages. It is coupled with the provision that the widow's brother marries her daughter, if she is marriageable and there is no other bridegroom available.⁴⁹ When a Jibaro Indian dies, his brother must marry the widow. "The departed husband, who is still jealous of the wife he left behind, does not cede her to any other man than his brother, who with himself forms one personality and represents him in the most real sense of the word."⁵⁰

Should the brother among the Hebrews refuse to take the widow, "then shall his brother's wife come unto him in the presence of the elders, and loose his shoe from off his foot, and spit in his face, and shall answer and say, So shall it be done unto that man that will not build up his brother's house."⁵¹ In the Talmud it is written: "The judges shall call the Levir and give him good advice. If he is young and the widow old, or the reverse, let them say to him: 'Wherefore to you an old woman (or a young)? Take your own like and bring no quarreling into the house!' If the brother-in-law is not suitable for the widow and yet holds to his 'right' to marry her, he could be promised a certain sum of money for the dispensation. But the widow after the ceremony is over need not redeem her promise; rather may she compromise with the declaration that she had 'held him a fool.'"⁵² In Persian tradition, if a man over fifteen dies unmarried, his relatives must dower a maid and marry her to some man. She is to be the dead man's wife in the next world and half her children are reckoned as his. This kind of wife is termed "adopted." If a childless widow marries again, half her children by the second marriage belong to her first husband and she is his wife in the future life. She is called "serving." The first child of an only child and daughter belongs to her parents and they

give her one-third of their property in compensation. She is called an "only child" wife.⁵³ On the death of Aristobulus (105 B.C.) his childless widow endowed his oldest brother with the rule and with her hand, by levirate-marriage.⁵⁴ To the Romans, marriages of brother and sister and, those with brothers-in-law, as occurred among the Egyptians, seemed loose and immoral, correlative with an undeveloped idea of property which made theft almost allowable.⁵⁵ Among the Germans there existed customs aligned with the *niyoga*,⁵⁶ while among the Beduins of today, "if a young man leaves a widow, his brother generally offers to marry her; custom does not oblige either him or her to make this match, nor can he prevent her from marrying another man. It seldom happens that she refuses, for by such an union the family property is kept together."⁵⁷

§407. Pregnancy and the Couvade.

Among some natives of British New Guinea pregnancy is thought to be due to frequent cohabitation and conception to take place in the breasts, which first show the condition. The child is then supposed to drop. There is no idea of a special intra-abdominal organ in which the child is lodged. During the suckling period the woman foregoes cohabitation and observes the same taboos as in pregnancy.¹

From the fifth month of pregnancy the Edo woman of West Africa wears her hair in a special manner; "it must be dressed by a woman who has borne one son, and kola is offered to the comb and pin used in the operation."² Among the Ba-Yaka the kola-nut is considered an aphrodisiac. No means are taken to prevent conception, and abortion is unknown. "During pregnancy the husband must abstain from his wife, and also during the period for which the child is suckled (about a year)."³ With the Bangala "a woman never had sexual relations with her husband from about three months before confinement until the child was weaned, i.e., from twelve to eighteen months. It was believed that if this prohibition were not observed, the child would sicken and die."⁴ Among the Baganda, "when a woman conceives, all sickly or delicate children are kept from her, and she is surrounded by strong healthy ones."⁵ The natives of the Niger Protectorate think that a pregnant woman's milk will suffer, and hence also the unborn or born child, if she does not leave her husband as soon as she knows of her state. It has thus become customary for a woman to avoid cohabitation with her husband for nearly three years after pregnancy.⁶

Among certain Siberian tribes "a pregnant woman must be active and energetic so that the child also shall have these qualities and issue easily and quickly from the mother. She ought in walking to raise her feet high, and on finding stones or lumps of earth in her path she should kick them away, symbolizing the removal of obstructions at child-birth."⁷ In India, "to be the blessed mother of a child is considered so much a blessing and a meritorious

deed in the East, and to remain barren is considered so great a curse, that from the very time of conception every possible care is taken as well for her health as for her being out of the way of drawing on evil eye on her blessed condition."⁸ The pregnant woman is spared household labors; must not be out of doors after dark for fear of evil spirits; receives presents and decorations and various other little attentions.⁹ In the Punjab it is thought that man and wife during pregnancy are particularly susceptible to the effects of an eclipse. It is safest for the woman to keep to her bed and not see it, though the man may. Both must refrain from locking and unlocking a lock lest the child's fingers be bent and powerless. To cut wood with an ax will make the child have hare-lip; to stamp or print during an eclipse is liable to leave an impress on the child's body.¹⁰

The same sort of prescriptions as to conduct recur in variant forms among most of the East Indians and are generally good examples of imitative magic.¹¹ Especially must there be no killing of animals or head-hunting; no blood must be spilt. In Celebes, the wife "may not stand under the supporting-beam of the house, as this effects miscarriage, and must split no wood."¹² "Oh, child," says the Javanese father, in sacrificing, "I kill this cow, but it shall be done dexterously; therefore thou must not come into the world untimely or misshapen."¹³ The wife has to be "careful not to disparage any man or beast, or the qualities she dislikes will be reproduced in her child. And she must not sleep in the daytime, or her child will fall a prey to evil spirits."¹⁴

In Micronesia "the moon played a rôle, as well as certain incantations;" and taboo and renunciation of all labor, for both man and wife, occur.¹⁵ In the Nauru Islands no nuts may be touched that fall within a hundred feet of the hut. The wife may eat nothing that the husband, father, or mother have touched. "From the fifth month on, no nail may be driven in the house and not the least noise may be made. Nothing may be taken from the wall till the child is born. Especially in the case of the first-born are these rules most painfully observed."¹⁶ In the Gilbert Islands, "when a woman was known to be pregnant, the greatest care was taken to conceal her condition from all outsiders. . . . Remnants of her food, toilet materials, old clothes, and all other things closely connected with her person were burned as soon as might be, for through such things some foreign sorcerer might most easily bring evil upon her. . . . The fifth month of pregnancy was considered to be the most dangerous of all to mother and child. When it arrived she was taken to the eastern shore of the island, where a small clearing in the bush had been prepared, and as she sat there a girdle of the inner bark of the *kanawa* tree . . . was bound about her middle. This was called her *bunna*, or protection against enemy magic, but incidentally it played the part of an abdominal support that helped her to bear the increasing weight of her child." Two kinswomen "paid constant attention during the last two months of pregnancy to the position of the child in the uterus, and if it seemed at any time unsatisfactory it

was adjusted by extremely careful massage. I have heard a competent medical authority speak in praise of the methods of these old experts, whose art is not yet quite extinct in the less visited islands of the Group."¹⁷ When a Maori woman of the high chieftain class was known to have conceived, she was not allowed to perform any laborious work; more especially was she forbidden to carry any food-products on her back—the common native way of bearing burdens—"inasmuch as such an act would have a most injurious effect upon the unborn child, for, be it known, such a child is *tapu* even before birth. The proximity of food-products has ever a desecrating or polluting effect upon *tapu* persons, objects, or places."¹⁸

Among the Tsimshian Indians "a woman who is with child is not allowed to eat tails of salmon, otherwise the confinement would be hard. She must rise early in the morning, and leave the house before any of the other occupants leave it. Before the child is born, the father must stay outside his house, and must wear ragged clothing. After the child is born, he must abstain from eating any fat food, particularly porcupine, seal, and whale. The mother is confined in a small house or in a separate room."¹⁹ The Minsi Indians of Canada say that the husband of an expectant mother was often accompanied on his hunting-trips by the spirit of the unborn child, whose romping and playing about the bushes, invisible to mortal eye, would nevertheless frighten away the deer and send the hunter home empty-handed. "To prevent this a little bow and arrow were made and attached to the prospective father's garments, in the hope that the little spirit would play with them and stay quietly with his parent. Should this precaution fail, the child was thought to be a girl, and a little corn mortar and pestle were substituted for the miniature bow and arrow."²⁰ The Dakotas believe that "women with child are but torturing sports for the vengeful Anogite [two-faced monster]."²¹ In all the tribes the pregnant woman must observe certain taboos. The Zuñi woman "must be guarded from the sight of moving water, fish, and water reptiles no less than from fierce and fearful things."²² Were a man to kill a snake during his wife's pregnancy the child would be born spotted like a snake and would die. "Were a pregnant woman to look upon a corpse her child would be still-born, or, born alive, would soon pine away."²³ Among the Pima, "a pregnant woman was not allowed to eat anything that an animal had touched. For example, if a gopher had cut a vine upon which a melon was ripening, she might not eat the fruit; or, if the mice nibbled at a basket of wheat she might not eat of the tortillas made therefrom. She dared not go where Apaches had been killed, or the baby would die. If her husband killed a rattlesnake at that time, her child's stomach would swell and it would die soon after birth. She must not eat liver or her child would be disfigured by birthmarks."²⁴ Among the Pawnees "a woman must not look hard at any animal before her child is born, for the child may be like it."²⁵

By many of the tribes of the Southwest beliefs of imitative magic are held in connection with conception, pregnancy, and growth; Parsons²⁶ has described a number as follows. "To conceive a male, a woman will wash a bow and arrow and drink the water; to conceive a female, she will wash the grinding stone, and

drink. A man or woman who eats corn whose grains grow in a double row or two chili growing together will beget or conceive twins. The remains of the lunch a hunter takes with him in the sacred rabbit hunts should not be eaten by a married woman or by the unmarried, otherwise they will have twins. A pregnant woman will not eat rabbit. The skin on the belly of a rabbit is thin and her child's belly would be over large. A pregnant woman should not stand looking out of a window, nor, once she has started to cross a threshold, should she return, for example, for anything forgotten. She should first cross the threshold and then return, otherwise the labor will be slow. To hasten labor, throughout her pregnancy a woman should rise quickly on awakening and put on her dress and belt, not dawdling about getting up. When it thunders a child will pull his hair to make it grow and stretch up his arms to grow tall. To make a backward or feeble child grow quickly and strong, a father will take it often out doors before the dawn."

In British Guiana neither parent must do any work, and the father may leave the hut only in the evening and for a moment. He must not bathe or handle his weapons. Thirst may be assuaged only with lukewarm water. It is forbidden to scratch the body or head with the finger-nails, a special implement being used. "The transgression of one of these prescriptions and prohibitions would bring about the death or lifelong sickness of the child."²⁷ Among certain Arawaks, "though the killing and eating of a snake during the woman's pregnancy is forbidden to both father and mother the husband is allowed to kill and eat any other animal. The cause assigned for the taboo of the snake is that the little infant might be similar, that is, able neither to talk nor to walk. Neither parent, however, when carrying a piece of cassava cake, may either turn it over in the hand, or curl it up at the sides; otherwise, the ears of the child, when born, will be found curled over. Any game hunted by dogs is strictly forbidden the pregnant woman of this tribe, just as it is at her menstruation; otherwise the dog would be spoiled for hunting purposes, permanently in the latter circumstances, temporarily in the former, the dog recovering its powers only when the baby was born." Cooking for a man is strictly prohibited to a pregnant woman; "she may however 'clean' the meat, but in cleaning any animal or fish she must not cut off the ears, nails, or fins." If a Carib fisherman's wife is with child, he must take special precautions lest he be unsuccessful.²⁸ Certain tribes of Brazil enforce fasting upon both spouses; they eat only ants and fungi, and drink water in which certain medicaments are dissolved; and they both cut themselves so as to lose considerable blood.²⁹

Samson's mother when pregnant was to drink no wine and avoid unclean food.³⁰

The Couvade and Allied Practices. By certain Melanesians "it is considered kind and respectful to call a man when he has a child the father of so and so; his station in society is advanced by his paternity, and it is recognized in this way." This teknonymy, indicating the pride of fatherhood, is in evidence in the couvade. The most conspicuous example of the couvade among Melanesians appears to have been in the region where descent follows on the father's side.³¹ In San Cristoval, Solomon Islands, "for two or three weeks after the birth of

a child the father guards himself carefully from the sun and from the cold wind which comes up nightly from the river valleys, and from the rain. He is careful to do no heavy work, and especially not to carry anything heavy."³² In New Guinea, "there is a distant reminiscence of the *couvade* in the usage whereby the father abstains for a time from tobacco and betel." If he goes upon the water, "the fish retire before him and the sea is stirred up;" if he eats crocodile-flesh or fish the child may have crooked legs.³³ Similar taboos obtain among the Andamanese.³⁴

In West Africa "a carpenter whose wife is pregnant must not drive a nail. To do so would close the womb and cause a difficult labor. He may do all other work belonging to carpentering, but he must have an assistant to drive the nails."³⁵ Along the Upper Congo "the father during the pregnancy of his wife is prohibited certain foods, and may not hunt or fish during the pregnancy and confinement of his wife, unless she goes to a '*nganga*' [medicine-man] and has certain ceremonies performed on and over her. The prohibitions varied considerably, and when a man was observing these tabus, he was said to be in a state of *liboi*, a noun derived from the verb *bwa* = to deliver of a child, to be confined. I have always regarded this as a remnant of '*la couvade*.' They have no tradition of the man ever having taken the place of the confined woman by lying in bed during confinement."³⁶ Among the Bageshu, "the husband of the woman is not allowed to take violent exercise, nor may he climb a tree, or go on to a house roof, or climb rocks, lest he should slip or overexert himself, and thus bring on a miscarriage for his wife."³⁷ In East Africa the father who fears twins must stay a month in his hut and drink a special concoction; this is called "a species of male child-bed."³⁸ Among the Awa-Wanga, many believe that within five or six days of the birth of a child the parents must cohabit, or the child will die. "After the birth of twins, the parents are secluded for from twenty days to a month; at the end of the ordained period the brother of the man then formally opens the door of the hut and the couple can go about as usual. This seclusion of the male parent is probably an attenuated relic of the '*couvade*' custom."³⁹

The *couvade* exists, we are told, among both Land and Sea Dyaks. "If a Land Dyak's wife be with child, he must strike nothing, never tie things tight, nor do any household work with his *parang* (chopping-knife), or some deadly harm will happen to his unborn offspring. At a birth the husband is confined to his house for eight days, and obliged to stay his appetite with rice and salt only. For one month, moreover, he may not go out at night, unless he wishes his infant to cry continually during his absence."⁴⁰ The Sumatran must stay by his wife from the first appearance of pregnancy till the forty-fourth day after delivery, especially between sun-set and sun-rise, to ward off evil spirits. He must not kill animals lest their qualities go over into the child. He has a sort of "invisible contact" with the latter and by his conduct exercises a strong influence over its destiny.⁴¹ In the Mentawai Islands the father shuts himself up for two months in the house, while his wife attends to the field-labors; and

in Luzon he must refrain from certain foods.⁴² So strict is the rule about husbands leaving their wives that Stevens⁴³ often had difficulty in securing carriers and guides. Wilken⁴⁴ gives a list of East Indian peoples among whom the couvade or like practices obtain, and cites regulations for both husband and wife. If these be omitted, the placenta may be retained, and the child be still-born or defective. The regulations of some Pacific Islanders form variants upon the foregoing,⁴⁵ while fasting by the husband is found in China.⁴⁶ Among the Malayan and Papuan races in Polynesia, "a few days after giving birth the poor woman has to go off to her daily toil as usual, and the father stays at home to nurse the child, and feed it with the expressed juice of cocoanut."⁴⁷

In British Guiana the husband hangs his hammock near his wife's and is confined along with her. Among all the Indians practising the couvade a number of taboos surround husband and wife. The Makusi father during his time of couvade is forbidden his usual bath. "Strange to say, it is the bath which in most tribes constitutes the final purification of the mother, at the end of her lying-in period, whether such period be of a few hours' or several days' duration." In many of the tribes during the couvade, and often for long afterward, the husband is prohibited from engaging in certain of his ordinary occupations. "The Pomeroron Arawak must neither smoke, lift any heavy weight, use a fish-hook, nor have intimate relations with any woman. The Mainland Carib of Cayenne was not allowed to cut any big timber with an ax. The Makusi must not touch his weapons. Should these and similar prohibitions be not observed, some evil would be sure to befall the child. There is another interesting example recorded of a man during couvade lying in his hammock and twisting a new bow-string; baby began to scream, with the result that the father had to undo the whole line."⁴⁸

In the old French story, *Aucassin and Nicolette*, is a striking case resembling the couvade.⁴⁹

§408. Child-Birth.¹

AMONG the aborigines of Victoria there exists a peculiar custom associated with the disposal of the navel-strand. "When a man has a child born to him, he preserves its umbilical cord, by tying it up in the middle of a bunch of feathers. This is called *kalduke*. He then gives this to the father of a child or children who belongs to another tribe, and those children are thenceforth *ngia-ngiampe* [under a sort of taboo] to the child from whom the *kalduke* was procured, and that child is *ngia-ngiampe* to them. From that time none of the children to whom the *kalduke* was given may speak to their *ngia-ngiampe*, or even touch or go near him; neither must he speak to them. . . . When two individuals who are in this position with regard to each other have arrived at adult age, they become the agents through which their respective tribes carry on barter." This estrangement is said to answer two purposes: "It gives security to the tribes that there will be no collusion between their agents for their own private advantage, and also compels the two always to conduct the

1 §317, of the *Case-Book*.

business through third parties." The taboo of the woman during child-birth is found here; in South Australia, "when a woman is married, she is not allowed to speak at all until she has done breeding."²

Among the Melanesian Koita, "should labour be unduly prolonged, the child's father is sent for. He, after having opened any boxes there may be in the house—and in the Port Moresby villages there are few house-fathers who have not at least one camphor wood box—sits down near his wife and proceeds to untie the cord which confines his hair, and to remove the *gana* from his arms. If this does not improve matters her brother is sent for, and he in his turn removes hair band and *gana*; should this fail a 'medicine woman' is the last resource." The play of imitative magic is here in evidence. "While his wife is secluded in the house, the child's father must abstain from chewing betel, and observe the same food taboos as his wife, under penalty of his child becoming seriously ill. . . . Cohabitation should not be resumed until the child can toddle about; if it is resumed before then the child will weaken, sicken and perhaps die."³ Among certain Solomon Islanders, "no married woman is allowed to sleep with a woman in her confinement, but it is quite permissible for unmarried girls to sleep in the same house."⁴ In New Georgia, "after the return of the mother with the twenty-five days' infant, she sleeps with the child, in a separate bed from her husband, until the baby's teeth have come, or until it is beginning to talk, when cohabitation again begins."⁵ For a considerable time after the birth of a child the Loyalty Islands mother was regarded as taboo, and was required to live a secluded life. "During this period her husband did not cohabit with her."⁶ Papuan women go to an outside hut to bear; this may be to force segregation of husband and wife at the time. Cases occur where women have to stay in the places of their delivery for months. These customs are said to explain in good measure the existence of polygyny and the difficulties of missionaries in trying to eradicate it.⁷

African tribes require seclusion for a month or so after confinement. The husband must take his weapons out of the house and stay out himself till eight days after the birth and may not live in the house till three or four weeks after he has first seen his child. Again, the woman may not leave the hut without peril of great ill luck to her and the child. "This custom seems to be solicitously observed." Throughout East Africa there must be no fire taken into or out of the house. The seclusion may be upon both "sanitary and æsthetic grounds."⁸ In East Angola, it seems that the husband is held in some degree accountable for the fate of the wife: "when a woman dies in child-birth the husband is obliged to bury her by himself, carrying the corpse on his back to the grave and doing the work of interment alone. Then he has to pay for her life to her parents; and if he has not the wherewithal, he becomes their slave."⁹ The Ewe-speaking people of West Africa consider a mother and child unclean for forty days after child-birth.¹⁰ Among the Baganda, before confinement, the lower part of the woman's body is massaged with butter. A

child born feet-first is called by a term of reproach; a stillborn child or one who dies in infancy is buried at the cross-roads and thorns put on its grave. Passing women throw grass on the grave to prevent the ghost from entering them to be reborn. If a child is found by the father's relatives to have any symptoms of disease, the mother is accused of breaking the taboos.¹¹ If the child is a boy, the Bahima father brings the gate-posts from the kraal, and places them on the fire to keep the mother and son warm; "this fire is kept burning brightly for seven days, by day and night. The mother is given the cord, which her husband uses to tie the legs of restive cows during milking, to wear as a waist-band. But should the child be a girl the mother has to use a strip of her own clothing for a band, and also has only ordinary fire-wood for her fire."¹² With the Atharaka, "on the birth of a child the father must call together his relations and slaughter a goat. This ceremony takes place outside the village, for no one can enter the village for five days after the birth. Should the father himself be away at the time of the birth he cannot himself enter the village till the goat has been slaughtered. During this period of five days no property can leave the village."¹³ In the Baringo District, the husband may not enter the hut for at least two months after delivery, and cohabitation must not be resumed until the child is weaned and the mother has gone through the purification-ceremony.¹⁴ Among the tribes of British Central Africa, purification consists in washing the whole body and in placing a piece of burning wood between the mother's legs, where it smoulders for several hours.¹⁵ In this region the mortality from obstructed labor is high, contrary to the usual experience of the natives. In Nyasaland the woman makes no fuss about child-birth, and works up to the last moment. "It is a common occurrence," says Stigand,¹⁶ "for a child to be dropped while at work in the fields. The woman performs all the necessary offices, picks up the child, and walks home."

Northern Asia shows the special tent for child-birth. After two months the mother goes out, putting on new clothing and making the old into amulets. While in the child-bearing tent the woman may eat only meat killed by her husband or the first booty brought home by a child. If she goes out of this tent she must not go by the door but through an opening made for the purpose. The Kalmuk husband whose wife is confined stretches a net around the outside of the tent and beats the air with a club until the child is born, crying the while: "Be off, devil!" If the pregnant woman accidentally steps on a net, it is cut into and sewed together again at that point.¹⁷ At the first attack of labor-pains, among the Yukaghir and Yakut, "the wife, the husband, and the midwife must loosen all the fastenings of their garments that the child may not be hampered in any way. . . . Then the midwife purifies the woman by means of smoke. Dry grass is kindled on the floor of the house, and the woman passes through the smoke, stopping a while and shaking her body." Miss Czaplicka¹⁸ states that all the cases of child-birth observed among these people were very difficult, and "the barbarous practices attendant upon them produce nervous diseases and premature age in the mothers." The Tungus wife must bear her child alone in the forest, "just as is the case among many tribes of

North America."¹⁹ The Tibetan mother gets gifts a week after confinement, on the occasion of the birth-feast, but must remain home a month.²⁰

Among the Naga tribes of India the mother was carefully secluded in her house, alone with the child, for five days, during which time she was fed only on fowls. "The meaning of this seems to be that the woman and all her surroundings are unclean. After the five days had elapsed all the woman's clothes were washed, and the clay pots used by her for cooking since her confinement were thrown away. She was then allowed to mix as before with the villagers, who made her small presents of food, drink, etc."²¹ Again, "after the birth of a child, it is generally the custom that the mother must not leave the house for some days, and among the Lushais neither parent must work for seven days lest the soul of the child, which is supposed to be hovering around them should be hurt."²² Among certain people of Malabar, "as soon as the pains of delivery come upon a pregnant woman, she is taken to an outlying shed, and left alone to live or die as the event may turn out. No help is given to her for twenty-eight days. Even medicines are thrown to her from a distance; and the assistance rendered is to place a jar of warm water close by her just before the child is born. Pollution from birth is held as worse than that from death. At the end of the twenty-eight days the hut in which she is confined is burnt down. The father, too, is polluted for fourteen days, and, at the end of that time, he is purified, not like other castes by the barber, but by holy water obtained from Brahmans at temples or elsewhere."²³ After the birth of a child, among the Nairs, "there is a mild pollution (as compared to the strong untouchable pollution caused by death) in the family. This pollution does not carry any disabilities except the prohibition to enter any sacred precincts."²⁴ Water appears to be a purifying substance *par excellence*. "When a male-child is born in a family, the father of the new-born child rushes headlong to the mother Ganges and jumps into it. He then begins to repeat the names of his ancestors and throw water upwards, apparently believing that his ancestors in heaven are receiving the oblations of water thus thrown up by him. . . . It is believed by an average Hindu that a male-child is the fruit of the procreation of ancestors."²⁵

Rose²⁶ has written extensively concerning Hindu birth-observances in the Punjab. To prevent mischief to the mother of the child, a number of precautions are taken. Fire must be kept in the room, as must also grain, close to the bed, as an emblem of good luck. Water must be kept there, as it is a purifier; and a weapon should be placed close by the mother. Under the bed should be kept the handle of a plough. There should be a lock on the bed, or else it should have a chain round it. On no account should a cat be allowed in the room, nor should the mother hear one call, or even mention the word "cat." It is most unlucky for her to dream of the animal, and if one is seen in the room, ashes should be thrown over it. An eighth-month birth is attributed to a cat having entered the mother's room in a former confinement. The house should not be swept with a broom, lest the luck be swept out of it. No small drain into the room should be left open, lest ill-luck enter by an aperture which must be unclean. A lamp must be kept burning all night and allowed to burn itself out

in the morning; if the lamp were blown out, the son would be destroyed. Monday is an unlucky day for birth; the remedy consists in boring the child's nose or ear. An averting ceremony follows a birth under an eclipse, one of the details of which is that the parents, with the child in the mother's lap, are placed under a sieve through which water is poured. There are also practices which consist in deceiving the mother. For instance, she is generally told that she has given birth to a girl, for if she knew she had had a son, the after-birth would not come away. If she bears a girl, she is told she has borne a stone. In one place the after-birth is buried at the spot where the child was born "after the eldest matron of the family has made the mother worship it." There is a great deal of bathing all through these ceremonies and also the use of cow's urine to cleanse. The Mohammedans of the Punjab have similar birth-observances. To facilitate delivery, they place a leaf in a jar of water: as it opens out, so the birth takes place. The mother is told that she has given birth to a one-eyed girl; the heat engendered by this ill news forces the after-birth out quickly; joy would retard it if she knew a son was born. The navel cord is sometimes incased in silver and hung round the child's neck as a defense against stomach-ache. In other instances it is buried in a corner of the house. Neither parent should touch it. After the child is born, a knife, sword, or piece of iron is kept under the mother's head so as to ward off evil spirits. Again, no cat is allowed in the room; it is possessed of genii and might harm the cord. When the mother goes out later to see the stars, points of swords are placed together over her head so that jinns and other evil spirits may not pass over her; thereafter danger no longer shadows her. Sometimes the father shoots an arrow into the ceiling over the wife's bed.

Similar cases of uncleanness, segregation, and purification are reported from other districts of India.²⁷ China and Japan show analogous customs, among them the "parturition-house."²⁸ In Assam there are regular gennas or taboos at child-birth, name-giving, ear-piercing, and other ceremonies. "The genna at birth varies not only according to the sex of the child but in some groups according to the number of children, being always most extended for the first-born. Naturally the poor mother and the child are particularly exposed to the malice of the evil spirits at the hour of birth. The shedding of blood at birth is regarded as dangerous to all who are in the house, and in exogamous communities it must be remembered that the woman, whose blood is shed, is by birth a member of another sub-section."²⁹ There are no professional midwives among the Palaungs, "child-birth being looked upon as a perfectly natural event, and not as an illness. The presence of an elderly woman, however wise, would only delay the birth and make the delivery more difficult. . . . The husband of a woman in labour may be in the house and even in the same room as his wife if she desires his presence. Other men should not come near the house for eight days from the birth of the child. Their presence would not harm either the mother or the baby, but if they happened to be tattooed with any charms, the efficacy of those charms would pass away. A child is often stationed on the veranda to warn any man, who, not knowing that a child had been born, might enter the house. If by accident a man does enter, he should leave at

once, go home as quickly as possible, and wash himself all over; if he can immerse a silver charm in the water, so much the better."³⁰

In the Malay Archipelago the less civilized natives are much exercised in mind over the perverted appetites of women who are bearing children; the women must not give birth in the house.³¹ Among the Jakun, or aboriginal Malaysans, is found the greatest development of the custom of "roasting" the new mother over a fire—"an Indo-Chinese practice which is general among the Malays, by whom it is called 'salei-an'"—as well as a system of birth-taboos which regulate the diet and the movements of both parents. "A considerable amount of noise is made by the Orang Laut as soon as a child is born to them. All present unite in shouting and in beating anything which will make a noise, the greater din that it makes the better. The hubbub lasts for about ten minutes at the shortest to half an hour at the longest, and is especially intended to scare away any evil spirits which might otherwise attack either mother or child. As soon, however, as the cord is cut, the demons are thought to have lost their opportunity."³² To keep off the evil spirits that impede birth, the Filipino husband bars his door, starts a fire, strips himself, and lunges furiously in the air.³³

The Nauru Islanders used to have parturition-houses.³⁴ In New Zealand "the mother is not secluded before birth; but she is *tapu* afterwards, until made *noa*, or 'common' by ceremonies."³⁵ Best³⁶ states: "On account of the *tapu* pertaining to both birth and death, but few persons were ever born or ever died in a dwelling-house in Maoriland." A special hut was constructed for a woman's occupation during and for some time after the period of parturition. "After all ceremonial performances following the birth of the child had been duly performed, and the party had returned to the village community, then the 'nest house' was destroyed. It was demolished and taken away piecemeal, together with any items, such as floor-mats, etc., used thereat, by a member of the priest class. Timbers, thatch, every item was conveyed by him to some place, probably the *turuma* or latrine, and there burned. The task of this man was to render the spot *noa*, common, or free from *tapu*, that is to take the *tapu* off it." Both mother and child remained in the "nest house" until the cord fell off, which occurred about the eighth day after birth, whereupon the child was taken to the water in order to undergo the ceremony of baptism. Both parents and child were sprinkled with water.

"The majority of Thlinget women suffer very little, and some not at all, when their children are born. They have been known to give birth while sleeping. In former years the universal practice was for the mother to lie outside of the house in a booth, or in the bushes. . . . In an incredibly short time after giving birth to a child, the mother is up and about."³⁷ Among the Kwakiutl, in the case of a twin-birth, "the afterbirth is well washed, and hung up until it is quite dry. When it is dry, it is folded up and put into the workbox of the mother of the twins. It is kept in the box as a medicine."³⁸ Such a mother is a fetish-woman. When the time for delivery came, it was the custom among the Winnebago for the woman to occupy a small lodge

erected especially for her use. "None of her male relatives were permitted to be present and her husband was not even permitted to stay at home. He was supposed to travel continually until the child was born, in the belief that by his movements he would help his wife in her delivery. According to one informant the husband had to hunt game, the supposition being that this procedure on his part would cause his wife to have enough milk for the child. This traveling of the husband was called, therefore, 'Looking-for-milk.'"³⁹ The Apache woman in confinement went off to a hut by herself, attended by her female relatives.⁴⁰ At the birth of a Yuchi child, "its navel cord is ceremonially disposed of, and the father is henceforth prohibited from association with his friends, besides having restrictions for a month against the use of certain foods, manual labor, and hunting."⁴¹

Among the present-day Arawak and Warrau, "a woman is delivered either in a separate banab (utilized also at the menstrual period by other women) or in a portion of the house screened off." In former times the Surinam Carib woman, as soon as the time of her confinement grew near, retired into the forest. "By hiding in the forest she thus had an opportunity of killing the child or shuffling it away before her man or remaining women in the village noticed anything. . . . As soon as she had taken a little rest she returned with her baby to the house, where she immediately continued on with her work." Many instances are noted where an accouchement has apparently made no difference in the daily routine: "when on the march an Indian is taken with labor, she just steps aside, is delivered, wraps up the baby with the afterbirth and runs in haste after the others. At the first stream that presents itself she washes herself and infant. 'So again, the mother with her first born in her arms, had been in our hut,' says Schomburgk, 'only a few minutes before. Within half an hour she appeared with another baby that she had just given birth to in the bush without any assistance.'" As to the navel-strand, it is either bitten, cut, burned, or tied. "Arawak at the present day use a piece of sharpened arrow reed, but the women tell me that in the olden days a fire stick was employed. This is confirmed by a passage in Bancroft, that they divide the umbilic vessels with a brand of fire, which cauterizes their orifices and renders a ligature unnecessary. Arawak tell me that the mother keeps the cord until her child, as man or woman, dies, when it is buried with the body. . . . Delivery would seem to be followed, sooner or later, by the ablution of both mother and child."⁴² Many examples are cited. It was a former custom among the Araucanians not to permit a woman to give birth to a child within the precincts of the village, as it was considered to cause infectious diseases. "She was driven out, on beginning to feel the labour pains, and retired to the banks of the nearest stream or lake. As soon as the child was born the mother stepped into the water and performed the necessary ablutions, returning afterwards to a small hut constructed for the purpose near the *ruca*, which constituted her home. Here she remained a week attended by some compassionate friend. At the end of this time she bathed again, and returned to her own home, where all her relations and friends were assembled to celebrate a feast in honour of the babe."⁴³

The notion of uncleanness is familiar from the Old Testament. It applied also to the woman in child-birth, who was unclean seven days if she bore a

son and two weeks if a girl. Ceremonies accompanied by offerings were prescribed for her purification.⁴⁴ On account of her impurity the child-bearing Greek woman was kept from the temple, and the house was purified.⁴⁵ Among the Zoroastrians, the mother at child-birth was unclean in spite of the logic of the religion, according to which she should be pure because she had increased life. "The strength of old instincts overcame the drift of new principles;" that is to say, the mores were too strong for the new faith. A woman who bears a dead child is a grave and must be ritually purified as such. Only to save her from death may she drink water, which she would defile, and if it is given to her she must undergo a penalty. These views go back to the notion that she has been near death and has had the death-fiend in her. A great fire is lighted to drive off the demons.⁴⁶ The Iranian woman who had given birth to a child was regarded as unclean for forty-one days and was given food and drink in the precautionary manner employed in the case of menstruating women. Later she purified herself with cow's urine and water, put on a new dress, and was then clean.⁴⁷

§409. Solicitude for Posterity.

Observances after Birth. The Hottentots use fat and other substances to make the child supple and strong; if it is a boy they sacrifice oxen and if a girl sheep or nothing.¹ During the period of the Kaffir mother's seclusion, a lunar month, "wise women sprinkle the child daily with a decoction of herbs, and repeat certain rhymes, mostly utterly meaningless, which are supposed to insure natural development and physical health. Then there is a fire of aromatic tomboti wood kindled at intervals on the floor, and the child is passed and re-passed through the smoke. This insures mental vigor, wisdom, valor, strategy, and eloquence of speech. The spirit of fire escapes the smoke as it ascends, and thus the child receives and retains, providing the smoking process is duly performed by qualified persons."² "When the little one is several months old, the father first takes official notice of it by having a ceremony carried out by which it is solemnly taken into the family." He plucks out of a cow's tail a bunch of long hairs which the mother knots together in a secret manner and fastens about the child's neck. The cow in question may not be sold but is given with the girl-child when she is married. It does not become the property of the bridegroom. This custom is believed to exorcise all future ills that may befall the child.³

On the Gold Coast the infant is subjected to certain fetish-preparations to fortify him against all kinds of evil.⁴ In this region, as in a number of others, the living child of a woman who dies in parturition is buried with her.⁵ In southern Cameroons it is customary to lay the child before the door of the house and then to apply a medicine in streaks of red to the child, to the threshold and door-frame, and to the soles of those who have carried the child. The procedure is repeated at all the doors of the village.⁶ Anointing the child with

the blood of a sacrificed fowl is practiced in the Congo Basin.⁷ As long as the Ba-Yaka child is "in arms" (about a year), both it and the father must abstain from washing.⁸

In Uganda the mother is subjected to the common roasting by the fire and then the priest presents the child to the ancestral spirits, asking for it long life, riches, and, above all, that it may be a faithful believer in the tribal and ancestral spirits. He accompanies each special request by spitting on the child's body and pinching it all over. For his services he gets one hundred and eight cowrie-shells, nine for each of the child's arms and ninety for the body. Birth of twins is lucky and "is celebrated by an obscene dance which, however, is only lewd in its stereotyped gestures," the latter being doubtless survivalistic. The dried navel-cord of princes is set with pearls and hung up on a post, with a man to watch it.⁹ Near Lake Victoria the hair of a child nine days old is shaved off the body, to be preserved in a box. Despite the desire for children, if any of the numerous portents and omens that are watched for at the birth of a child are bad, it is strangled; also if its upper teeth come first.¹⁰ Among the Hovas if a child is born out of due time, it is put in the opening of the cattle-pen and the cattle driven over it. If it escapes unharmed, it is allowed to live. The normal child is twice passed over the fire.¹¹ The Kabyles cause several drops of the blood of a sacrificial victim to fall on the child's face which "ought to repel evil influences and assure the child a prosperous future."¹²

The newly born among the Ostyaks are rubbed with snow or laid directly in it. Exposure to the sun's rays for several days, after licking by the mother, is practised in Tibet.¹³ The Hindu child is received on a tray of bamboo-chips used for winnowing grain and a drop of honey is put into its mouth even before it receives its first bath. Its horoscope is cast and an evil spirit is propitiated which would otherwise be malicious.¹⁴ Rose¹⁵ says with reference to the ceremonies after birth in the Punjab, that "it is as difficult to distinguish between the religious and social observances as it is to say what usages are based on magic and what on the first glimmerings of medical skill. Nevertheless, under much that is barbarous and puerile there are traces of more rational ideas regarding cleanliness, and even a kind of primitive anticipation of antiseptic treatment. One important point to note is that the observances are far less elaborate in the case of a girl child, and this idea, that the birth of a girl is a misfortune, re-acts injuriously on the mother, less care being bestowed upon her, and every observance being hurried over and many stinted, if the child is not a boy. Thus in Râwalpindi the mother of a son is carefully tended for forty days, but if the child is a girl for only twenty-one."

In old Japan "the infant is not allowed the breast for nearly three days and is dosed often with the horrible decoction used for staining the teeth, composed of water that has become putrid in an old teapot in which were a quantity of old rusty nails."¹⁶ Malay children born on an unlucky day are buried alive,¹⁷ such practice being strong evidence of the fear of the aleatory element, for

children are much desired. It is customary in parts of Borneo to cut the navel-cord with a sword that may never be sold; the ears are pierced as soon as the child is bathed.¹⁸ The theory of the Sea Dyaks seems to accord more concern to the mother. If she died in consequence of delivery, "the child should pay the penalty (i) as being the cause of the mother's death, (ii) because no one remained to nurse and care for it." "No woman would dare to suckle such an orphan lest it should bring misfortune upon her own children."¹⁹ To the Dyaks, ghosts are right at hand to plague the child, so that it cries a great deal. A cock is sacrificed to an evil female spirit that is particularly dangerous to young children.²⁰ The Macassars sprinkle colored rice upon the body of the woman and try to get a cock and a hen to pick it off, in order to remove all disasters and adversity. If they will not do that, there is doubt about the child living long.²¹ The peoples of Malacca have hit upon the practice, rational in its results, of plugging the nostrils for a short time with cloth "to cause the child to cry."²²

After the Maori child is baptised, "the priest casts the six pieces of grass or leaves into the stream, and the movements of these are carefully watched. Should they drift away without scattering or separating much, the fact is hailed with pleasure, it being a good omen for the child's future, he will be healthy, vigorous, clever, and will attain manhood. But should the pieces separate, and drift apart, the omen is a bad one for the child." Best²³ states that the main idea of the religious ceremonies after birth is "to endow the child with *mana atua*, supernatural power or attributes, such as the gods possess, the divine powers that emanated from Io, as also with intellectuality."

Among the Hopi Indians, "ashes or sacred meal are rubbed on the newborn babe."²⁴ "The Acoma mother lies in for four days. During this time an ear of corn is placed next to the child. On the fourth morning, according to one informant, the 'medicine-man' and his wife are sent for. They arrive with the 'medicine-water' some time before dawn. The 'medicine-man' prays and sings four or five songs. He then takes the child out the east side of the mesa to show it at sunrise to the sun. The child's mother goes along and during the ceremonial sprinkles meal. It is the 'medicine-man' who proposes a name for the child. If his suggestion is not acceptable, any relative may name the child."²⁵ Both Sia and Zuffi have the superstition that "should one suffering from a snake-bite look upon a woman furnishing nourishment for an infant, death would be the result."²⁶ Among the latter people, "if the cord of the new-born infant 'runs,' it is because, it is believed, some one who has been bitten by a snake has been in the room. That person must be found and must then proceed to wave some ashes four times around the heads of mother and child—otherwise the child will die."²⁷

"Until her youngster is able to walk well, the Arawak mother on the Pomeeroon must eat neither deer, turtle, nor iguana, animals which, for some days after birth, creep or crawl very slowly, in contradistinction, for instance, from the bush-hog, that will start to run directly it has littered. The idea is that by eating such flesh the mother will cause her infant to walk too slowly. On

the islands, the Carib mother abstained from female crabs, which would give the child stomachache, while the father had to avoid certain animals for fear of the youngster participating in their natural faults. If a father ate turtle, the child would be heavy, and have no brains; if he ate a parrot, the child would have a parrot nose; if a crab, the consequence would be long legs."²⁸ In Eastern Ecuador "custom requires that after a child is born the parents shall fast and observe other rules of abstinence for a couple of years, or until the child is named. This is due to the idea that something of the souls or essence of the parents inheres in the child, so that all three in one way form a single organism, a single personality."²⁹

*Weaning.*³⁰ "Long after our children are weaned," said Lubbock,³¹ "milk remains an important and necessary part of their food. We supply this want with cow's milk; but among people who have no domesticated animals this cannot, of course, be done, and consequently the children are not weaned until they are two, three, or even four years old, during all which period the husband and wife generally remain apart." Ethnographical evidence on this point, as well as on infant-feeding, follows.

Among the Southern Massim "the child is usually suckled until a number of teeth have appeared, but before this he is given taro, yam or banana, which has been first masticated by his mother."³² The Bushwomen of Africa nurse their children long, but begin from an early date to feed them with roots and meat which they chew for them. The children are taught to chew tobacco very young.³³ According to a missionary in northern Rhodesia babies are fed on an alcoholic drink similar to beer and are taught to smoke a pipe at the age of two; these practices are said to account in large part for the high rate of mortality.³⁴ The Baganda child is nursed for two years and then fed with cow's milk or bananas.³⁵ When the Bawenda child is five years old the medicine-man comes to wean it; he gives it some "medicine" to make it forget its mother's breast.³⁶ In British Central Africa the child is suckled for two or three years. Suckling may be prolonged for four years in the belief that pregnancy is thus avoided. Mortality is high because of improper feeding, big lumps of porridge being thrust in the infant's mouth when a few months old; diarrhoea and malaria are common.³⁷ There are no wet-nurses among the Dinkas; if the mother is unable to nurse her child, it is fed on goat's or cow's milk.³⁸ Among the Nigerian head-hunters, "if the child lives the mother will suckle it for two to three years [in some cases up to five years] and during this time she will not have connection with her husband for fear of injuring it. If, however, she did lapse and conceive again within this time she would at once wean her child. . . . There is apparently no artificial feeding, and as women continue lactation so long there is never any difficulty in finding a wet nurse."³⁹

Among the Sema Nagas "children are suckled for from one to three years, and it is not unusual to see a Sema mother suckling two children who may have more than a year's difference between them in the matter of age."⁴⁰ Nivedita⁴¹

thinks that the tenderness of parents and the veneration of children, which feelings are deep-rooted among the Hindus, are to be explained by the fact that every child is a nursling for its first two years of life. The food of the Benua children of the Malay Peninsula was eked out with hog's grease from about the third or fourth day of their existence. According to Skeat and Blagden,⁴² "this might be owing to the habit of not weaning children till they were two, three, or even sometimes four years of age. It was no uncommon spectacle," the authors add, "to see an infant of a few weeks and a fat nursling of two years at the breast together." A Palaung mother nurses her child as long as she can possibly do so, but "many babies die because mothers cannot continue to suckle them, and it is difficult to get any cow's milk. As Palaungs neither drink milk nor know how to milk cows—cattle being kept solely as beasts of burden—the milk goes to the calves. . . . A Palaung baby is not brought up on its mother's milk alone. When it is a few days old, its mother takes a small quantity of well-cooked rice that has been steamed, not boiled—about half an ounce to begin with—which she chews thoroughly, until it has become a kind of smooth pap. This she puts direct from her mouth into that of the baby."⁴³ In Samoa, "for the first three days the infant was fed with the juice of the chewed kernel of the cocoanut, pressed through a piece of native cloth, and dropped into the mouth." The juice of the sugar-cane was also given to infants. "Many fell victims to this improper treatment. At a very early period the child was fed, and sometimes weaned altogether at four months. This was another fruitful source of mortality among children."⁴⁴

Esquimo women suckle their children for three or four years and sporadically long thereafter; there is no soft food available and if the mother dies the child dies also. The child is offered blood at an early age.⁴⁵ The Indians do not wholly wean their infants till they are two, three, or even four years old. The reasons assigned for this protraction are that "it is good for the infant," or "it makes the child strong and healthy," or "it wants it," or "does not want to give up." The period is three years among the Apache; Chichimec women nursed up to six or seven years. In British Guiana the period is three or four years and two children of different ages may be nursing at the same time; the women even suckle certain domestic animals.⁴⁶ "The practice of keeping infants at the breast to a comparatively advanced age is universal. The Warrau mother will suckle her offspring up to 3 and 4 years of age. Sometimes she will have one at each breast. Both among the Arekuna and Makusi the child is also given the breast up to the third or fourth year, and if a new baby appears the previous one will be handed over to the grandmother, who carries out the mother's duties with it. This has been observed among the oldest of Indian women. It is also the old lady's business to bring up the young mammals found by the father or son. When Schomburgk expressed surprise at these occurrences, he was informed that the women practice a means whereby the milk is retained to extreme old age."⁴⁷ Among the Araucanians "a man does

⁴⁷ Roth, in BAE, XXXVIII, 697.

not cohabit with his wife after childbirth till the child is weaned, which does not take place till it has cut all its teeth."⁴⁸

The Egyptian mother nursed her infant three years; under Mohammedan influence the period ran into the fourth year, though the Koran prescribes its continuance only into the second. Such prolongation was to protect against the influence of the summer-heat.⁴⁹ In Hungary and elsewhere nursing may be protracted for three to four years, though the rule for Hungarian and German women is ten to twelve months. Exceptional cases show six or seven years.⁵⁰

Cases similar to that of the Guiana Indians, where the grandmother takes over the function of nurse, seeming quite able to do so, are not infrequent in ethnography; and Fritsch and Livingstone think there is evidence, belonging to abnormal physiology, that the husband has been known to exhibit this power.⁵¹

Desire for Children; Adoption. "The practice of adopting the children of others is very frequent in the Banks Islands and is accompanied by many interesting features. Of these features the most important is that a man who fulfils certain conditions [such as making the necessary payment to the midwife] may take the child of another in spite of the unwillingness of the parents to part with their offspring. The true parents may be unable to keep their own child if others want it and it is interesting in this connection that the word for adoption . . . seems to have primarily the meaning of 'snatch.' . . . It seemed clear that the real father could recover his child from the adopting parents by making certain payments, but the conditions were such that this was rarely possible. The father would have to repay all money which had been expended by the adopting father on behalf of the child with cent per cent interest. . . . The fact of his real parentage is carefully kept from the adopted child and any approach of the real father to his child is resented on account of the fear that the true parentage may be revealed. . . . The only other Banks island from which I obtained an account was Merlav. Here a man who wishes to adopt a child about to be born waits till he hears of the birth and then runs quickly to plant the leaf of a cycas tree in front of the door. The man who first plants a leaf is the father of the child. . . . Several motives were given for the practice of adoption. Childless persons have no honour and may be the object of ridicule because they have no one to call or command. . . . It was said also that adoption is designed to prevent property passing out of the family; the more children there are in the family the less is the risk of this."⁵² Adoption is not uncommon among the Koita. "Girls are more commonly adopted than boys, because their fathers do not often care to part with the latter. Usually the adopter is a great friend of the father of the adopted child, and the latter asks the former to help him to feed one of his children. It seems that such a request is never refused; the adopted child assumes its adopter's *iduhu* [clan], calls him father, and if a girl, her adopted father receives her marriage-price."⁵³

Rivers⁵⁴ says that the custom of adoption of children is not practised by the

Todas. "They denied its existence emphatically, and I met with no instance which led me to suspect its presence in compiling the genealogies. If a child is left an orphan, it is looked after by the people of its clan, but it is always clearly recognised that the child retains the father's property." He adds a detail which would seem to be highly exceptional: "There is, so far as I could ascertain, no religious custom which makes it necessary that a man should have children. The duties of a child at the funeral ceremonies can quite well be performed by some other member of the clan."

The aim of marriage among the ancient Hindus was the perpetuation and increase of one's own stock; "this is possible only through male descendants. On sons rested the hope of the house; abundant male descendants gave power and reputation, and were an ornament. . . . Never do we find in the Vedic songs the wish for a daughter; her birth was publicly viewed with displeasure." The custom of exposing daughters was not very widespread, but there was a definite persuasion that "to have daughters is a woe."⁵⁵ It is stated that in China only children out of families who bear the same family-name may be adopted, as otherwise, according to the Chinese, the difference between families would soon cease to exist. The levirate, thinks Von Mollendorff⁵⁶ can never be of the same importance with the Chinese as with other people, that is, to keep the family-property together, as posthumous adoption, which the Chinese substitute for it, fully meets the object. "The Palaungs, like all Eastern races, are very anxious to have children. Girls as well as boys are welcome, and infanticide is unknown. Still, on the whole, boy-babies are preferred. When boys grow up they are stronger to help their parents in the work of the tea gardens or in the cutting down of jungle trees; also the son may continue to live at home after he marries, but the girls, when they marry, must go to a new home and must give their help first to the husband's father and mother. . . . After many incarnations a spirit that has acquired much merit may inhabit the body of a woman who will live to be very old, and who will lead such a good life that when her spirit is re-born again in a human body it may be in that of a baby-boy." Palaungs think that it is better to have a child who lives only a short time than to have no child. "The entrance of the *kar-bu* [spirit] into the foetus insures that the child will be born with a normal human spirit; otherwise it might be still-born (without a *kar-bu*), or be an idiot (having only a fragmentary *kar-bu*)."⁵⁷

The object of a certain Spartan treatment which a married couple underwent in the Gilbert Islands was to encourage them to beget a child quickly. "When at last the girl became pregnant they were allowed to don clothes and to live in the communal dwelling of the husband's family." Adoption was also a practice here. "The object of the Gilbertese father in giving his son in adoption to an elder of his family was to provide for his aged relation a companionship and support which he, as a busy breadwinner, had no leisure to afford. It was a very sensible arrangement, calculated to promote high reverence in the young for the old and responsible for a great family solidarity."⁵⁸

"Children are very much desired by Thlinget parents. A barren wife is not enviable. Parents who are so unfortunate as to have no children sometimes adopt them. . . . Boys are, on the whole, more desirable than girls, because

a man is esteemed of more worth than a woman."⁵⁹ With the Winnebago Indians, "when a child dies, then the father mourns for many years, and if during that time he happens to meet a child that resembles his dead child he asks to be allowed to adopt him. The parents of the child can hardly object to such a request." The author is of the opinion that "quite a number of parents believe that such a person is really their reincarnated child."⁶⁰

Adoption occurred among the ancient Babylonians and was effected by a formal transfer of the child by the parents.⁶¹ The Egyptians had great desire for children and took much joy in them.⁶² The aim of marriage among the Iranians was the begetting of progeny which was regarded as a possession, as a part of property. According to Strabo, the king rewarded those who had begotten the most sons. A much higher value was laid on boys than on girls, and on healthy children in contrast with defective; the latter were often exposed. "The crippled and sickly, who remained alive, were in Persia as in Armenia left to themselves and led a miserable existence; in Armenia it was a chief service of Christianity that it lightened the lot of these unfortunates."⁶³ Boys were much preferred in Arabia, and "it went so far with the Arabs that quite commonly the barbarous usage prevailed of getting rid of newly born daughters, whose rearing threatened to become inconvenient, by simply burying them alive."⁶⁴ The sentiment is expressed in the plays of Euripides⁶⁵ that children are the greatest bliss but cause their parents much worry.

Sale of Children. In 1792 the British government in India issued a proclamation against dealing in slaves, "but the proclamation was not to prevent the privileged superior castes from purchasing the children of famine-stricken parents, on condition that the parents might re-purchase their children on the advent of better times."⁶⁶ Among the Dyaks "every pawn-holder has the right to sell his pawns, while every free Dyak has the right to trade with his children."⁶⁷ About 200 B.C. the founder of the Han Dynasty in China allowed the poor to sell their children; to this Chinese historians trace the institution of slavery.⁶⁸ Though now prohibited by law, the sale of children still exists. Exception seems to be virtually allowed to families permanently distressed by famine or other causes, and many accordingly sell their children from mere stress of poverty; boys are seldom parted with, but slave-girls abound, there being scarcely a respectable family without one or more of them. "At Peking a healthy girl under twelve years brings from thirty to fifty taels, rising to two hundred and fifty or three hundred for one of seventeen to eighteen years old." Among the more opulent families, a number of girls are attached to each child as personal attendants and playmates, and these are often chosen by the future husbands of the young ladies as concubines. Boys once enslaved appear to continue in a state of bondage, their children becoming the property of their masters; girls become free upon marriage, as they follow the fortunes of their husbands, whosoever they be.⁶⁹ Somewhat aligned to the sale of children is the geisha-system in Japan, which is roughly as follows. "Parents of girls whom

they feel unable to maintain present them, when children of from 7 to 12, to the masters of geisha training houses. These masters select the comeliest and brightest and those having a natural musical talent and practically adopt them. The parents enter into contracts that the girls shall remain with their master and be subject to all his commands until such time as they shall, from their earnings as entertainers, have repaid all the cost of their education in music, dancing, flower arrangement, color matching, deportment, table etiquette, and conversation. . . . Until they have earned their way out, they are practically slaves." Such was the rule until 1922, when the higher court at Osaka rendered a decision that no girl might be bound by a contract made without her consent and knowledge and enforced against her will.⁷⁰

With certain Indians, "the practice of selling children seemed to have been common."⁷¹ Among the slaves of the Aztecs were children sold by their parents.⁷² "Among the Makusi a man may sell his children, in spite of the bitterest tears of the mother, to a married couple who have none. The price is the same as that demanded for a dog, i.e., a gun, ax, or something similar, but the buyer has in addition to give some little things, e.g., beads, to the relatives, who report themselves in considerable number to the new father."⁷³ Botocudo fathers, "attracted by a good trade," have often sold their children to Brazilians.⁷⁴ Among the laws and ordinances mentioned in Exodus occurs the following: "And if a man sell his daughter to be a maid-servant, she shall not go out as the menservants do. If she please not her master, who hath betrothed her to himself, then shall he let her be redeemed: to sell her unto a strange nation he shall have no power, seeing he hath dealt deceitfully with her."⁷⁵

§410. Treatment of Children.

In South Australia "all afflicted, infirm, diseased, imbecile, blind, deaf, or otherwise afflicted, are *never* put away. On the contrary, the greatest sympathy is shown, while the greatest care and attention is paid the infirm and sick."⁷⁶ Among the Southern Massim, "both sexes make affectionate and indeed over-indulgent parents, while the children brought up under these conditions make as a rule excellent sons, daughters and even relations-in-law, and no old man or old woman—too old and worn to work—is neglected by his or her children or grandchildren, including in this term, as the native does, nephews and nieces on the maternal side." The author² reports the same for the Koita—"the men especially often seeming absurdly indulgent to their children who are never ill-treated nor even punished. In their turn the children grow up imbued with kindness and consideration for their elders, and especially for the old men. Although the men make undemonstrative husbands, wives are usually well treated." On the D'Entrecasteaux Islands, "children do very little work before they are about twelve years of age. A girl as soon as she is big enough will carry water, and peel the yams and help to sweep the hamlet clean each day, but she lends no aid to her parents in the gardens. The lads do even less: they play and fish, and follow the men about, but no work is expected of them."³

In the Upper Congo, "the father has the right to kill his own child, and

although the act may be strongly condemned by neighbours, they have no power to punish him even though it may be a clear case of murder." Weeks,⁴ who lived among them for many years, says: "I may say that I never heard of a father killing his child . . . but there were many cases of a father pawning his children for debt, and occasionally selling them." Among the Ba-Yaka, "the father may neither kill his child nor sell it as a slave, and, as a matter of fact, men seem to be very fond of their children, indeed, in most villages the care of the children seems to be undertaken by the men."⁵ Child-birth out of wedlock is no cause of reproach among the tribes of British Central Africa, the child belongs to the mother.⁶ When Coudenhove⁷ once asked a Yao why black babies make so little noise compared with white ones, the latter replied: "The European father teaches his child to make plenty noise and to break everything it touches, because, if it does not, he thinks it is ill." The author comments: "The placidity and the contentment of native as compared with European babies is due, no doubt, to their close companionship with their mother, from whom they are as inseparable, *mutatis mutandis*, as little kangaroos from theirs. During the first years of their life, they spend nearly all their time snugly and comfortably berthed in the *kuveleka*, the pouch formed by the cloth slung over their mother's back. If they want to sleep, they sleep; when they are awake, there is always something interesting to see, or to hear, by peeping round the corner. The larder is always full, the table always laid, the perambulator always ready to start; they are kept warm by the best and most natural of warming-pans." It is stated of the Mkamba that "towards his children he is remarkably kind and tender." Throughout East Africa no difference is made between legitimate and illegitimate children, and "children of slave women married to the father have equal rights with freeborn children."⁸

"Children in the Maori commune are petted and given a great deal of liberty by their parents. A father may often be seen nursing his *potiki* or youngest child for hours, carrying it about with him on his back in his shawl or blanket. Young girls were allowed to do pretty well as they pleased, and they and the boys enjoyed full liberty in sexual matters, unless indeed a girl was a *puki*, like the *taupo* or village maid of Samoa, or was *tapui'd* or betrothed to some young chief."⁹ In Samoa, children born outside of marriage were those of a mother who, while living with her family got into sex-relations secretly with a man, without being led into his house as spouse. Such children could inherit only if taken by the father into his family—that is, recognized as his offspring. Then they would have rights equal to those of legitimate children.¹⁰ "Love of family is a strong trait in their character," writes Thomson¹¹ of the Easter Islanders; children are fondly cared for, and the desire for offspring is general." On the Island of Yap, "among the several members of the family there reigned deep affection, especially of parents toward children. The children in their early years were treated carefully and especially mildly; they were allowed the greatest freedom and were punished scarcely so as to give pain."¹²

Jones¹³ writes of the Tlinkits: "Children are so beloved by their parents that they are indulged to their detriment. They are rarely punished. When they are it is because the parent has been grievously aggravated by them, and then punishment is brutally administered. The wishes of children are usually gratified to the extent of the parental ability. They are usually allowed to have their own way, and little or no parental restraint is thrown about them. This is due not so much to laxness as to misdirected parental love. It is considered a mark of their love to let their children have what they demand and do as they please." On the other hand, "children born out of wedlock, especially illegitimate half-breeds, are more or less despised. In earlier times they were put to death immediately after birth." The child among the Cheyenne Indians was carefully trained, almost wholly by advice and counsel; no whipping occurred. As a sign of affection, the child's ears were pierced, actually or ceremonially (by proxy); wealthy people had images and pierced the child's ears on them even before birth, paying a fee to the one doing it.¹⁴ "In the Omaha family the children bore an important part; they were greatly desired and loved. . . . Careful parents, particularly those who belonged to the better class, took great pains in the training of their children. They were taught to treat their elders with respect, to be particular in the use of the proper terms of relationship, to be peaceable with one another, and to obey their parents. Whipping was uncommon and yet there were almost no quarreling and little downright disobedience. Much attention was given to inculcating a grammatical use of the language and the proper pronunciation of the words. There was no 'baby talk.' Politeness was early instilled. No child would think of interrupting an elder who was speaking, of pestering anyone with questions, of taking anything belonging to an older person without permission, or of staring at anyone, particularly a stranger."¹⁵ It is said in general of the Indians of the United States: "Both parents alike were entirely devoted to their children, and bestowed upon them the fullest expression of affection and solicitude. The relation of parent to child brings out all the highest traits of Indian character."¹⁶

The children of the Guiana Indians are almost never corrected, yet show considerable respect for their parents. Little regular attention is paid to their education; they learn from seeing and doing, the boys going with the men and the girls with the women.¹⁷ "Punishments, like chastisings in general, the Indian did not know; for only the dog, not the Makusi, needs blows."¹⁸ Of the same group it is said: "Up to the time when the child can trust himself to his own feet, his mother is seldom seen without him; he is up to then an integral part of her ego. Despite this tender love, she is not observed kissing him; no caressing words are heard." At puberty the boy becomes a stranger to his mother.¹⁹ Visitors have mentioned love of children as the only noble feeling of which the Fuegians are capable, but it is said to disappear as the children grow older.²⁰

§414. Primitive Family-Organization.

The Joint-Family. In British New Guinea a village is often comprised of one house several hundred feet in length. The longest that Chalmers¹ measured was 692 feet long. "These *darimo* (large houses) are divided into stalls say 12 feet long and 8 feet broad, and run down each side, leaving, in the centre, a fine broad path where feasting and dancing take place." In Papua, "all the villages are built on the same principle—a great house (that at Mida, or Kubu, is about 200 feet long and 40 feet wide) with a central hall, which runs the entire length of the house and is reserved for the use of the men; on either side are the walled-off private apartments. These consist of three storeys."² "The basis of the whole social structure on Goodenough [D'Entrecasteaux Islands] is the family, which consists, as with us, of a man, his wife, and their descendants. The son, as soon as he reaches manhood, seeks a wife in another hamlet and leads her away to his own; the daughter, with rare exceptions, removes to the hamlet of her husband. Each hamlet, therefore, consists of a number of families closely connected with one another by ties of kinship. One man, the recognized head of the related families, is likewise the head man, *kauvea*, of the hamlet. These families garden in the same place, hunt and fish together, participate in every rite and ceremony that affects one of their number, rejoice together in the common feast, and stand with united front against private and public foe . . . The bond which at bottom unites the hamlets of a district is largely one of common interest, though it is always vastly strengthened by intermarriage and by the possession of a common dialect."³

In the *thadoukeli boukkham* or joint-house of the Kabyles, "the members of a family contribute to the society all their property (of which only the enjoyment is common), their work and their industry. The oldest man, if he is sufficiently intelligent, is charged with administration. It is he who buys and sells, leases the land, presides at the harvest or the gathering of the fruits, goes to market, pays and receives. However, his power is not limitless, and the family must be consulted every time when it is a question of an important transaction, notably the sale or purchase of real estate. It is the community which furnishes each of the members with the instruments of work, a musket, and the capital required for the trade he undertakes or for conducting the industry to which he wishes to devote himself. Each is bound to devote his work to the community and to turn into the hands of the chief of the family all his salary or profits. Should he divert a farthing of it he would be forced to make restitution and would be dishonored by his fellow-citizens and expelled by the family, if the case should appear very serious. The immovables which come to one of the associates by gift or bequest remain his particular property, but the enjoyment of them is acquired by the family. . . . In the case of movables the men have as their private property only their clothes. The women possess only their wearing-apparel and the jewels which they received the day of their marriage. Fancy clothes and ornaments purchased at the expense of all, and with which they adorn themselves on festive days, are common property. When the family is not very numerous, the food is prepared by each of the women in turn. This one gives to each his share of *cous-cous* [a favorite dish], and the head of the family apportions the meat. If the members of the associa-

¹ In JAI, XXXIII, 118.

² Haddon, in JAI, XLVI, 336.

³ Jenness and Ballentyne, *D'Entrecasteaux*, 63-64.

tion are too numerous for the repast to be taken in common, they divide each month the dry provisions and the oil needed for each fire. Meat is distributed, without being prepared, every time animals are slaughtered or when the head of the family buys meat in the market. The strictest equality must preside over these apportionments. Each of the members of the family has the right to a share; the infant at the breast counts as one. The direction of the household is confided to the oldest woman, if she is judged capable; if not, the family chooses another, or each of the women receives for one day the keys and the domestic management. The head of the family must show a rigorous impartiality. . . . Each of the [male] members has the right to correct the women and all the children. When the association breaks up, the property, movables and immovables, acquired during the existence of the community, is not divided equally, but in proportion to the hereditary rights and the contributions of each. The only exception is the yearly provisions: grain, oil, and commodities of all kinds. The death of one of the associates does not dissolve the community. If his heirs do not wish to remain with the family, just as in the case where one of the members wishes to retire, their share is calculated and delivered to them, and the community almost always continues. The duration of the *thadoukeli boukhkham* is never fixed in advance; in the large families the association exists for several generations, and this persistence in communal life is one of their best titles to the estimation of their fellow-citizens."⁴ Wilken⁵ cites a number of cases where Malays, Dyaks, and others have big houses for related stocks, containing two hundred and fifty to three hundred persons. Communal long-houses are also found among the Indians of British Columbia. "These houses do not appear to have been as long generally as among the Delta tribes, where continuous structures of from 100 to 200 yards were not uncommon fifty years ago. . . . Each family group was customarily divided off from the rest by permanent wooden partitions. . . . In the walls of this passage-way, at about the centre, was a doorway on each side which gave access to the compartments. Within each of these compartments there dwelt usually four fire-groups, one to each corner. These fire-groups made up the family, and were invariably of blood-kin to each other. They were sometimes made up of four generations of the same family, sometimes by a group of brothers with their wives and children, sometimes of a father and his married sons, and sometimes partly of one and partly of the other; but all were related to one another by blood ties, and no marriage was permitted between them." The author mentions one long-house that extended three hundred feet along a river bank; most of them are about twenty-four feet in width, and practically open from end to end. Privacy is not known and "apparently undesired."⁶ The southern Caddoan tribes lived in agricultural hamlets or single households scattered around a main village. "A household consisted of several families living in a large conical grass lodge. The semi-communal households seem to have been organized on the basis of paternal right; but an elder woman served as the economic head."⁷

The old Slavic custom of joint-householding is kept up by the Bulgarians; the family, consisting sometimes of scores of individuals, constitutes one household and one society. The larger family-groups are the poorer ones; where in-

⁴ Hanoteau et Letourneux, *Kabylie*, II, 468-473.

⁵ In VG, I, 372-373.

⁶ Hill-Tout, in JAI, XXXIV, 331, 332; and in JAI, XXXV, 134.

⁷ Bolton, in HAI, II, 50.

dividual initiative has broken loose the community dissolves. In the Bulgarian case all are subject to the chief householder, called *dyado*, who oversees arrangements and keeps peace. He appoints the work for each one, pays the tribute, keeps the money earned by the family, and in general sees to the common interests. He holds a council with the older members, where a majority vote decides. At a meal the men sit on his right and the women on his left, always in order of age. They pay much attention to age-precedence, dividing the work by age and marrying by age, the oldest brother first, unless he waives the right. The younger brother must ask the permission of the older, without which he may not marry even though the parents should desire it. Thus, too, the girls marry in order of age. All the immovables belong to the community but each member can have his own property. When all the community-affairs are finished, each can go about his own business; he can work for wages and what he wins he can dispose of without the knowledge of the *dyado*. A leading woman, called the *baba*, presides over the household-work and keeps the keys. When the men go off to work, she takes the *dyado's* place. She presides over buying and selling, borrowing and paying debts, and all her contracts are sacred for the community. When the *dyado*, who is usually the *baba's* husband, returns, he carries out her contracts as if made by him. Though the women have to work hard, they are treated with great respect.⁸

To the question as to what broke up the house-community, the unexpected answer is: "The women." They "do not acquiesce in it and urge the men to family-division. Their position is, in many localities, unendurable, domineered over as they are by all. The chief fault of the house-community is the quarrelling of its members; yet it is the fundamental institution of the South Slav country-population.⁹ Similar forms are to be found in other parts of Europe: *participanze*, *parsonneries*, etc.¹⁰

Vinogradoff¹¹ writes of the joint-houses among the Celtic population of Great Britain, with special reference to Wales. "The house of the tribal king, and, in a smaller degree, that of the better tribesman, the 'uchelwr,' is not meant to be the dwelling-place of a small family household surrounded by a certain number of dependents. It is adapted for the joint occupation of a number of tribesmen living together. The great hall, opening between trees, the boughs of which met to form the roof of the house, was the common room and the dining hall of the whole household, and in the aisles on the right and left of it lay the beds or compartments of the families which constituted it. This mode of building answers well to the indications of the laws and extents as to the joint management of affairs by members of gwelys [agnatic grouping]. The more usual course was however to provide a young man when he married with a tyddyn, a separate dwelling of modest size and light construction. These tyddyns sometimes lay in proximity to each other, and were grouped into small hamlets or villages (trevs), in which the inhabitants clustered according to their distribution in kindreds and 'beds.'"

Says Schmoller¹² of the family in its relation to the development of economic life: "The family, associated with its dwelling, and carrying on an ordered domestic economy, became the first social organ which learned how and then

taught mankind to accumulate, hold together, and control possessions in herds, land, and capital; to transfer property from generation to generation and in connection with it to develop and render stable habitudes of labor and of division of labor." The family rested upon "an inexorable, stern principle of coercion, the mastery of the family-head, which only in millennia of evolution becomes mild, and unites itself, to form a whole, with the noblest and purest sentiments of sympathy characteristic of conjugal, filial, and parental love. . . . Groups of four to ten, even of twenty to forty and more persons, totally disappear in the conception and aims of the family. Egoism, which is suppressed within it, grows all the more stern toward what is outside. Until the individualism of later culture arises, there exists what is an economic family-egoism rather than a personal egoism. Mighty epochs of a rising economic culture rest predominantly upon this . . . basis; almost the whole of economic activity, for hundreds and thousands of years, was supported upon the life, discipline, and organization of the family; the ordering of rights and the mores characteristic of the family governed and set limits to all economic performance. But, conversely, economic life and the increasing self-centered desire for gain, on the part of the father of the family, introduced into the family-organization elements which were bound to become perilous to it, especially where growing hosts of slaves, acquired not from family-considerations but in the prospect of gain, expanded the family all too widely."

Schroeder¹³ gives as the historical, natural evolution of the sexual organization: "I. The primitive family, an apparently unlimited blood-kin-family without any limitation in sexual relations except the exclusion of alien individuals not belonging to the family. II. The blood-kin-family with the limitation that sexual intercourse is allowed only between the family-members of the same generation. III. The group-family in narrower sense as the very most advanced form of the group-family, with the wider limitation that real and collateral brothers and sisters also are excluded from mutual sexual relations; Morgan calls this the Punalua-family. IV. The pairing-family with free individual marriage. V. The patriarchal family with the father-right and the supervision of the women (polygyny). VI. The monogamic family."

Lowie¹⁴ compares the family with the sib: "The sib, like the family, is a kinship group. It is at once more and less inclusive than the rival unit. On the one hand, it excludes one half of the blood-kindred—the father's side of the family in matronymic, the mother's side in patronymic societies. On the other hand, it admits on equal terms all kindred of the favored side regardless of degree and even individuals considered blood-relatives merely through legal fiction, whence the rule of sib exogamy. The sib normally embraces not merely the descendants through females of an ancestress, or through males of an ancestor, but several distinct lines of descent, which are only theoretically conceived as a single line."

§415. Sex-Ascendancy.

Among the southern Massim, "it was optional whether a man first went to live in his wife's hamlet or not; very often he did, especially if their homes were not close together, but it was obligatory that the first garden made after his marriage should be on his wife's land. As soon as a good garden had been

made there, he would usually make a garden in his own hamlet, where he would probably take his wife to stay for some time before he again visited her hamlet, and a semi-migratory existence between the hamlet-groups of the husband and wife might sometimes be kept up for years. But whether or not a man lived often or long at his wife's hamlet, he almost invariably returned to his own when getting old. . . . Very much the same condition of things is found on Tubetube."¹ On Goodenough Island, "the son, as soon as he reaches manhood, seeks a wife in another hamlet and leads her away to his own; the daughter, with rare exceptions, removes to the hamlet of her husband. . . . Neither in the terms which denote relationship, nor in the inheritance of property, nor in the legends and folk tales handed down from past times, is there any trace of a matrilineal system such as prevails in the Trobriands."²

Among the African Wayao and those tribes into which their influence has penetrated, "woman rules supreme in the household and in the village. I have spoken," writes Coudenhove,³ "with many men who, after some hesitation, ended by admitting it. In the villages it is the women who make or mar reputations, as they did in Europe before the advent of the suffragette, and in the house the men follow their advice in almost everything. It is they who decide whether a stranger shall be allowed to settle in the village and to remain there, and whether one of the community who, for some reason or other, is making himself obnoxious, shall be given, by the men, the *consilium abeundi*. When the wife of a native servant desires a change, she will prevail on her husband to leave his situation, however much he may like it personally. 'Boys' who have been scolded in the presence of their women invariably give notice; most thefts committed by men are due to direct or indirect instigation by their wives. Black men are extremely sensitive to ridicule, and what they fear more than anything else, is to appear ridiculous or weak before their women. The latter know this, and harp on that string with consummate virtuosity. What gives the women of the Wayao such a hold over the men is the unique custom that, after marriage, the man follows the woman to her village, not *vice versa*; and if, later, the man goes to reside in another place,—as, for instance, when he finds employment on a plantation,—it seems to be left to his wife's discretion entirely, whether she shall follow him or not. Frequently she refuses." Though wives among the Ba-Mbala follow their husbands, the man often takes up residence in his father-in-law's village.⁴

Miss Czaplicka⁵ states that among the Yukaghir the son-in-law occupies a very subordinate position. "Only when he has his own children does he acquire the right to use some of the furs and other objects without permission. Only after the death of his father-in-law and other old men of the family, and when his wife's brothers go away to their fathers-in-law, does he become the head of the family. If the young man wants to leave his father-in-law, he can be prevented from taking his wife with him, unless he has his own children. . . . Although we see in the Yukaghir marriage some matrilineal arrangements, it does not follow that we have here an instance of matriarchy; for the children are called by the name of the father, they reckon their descent from their father's male ancestors, and the duty of blood-revenge is incumbent on paternal

relatives. According to an old Yukaghir, there once existed the custom of reckoning the first son and daughter among the relatives of the mother and the rest among those of the father; but, as Jochelson observes, this was probably in order to keep the son-in-law in the house of his wife's parents." With the Buryat, "after the wedding a wife remains with her husband for a month; then he lets her go for six months to her parents, and during this time is not allowed to visit her. . . . Then she spends one month with her husband, and returns again to her parents, after which follows another visit to her new home. The visits to her husband become more and more frequent, until at last she settles down with him for life. . . . In former times the husband always went to live in the home of his wife's parents." Among the Ostyak of the Yenesei, "the young couple live with the husband's father-in-law for about a month after the wedding, and only then does the husband take his wife home." Finally, among the Ainu of Japan: "'If the young woman herself or her parents have been the main movers in the business'—proposals of marriage—"the bridegroom is removed from his own family to take up his abode close to the hut of his father-in-law; he is, in fact, adopted. But if the bridegroom did the wooing, or his parents were the prime movers, the bride is adopted into his family. Or if a woman of one village chooses a man of another, he, if agreeable, goes to live with her; or if a man chooses a woman who resides at a distance, she, if agreeable, goes to live with him.' . . . Batchelor says that if a girl courts a young man, she 'may enslave herself to his parents as a price for their son.' Pilsudski, however, states that though the custom of women trying to win men did formerly exist, it is no longer observed."

By exception, when a Bornean removes to the house of his wife's parents, she remains slavishly subject to his will and is obliged to do most of the work both within the house and in the fields. It is but rarely that a Land Dyak does not have to reside with and labor for the wife's father for a time before the couple can set up for themselves; but the husband has complete control of the wife. The demand for a high bride-price may delay a girl's marriage for some time; and the issue may be settled in the end by the man coming to live with her family.⁶ Where it is customary, in Borneo, for the husband to reside with the father-in-law until he can set up his own establishment, the "father-in-law is treated with even greater respect and deference than one's own father. The son-in-law may not venture to utter his name or contradict him when speaking. He cannot lie on the same mat with him, eat off the same plate, drink from the same cup, or walk in front of him."⁷ In some parts of Java, "so much deference is paid to the bride's wishes, that if she demands it, the husband, if of a different village, must come and live in hers."⁸ Among the Sea Dyaks, "the bridegroom generally betakes himself to the apartment of his wife's parents or relations, and becomes one of the family. Occasionally, as for example when the bride has many brothers and sisters, or when the bridegroom is the support of aged parents, or of younger brothers and sisters, the bride enters and becomes one of the family of her husband." The birth of a daughter is regarded as being more desirable than that of a son, for at marriage a son may have to follow his wife, whereas a daughter obtains for her parents the

⁸ Crawford, *Ind. Arch.*, 90.

benefit of her husband's labour and assistance." The Bataks say: "The steer follows the cow, the man follows the woman." The woman is the basis of the family. A poor Batak goes to live with his wife. "This comes out clearly in the word *mandingding*, a word which properly signifies: to live in the same place with a creditor, being under obligation to assist him if he has pressing work. Indeed this is also the position of the man in marriage with respect to the family of his wife." Such a marriage has been called by a term which conveys the idea of being in pawn. If the bride-price is not paid, says Wilken,⁹ who reports these cases, the "matriarchal marriage" takes place and the man goes to live with his wife's group. The children are divided between his and her families or, in some cases, remain with the mother's kin. Where a low bride-price is paid, it is a matter of indifference which party goes to the other, the children and property belong to both, and the pair may have their own house. In South Celebes "it is quite a matter of indifference at a marriage whether the man moves in with the woman or the woman with the man. All is regulated according to which of the two is the landholder." If he is, she goes; if not, he does; only if they live far apart may she go, even though the landholder. It is evident that financial considerations rather than others are likely to govern such cases.

Among the Sengirese the man goes to the woman's house and stays there; the children, when they are old enough, may choose which family they will belong to.¹⁰ Again, the prospective father-in-law may allow a suitor to live with his daughter, more or less under his paternal control, until the aspirant can afford to marry.¹¹

In Guiana, "when an Indian marries he takes up his quarters close to his father-in-law, or may occupy the same house. He becomes part and parcel of his wife's family. According to the Indian rules of marriage, the young husband is bound to live in the same settlement with his wife's parents. The wife's father expects the bridegroom to work for him in clearing the forest and in other things, and the young people often remain with him until an increasing family renders a separate establishment necessary. This also was the rule on the islands among the Carib. The woman continues to live in her father's house after the wedding and she enjoys more privileges than her husband, because she can speak to everybody, but he can not speak to the wife's relations without great caution, or when he finds them in liquor. They always shun such meeting. Talking of her mainland, Brett says that the Carib woman is always in bondage to her male relations. . . . The old men regard their sons-in-law as servants to wait on them and from the time that their daughters are married have no more cause to work. The newly married Indian has to see to the plantation, the home, the hunting, and the fishing."¹²

When Samson took a wife from among the Philistines, his marriage was matrilocal, for he went to her.¹³ Smith¹⁴ says that the formula, "he went in unto her," was used to indicate the matrilocal arrangement. Barton,¹⁵ disagreeing somewhat, says this was a primitive Semitic matrilineal practice. The children remained with the mother.

§416. The Mother-Family.

Matrilineal Descent. In Australia some tribes count descent in the maternal line, others count it in the paternal; indeed, it is not as yet possible to say which of these methods is the more widely practised. Some writers think that maternal descent is the general rule. Where the maternal line exists, every child belongs to its mother's class and totem; "thus in every family the father belongs to one class and totem, while the mother and all the children belong to another."¹ "Descent is necessarily through the mothers" in Australian group-marriage; children are of the father's horde but of the mother's totem. Again, "the father has nothing to do with the disposal of his daughter, the reason given being that the daughter belongs to the class of her mother's brother, and not to that of her father. Notwithstanding this, they believe that the daughter is of the father solely, being only nurtured by her mother."² Evidently there is here a persistence of ancient practice alongside an altered theory. An Australian hunter gives little of his quarry to his wife, but in that case it is the rule for her brother, or someone else on her side, to give her of his hunting.³ "The wedding presents are not given to the bride and bridegroom, but by the latter to his mother-in-law, to whom, however, he is never allowed to speak. Failing a mother-in-law, the presents are given to the nearest of kin to the wife."⁴ Says Howitt⁵ in a letter to Tylor: "When a man marries a woman from a distant locality, he goes to her tribelet and identifies himself with her people. This is a rule with very few exceptions. Of course I speak of them as they were in their wild state. He becomes a part of, and one of, the family. In the event of a war expedition, the daughter's husband acts as a blood-relation, and will fight and kill his own blood-relations, if blows are struck by his wife's relations. I have seen a father and son fighting under these circumstances, and the son would most certainly have killed the father if others had not interfered."

In one case of cannibalism it is reported that the nearest relatives did the eating in order to "forget the departed and not be continually crying." So far as the eating is concerned, almost any relation can eat any other except that "the father does not eat of his off-spring, or the off-spring of the sire."⁶ The father-child relationship is not, then, a close one, as compared with the rest.

In New Guinea, the man goes back to his own kin in case of war. In some localities "the mother-line still rules everywhere in very marked degree, and therefore is the structure of the Melanesian state so extraordinarily loose. . . . The sons follow the maternal uncle and oppose in the field the father and his kin." In some localities, though the mother-line is dominant in the rules of inheritance, the father-line is on the gain and is really determinative. The wife follows the husband; only rarely does the husband remove into the wife's village. "Earlier, when blood-vengeance was still in full swing, the relatives on the mother's side, the *Gai's* . . . had the duty of avenging the dead, and that not alone on the murderer but on his family or the whole tribe, of which every single member, even the women and children, were held responsible and could

⁶ Smyth, *Vict.*, I, 120.

be killed in expiation—a direct sequel and survival of the earlier group- or horde-marriage.”⁷ Among the Dobuans, “descent is through the mother, to whose family the children belong. On the death of a woman the surviving consort goes into severe mourning under the charge of his mother-in-law, from whom he is only released after a succession of ceremonies. The widower then goes to his own village, leaving his children and all but his own actual possessions to his late wife’s family.”⁸ Among the Northern Massim, “children take the mother’s totem, and although adoption is practised the adopted child retains its true totem. . . . Children are not infrequently named after a maternal uncle or aunt, and instances were found in which people were named after their maternal grandfather or grandmother; I could hear of no case in which a man was called after his father or father’s relatives.” It is the custom here for brothers to make a garden for their married sister and continue to help her as long as she and they live. On this account brotherless girls find it extremely difficult to find husbands; “a man hesitates to marry into such a family, saying to himself: ‘Where are the brothers to make a garden for my wife, their sister?’” On the other hand, “one girl in a family of about five boys will have numerous suitors, and large quantities of property, perhaps reaching a trade value of as much as £20 or £30, may be presented to her father and other relatives as the bride-price.”⁹

In the New Britain group, if one of two brothers (of the same totem) marries, his children follow the maternal line. Then one brother may marry the other’s daughter, and no exception may be taken to it because the girl does not belong to his totem but to her mother’s. But a man may not marry his sister’s daughter because she is of his totem.¹⁰ In the Fiji Islands, where the mother-family has been extraordinarily well preserved, the women are cruelly treated and sometimes commit suicide to escape their lot; “for the rule of the man over the woman is quite absolute and he can with impunity kill and eat her.”¹¹ In the New Hebrides, “the first of the human race, they say, was a woman, then her son, and from them sprung the race of men.”¹² Says Malinowski¹³ of the ideas concerning the relationship between father and child, as it is conceived by the natives of the Trobriand Islands: “They have only one generic term for kinship, and this is *veiola*. Now this term means kinship in the maternal line, and does not embrace the relationship between a father and his children, nor between any agnatically related people. Very often, when inquiring into customs and their social basis, I received the answer, ‘Oh, the father does not do it; because he is not *veiola* to the children.’ The idea underlying maternal relationship is the community of body. In all social matters (legal, economic, ceremonial) the relationship between brothers is the very closest, ‘because they are built up of the same body, the same woman gave birth to them.’ Thus the line of demarcation between paternal or agnatic relationship (which as a generic conception and term does not exist for the natives), and maternal kinship, *veiola*, corresponds to the division between those people who are of the same body (strictly analogous, no doubt, to our consanguinity), and those who are not of the same body. But in spite of this, as far as all the minute details of daily life are concerned, and further, in various rights and privileges, the

father stands in an extremely close relation to the child. Thus the children enjoy membership of the father's village community, though their real village is that of their mother. Again, in questions of inheritance they have various privileges granted them by the father. The most important of these is connected with the inheritance of that most valuable of all goods, magic. Thus very often . . . when the father is able to do it legally, he leaves his magic to his son instead of to his brother or nephew. It is remarkable that the father is, sentimentally, always inclined to leave as much as possible to his children, and he does so whenever he can. Now, such inheritance of magic from father to son shows one peculiarity: it is given, and not sold. Magic has to be handed over during the man's lifetime, of course, as both the formulae and the practices have to be taught. . . . Thus, in the native mind, the intimate relationship between husband and wife, and not any idea, however slight or remote, of physical fatherhood, is the reason for all that the father does for his children. It must be clearly understood that social and psychological fatherhood (the sum of all the ties, emotional, legal, economic) is the result of the man's obligations towards his wife, and physiological fatherhood does not exist in the mind of the natives."

"If any argument concerning the social relations of parents and children is to be drawn from the customs of adoption of the Banks Islands, it is as much in favour of lack of recognition of physical motherhood as of physical fatherhood. There are, however, here and there customs which indicate that the close relation with the father did not at one time exist." The author¹⁴ cites examples and makes the following generalization regarding the situation in Melanesia: "The first conclusion, then, to be drawn from the data is that the most ancient terms of relationship now found in Melanesia are those for the mother, child, mother's brother and the terms for the brother-sister relationship, i.e., those relationships which have the most important place in a condition of mother-right. . . . If the assumption that diversity indicates antiquity is correct, it is clear that the most ancient social condition of which the systems of relationship bear evidence was one of mother-right. Those who wish to show that the patrilineal descent of Melanesia is the older form will have to show that the diversity in the terms for mother and mother's brother have been the result of a later development."

Livingstone¹⁵ sees in the state of vassalage into which a young man enters when he goes to live with his wife's mother "only a more stringent enforcement of the law from which emanates the practice which prevails so very extensively in Africa, known to Europeans as 'buying wives.' Such virtually it is, but it does not appear quite in that light to the actors. So many head of cattle or goats are given to the parents of the girl 'to give her up,' as it is termed . . . and allow an entire transference of her and her seed into another family. If nothing is given, the family from which she has come can claim the children as part of itself: the payment is made to sever this bond."

In Togo the prospective mother-in-law receives the bridegroom's embassies and presents and "mother and daughter remain most intimately bound together up to the last breath."¹⁶ In West Africa, again, the Igalwa, one of the proudest and most noble tribes, accounts relationship only through the mother and in a perfected and elaborated form; "brothers and cousins on the mother's side

¹⁴ Rivers, *Melan. Soc.*, II, 151, 185.

¹⁵ *Mission. Travels*, 667-668.

¹⁶ Fies, in *Globus*, LXXXVII, 76.

being in one class of relationship, and called by one name. . . . The father's responsibility, as regards authority over his own children is very slight. The really responsible male relative is the mother's elder brother. From him must leave to marry be obtained for either girl or boy; to him and the mother must the present be taken which is exacted on the marriage of a girl; and should the mother die, on him and not on the father, lies the responsibility of rearing the children; they go to his house, and he treats and regards them as nearer and dearer to himself than his own children, and at his death, after his own brothers by the same mother, they become his heirs." The negro resents the effort of the whites to reverse what is to him the natural order of relationship and to saddle him with the support of his children; "moreover, white culture expects him to think more of his wife and children than he does of his mother and sisters, which to the uncultured African is absurd."¹⁷

Among the Ewe, the child belongs to the mother and not to the father, unless the mother is a slave, in which case the child of the slave belongs to the slave's owner. Kinship is traced through females. If a woman has to pay a fine, she often pledges her children to her husband; he, however, may refuse to assist, so that he can get full control over them.¹⁸ "That the Yorubas formerly had the system of female descent is shown by an ancient proverb, which says, 'The *esuo* (gazelle), claiming relationship with the *ekulu* (a large antelope), says his mother was the daughter of an *ekulu*.' If the male system of descent had been in vogue when this proverb was invented, the *esuo* would have been made to say that his father was the son of an *ekulu*. Moreover, in spite of the legal succession from father to sons, children by different mothers, but the same father, are by many natives still scarcely considered true blood-relations. . . . In Dahomi, blood-descent is on both sides of the house, and succession in the male line. This change, has, however, only taken place in the royal family of Dahomi, and among what may be termed the aristocracy, who appear to have followed the lead of their sovereign. The lower orders still trace descent in the female line, and that the higher orders used also to do so is shown by the terms in use for expressing relationships. Brother and sister, for instance, can only be rendered by 'mother's son' and 'mother's daughter' respectively."¹⁹ On the Loango Coast, "the father possesses no power over his son, whom he may not, like the uncle the nephew, sell; and if separation occurs the children follow the mother because they belong to her brother, as uncle. The children may then inherit from the mother while the property of the father goes over to his brother or nephew." Princes, regarding themselves as all brothers in one family, may not marry princesses but must take wives from the people, and their sons may not bear the title of prince. The sons of princesses, on the other hand, are full princes, even though their fathers are almost always common men. Princesses are mostly unmarried, as they may not marry princes and because common men avoid marrying them by reason of the disadvantageous position they come thus to occupy. Only when poor and insecure do men seek security in the rank of a princess-wife.²⁰ In British Central Africa "children take the clan-name of the mother, and members of the same clan are regarded as brothers and sisters; they are blood relations and may not intermarry." When

about five years old, children go to live for a time with their maternal grandmother.²¹

In Uganda, "the goodwill of the girl's mother must be won by the making of repeated presents, which may last over a period of two or three years."²² The Alur suitor addresses the mother of the girl he wants to marry, with gifts; if she accepts him he goes two days later to the father. The maternal uncle also gets presents.²³ Folk-tales and sayings witness to the dignity of the mother; but few of the stories have to do with the helpfulness of husband to wife—"it is always the brothers of the woman who with bold spirit snatch her out of danger. It is therefore a threat for which every husband has respect when she says to him: 'Do not torment me as if I had no one at home.' The most insignificant quarrel . . . may cause her to return to her people, and she is sure always to find there protection and partisanship."²⁴ In Madagascar the root of the word for tribe or family is "mother," those who come from the same mother. A sharp distinction is made between the children of two brothers, who marry, and those of two sisters who may not marry down to the fifth generation. Children of a brother and those of his sister may marry with a special ceremony.²⁵

Among the Tuareg, women are held in great respect. "If there had been only women among us, the Touâreg would have conquered the world. They would have possessed as far as Paris!" Women go alone wherever they like, are admitted to councils, and partake of the chieftainship of their husbands. "The son of a slave or serf father and a noble woman is noble; the son of a noble father and a serf woman is a serf; the son of a noble and a slave-woman is a slave."²⁶ Berber names are metonyms—as, for instance Massinissa, meaning son of Issa—and property and political position have long been inherited in the female line. This state of affairs is interpreted as a relic of the time when there was no marriage in North Africa and passages in classical writers appear to support the interpretation. An Arab traveller of the 14th century wrote: "The state of this people is marvelous, their customs are strange. As for the men, they know no jealousy. None of them gets his name from his father but everyone draws his source from the uncle on the mother's side. Only sisters' children inherit, to the exclusion of own children. Nowhere in the world have I seen anything of the sort elsewhere than among the heathen Hindus of Malabar."²⁷

Seligmann²⁸ finds "indisputable traces of a former matriarchy" in the marriage-customs of the Hamitic peoples of the Sudan. The bridegroom goes to the bride's village to be married and stays there for from one to three years. Though he pays the price, the bride's relatives provide the tent, furniture, and other necessities. The groom accompanies the father-in-law as a son. The first child is likely to be born among the mother's people; sometimes this is so arranged. The author also refers to "a feature of the social organization of the ancient Egyptians and certain African peoples of mixed Hamitic and Negro

descent which there is every reason to believe is connected with matrilineal descent and which is probably a legacy of an old Hamitic practice, namely, the custom of brother-sister marriage in the royal family. It is so well established that this occurred in Egypt that it does not seem necessary to cite specific instances. But it cannot be said that the fact that such unions occur among the powerful lacustrine tribes of Central Africa has received the attention that its importance warrants. . . . The Baganda also trace their descent in the male line, except in the case of the royal children, who take their mother's totem as well as certain totems claimed by every prince and princess. Clan exogamy was strictly observed except in the case of the ruling prince, who, on his becoming king, was ceremonially married to one of his half-sisters, who shared with him the coronation ceremonies and the official mourning of his predecessor. . . . We thus reach the conclusion that brother-sister marriage was a widely spread early Hamitic institution. Nor were consanguineous marriages limited to the royal family, or even to the aristocracy, for the practice occurs among commoners in certain Galla tribes at the present day and there is evidence that marriages between near relatives were by no means repugnant to the feelings of the Egyptian populace."

The Yakuts are vague in their terminology covering relationship on the father's side. The term for mother means "case," "matrix," "place of birth," while that for father means "an elderly man." "This vagueness in regard to the male blood tie, side by side with the definiteness of the female connection with the offspring, is very significant." All names of female ascendants are clearer than those of male; the word for family means mother-family, with a woman-origin. It is a current fact in the legends that the heroes do not know who their fathers were. The same Russian word is used for both *sib* and *kin*. The *familia*, in the Latin sense of the word, bears a name which means "mother-kin." From the facts about names "we may infer that when, amongst the ancient Yakuts, a number of related persons were living together, the relations of 'mother' and 'wife' were the first ones which called for expression, 'mother' meaning a woman who had children. This inference would support the belief that the matriarchate once existed among the Yakuts,"²⁹ with a sort of group-marriage in the background.³⁰ The Lepchas of the Himalayas trace descent through their mothers and not through their fathers.³¹ In Baluchistan, a man marries a kinswoman as nearly related as possible, so long as she is outside a certain few prohibited degrees. The belief is current and strong that heredity follows the mother. In another district of India, the woman is the head of the family. The man, married or not, who remains in his mother's house is earning for her family and at his death his property goes in the first instance to his mother, then to his grandmother, sisters, or sister's children, in order. All relationship is reckoned through the woman and the child takes the clan of his mother.³²

In the Chin Hills a brother controls the marriage of his sister; the woman is the guardian of the children and if divorced takes them with her, though the husband's claim is usually satisfied by compensation. "The children of a slave woman were born in slavery, and every child she bore, be the father chief or slave, was the slave of the mother's master, and therefore as generation after

generation passed the slave population increased and multiplied."³³ On the Malabar Coast, "a man's sister's son and a woman's own son as their respective nearest blood relations perform funeral rites," as the rule. . . . Though everywhere succession is altogether through women, funeral rites are still performed by men."³⁴ If the matriarchate is found anywhere, says Letourneau³⁵ it is among the Nairs of Malabar; the man raises and rules the family of his sister and must show much more grief at their death than he would for his own children. It is said that no Nair knows his father. The patriarchal Brahmans could not change the Nair system. In another Malabar district the Kooch husband resides with his mother-in-law and does the coarse work; she rules, with her daughter second in command. He must meet any expenses he incurs without authorization. A woman's property goes to her daughters. Brothers obey their oldest sister and respect the younger.³⁶ Again, the eldest daughter of a Rajah "never marries, but takes now one, now another Brahman as her lover; her sons become Rajahs and her eldest daughter carries on the family."³⁷ Ghurye³⁸ thinks there is good reason to believe that there was in South India once "a wide prevalence of dual organization with matrilineal descent." The Khasi in Assam are said to "offer the best example of the matriarchate."³⁹

Traces of the mother-family in Cambodia are found in the fact "that the price of the 'nursing milk,' as it is called, is paid to the mother; and also in the much more lasting and profound respect had by the son for his mother, and in the general and uncontested principle that the woman put away by her husband has the right to take her children with her. . . . It is the custom, always observed, for the father not to consent to a marriage which the mother opposes, and not to pledge a child without the consent of its mother; then there is the instinctive horror, much more marked than when the father is the victim, which Cambodians feel at the thought of a child beating its mother. One of the most conclusive proofs appears in the word for cousin-german, which when analyzed means brother-grandmother, or brother by the same grandmother, but never brother by the same grandfather. This affords an almost incontestable trace of an ancient social régime when relationship followed the female line."⁴⁰

The most ancient Chinese traditions assert that in the earliest times men knew their mothers but not their fathers. The ideographic character for family is said to combine the signs for "woman" and "to be born." It came to be applied to the descendants of a male ancestor.⁴¹ The groom's maternal uncle gives him instruction in conjugal duties; if there is no maternal uncle, the paternal uncle does it.⁴²

The mother-family is the oldest form in the Malayo-Polynesian race and must once have been general. Though it is now considerably modified and has been superseded as a system by the patriarchal system, it has left many traces behind it.⁴³

Among the Alfurs of Minahasa the word for family is the same as the root

of the word for milk, meaning those who are suckled by the same milk, a fact which Wilken⁴⁴ interprets as a survival of the mother-family. He cites several cases of female rulers in the Archipelago, even among the Mohammedan tribes. "Certainly this phenomenon, so much at strife as it is with the spirit of Islam, is to be conceived, here as elsewhere, as merely an echo, an after-effect out of the time of the matriarchate, when the woman stood on an equality with the man in public law and could be called to the discharge of public offices and services as well as he could." Such female rule was proscribed by Mohammedan influence in Sumatra. Indeed, it is probable that the mother-family in Atjeh was suppressed by Arabic influence at a relatively recent date.⁴⁵

In Celebes the mother is paid at the time of loosing the zone of the bride.⁴⁶ In the northern part of the island the marriage-customs are purely matriarchal. The man always goes to his wife's house and becomes a member of her family. "The only persons who are free from the matriarchal system are the sons of the rajahs, who do as they please about following their wives."⁴⁷ Certain Malay examples are cited by Stevens⁴⁸ to show that the matriarchate is not a token of the preferential position of the female sex but, on the contrary, for its misprision. Children who belong to the mother are neglected. He once said to some of the Orang Laut: "The fact appears to be that you can be sure who the mother is, but not who the father may be." In reply, "they laughed and agreed" with him.

In the Mortlock Islands, "the members of a tribe regard themselves as blood-related brothers and sisters and therefore marriage between tribal members is completely ruled out; even an extra-marital sex-union would count as incest and be punished as such by death. A man can therefore have intimate relations, or marriage, only with a woman from another tribe; he must commonly go to her dwelling and there work the land that belongs to her. If in addition he owns land in her locality he must bring the products to the relatives of his wife. Among these the father-in-law is a mere accessory person, while the brothers-in-law and the chief of the tribe and village to which the woman belongs are of the greatest consequence. The wife is quite independent in the family and has at worst to suffer the tyranny of the sons, who let the unmarried sisters too feel their predominance. . . . Men of the same tribe may not fight against each other, while on the other hand brothers or even father and son must oppose one another insofar as they belong to different tribes. In strange contradiction to this stand the peculiar provisions which most strictly separate the tribal members according to sex—as men and women, brothers and sisters—if they do not, on the mother's side, come from different tribes. For it is the mother who passes on to the children the tribal connections, which consist of the duties of citizens in the natal village of the mother. . . . It is clear that brothers and sisters could not sleep under the same roof and that women could not enter the men's house of their own tribe, though this was not objected to in the case of women of other tribes. Less intelligible are the regulations of native etiquette, according to which the woman in the presence of her husband must not touch her brother or must go by him crouching."⁴⁹ Every village-community consists of a kin-group bound together by maternal

blood and the feeling of blood-brotherhood shows itself stronger than political enmity; blood-brothers must not fight together. Therefore groups fight each other only in the sense that their mutually alien tribal components fall into hostilities.⁵⁰

The tribal organization of the Carolines, where every tribe forms a state, "is not suited for the establishment of a true family-life, for the children are for the mother true children but for the father they are aliens not belonging to his tribe. In case of a war between two tribes, father and son stand over against each other in hostility."⁵¹ "That the natives do not contribute in the least to the increase of the . . . wild-growing native fruit-trees scarcely needs to be noted: they are just children of the present or rather of the moment. For whom should they plant? Their children do not become the heirs and the nephews, who will sometimes enter upon the heritage, can then just look out for themselves."⁵² In Ponapé, "descent is traced through the mother—a custom tolerably common amongst Oceanic races in general."⁵³ In the Pelew Islands, the family includes only the descendants of the women; and "there is no doubt that originally on all the islands of Oceania there existed this primitive tribal organization which still prevails in very clear form only on the Carolines." If a man's wife dies in her home while he is living there, his relation to her family ceases and he goes home. His children remain, unless they are grown up and fond of him, when he sometimes gets them for his lifetime; then they go back to their maternal grandparents. If a wife lives at her husband's home, she is well treated by his relatives. However, they watch all his gifts of money to her. If he dies, his relatives extort all the money they can from her; and if she yields they come to terms with her. After the mourning, she takes her children and goes home. Hence a wife is trying, during her husband's life, to get all she can from him. Envy, jealousy, and greed for money appear at every point.⁵⁴ In the Nauru Islands, "at marriage the man moves into the woman's house. If the eldest daughter marries, the parents surrender to her their house and build themselves a new home near by."⁵⁵

Among the Polynesians "are to be found more or less significant survivals of a maternal system of relationship which fully justify the inference that this system must once have been universal among them."⁵⁶ Polynesian mythology tells of a chief who, in anger at his wife for not having cooked well, beat her and asked: "Are the logs of firewood as sacred as the bones of your brother?" And he threatened: "I will serve the flesh of your brother in the same way; it shall frizzle on the red hot stones."⁵⁷ Some of the Polynesian pedigree-sticks give evidence of descent through a female lineage, while survivals may be found in the marriage-ceremony, where "on some occasions the female relatives cut their faces and brows with shark's teeth, receive the flowing blood on a piece of native cloth, and deposit this, sprinkled with the mingled blood of the mothers of the married pair, at the feet of the bride."⁵⁸ In New Zealand, "often the husband went to live with his wife's people,—not of course, if he was a great chief, or had several wives. If he went to live with his wife's people, he was considered as one of her tribe, and fought on their

side."⁵⁹ Williamson⁶⁰ cites many cases of matrilineal descent among the Central Polynesians.

The Iroquoian system, mentioned in the text, is unique in the completeness with which it has been worked out,⁶¹ but the female line is represented in the less elaborated codes of many tribes.⁶² Relationship-names are widely indicative of maternal descent.⁶³ One ethnologist⁶⁴ thinks it "safe to look for the original seat of the clan system with maternal descent on the northwest coast among the Tlingit, Haida, and Tsimshian"; with these tribes "the organization is based on mother-right; that is, birth-rights, such as rank, wealth, property, etc., are received from the mother." Father-right is found farther south.⁶⁵ Among the Columbian tribes, "it is said, that the husband almost invariably joins the tribes to which his wife belongs, under the idea that among her own family and friends she will be better able to provide for her husband's and children's wants. This also may proceed from the fact of the influence the women possess; for they always assume much authority in their tribe, and are held in high respect. They have charge of the lodge and the stores, and their consent is necessary for the use of them; for after coming into their possession, these articles are considered the women's own."⁶⁶ In one tribe "it was thought wicked for a man or woman to marry any of their mother's relations, but they might marry their father's relatives."⁶⁷ Again, "as the father is never of the same caste as the son, who receives caste from his mother, there can never be intertribal war without ranging fathers and sons against each other." This condition works out into avoidance of war.⁶⁸

The mother-descent group is the simplest unit among the Siouans, but is passing. "There are traces of descent in the female line; for example, sisters have great privileges; all the horses that a young man steals or captures in war are brought by him to his sister. He can demand from his sister any object in her possession, even the clothing which she is wearing, and he receives it immediately."⁶⁹ Among the Ojibwa, who made great amounts of maple sugar, each woman who was head of a household had her own clump of trees and her sugar-hut to which she always went. These were inherited by mother-descent and totem.⁷⁰ Shawnee matrons had the right to name the children, that is, to determine whether they should enter the maternal or paternal clan. When a Shawnee sachem "expressed a desire that a son of one of his sisters might succeed him in the place of his own son," the young man's name had to be changed to comply with the request. This incident "tends to show that at no remote period descent among the Shawnees was in the female line. The author⁷¹ cites a number of similar instances.

"Much is said of the inferior position of woman among the Indians. With all advanced tribes, as with the Zuñis, the woman not only controls the situation

but her serfdom is customary, self-imposed, and willing absolutely. To her belong also all the children; and descent, including inheritance is on her side."⁷² The Zuñi man "must work in the field of his prospective mother-in-law, that his strength and industry may be tested; he must collect fuel and deposit it near the maternal domicile, that his disposition as a provider may be made known; he must chase and slay the deer and make from an entire buckskin a pair of moccasins for the bride, and from other skins and textiles a complete feminine suit, to the end that his skill in hunting, skin-dressing, and weaving may be displayed; and finally he must fabricate or obtain for the maiden's use a necklace of seashell or of silver, in order that his capacity for long journeys or successful barter may be established; but if circumstances prevent him from performing these duties actually he may perform them symbolically, and such performance is usually acceptable to the elder people. After these preliminaries are completed, he is formally adopted by his wife's parents, yet remains merely a perpetual guest, subject to dislodgment at his wife's behest, though he cannot legally withdraw from the covenant; if dissatisfied, he can only so ill-treat wife or children as to compel his own expulsion."⁷³ The Zuñi are agricultural and pastoral; their gardens are cultivated exclusively by the women and inherited by the daughters. Zuñi women hold a high social and political status.⁷⁴

So too under the Navaho system descent is in the female line; the children and practically all property except horses and cattle belong to the wife. Sheep and goats are exclusively hers and the head of the family may not sell a sheep without first obtaining her consent.⁷⁵ The pueblo was the result of the gradual growth of a group with maternal descent, for the daughters drew husbands from other groups and a joint-house system was evolved.⁷⁶ Hodge⁷⁷ is authority for the statements that "all the Pueblos are monogamists, and the status of women is much higher than among most tribes. Among the tribes in which descent is reckoned through the mother, at least, the home is the property of the woman, and on the marriage of her daughters the sons-in-law make it their home. Marriage is effected with little ceremony, and divorce is lightly regarded, the wife having it in her power to dismiss her husband on a slight pretext, the latter returning to his parents' home, sometimes for a trifling cause. . . . The children are spoken of as belonging to the mother; i.e., among most of the Pueblos they belong to the clan of the mother; and in this case, at least, if the father and the mother should separate, the children remain with the latter."

The Seri Indians "are the most primitive people in North America, and their disposition is so savage and treacherous that they remain nearly unknown to scientific students." Descent is reckoned exclusively in the female line and their simple property belongs to the housewives. A groom's claims "are presented chiefly by his older female relative, when, if the suit is favorably regarded by the maiden's mother and uncles, he is provisionally installed as a member of the family without ceremony, without any suggestion of purchase-price, and without presents." If he shows himself a good protector and provider and also endures a continence-test, he is formally installed in the family as a permanent consort-guest, and his children are added to the clan of his mother-in-law. The

matrons own everything and their brothers are entitled to places in the house; "the husband has neither title nor fixed place, because he belongs to another house." The matrons discuss community-questions and they are settled "by the dictum of the eldest in the group." "Mortuary ceremonies attain their highest development in connection with females, the recognized blood-bearers and legislators of the tribe. The special signification of females in respect to funerary rites is without precise parallel among other American aborigines, so far as is known, but is not without analogues in the shape of (presumptive) vestiges of a former magnification of matrons in the mortuary customs of certain tribes. The vestiges are especially clear among the Iroquoian Indians."⁷⁸

Among the Seminoles the man goes to the home of his mother-in-law. Later he builds a house for himself and his wife "either at the camp of the wife's mother or elsewhere, except among the husband's relatives." All the persons in a camp except the husbands are of one kin-group. A man may not marry a woman of his own clan; and his children belong to the mother and are of her clan.⁷⁹

In British Guiana, "tribal relationship is never derived from the father but always only from the mother; the child of a Warrau-Indian and an Arawak is numbered with the Warraus. Inheritance too aligns itself with this right of tribal claims."⁸⁰ There are some traces of mother-right among the Shingu. Although they have the patriarchal family-organization, the mother's brother is equally with the father the protector of the children and takes the father's place if he dies. He, and not the mother, manages the property. The protector of the woman, in other tribes too, is always her brother.⁸¹ In tropical South America the married man does not eat with his own family but with that of his married sister and he gets his share of booty, not in his own house but in that of his sister. In general where the mother-family prevails women are free, respected, and dominant, whereas under the patriarchal régime they are held in subjection and little respected.⁸² Among the West Tupis, "not the fathers but the brothers give away the maidens." If the mother is a Macusi the children also are Macusis; yet the paternal uncle may not marry the niece, while it is allowable to marry a sister's daughter. Arawak descent is strictly through the mother; marriage is forbidden with members of the mother's tribe but not with those of the father's. The father's or mother's brother has a weighty voice in the family-council.⁸³ Humboldt⁸⁴ refers to a legend about a tribe of "women who live alone"—a case paralleled to the "woman-land" of southeast New Guinea, wherein men exist only to breed with the women.⁸⁵ Latham⁸⁶ thinks that to the unbridled license which prevails during Araucanian feasts "may possibly be due the custom of reckoning parentage and descent from the mother's side, it being frequently impossible to determine with any certainty who is the father of a given child."

Traces of descent through women are found in ancient Egypt and Mesopo-

tamia;⁸⁷ and the Israelites show some reminiscences. Abimelech says to his mother's brethren: "I am your bone and your flesh." He wants them to make him, not one of his father's sons, their king. Several details appear in connection with the marriage-arrangements of Rebecca and in the Talmud.⁸⁸ Wilken⁸⁹ has collected considerable material relating to the existence of the matriarchal family among the ancient Arabs, which leaves him in no doubt as to the matter. He cites several Old Testament cases indicative of the closeness of relationship through the mother and finds parallels among the Arabs of the older time and also among Arabized peoples of the Malay Archipelago. The customs of the princely houses of Arabia show undoubted traces of descent through women; the term "mother" itself signifies "folk," "tribe," "community"; and the terminology "is not purely fossil, for there still exists among the Arabs, in the present as in antiquity, the feeling that the mother determines the nature and the natural relationship, the character of the child. The mother is more sacred than the father, the mother's sister stands nearer to the child than the father's sister, and cousinship on the father's side involves by nature less kin-feeling than that on the mother's side. Ever and anon does the vein of the mother or the mother's brother crop out in the child. . . . On the political and legal range, at the time of Mohammed, relationship through the mother yielded to that through the father; the latter is the political relationship."⁹⁰ "The Arabs generally consider innate virtues as inherited through the mother rather than the father, and believe that a man commonly resembles, in his good and evil qualities, his maternal uncle." A complimentary form of address is: "Thou who hast a valiant maternal uncle!"⁹¹

The first proponents of the matriarchal theory⁹² rested their case chiefly upon evidence from classical antiquity. Most modern scientists would doubtless agree with Starcke⁹³ that Bachofen's method of interpreting and applying mythical tales inspires little confidence, being "prompted by a poetic inspiration, which snatches at every kind of allegory." There is very slight reason to assert that Homer affords evidence for the mother-family.⁹⁴ Æschylus⁹⁵ has a line about "Amazons who feed on flesh and know not men." Amazon-legends have been interpreted as pointing back to a "matriarchate." The Orestes story, as worked over by Æschylus,⁹⁶ develops a peculiar opposition between the gods of the new dispensation and those ancient female avengers of matricide,⁹⁷ the Erinyes. Apollo asks the latter: "What of husband-slaying wives?" and receives the answer: "That blood bears not the blame of kindred violence." There is no blood-tie between man and wife but only a marriage-tie, a sort of master-servant relationship. Several passages bear upon the relative nearness of relationship with father and mother. Orestes said to his maternal grandfather:

"My father begot me, thy daughter bore me, a field receiving the seed from another; and without the father there could never be a child. I argued therefore that the prime leader of my being caused me to be, rather than the nurse who received me."⁹⁸ In the *Electra* of Euripides⁹⁹ there is a sort of protest against naming the child from the mother, even when she is of lofty family and the father is of low station. It is reported that the ancient Athenians were named after their mothers and that Solon allowed marriage with a half-sister on the father's side while forbidding union with such a relative on the mother's side.¹⁰⁰ "Ask a Lycian who he is, and he will answer by giving his own name, that of his mother, and so on in the female line. Moreover, if a free woman marry a man who is a slave, their children are free citizens; but if a free man marry a foreign woman, or cohabit with a concubine, even though he be the first person in the state, the children forfeit all rights of citizenship."¹⁰¹ Much later it is reported that they "honor women more than men and call themselves after their mothers; they leave heritages to their daughters and not to their sons."¹⁰²

Miss Harrison,¹⁰³ in presenting evidence for matriarchal conditions in early Greece, seems to support Lippert's¹⁰⁴ view, especially with respect to the greater antiquity of goddesses as compared with gods. "At Delphi in historical days Apollo held the oracle, but Apollo, the priestess . . . knows, was preceded by a succession of women goddesses:

First in my prayer before all other gods
I call on Earth, primæval prophetess.
Next Themis on her mother's oracular seat
Sat, so men say. Third by unforced consent
Another Titan, daughter too of Earth,
Phoebe. She gave it as a birthday gift
To Phoebus, and giving called it by her name.

Gaia the Earth was first, and elsewhere Æschylus tells us that Themis was but another name of Gaia. Prometheus says the future was foretold him by his mother:

Themis she
And Gaia, one in form with many names.

In historical days in Greece, descent was for the most part traced through the father. These primitive goddesses reflect another condition of things, a relationship traced through the mother, the state of society known by the awkward term matriarchal, a state echoed in the lost *Catalogues of Women*, the *Eoiai* of Hesiod, and in the Boëtian heroines of the *Nekyia*. . . . Of the many survivals of matriarchal notions in Greek mythology one salient instance may be noted. St. Augustine, telling the story of the rivalry between Athene and Poseidon, says that the contest was decided by the vote of the citizens, both men and women, for it was the custom then for women to take part in public affairs.

98 Euripides, *Orestes*, 552-556.

104 *Kgchete*, II, 257.

The men voted for Poseidon, the women for Athene; the women exceeded the men by one and Athene prevailed. To appease the wrath of Poseidon the men inflicted on the women a triple punishment, 'they were to lose their vote, *their children were no longer to be called by their mother's name* and they themselves were no longer to be called after their goddess, Athenians.' The myth is ætiological, and it mirrors surely some shift in the social organization of Athens. The citizens were summoned by Cecrops, and it is noticeable that with his name universal tradition associates the introduction of the patriarchal form of marriage." The authoress quotes classic authority to the following effect: "Women give to each successive stage of their life the same name as a god, they call the unmarried *Maiden* (Korē), the woman given in marriage to a man *Bride* (Nymphē), her who has borne children *Mother* (Mētēr), and her who has borne children's children *Grandmother* (Maia).' Invert the statement and we have the whole matriarchal theology in a nutshell. The matriarchal goddesses reflect the life of women, not women the life of the goddesses." Again: "The Hera who in the ancient Argonautic legend is queen in Thessaly and patron of the hero Jason is of the old matriarchal type; it is she, Pelasgian Hera, not Zeus, who is really dominant; in fact Zeus is practically non-existent. In Olympia, where Zeus in historical days ruled if anywhere supreme, the ancient Heraion where Hera was worshipped alone long predates the temple of Zeus. At Argos the early votive terra-cottas are of a woman goddess, and the very name of the sanctuary, the Heraion, marks her supremacy. At Samos, at the curious festival of the *Tonea*, it is the image of a woman goddess that is carried out of the town and bound among the bushes, and Strabo tells us that in ancient days Samos was called Parthenia, the island of the Maiden. At Stymphalus, in remote Arcadia, Pausanias says that Hera had three sanctuaries and three surnames; while yet a girl she was called Child, married to Zeus she was called Complete or Full-Grown . . . , separated from Zeus and returned to Stymphalus she was called Chera (Widow). Long before her connection with Zeus, the matriarchal goddess may well have reflected the three stages of a woman's life; Teleia, full-grown, does not necessarily imply patriarchal marriage." One further survival: "A man when he married by thus obtaining exclusive rights over one woman violated the old matriarchal usages and may have had to make his peace with the community by paying the expenses of the Thesmophoria feast."

The Italian Locrians reckoned blood-relationship only in the female line.¹⁰⁵ From a study of data in classical literature, covering the position of women, Farnell¹⁰⁶ concludes that "the matriarchate has not left so clear an impress on classical religion as has been supposed," and that "many of the curious phenomena in the relation of the sexes to cult are not excessively distinctive indications of any special family organization."

"One of the latest discoveries . . . is that the Teutons, before they reached the stage of paternal right, passed through a stage of maternal right."¹⁰⁷ "Now it is not contended that the Germans, even when they first came within the ken of history, recognize no bond of blood between father and son. . . . The most that can be said by ardent champions of 'mother right' is that of 'mother right' there are distinct though evanescent traces in the German laws of a later day. On the other hand, we seem absolutely debarred from the supposition that

¹⁰⁷ Ihering, *Aryan*, 40; Wilken, in *VG*, I, 239; Weinhold, *Deut. Frauen*, I, 105, 107.

they disregarded the relationship between the child and its mother's brother."¹⁰⁸ "According to the Law of Tanistry, even among the Piets and Scots, in a case of doubtful succession [to the chieftaincy] the choice fell upon the one nearest eligible in the female line."¹⁰⁹ "Let no one think that the patriarchal rule of the woman is milder than that of the man; rather the reverse." A Ural mother who was head of a household had a son flogged to death because he tried to comfort his wife when she was being badly treated by the old woman. To no avail did the oldest members of the joint-family beseech the irritated house-mother.¹¹⁰

In a sprightly article on "Royal Marriages and Matrilineal Descent," Miss Murray¹¹¹ expresses the opinion that royal power went by matrilineal descent and that the cases of consanguine marriage were with the idea of marrying the heiress—all possible heiresses. The case of Hamlet is cited. Where such consanguineous marriages occur, one must look for inheritance in the female line. Man lays claim to the throne by marriage and not by inheritance. In Egypt, "the queen is queen by right of birth, the king is king by right of marriage." The king could have any number of wives—all the heiresses, if he could get them; the queen could have only one husband at a time, he being the rightful ruler by reason of his marriage with her. Cæsar and Antony legitimized their position by marrying Cleopatra. The tables of the Ptolemies are given and from the house of Judah are cited cases of consanguine marriage. Maachah married her cousin and then her son.¹¹² In the case of the Roman Emperors, the authoress asserts that the amazing alliances were not vicious, but political. Matrilineal descent and female inheritance were admitted for Roman kings. Again tables are given. The wife of Cæsar must be above suspicion! In the imperial family the son did not succeed the father. These views are mentioned because they are suggestive and may contain several grains of truth.

The Maternal Uncle, and Nephew-Right. Among certain tribes of West Australia, "the mother's brother of a girl occupies an important position. If there are several claimants for his sister's daughter it is often he who decides which shall be the favoured one. This man is the *talyu* of the girl's future husband. If a man wishes to obtain a girl in marriage he must therefore pay his attentions not only to the girl's father (his *yaji*), but also to her mother's brother (his *talyu*)."¹¹³ In the Baniara District of Papua, the maternal uncle is considered the child's nearest relative and guardian. When the baby's hair is to be cut for the first time, the parents give large presents of food to that uncle and the grandfather. "The maternal uncles decorate the children and they are given their dance ornaments."¹¹⁴ Again, "the man normally responsible for introducing the boy [to the body of mature men] is his maternal uncle, or *apono*. It may be explained that the *apono* has certain rights over his nephew, and may call upon him for small services. Furthermore, he officiates ceremonially for the boy, especially in the piercing of his nose and ears in babyhood, and later in his passage through seclusion and the *Pairama* ceremony. . . . In some cases it appeared that the child was introduced into the *ravi* [men's house], not by his *apono* but by his father. But it would seem usual

for the child to undergo his seclusion and initiation under the especial care of his *apono*—in general, of his mother's male relatives. In a certain percentage of cases a boy passes, by a sort of adoption, into the group of his *apono*, i.e., into the *larava* (or *ravi*-alcove) of his maternal uncle rather than that of his father, as is normally the case."¹¹⁵ Among the Koita, "a boy usually receives his first perineal band (*sihi*) from his maternal uncle (*raimu*), and in return owes him certain services. . . . In a general way he performs the same services for his *mama*, whether father or paternal uncle, though a maternal uncle is supposed to exert more authority than any *mama*. . . . A man or boy might refuse to accompany his father or paternal uncle (*mama*), but would always go with his maternal uncle (*raimu*) without demur." In the case of the Roro-speaking tribes, "some time after a boy has had his ears pierced and while he is still a *miori*, his father kills a dog which he first hangs to the front of his house, and then takes to the house of the boy's maternal uncle to whom he gives it. . . . The boy is then sent to his uncle, who in his own house puts the *itaburi* on his nephew. The boy then returns to his father." With the Southern Massim, "it is a father's part to teach his son the various methods of fishing and garden-making, but in these duties he would be assisted by his wife's brothers who shared his responsibility. If a boy's father died his maternal uncle acted in his stead in every way. In the same way a child's maternal aunt replaces its mother, this being especially the case if the child be a girl. . . . A boy had to give a portion of the fish he caught or pig he spared to his maternal uncle. When travelling with his uncle he would do the hard work such as gathering firewood and cooking food, and in a canoe journey he would be required to make himself generally useful to his uncle."¹¹⁶

In San Cristoval, Solomon Islands, "the *mau*, mother's brother, stands in a very close relationship to his sister's children. When he dies they share the property, though some of it goes to his brothers. A boy will marry his uncle's widow or her younger sister. He is expected to work in his uncle's garden, and may freely take of his uncle's possessions. If a boy wishes to go to school or to recruit on a plantation, the uncle's permission is asked. If he wishes to marry, he looks to his uncle to make the arrangements for the purchase of the woman he desires for his wife (from £8 to £10 is the price nowadays in Arosi). The uncle takes a part in the series of feasts made for small children, including that at which the name is given, and in the initiation of boys. When the actual brother of the mother dies, his nephew shaves a line across his head from ear to ear. . . . A boy and his mother's brother are on a relation of great freedom toward one another."¹¹⁷ "The special relation of a sister's son to his uncle," says Rivers,¹¹⁸ "has reached its highest known manifestation in the *vasu* institution of Fiji, while these islands also furnish a most pronounced example of the avoidance between brother and sister. . . . The special relation between a man and his sister's son still persists, though shorn of many of its most picturesque features. At the present time among the inland people the mother's brother still takes the chief part in the direction of his nephew's life. . . . In the old days the sister's son could take any of the possessions of his uncle and could, if he wished, kill any of his pigs. In this respect the old custom is no longer followed, and if the right were exerted, the nephew might be taken

to the court where his act would be treated as an ordinary case of larceny. On the coast it is well known that in the old days the *vasu* of a chief could go to the town of that chief and take any woman he desired and it seemed that this was once also true of the island tribes. . . . I inquired especially into a point which the many previous accounts of the *vasu* institution have left doubtful, viz., whether there is any difference between the duties and privileges of the own sister's son and of the many other persons who would be classed with him through the classificatory principle. It seemed quite clear that the rights would be exactly the same for the actual sister's son and for the son of a woman called by the same term of relationship as the sister, but in reality the father's brother's daughter. . . . It was also said that the husband of the father's sister, classed in nomenclature with the mother's brother, had the same duties and privileges and was liable to have any of his possessions taken by the son of his wife's brother." Hocart¹¹⁹ suggests that the right of the sister's son to plunder his uncle is "an integral part of divine chieftainship, i.e., a natural consequence of the divinity of chiefs: if this can be definitely confirmed it cannot be a survival of a primitive mother-right as is commonly supposed." With respect to Fijian heralds, he says: "A man is sent to his mother's kinsmen because he is safe among them and because he is sure, in virtue of the sister's son's irresistible right (*vasu*), to obtain what he asks for. This usefulness of the sister's son may in turn have reacted upon his right and helped it to the extreme pitch to which it has attained in Fiji."

"The relationship between a man and his mother's brother is very close throughout the Banks Islands." In addition to the right to the property of an uncle after his death, "any of his goods may be taken by his sister's son during his lifetime, a right which is the source of many quarrels. . . . The difference in the status of the uncle and father is brought out very clearly in one way. If a man imposed on his sister's son a difficult task which resulted in his death or injury, no compensation could be demanded, but if a man put his own son to such a task compensation could be demanded by the mother's brother of the boy. If a man who is fighting is told to stop by his mother's brother he will do so at once, and it was said that if he had refused in the past he would have been killed by his uncle, but a man told by his father to stop would only do so if he felt inclined. A man treats his mother's brother with far greater respect than his father and may not put his hand above his head." Examples of this are cited, as well as of the following points. "The sister's son always goes in his uncle's canoe; it would not be necessary for a man to ask his nephew but the latter would take his place naturally, and if he refused to go he would be a despised man and if young he might be thrashed by his uncle." There are also special relations between a man and his father's sister, which are introduced for the sake of comparison with the foregoing. "The relation between a woman and her brother's child is one of the utmost importance in the Banks Islands. . . . It is in connection with marriage that the rôle of the father's sister becomes of the most importance. She arranges the marriage of her nephew in the ordinary course, and if the latter chooses for himself, she may forbid the match. A man would never marry against the will of his father's sister. . . . There is a certain amount of community of goods between a man and his father's sister. The latter could take her

119 Hocart, in JAI, XLIX, 51, 118. He has developed this further in his "Chieftainship in the Pacific," in AA, XVII, 634.

nephew's things but only those which he had received from his father. If a man wants any of the possessions of his father's sister, it is customary first to ask her son but they may be taken without his permission. This account applies to Mota." The husband of the father's sister also comes in for characteristic treatment. "The special feature about this relative, who is called *usur*, is that he is continually the subject of chaff from his wife's nephew."¹²⁰

The maternal uncle plays an important rôle in the marriage-ceremonies in British Central Africa. "A man seeing a girl he would like to marry deposes his brother to go to the brother of the girl, who then calls the girl's maternal uncle, and he speaks to the mother on the subject. The mother consults the girl; if she refuse, nothing further is done. . . . After six months the mother of the girl prepares beer. The uncles of the young couple, mothers, fathers, sisters, and brothers are invited. The girl's maternal uncle then speaks, addressing himself to the maternal uncle of the husband, saying, 'We have called you here to drink beer and to see the house of your brother that you may return when you like. Should anything arise between these two newly married ones in the nature of a dispute, let them come to their respective uncles about the matter.' . . . The child is named usually after the maternal uncle's child-name which is given by the uncle."¹²¹ In the case of child-marriage among the Ba-Mbala, who reckon kinship on the female side, "their children belong to the eldest maternal uncle." Among the Ba-Huana, "children are considered to belong to the family of the mother, and are sent to the village of the maternal uncle as soon as they arrive at puberty. . . . Great respect is paid to the eldest maternal uncle, and frequent presents must be made to him. . . . In the case of an orphan, the maternal uncle is the guardian." In the Congo region, "children appear to belong to the maternal uncles." The father leaves it to the maternal uncle to decide whether a son should accompany a visitor when the latter departs.¹²²

In Nyasaland the maternal uncle of a girl is the first to be approached by the intending husband. He arranges with the parents. In some tribes the brother is first asked and the present is divided between father, mother, brother, and maternal uncle.¹²³ Among the Masai, "a maternal uncle (*ol-apu*) exercises great influence over his nephews, as it is believed that if he were to curse them they would die. He can at any time stop a fight in which one of his nephews is engaged by merely calling on his nephew to desist, as the nephew would be afraid of his right arm withering if he were to disobey. This power is to a certain extent reciprocal, and if a man were to start beating his wife he would have to stop if his maternal nephew ordered him to do so. . . . Besides the power of a maternal uncle to stop a fight, he has also the right to take anything which belongs to his nephew. If the uncle desires anything that is the property of his nephew's father, the nephew must buy it from his father, who will at once give it up when he knows for whom it is required. This power of taking property is reciprocal, and in fact applies to all persons who address one another as *ol-apu*, *ol-le-ng-apu*, etc. A nephew, for instance, can go to his maternal uncle's kraal, and if his uncle is absent, he can slaughter a goat or drink his uncle's milk, and nothing would be said. He cannot, however, drive

off a cow without his uncle's sanction, but permission would not be refused. Other relatives have likewise some power of taking property."¹²⁴

A custom among the Altaians, which is possibly a survival from an older family-system, is the presentation of *barky*, i.e., a gift, from the maternal uncle. "Until a boy is seven years old his hair is braided into two tresses worn in front of the ears. When he reaches his seventh birthday, his maternal uncle sends to him saying: 'Come; I will restore to you *barky*.' He goes, and his uncle cuts off the tresses, in return for which he is supposed to present the boy with a horse." Among the Ainu, "relationship through the mother is of more importance than that through the father, the maternal uncle being very often the most important member of the family."¹²⁵ In Tibet the maternal uncle has the deciding voice as to a girl's marriage.¹²⁶ In some districts, the Chinese groom's maternal uncle instructs him prior to his marriage.¹²⁷

"It has been remarked that in the marriage of the widow by her son a trace of a former matrilineal system may perhaps be detected. It is possible to detect a more definite trace in the position of a mother's brother. Among the Semas, as among other Naga tribes, the greatest respect is enjoined on a man for his mother's brother. . . . In the case of a girl's relations to her mother's brother we find a definite obligation existing, which is inherited from the mother's brother by his son if it has not been discharged. When a man's sister's daughter is married, or when, after his father's death, his father's sister's daughter is married, he must give her a present."¹²⁸ Among the Kuki-Lushai clans "the name is usually chosen by the maternal uncle, but sometimes omens are consulted."¹²⁹ The Nairs of Malabar have a "song of the maternal uncle," wherein he invokes luck for the bridal pair.¹³⁰ Says Panikkar:¹³¹ "It must be acknowledged that the Nāyar *Kārnāvan* loves his sister's children more than his own. The explanation of this apparently unnatural feeling lies in two directions. First, the father is not necessarily of the same caste as the son. Secondly, there is always the possibility of a break in the union. Divorce is not a matter of any difficulty among the Nāyars, both the husband and wife having equal right to announce such a termination of their connection whenever either of the parties desires to do so. This instability of relationship is the principal reason why a man's affection for his own son is neither so intense nor so important as his affection for his sister's son. Also, in matrilineal communities family tradition descends only through the sister's progeny. As the Nāyars formed a fighting aristocracy before the British conquest, they had naturally acquired family tradition, mottoes and arms, which descend of right only in the female line. Hence also a man looks to the training of his sister's sons to keep up his family tradition. All these contribute to an extraordinary, and at first sight inexplicable, tenderness towards the children of one's sister."

The power of the maternal uncle among the Nairs is analogous to the *patria potestas* in groups living under the father-family.¹³² "Authority in the family is wielded by the eldest member, who is called *Kārnāvan*. He has full control of the common property, and manages the income very much as he pleases. He arranges marriages (*sambandhams*) for the boys as well as the girls of the family. He had till lately full power (at least in practice) of alienating

anything that belonged to them. His will was undisputed law. This is, perhaps, what is intended to be conveyed by the term *Matri-potestas* in communities of female descent. But it should be remembered that among the Nāyars the autocrat of the family is not the mother, but the mother's brother. The power of the *Kārnavan* over the family property has always been, in theory, limited, because the property was supposed to belong to every member of the family jointly. Till lately, however, it was practically impossible to limit the *Kārnavan's* power of mortgaging or even fully alienating it, because when it came to litigation the *Kārnavan* always pleaded that such action as he took was necessary for the welfare of the family, and justified himself by basing his arguments 'on the discretionary power' vested in him. However, the old theory has lately been asserted in law that a *Kārnavan* can sell or mortgage the property only with the consent of the other members of the family. All the moneys owing to the family can be paid only through him. He alone can give permission for the use of what belongs to the family. He can punish all the members of the family, either by depriving them temporarily of their allowance, or by prohibiting them to enter the house. In short, he is virtually the head of a tribe rather than the senior member of a family. . . . The wife of the *Kārnavan* has no standing in the family; yet as is but natural, she is supposed to be a dark and sinister force working against the interests of the *Tharawad*. Since she does not belong to the *Tharawad* of her husband she has no interest in its well-being, and it is generally supposed that the *Ammāvi* (the wife of the maternal uncle) is interested only in getting as much out of her husband's family for her own children as her influence over her husband allows. All the tales told to children have as the villain the *Ammāvi*, whose position is not only that of the wife of the maternal uncle, but also the mother-in-law of the brother. She is universally considered to be a sort of sinister step-mother."¹³³

Williamson¹³⁴ quotes several authors with regard to the relationship between a child and his mother's brother in Tonga. "Pritchard says that the term *tamaha* referred to a sister's children, who could appropriate anything belonging to their maternal uncles and their offspring." Another writer reports that the *fahu* or sister's son had the right to take all he wished from his maternal uncle, and his descendants could do so from those of the uncle. "These statements indicate an extension of the rights of the children so as to be exercisable by their descendants, and against those of the uncle (as in Samoa), and thus take the matter beyond what is involved by the ordinary conception of the relationship." Rivers¹³⁵ gives more detailed information. "In Tonga the *tuasina* or mother's brother is 'the same as a servant for his sister's son. He has to listen to the boy all the time.' The sister's son is especially honoured by his uncle and can take anything he likes from his uncle's place; his pig, his canoe or anything he chooses, and no objection will be raised. Indeed, I was told that a man would be very glad to see his nephew take any of his goods. A man looks after his sister's son while he is young and, when the latter goes to his uncle's house, he can do as he chooses and is subject to no restrictions on his conduct such as we shall find affect him when he visits his father's sister. On the other hand, a boy has not to be especially obedient to his maternal uncle; if the boy's father tells him to do anything, he will do it, but, if told

¹³³ Panikkar, in JAI, XLVIII, 262.

¹³⁵ Melan. Soc., I. 366/367.

¹³⁴ Cent. Polyn., II. 182.

by his uncle, he will do it or not as he pleases. . . . I could not discover that the *tuasina* would take any special part in ceremonial connected with his nephew either in connection with naming, incision or marriage. . . . A woman can also take anything from the house of her maternal uncle and has the same rights and privileges as her brother. . . . The aunt may take anything from her nephew. A man honours his father's sister more than any other relative, even more than his father or his father's elder brother, and it was believed in the old time that, if anyone offended his father's sister, he would die. . . . There are many restrictions on the intercourse of a man with his father's sister; he may talk to her and address her by name, but he may not eat in the same place with her nor may he eat anything which she has carried. He will not sit on her bed and if she comes into a house in which he is present, he will at once go out."

Among the Tlinkits, "when a man dies, leaving children, their maternal uncles and aunts assume their support and care."¹³⁶ The custom is found in some American tribes that a nephew must marry the widow of his uncle; this being a development of relationship through females.¹³⁷ Pontiac "often intimated to me that he could be content to reign in his country in subordination to the King of Great Britain, and was willing to pay him such annual acknowledgement as he was able in furs, and to call him his uncle."¹³⁸ The Omaha have been long on the father-family stage; yet mothers' brothers and own brothers "seem to have more authority than the father or mother in matters relating to a girl's welfare. They were consulted before she was bestowed in marriage, unless she eloped with her husband. . . . Girls can be more familiar with their mother's brother than with their own brothers. . . . Even boys are more familiar with their mother's brother than with their own father, and they often play tricks on the former."¹³⁹ "In the event of the death of the mother and father, provided the father had no brothers, the uncle (mother's brother) had full control of the children and no relative of the father could dispute the right of the uncle to the children. During the lifetime of the parents the uncle was as alert as their father to defend the children or to avenge a wrong done them. The children always regarded their uncle as their friend, ever ready to help them." In the spring, after the thunder sounded, the boys of the same tribe had a festivity called, literally, "striped face," the word referring to the mask worn at that time. "A dried bladder, with holes cut for the mouth and eyes, was pulled over the head; the bladder was striped lengthwise in black and white, to represent lightning. The boys carried clubs and scattered over the village. Each boy went to the tent of his uncle (his mother's brother) and beat with his club against the tent pole at the door, while he made a growling sound in imitation of thunder. The uncle called out, 'What does Striped Face want?' The boy disguised his voice, and said, 'I want leggings or moccasins or some other article.' Then the uncle called him in and made him a present. Should the uncle refuse to give anything the boy might punch a hole in the tent or do some other mischief. But generally the sport ended pleasantly and was greatly enjoyed by old and young."¹⁴⁰ "Among the Choctas . . . if a boy is to be placed at school his [maternal] uncle, instead of his father, takes him to the mission and makes the arrangements. An uncle,

among the Winnebagoes, may require services of a nephew, or administer correction, which his own father would neither ask nor attempt. In like manner with the Iowas and Otoes, an uncle may appropriate to his own use his nephew's horse and gun, or other personal property, without being questioned, which his own father would have no recognized right to do. But over his nieces this same authority is more significant, from his participation in their marriage contracts."¹⁴¹ Among certain Colombia Indians, girls are sold in marriage under the full authority of their maternal uncles.¹⁴²

In Damascus the close connection between nephew and maternal uncle is indicated in formulas of appreciation or of imprecation: "God bless his uncle!" and "God damn his uncle!" The following proverb refers to a case where a nephew even exceeds a bad uncle in baseness: "If a son goes to pieces morally, he belongs two-thirds to his maternal uncle;" that is to say, two-thirds of his baseness he has from his uncle and one-third is his own contribution. "The maternal uncle has more love for his nephews and nieces than has the paternal uncle, just as the love of mothers for their children is greater than that of fathers. An Arab proverb states: 'The vein of the maternal uncle sleeps not.' The Prophet, who wanted to recognize with gratitude the services of Saad, took him by the hand and said: 'This is my maternal uncle.' The cited examples set clearly into light the belief in a spiritual relation between anyone and his maternal uncle."¹⁴³

Inheritance and Succession. In New Guinea, "even where the family is patriarchal, the chief heirs are, as is understandable in a matriarchal state, the relatives on the mother's side, the *Gai's*. In the second grade come the children, then the man's brothers, and last of all the widow. . . . The *Gai's* inherit the most valuable house-utensils . . . and weapons," but they do not get them all.¹⁴⁴ Against the servile position of the woman is to be contrasted her determinative influence in matters of inheritance, "which goes so far that the uncle starts nearer to his sister's children than their father."¹⁴⁵ Among the Dobuans, "when a man dies his private property is taken by his sister's children principally, then by his brothers, and even his own sons may have a small share. If his sister's children are too young, his brothers will take their share, and pay the children back when they have grown up. Should one of the nephews attend to his uncle with loving care during the illness preceding death, he will become the *tobuio*, or preferred heir, and receive the biggest share of the property. . . . When a woman dies her bodily ornaments belong to her sister's children, and her other property to her own children."¹⁴⁶ In San Cristoval, "the nephew receives his uncle's property when the uncle dies, except some portions reserved for the brothers of the dead man; and during lifetime the uncle and nephew share things, and are quite free to take each other's possessions if they so wish."¹⁴⁷ "The relationship between a man and his mother's brother is very close throughout the Banks Islands. In the old days there is no doubt that the sister's son would have been the heir of his uncle and would have taken all his property, including any objects of magical value, but at the present time this has been much modified." In Pentecost, which is the most archaic part

of Melanesia included in the author's¹⁴⁸ survey, "it is clear that inheritance should properly be matrilineal, the land and personal possessions of a man passing at his death, not to his own children, but to members of his own moiety, and especially to the children of his sister. At the present time it is becoming the custom to transmit property, or, at any rate, property of certain kinds, to the children; but this is quite recent and has perhaps only come about as the result of European influence, not necessarily as the direct result of European teaching, but as the result of the increased intercourse between different parts of Melanesia which has followed the arrival of Europeans. I was told that inheritance by the children is quite modern, and this information receives strong support from the account of Dr. Codrington. At the time when it was written, only about thirty years ago, the son received nothing except what his father gave him during his life. . . . A clear indication of the priority of matrilineal inheritance is to be found in the case of land. Dr. Codrington¹⁴⁹ has pointed out the definite distinction between the modes of inheritance of ancient cultivated ground and land newly reclaimed from the bush. The former passes to the sister's children, while the latter is taken by the children of the man who cleared it."

In South Africa, where the patriarchy prevails, "the king's son remains the heir, but he must be the eldest son of the chief wife; and so much weight is given to the mother by this qualification, that in the long run the kingship is also subject to the female line of descent."¹⁵⁰ Among the Banyai the successor to the throne is chosen rather from the descendants of the last king through his sister than directly.¹⁵¹ Among the Ewe-speaking peoples, who trace kinship through females, the order of inheritance is from elder to next younger brother or, if there are no brothers, from uncle to the eldest son of the eldest sister.¹⁵² In most of the tribes of the Gold Coast the law of nephew-inheritance prevails; "at the death of the family-head, the heritage—rights as well as debts—goes over to the oldest son of the oldest sister of the man."¹⁵³ On the lower Congo, "if a man die, the bulk of his property goes to his sister's son, not to his son; the reason being that of the blood-relationship of the nephew there can be no doubt, but the descent of the son may be questioned. . . . A strange exception is made when a man marries a slave of his; the son then ranks first in this case, as the natives say that he is not only presumably the next-of-kin by birth, but also by purchase, as the mother belonged to the father."¹⁵⁴ In Nyasaland, "the sultan is succeeded, not by his own son, but by his eldest sister's eldest son"; if that son is "very stupid," his next younger brother succeeds, and so on down. The chief's subjects "kneel to him, as he himself kneels to his invalided old mother."¹⁵⁵ In East Central Africa, a man's heir is the son of his mother or, failing him, his sister's son; his own children are excluded. "The succession to the chieftainship is based on the same principles, which is curious, considering the terrible severity with which known cases of adultery, in the case of chiefs' wives, are punished."¹⁵⁶ A man's heir, among the Ba-Huana, is his eldest brother, then his eldest sister, then her eldest son. If there are no heirs, the goods are burnt and the slaves freed. The magician

is succeeded on his death by his sister's son.¹⁵⁷ The son never succeeds his father, among the Mombasa, the estate becoming the property of the nearest male relative in the female line, generally the grandson by the eldest daughter.¹⁵⁸ The Hova mother gives blood and rank. Inheritance through women is much preferred.¹⁵⁹ With reference to succession among the Wayao it is said: "The common rule of discriminating between the children of a brother and sister and those of two brothers or of two sisters is present here, and is combined with the equally common one of succession to the sister's son. The rule of succession is, strictly speaking, to the eldest son of the eldest sister. If, however, a man and his advisers consider him to be unsuitable, or in event of his death, the succession passes to the following in order of precedence: younger son of the eldest sister, younger son of a younger sister, and son of own daughter. . . . An heir, on succeeding, may marry the wife or wives of his maternal uncle, but not if he has previously married one of his daughters."¹⁶⁰ The Twareg count inheritance through the mother; one is the heir of his uncle, not of his father.¹⁶¹ Among the Berbers, property and political position have long been inherited in the female line. The sister's son inherits or, if she has no children, the brother of the same mother. Own children can merely receive presents.¹⁶²

In the Punjab, a bride "should be a virgin, beautiful, young and free from disease. She should also have a brother, for otherwise, according to the marriage contract, her first-born son would have to be given to her father, in order that he might become his maternal grandfather's heir."¹⁶³ On the Malabar Coast, "where succession through the female line is observed, a man's sister's son, and not his own, inherits."¹⁶⁴ "The Nāyar family consists of all the descendants from the same ancestress, counting relationship exclusively from the side of the mother. Theoretically it may contain all those who have a common ancestry of this kind, but, in practice, when families grow unwieldy, they divide the common property and live under different roofs. . . . The family owns property in common. What a private individual earns belongs to him exclusively, but when he dies it is joined to the rest of the family, according to the old Nāyar law which is still prevalent in some parts. When the family becomes unwieldy, or certain members show insubordination, the family property is partitioned equally among *each female line*. That is to say, if there are three sisters in the family, each having daughters and granddaughters, the partition is done in such a way that each of the ancestresses founds a separate family among whom the original property is equally divided. . . . There are many instances in which, though family partition took place at least a hundred and fifty years ago, the members continue to call each other brothers and sisters, as if they were the nearest blood relations."¹⁶⁵ In Travancore the royal line ran out because there were no sisters through whom nephew-heirs could be born.¹⁶⁶ "The laws which govern the succession to the State of Travancore are very peculiar. The descent, according to the usages of the Nairs of the Western Coast, is in the female line. Thus on the death of the Raja the sovereignty passes not to his sons, who can in no case inherit, but to his uterine

brothers if he has any. Failing these, or on their demise, it passes to his sister's sons, or to his sister's daughter's sons, and so on. Hence it follows that the only adoptions which are performed by the Rajas of Travancore are not of males to supply the place of sons of their own body, but of females through whom the line must be continued. Any failure of the direct female descent requires the selection and adoption of two or more females from the immediate relatives of the family who reside at certain places in Travancore. The females so adopted are designated the Tumbrattees or Ranis of Attingah, and by the laws and usages of Travancore are assigned a distinguished rank as alone entitled to give heirs to the state, and enjoy many important privileges. Such an adoption occurred in 1788, when two sisters were selected and adopted as Ranis of Attingah. The younger sister died after giving birth to a female child which also died. From the elder sister the present family of Travancore are descended, the late Raja being the grandson (daughter's son), the present the great grandson (daughter's daughter's son). In 1857 the line of Travancore was again threatened with eventual extinction. The sister of the late Raja (granddaughter—daughter's daughter—of the elder of the two sisters adopted in 1788) left five children, four sons, the second of whom is the present chief, and one daughter. The daughter died suddenly, leaving two sons. The Tumbrattees of Attingah thus became extinct, and although the state after the death of the Raja would devolve successively on his four nephews and his two grandnephews, the line, unless recruited by the adoption of Tumbrattees as before, would have expired with them. Under these circumstances the late Raja intimated to the Resident that, in strict conformity with former usage and precedent, he proposed to bring in two, the most eligible female members from among his relations, as senior and junior Ranis. Two ladies were accordingly adopted with the sanction of the British Government.¹⁶⁷

In South Celebes nobility reproduces itself more through the woman than through the man, for the latter is not in a position to raise wholly to his own rank a child begotten by him with a woman of lower birth, while the woman can, in a corresponding case, raise her child to her own status. This is regarded by Wilken¹⁶⁸ as an undoubted survival of an original matriarchate, for under it the woman has precedence in ennobling. "Rank is inherited from the mother, not from the father, corresponding to the Marshall Islands view that the mother of a child is always known but it is not always known who the father was." Examples are given. The same system prevails on Kushai, in the Carolines, and a case is mentioned where a man's oldest son, a boy of about fourteen years, stood higher than his father because his mother was the daughter of the deceased king, while a younger sister of this marriage had a still higher rank than her brother. It is the custom on Ponapé that "rank is inherited from the mother and not from the father."¹⁶⁹

"As far as Polynesia is concerned, we find the maternal arrangement clearest in the Tonga Islands. Here inheritance of property still follows the female line and so too is nobility transmitted."¹⁷⁰ "In Tonga, according to Mariner, nobility depended upon relationship to the *tuitonga* or the *hau*, that was in effect upon relationship to one of the three great ruling families of Tongatabu. In every family nobility descended by the female line, children acquiring their

rank by inheritance from the mother's side, for where the mother was not noble, the children were not nobles, but all the children of a female noble were, without exception, nobles." Examples are given in profusion. "So far as definite statements are concerned, the evidence of a survival of a system of matrilineal descent in Tonga is fuller and stronger than in Samoa." In the latter case, "succession was in the main, though apparently not entirely, patrilineal; but I am going to refer to evidence which seems to point more or less clearly to ideas derived from a system of matrilineal descent which had prevailed in the past, and which, indeed, had not died out completely, and to customs which may have had their origin in matrilineal descent. . . . As regards my references to the passing of descents from mothers to daughters, I must point out that they would pass to sons also, as all the children of the same mother would, under a system of matrilineal descent, belong to her social group. The point of the matter is, however, that each son would be, so far as the line of descent was concerned, a *cul-de-sac*; it would come to an end on his death, and it would be *through* his sister that it would be continued to subsequent generations. . . . Why was it that a chief, on succeeding to the official title of his predecessor, has to make a valuable present to his sister? I suggest that the custom was based upon the effect upon a system of patrilineal succession of a still lingering recognition of the right of succession involved by matrilineal descent—that he was buying from his sister the possible claims that her children might through her have to the succession." The bulk of the information which the author¹⁷¹ has with respect to the question of matrilineal descent in the Society Islands comes from Tahiti. "Moerenhout, who apparently applies the title *ari'i* to the great chiefs only, distinguishing the minor chiefs by the term *tavana*, says that if a daughter who was the only scion of a noble family married a man who was not the son of a principal chief, a son born of the marriage immediately took the title of *ari'i*; and that, when the father was only a subordinate chief, and the mother belonged to the high aristocracy, then she was regent. This is probably a case of succession at birth; but I think it involves the proposition that the mother's high nobility of family rank descended to the son, notwithstanding the inferior rank of the father. . . . On the other hand, if a prince made a *mésalliance*, the children born of that union had no right to the privileges or the position of their father, and only inherited a mixed position, in proportion, it is true, to the power of the father." Examples are cited. "A woman could pass her rank to her child notwithstanding the inferiority of its other parent, whilst a man could not do this. These statements suggest some recognition of a system of matrilineal descent." The Maori have the matriarchate, though the patriarchate is coming in; the wife lifts the man to her rank, not the man the wife.¹⁷²

The Mexican emperor was chosen from the brothers of the dead ruler or, in default of these, from his nephews.¹⁷³ In Peru, heritage followed the lines characteristic of the mother-family.¹⁷⁴ In British Guiana, "the sons of the daughters of a chief have the right of succession to the dignity of their grandfather, not the sons of the chief, though they do not hold at all strictly to such a succession."¹⁷⁵ Among the Shingú the chieftaincy descends to a son or, if

there is none, to a sister's son.¹⁷⁶ "Among some [Araucanian] tribes the eldest brother of the deceased inherits at his death, as being more certainly of his blood. This peculiarity attracted the attention of the chroniclers at the time of the Spanish Conquest, throughout America."¹⁷⁷

Survivals of these practices exist among the people of the Pyrenees. "When the daughter marries, her name is added to that of her husband, is borne by her children, often even registered by the civil state. . . . Usage still bestows upon the sons of heiresses the name of the house where they were born: if they have left the country, and return imbued with the ideas of our civilization, they are amazed sometimes at the silence to which the memory of their father has been relegated, and they seek, but in vain, to relieve themselves of the maternal name. . . . And, again, in the country, when it is a daughter who is the oldest, she becomes the actual head of the family and, in reality, the sole heiress. Then, again, she exercises power in the house, and the people of the country say that her husband is her chief domestic;—at most, her man of affairs. He has brought into the house with his person only his work and the hope of posterity. In the eyes of society, it is the woman who personifies the house and not her husband. In the relations of family to family she intervenes alone: hers to receive, to express the congratulations and condolences of private life."¹⁷⁸

§418. Transitional Forms.

SPENCER and Gillen¹ have pointed out the difficulty, if not the impossibility, of stating definitely whether descent in an Australian tribe is through the men or through the women. "It is not easy to say with anything like certainty that one tribe is in any particular respect more 'primitive' than another. It is, for example, generally assumed that counting descent in the female is a more primitive method than counting descent in the male line, and that of two tribes, in one of which we have maternal descent and in the other paternal, the former is in this respect in a more primitive condition than the latter; but it may even be doubted whether in all cases the counting of descent in the female line has preceded the counting of it in the male line. The very fact that descent is counted at all, that is, that any given individual when born has some distinguishing name, because he or she is born of some particular woman, indicates the fact that men and women are divided into groups bearing such distinctive names, for it must be remembered that in these savage tribes the name which is transmitted to offspring, and by means of which descent is counted, is always a group name. When once we have any such system, whether it be totemic or otherwise, then we have arrived at a stage in which it is possible to imagine that the men of one particular group have marital relations only with women of another particular group. Supposing we take two of these exogamous groups, which we will designate A and B. Thus men of A have marital relations with women of B, and *vice versa*. When once these groups are established, then, there is, in reality, no difficulty whatever in counting descent in the male just as easily as in the female line. It is quite true that the individual father

¹⁷⁶ Von den Steinen, *Zent. Bras.*, 331.
¹⁷⁷ Latham, in JAI, XXXIX, 354.

¹⁷⁸ Cordier, *Droit de famille aux Pyrénées*,
 quoted by Wilken, in VG, I, 246.
¹ Nat. Tr. Cent. Aust., 36, note.

of any particular child may not be known, but this, so far as counting descent under the given conditions is concerned, is a matter of no importance. The only name which can be transmitted, and by means of which descent can be counted (as indeed it is amongst the Australian tribes of the present day), is the group name, and as women of group B can only have marital relations with men of group A, it follows that the father of any child of a woman of group B must belong to group A, and therefore, though the actual father may not be known, there appears to be no inevitable necessity for the child to pass into group B rather than into group A. On the other hand, if we suppose men of one group to have marital relations with women of more than one other group, then, unless each woman be restricted to one man, descent, if counted at all, must of necessity follow the female line." Referring to one particular tribe, Mathews² states: "I have been trying for some years to ascertain definitely how the totems descend—whether through the men or through the women; but I am not yet satisfied. . . . Some of them follow the father, some the mother, and some follow neither parent. Other individuals have two totems."

In Murray Island, Torres Strait, the wife retains her own totem, while the children may take that of their mother's sister or of their father.³ "We shall not go astray in ascribing to the Papuans of German New Guinea a mean between the systems of father-right and mother-right, under which the mother's group as well as the father's lays claim to the child, and which leads to all thinkable compromises. For instance, guardianship is arranged regularly according to the maternal system while inheritance follows now the maternal line and now the paternal." In Melanesia, despite the system of mother-descent, "in practice, as in the devolution of property and in the handing on of religious and magic rites, a man always put as far as he could his son into his own place, and a rich and powerful man would secure a high place in the Suqe [society] for his son in very early years; thus the great man's son would succeed to his place, and become to some extent an hereditary chief. . . . The son does not inherit chieftainship, but he inherits, if his father can manage it, what gives him chieftainship, his father's *mana*, his charms, magic songs, stones and apparatus, his knowledge of the way to approach spiritual beings, as well as his property." Again, "a first-born son remains ten days in the house in which he was born, during which time the father's kinsmen take food to the mother." On the tenth day, "they, the kin of the father, and therefore not kin of the infant," perform a ceremony indicating that they will feed and keep the son. "There is clearly in this a movement towards the patriarchal system, a recognition of the tie of blood through the father and of duties that follow from it. Another sign of the same advance of the father's right is to be seen in the very different custom that prevails in the Banks' Islands on the birth of a first-born son; there is raised upon that event, a noisy and playful fight, . . . after which the father buys off the assailants with payment of money to the . . . kinsmen . . . of the child and his mother. It is hardly possible to be mistaken in taking this fight to be a ceremonial, if playful, assertion of the claim of the mother's kinsfolk to the child as one of themselves, and the father's payment to be the quieting of their claim and the securing of his own position as head of his own family." These cases illustrate the "remarkable tendency throughout the is-

² In AA, VII, 303, 304.

³ Hunt, in JAI, XXVIII, 10.

⁴ Codrington, *Melanesians*, 55, 56, 57, 230, 231.

lands of Melanesia towards the substitution of a man's own children for his sister's children and others of his kin in succession to his property; and this appears to begin where the property is the produce of the man's own industry."⁵

Among the Southern Massim a blood-price would be paid to the brother of the deceased. "If there were no brother, the mother or maternal uncle would take it, and it appeared that even the sister might be compensated, especially if the mother were not alive. When deaths on both sides occurred in a brawl, the survivors did not as a rule cry quits immediately even if the number killed were equal; but ceremonial atonement was made for each. It was pointed out that the blood price was a matter which concerned the family rather than the hamlet-group (though these two groups were often identical), and this was one of the instances where the relationship of a man to his father was practically acknowledged; it was distinctly the duty of a father to help find the blood price paid for his son's misdoings."⁶

Rivers⁷ writes: "There is a wide difference between the modes of descent and inheritance in Melanesia. While descent is almost always matrilineal where it is proper to speak of descent at all, inheritance is largely patrilineal at the present time, even in the islands which possess the most archaic forms of social structure. The island in which matrilineal inheritance is most strict is Pentecost . . . and there is evidence that not long ago, the matrilineal mode of inheritance existed in this island in a pure form. In other islands the available evidence points to a process whereby the matrilineal is gradually passing over into the patrilineal mode, and it is clear that this is no recent innovation, but one which goes back to a time long before the advent of European influence." With reference to Pentecost Island, "it was said that formerly all property belonged to the *verana*, viz., the subdivision of the moiety the exact nature of which is uncertain, and it was said that even if property belonged to individual persons it was not inherited by individuals but by the *verana* as a whole. Canoes are in no case individual property even now, but always belong to the *verana* as a whole. At the present time it is clear that property in general is owned by individuals and should properly be transmitted to the sister's son, though a change is going on whereby the property of a man is being inherited more and more by his own children." By way of contrast the author cites the society of Ambrim, also in the New Hebrides, which is organized on the most definitely patrilineal basis. "An examination of the social structure of the island showed no signs of matrilineal institutions, nor of any dual system. The existence of local exogamy made the village a social unit of great importance, and this grouping was strictly patrilineal, while another social group, called the *vantinbül*, of especial importance in connection with the tenure and transmission of property, consisted mainly of persons related through patrilineal ties, though it also included the sister's son and certain other relatives through the mother. It was only on examining the ceremonial observances of the people that there came to light a number of facts pointing to earlier matrilineal institutions." There exists here an organization called the *Mangge*, in which men, and also to some extent women, gradually rise in rank. "There are about twenty stages, the ritual of which becomes more and more elaborate on pass-

⁵ Thomson, in JAI, XXIV, 381, note.
⁶ Seligmann, *Melanesians*, 571.

⁷ *Melan. Soc.*, II, 99; I, 209; Rivers, in JAI, XLV, 230, 232, 233.

ing upwards in the hierarchy. The record of its ritual forms a large mass of data of the most varied kind, but I did not hear of a single feature which brought the participants in the rites into any sort of relation with the mother's relatives or the mother's village. On the other hand, there were observances which showed the existence of the closest ties with the father's relatives. The whole organisation is founded on a cult of dead ancestors. In most of the higher grades an image in human form is made, which becomes the abode of the ghost of the father's father of the man who is taking new rank, or if his father is dead, it may be the ghost of the father who inhabits this image. In either case it is the business of the ghostly resident to look after the welfare of his descendant, to shield him from injury by others and to further his material prosperity. . . . The social relations between a man and his mother's brother in a patrilineal community have long been regarded as an indication of a preëxisting condition of mother-right. The Ambrim condition differs from most previously recorded cases in that the social ties with the mother's brother show themselves only in ceremonial and not in the transactions of everyday life, but this only makes the case for regarding these social functions as survivals all the stronger, for even the most determined opponents of the doctrine of survival will acknowledge that if survival occurs at all, it is in ceremonial. An important feature of the Ambrim practices is that the social functions of the mother's brother clearly fall to his lot as a member of the social group formed by the mother's relatives. Feature after feature of the indigenous ceremonial of Ambrim shows that this ceremonial embodies an old order in which social relations of the most definite kind must have existed between a man and his mother's people. Last, and I think most instructive, of all these Ambrim customs is the persistence of the old social order in connection with death. The repetition of the rites of the *Mangge* as the leading feature of the funeral ceremonies shows definitely that the *Mangge* has permeated the whole ritual of death, but it has not been able to exclude the fulfilment of certain obligations towards the village of the dead man's mother. This persistence of the old order in connection with death is shown even more decisively in the duty of the mother's father to look after his descendant in the world of the dead while his father's father is responsible for his welfare during life. The evidence now brought forward comes only from one island of Melanesia. Standing alone it would not justify us in accepting the precedence of matrilineal institutions as a general feature of Melanesian society. There is, however, much evidence from other parts of Melanesia showing that an earlier matrilineal mode of transmission has changed in the patrilineal direction." Before presenting such evidence from another of the author's writings, we may note his conclusion with respect to this study: "While in Melanesia the general social condition of the matrilineal peoples supports the idea that they represent an earlier stage of social progress, elsewhere, and especially in North America, the matrilineal peoples have on the whole advanced in general culture beyond the level reached by those who practise father-right. It is possible that some mechanism has been in action here which has produced a change from father- to mother-right, or has led to the development of each from some state of society which cannot strictly be regarded as either patrilineal or matrilineal. Only when far more attention than hitherto has been paid to the social functions connected with relationship, both in ceremonial and secular life, can we expect to reach conclusions of any value concerning the relation to one another in time of mother- and father-

right." The author is an adherent, though not a fanatical one, of acculturation as against parallelism.

In his *History of Melanesian Society*, Rivers⁸ mentions other transitional cases and the difficulty of determining relationships and descent, especially when native words have a meaning for which there is no exact English equivalent. He cites many examples. To illustrate at length: "The *sogoi* of a Banks islander are those of his own *veve* or moiety; the Melanesian has learnt, quite wrongly, that the English equivalent of *sogoi* is 'related,' and as his father is not his *sogoi*, he believes that he is justified in saying that he and his father are not related to one another. When such a statement is made in a scientific publication, the writer is making the same kind of mistake as the Melanesian, a mistake due to an assumption which is at the present moment a most serious hindrance to progress in anthropology. This assumption is that European languages possess terms which are the exact equivalents of the terms of Melanesian or other families of language belonging to rude forms of culture. The word *sogoi* can only be translated by 'kin' or 'relative,' if these words are used in senses very different from those they ordinarily possess in the English language. It is quite possible that at one time the relations between father and child in Melanesia were of such a kind that it would have been correct to say that father and child were not kin in the usual English sense. The regulation that a man and his father may not eat together, the belief that father and son necessarily have different mental dispositions, and the fact that, if a man injure his own child, he is held to be responsible to its maternal uncle, suggest that, at one time, the father was so much a stranger to his offspring that it would perhaps have been correct to say that kinship with the father was not recognised. In the present condition of Melanesia, however, the relations between father and child are of such a kind that the superficial observer of Melanesian life would probably fail to notice anything which would differentiate the relationship from that of a civilised family. There is thus a considerable mass of evidence which shows that there exist in the matrilineal communities of Melanesia social relations with the father and with the father's relatives which differ in no obvious respect from those existing between related persons of the same social group, and there is evidence that this condition is not recent, but goes back far into the past. At the same time, it is probable that the relations with the father and the father's moiety were once different from those which now exist. . . . The available evidence, then, points to a great change having taken place in the freedom and intimacy of the social relations between members of different social groups. With this increased freedom there seems to have gone on a progressive increase in the degree of recognition of the relationship of a person with his father and his father's relatives, until the present condition has been reached in which the superficial observer would see nothing exceptional from the civilised point of view, in which it is necessary to look below the surface, to consult tradition and study social relations in detail, in order to find indications of widely different functions of the social grouping. . . . The result of this inquiry into the nature of descent in Melanesia is to show that, in the matrilineal communities of this area, a change has taken place in the social importance of the line of descent which shows itself especially clearly in the altered status of the father."

In the same work is considered the position of the maternal uncle, as indicative of the transition to the father-family. "The great interest in this relationship arises from the fact that its special functions in patrilineal communities have so often been regarded as survivals of mother-right. The records of this book allow us to compare the position of this relative in communities practising matrilineal descent with that which he occupies where descent follows the father. . . . When we turn to the patrilineal people of Fiji, we find the mother's brother still occupying a most important place. The rights of the sister's son or *vasu* in Fiji are so well known that it is unnecessary to enter on the subject here; it need only be noted that the right of the *vasu* which stands out preëminently is that he may take any of his uncle's property, and we have seen that in the matrilineal Banks Islands also the sister's son may take any, even the most valued, possessions of his uncle. The Melanesian evidence is in accord with the widely held opinion that when the special relation between a man and his mother's brother is found in a patrilineal community, it is a survival of mother-right. . . . Among a people with mother-right the position of the mother's brother as an elder of a person's own social division is clearly established; it is so much a commonplace and familiar matter that special regulations concerning the relationship need not exist. It is only as the rights of the father increase that those of the mother's brother gradually become more obvious. In every community in which the rights of the father are gradually growing in strength and importance there must be occasions of conflict between the mother's brother and the father, and it will only be slowly that the respective positions of the two will become defined. . . . I take as an example the special case of the compensation given to the mother's brother by a father who injures his own child. We can have little doubt that at one time this compensation had to be given to the mother's brother by any man who injured a child, and that there was no thought of distinguishing the father from other men. At this stage no one would think of formulating a regulation concerning the case in which it was the father who had injured his child. As the rights of the father grew, there would sooner or later come a time when it would happen that a father caused the injury or death of his child. He might put forward the claim of exemption from the penalty, or more probably, this claim would not be definitely made, but the matter would be talked about, and thus a vague formulation of the special condition would arise. As succeeding cases occurred, this formulation would gradually grow more definite until there was reached such a regulation as that of which I was told in Mota. In fact, we have here simply a special instance of the growth of Law; in the different degrees of definiteness of the formulation of the functions of the mother's brother in Melanesia, we have a simple example of the way in which this growth takes place."

With reference to succession, the author continues: "Among the chiefs it seems that royal succession was counted in both lines and, as we have seen, chieftainship of the highest rank depended on both parents having been of royal rank and in these cases it is certainly not correct to speak of succession as matrilineal. As we have seen also, the grade of the marriage and the rank of the children depends quite as much on the rank of the father as on that of the mother, and the only case in which it seems applicable to use the term matrilineal succession is when a child has only one parent of chief's rank. When it is the mother who has the rank of a chief it seems that the offspring belongs

to the chiefs, though it is recognised that the chiefly rank is stained by the plebeian condition of the father. If, on the other hand, it is the father who is of higher rank in a mixed marriage, it seems that the offspring is not counted as a chief at all, and the Hawaiians seem themselves to recognise that this is due to the uncertainty of male parentage."

Certain conclusions follow: "The inquiry conducted in this chapter has led to the conclusion that matrilineal descent is a feature of Melanesian society which now possesses far less social significance than in the past. In some places it is perhaps only the last relic of a condition of mother-right which once governed the whole social life of the people; which regulated marriage, directed the transmission of property, and, where chieftainship existed at all, determined its mode of succession, while many other aspects of social life were altogether governed by the ideas of relationship arising out of this condition. The definite recognition of the relationship between father and child seems to have greatly affected these social functions. It would seem that a gradual process has been in action whereby the matrilineal organisations of Melanesia have been robbed of much of their social importance, until in some cases they have become little more than empty forms." Again, "the dual organisation with matrilineal descent which is now found only here and there in Melanesia once had a far wider distribution, and was accompanied by a condition of communism, together with a state of dominance of the old men so pronounced that they were able to monopolise all the young women of the community. The study of the varieties of social organisation and of marriage at present existing in Melanesia showed that the early dual system had developed into a number of complex forms, all of a kind which would be produced if the institution of individual marriage and the social recognition of the relation between father and child had arisen in this society."

The social system of the Ba-Yaka is "an interesting mixture, patriarchal in the main, but exhibiting peculiarities which may be survivals of an early matriarchal organisation." Thus, "the tie between a woman and her own village is by no means dissolved by marriage; on the birth of her child, her chief must make a present to her husband, and the child itself, as soon as it can walk, is sent to its mother's village to which it legally belongs and from which the father cannot even purchase it. . . . Nevertheless, a man's heir is his eldest brother, and not, as might be expected under the circumstances, his sister's son, who only becomes his heir in default of brothers. . . . Moreover, in connection with certain food tabus a mysterious connection appears to exist between a man and his son until the latter arrives at puberty. . . . A cock must be eaten by one man alone or illness results; he may however give some to his son if not yet circumcised. This fact is particularly interesting since it seems to show that a male child before circumcision is not supposed to possess an individuality apart from the father, although it is regarded as belonging to the village of the mother." The Ba-Yaka are a pushing, encroaching tribe, invading the Ba-Mbala. A comparison of the two, which looks like a good case of father-family as opposed to the mother-family in organization and effectiveness, is as follows:⁹

⁹ Torday and Joyce, in JAI, XXXVI, 39-40, 41, 42; §421, of the text and *Case-Book*.

Ba-Yaka

Circumcision.
 Scars and tattooing exceptional.
 Burial contracted.
 Feudal chiefs.
 Eldest brother inherits.
 No slave concubines.
 Virginity of bride essential.
 Cannibalism abhorred.
 Slaves treated cruelly.
 Drunkenness condemned.
 Cripples preserved, cared for.
 Wars of occupation.

Ba-Mbala

None.
 Practically universal.
 Extended.
 Independent petty chiefs.
 Sister's son inherits.
 Slave concubines.
 Not essential.
 Daily occurrence.
 Treated with kindness.
 Admired.
 Buried alive.
 No wars of occupation.

Among the Yakuts, "there are two names for a clan: *ye-usa*, 'mother-clan,' and *aga-usa*, 'father-clan.' Nowadays *ye-usa*, whatever its original signification, is a 'mother-clan' only in name, being really subordinate to the *aga-usa*. . . . In comparatively recent times, until the coming of the Russians, indeed, the Yakut had the custom of polygyny. The offspring of a man by all his wives formed the basis of an *aga-usa*; while the offspring of each separate wife would form that of a *ye-usa*." Again, "both Sternberg and Pilsudski agree that the Ainu are the only people of northeastern Asia among whom strong traces of mother-right are found. Pilsudski says that they are just at the stage of transition from mother-right to father-right. As traces of matriarchy he cites the superior position of women among the Ainu as compared with neighbouring tribes, e.g., the Gilyak. This is especially evident during pregnancy, when she is surrounded with every care, and even regarded with veneration. Marriage is never by purchase. If the husband does not go to live in the house of his wife's parents, the wife goes to him, but the first few years after marriage are usually spent with her parents, in whose house her first child is often born."¹⁰

"Descent among the Todas is always reckoned in the male line. . . . The Todas show few traces of mother-right. In some communities there is little reason to doubt that such acts as are performed by a Toda towards his sister's son are survivals of a condition of society in which the mother's brother was responsible, largely or altogether, for the welfare of the child. Among the Todas, however, the *mun* stands in two relations to a child. He is the mother's brother, and he is also the prospective or actual father-in-law, and we have no means of telling in which of these two rôles he performs his duties. If the duties of a man towards his sister's son among the Todas be a relic of mother-right, there can be little doubt that this condition must have been very remote."¹¹ Fawcett¹² has written in reference to the system of inheritance through females among the Nairs. "The girl on marriage joins the sept of her husband, but she retains her own sept name, and her children are of her sept, not of their father's. Marriage between persons of the same sept name is prohibited, and this is regulated solely through the mothers. The tribe is endogamous, but the septs within it are exogamous. Thus, a man or a girl cannot marry any one of the same sept having the same sept name (which is inherited

¹⁰ Czaplicka, *Aborig. Siberia*, 59, 104-105.

¹² In JAI, XXXIII, 61.

¹¹ Rivers, *Todas*, 546, 547.

through their mother), and *must* marry some one within the tribe, but of a different sept to his, or her, own—of his father's sept or any other. Though property devolves through the men, degrees between which marriage is prohibited are inherited through the women."

Wilken¹³ remarks with reference to certain Malays that despite exclusive descent in the male line the free-born father has not the power to raise to his social level the child begotten by him in lawful union with a slave-woman, while the mother, a free woman, can raise a child of hers with a slave-man. This practice he regards as an unquestionable survival of the mother-family. The primitive arrangement among the Bataks was the mother-family; they now have a strong father-family, with the rules of exogamy and the patriarchy in full swing. "Over against the marriage with bride-price, *cum manu*, stands that without bride-price, *sine manu*. In this marriage the wife remains in the house of her parents, whither the man removes, while the children belong to the kin-group of the mother." So in South Sumatra. The most frequent unions "are those wherein the man leaves his *sumbai* [clan; exogamy being the system here], and comes to live with his wife, being taken in as a child, not so much by her parents as by her *sumbai*. . . . After the death of his wife, the man may, at his own choice, go back to his *sumbai*, and the children, if they are still small, he may take along with him without hindrance. When, later on, they no longer need the father's care, the *sumbai* of the mother may demand them. . . . Originally, then, in the transition from matriarchy to patriarchy, marriages *cum manu* and *sine manu* appeared side by side; and the idea existed that the stock could be carried on as well in the male as in the female line."

Van Ossenbruggen,¹⁴ editor of Wilken's posthumously collected writings, comments upon the latter's ideas about father- and mother-family. He asserts that there is no single demonstrated case of the latter succeeding the former. In both types of family the child belongs to the tribe of the men who have power over the mother; in the father-family, these are strangers, in the mother-family, tribal associates of the mother. Wilken makes much of the social position attained by the woman under the mother-family; his editor thinks there is no correlation of the sort.

In northern Sumatra the children always remain with the mother and are regarded as hers. Daughters bring their husbands home, and sons belong to the maternal group, though they visit their wives from time to time. These customs are, however, really survivalistic, for when they speak of a family in the broad sense, or of a stock, they mean the descendants of one man in the male line, however far apart they live. And this conception is not a new one or referable to Islam, though strengthened by it; the patriarchal type is very old.¹⁵ It is reasonable, according to Ratzel,¹⁶ to assume that wherever exogamy is now found co-existing with inheritance through the father, this was formerly through the mother, and that the later system is the result of dislike of the inconveniences to the husband of his insecure and dependent position in the wife's family. A curious case is found in Celebes: "During the wedding the man

13 In VG, I, 327-328; II, 246-247 (quoted).

14 In Wilken, VG, I, 228, 255; I, 235-254. Here are many cases of the mother-family, both in the Archipelago and elsewhere, especially throughout Africa and America, and a number of Biblical references are cited. A list of native female rulers is given (260),

with a reference to Veth, *Vrouwenregeeringen in den Indischen Archipel*, in *Tijdschrift voor Nederlandsch Indië*, Jaargang 1870, deel II, 365.

16 *Vhde.*, II, 433.

and woman declare to what tribe or family they want to belong, that of the father of the young woman or of the young man. The children follow their parents."¹⁷

In the Tonga Islands children of the common people belong to the mother's class but inherit from the father.¹⁸ In the Mortlock Islands, while consent for a marriage is desired from the mother and her kin-group and the father has nothing to say, yet, along with the chief and the girl's brothers, he generally gets gifts from the bridegroom.¹⁹ In New Zealand the husband generally went to the wife unless he were a great chief or had several wives.²⁰ Grosse²¹ assembles several cases showing that a peculiarly prominent man did not give up his kin-group but forced his wife to give up hers.

Everywhere on the American continent, in primitive times, "the system of mother-right was interrupted by father-right, and the man took the wives to live in his lodge." The author quoted²² believed the mother-family to have been antecedent and universal and to have been broken by the man taking the wife home.

Among the Tlinkits it is the great men who already give the paternal name to their children; the poorer people are still in a stage of uterine filiation. Certain tribes have quite recently adopted the system of paternal filiation. This is due to European influence.²³ Again, a child's totem can be changed by giving him to his father's sister to nurse. Though the man-family "is the sociological unit," property-inheritance is through women.²⁴ Kohler²⁵ finds in the legends of the Columbia tribes that the main totem came from the animal ancestress while the lesser ones were derived later by the men. And he finds among the patriarchal Omahas several reminiscences of transition: the brother and mother's brother, not the father, control the daughters; inheritance goes to sons, but in their absence to brothers, sisters, mother's brother, and sister's son; and prohibition of marriage is not limited to the agnatic or paternal line. "A child belongs to its father's gens, as 'father-right' has succeeded 'mother-right.' But children of white or black men are assigned to the gentes of their mothers, and they cannot marry any women of these gentes." Mother's brothers and brothers retain authority over girls.²⁶ "In the family the father was recognized as having the highest authority over all the members, although in most matters pertaining to the welfare of the children the mother exercised almost equal authority."²⁷

"At the time of the discovery, most of the Siouan tribes had apparently passed into gentile organization, though vestiges of clan organization were found—e.g., among the best-known tribes the man was the head of the family, though the tipi usually belonged to the woman."²⁸ While most Indian tribes reckon descent in the maternal line, a number have the father-right; of some of these, like the Winnebagoes, it is known that they had the maternal system earlier. Carver²⁹ found traces of descent in the female line in 1787 among the Winnebagoes. "Some nations . . . when the dignity is hereditary, limit the succession to the female line. On the death of a chief his sister's son sometimes

succeeds him in preference to his own son; and if he happens to have no sister the nearest female relation assumes the dignity. This accounts for a woman being at the head of the Winnebago nation, which, before I was acquainted with their laws, appeared strange to me." Among the pueblo tribes, "tribal custom requires the groom to make his home with his wife's family, the couple sleeping in the general living room with the remainder of the family; but with the more progressive pueblos, and with the Sia to a limited extent, the husband, if he be able, after a time provides a house for his family."³⁰ "The Zuni are divided into a large number of clans. . . . A boy or a girl is regarded as belonging to the mother's clan, but is spoken of as a 'child' of the father's clan, and marriage into either of these is practically prohibited."³¹

With one possible exception, "each of the twenty-two camps into which the thirty-seven Seminole families are divided is a camp in which all the persons but the husbands are members of one gens. The camp at Miami is an apparent exception. There Little Tiger, a rather important personage, lives with a number of unmarried relatives. A Wolf has married one of Little Tiger's sisters and lives in the camp, as properly he should. Lately Tiger himself has married an Otter, but instead of leaving his relatives and going to the camp of his wife's kindred, his wife has taken up her home with his people."³²

The question of priority as respects the mother-family and father-family in North America has been much discussed. "Among the village communities of Oregon, Washington, and southern Vancouver Island the child belongs to the father's village, where the married couple generally live, and it seems that among many of these tribes the villages are exogamic. Among the Kwakiutl the clans are also exogamic, and certain privileges are inherited in the paternal line, while a much larger number are obtained by marriage. The existence of the former class suggests that the organization must have been at one time a purely paternal one. Three causes seem to have disturbed the original organization—the development of the more complex organization mentioned above, the influence of the northern tribes which have a purely maternal organization, and the development of legends referring to the origin of the clans which are analogous to similar traditions of the northern groups of tribes. Taking up the last-named point first, we find that each clan claims a certain rank and certain privileges which are based upon the descent and adventures of its ancestor. These privileges, if originally belonging to a tribe which at one time has been on the paternal stage, would hardly have a tendency to deviate from the law governing this stage. If they have, however, originated under the influence of a people which is on a maternal stage, an abnormal development seems likely. In the north a woman's rank and privileges always descend upon her children. Practically the same result has been brought about among the Kwakiutl, but in a manner which suggests that a people with paternal institutions has adapted its social laws to these customs. Here the woman brings as a dower her father's position and privileges to her husband, who, however, is not allowed to use them himself, but acquires them for the use of his son. . . . I can not imagine that it is a transition of a maternal society to a paternal society, because there are no relics of the former stage beyond those which we find everywhere, and which do not prove that the transition has been recent at all. There is no trace left of an inheritance from the wife's brothers; the

³⁰ Stevenson, in BAE, XI, 42.
³¹ Swanton, in HAI, II, 610.

³² MacCauley, in BAE, V, 507.

young couple do not live with the wife's parents. But the most important argument is that the customs can not have been prevalent in the village communities from which the present tribal system originated, as in these the tribe is always designated as the direct descendants of the mythical ancestor. If the village communities had been on the maternal stage, the tribes would have been designated as the descendants of the ancestor's sisters, as is always the case in the legends of the northern tribes." Elsewhere the same author³³ writes: "Totemism and maternal descent have existed in earlier times among many people where they have now disappeared, and a complete recurrence to these customs, after they have once been given up, is rare, and has never been observed in the history of the civilized world. From this it is inferred that totemism and maternal descent belong to an earlier period in the evolution of civilization, and have gradually been superseded by other forms of social organization and belief. While we may grant that this is the general course of events, the conclusion that totemism and maternal descent precede everywhere paternal descent and family organization does not seem to me necessary. The tendency to their disappearance may exist everywhere; but this does not prove that they are a necessary stage in human development."

Kroeber has argued that "the evidence as a whole indicates the very powerful probability that nearly every nation in North America has reached the matrilineal condition from the patrilineal, the unilateral reckoning from the bilateral, exogamy from a previous non-exogamic state; or at least that the apparent drift, so far as our mental eyes can at present follow it, has been predominantly in this direction. . . . Within the confines of exogamy, patrilineal reckoning prevails among the less advanced nations [of North America], and every important acme of civilization is situated among matrilineal peoples." Hartland replies: "Either matrilineal reckoning must have emerged out of patrilineal reckoning, or *vice versa*. Now the greater general advance of patrilineal peoples elsewhere than in North America is admitted, as I understand, by Dr. Kroeber and those whose views he shares. But it is claimed that in North America the case is different, and that, since there the peoples possessed of the higher degree of civilization are found to be generally, though not universally, matrilineal, therefore the patrilineal organization is the more primitive. This inference is, however, by no means inevitable. . . . There is one thing that cannot be left out of account in such correlation: the connection which seems to exist between matrilineal institutions and an agricultural civilization, based as it is upon female organization and labor, not only in North America, but elsewhere. This would lead to resistance of paternal, and a consequent prolongation in strength of maternal, institutions. On the other hand, the nomadic life of hunters would result in the enhanced importance to the family and authority of the husband and father, and tend to change the reckoning of descent, as it has done in Australia. If so, then matrilineal reckoning cannot be relied on as an essential constituent or a product of the advanced civilizations of North America, for it may be a survival of an earlier stage, and conversely patrilineal institutions may be a relatively modern development. In these circumstances it is important to enquire whether the institutions of patrilineal tribes contain any evidence of a previous matrilineal reckoning; for this would be crucial. Accordingly this is what I have done,

33 Boas, in USNM, 1895, 334-335; and in JAI, XL, 535-536.

and I submit with success. For such evidence has been found, embedded like fossil remains in geological strata, among the very tribes where it was summarily denied. The evidence may be challenged, or its effect may be attenuated, or conceivably even destroyed by explanation; but it cannot be merely ignored or pooh-poohed as 'special pleading.'"³⁴

In Yucatan "the name of the child was formed by combining the names of the father and mother; the mothers name, however, had the precedence."³⁵ The Waimare, near the source of the Paraguay, say that their fathers were Waimare and their mothers Paressi. Hence their names were not derived from their mothers, although the man dwelt in the home of the woman.³⁶ In the South American tropics the father-family is not found in full development. In the different tribes the two systems are much mixed; though the child almost everywhere belongs to the clan of the mother, the clan is of little importance.³⁷

Moses is reported as making a ruling on the complaint that daughters, marrying out of the tribe of Joseph, would carry away the land inherited by them. He ordered that they must marry within the tribe of their father, whomsoever they pleased. The daughters in question married their father's brother's sons.³⁸ The doctrine of two births, says Lippert,³⁹ reconciles the mother-right and father-right; when circumcision (the period of second birth) comes at birth, not at puberty, the latter has, as in the case of the Hebrews, prevailed.

According to Smith⁴⁰ religion follows the mores in that "in various parts of the Semitic field we find deities originally female changing their sex and becoming gods, as if with the change in the rule of human kinship. So long as kinship was traced through the mother alone, a male deity of common stock with his worshippers could only be their cousin, or, in the language of that stage of society, their brother. This in fact is the relationship between gods and men asserted by Pindar, when he ascribes to both alike a common mother Earth, and among the Semites a trace of the same point of view may be seen in the class of proper names which designate their bearers as 'brother' or 'sister' of a deity. . . . The Babylonian Ishtar in her oldest form is such a mother-goddess, unmarried, or rather choosing her temporary partners at will, the queen head and first-born of all gods. . . . So far as religion kept pace with the new laws of social morality due to this development, the independent divine mother necessarily became the subordinate partner of a male deity, and so the old polyandrous Ishtar reappears in Canaan and elsewhere as Astarte, the wife of the supreme Baal. Or if the supremacy of the goddess was too well established to be thus undermined, she might change her sex, as in Southern Arabia, where Ishtar is transformed into the masculine 'Athtar.'" "It appears that the patriarchate has not always had the mastery in Arabia; there are indications at hand that it remained for a time in strife with the other system, and also that it did not win to victory without compromises and shadings."⁴¹

§419. The Father-Family.

THE social organization of the African Ba-Yaka is in many points purely patriarchal. "Agricultural produce belongs to the head of the family. . . . The village chief is responsible for the payment of fines incurred by his subjects . . . and, when a woman is given in marriage, receives a goat from her father. The marriage price is paid to the father of the woman; and the death of a wife without having given birth to a daughter is considered so much to the detriment of the husband that the money he paid for her is refunded." These people appear to be "distinctly progressive. Situated to the south and southwest of the Ba-Mbala, they are gradually encroaching upon the territory of the latter, whose exceedingly loose system of social organisation, under a number of practically independent village chiefs, renders them incapable of anything like organised resistance."¹ It is a belief of the tribes in British Central Africa that the child is formed solely from that which man introduces into the woman;² while in the Upper Congo the child is thought to be kin to the father only.³ "Kinship is derived by the Dinkas through males only. But to this there is one exception. The definition of incest extends it to sexual intercourse between persons connected by blood on either side, so far as the genealogies can be traced in tradition. For no other purpose . . . is kinship traced through both parents."⁴

"Paternal relationship is considered to be much stronger than maternal relationship. There is a Chukchee saying that has it that even a distant relative on the father's side is much nearer to the heart than a maternal cousin.' There is no word for 'family' in Chukchee; *rayirin* means 'houseful' or 'those in the house,' and *yaratomgit* signifies 'house-mates.'⁵ "The purely patriarchal nature of Sema society as it exists at present cannot be too emphatically stated. The female line is of no account, and relationship through the female, though recognised as existing, is barely recognised and nothing more. A Sema may not marry his wife's mother, but can marry practically any female relation of his own mother on her father's side. For although some Semas are said, like the ancient Athenians, to forbid marriages with a mother's sister by the same mother, even though the father be different, the vast majority hold that a man may marry his mother's sister by the same father and mother without any suggestion of impropriety, whereas he would be guilty of incest, and banished from the village, if he took to himself, say, a third cousin in patrilineal descent. He may also marry his father's sister's daughter, though such marriages are regarded as unfertile. . . . There is much to suggest that a matrilineal system survived till comparatively recently."⁶ The Naga *khel* being a unit composed of descendants of the same ancestor, children take the *khel* of the father.⁷ A Santal proverb says: "No one heeds a cow track or regards his mother's sept."⁸ "In Bengal the house father exercises a despotic rule over his family; he controls the education, manner of life, and marriage of his sons and daughters, receives the incomes of all family members, and determines the expenditures." The wife rules the female members of the household, eats sparingly and "never in the

presence of her husband, chiefly the leavings of his meal, lives simply and thriftily, and is bigoted and superstitious."⁹ Even the Nature-Veddahs have the father-right.¹⁰

When the missionaries came to the East Asiatics they taught that one must leave father and mother and cleave to his wife. "In China and Japan, where love for father and reverence for ancestors had reached the highest grade, such teachings raised a storm of anger, were regarded as simply immoral, and became a powerful weapon to the hand of the anti-Christian natives." The case is parallel to that of the children of the matriarchal Iroquois, who objected to the translation: "Thou shalt honor thy father and mother," and insisted earnestly upon the form: "Thou shalt honor thy mother and father."¹¹ The Chinese wife followed the husband even to her own grave; he walked in front of her coffin, not behind it.¹² "In China and among the other Mongolian races, as well as among the Finns," according to Starcke's¹³ sweeping conclusion, "individuals are distributed into patriarchal families, and no direct traces of the female line of descent exist." "The *animus matrimonii*, the intention of the husband and wife to form a connection for life, can, with some exceptions, have no place in China. . . . Among the Chinese the heads of the families alone choose, and the inclination of the principal parties is never consulted. . . . The *patria potestas* over children, whether legitimate or adopted, is unlimited. The father (or after his death the mother) can do with them as he likes; he may not only chastise, but even sell, expose, or kill them." Here as in pre-Christian Rome, *mulier est finis familiae*. "A woman alienates herself from her own kin on marriage, and becomes a part of the stock upon which she is grafted."¹⁴ "The theory of Chinese government," says Williams,¹⁵ "is undoubtedly the patriarchal. . . . This may, to be sure, be the theory of most governments, but nowhere has it been systematized so thoroughly, and acted upon so consistently and for so long a period, as in China."

In northern Sumatra, "the stock dies out with the woman, if she has no brothers; the man only carries the stock on. . . . The children born of the marriage belong to the father; they are regarded as of *his* blood and *not* of that of the mother. The wife is *his* property, which he has bought from her parents or next blood-kin, and therefore also, just as in the case of his field, his fruit-trees, his cattle, the fruit which she bears is *his*." While children of a free man and a slave are free, those of a slave and a free woman are the property of the slave's master"—contrary to the Mohammedan prescription. "And this goes even so far that the wife who is in danger of divorce or repudiation from the side of her husband has no right to abort the child with which she is pregnant, except with the pre-knowledge and full consent of the husband, to whom everywhere and always the unborn child belongs." The father has full right to marry off the daughter and the mother has nothing to do with it. Even if a man goes to live with his wife, he is to be buried in his own family-grave, for the children must be buried along with the father. It takes a family-council to allow of any exception. If the distance is too great to allow of transporting the body to the burial-place of the kin, a piece of clothing

must be sent to the kin who keep it as a relic.¹⁶ Thus does the patriarchy really reach beyond the grave.

With the Maori, "in regard to the functions of sex, it was taught of old that the seed of man is with the male, and the sheltering haven with the female; the male has the kernel provided by the Deity, while the female shelters the same, and nurtures it, hence the growth of all things."¹⁷ In Samoa children remain in the father's family unless the woman is of a superior tribe, in which case one of her relatives adopts them and they take their position in her tribe in war and peace.¹⁸ The family-organization of the island of Yap "is founded upon a well-marked father-right, in contrast to most of the islands of Micronesia, and in particular to the neighboring Pelew and central Carolines."¹⁹

Despite the striking examples of the maternal family in North America, the male line of descent is widely recognized.²⁰ Among the Greenlanders "the newly married pair remains with husband's parents, and his mother, as long as she lives, manages the domestic economy."²¹ The Menomini Indians have moved from their older usage of counting descent in the female line to that of the father-right.²² In British Guiana the father's brother may never marry the niece; he is too nearly related, and is, indeed, called "papa." But anyone may marry his sister's daughter.²³ "The Indian designates the grade of relationship with precision and especially sets the highest value upon the paternal blood. On this ground the father's brother plays a very weighty rôle in the family. He is the born counsellor and after the death of the father, according to the usage of many peoples, he enters in relation to the widow and the children upon the rights and duties of the deceased. . . . The son, coming to manhood, forms his own family by taking a wife who has either been determined for him in youth or whom he has won by several years of service in the house of his father-in-law."²⁴ Among the Tupis, "descent was regulated from the father, in opposition to what is found among the barbaric peoples of Africa. The mother was considered only, in the manner of the ancient Egyptians, as the guard or depository of the embryo until it came to the light; the son whom she suckled contracted no duties toward her."²⁵ "When a Tupinamba, who is married, dies, his eldest brother is under obligation to marry the widow, and if there is no elder brother at hand, the nearest male relative. The brother of the widow must marry her daughter, if she has one, and if there is no brother of the widow, this union devolves upon the nearest male relative on the mother's side. If this person does not want to take his relative as wife, he can keep her from any union in order to give her a husband of his own choice. The paternal uncle may take the niece, but must hold her in the status of a daughter, she calling him father. If this relative is lacking, instead of him the niece takes the nearest paternal relative. She calls all paternal relatives father and is called by all of them daughter, but belongs to the nearest only. In like manner, grandsons call the brother or cousin of their grandfather, grandfather, and

are all called grandsons by him." Likewise, on the mother's side; "but the attachment is not so intimate as to the paternal relatives."²⁶

Among the Semitic peoples, the ancient Hebrews show the agnatic relationship. The wife was bought from her parents, the widow was transferred to a brother or other relation of the deceased, while inheritance was exclusively to male agnates. Sons inherited exclusively from the father; only in default of sons did the daughter inherit, and then such an heiress was obliged to marry somebody from the stock of her father so that the heritage thus remained in the stock.²⁷ The passages in Greek tragedy which set in contrast to the reigning patriarchy the theory of maternal descent have been referred to in a preceding connection.²⁸

Patria Potestas. In some Australian instances it is the grandfather who has the power to decide whether a child shall be kept alive or not. If not, it is eaten, the parents not partaking. "The father could not order the child to be killed; for if he did so, the grandparents would raise a party against him and he would have to fight them."²⁹

In East Africa the Mtumia is "the father, elder and despot of the family, and the true Mkamba knows no authority beyond his. To him belong all the cattle and goats, none of his sons possess anything, even their wives are bought with his property, all the dowries [bride-prices] paid for daughters of the village, and blood moneys for members of the family who have been killed, go to increase the father's stock. Meanwhile the father is not expected to use the cattle as he likes, for he is essentially the head of the family, and as such he is the sole owner of its wealth. If a son leaves the village he will get what would be his portion of the stock, but so long as he stays with his father there is only one common ownership, represented by the father. . . . As marks of his position he carries the forked stick and three-legged stool. . . . Next to the Mtumia (pl. Atumia) comes the 'Nthele'; these are men who might be called middle-aged; as a rule reference is made to them as those who do not dance any longer."³⁰ Dinka society is patriarchal. "The father is the head of the family; but it would seem that he is far from being absolute ruler. Although Captain O'Sullivan describes his wives and unmarried children as his property, they can hardly be so in the same sense in which his slaves, cattle and so forth, are his property. He must have duties towards them, though such duties may be more vaguely recognised and more difficult of enforcement than his duties towards members of other families. This is clear from the rule that when a dispute arises within the family he does not settle it himself, but refers it to the 'old men.' If a woman be killed by her husband it is treated as an accident and a misfortune to the husband; but Captain O'Sullivan significantly remarks: 'He may have to pay a cow or more to propitiate the girl's family and stop talk.' If the wife were, in the full sense of the term, the property of her husband, there would be no payment of cattle to propitiate her family. The truth is that the payment of a bride-price has been very apt to mislead European inquirers as to the real status of the wife and children. . . . Speaking generally, its effect undoubtedly is to transfer to the husband large powers over the person of his wife. . . . But all this comes very far short of vesting their absolute ownership in him. They are not slaves, however servile their status

may appear to superficial observation."³¹ O'Sullivan³² lists a man's property as follows: his wives, sons whilst unmarried, daughters whilst unmarried, children of unmarried daughters, daughters whose marriage has been "broken," children of such daughters, slaves, children of slaves, cattle, corn, and property earned by people who are his property. "No woman can possess property, she being herself property; but a woman can hold property 'in trust':—(a) If she is the widow of a man none of whose male relatives are living. (b) If she is the daughter of a man none of whose male relatives are living, and if her own mother is also dead."

In northeast Africa, the house-father or family-father "is at once the master and possessor of the whole property of the family and lord over the life and death of all the members thereof." Children "are the property of the father for whom they have to work . . . who may sell them, and from whom they must be bought off. The father has no duties toward them. . . . Their working power belongs to the father up to the moment when they leave the family and themselves become heads of families. . . . No other right save that of inheritance alone, which enters only after the father's death and is in favor of the eldest son, alters this relation. The wife stands in a still worse, fully unprivileged relation to the house-father, because she does not possess even the right of inheritance. She too remains, bought as she is with goods, a possession of the man. Under such circumstances it remains noteworthy that, along with the naturally developing estrangement of the children from the parents, the patriarchal prestige of fathers and tribal chiefs does not suffer at all, but, on the contrary, is very lively and in vigorous activity."³³

In India, "marriage is solemnized when the bridegroom's father accepts or approves of the bride, and the son marries her thus approved."³⁴ "Although most of the educated young men of modern days have a desire to select spinsters, of their own accord, after the European system, the iron rod of custom prevents them from adopting such a procedure. It is only in very rare instances that the son overrules his father's decision in matrimonial matters."³⁵ "The constitution of the Hindu family is analogous to that of the Roman family, wherein it was only the *paterfamilias* who was *sui juris*, his children having no will independently of him."³⁶

Wilken,³⁷ who mentions a number of cases of the patriarchate in the Indian Archipelago, says that the power of the father is best shown by the sale of children into slavery, as in the Lampong District of Sumatra. It is common for parents to sell their children, especially in time of famine, when children, mainly girls, are sold for a relatively small amount of rice and thus doomed to slavery. Thus the children form a part of the housefather's property. Again, the father has unlimited power over his daughter, "whom he always actually sells into marriage," although the will of the girl is taken into account. The author is of the opinion that despotism of the father is not so much a phenomenon of lower as of higher civilization, the less cultured peoples being more likely to be on the mother-family stage.

Among the Guiana Indians, "A father possesses such authority over his own children that they must give their hand where he pleases, the girls being entirely

under his control, even to a certain extent after marriage. Capt. Quio . . . had given his child to an Indian, but having had a quarrel with him, he ordered the child home. He next gave her to another, and a short time after, a drunken quarrel and fight ensuing, he deprived his pugnacious son-in-law of the girl. The third husband was abandoned because, as the captain affirmed, he was too lazy to work. . . . At last the father of the girl talks somewhat as follows: 'I cannot give you an answer until I hear from the girl and her mother; if the girl likes you, you will know for yourself, and I can not refuse you.' . . . After a few days the bridegroom may take his new wife on a visit to his mother's, but he soon returns to his father-in-law's place, where he takes up his permanent abode. . . . He removes all his property to his father-in-law's hut and devotes all his attention to him—hunts, fishes, and clears a field for him. If he complains of the exertion or does not appear energetic enough for his father-in-law, the latter will get rid of him with a word or two of thanks."³⁸

Among the early Scandinavians, figures of gods were carved out of the pillars which surrounded the housefather's seat of honor. The father was called prince, and was priest, judge, and leader of his descendants and dependents.³⁹ Wilken⁴⁰ cites the following passage from *The Taming of the Shrew*:

I will be master of what is mine own:
She is my goods, my chattels; she is my house,
My household stuff, my field, my barn,
My horse, my ox, my ass, my any thing.

§421. The Mother-Family as an Adjustment.

TYLOR'S¹ views do not fully accord with the position we have taken; but we are in entire sympathy with his chief purpose, which is "to make it clear that the matriarchal system is one framed for order, not disorder." He cites a number of cases of the most complete types of mother-family which have lasted on into modern times. "Although examples of the matriarchal family . . . are few in number in modern times, perhaps not exceeding twenty peoples, yet the important point has now been made out that they are to be found in all the great regions of the barbaric world. With and around them, moreover, are found twice or thrice as many imperfect systems, which appear from their fragments of maternal rules to belong to the period of transition into the new paternal stage."

Tylor's conclusions from his cases are, first, that there is no "matriarchate"; in communities where the maternal line exists, "women enjoy greater consideration than in barbaric patriarchal life, but the actual power is rather in the hands of their brothers and uncles on the mother's side." Next, he finds the cause of the maternal system to be "connected with the custom of the father's residence in the wife's family." Starcke² concurs with this view. Tylor adduces the *ambil-anak* marriage³ of the Malays and similar forms in evidence; and makes much of the heiress-husband—the German *Erbtochtermann*. But this explanation is not sufficient "to account for the presence of the maternal system, complete or partial, among toward half the known peoples of the lower

³ §363, above.

culture. We are led to look for some world-wide influence at work in periods early in time and civilization, though probably far removed from the primitive state of mankind."

Tylor finds the maternal system to be closely connected with exogamy. "While maternal peoples are exogamous, exogamous peoples are not necessarily maternal, but may be either maternal or paternal, clanship being reckoned on the mother's or father's side accordingly. . . . There is no proof that at any period the maternal system held exclusive possession of the human race, but the strength with which it kept its ground may be measured by its having encompassed the globe in space, and lasted on from remote antiquity in time." We can see in this correlation with exogamy nothing that might have favored the mother-family system over that of the father-family. Both are present in potentiality, for Tylor has just said that "there are two alternatives: either for the wife to remain in her own home, or to be taken by her husband to his home; according to which of these customs prevails, the family will be prone to become maternal or paternal." Either would have prospered in conjunction with exogamy.

Exogamy is a winning policy, and if any incipient institution can be favored by an exclusive relationship with it, there is every prospect of the wide extension of the attached system. We cannot see, however, that the maternal system is in the position of exclusive beneficiary or that Tylor's contention is innocent of conjecture; and we regard a number of his points as highly debatable. The same is true in a greater degree with respect to Starcke,⁴ whose whole argument is that locality or proximity makes the mother-child tie, that the current notion that blood is important is untrue, and that the mother-family is not original but transitional. Westermarck⁵ uses the term "metrocracy" for mother-right and gives a list of cases where it never existed, to refute the doctrine that all nations have passed through it. It is very rare in Asia, being restricted to parts of Ceylon, India and the Malay Archipelago, and is more common in Africa. Wilken⁶ coincides fully with the position taken by us as respects the basis of the maternal system in notions about blood-kinship; but he believes that the "matriarchate" rises only with exogamy and that under that system "the criterion for the patriarchal or matriarchal marriage" consists of the payment or non-payment of the bride-price. Since in the *ambil-anak* marriage it is not paid, that form is matriarchal. Letourneau⁷ cites a number of cases of the maternal family and concludes that "the maternal family and the matriarchate are very different things. The first is common; the second is very rare, if indeed it has ever existed." Kohler⁸ thinks that "among tribes, to which nature has accorded a horde-wise association, the mother-right must be more stubbornly preserved than with tribes which have been speedily scattered by lack of food and resources." Brinton⁹ contributes the opinion that the habit of reckoning ancestry in the female line was not on account of doubt of paternity but because parental affection is, among primitive peoples, largely confined to the mother. Hewitt and Swanton¹⁰ solemnly challenge the antecedency of the maternal line, citing a quite unique consideration. "There has been prevalent hitherto among many ethnologists the opinion that the tracing of descent

⁴ *Prim. Fam.*, 25, 28, 37, 40, 54, 65, 77, 100.

⁵ *Marriage*, I, 275 ff.

⁶ In *VG*, I, 324-325, 372 ff., 391.

⁷ *Marriage*, ch. XIX and 282.

⁸ *Urgchte. d. Ehe*, 55 ff.

⁹ *Races and Peoples*, 55.

¹⁰ "Kinship," in *HAI*, I, 692.

through the paternal line is in most cases a development from the system of tracing descent exclusively through females, and that, therefore, the latter system is antecedent and more primitive than the former. But it is not at all clear that there has been adduced in support of this contention any conclusive evidence that it is a fact or that either system has been transformed from the other; but it is evident that such an improbable procedure would have caused the disregard and rupture of a vast body of tabus—of tabus among the most sacred known, namely, the tabus of incest.” No explanation is offered by these authors, who are specialists on American ethnology, of the many facts cited by the writers they criticize.

§423. Terms of Address.

IN many Australian tribes, “persons never address one another by name, but use instead the proper term of relationship.” Brown¹ mentions a number of points regarding the practice of a group in West Australia. “(1) The relationship system of the Kariera tribe is not only a system of names or terms of address, but is preëminently a system of reciprocal rights and duties. A man owes the same duties (though not in the same degree) to all the persons to whom he applies the same term. Thus the relationship system regulates the whole social life of the people. (2) It is based on actual relations of consanguinity and affinity that can be traced by means of the genealogical knowledge preserved by the old men and women. (3) The recognition of relationships is so extended that everyone with whom an individual comes in contact in the ordinary course of social life is his relative. It is impossible for a man to have any social relations with anyone who is not his relative because there is no standard by which two persons in this position can regulate their conduct towards one another. I am compelled to treat a person differently according as he is my ‘brother,’ ‘brother-in-law,’ ‘father,’ or ‘uncle.’ If I do not know which of these he is, all intercourse is impossible. (4) Within the body of relatives of a given kind distinctions are made between nearer and more distant relatives, just as in English we distinguish between nearer and more distant ‘cousins’ though still calling them all by the same name. These distinctions are not of kind but of degree, if we may use the phrase. Thus though a man owes certain duties to all the men he calls ‘father’ he must observe them more particularly in regard to his own father or his father’s brothers than in regard to a distant cousin of his father. The same is the case with every other relationship. (5) In Australia, much more than in civilized communities, a great deal of attention is paid to actual relationship by blood and marriage. Thus the Australian system is characterized, not by a less intense, but by a more intense recognition of actual relationships of consanguinity. (6) The classes of the Kariera tribe are groups of related persons. The rule that a man of one class may only marry a woman of one of the other classes is the result of the more fundamental rule that a man may only marry a woman bearing to him a certain relation of consanguinity, namely, the daughter of his mother’s brother. Marriage is regulated by consanguinity and by consanguinity alone.”

The Mekeo of British New Guinea “have no word representing the idea of a family. Their words for father and mother are *ama* and *ina*; but these words

¹ In JAI, XLIII, 157-158; and in JAI, XLVIII, 240; Cunow, *Australneger*, 55.

are not confined to actual parents, nor are there any expressions so confined. All brothers and sisters of a man's father and mother are also his fathers and mothers. Similarly, the word *ufu*, which means a grandparent. . . . Every relation on the mother's side, other than true uncles and cousins, is, however, generally called *ekofaa*, which means friend."²

The dual grouping of the clans among the Southern Massim regulates the terms by which each person is addressed, while "it formerly decided who should take part in the cannibal feast held in revenge for a member of the hamlet-group killed by a hostile community. Further, until recently it determined a particular form of exogamy, but with the extinction of warfare and cannibal feasts within the last few years, the dual grouping has so fallen into decay as to be largely ignored in the regulation of marriage, although totem exogamy is still quite generally observed." A further word about these clan-groups is in order before discussing the terms of address. They "resemble phratries in that a man may not marry a member of his own clan-group, and may marry a member of the other clan-group of the community, if that clan-group be not barred to him by its being the clan-group to which his father belongs. I tend to regard the clan-groups as originally phratries, which, as the importance and avoidance of the father's totem became marked, ceased in a very large number of instances to be intermarrying groups although the old prohibition of marriage within the clan-group persisted. It is obvious that the Massim are generally in a condition of transition from matrilineal to patrilineal descent while at the extreme west of the Massim area the transition has actually taken place." Terms of address vary according to the clan-group of the individual addressed. "A native of Wagawaga of either sex in addressing an old man of his own clan-group, would call him *aii* (maternal uncle), and the speaker would be answered by the same term (meaning in this case sister's child). An old woman of the same clan-group as the speaker would be addressed as *hina* (mother), and in reply would use the term *natu* (child). A man will address an individual of his own sex, status, and clan-group, as *warihi* (brother or cousin), while he will address a woman of his own status and clan-group as *nowe* (sister or cousin). Both these terms, i.e., *warihi* and *nowe*, are reciprocal. A man or woman would address any man belonging to his or her father's generation and clan-group as *mahia* (paternal uncle), and would reciprocally be called *mahia* (brother's child)."³

Rivers,⁴ writing of the Melanesians in general, says: "In peoples with patrilineal descent the community of designation for the father and father's brother, for their consorts and children, follows naturally if the system be founded on the clan-organisation. . . . The nomenclature for the father's brother and mother's sister, their consorts and children, points to the dual organisation having at one time been universal in Melanesia." Further, "it may be pointed out at the outset that the mother's brother and father's sister must always belong to different social groups wherever there is exogamy, and this must be so whether descent be patrilineal or matrilineal. Similarly, their children must always belong to different social groups. . . .

"In the great majority of the systems which have been recorded the mother's brother is denoted by a special term. . . . The relationship of mother's brother is one which brings out in the clearest manner the connection between the absence

² Williamson, in JAI, XLIII, 269-270.
³ Seligmann, *Melanesians*, 435-436.

⁴ *Melan. Soc.*, I, 257; II, 16, 17-19, 56-57.

of a special term for a relative and absence of function. Throughout Polynesia, so far as we know, the mother's brother has no special duties or privileges except in places where he has a special designation." Copious illustration is presented. "Thus, wherever the mother's brother and sister's child have special functions, terms are used which distinguish them from other relatives. . . . As already indicated (I, 48), we have in the position of the wife of the mother's brother the clue to one of the peculiar features of Melanesian relationship, that according to which cross-cousins, the children of brother and sister, stand to one another in the relation of parent and child, the children of the father's sister being classed in nomenclature with the parents and the children of the mother's brother with the children." On the island of Pentecost, "there have been found certain correspondences, all of which receive a perfectly natural explanation as the survivals of an ancient institution in which a man married a woman having the same status as his daughter's daughter. Among the Dieri of Australia this form of marriage is still in existence (or was at the time Howitt's record was made); here also the children of a woman are considered as being the younger brothers and sisters of the woman's father, just as in Pentecost, while the mother's mother is sometimes called by a term including that for elder sister, again just as in Pentecost. In this case we have no doubt about the origin of the correspondences in an ancient form of marriage. Among the mountain tribes of Viti Levu and in the Buin district of Bougainville there have been found correspondences which again receive their most natural explanation in an ancient form of marriage between persons separated by two generations. In this case the marriage which will explain the correspondences is one in which a man marries a woman two generations above his own, viz., the wife of his father's father or a woman having the same status as this relative. The marriage of a man with a woman belonging to a generation two generations senior to his own may seem in the highest degree improbable, but this improbability becomes much less when we consider the nature of the classificatory system of relationship. Where this system exists, the difference of age between those who call one another by the same terms as grandparent and grandchild may be very slight. It may even be possible, though it probably rarely happens, that a man may be actually older than a woman two generations above him whom he classes with his own grandmother. Further, it may be pointed out that the marriage with the wife of the father's father does not stand alone. We have in Melanesia the clearest evidence for the existence, not only in the past but even at the present time, of marriage with the wife of the mother's brother. The definite existence of marriage with one of the immediately preceding generation certainly diminishes the improbability of marriage with a member of a still older generation."

That terms of relationship may be survivals of a form of marriage which has existed in the past seems to be true of the Solomon Islands also. Fox⁵ has written at length concerning the practice in San Cristoval. "A child belongs to his mother's clan and necessarily marries a member of some other clan, and then all the members of these two clans are his relatives (though there is no word quite corresponding to the Mota *sogoi*) either by birth or by marriage. But in a general sense so are the members of the other clans with which he is not directly connected. Roughly, the people are classed by the generation in

⁵ In JAI, XLIX, 108-110, 119-120, 141, 175; §409, of the text and *Case-Book*.

which they stand. Those of the father's generation are classed with the father, unless they are of the mother's clan; the father's sisters and mother's sisters are classed with the mother. So all the children of a man's own age are classed with his brothers and sisters, unless they are the children of those classed with his mother's brother. This classificatory system seems simple, yet it is hard for an Englishman to think in terms of it: he cannot resist using English words such as father, brother, sister, as equivalents for native words, which they are not, and he has a feeling that the word used for father is only loosely used when it is used for other men of the father's standing. . . . I discovered that about half the men and women who were married in Arosi had married either a generation above or a generation below their own, at any rate in the case of the first wife or husband, and that in some cases a man had married a woman two generations above him, a woman whom he classed with his father's mother, when using a native term for their relationship. With this key many puzzles were speedily unlocked, and these marriages were evidently the principal reason for my bewilderment. . . . But next to the marriages into another generation, the most prolific source of error or of difficulty is the native custom of adoption. Adoption is very common and puts a person into the actual place, as it were, of those born in these relationships: a boy adopted is considered the real son of the man who adopts him, just as much as one born to him by his wife. The woman who cuts the umbilical cord, and who shaves the head of the baby, is the baby's mother henceforth. Children bought become the 'real children' of the man who buys them—again a difficult point of view for an Englishman, who insists that these are not 'real children' at all; but when a man is giving a pedigree he makes no distinction between adopted children and those born to him. Yet in using relationship terms he may think of the relationship in which the boy stood before he was bought, and give that, or sometimes that and sometimes the new relationship. Moreover, people are not merely adopted as sons or daughters, but also as fathers, mothers, grandfathers, and grandmothers. A boy may be adopted to take the place of a man's father and keep his memory green; the father's name is given to him, and he takes *his* standing: he is classed as grandfather to boys of his own age or even older than himself. The unusual marriages, helped perhaps by this system of adoption, have made it now impossible to tell from a person's age in what generation he stands: one classed as your father may be of your own age, a brother may be as old as your father." Again, "if only one sort of marriage were taking place and it were taking place uniformly, the terms would be regularly and uniformly affected; but as this is not the case, the result on the terms used seems at first sight merely confusion, since they have not a fixed meaning, and vary from pedigree to pedigree. However, these marriages which seem strange are after all not the normal ones; in at any rate about half the marriages the man has married in his own generation a 'sister' of another clan, and the woman in her own generation a 'brother' of another clan, so that the proper value of the terms is easily obtained. Perhaps 'generation' is not quite the right word to use, for such marriages as those mentioned, like a fault in geology, have brought different strata on a level, so that children brought up together, and therefore of the same generation, are in terminology of different generations." The author gives some statistical evidence: out of sixty married men, twenty-nine married a woman of their own generation, and thirty-one a woman a generation above or below. Twenty-eight married a younger sister, nine a niece, thirteen a daughter, and nine a mother. "The general tendency now is for a

man to marry a woman a generation below him (unless he marries, as at least half do, in his own generation); whereas the evidence points to a time when a man married a generation above him, and to a still earlier time when he married a woman two generations above his own."

"The kinship system of the Hottentots is a classificatory one with many similarities to the kinship systems found among the Bantu. The relative ages of the person speaking and of the person spoken of are very carefully recognised in these kinship terms. There is a special term for the mother's brother who stands in a very close relation to his sister's children, and there are special terms for cross cousins, corresponding to the special relation in which these people stand to one another."⁶

In West Africa neither of the words now used to express "father" has any relation to the act of begetting. They do not mean "he who begets" but "he who owns" and "he who maintains." Similarly with the words for "mother"; they mean "she who stays in the house" or "she who cooks." "*Baba* now means lord, master, great personage, or father. It appears to be derived from a root having the meanings of violence, strength, and power, and so, in the classificatory system, might well be applied to the grade of men who would be the hunters and warriors of the community."⁷ Again, brothers and first, second, and third cousins are all called brothers; all uncles are called fathers. The mother and her sister are called mother.⁸ Among the Bangala the same word stands for grandparent and grandchild.⁹ In Madagascar names for brother and sister show distinctions which we do not possess; "and so much is the near kinship of brothers' and sisters' children recognized that, as with the words father and mother and child, it is difficult without close inquiry to find out what actual relationship there is between members of a family."¹⁰

In the following quotation from Sanderson¹¹ regarding the relationship-systems of certain Nyasaland tribes, the terms "brother" and "sister" are used in the full classificatory sense: all children of uncles and aunts are "brothers" and "sisters." "The wife of a 'brother,' whether older or younger, uterine or not, is called by the same term (*nkasi*) as a wife. I am informed that sexual intercourse, though not countenanced, is not uncommon, and such cases are apt to be treated leniently should they come to (native) court. This might be regarded as evidence of former 'group marriages,' but it should be noted that a man's first heir is his brother, who succeeds to the wives in common with the rest of the 'property.' . . . The 'sisters' of a wife are also called *nkasi*. The husband of the eldest of a family has a prior right to marry her uterine sisters, and a semi-right to her other 'sisters'; such marriages are very common." Other similar cases follow. All "grandmothers" are *nkasi*, probably, and so all "grandmothers" of the wife. A man has often to marry his "grandmothers" on the death of the "grandfather"; it is the rule to do so if they are destitute. Cross-cousins are classed as "brothers" and "sisters" and so first cousins are unmarriageable. Succession goes (1) to a younger brother by the same father and mother; (2) to a younger brother by the same father and a different mother; (3) to any younger "brother."

Among the Yakuts there are no special terms for son, daughter, or husband: and the wife is generally "my woman." "From all this we may infer that when,

amongst the ancient Yakuts, a number of related persons were living together, the relations of 'mother' and 'wife' were the first ones which called for expression, 'mother' meaning a woman who had children. . . . The children belonged to the whole horde. Any one of the adult men might be the father of a certain child since the sex relations were undefined and perhaps unregulated. It is a curious circumstance that the heroes in the ancient folk tales often set out to find their *fathers*. We see, further, that the terms of relationship amongst the Yakuts express, first of all, the distinction between *younger* and *older* than the speaker. There is one word for older brother and another for younger brother; one word for older sister and another for younger sister, but there is no general term for brother or sister, since all were brothers and sisters within the compass of a *sib*. Hence nowadays *ubaj* means not only 'older brother' but also 'older male cousin,' 'older nephew,'—in short 'older member of the *sib*' than the speaker. *Ini* expresses not only 'younger brother,' but also 'younger male cousin,' 'younger nephew,' and in general 'younger member of the *sib*.' The case was the same as to female relations. In current speech, especially in personal address, the Yakuts use no other terms than these."¹²

"The Toda system of kinship is of the kind known as classificatory with several interesting special features. Perhaps the most important of these is the use of the same terms for mother's brother and father-in-law on the one hand, and for father's sister and mother-in-law on the other hand. This is a natural consequence of the regulation which ordains that the proper marriage for a man is one with the daughter either of his mother's brother or father's sister. . . . Thus the children of two brothers are brothers and sisters, and the children of two sisters are also brothers and sisters, while . . . the children of brother and sister receive another name. The children of two sisters belong to different clans except in those cases in which the sisters have married men of the same clan."¹³ The classificatory system of relationship is prevalent among the Nairs also. "As a matter of fact, the distinction between own brothers and collateral brothers does not exist. All the persons of your own generation older than you are called brothers, and equal respect is shown to them. They are called by such terms as big brother, small brother, etc., *only when they are older than you*. Those who are younger are always called by their names. All women of your mother's generation are called mothers; those older than your mother are called *Peramma* or *Valiamma*, which means nominal mother or bigger mother, and those younger are called *Kochamma*, little mothers. But unlike among brothers, the distinction between one's mother and other females of the same generation is always maintained. Though respect is paid to all of them alike, own mother is always spoken of as mother, without qualification, and she alone has complete right to command you." The author¹⁴ asserts that while the classificatory terminology to express relationship, when in use in a patrilineal community, may show the existence in some earlier time of group-marriages, "on the other hand, in a matrilineal community [such as that of the Nairs] such terms have nothing to do with the system of marriage, but only with relationship counted on the mother's side." He continues: "The mother-in-law has no special name. This is, of course, due to the universal prevalence

¹² Sieroshevski-Sumner, in JAI, XXXI, 109; Czaplicka, *Aborig. Siberia*, 39 ff., gives consanguinity- and affinity-tables of relationship-terms.

¹³ Rivers, *Todas*, 483, 487.

¹⁴ Panikkar, in JAI, XLVIII, 263, note, 263-264.

of first cross-cousin marriage. The mother-in-law is generally addressed as *Ammavi Amma*, the first word being the same as the wife of the mother's brother, and the second an honorific addition to it. Dr. Rivers, in *Kinship and Social Organisation*, as well as in *Melanesian Society*, has conclusively shown that wherever first-cousin marriage prevails, there the mother-in-law has no special name. His explanation that this is due to the obvious fact that, in most cases, the mother's brother's wife is the same person as the mother-in-law, and that the former position was antecedent to the latter, is fully borne out by the terminology among the Nāyars." Says another writer¹⁵ on India: "Dr. Rivers, whose loss we all deplore, drew our attention to the fact that some of the features of the classificatory system were such as could be derived only from dual organization of society. He pointed out that, first, one's mother's sister's children, father's brother's children and one's own brothers and sisters were grouped together under one term; secondly, mother's brother's children were classed together with those of father's sister. These features follow easily from a dual organization of society, and are hard to explain on the hypothesis of more classes than two."

In America, "the Coast Salish have a single term for paternal and maternal uncles, but distinguish children from all nephews and nieces. . . . Because primitive peoples attach an extraordinary importance to names the more remote cousin who is *called* cousin or sister may become more closely related in thought and marriage may be tabooed regardless of degree of propinquity. . . . Among the Nez Percé even third cousins were not allowed to marry and the union of second cousins roused ridicule in Thompson River communities."¹⁶ There is no full gentile system among the Mohave, "but something closely akin to it, which may be called either an incipient or a decadent clan system. Certain men, and all their ancestors and descendants in the male line, have only one name for all their female relatives. Thus, if the female name hereditary in my family be Maha, my father's sister, my own sisters, my daughters (no matter how great their number), and my son's daughters, will all be called Maha."¹⁷

The fundamental principles of North American Indian tribal organization through kinship are formulated by Powell¹⁸ as follows. "1. A body of kindred constituting a distinct body politic is divided into groups, the males into groups of brothers and the females into groups of sisters, on distinctions of generations, regardless of degrees of consanguinity; and the kinship terms used express relative age. In civilized society kinships are classified on distinctions of sex, distinctions of generations, and distinctions arising from different degrees of consanguinity. 2. When descent is in the female line, the brother-group consists of natal brothers, together with all the materterate male cousins [children of maternal aunt] of whatever degree. Thus mother's sisters' sons and mother's sisters' daughters' sons, etc., are included in a group with natal brothers. In like manner the sister-group is composed of natal sisters, together with all materterate female cousins of whatever degree. 3. When descent is in the male line, the brother-group is composed of natal brothers, together with all patruate male cousins [children of paternal uncle] of whatever degree, and the sister-group is composed of male sisters, together with all patruate female cousins

of whatever degree. 4. The son of a member of a brother-group calls each one of the group father; the father of a member of a brother-group calls each one of the group son. Thus a father-group is coextensive with the brother-group to which the father belongs. A brother-group may also constitute a father-group and grandfather-group, a son-group and a grandson-group. It may also be a patruate-group and an avunculate[maternal uncle]-group. It may also be a patruate cousin-group and an avunculate cousin-group; and in general, every member of a brother-group has the same consanguineal relation to persons outside of the group as that of every other member."

"Among the Carib Islanders the uncles and aunts—as many as are of the collateral line—are called fathers and mothers by their nephews. . . . All the male cousins are also called brothers and all the female cousins sisters, but between male cousin and female cousin the former calls the latter *youëilleri*; that is to say properly, my female, for, naturally, among them the female cousins become wives to the male cousins."¹⁹ Among the Shingu Indians older and younger brothers had different names and rank. The author²⁰ was called "older brother" or "grandfather," or "uncle," while his comrades were designated as his younger brothers. In Central Brazil there was a single term for father's brother and father and for mother's sister and mother. The mother's brother and father's sister are uncle and aunt. The paternal uncle and maternal aunt call their nephews and nieces, sons and daughters. Cousins whose fathers are brothers or whose mothers are sisters call each other brother and sister. ²¹ Among the Fuegians "a man and woman's brothers and sisters, nieces and nephews, call themselves respectively, the mothers and fathers, brothers and sisters in law, of his or her sons and daughters in law; and expect to be treated by these sons and daughters in law as such."²² Among the Araucanians a son's son is called *lacu*, the same name as grandfather on the father's side. It "really means blood relative (male) once removed." In the same way mother's father and daughter's son are called *chedchi*.²³

Among the Eastern Finns, finally, "as a rule no distinction is drawn between boy and son, girl and daughter, woman and wife, woman and mother; each doublet is usually expressed by a single word. As a rule, too, there is no word for brother or sister, only for elder brother, elder sister, and these are nearly always coupled with the connotations of uncle and aunt. Native words, too, for nephew, grandson, and first cousin are generally absent. . . . Traces of a classificatory system, founded on seniority, are still found among the Eastern Finns. . . . Exclusive of the father and mother, all blood-relations are divided, with regard to oneself or to a given person, into two categories of older and younger persons."²⁴

§425. Relationship-Mores.

Avoidance of the Mother-in-law. In West Australia, says Brown,¹ "a man applies the name *toa* to his father's sister and to the wife of any *kaga*, that is to any woman who might be his mother-in-law. He may not speak to any of these women, nor have any social dealing whatever with them. If for any reason

he is obliged to be near one of his *toa* he must take care that he does not look at her. He will, if possible, interpose a hut or bush between himself and her, or else he will sit with his back to her. This rule breaks down when a man gets on in years and has been long married with children of his own. He then ceases to speak of these women as *toa*, calling them *yumani* instead, and he is permitted to speak to them if he wishes, although the old habit still shows itself, and he has very little to do with them. I was not able to make out that the necessity of avoidance was more intense in respect to the actual mother-in-law. . . . There is no similar avoidance in the case of a woman, that is to say, she does not need to avoid her father-in-law or her mother-in-law, but only her son-in-law."

In Southeast Papua, "as mother-in-law woman is almost supreme. A man must always pay due respect to all his married relatives, but he must be especially considerate of his mother-in-law. On betrothal the young man must begin to make presents to his betrothed's mother, and continue the gifts to the end of the chapter. The best fish caught, the finest bunch of bananas grown, the most costly native wealth must go to the mother-in-law. Marriage is almost exclusively arranged by the women, and divorce is in nearly every case caused by the mothers-in-law."² Again, "no man will speak first to his father-in-law or mother-in-law, though if addressed he will answer. He will not walk straight up to them, and will not stand immediately in front of them. The same marks of respect are shown to chiefs."³ Among the Southern Massim, "a man avoids his mother-in-law less rigidly than his wife's sisters, although if he meets her alone he treats her in the same way, and even in public does not usually enter her house unless he is living there. In his own house he may talk to her a little, and he may eat food she has cooked, but he does not take the pot containing food directly from her."⁴ In Santa Cruz and Reef Islands, "when the woman is bought, the bridegroom must not see his mother-in-law's face as long as he lives; he must not speak her name; it does not matter if it be any article or thing of hers near, he must give it a different name."⁵ In other islands, "if a man is sitting and his daughter's husband wishes to pass him, he will ask his father-in-law to get up, but if the latter does not wish to rise, he may meet the occasion by turning his face away as his son-in-law goes by. The behaviour towards the wife's mother is of the same kind. A man must not go near this relative nor say her name and he may only talk to her from a distance of five or six yards. If for any reason he has to pass her at a smaller distance than this he will do so in a crouching attitude and in no case will he pass her if she is sitting. If, on the other hand, the wife's mother has to pass her son-in-law even at a greater distance, she will go down on her hands and knees and will not pass him at all if he is sitting. It was said that formerly a man might marry the mother of his wife but that such an event would be the occasion of a fight." Again, "in the case of the wife's father there are, in addition to this name-avoidance, other signs of respect. . . . With the wife's mother, on the other hand, the avoidance is far more thorough. A man must not enter a house if his wife's mother is within and near the door; he will wait till she goes or moves away from the door, and in the latter case he may enter but must sit as far away from her as possible. If he meets her in the bush he will turn off the path and make a wide detour through the bush in order to pass her. If on

⁵ O'Ferrall, in JAI, XXXIV, 223.

the other hand he has climbed up a tree, his mother-in-law must turn out of her way to pass him. She may not drink the water from any bamboo that he has carried and if she wants him to help with any work she will speak first to her daughter who in her turn will speak to her husband. Any infringement of these rules can only be condoned by payments of money."⁶

Among the Nama Hottentots, a "wife's mother had always to be treated with the greatest deference by a husband. They were said to be 'shy' of one another, and the man might never look at her when speaking to her. There used in the past to be a special form of address between all relatives-in-law, the formal 'You' being applied both to the mother-in-law, to the brothers of a man's wife, and to her father, but it is not so used nowadays."⁷ In Madagascar "there are proverbs in the language which warn people about the desirability of being on good terms with one's mother-in-law, speaking of it as being far more important than even agreeing with one's wife!"⁸ An injunction of this character might, perhaps, be taken to indicate the former importance of the wife's mother as wielding authority under a matrilinear system—an authority recognized even by ensuing avoidance-customs.

In British Central Africa "a man used never to speak to his mother-in-law till after the birth of his first son. Neither a man nor his wife will eat in company of their mother or father-in-law until after birth of a child. If a man sees his mother-in-law eat he has insulted her and is expected to pay damages. If a man meets his mother-in-law coming along the road and does not recognise her, she will fall down on the ground as a sign, when he will run away. In the same way a father-in-law will signal to his daughter-in-law; the whole idea being that they are unworthy to be noticed till they have proved that they can beget children."⁹ Among the Bangala of the Upper Congo "the mother-in-law is the only relative avoided. She and her son-in-law must not look on each other. Directly a man hears the word *bokilo* = mother-in-law, he runs and hides. They can sit at a little distance from each other, with their backs to one another, and talk. The only reason I have been able to ascertain for this avoidance," says Weeks,¹⁰ "is: 'My wife came out of her womb.' *Bokilo* is from the verb *kila* = to forbid, prohibit, tabu. *Bokilo* in its wider use is also relation-in-law, e.g., daughter-in-law, brother-in-law, sister-in-law, sisters of mother-in-law, father-in-law, and it was regarded as incest to have sexual intercourse with anyone who was *bokilo*. I knew a case in which a man married his mother-in-law by marriage. The woman was not his wife's mother, but his wife's father's wife, and as such was his mother-in-law. I have seen him avoid her many times, and it was evident from this that all the wives of the wife's father are regarded as joint mothers of the children, and hence mothers-in-law. The man's wife's father died, and the man wanted to have one of the wives (i.e., one of his mothers-in-law) as his own wife, so he arranged with a friend to pay the marriage money and take her as his wife, then she by that marriage being no longer his mother-in-law, he was able to take her as his own wife. He paid the money for her and took her to his house." With the Baganda "no man may see his mother-in-law or speak to her. If he wishes to hold any communication with her it must be done through a third person or she may be in another room out of sight and speak to him through the wall or open door. A daughter-in-

6 Rivers, *Melan. Soc.*, I, 42, 182.

7 Hoernlé, in *AA*, XXVII, 23.

9 Stannus, in *JAI*, XL, 307.

10 In *JAI*, XXXIX, 438.

law may speak to her father-in-law, but may not hand him anything. Any breach of these customs will cause nervous debility with tremors in the hands and other parts of the body. The reason why a man may not see his mother-in-law is because he has seen her daughter's nakedness. A man must not touch his wife's uncle's daughters, that is, the man who secured his wife for him; this also will bring on tremor."¹¹ A different reason is given for the custom among the Ba-Huana: "A peculiar taboo, similar to the *Hlonipa* of the *Zulu-Xosa*, exists between a man and his parents-in-law; he may never enter their house, and if he meets them in a road he must turn aside into the bush to avoid them. . . . Repeated enquiries as to the reason of this avoidance on the part of a man of his parents-in-law, elicited the invariable reply 'that he was ashamed'; to a further enquiry of what he was ashamed, the answer would be 'of marrying their daughter.' No other reason could be obtained."¹²

In East Africa, "amongst the Wahehe the bridegroom has first to sleep with his mother-in-law, when he may cohabit with the daughter." A case is mentioned where the marriage was broken off because the man refused. On the other hand, a man may speak to his mother-in-law only at a distance, and may not look at her. The same restriction affects the woman in relation to her father-in-law.¹³ Among the Mombasa, "no man may behold his mother-in-law. If he hears she is coming along his path he will make any detour to avoid meeting her."¹⁴ In the case of the Lumbwa "there is a natural avoidance between the lover and his sweetheart's mother, as in the mother-in-law prohibition."¹⁵ Dundas¹⁶ remarks that "after marriage the relations between the husband and his parents-in-law are very curious, for although this relationship is very close, a Kikuyu, for instance, cannot sit together with his father-in-law, and a Mkamba may not meet or look at his mother-in-law; if he meets her on the path he will make a detour off the pathway." Hobley¹⁷ gives further information concerning the latter group. "If a man meets his mother-in-law in the road they both hide their faces and pass by in the bush on opposite sides of the path. If a man did not observe this custom and at any time wanted to marry another wife it would prove a serious stigma and parents would have nothing to do with him. Moreover if a wife heard that her husband had stopped and spoken to her mother in the road she would leave him. If a man has business he wishes to discuss with his mother-in-law he goes to her hut at night and she will talk to him from behind the partition in the hut. A man can however take steps to remove this prohibition: he gives due notice of his intention and then on a certain day the people of the neighbourhood collect at the village where his mother-in-law lives and the man sends them an ox, a big goat, several pots of honey and a supply of beer, the assembled company then hold a great dance and feast, and the man formally presents a blanket to both his father-in-law and mother-in-law and after that he need take no special precautions in the matter." It is a rule of Masai relationship that "mothers-in-law and their sons-in-law . . . must avoid one another as much as possible, and if a son-in-law enters his mother-in-law's hut she must retire into the inner compartment and sit on the bed, whilst he remains in the outer compartment; they may then talk."¹⁸ Among the Ababda in the eastern desert of Egypt, "a man avoids his

mother-in-law by not speaking to, touching, or eating in her presence. A very few avoid this prohibition by paying a fine of about 30 piastres [a coin worth about four and a half cents] to the mother-in-law. The mother-in-law's sister is not avoided in the same way. . . . A woman does not avoid her mother-in-law."¹⁹

Among the Ostyak, "no married woman can appear before her father-in-law whilst she lives; nor the bridegroom before his mother-in-law until he has children. They must avoid them as much as possible; and if they chance to meet them must turn their backs and cover their faces."²⁰ In one case in India the bride's mother "is, by a curious custom, not permitted to approach the bridegroom on the wedding day or after, lest she should cause ceremonial pollution."²¹ Among the hill-tribes of Central India "the most common of the taboos is that which prevents a man from addressing, touching, or even looking at his mother-in-law. This has been explained by Sir John Lubbock as a survival of marriage by capture, the relatives of the bride being hostile to the man who has captured their woman; or, as by Mr. Keane, from the analogy of the Patagonian practice that on the death of any young person the head of the family was required to despatch some aged woman, and he naturally selected his mother-in-law as the appropriate victim. Hence, it is said that through fear of such a fate, women acquired the habit of avoiding their sons-in-law."²²

In Celebes "after the marriage it is specifically forbidden to the son-in-law to speak with his mother-in-law."²³ Evans²⁴ was informed that among the Hill Sakai of Upper Perak "avoidance of the mother-in-law was strictly observed, and that it was not allowable to speak to her directly, to pass in front of her, or even to hand her anything." "If a man is in the least degree too familiar with his mother-in-law, thunderbolts, said the Semang to me, will assuredly fall. For this reason (if for no other!) the contingency never arises. But they also assured me that they of the jungle were far more distant and circumspect in their dealings with their mothers-in-law than was the case with their neighbours the Malays."²⁵ In New Zealand the bride's mother resisted and vociferated at her daughter's marriage, abusing the missionary, "but telling him at the same time in a low voice not to mind, for she was not serious."²⁶

The Alaskan natives "consider it the proper thing for a brother to sit with his back to his sister or his mother-in-law; if he needs to communicate with them it must be through a third party, or in such a manner as if he were not addressing them."²⁷ Among the Omahas "as much as possible a woman avoids passing before the husband of her daughter. . . . A man addresses never a word to the mother or grandmother of his wife."²⁸ The Mandan mother-in-law "never speaks to her son-in-law, unless on his return from war he bring her the scalp and gun of a slain foe, in which event she is at liberty from that moment to converse with him. . . . While the Dakota, Omaha, and other tribes visited by the author have the custom of 'bashfulness,' which forbids the mother-in-law and son-in-law to speak to each other, no allowable relaxation of the prohibition has been recorded."²⁹ By the Menomini, "besides the mother-

in-law taboo, the father-in-law taboo is observed to a certain extent, but for the latter there is no fixed rule."³⁰ In good Cheyenne families "indirect courtesies often passed between a wife's mother and her son-in-law. . . . Since a man was not permitted to speak nor ever to look at his mother-in-law, it was usual for her to ride up behind the lodge and step into it at a time when she knew he was abroad. . . . A woman might face her son-in-law if she chose formally to present him an ornamented robe." There were certain ceremonies attending upon such a presentation. "After an exchange of gifts such as described, the mother-in-law tabu ceased to be in force."³¹ As among the Navaho, so with the Chiricahua, "a man never spoke to his mother-in-law, and treated his wife's father with distant respect."³² Says Roth:³³ "As with the Carib, a Warrau does not talk to his mother-in-law; but I have noticed the latter doing so at a distance in a lowered tone of voice, and with head turned in a different direction. She turns her face away whenever he passes anywhere near. Arawak have told me that 'in the old days' their women used a large basket, under which, inverted, they would crouch and hide their heads on the approach of their son-in-law." The Araucanian mother resists the removal of her daughter, sulks, and will not speak to her son-in-law.³⁴

Other Avoidance-Practices. Of special significance in the following cases are the brother-sister relation, avoidance of bride and father-in-law, and customs surrounding connections by marriage; equally noteworthy is the taboo on the names of certain relatives.³⁵ A few cases refer to the duties and privileges of relatives.

Among the Arunta and Urabunna tribes of South Australia, "the husband is, all his life, under certain obligations to supply food to the relatives of his wife. The portions of the chase go to (1) his father-in-law, (2) himself, wife, and children, (3) his wife's brothers' children, (4) his mother-in-law, (5) father of his mother-in-law, (6) sisters of his mother-in-law's father. Nor is he allowed to eat the flesh of an animal caught, killed, or touched by any of the above mentioned people."³⁶

Among the Southern Massim, "every native avoided speaking the name of a large number of people who may be grouped as follows: (1) Living relatives. (2) Dead relatives. (3) Connections by marriage." A number of examples are cited. "The majority of connections by marriage who are of opposite sexes and between whom there is name avoidance also avoid coming into contact with each other. A man would most rigidly avoid talking to a sister of his wife whether he met her alone or in the company of others. If he met her alone he would avoid coming near her at all; if this were impossible, as when meeting on a jungle track, brother-in-law and sister-in-law would turn their backs to each other in passing and one, usually the woman, would step aside into the bush. . . . Father-in-law and daughter-in-law avoid each other very much as do mother-in-law and son-in-law. A man does not avoid his brothers' wives." In the Louisiade Islands, "a wife's sister may take anything she likes belonging to her brother-in-law without any objection being raised; she may even borrow and damage a big canoe without incurring blame. This is all 'pay belong girl.' The bride's brothers have similar rights. . . . Toakina stated that

36 Wallis, in AA, XV, 110.

he found it advisable to keep his more valuable jewellery constantly on his person in order to be sure of retaining it for himself. . . . A son-in-law avoids his mother-in-law, and a father-in-law avoids his daughter-in-law; a wife avoids her husband's brothers, and a husband avoids his wife's maternal and paternal aunts; he will also avoid his wife's sisters' daughters."³⁷ Rivers³⁸ remarks: "The custom of chaffing or mocking certain relatives seems to be so well established a custom of the Banks islanders as to be a regular social institution. . . . It is clear that there is an established custom of mocking certain relatives by marriage and the example which has been recorded suggests that the whole business has a deep-seated meaning to those who indulge in it." A similar case among the American Indians appears later on.

"On the south coast of Bauro, at Parigina and elsewhere, intercourse between brother and sister (actual brother and sister) is forbidden. A brother must never: (1) Name his sister. (2) Approach her. (3) Laugh or play in her presence. (4) Touch anything belonging to her or even lying near her. (5) Go into a house where she is. (6) Enter the same canoe. (7) Tread on her bed mat. (8) Meet her in the path (one turns into the bush). (9) Go into the garden she is in. (10) Speak to her. And these restrictions hold even when both are grown up and married, and until their death; to an Englishman accustomed to think of his sisters as his most intimate friends and counsellors, a truly strange state of affairs, but nevertheless one that holds also elsewhere in Bauro, though the regulations are not everywhere so strict, yet everywhere a man should avoid his sister and never name her or speak to her."³⁹ In the New Hebrides, father-in-law and son-in-law avoid one another almost as strictly as mother-in-law and son-in-law. If they touch each other they must kill a pig to cleanse the stain; otherwise the son-in-law will be poor or the eyes of both will be weak in battle.⁴⁰ In the Torres Straits Islands, the son-in-law may not utter the names of his wife's relations and may speak to his father-in-law only through his wife. These customs are regarded as "vestiges of a condition in which a man lives with and serves the family of his wife."⁴¹ Among the Andamanese, "until a man attains a middle age he evinces great shyness in the presence of the wife of a younger brother or cousin, and the feeling is invariably reciprocated; it is, however, otherwise in the case of the elder brother's (or cousin's) wife, who, moreover, should she be many years his senior, receives from him much of the respect accorded to a mother. . . . When a man wishes to address a married woman older than himself, he cannot do it himself, but must find a third person to act as a medium."⁴²

Among the Nama Hottentots, "the relation of a man to his sister's children was one of the greatest indulgence and good will. A boy could do almost anything at his maternal uncle's . . . home, without being blamed for it. He could take, without asking, any of the specially fine animals among his uncle's herds, and the uncle had no redress but to take misformed ugly animals from his nephew's herds. . . . A woman considered her husband's younger brothers as her husbands, and used in the old days to be inherited by one of them. In the early missionary records there are numerous instances of a younger brother taking over his elder brother's widow. . . . It will be seen from the account

given of the kinship system and the 'behavior patterns' accompanying kinship terms that the type of behavior which is expected of a person by another is directly indicated by the kinship term in use between them, so that a knowledge of these relationships is essential for an understanding of the whole moral regulation of the lives of the people." The author⁴³ writes also of the duties and privileges of relatives. "The chief consideration in the behavior of Nama to one another is the relative ages of the people concerned. Respect for age is inculcated in every possible way, and the whole social organization of the people is an illustration of the fact. In the family deference and respect must always be paid to elders. Thus, of a number of brothers the eldest always has the honored place and the first voice in any debate. . . . In the old days the behavior of a brother and a sister was very strictly regulated. As tiny children they ran about together, but once they were grown up, they had to avoid one another completely. A brother was not allowed to speak to a sister directly, he must never be alone with her in the hut, he must never speak of her except in the most respectful terms. A sister was a *târas*, that is, a person to be respected, not to be spoken to or of lightly. In the old days an oath by a sister was one of the greatest oaths a man could take, and a sister could generally be relied on to stop any fight in which her brother was taking part."

Among the Ba-Huana a man must avoid his wife's parents, while a woman must show respect to her parents-in-law and visit them. She must not have anything to do with the maternal uncle of her husband.⁴⁴ Such is the power of conventionality in Nyasaland that "if the husband's brother, or his maternal uncle, come on a visit, the wife will at once leave the hut and sit by herself, alone and disconsolately, at some distance, until he has gone. And if one asks her why she acts in this way, she replies: '*Ninaona haya*.' (I feel shy.) The visitor, if the same question was put to him, would probably say, as an explanation needing no further comment: 'Is she not my daughter-in-law?'"⁴⁵ Among the Akamba, "if a girl of the age of puberty meets her father in the road she hides as he passes, nor can she ever go and sit near him in the village until the day comes when he tells her that it has been arranged for her to marry a certain man. After marriage she does not avoid her father in any way."⁴⁶ Own brothers-in-law and sisters-in-law among the Masai must avoid one another, though this rule does not apply to half-brothers-in-law and sisters-in-law. "This rule," thinks Hollis,⁴⁷ "is possibly due to the fact that when a man dies his own brother may not marry his widow, though there is no objection to his half-brother (paternal) or one of his paternal cousins taking her to wife. In fact, the only person who may marry a widow is one of the deceased husband's half-brothers or paternal cousins. It frequently happens, however, that widows never re-marry, but live with their children in the kraal of the eldest living brother of their late husband, who becomes the guardian of their children."

In the Sudan region the relatives of a man's wife "seem to have the feeling that they have entered into a highly delicate and difficult position with respect to him. For the parents-in-law and the brothers and sisters of his wife he becomes an individual whom they mention only by necessity by his own name and whom they avoid so far as possible. If he is sitting in a company of men

and his father-in-law comes along, he rises very quickly and goes away; if his brother-in-law comes and sees him, he remains sitting, it is true, but the other goes by. On the other hand he does not sit down in a gathering in which his brother-in-law is but hitches his *litám* [face-veil] over his face and strides by. If he has children and his name has to be mentioned, they use the circumlocution: 'father of such-and-such son' or 'father of such-and-such daughter.'⁴⁸ Among the Ababda "the father-in-law may be saluted by name by his son-in-law, but otherwise he is avoided, and though his daughter-in-law may speak to him, she does not eat in his presence. A woman does not avoid her mother-in-law. The following relatives may not be addressed by name by an Abadi: father's brother, father's sister, mother's brother, father's father, mother's father. Further, among the Ababda of the hills a wife may not address her husband, nor a husband his wife, by name."⁴⁹

The Yakut bride "should avoid showing herself or her uncovered body to her father-in-law." She used to avoid her husband's male relatives and they tried not to meet her, saying, "The poor child will be ashamed." "If a meeting could not be avoided, the young woman put a mask on her face. Sometimes she died before her father-in-law had seen her face. Not until then was it proper for him to look at her so as to know whether she was pretty or what she was like. Nowadays the young wives only avoid showing to their male relatives-in-law the uncovered body. Amongst the rich, they avoid going about in the presence of these in the chemise alone."⁵⁰ Evidently there is here a variation toward modesty, set afloat by the upper classes. This taboo is explained as prudential, against love. The prohibition which binds the Yakut woman is with regard especially to her father-in-law, but refers also to other older male relations. "It is known as *kinitti*, and according to this she (i) is not allowed to pass in front of the fire of the father-in-law and other older male relatives, but must pass behind it from the northwest; (ii) must not talk in a loud voice, nor use words with a double meaning; (iii) must not call her father-in-law by his name, and even if his name signifies an object in common use, she can only name this object by means of a periphrasis—e.g., if he is called 'Flint,' she must say 'fire-stone' when speaking of a flint; (iv) must not eat of the head of any animal, for the father-in-law is head of the house; (v) must, when addressing her father-in-law or mother-in-law, draw her cap down as far as possible over her eyes; (vi) must not show her hair to her father-in-law, or bare her feet or any part of her body before him. Sieroszewski says that the custom of *kinitti* was formerly much more strict. The bride was forbidden to show herself for seven years after her marriage to her father-in-law or brothers-in-law, or to any male relative of her husband." A similar situation exists among the Buryat, where "the bride has to observe the following restrictions: (i) she must never address her father-in-law or mother-in-law by name; (ii) all relatives of her husband older than he, and her father-in-law as well, she must call *khadam*; (iii) in the presence of a *khadam* she must never be without her cap and face-covering; (iv) she must not remove or change her dress in his presence; (v) her sleeping-place should be in a separate *yurta* [tent]; (vi) if she meets a *khadam*, she must not cross his path, but pass behind him; (vii) she must not ride in the same wagon with him, and generally not be close to him. He, on the other hand, must not dress or undress in her

⁴⁸ Nachtigal, *Sahara*, I, 450.
⁴⁹ Murray, in *JAI*, LIII, 420.

⁵⁰ Sieroshevski-Sumner, in *JAI*, XXXI, 93.

presence, not sit or lie down on her sleeping-place. He must not utter any indecent language before her; and before entering the *yurta*, must make a signal to her of his approach, in order that she may have time to put her dress in order." The Kalmuk bride is also obliged to keep certain rules of behavior with regard to her father-in-law and the older male relatives of her husband. "She must not sit down while they remain in the *yurta*. She enters their *yurtas* only when invited; on going out she must cross the threshold with her face turned towards the interior of the *yurta*. . . . She must not address her husband's parents or other older relatives by their own name, but must invent names herself for them. This custom holds even with regard to the parents' dog. Tereshchenko writes that the bride throughout her life must not show her bare feet or head to her father-in-law or male relatives older than her husband." Among the Ostyak, "the custom of avoidance is binding upon the bride as well as her brothers-in-law. There are also certain restrictions governing the relations between a girl and her brothers. After she has reached the age of thirteen she may not eat with them or talk to them."⁵¹

Among the Nairs a young man or woman "is not supposed to talk to any relations of the opposite sex in the same family *if they are of almost the same age*. A younger brother can talk to a sister considerably older than himself; but under no conditions may he talk to a younger one, and in orthodox families this restriction is carried so far that if it is known that a brother is standing somewhere near, the sister scrupulously avoids him. . . . This involves considerable inconvenience, for, if the mother is dead and there is no one of *her generation* living, a man loses all touch with the family, because his sisters and women of that generation may not speak to him, and he may not go near them. In such cases, it is customary for young men to go and stay in their wives' houses and visit their own families for business arrangements."⁵² Among Dravidians, one of the most important of marriage-taboos is that which prevents a man from coming in any way into contact with the wife of his younger brother. Most of these races protect her from her senior brother-in-law by a most stringent sanction which, in the case of the Dharkars, reaches the point that a man contracts a stain if even her shadow crosses his path. Second comes the taboo of the wife's elder sister. A man may marry two sisters, but he may not marry the elder if the younger be already his wife. She is said to be in the position of mother to her younger sister, but this is obviously a later development of the taboo. Third, there are taboos of more distant female relations—the maternal aunt, the first cousin on the mother's side, the relation of Samdhi, that is, of persons allied by the marriage of their children. Among the Pankas the father-in-law and mother-in-law of a married pair do not speak to each other. So there are taboos of the wives of the paternal uncle and nephew. Among the Majhwars a woman may not address her father-in-law by name. Last and most significant, the Korwas extend the taboo to their sisters. The author⁵³ suggests that the real explanation of this group of marriage-taboos is to be found in the fact that they include persons with whom, under the primitive rule of group-marriage, connection was permissible. They have persisted long after the social system which gave them birth has disappeared and have been replaced by a new series of exogamous rules and prohibited degrees.

⁵¹ Czaplicka, *Aborig. Siberia*, 110-111, 120, 122, 128.

⁵² Panikkar, in JAI, XLVIII, 261-262.
⁵³ Crooke, in JAI, XXVIII, 238, 239.

"The prohibition with regard to mentioning the names of near relations, either by blood or marriage, so common in the Malayan region, is also found among some of the mixed Negrito-Sakai and Sakai-Jakun tribes, and also among the Sakai proper. A man of a Sakai-Jakun tribe, which was living close to Kuala Tembeling in Pahang, told me that they were forbidden to mention the names of fathers-in-law, mothers-in-law, brothers-in-law, or sisters-in-law; while a man from near Pertang in Jelebu, Negri Sembilan, said that his people did not dare to mention the names of their fathers, because they were afraid of being struck by the indwelling power (*daulat*) of that relation."⁵⁴ On Mortlock Island "brothers and sisters are strictly taboo and must not even speak to one another."⁵⁵ In Samoa "the remotest reference, even by way of joke, to anything which conveyed the slightest indelicacy in thought or gesture was prohibited when brothers and sisters were together. In the presence of his sister the wildest rake was always modest and moral; and in the presence of her brother the most accommodating coquette was chaste and reserved. Krämer says the relation between brother and sister was a sacred one, and this was so as between male and female cousins [who would under the classificatory system be brothers and sisters]. . . . A man's sister has some functional duties in connection with his burial."⁵⁶

Among the Tlinkits "the absurd custom of brothers and sisters (as soon as the latter attain to womanhood), the mother-in-law and son-in-law, males and females of the same totem, refraining from speaking to each other, still finds favour with many." The author⁵⁷ has known "sisters who, on their return to Alaska, after being away to school in the States, could not get their uneducated brothers to speak to them. A nephew, who had been educated in one of our schools, made repeated efforts to get his aunt to speak to him while on a long journey, but failed. The untutored aunt would not condescend to speak to her nephew, as it was contrary to her notions of womanly modesty and ethics. It is considered improper for a brother and sister to sit in the same room if no others are there. A brother refused to enter the church until the arrival of others because his sister was the only one inside. A brother may not make a present to his married sister, but may to her husband. It is considered highly improper for a brother to give his married sister anything."

"The Cheyenne young man was not permitted to speak to his adult sister." This began when she was fifteen years old. If he wanted to speak, he addressed someone else in her presence, even a new-born child. The practice continued up to old age.⁵⁸ The name-taboo was strict among the Omahas and conversation between certain relatives was circuitous. "A man did not directly address his wife's father or mother, nor did any of his brothers do so. If the parents were visiting in the same tent with their son-in-law or any of his brothers, conversation could be carried on but it was generally done indirectly, not directly between these persons. A wife did not directly address her husband's father but this did not apply to his mother. This custom has been explained by old Omaha men to mean that respect was thus shown by the younger to the elder generation. . . . Etiquette demanded also that a person's name should not be mentioned in his presence. It may be recalled that a man's name referred to the rites in charge of his gens or to some personal experience—a

dream or a valorous deed. The personal name sustained therefore so intimate a relation to the individual as to render it unsuitable for common use. . . . It is more likely that the benefits to be derived from the daily emphasis of kinship as a means to hold the people together in peaceable relations had to do with the establishment of the custom, which was strengthened by the sanctity attached to the personal name. . . . 'It sounds as though they do not love one another when they do not use terms of relationship.'⁵⁹ Among the Chiricahua, a man's "brothers were never familiar with his wife nor he with her sisters and brothers."⁶⁰ In the Winnebago tribe, "a man was not permitted to take even the slightest liberties with any of his near relatives or with his mother-in-law or his father-in-law, but a curious exception to this rule was permitted for his father's sister's children, his mother's brother's children, his mother's brothers and his sisters-in-law and brothers-in-law. In the two cases last named not only was a man permitted to joke with those relatives, but he was supposed to do so whenever he had an opportunity. Under no circumstances were any of these individuals supposed to take offense. This relationship was of course reciprocal. If a person attempted liberties with people who did not belong in the category of the 'joking relationship' they would stop him immediately, saying, 'What joking relation am I to you?'"⁶¹

§426. Artificial Relationship.¹

In southeastern Papua prisoners and all strangers were treated in one of two ways: "they were either killed and eaten, or adopted into the tribe with full rights. If it were decided that a prisoner should not be killed, he would be received without ceremony of a secret character by being presented with a block of land by the family adopting him. He would be called son, brother, nephew . . . and be treated in everything as a member of the tribe."²

There are five kinds of adoption known to Fox³ which are regularly practised in certain of the Solomon Islands, all common and all vitally affecting the social life of the people: "(1) the *marahu* adoption; (2) adoption of children or adults taken in war or punished for offences by being sold to people at a distance; (3) adoption of children by buying them from a distance; (4) adoption of children at birth; (5) adoption to keep green the memory of the dead. (1) *The Marahu Adoption*. The meaning of the word *marahu* has already been given as (1) a namesake, (2) one with whom a man exchanges names, (3) one with whom he exchanges wives, (4) a friend. The third is seldom seen nowadays, the first and fourth are common enough, the second is the most interesting. Most natives, one is told, have a *marahu* in this sense. There is the famous case of Karani of Santa Anna who became 'Moto,' exchanging names with the Wango chief, who became 'Karani.' The practice is to emphasise friendship by the exchange of names, and this gives a man the status of his *marahu*. A small present is exchanged, and the man is considered to have a right to the property of his *marahu*, which will not be withheld from him; he may take his coco-nuts, his yams, or even tobacco from the bag of the *marahu*, and he has very much the close and intimate relationship to his *marahu*

³ In JAI, XLIX, 138-140.

that a boy has to his *mau* or mother's brother. I should know something of the custom, as I have a *marahu* both in Bauro and in Arosi, and have frequently been addressed by their names, both directly and in letters. When I became *marahu* to a Bauro man I was received into his place in the society of the village, called all the people in it by the terms used by him and was called by the terms they gave him. I was told how to address each, to call a young boy grandfather and another uncle; and it was explained to me that the names of certain of my new relatives must never be used, i.e., the native name—the baptismal might be; and how to get over the difficulty when I wished directly to address people whose names I must never use. Above all I must never use the name of one I called *wauwa* (in practice these were elder brothers), not only in direct address but in any conversation, and he might be addressed directly as *Warua* (i.e., the numeral two, with the masculine prefix). I found that not only was I now Amwea, but Amwea people everywhere gave me food as a matter of course, and if I wanted a native bag or limebox, they were made for me without any payment being expected or asked, and getting boys for odd jobs became a much easier matter; tobacco, no doubt, was expected by all Amwea people when they called, and other little gifts, but this was hardly a new fact due to the *marahu* adoption. A *marahu* is a close friend with whom one is on terms of great freedom: like a boy and his uncle, carrying much the same privileges as that relationship; and is a means of adoption for a foreigner.⁴ (2) and (3) have already been mentioned; (3) is practised partly to get children without the trouble of rearing them, and to replenish the population dwindling through disease or from the practice of child murder; and also to strengthen alliances, thus making relatives at a distance and sometimes ending in this way a long period of hostility.⁵ (4) Adoption at birth is very common. In Arosi the first woman to cut the umbilical cord and shave the child's head becomes the mother. Both (3) and (4) put the child exactly into the same position as if he or she had been born into it. (5) Adoption to keep green the memory of the dead. (Perhaps this might be called 'memorial adoption.') This is common and important, in that it alters relative terms used, and brings men and women of the same age into the status of those one or two generations removed from them, and so may be the cause of the anomalous marriages found in San Cristoval, or a contributory cause of the apparent confusion in the use of relationship terms. The commonest forms of adoption in Bauro are as follows: A man adopts a small boy to the name and status of his (1) father, (2) mother's brother, (3) grandfather, and a small girl to the name and status of his (1) mother, (2) grandmother. A woman adopts a child to the name and status of (1) her father, (2) herself. The reason given is to keep green the memory of the dead, and it is usually done when the relative dies." The author writes further regarding his own experience with the *marahu* adoption: "The father of my *marahu*, a man named Mono, wished to remember his own father Sutagera, who had lately died, and bought a boy, from twenty miles away somewhat younger than or about the same age as my *marahu*, Waiau Gafuafaro. This boy was then called Sutagera and took his status, becoming Waiau's grandfather, though younger than Waiau. Mono's brother (and Mono himself) always called this young boy Mama (father). I, of course, called him grandfather. Later on he married a girl of about his own age whom he called daughter, and Waiau called mother. A boy of the

⁴ §212, 416, of the text and *Case-Book*.

⁵ §142, of the text and *Case-Book*.

place may be adopted in this way and then all the terms he used before must be altered to suit his new standing. It is an interesting question whether such adoption might not have just the effect of bringing the different genealogical strata together which we find in San Cristoval, and so causing what we call anomalous marriages."

Among the Fan of West Africa "the ceremonies of adoption are the same as those of birth. The adopted child loses all his former totems to take those of the tribe which he enters. A single ceremony is added: the effusion of blood. . . . The adoptive father makes some slight scarifications on the left arm of the child, collects the blood which flows, and throws it on the skulls of the ancestors, then on the *akaméyôn* [objects connected with the totem]. He then takes a portion of a skull, some ashes of the totemic sacrifices and rubs them vigorously on the arm of the child. This is the distinctive sign of adoption."⁶ In the Upper Congo, "there is no adoption, but there is both blood-brotherhood and milk-brotherhood, but these carry no right of inheritance, although to the latter a portion of the estate is sometimes given. There is also milk sisterhood, and when a woman is a milk sister it is not usual for her milk brother to marry her. It is permissible but is regarded as irregular. There is no blood-brotherhood between men and women."⁷

In South Sumatra any person may recognize another as his brother or father, with the exception that, by virtue of the rule that adoption must mimic nature, a person may not take as his son a person who is older or of about the same age as himself. Anyone may adopt an alien for his lawful father, brother, or son, and in such cases name him as his heir, even though he buys a slave for that purpose. This takes place by killing a buffalo or a goat and making a meal. The custom of accepting or recognizing children prevails chiefly in Minahasa. It is so common among the Alfurs that everyone seems to be recognizing or being recognized as a child. If one wants to take an old man as a father or an old woman as mother, he lets it be known, and if there is consent he takes it upon himself to be helpful to the old people; then, like a regular child, he inherits from them after their death. Similarly when an older person wants to bind to himself a younger. In this adoption there is not much ceremony, merely a feast or meal, though during heathendom a sacrifice was common. There are always witnesses; and in later times also a document of agreement. Seldom does the adopted child go to live with the older, adopted parent, but merely enters upon the rights and duties of a child; he must help from time to time, especially at rice-cultivation, lend assistance in case of need, and help pay the costs at death. The adopted child shares with the own children in the heritage. The same custom obtains among the Dyaks, where the ceremony consists in taking a little blood from each of the two parties, putting it on a betel-quid and giving it to both to eat.⁸

In Central Polynesia fictitious kinship exists alongside of real. "A child, and, indeed, an adult, belonging to one social group, might be adopted into another group, and thereupon become, speaking generally, an actual member of that group—just as much, or almost so, as he or she would have been if his or her claim to membership were based upon blood relationship. . . . As regards what is spoken of as *real* kinship, . . . whilst systems of matrilineal descent of blood, or traces of them and of exogamy are found in some of the islands, succession

8 Wilken, in VG, I, 387-388; II, 288.

to the name or title of a social group was mainly patrilineal; and therefore the distinction between maternal and paternal relationship does not appear to have been nearly so closely recognized as it would be among people with more archaic social systems, and a true brother and sister relationship between the children of a father of one social group by wives of different social groups would commonly be recognized."⁹

Among the Menomini Indians "a person is in 'joking-relationship' with his uncles and aunts, nephews and nieces, sisters-in-law and brothers-in-law on either side. The joking-relationship also implies the lawfulness of sexual intercourse. Very near is the relationship with nephews, nieces, brothers-in-law and sisters-in-law."¹⁰ Elsewhere "adoption by marriage or by residence of more than a year was common."¹¹ Hewitt¹² has written generally concerning adoption among the North American tribes. "From the view point of the primitive mind adoption serves to change, by a fiction of law, the personality as well as the political status of the adopted person. For example, there were captured two white persons (sisters) by the Seneca, and instead of both being adopted into one clan, one was adopted by the Deer and the other by the Heron clan, and thus the blood of the two sisters was changed by the rite of adoption in such wise that their children could intermarry. . . . From the political adoption of the Tuscarora by the Five Nations, about 1726, it is evident that tribes, families, clans, and groups of people could be adopted like persons. A fictitious age might be conferred upon the person adopted, since age largely governed the rights, duties, and position of persons in the community. In this wise, by the action of the constituted authorities, the age of an adopted group was fixed and its social and political importance thereby determined." Again, "the Iroquois, in order to recruit the great losses incurred in their many wars, put into systematic practice the adoption not only of individuals but also of entire clans and tribes. The Tutelo, the Saponi, the Nanticoke, and other tribes and portions of tribes were forced to incorporate with the several tribes of the Iroquois confederation by formal adoption."

§427. Family Life.

Domestic Segregation. In Fiji the family-life is characterized by constrained relations with relatives-in-law on the order of those above described. "What wonder that the domestic life of the Melanesians is full of distrust and suspicion and terror, in the face of the constraining customs which prevail?" Husbands are abroad a great deal. Hatred of a wife for a husband and in lesser degree of a husband for a wife is popularly regarded as a usual thing. There is a superficial friendliness in their intercourse but, except for the mothers, few have any deep feelings. Fathers teach their sons to beat their mothers lest, being controlled by women, they may become cowardly.¹ Husband and wife never trust one another; the slightest rumor of infidelity is believed on either side. "The man may punish the woman, but she can only retaliate for his offense by means of her tongue, which she often allows to do all it will."²

Affection between Bantu husband and wife, parent and child, as we know it, "is practically non-existent in many of the savage peoples, whilst the moth-

er's love for the child is much the same as that of an animal."³ "The family-sense is not very well developed; at least children were constantly being offered to my people for sale."⁴ It is common for several men to eat together, their wives serving them and eating later.⁵ Says Weeks⁶ of the natives of the Upper Congo: "All the food was cooked together and then divided by the woman-cook into two lots, one for the males of the family and the other for the females. They never ate together. If stress of weather forced them to seek the shelter of a house, the males took one end of the building and the females the other end. The boys and girls would eat with either party, but as soon as they knew the meaning of sex they no longer did so." In British Central Africa, "men and women never take their food together, a husband never sits and talks with his wife, the sexes congregate separately. A man taking his food in his hut is looked upon as greedy. Outside he invites anyone near to share with him."⁷ In private the Baganda eats with his wife and children; if there are guests, the wife and children keep out.⁸ In the southern Sahara husband and wife live in separate places, the former visiting the latter from time to time.⁹

Spencer¹⁰ cites the classic case of the Tatar woman who complained that her husband did not love her because he never beat her. She valued any attention whatever from him over stark indifference. Among several tribes in Russian territory, women never show affection to husbands or sons; children are generally taken away from their parents and given to strangers to be brought up; hence love for parents is unknown. A woman may not enter into conversation with her husband unless he addresses her or sit down beside him when others are present. She receives direction from him only through a third person. She hurries to hold or take care of his horse. A man will take a girl from her parents as his wife without marrying her until he finds out whether she is a good worker; he can send his wife away when he likes and get another. If a sick woman cries out for her husband they think it a violation of propriety and the women will say, "What a sinner; although she is dying she thinks about her husband. What a scandal!" After marriage the bride covers her face except eyes and nose. Besides her husband, sister, and little children, she must not talk with any one. She answers her parents-in-law by signs and her husband ought not to call her by name.¹¹

In ancient India, according to Manu, it is the "nature of woman to seduce man in this world . . . not only a fool but even a learned man, and to make him a slave of desire and anger. . . . One should not sit in a lonely place with one's mother, sister, or daughter, for the senses are powerful and master even a learned man." A woman is angry at her husband for showing affection for her before others, as if she were base; he should be severe and overbearing. While the man eats, the wife serves him. The wife "must live in the woman's apartments, keep her face veiled when her brothers-in-law are present, and never be seen speaking even to her husband in the daytime."¹²

In Korea, among the upper classes, the bridegroom, after passing three or four days with his wife, leaves her for some time to show his indifference. To

act otherwise would be "bad form." Wives generally submit quietly to the exactions of their mothers-in-law, but "those who are insubordinate and provoke scenes of anger and scandal are reduced to order by a severe beating, when they are women of the people. In the noble class custom forbids a man to strike his wife, and as his only remedy is divorce and remarriage is difficult, he usually resigns himself to his fate."¹³

Says Vámbéry, with special reference to Turkish society:¹⁴ "The picture of family life in the Occident, which is so confidential and charming, is in the Orient veiled in mystery and fearfully cold." The duties of the housewife among the Mohammedans devolve upon the head of the house. With sleepy, peevish mien he goes through the accounts of the household-expenses and grudgingly provides for their payment out of funds which he keeps by him even at night. He pays with a heavy sigh, knowing that a half or third of the bills are spurious and that peculation is going on all the time. The children are presented to their father and must stand up, no matter how young. This respect, the author asserts, crushes love. The busiest time of the day is up to eleven in the morning, for the Oriental soon tires of the slightest labor and only in the early morning has he energy enough to do anything. Exertion is hateful to him and he avoids it just as he eschews superfluous bodily movement. Contrary to our view, he regards physical and mental rest as the chief necessity for perfect health. Despite this torpidity, the appetite of these people is gigantic. They are slow in everything else—in walking, talking, and the like—but very swift in eating. From about 11.30 a.m. they retire and the house appears to be empty. Then the mice come out to play. Apparently the family feels free only when the master is asleep. Often servants never see the family, though they hold conversation with the female members of it. There is in the Oriental family an unnatural feeling of embarrassment due to the mores regarding women, even in the most intimate relations of the family. "There can be no talk of family-festivals and associations—in a word, of the family at all—under such circumstances." The man and his wife are separated for the greater part of the day; there is no mutual sympathy, joy or sorrow, and no companionship in married life. Husband and wife are two parties in the house, between whom religion and civil law have erected a high wall. This sharp separation takes shape in some cases at the beginning of marriage, in others several months or years later, and the house-master, unless willing to overlook peculation and to put up a good front in face of intrigues and insulting talk, gets so disgusted with the harem that he avoids it during the day and spends his time in his own quarters.

Generally in Polynesia men and women may not eat together, nor may women eat what men have prepared. There is nothing that might be called domestic happiness. Man and wife may not play at the same fireside with their children. The two sexes are separated from birth on; mother is alienated from son, for he is called holy and she is called base. The joint-houses are unfavorable to family-life as we know it. It is regarded as shameful that a woman should be in confidential relations with her husband. A man will never appear on the street with his lawful wife, although his woman-friends always follow him. When there is a stranger in the house, the wife retires from the presence of the husband.¹⁵ In the Pelew Islands wives are selected for their bodily

strength and efficiency in the taro-patch. Man and wife are fully aware of the purpose of their union and acquiesce. "The least external manifestation of tenderness, any caress whatsoever, is barred and interdicted out of the domestic life, and jealousy on the man's side is less the work of wounded feeling than of external propriety." A man spends his youth without domicile, being by day a guest in the house of the chief or of his parents and by night sleeping in the men's house. As a young husband he may not stay at night in his wife's parental home and when he gets a house of his own, he must devote most of his time to club-life.¹⁶

In the Mortlock Islands brothers and sisters live together and with their parents only in early childhood. At the age of seven or eight "the boys keep together or play only with tribally unrelated girls. Later they follow the father and sleep with him in the men's house, while the sisters stay with the mother in the special women's houses, so that the family is not united under one roof."¹⁷ A Nauru woman never eats anything her eldest son has touched or carried. In chieftains' families this applies to the eldest daughter. They believe that it would weaken the child, harm the mother, and be shameful in the eyes of others.¹⁸ In Yap "the woman occupies a house by herself and also eats alone. So long as the children are small they all live with the mother; of the older children the boys go to the father's house and the girls remain with the mother or have their own huts."¹⁹

In some North American Indian tribes "men and women used different forms of speech, and the distinction was carefully observed."²⁰ This situation was characteristic of certain South American groups. Schomburgk²¹ wrote that a noteworthy peculiarity in the speech of the Arawaks was the fact that there were certain words which men only might use and others which were restricted to women. "The Island Caribs have two distinct vocabularies, one used by men and by women when speaking to each other, and by men when repeating in *oratio obliqua* some saying of the women. Their councils of war are held in a secret dialect of jargon, in which the women are never initiated."²² Other Caribs show a diverse language of man and wife, which is accounted for by the tradition that they let only the women of conquered peoples live. Among a number of tribes in Brazil there are separate languages for men and women. In some instances only a few words are entirely different, the variation lying mainly in the inflexion.²³

In Guiana, "among the Galibi, those that are married dine everyone apart, and those that are unmarried eat all together; and all the women, maids, and little children go to another side of the hut to eat. This would seem to be the rule almost everywhere, the two sexes having their backs turned to one another. No Indian wife eats with her husband."²⁴ In Central Brazil the man's house plays its part in the separation of husband and wife.²⁵ In one Colombia tribe, after marriage the pair "go home by different roads, the woman to her house and the man to his, and from that day never by any circumstance will they go into each other's houses, nor do they so much as speak together while at

home. When the wife prepares food for her husband, she places it on a stone between the two houses, where she leaves it; then the man comes and takes the food to his house. Having eaten, he returns to the stone the empty gourds in which the food was served, and goes away; then the wife comes and takes them again. They have only one place that is common ground to them, and that is their garden, where in some secluded spot they cultivate the soil together. At all other times they are strictly separated, and the reason for it all is, as stated by Father de la Rosa, their belief that a child conceived without the light of the sun will be born blind and have no light in its eyes."²⁶

§428. Treatment of the Old.

Among the northern tribes of Central Australia "there is no such thing as allowing an old and infirm person to starve. It is the duty of every one to supply certain other older people with food, and this they do cheerfully and ungrudgingly. In this way and in accordance with the needs and conditions of the community, these savages have long ago settled the question of old-age pension, or rather they have rendered any such thing quite unnecessary."¹

The aged African Bushman, on the other hand, is abandoned with a little food and water; similarly among the Hottentots the old man or woman is shut up in a little hut and left to die of hunger or be killed by wild beasts. Certain other South African tribes used to hurl the old or dependent relatives over lofty cliffs. Occasionally they were exposed to the vultures.² In Borku there is no respect for age; if a father is old and feeble and has a young wife, the son sometimes takes possession of her without ceremony. The northeast African tribes show no great respect for age; it often happens among the Somal that "they simply expel the old father and give him over to want and death by hunger."³ "I fear it cannot be denied," says Cummins⁴ of the Dinkas, "that the elderly people are usually thin and starved-looking to an extent not explicable by the flight of time; whereas the younger men and women, especially the more attractive of the latter, are always sleek and well-fed."

The Chukchi kill children who are weak or defective and old people who cannot work or endure the hardships. A case is given of an old man who at his own request was put to death by relatives who thought that they were performing a sacred obligation. "The custom of putting to death the aged and sick is due to the hard conditions of life in the arctic wilderness. It is also a part of the Chukchi system of ethics. The old and sick consider death a right, not a duty, and often claim this right notwithstanding the opposition of their kinsmen." The victim often takes a lively interest in the preparations for his own demise. "An old man, whose strangulation I witnessed, was as interested as anybody in the preparations for his own death. I was speaking to him on the shore about it a few days before the ceremony. He did not seem dejected, but merely remarked in English, 'Me die Monday.' He even set out the whisky barrels and prepared the walrus thong for his execution. He was rendered

insensible with drink before being dispatched.”⁵ Again, “‘volunteer death’ is a regular custom among the Chukchee. It is accounted for as being the result of disease and helplessness, of deep sorrow at the death of some near relative, or of a quarrel at home, or sometimes simply of the feeling of *tædium vitæ*. Bogoras knew of various instances of ‘voluntary death’ due to each of these causes. . . . Mature or old people are killed by some near relative at their own request. Bogoras thinks that the custom of killing old people sometimes ascribed to the Chukchee does not exist as such, but that, as a matter of fact, old people are often killed because they prefer death to the hard conditions of life as invalids. . . . Jochelson says that the custom of killing old people existed until recently among the Koryak.”⁶ In an old book it is related: “Whoever in Siberia is seventy years old is taken by his nearest relatives into the woods where they build him a hut, give him food for three days, and then take leave. When the old man has eaten the food, he dies of hunger.” Later travellers support this; for instance, it is said that the Koryak, due to their nomadic life, kill the old and sick; killing them is “a measure dictated by wisdom and also sympathy.”⁷

The Yakuts do not respect age; the younger plunder the older and scold and abuse the weak and decrepit. “A local tradition is met with that in ancient times, if an old person became extremely decrepit, or if anyone became ill beyond hope of recovery, such person generally begged his beloved children or relatives to bury him. Then the neighbours were called together, the best and fattest cattle were slaughtered, and they feasted for three days, during which time the one who was to die, dressed in his best travelling clothes, sat in the foremost place and received from all who were present marks of respect and the best pieces of food. On the third day the relative chosen by him led him into the wood and unexpectedly thrust him into a hole previously prepared. They then left him together with vessels, tools, and food, to die of hunger. Sometimes an old man and wife were buried together; sometimes an ox or horse was buried alive with them; and sometimes a saddled horse was tied up to a post set in the ground near by, and left there to die of hunger.”⁸ The Tatars and some others killed their fathers when old; they burned the bodies and sprinkled the ashes on their food every day.⁹ Herodotus¹⁰ reports that the Massagetæ kill and eat the old and that this is esteemed a happy end. Those who die of disease and are buried are regarded as less fortunate.

In one district of India the eldest son, at marriage, turns his parents out of their home and claims two-thirds of all they possess. Young chiefs oust their fathers and small boys mock and spit at the old without shame or fear of reproof.¹¹ It is different among the Palaungs, where “an old man is greatly revered, because the number of his years shows that he has been a really good man in many previous existences. The fact of his age is the proof of previous merit, and for this reason his blessing is asked by the young. . . . Old people have happy lives among the Palaungs. . . . Elders are heartily welcomed at

all feasts, and are offered the best seats and the best food."¹² The Easter Islanders have no respect for old age in either sex.¹³

When people get so old, in Greenland, that they cannot take care of themselves, especially women, they are often treated with little consideration. The Central Eskimo believe that all who die by violence go to the happy land; hence it is lawful to kill the old. Again, "old and infirm people are treated with severity, and when dependent upon others for their food they are summarily disposed of by strangulation or left to perish when the camp is moved. . . . Aged people who have no relatives on whom they may depend for subsistence are often quietly put to death. When an old woman, for instance, becomes a burden to the community it is usual for her to be neglected until so weak from want of food that she will be unable to keep up with the people who suddenly are seized with a desire to remove to a distant locality. If she regains their camp, well for her; otherwise, she struggles along until exhausted and soon perishes. Sometimes three or four of the males retrace their steps to recover a lost whip or forgotten ammunition bag. They rarely go farther than where they find the helpless person, and if their track be followed it will be found that the corpse has stones piled around it and is bound with thongs." An old woman at Fort Chimo had but one eye, and this was continually sore and very annoying to the people with whom she lived. "They proposed to strangle her to relieve her from her misery. The next morning the eye was much better and the proposed cure was postponed."¹⁴ In the case of a tribe of Labrador Eskimo "the aged and the diseased are frequently deserted, sometimes quietly strangled. An unlucky woman is driven out into the wilderness. A bad man is not admitted into the houses, and if he commits murder the others stone him to death."¹⁵ Among the Sekani, an Athapascan group, "when a member of the band was believed to be stricken with death they left with him what provisions they could spare and abandoned him to his fate when the camp broke up."¹⁶

Powers¹⁷ cites the case of an old squaw who, having been abandoned by her children because she was blind, was wandering alone in the mountains. Nomadic habits among savages of low grade are little better than death to the aged and infirm, for they cannot readily follow and the few poor conveniences and comforts which they collect around themselves when stationary have to be abandoned. It would be hard for a tribe to find a better way of ridding themselves of those whom they account as burdensome. Farther north, "the aged people were formerly neglected, and their death hastened by starvation and abuse; but fear of punishment now restrains the Indians from this cruelty."¹⁸ "Favored by the mildness of the climate, the lot of the aged among the Pimas was less unenviable than among most of the other Indian tribes. As they were a sedentary people, the custom of abandoning the aged on the march could not prevail. As a matter of fact, the old and helpless were not killed by the active members of the community, though they were sometimes neglected until they starved to death and sometimes they set fire to their houses to commit sui-

cide."¹⁹ Old people were treated by some of the tribes "with contumely, both men and women."²⁰

Many South American tribes "are wont to put their own relatives to death as soon as they have become helpless and burdensome to them, in the belief that without hunting, war, and drinking-bout nothing further of enjoyment can come to the old man. Among the old Tupis sometimes a sick person concerning whose recovery the shaman was doubtful, was on his advice killed and—eaten."²¹ In some places, among the Guiana Indians, there is great respect for aged parents; other peoples regard them as nuisances and kill them, often with their own consent, for they realize their uselessness.²² Among the Tobas, "older persons were not usually killed by blows of a club but were buried alive. Often the old people, irritated over their feebleness, themselves asked for the favor." The deed was done exclusively by the women, for they feared it might make the men cowardly.²³ The Fuegians were expected to support aged parents and generally did so, but sometimes killed them to get rid of the trouble of keeping them.²⁴

"The custom of putting a violent end to the aged and infirm survived from the primeval period into heroic times not infrequently amongst the Indo-European peoples. . . . It can be authenticated in Vedic antiquity . . . amongst the Iranians . . . amongst the ancient Germans, Slavs, and Prussians." Deposition of the father with the marriage of the eldest son took place and "is very simply explained on the basis that dominion belongs to him who has the power to uphold it."²⁵ The Greeks pushed the old aside without scruple or sentimentality;²⁶ but the Roman father held the *potestas* to the end. However the expressions *Sexagenarii de ponte* and *de pontani senes* are indicative of at least the sacrifice of the old; the latter expression is explained as "those who were cast, as sexagenarians, into the Tiber."²⁷

§430. The Function of Idealization.

THE following survey of the various elements entering into Christian marriage—elements which, if not representing idealization in the stricter sense, yet portray the play of the imaginative factor—is a portion of an unfinished manuscript found among the papers of the senior author of this book.

At the time of Christ the whole civilized Western world had reached the stage in which actual monogamy was, for economic reasons, the practice of all but the rich and great. This, however, was not pair-marriage, for polygyny was fully tolerated in the mores everywhere. By pair-marriage we refer to marriage which is exclusive on both sides and in which both religious disapproval and legal penalty fall on a man who has a second woman at his disposal. It is evident that there is a wide gulf between *de facto* monogamy and actual pair-marriage. The latter has been called sacramental monogamy. In modern poetry and romance pair-marriage is presented as love-marriage. The

engrossment of the parties in each other results in exclusiveness as respects all others. The fatality of love-marriage has been that inasmuch as it demands a highly exalted state of emotion it has not lasted. Use and wont have been against it. To get the same tension there must be novelty and variety. The ancient people all knew the passion of love and needed Venus and Cupid to account for it. None of them believed in its durability and therefore none of them put any confidence in it as a basis of matrimony.

When the early Christians came to this subject they were controlled by the following facts. In the first place, they were all of the class in whose usage monogamy was and had long been the practice, although the epistles of St. Paul to the Greek churches show that laxness and uncertainty and vicious practices prevailed amongst them. When the Christians turned to the Old Testament in order to get support for their ideas about marriage they found no light at all. It is astonishing that so little information is yielded about the Jewish marriage-institution or the wedding-ceremony before the captivity. The system was purchase and there are cases of capture; a father probably consented to give his daughter and that was the end of the matter. It is also noteworthy that there is no picture of conjugal felicity in the Old Testament and no case of a woman who is a heroine of womanliness.

In the Anglican wedding-ceremony Isaac and Rebecca are set forth as models. The earlier mediæval rituals mentioned also Tobias. Isaac and Rebecca must have been chosen because they alone amongst the patriarchs, so far as the record shows, lived in pair-marriage. The reformers dropped Tobias because the book in which he appears was adjudged not to be in the canon of scripture; in any case, its significance was entirely misunderstood. The early Christian ecclesiastics were especially interested in the fact that Tobias refrained from his wife for three nights after what would seem, by analogy, to be his wedding. This detail is in the Vulgate which Luther followed in his translation but not in the Septuagint upon which the more recent English revisers based their translation. The custom of such abstention is well known to us from barbarian life, the motive of it being to defeat the evil spirits. Primitive marriage-customs are largely molded by the desire to secure good luck and avoid bad luck in matrimony; evil spirits are supposed to surround the marrying pair and to secure their opportunity, when the marriage commences, for interposing their evil machinations. The context of the Tobias story is full of Chaldæan daimonism and his abstention is to be explained by the view of daimonism which we find elsewhere. The daimons were defeated if the critical moment was undefined and therefore unknown to them. A woman-figure which has been selected from the Old Testament for veneration by Christians is Ruth; we now recognize in the Ruth story, however, only a question of usage in regard to the duty of a next-of-kin to which also ethnography gives us the explanation. And though the Jews made a heroine of Esther, she is a model of patriotism, not of womanliness.

The most useful fact in the Old Testament for the development of the Christian idea of matrimony was the conception of Adam and Eve in Paradise as a pair. The theologians made a distinction which is still presented in the Anglican service between matrimony as God instituted it in Paradise and the revised version of it after the Fall. This left the paradisaical form of it as a subject for speculation and idealization. The utmost point ever reached by this tendency is in Milton's *Paradise Lost*. It is strange that it took men so long to see

that there are two myths combined in the Bible account of the creation of woman. In the first chapter of Genesis this incident of creation is covered by the incidental clause: "male and female created he them." The only additional facts are that they are told to "be fruitful and multiply" and that they are given dominion over the rest of creation. The ecclesiastics construed marriage into the command to be fruitful and multiply. The alternate myth in the second chapter does not simply narrate the facts by which things were created; it enters into a description of the method. Man was made from dust and woman from a rib of man, to be a helpmeet for him.

God "brought her unto the man." Though this clause is as simple and matter-of-fact as language could offer it, laborious attempts have been made to construe it into a wedding-ceremony with delivery of the woman. The saying attributed to Adam: "Therefore shall a man leave his father and his mother, and shall cleave unto his wife: and they shall be one flesh" is very remarkable in its form. It is quoted three times in the Bible. The Israelitish society was on the father-family basis through all the time during which we know it, although survivals of the mother-family are to be found in the Bible. Why, then, should this text have put the case in that way? In general, the ecclesiastics passed over this point and were contented to find in the text a strong statement of the union of a pair in matrimony. Adam, in the context, bases the fleshly unity of man and woman in marriage on the fact that woman was made from a rib of man and so is "bone of my bone and flesh of my flesh." The ecclesiastics referred this to the sex-relation and indulged in analyses and deductions which were not very edifying. The fact that God blessed the pair is stated in the first myth and not in the second. The blessing of the married couple came to have such importance in the history of Christian marriage that much stress was laid upon the benediction mentioned in this text; but there is nothing at all in the textual connection which would be required for the deductions desired. There is plainly no wedding at all; the two are supposed to be alone, made for each other, placed in a position which affords no precedent for human society and is therefore not to be cited at all in discussions of human marriage. This story stands on the first page of a book through which polygyny appears as the common usage and without the slightest disapproval. This is so because in the mores of the Israelites during the period covered by the canon of the Old Testament there was no objection to polygyny. It was in the interval between the Old and New Testaments that monogamy seems to have entered into the mores of the Jews. Philosophically it may have been due to contact with the Persians; practically it was due to poverty.

In the New Testament there is little heed given to the marriage-institution. Much has been made of the fact that Christ attended a marriage at Cana. This argument proves only the poverty of that side of the case. He gave no law or institution about marriage. There was at the time a dispute amongst the Jews, some desiring to introduce more stringent usages of divorce, others desiring to continue the existing ones, which were those characteristic of the father-family. When this question was put to Christ, he took the stringent side and laid down a law which the Christian Church has never obeyed; some have gone beyond it; others have fallen short of it. In this connection he added to the citation from Genesis a more explicit enunciation of the union-of-the-flesh doctrine: "So that they are no more twain but one flesh. What therefore God hath joined together let not man put asunder." The best interpretation of this

text is that inasmuch as God has made two sexes with a need of their union man ought not to try to prevent their union. He then added some utterances about eunuchs which are unintelligible as they have come down to us, although historically they have been very important in connection with what we have to notice in a moment about celibacy and virginity.

Before coming to that, let it be noticed that there is in the New Testament no ideal of marriage, no wedding-ceremony, no model woman. The Virgin Mary alone has been put forward as such by the Church but she, for obvious reasons, cannot be so regarded; nor can Mary Magdalen. Martha, who was a good housekeeper, is treated rather with disdain. It is also to be noticed that there is, in the New Testament, no injunction of monogamy or pair-marriage. It is assumed as in the mores but there is nothing which exhibits concubinage as outside of toleration. There is no explicit statement about it.

The ideal of the New Testament is celibacy, which is made one with chastity. In the seventh chapter of First Corinthians Paul treats the subject at length, and his view of marriage is that it is only a last resort. To desire marriage is to yield to a lust of the flesh and to incur trouble; if one can master one's self it is better to remain virgin; in case of marriage, each of the pair must fulfil the sexual duties of the relationship; it is not wrong to marry; it is not a shame to marry; it is, however, falling below the Christian ideal. This is the plain teaching of the text, although it is noteworthy that the Apostle marks off grades in his own conviction as to whether he is right on different points of it. When the Christian Church started off upon the line of exalting celibacy above marriage it was faithful to the Apostolic teaching.

The fifth chapter of the Epistle to the Ephesians also requires attention. The Christian Pharisees have found in this chapter materials for heavy burdens which they have bound and laid on men's shoulders. The Apostle exhorts men to love their wives and women to be submissive to their husbands and, in so doing, uses Christ's headship and leadership of the Church as a parallel for the relation of husband and wife. The parallel is not one which is calculated to have influence on the mind by its simplicity or aptness, though it is intelligible. If one has accepted the idea of Christ as living and reigning in heaven and watching over the Church, the relationship of leadership and headship is not mysterious. It may be that it is to this continued life and relation of Christ to the Church that the Apostle refers when he says: "This mystery is great, but I speak in regard of Christ and of the Church." Between the two things, then, the relation of matrimony and that between Christ and the Church, which is the known thing and which the unknown? Which explains the other? Each is a mystery. Do we so fully understand the mystery of matrimony that it illuminates the relation of Christ to the Church? It is impossible to answer yes. Though in ecclesiastical language, marriage has been used to set forth that relation, there is no force or sense in the usage. The parallel fails at every point. Does the relation of Christ to the Church throw any light on marriage? Obviously it does not, beyond the relation of leadership and headship. The argument of the theologians has run about as often from marriage to Christ's leadership of the Church as from the latter to the former. The most important point, however, is that a chance was offered for subtleties and quibbles, for the elucidation of parallels and contrasts, antitheses, and types, out of which arbitrary restrictions on human happiness were spun by schoolmen and monks and upon which priestcraft flourished luxuriantly.

Another circumstance contributed to the mischief. In the Vulgate version of the Bible the word here rendered as "mystery" is translated "sacramentum." But for this accident of language it is very doubtful whether marriage ever would have been put in the list of sacraments. A sacrament is a means of edification in religious life; the other six sacraments are all religious observances which enter into religious life and produce religious results in experience. Marriage, on the contrary, is no more a sacrament than trade or agriculture. It is a practical interest. Religion may be and perhaps ought to be interwoven with all interests; it has been interwoven with trade and agriculture; in this sense and no other is it interwoven with marriage. Consequently we find theologians of high standing denying that marriage is a sacrament.

It has, moreover, been a great puzzle to other theologians to say in which aspect or element of marriage the sacrament lies. I have collected the various statements which I have met with. It would take half an hour merely to enumerate and explain them. The practical importance of this point is that if, in any sense, marriage was a sacrament, ecclesiastics got control of it and through it controlled the family, the descent of property, questions of legitimacy and divorce, and family-alliances—matters which are inseparably connected with the control of marriage.

In the fourth and fifth centuries the interest of the Church turned with passion to the ideas of virginity, chastity, celibacy, and marriage. As we have seen, the Church started out with Apostolic teaching in which there were two standards of right and Christian virtue. The desire was to define and determine the relation of these two standards to each other. Two standards of right are irrational and immoral; we know that because we see and use two or more standards all the time. The ecclesiastics wanted to urge the highest standard, that is, virginity, as the only proper one, but at the same time they had to make allowance for the lower one, marriage, because of the Apostle's teaching. Tertullian was a rigorist and a fanatic on this point; he had a wife to whom he wrote a letter about marriage which amounted to saying that she and he were in a licentious and corrupt relationship. Jerome in his tract against Jovinian swings around and around the paradox of the two standards: you may but you had better not; if you were sanctified you would not want to; if you want to, you may; you had better seek higher holiness; if you will not do that, it is no sin for you to marry; if you do marry, be chaste; but it is only a lesser evil—and so on, over and over again. The Church could not go far on this line before finding itself enclosed in a contradiction. It was enjoined on married people to pay the conjugal debt to each other and yet the conjugal act was to be regarded as a base and shameful thing in its nature. Especially, however, the attention of the Church turned to the Holy Family, asking how all these paradoxes were to be understood with respect to its history. If it is a mystery that a virgin bore a son, so let it stand; but Augustine and his followers attempted to analyze this mystery. A virgin, who was married, bore a son, who had no father. She remained a virgin and a wife yet was neither a virgin nor a wife. In the Middle Ages there was a tradition that Christ took the Virgin from Joseph and gave her to St. John. These grotesque speculations were of great importance in the development of the Christian doctrine of marriage.

Although the Christian Church started with confused and heterogeneous traditions and dogmas, it actually developed between the sixth and eleventh centuries a wholly rational doctrine of marriage. The consensus of the parties

followed by concubitus constituted a marriage recognized by the Church. It had no function except to recognize and to bless; blessing, however, was no essential part of the ceremony of wedding or of the institution of marriage but was external to it. If we believe that blessing has any efficacy we must believe the same of cursing; then we have come to the doctrine that men can invoke the power of God for and against each other. If we do not accept this doctrine, then blessing and cursing are only expressions of good-will or ill-will and are of no practical importance. Still it was always a conservative and beneficial influence which was exerted by the Church when it guided the mores as to marriage and it made a great difference whether people felt that they were acting with the approval or disapproval of the best opinion of the society in which they lived.

Religious people liked to get the benediction of the priest on a marriage or to connect it with religion in some way. This was entirely informal before the twelfth century. Christian society conceived of marriage directly, simply, and correctly: a man and a woman agreed to enter the conjugal state together, this consensus being the first thing. It did not contemplate fornication but matrimony, joint life, united interests, children, conjugal relations, as long as both should live. What was wanted was just what had been wanted from the days of barbarism, namely, a clear decision, determined and expressed in public, simply in order that the pair's acts might not be open to misconstruction. Then they proceeded to execute their agreement and the marriage was complete. Hence what was needed by way of ceremony was that some third person should, in the presence of witnesses, ask them if they had the intention or if they did then and there take each other. This third person appears in all ancient and mediæval marriages; he is the father, a person of social weight—even a goddess acting through some representative. In strictness all that was witnessed was a promise.

Through these usages there runs the true legal notion that a promise is not a performance; that a betrothal is not a marriage. For centuries there was an oscillation of attention and interest between these two acts. Although the canon law of the twelfth century is distinctly upon the plane of doctrine about marriage which has just been stated, the ecclesiastics were pushing earnestly from that time to the sixteenth century for more definite priestly control over marriage. Should the Church aim to consecrate the betrothal or the consummation? In the nature of the case, when a pair came to an agreement, some interval of time elapsed before they entered upon matrimony. Local usage shows much variation. Among the common people it became customary in many places that when a pair walked together at a certain time or in a certain place, for instance on Sunday afternoon or in Lover's Lane, that was taken as an announcement that they were to be married. The priest urged them at this time to come before the church door and there get the blessing of the Church on their engagement. The engagement thus became irrevocable and so the usage arose which now exists very widely that a betrothal is irrevocable. The priest now became the functionary who asked the question and elicited the consensus and thereupon consummation followed at any time. To this the Church objected or at least it urged that a blessing should be invoked on the matrimony which had begun. In the German poems of the thirteenth century, the betrothal of great people is made for the pair, who stand in a ring of witnesses, by an important third person. Concubitus follows the same night and the pair go to mass for a

blessing the next morning. Very gradually the betrothal fell into neglect; the irrevocable promise was brought to the point of time just before consummation and the wedding was made all important. This arose from sound considerations of expediency and from the interest of the Church. The priest found other opportunities for intervention which were set aside by refinement of the mores.

Through all the ancient forms of marriage down to recent times the idea has prevailed that a man must give a property-pledge or gage in marriage in order to make the union good. The idea was that if he was led by sentiment alone his affection might wane. As he might change his mind or try to get out of it, a property-pledge was necessary to hold him. A woman who had no such pledge was a concubine, not a wife; hence the wedding-gifts given by the man, the marriage-contract of the Jews, the similar document of the Romans, and the marriage-gifts of the German husband. Our wedding-ring is a survival of this. A "wed" is a pledge and a wedding is a pledging. The revived engagement-ring is a renewal of the same idea in a secondary stage, such as we often see in the history of ceremonial. If a man gave any gift to a woman when he promised to marry her she could prove his promise later, if he repudiated it, by showing the gift; the man could then be asked to explain how it came into her possession if what she said was untrue. If he gave her a coin, it was unidentifiable; hence the usage of breaking a coin in two and giving a piece of it.

A subject of constant complaint was the clandestine marriage. Such an union defeated the will of parents and the authority of the Church. It was also open to doubt and therefore exposed the honor of women, the legitimacy of children, and the security of property. At the Council of Trent it was proposed to forbid clandestine marriages and the means adopted were in the interest of Church authority. There was great opposition in the Council to any change of the Church-rules about marriage as they then stood in the Canon Law and as they have been described above; but so long as the Church was obliged to recognize any union which had been contracted with a consensus of matrimony and consummation, it could scold and preach and set penance but it could not prevent clandestine marriages. The royal and noble families united with the ecclesiastics in favor of a law making marriages null and void if not solemnized before the parish-priest with at least three witnesses. Ever since 1563 that has been the law of the Roman Catholic Church, wherever the decrees of the Council of Trent have been promulgated. By this law marriage became an affair of ritual. It was incorporated in the mass and there was a requirement that the parties should confess a few days before marriage. The next step was easy. At first the priest merely pronounced, as in the Anglican ritual, that the parties by virtue of their own consent and pledge had become man and wife. Then, with his accession to greater power, he confirmed their act in the nave of the Church. At length it became his priestly fiat which made them man and wife. It was not their act, then, which married them, but his; he was the fetish-man who alone was endowed with the power to make them one flesh and he did that by a fetishistic fiat.

The doctrine that marriage is entirely indissoluble, that it is not to be contracted within the fourth degree of relationship, the injunction to keep the so-called Tobias nights, and the prohibition of marriage at certain seasons of the Church year are other details in the multiplication by ecclesiastical authority of arbitrary regulations which meant worry and pain unless ecclesiastical

remission was to be obtained. No men ever have lived or ever can live under absolutely indissoluble marriage. The Church has prohibited unions between third cousins or nearer relatives and also between persons in the same degree of affinity by marriage and has interposed also other bars. It is doubtless expedient that marriages should be prohibited between persons who are blood-kin to each other within certain degrees; beyond this, however, there is no sense or reason in any of the sweeping traditional restrictions. The Church proscriptions are not scriptural; they have been invented by men who, if they were honest, were celibates and ignorant of what they legislated about or who, if they had knowledge, must have got it by what they themselves averred to be an abominable sin.

The English Puritans were driven by hostility to the excessively ecclesiastical doctrine of Trent into the opposite extreme. When they examined the Bible, they could find no evidence that marriage is a divine ordinance, for there is no such evidence. They therefore regarded it as in part a private arrangement like friendship, in part a civil institution. The ministers did not preside at marriages. This function, even in a sect which mixed religion with every life activity, fell to magistrates. In New England, at the end of the seventeenth century, the ministers began to solemnize marriages as a result of rational consideration of the advantages to be won from a connection of this important personal and societal interest with the sanction of religion.

No sooner had the ecclesiastical movement for the control of marriage won complete success as a law (although it is not yet realized as a fact, even in strictly Catholic countries) than the ecclesiastics began to lighten the load, provided they could get submission and obedience. The attitude of the Jesuits in the seventeenth century does not seem to be understood as it ought to be. They offered an epicurean life-philosophy of ease, pleasure, and indulgence, without worry about the other world, provided only that the laymen would submit to the Church and obey her implicitly. The mediæval Church had become a grand organization for winning societal power and the Jesuit way of confirming and securing this was to give comfort and wide indulgence with immunity to all who would submit to the ecclesiastical authority. They had ritual means for securing all that a man could want in the way of good things in the next world and of divine favor in this.

In the Form of Solemnization of Matrimony, in the Anglican prayer book, it is first stated to the parties that matrimony is not "to be taken in hand . . . to satisfy men's carnal lusts and appetites, like brute beasts that have no understanding," and then three purposes of matrimony are stated: (1) "for the procreation of children"; (2) "for a remedy against sin and to avoid fornication that such persons as have not the gift of continency might marry"; (3) "for the mutual society, help, and comfort that the one ought to have of the other, both in prosperity and adversity." Although the coarseness of some of these phrases is not widely resented because of conventionalization, refined people are revolted by them and insist upon their deletion.

§437. Sense-Gratification: Taste.

Salt. This much-desired condiment has influenced the customs and practices of a number of tribes. In the circumcision-ceremonies of the Bechuana "the chief song is the Song of the Salt. Just as salt was the great taboo in the days of

the novitiate so this song in its praise, extolling its excellencies, is the great song of the *Bogwera*. . . . It is a song common to all the *Bogwera* camps."¹ When the men of the East Central African tribes are on the road, they must not use salt; if they did, and their wives were not behaving well in their absence, the salt would act as a virulent poison. Few Africans would risk this. Another superstition in this region is to the effect that if a woman morally guilty were to put salt in her husband's food, and he should eat of it, he would die; hence many women have a habit of always asking a little girl to put in the salt.² The Ba-Yaka drink salt water, deriving the native salt from the ashes of the water-plant.³ In Nyasaland preparations of salt are made from grass as follows. "Certain kinds of tall grass are gathered, dried, and burnt. The ashes are collected and put in an earthenware vessel, with a small hole in the bottom. They are well pressed down and the pot placed on the top of another empty one. Water is put in the first pot and filters through to the second, dissolving the salt. This salt water is either boiled down to a thick fluid or used as it is to cook food in. Salt is made from the ashes of *gumbwa* (papyrus), dried and burnt, also from a grass called *chesa*."⁴ The Nigerian head-hunters get salt from the Hausa traders; when unable to do so, they use ash from guinea-corn or millet.⁵ In common with the other Nilotic tribes of British East Africa, the Kavirondo "draw blood from the living cattle and drink it. The custom, however, has its justification, for in many parts of Kavirondo this is the only method by which the natives can obtain salt."⁶

In India, to pass salt from hand to hand is believed to portend some quarrel. It is generally handed over in a plate. If passed from hand to hand, the giver, after giving the salt, pinches the hand of the receiver to avert the quarrel and end it in a pinch. A somewhat similar superstition prevails in Europe, while the custom of throwing over the shoulder a little of the salt that has been spilled is known to all readers. In India salt is also considered to be very auspicious on a joyous occasion. The author⁷ began many a birthday of his boyhood by eating a few grains of salt the first thing in the morning. To do this on one's birthday, before eating, portends good, indicating that during the whole of the ensuing year the person so doing will be sure to get his salt and bread, or livelihood. In British North Borneo a feud is not actually settled until peace has been made by swearing an oath; in the ceremony undertaken by the chiefs of the two tribes an important rôle is played by salt. Following the oath there is "one more test, after which the two parties feel themselves perfectly secure against any renewal of hostilities from each other, and that is when they have eaten each other's salt."⁸ In Formosa "to eat salt from the same dish is a mark of friendship."⁹ Some peoples do not know salt. In Buru, for example, "the use of salt is far from universal and the tribes located in the inner districts have become insensible to the use of it."¹⁰ A Samoan legend refers to the use of salt water in the preparation of food.¹¹

Certain Indians of northern California did not use salt in food because they believed such use would cause sore eyes.¹² One tribe refrained from eating salt

in the belief that it turned the hair white.¹³ The Papagos regularly visited a salt lake which lay near the coast and just across the line of Sonora, from which they packed large quantities of salt to be sold at Tubac and Tucson. Strict ceremonies had to be observed, which would indicate that salt was regarded as a fetish. As they approached the shore of the lagoon in which the Great Spirit resided they ran at topmost speed and circled four times around the salt-deposits before those who understood the proper ritual began to collect the mineral. Even on the homeward journey there was magic power in the salt, and if a horse died the whole load was thrown away. As the salt-gatherers approached the home-village they were given a noisy welcome but were compelled to remain outside for four days, and for a long time thereafter they must abstain from certain acts that need not be detailed here. For four days those who remained at home sang for those who journeyed, and then all might eat the salt and were free to bring it to the Pimas. The latter sometimes made journeys to the lake for salt, being two days on the way to Quijotaa and two days on the trail beyond.¹⁴ Among the Hopi salt was gathered with ceremony by making sacrifice to the Goddess of Salt and the God of War, whose shrines were located in the Grand Canyon of the Colorado. "The Pueblos have important salt deities, that of the Hopi being Hurúng Wuhti, 'The Woman of the Hard Substances.' . . . Pottery vessels of special form were used to contain salt, and mortuary vessels which contained food for the dead are frequently saturated with this substance, causing exfoliation of the surface of the ware." The Zuñi "Salt Mother" was Mawe, genius of the sacred salt lake. "At certain seasons war parties were sent to the lake for salt, and while there ceremonies were performed and offerings made."¹⁵ "*Naoudiche* means 'salt,' and the village bearing this name was so called because of the salt supply near by."¹⁶ The above salt-expeditions recall the custom of peaceful access and other transitional forms between war and trade.¹⁷

The use of salt is said to be unknown to the Cayuas.¹⁸ Schomburgk¹⁹ pays a tribute to the honesty of the Guiana Indians, especially noticeable because salt was involved. He writes: "The unconditional trust which we reposed in the honor of our friends had not been betrayed; we found our things untouched, although the hut in which our packs were had been again occupied by the family to which it belonged. Every child of the settlement knew that the boxes and chests held articles of barter, objects as bearers of which they had followed us, for which they undertook every burdensome effort and gladly gave to us their weapons and ornaments, on which they had spent months of work. By an oversight our receptacle for salt—the highest article of luxury known to the Indian, which he eats only a grain at a time—had been left open; but this too had been held so sacred that a film of dust lay upon it." The heir to the throne of Bogotá in Colombia had to undergo a severe training from the age of sixteen; one requirement was that he must not eat salt.²⁰

The Romans regarded salt as a necessary and desired element of nutrition. It was a sacred thing, one of the first to be sacrificed to the gods. The salt-cellar consecrated the profane table and had a character of domestic religi-

osity.²¹ "The mountain people of North Carolina and West Virginia are said to put salt in their shoes in order to keep off the witches."²²

§438. Intoxicants and Narcotics.

Intoxicants. Torday¹ mentions as a remarkable phenomenon the fact that "though the Batetela come from a country where the native drink is 'pombe' beer, and live now among people who freely indulge in palm wine, produced both from the elais and the raphia, yet they use no other beverage but water, and are ignorant of intoxicants." The Baganda have a plantain-drink which is slightly alcoholic; the natives manage to become intoxicated after a day of drinking.² All the quarrels among the Nigerian head-hunters are over women and drink.³

A black drink, made by boiling leaves of the *Ilex cassine* in water, "was employed by the tribes of the Gulf states and adjacent region as 'medicine' for ceremonial purification. It was a powerful agent for the production of the nervous state and disordered imagination necessary to 'spiritual' power. Hall says that among the Creeks the liquid was prepared and drunk before councils in order, as they believed, to invigorate the mind and body and prepare for thought and debate."⁴ This case and some of the following recall the practices mentioned earlier in connection with ecstasy and inspiration.⁵

Roth⁶ writes of the natives of Guiana: "It is true that Indians drink but little or nothing at their ordinary meals until they have finished eating, and then commonly drink one draft; but when they assemble together for a drinking party they keep up the revelry until they have drunk up all their liquor; and this may, on occasion, last for three or four days. As soon as an individual has drunk all he can he will vomit it up and drink more. This vomiting is to some extent part of the festivities, because he never once leaves his seat. . . . As to intoxication at a drinking feast, certain women, as well as certain men, whose business it is to keep sober especially for the purpose, hide away all weapons on the first signs of inebriety. The women will carry some of the disturbers of the peace to their hammocks and tie them up firm—a position from which no amount of exertion or raging can free them, and where, with continued swinging, they soon fall into a deep sleep. The same plan is followed on the Pomeroon at the present day, where it is usually the house master or mistress, perhaps both, who purposely keep sober to put an immediate stop to any rows and disputes arising. . . . Pinckard, speaking of the Arawak Indians on the Berbice, says: 'They are very fond of drinking rum and eagerly swallow it to intoxication. But they observe a kind of method in their drunkenness, for when they come to the towns in bodies of considerable number it is remarked that half the party will freely devote to Bacchus, while the other half carefully refrain, in order to watch the helpless; and these, when restored by sleep, are observed to take their turn of watching, and to guard their late protectors through similar visits to the deities of turbulence and repose. They have no pleasure in long sipping, but swallow large drafts of rum or drink quickly glassful after glassful till they are unable to move.' . . . A more drastic

remedy would seem to have been in vogue in Surinam, where plaited mats and girdles, with stinging ants attached, would be placed upon the backs of the helplessly intoxicated guests."

After drinking either *maikoa* or another narcotic drink, prepared from the stem of the vine *Banisteria caapi* and called *natéma*, "the Jibaro warrior generally receives the revelations of the spirits while sleeping alone in the virgin forest in a small ranch made of palm leaves, usually situated many miles away from the habitations of the Indians." A drum is beaten when the Jibaros drink the narcotics, the object being "to summon the spirits that inhabit these sacred drinks." Manioc-beer is prepared by the natives in a ceremonial way. "After the fruit has been boiled it has to be masticated, a work which it takes some two hours to perform. The masticating of the manioc for the feasts is a real ceremony and is called *nauma*. Generally only the women take part in it, since the preparation of the beer is a work particularly incumbent on the women. Of the fruit, however, only a part, or at the most a half, is masticated. The rest of it is only mashed. The manioc masticated is thoroughly mixed with saliva and then spat out in a number of large clay pots." Caapi-drinking is practised also by the natives of southeastern Colombia, being done to cast out all fear and to impart "the valor of a warrior." The region where this prevails is called by a name which signifies in English "The Land of No Regrets."⁸ Of the Araucanians it is said: "In regard to fermented liquors they are exceptionally well provided, a considerable number of wild fruits supplying them with materials." These people are an outstanding example of the disastrous effects following the introduction of "firewater" by Europeans. "The introduction of spirituous liquors did not, for a considerable time, make much headway. The relations between the whites and the Indians were so strained, and the stern, hard discipline of constant warfare so maintained, that the results of this traffic were not for a long time apparent. But after the declaration of the Republican Government, when there were longer lapses of peace, it became a lucrative business, and many large fortunes were made by distilling cheap 'firewater' in the frontier districts. To such a degree did this traffic attain that it is a common saying in the south that the distillers did in a few years what the Spaniards failed to accomplish in three centuries—reduced the tameless Araucano. This vice has taken such a hold of the Indian that in general it has completely changed his character and mode of life, and from being a fierce, untiring, vengeful patriot, he has become a drunken, cringing, soulless vagabond, who would sell land, stock, wife, daughters, or his soul itself to indulge in his craving desire for drink."⁹ In this connection it may be mentioned that fourth in the list of the chief causes of decrease of the Indian population of North America, ranged in order of importance, are "whisky and attendant dissipation." They stand ahead of war in the category of destroyers.¹⁰

Tobacco and Drugs. Pitcheri is a Central Australian narcotic, the effect of which is to produce drowsiness. It has no long action and is not habit-forming. Expeditions are sent often afar to get it.¹¹ "If tobacco is really a recent importation into British New Guinea," writes Strong,¹² "the way it has spread over the country is very remarkable. I have always found it in profusion cultivated

far inland among the mountains both on the south and on the north-east coasts. And this, although I was practically the first European to visit some of the districts." Says Weeks¹³ of the African Bangala: "Tobacco, called by the natives *makaiya*, was largely used by the men, but all the years I was there I never saw a woman smoking." Among the Nagas of India a crying baby is quieted by two or three puffs at its mother's pipe.¹⁴

MacMillan¹⁵ says that in many ways the white man has been detrimental to the Eskimo. "He has brought coffee and tea and tobacco and the Eskimos have formed these habits, and when the white man goes they are unable to get the things they want. This has had a depressing effect." All sorts of ceremonial surrounded tobacco and pipes among the Cheyenne Indians, of which Grinnell¹⁶ has written a great deal. "The word tobacco is of American origin, and has been adopted, with slight variation, into most foreign languages to designate the plant now smoked throughout the world, although there is evidence that the early Spanish settlers employed the word to designate the instrument in which the plant was smoked, rather than the plant itself. . . . To the Indian the tobacco plant had a sacred character; it was almost invariably used on solemn occasions, accompanied by suitable invocations to their deities. It was ceremonially used to aid in disease or distress, to ward off danger, to bring good fortune, to generally assist one in need, and to allay fear. The planting of medicine tobacco is one of the oldest ceremonies of the Crows, consisting, among other observances, of a solemn march, a foot race among the young men, the planting of seed, the building of a hedge of green branches around the seed bed, a visit to the sweat house, followed by a bath and a solemn smoke, all ending with a feast; when ripe, the plant was stored away, and seeds were put in a deerskin pouch and kept for another planting. . . . At times both priests and laymen smoked plants or compounds that were strongly narcotic, those using them becoming ecstatic and seeing visions."¹⁷

It is said that "the term tobacco does not appear to have been a commonly used original name for the plant. It has come to us from a peculiar instrument used for inhaling its smoke by the inhabitants of Hispaniola (Santo Domingo). The instrument described by Oviedo in his *Historia de las Indias Occidentales*, Salamanca, 1535, consisted of a small hollow wooden tube shaped like a Y, the two points of which, being inserted into the nose of the smoker, the other end was held into the smoke of burning tobacco, and thus the fumes were inhaled. This apparatus the natives called 'tabaco.'"¹⁸ The Shingu Indians speak of tobacco as having come from the north, in the most ancient time, having been won for them by their culture-heroes. They use it in medicine.¹⁹

§442. Dancing and Acting.

"As with all primitive folk," says Basedow¹ of the natives of Bathurst Island, "song and dance constitute the ultimate stage of any social intercourse or festivity. The islanders are even more ready than their brothers on the mainland to resort to this means of entertainment. It thus happened that, wherever we came into contact with the blacks and presented them with divers small

¹⁹ Von den Steinen, *Zent. Bras.*, 210.

¹ In JAI, XLIII, 305 (quoted), 308-311. Horne and Aiston, *Cent. Aust.*, 37 ff., describe a welcoming corroboree.

articles, a corroboree was immediately inaugurated; even though the encounter happened to occur in the middle of the day." He describes a corroboree of a ship of war and of a fight, in which there was much imitation, really the beginnings of drama.

The mimetic dances of the natives of New Guinea show how the cassowary majestically stalks, how the herons and the doves feed their young and how a large bird chases a little one. "The women take part in the dances, and to make the exhibition more graphic put feathers on the backside of their bark aprons. The movements of the women are most graceful and the exhibition is truly fascinating. The men for their part show how a kangaroo is followed by dogs, how the dog goes after the bitch, and how the cock circles the hen. Quite masterfully they know how to portray animals in the dance and to represent in pantomime how they chase each other, quarrel, and fly, so that it is a pleasure to look on."² Among the Koita, "dancing takes place at almost all feasts, and most dances are accompanied by songs and the beating of drums or the thudding of dancing sticks and the shaking of rattles. . . . Dancing is not limited to ceremonial occasions, and the majority of the Koita dances are not obviously pantomimic and, according to their exponents, are not imitative or memorial in intention. . . . Both songs and dances are strictly copyright, and in the old days the unauthorized use of a song or dance might have led to war. The only legitimate manner for people to obtain the right to a dance or song not their own was to buy it."³

Dornan⁴ says that the dances of the Tati Bushmen "do not strike one as at all graceful. They consist of little more than stamping and jumping in a circle, narrowing and enlarging, while the performers go through various stoopings and twistings of the body, intended to represent the various attitudes of the animal from which the dance is named. For instance, in the Eland Bull dance the leader represents the animal grazing, running, fighting, or licking itself. It requires some knowledge of the dance to be able to understand what animal is referred to, although some of the representations are not at all bad. I have heard it said that some of these dances are very indecent, but I cannot say that they struck me as being particularly so."

In New Zealand "the 'dancers' do not really dance, but stand in rows and twirl the light *poi*-balls (made of dry *raupo*-leaves) over their heads, from side to side, beating them at intervals on their heads, breasts, shoulders, and even their feet, all in perfect time to the rhythm of the song or the musical accompaniment. The *poi* is often an action song—some represent the work of planting food, some the action of paddling a canoe, some imitate the fluttering of the wild birds. The Taranaki Maoris are amongst the cleverest *poi*-dancers in New Zealand, but the *poi* had always been something of a religious ceremony in their district."⁵

Among the American Indians there are "personal, fraternal, clan or gentile, tribal, and inter-tribal dances; there are also social, erotic, comic, mimic, patriotic, military or warlike, invocative, offertory, and mourning dances, as well as those expressive of gratitude and thanksgiving. Morgan gives a list of 32 leading dances of the Seneca Iroquois, of which 6 are costume dances, 14 are for both men and women, 11 for men only, and 7 for women only. Three of the costume dances occur in those exclusively for men, and the other 3 in

those for both men and women. . . . Among some tribes, when the warriors were absent on a hunting or war expedition, the women performed appropriate dances to insure their safety and success."⁶ When the scalp-dance was performed, the scalps were carried not by the men but by the women.⁷ An Apache medicine-man once taught the tribe a new dance, claiming that it would bring dead warriors to life.⁸ The Patwin had dances to celebrate a good harvest of acorns or a successful catch of fish.⁹ Grinnell¹⁰ mentions a constant spitting on the hands in the Cheyenne dances, and a regularly recurring use of the number four. There is also much story-telling among these people. Lowie¹¹ has stressed the element of propitiation in the Indian dances. "Among the Arapaho the seven ceremonies distinctive of the age-societies, as well as the Sun Dance, are performed only as the result of a pledge made to avert danger or death. The dances of the Kwakiutl, differing in other respects, resemble one another in the turns about the fireplace made by entering dancers; paraphernalia of essentially similar type (head-rings, neck-rings, masks, whistles) figure in Kwakiutl performances otherwise distinct; and the object of apparently every Kwakiutl society's winter ceremonial is 'to bring back the youth who is supposed to stay with the supernatural being who is the protector of his society, and then, when he has returned in a state of ecstasy, to exorcise the spirit which possesses him and to restore him from his holy madness.' Among the Hidatsa the right to each of a considerable number of esoteric rituals must be bought from one's father: in each case the requisite ritualistic articles were supplied by a clansman of the buyer's father; a 'singer' conducted the ceremonies; the purchaser received the ceremonial bundle, not directly, but through his wife; and so forth. All important bundle ceremonies of the Blackfeet require a sweat-lodge performance; in nearly all rituals the songs are sung by sevens; for almost every bundle some vegetable is burned on a special altar; and every ritual consists essentially of a narrative of its origin, one or more songs, the opening of the bundle, and dancing, praying, and singing over its contents." Dorsey¹² gives some details regarding the Sun-Dance. "On the completion of the altar the priests decorate the bodies, naked except for a loin cloth, of those who are to dance; these, together with the priests, have taken neither food nor drink since the preceding night. After the dancers have been painted, and decked with sage or willow wreaths about the head, neck, waist, wrists, and ankles, the dancers, forming in line, dance toward the center pole, representing the sun, blowing whistles made of the wing-bones of eagles to accompany Sun-dance songs, which are sung by musicians seated about a large drum at the southern side of the entrance. After an interval, which may be a day, the paint is removed and renewed, and the ceremony is resumed, and to the end the dancers thus alternately dance and rest. At the close of the performance the dancers in some tribes take an emetic, drink medicine-water, break their fast, and then enter the sweat-lodge. In all tribes, so far as known, the lodge with its accompanying altar is abandoned to the elements, for it is considered sacred and may not be disturbed. Among several taboos of the ceremony, one most frequent and almost universal is that forbidding the presence of menstruating women. . . . In the majority of tribes one of the most common rites of the public performance is that of voluntary self-laceration or torture. The two

most common forms of torture were (1) to attach the free end of a reata that had been fastened to the center fork of the lodge, to a skewer inserted in the loose skin of the breast, and (2) to drag around inside the camp circle one or more buffalo-skulls by a reata the other end of which was attached to a skewer inserted in the back. In some tribes a small piece of flesh was cut from the arm or shoulder of the dancer and was offered with tobacco seeds at the foot of the center pole."

§446. Treatment of the Skin and Hair.

Tattooing. In British New Guinea "the tattooing of a girl is commenced when she is quite young, and is afterwards added to from time to time prior to her marriage; but no further tattooing is done after then. . . . Men do not usually tattoo, but they sometimes do so either before or after marriage, and tattooing on the breast used to be a sign that a man had taken human life."¹

Among certain South Africans, girls could not be married until some four thousand stitches had been made on their breasts and stomachs, and a black fluid rubbed in. It caused great torture. "A Krooman can always be distinguished by a peculiar mark consisting of a broad blue-black line running from the forehead down to the end of the nose," the most extensive bit of real tattoo known in West Africa. In Liberia, only the initiated and tattooed boys may take part in palavers. In the Sudan, slave-women are marked by scarring and tattoo. Various patterns, which are often raised scars rather than true tattoo, are common in this region and the body rather than the face is the object of attention. In East Africa, though tattooing is chiefly for beautification, the patterns also distinguish tribes. Other marks confer luck in hunting. Curves and spirals are rather rare.²

The Tungus, Yakuts, and Ostyaks used to tattoo the face by means of sewing; Ostyak women decorate the hands with figures of birds and animals and with conventional designs; among the Koryaks only married women tattoo, in the hope of thus obscuring the effects of time. Mongolian tattooing is infrequently ornamental; it is a mark of criminality. Devotees in Lhasa often have the three mystic syllables, *Om, A, Hum*, tattooed on the crown of the head, on the forehead, and on the sternum respectively.³

In India, tattooing is practised in all quarters among the lower classes and has filtered in among the higher. "It is only an infinitesimal portion of the educated men of India who have been inducing their fair sex to give up the practice. The tribe, the caste, the religious sect, and the profession of the wearer of the mark can often be traced from the symbol selected. Many again are charms. Imitative magic likewise plays an important part in the selection of these drawings; for instance, the mark of a scorpion protects one from the bite of that vermin, and a snake from that of a cobra, and so forth. Among the Burmese, gunshots are tattooed to protect from fire-arms. A Shan thinks he acquires agility by tatuing a cat, or tiger, on his body. . . . Some charm, superstition, hope, myth, or something is connected with the devices, especially those

³ Hieckisch, Tungusen, 72; Ratzel, Vhde., II, 757; Russ. Ethnog. (Russ.), II, 482, 581; Rockhill, in USNM for 1893, 697; Rockhill, Mongolia and Tibet. 58. 67.

of women." The custom is waning with the refinement of the people. There are professional female tattooers in southern India and many people are profusely tattooed beneath their clothes. Worshipers of Vishnu are branded with his emblems. Some of the wild tribes tattoo after taking a first head. Tattoo "seems to have been the sign of full membership in the tribe; not till a man had shown his efficiency as a fighter might he wear the tribal badge or take the position of a married man." Again, the tattoo confers upon women immunity in a feud: "These women are much sought for by the southern men, because, however fierce may be their feuds, a tattooed woman always goes unscathed, fear of the dire vengeance which would be exacted by her northern relations were she injured giving her this immunity."⁴ Among the Todas "tattooing is only practised by women. . . . The tattooing must not take place before puberty, but it may be done either before or after childbirth."⁵

"The practice of tatu is so widely spread throughout Borneo that it seems simpler to give a list of the tribes that do not tatu, than of those who do. . . . The Kayans are, with one or two exceptions, the most tatued race in Borneo, and perhaps the best tatued from an artistic point of view; the designs used in the tatu of the men have been widely imitated and much ceremonial is connected with the tatu of the women." The men tattoo chiefly for ornament. No special significance is attached to the majority of designs employed, nor is there any particular ceremonial or pattern connected with the process of tattooing the male sex. "Amongst the Sarawak Kayans, if a man has taken the head of an enemy he can have the backs of his hands and fingers covered with tatu. . . . Although a single figure of the dog is the most usual form of tatu, we have met with an example of a double figure. . . . A woman endeavours to have her tatu finished before she becomes pregnant, as it is considered immodest to be tatued after she has become a mother. . . . The operation of tatu is performed by women, never by men, and it is always the women who are the experts on the significance and quality of tatu designs, though the men actually carve the designs on the tatu blocks. Nieuwenhuis states that the office of tateur is to a certain extent hereditary and that the artists, like smiths and carvers, are under the protection of a tutelary spirit, who must be propitiated with sacrifices before each operation." As to the operation, "the tateur or her assistant stretches with her feet the skin of the part to be tatued, and, dipping a pricker into the pigment, taps its handle with the striker as she works along a line, driving the needle points into the skin. The operation is painful, and the subject can rarely restrain her cries of anguish, but the artist is always quite unmoved by such demonstrations of woe, and proceeds methodically with her task. As no antiseptic precautions are ever taken, a newly tatued part often ulcerates, much to the detriment of the tatu, but taking all things into consideration it is wonderful how seldom one meets with a tatu pattern spoilt by scar tissue."⁶

Along with tremendous ear-rings that distorted the ears and were a sign of nobility, the Filipinos blackened the teeth and tattooed to such an extent that for a long time the Spanish term *pintados* was applied to them. Slaves might not tattoo.⁷ All the Maoris tattooed, but not at puberty. A warrior's full tattoo

⁴ Sinclair, in AA, X, 376, 377; Leclère, in PSM, XLIV, 780; Basu, in JASB, II, 93; Thurston, *S. India*, 377-379; Fawcett, in JASB, II, 330; Woodthorpe, in JAI, XI, 206, 208, 209; Godden, in JAI, XXVI, 185;

took place after he had distinguished himself in war. "The tattooing of a slave's face was only a vile practice, introduced lately for the sake of selling dried heads (fully tattooed) as European curios."⁸ The drawers or knee-trousers pattern common in Samoa is represented also on Ponapé; it is closely connected with sex-considerations. In Micronesia tattooing has become almost exclusively ornamental. Nukuoro women have to live in a temple for three months before their tattooing; it is attended by long religious ceremonies, where in the case of men the whole matter is arbitrary. The patterns in these regions generally indicate rank. Representations of the dead were, in the Bowditch Islands, often tattooed upon the chests of near relatives. Easter Island patterns used to be limited only by the fancy and ability of the artist, whereas standard figures were the rule in most of the Pacific islands. Marriage-marks were tattooed upon the husband's neck just below the larynx, if he belonged to a chieftain's family. All tattooing has now been given up by these islanders.⁹

Sinclair¹⁰ says: "The most elegant work is done in Japan and Burmah. Next come the Marquesas, Samoa, New Zealand, and other South Sea islands. That of the Haida Indians of Queen Charlotte islands is elaborate, and finely wrought, by far the best of any in the Americas."

Tattooing was probably once practised throughout the American continent. Sometimes it was no more than scarring, resulting from blood-letting for religious reasons. Painting the skin has largely superseded puncturing and cutting. Tattooing is common among Eskimo women, where among the men it is on the decline. It is thought to make the East Greenland women more effective in their work and men are sometimes marked "that they may be able to harpoon well." But the chief motive is adornment and pleasure. Central Eskimo women tattoo by "sewing" the skin—passing needle and thread covered with soot under the skin, or by puncture. At Point Barrow, "tattooing on a man is a mark of distinction. Those men who are, or have been captains of whaling oomiaks that have taken whales have marks to indicate this tattooed somewhere on their persons, sometimes forming a definite tally." These tally-marks are usually pricked upon the cheek, chest, or arms. Occasionally the wife of such a man had an extra mark put at the corner of her mouth. The tattooing of women is almost universal across the whole continent and in Siberia. It is done especially at the age of puberty. "When an Eskimo girl reached maturity a line was tattooed from the edge of the lower lip to the point of the chin; later two or more lines were added to mark her as a married woman." "Among the Kiowa the tribal mark was a circle on the forehead of the woman. With the Omaha and some of their cognates a small round spot on the forehead of a girl, and a four-pointed star on the back and breast, were marks of honor to signify the achievements of her father or near of kin. In other tribes certain lines on the face indicated the marriageable or married woman. . . . On the middle Atlantic coast geometric designs were tattooed on the person so as to have a decorative effect. The same type of design was incised on the pottery of that region. Tattooing was extensively practised among the tribes of the interior. The Wichita, because of their profuse use of this decoration, were known to the French as 'Pani Piqué. . . . As tattooing gave a permanent line, it served a different

purpose from decoration by paint. Among men it marked personal achievement, some special office, symbolized a vision from the supernatural powers, or served some practical purpose, as among the Hupa, where the men have '10 lines tattooed across the inside of the left arm about half way between the wrist and the elbow' for the purpose of measuring strings of 'shell money.' . . . The Chippewa sometimes resorted to tattooing as a means of curing pain, as the toothache. The process of tattooing was always attended with more or less ceremony; chants or songs frequently accompanied the actual work, and many superstitions were attached to the manner in which the one operated upon bore the pain or made recovery. Most tribes had one or more persons expert in the art who received large fees for their services."¹¹

Body-Painting. A few scattered cases may illustrate this widespread practice. In Bathurst Island "both male and female walk about in the nude state. The body is anointed with grease and besmeared, in one or more shades of colour, with ochre."¹² Red is the mourning-color among the African Ba-Yaka, and widows are painted this hue. To avoid the vengeance of the soul of a man killed in battle, the forehead is painted red and red tail-feathers of the parrot are worn in the hair.¹³ In the Upper Congo, "it was the custom to wash the body well, anoint it with palm oil, and then dust it with cam-wood powder. . . . The skin thus treated kept healthy and soft and free from scabs, etc., and received much protection from rain, sunshine or cold."¹⁴ Among some of the American Indians "the face of the dead was frequently painted in accordance with tribal or religious symbolism."¹⁵ "The Araucano neither daubs his face with paint nor uses tattooing as a means of beautifying his personal appearance, although formerly their war parties painted their faces to strike terror into the hearts of their enemies. The elaborate designs and totem marks used by some of the northern races seem to have had no counterpart among them, and they seem to have had no special identification mark to distinguish them if slain in battle."¹⁶ In Ecuador "body painting among the Indians nearly always serves magical ends, being regarded as a protection against disease and witchcraft, and this is especially the case with the black painting. According to the ideas of the Jibaros and the Canelos Indians there is a demon . . . in the black genipa paint."¹⁷

Treatment of the Hair. "All Batetela remove the body hair, women by plucking, men by shaving; the Olemba, moreover, shave the eyebrows and pull out the eyelashes."¹⁸ The Polynesians pluck out all the facial and bodily hair; they have a proverb: "No wife for the hairy man." On Ponapé hairiness is viewed with horror and they pull out their hair with hinged shells.¹⁹

Of the Indians Catlin says: "Beards they generally have not, esteeming them great vulgarities, and using every possible means to eradicate them whenever they are so unfortunate as to be annoyed with them. . . . From the best information I could obtain amongst forty-eight tribes that I have visited . . .

at least the proportion of eighteen out of twenty by nature are entirely without the appearance of a beard; and of the very few who have them by nature, nineteen out of every twenty eradicate it by plucking it out several times in succession, precisely at the age of puberty, when its growth is successfully arrested; and occasionally one may be seen who has omitted to destroy it at that time, and subjects his chin to the repeated pains of its extractions, which he is performing with a pair of clam-shells or other tweezers nearly every day of his life." The Apache used to pluck out eye-lashes and often eyebrows but have given it up. The Choctaws are said to have plucked "all the hair off their bodies with a kind of tweezers, made formerly of clam shells." It is thought by some that depilation originated in the attempt to facilitate face- and body-painting; natives cease to pluck out their beards when they cease to paint. Sioux men, having almost no beards, commonly pulled out what little they had; both sexes plucked out hair on other parts of the body.²⁰ The Cheyenne pulled out hair with tweezers called "eyebrow pluckers." It may be inferred that eyebrows were first removed; the practice today is to remove the lashes and other hair as well.²¹

Depilation was not the only method of treating the hair among the North American Indians. "In some tribes the women dressed their hair differently before and after marriage, as with the Hopi, whose maidens arranged it in a whorl over each ear, symbolizing the flower of the squash, but after marriage wore it in simple braids." With some tribes, as the Omaha, the hair of children was cut in a pattern to indicate the gens or band of the parent, and in some, as the Kiowa, to indicate the particular protecting medicine of the father. "The first cutting of the hair was usually attended with religious rites. Among the Kiowa and other southern Plains tribes a lock from the first clipping of the child's hair was tied to the forelock. Among many tribes the hair was believed to be closely connected with a person's life. This was true in a religious sense of the scalp-lock. . . . Among the Dakota a bit of the captured scalp-lock was preserved for a year, during which period the spirit was supposed to linger near; then, when the great death feast was held, the lock was destroyed and the spirit was freed thereby from its earthly ties. . . . One can be bewitched and made subservient to the will of a person who becomes possessed of a bit of his hair; consequently combings are usually carefully burned."²² The name Pawnee is probably derived from *partki*, or horn, "a term used to designate the peculiar manner of dressing the scalp-lock, by which the hair was stiffened with paint and fat, and made to stand erect and curved like a horn."²³ Among the Tarahumari, "both men and women wear long, flowing, straight black hair, which in rare cases is wavy. It is held together with a woollen head-band made for the purpose, or with a narrow pleated band of palm-leaf. . . . Very often the men, for convenience, gather their hair at the neck, leaving off the band. . . . Beards are very rare, and if one appear, the Indian pulls it out with great care. Their devil is always represented with a beard, and they call the Mexicans the 'bearded ones.' My offer of some tobacco," says Lumholtz,²⁴ "was once refused by a man because he feared that it would cause a beard to grow on his face—because I was a bearded man. A medicine-man once astonished

me by having his hair cut short. When I asked him why he had done so, he said it was not good because it was old; his head would get new and good thoughts with new hair. When the hair is cut off for this reason, the head is covered with a piece of cotton-cloth to keep the man's thoughts from escaping. When they cut hair from the head because it is too long, they place it under a stone or hang it from the branch of a tree."

"As soon as an Indian is captured in war he is deemed a slave, and one forthwith cuts his hair to make him understand that he is indeed so. In fact, hair is a sign of liberty, and only those who are free let it grow, and never cut it unless they are in mourning. From the Archivos de Indias . . . it is evident that the practice of cutting prisoners' hair as a mark of slavery was followed by Arawak as well as Carib." These Guiana Indians also depilate.²⁵ The Shingu pull out all the hair on the body. The beard is slight, and they seem to enjoy plucking it, being accustomed to it from youth up. Strangers who wear beards seem to them ugly. There might be rational ground, the author²⁶ thinks, for depilation—on account of parasites or special heat-irritation, or uncleanness, or danger of entanglement in the bushes, or of the chance given an enemy in a fight; but it is more plausibly connected with the custom of painting the body, where the hair would be in the way, especially in case the painting is designed to kill insects. "In short, he who removes the hair is so much better off, and has lost nothing. This is sufficient to account for the custom." Von Martius²⁷ thinks that depilation is everywhere practised in America in proportion to the development of tribal pride. Again, "the pulling out of the sparse face-and body-hair ranks with them as a law of beauty and is always practised." In Brazil too the eye-brows and eye-lashes are sometimes removed.²⁸ Among the Araucanians "the men pull out the beard, and both men and women remove all the eyebrows except a narrow strip."²⁹

Pincers for depilation are found in many prehistoric graves, for instance, in Scandinavia.³⁰

An excellent observer³¹ remarks: "To pluck out, to cut, or to shave is nothing but a question of thoroughness, or of the instruments at command, or of delicacy of feeling. The hair was cut or pulled out before it was combed."

§447. Ornament and Clothing.

IN Bathurst Island, "the females carry folded sheets of paper bark or large food-carriers about with them, which, upon the approach of strangers, they hold in front of their person."¹ In British New Guinea "women usually wear their nose ornaments on special occasions, but men wear them more generally." The war-feast after a victorious raid upon an enemy is the occasion for the donning of a large disc of white shell or an ornamental design. "Formerly only a man who had killed an enemy was allowed to wear these, and they were therefore insignia of which the wearers were greatly proud."² "Men of Lifu wore no clothing, but for ornament wore round the body the vine of a kind of bind-weed. The name of the beautiful convolvulus-like flower of this plant—*wanaithihle*—

after the introduction of Christianity and clothing, came to signify a heathen, and the adoption or rejection of Christianity was compared to the putting on or taking off of clothes.³

In southwest Africa iron is worth more than silver for it keeps its shine in the dry air and is used for ornament. The native women carry pounds of it and have to walk slowly and slouchily; this gait is regarded as aristocratic.⁴ The Bangala "were fond of brass ornaments, especially the women, who often wore heavy solid brass collars weighing from 2 lbs. to 18 lbs. When they died their heads were cut off to remove the collars. . . . The anklets were various in shape and weight, sometimes heavy brass rings were put on one above the other, and here and there would be seen a woman with a spiral leg ornament reaching from the ankles to the knees."⁵ Among the Atharaka "the only clothing originally worn by the men was a fringe of *mbuyu* threads (*ngigi*)."⁶ Small boys are unclothed, but after six or seven "wear the *ngigi*, to which is frequently added a piece of goatskin in order to more effectively conceal the fact that they are not yet circumcized. . . . Uncircumcized girls wear beads round the loins, to which is attached a fringe of *mbuyu* threads, so as to cover the genitals. . . . At an early age the lobe of the ear is pierced, and great care is taken in the gradual operation of its extension. A circular peg of wood is put in, and this varies in size and shape according to the owner's taste. . . . The women are literally weighed down with the weight of their beads and metal ornaments. . . . The unmarried girls do not wear the *matulutia*, but insert a small round piece of wood in the lobe of the ear (*ndingi*). They also wear goat's hair brushes stuck through the rim of the ear. These are called *ndiro*, and seem to serve no further object than decoration. The weight of these causes the rim of the ear to droop over, which I am informed is much to be desired. I was also informed that the *ndiro* flap about when the girls are dancing, which greatly fascinates the young men."⁷ Among the Kavirondo, "the women do not wear iron wire to the same extent as their husbands and brothers. These may frequently be seen with from six to ten pieces wound round their arms and legs, which shine from constant rubbing and polishing with oil and fat. Happily there are signs that this wire is going out of fashion, whereby they will be spared the sores and ulcers which are its continual accompaniment."⁸

According to an Associated Press despatch, shoe-polish by the ton is coming into Calcutta from England, to meet the desire of Indian natives in cities and towns to "outshine" their neighbors in the matter of footwear. "Until a few years ago comparatively few Indians wore shoes. At first the natives never thought of shining their shoes, but now it has become a fetish. The more perfect the shoe shine, the native believes, the greater the envy of all his fellow-beings."⁹ Formerly the wealth of the natives in Mindanao was in slaves, animals, *aguns*, and fine clothes. "The days of slavery are past; the *aguns*, or big gongs, they still possess. These are their most important musical instruments, and the magnificence of tone coloring of many large gongs played together is indescribable. The Bagobos have other instruments of percussion, wind, and strings, but these large gongs serve also as a medium of exchange, and a man's wealth is usually reckoned by the number of gongs he possesses."⁹ In Polynesia, "to bring someone's comb into contact with food, or to lay it in an oven, was the grossest of

insults,—but to the owner of the comb. Food, to the Polynesian, is profane and defiling, while the comb, which is in contact with the head, is emblematic of personal dignity.”¹⁰

The members of one of the Dakota tribes “wore looking-glasses suspended from their garments. Others had papers of pins, purchased from the traders, as ornaments. We observed one, who appeared to be a man of some note among them, had a live sparrow hawk on his head, by way of distinction; this man wore also a buffalo robe, on which 8 bear tracks were painted. . . . The squaws we saw had no ornament, nor did they seem to value themselves upon their personal appearance.”¹¹

§448. Clothing as Adjustment.

THE Australian case mentioned in the text is pretty complete, but not by any means extreme. Says a missionary¹ of wide knowledge: “My own experience, gained by ten years’ residence in Polynesia and New Guinea, is that the advent of the white man is invariably followed by the gradual extinction of the native race. Unintentionally, perhaps, but none the less certainly, the white man carries with him, wherever he goes, causes which ultimately destroy the native population. Foreign foods, foreign clothing, intoxicating liquors, foreign modes of living, and the direct introduction of specific diseases all tend to the one result. And of these I consider that the introduction of foreign clothing is one of the most fatal. In this matter the missionaries have to bear a share in the responsibility. Invariably adopted from a love of display rather than from any other reason, the native generally wears his foreign clothing during the daytime. Then at night, when it can no longer be seen, he throws it off, and sits in the cool night air, wet or fine, without anything on. The natural result of this exposure is the introduction of pleurisy, pneumonia, and other chest and lung diseases which cause terrible havoc.”

The same diseases reduced the Andaman Islanders, and it was decided “to supply them only with drawers, leaving the upper part of the body exposed. A marked improvement in the general health resulted from this change.”² The same story is rehearsed by Sir. H. B. Frere³ concerning South Africa, “where the natives have adopted such clothing without regard to European health customs.” Another writer on South Africa says that the missionaries who teach tribes accustomed to nudity to wear clothes are responsible for three things: lung diseases; the spread of vermin; the disappearance of inherent and natural modesty.⁴ Consistency in the mores is one of the texts of these last quotations. Others report the usual story of bad hygiene following upon the adoption of clothing,⁵ though Livingstone⁶ thinks that clothing helped against inflammatory diseases like rheumatism.

In South India, we are told, “one of the Government Agents some years ago insisted on a young woman being properly clothed. The result was she survived the change only three days.”⁷ Here, doubtless, was a case of death by fright on account of some transgressed taboo or religious scruple.⁸ In the Caroline Is-

8 §268, of the text and *Case-Book*.

lands, health has been much imperilled by the adoption of European clothes, the result being all manner of rheumatic and pulmonary ailments.⁹ The Maori died in numbers because the missionaries made them wear clothes.¹⁰

On the east coast of Greenland everybody when in the house goes naked or very nearly so. This is very wholesome because the furs worn out-of-doors would impede transpiration. On the west coast, the missionaries have preached down the habit of indoor stripping. Nansen¹¹ cannot say whether this has improved morality, but doubts it, and unhesitatingly declares that it has not been conducive to sanitation.

Of certain low California tribes we learn that "though filthy, these people do not neglect the cold morning bath until they have learned to wear complete civilized suits . . . and never since the fatal hour when Adam and Eve tied about them the fig-leaves in Eden has clothing been a symbol so freighted with evil portent as to these miserable people. On excessively hot days they would lay off the miserable rags of civilization which hampered and galled their free-born limbs; and then would come colds, coughs, croups, quick consumption, which swept them off by thousands."¹²

Of the Guiana Indians it is written: "For decency's sake, as Gumilla tells us, the missionaries distributed clothing, especially among the women, but in vain. They fling it into the river or hide it, but do not cover themselves, and when remonstrated with, they reply 'We do not cover ourselves, because it gives us shame.' . . . They recognize shame and bashfulness, but the signification of the terms is changed. . . . They feel abashed at being clothed. . . . Among the nations bordering on the Amazon, the Indians are entirely nude. They regard almost as a certain sign that he who would cover what shame obliges us to hide would soon be unfortunate, or would die in the course of the year. . . . It is well to bear in mind what is already well known in connection with many other races, but so pertinently expressed by Kirke relative to the Guianese Indian: The climate of Guiana is exceedingly warm and moist; up the rivers scarcely a day passes without several showers of rain. The natives in consequence go about in a nude state, and the rain as it falls runs off their oiled backs like water off the proverbial duck. But when, by the efforts of some well-meaning but misdirected missionary, they don clothes they soon become victims of phthisis and pneumonia, their clothes getting wet through and drying on their bodies several times a day. It is not from want of knowledge of clothes that the Indian goes naked. As Coudreau pointed out, the Indians regard European clothes as ornaments, wearing them over their own bead or feathered decorations. He mentions how the Atorradis, etc., speak of clothes as the *cachourous*, i.e., beads, necklaces, of the whites."¹³

§449. Prestige.

Trophies. Somerville¹ notes in New Georgia "the custom of keeping the skulls of any animals eaten; these may usually be seen inside the houses, threaded on long sticks. They consist, for the most part, of opossum, turtle, and frigate bird skulls, and are kept either merely for ornament, or as a bragging record

of former feasts and good living. I think that perhaps the custom has also some 'religious' meaning." In Bougainville the beard is scalped and worn as a trophy.² In Mowat the victor wears as a charm the private parts of a great warrior slain in battle.³

With the Bangala, "when a man kills his opponent in a fight he cuts off the head and removes the lips, which he thoroughly dries in the sun, and then sticks in brass chair nails and wears them as an ornament with as much pride as the Victoria Cross is worn—it is the man's medal for bravery."⁴ In Victoria Nyanza the hunter makes rings from one of the hind feet of the elephant and wears one for each animal killed. He has great pride in them; an old hunter has fifteen or twenty. The tuft on the end of the tail is also a trophy.⁵ In northeast Africa, "the first business of the victor, who has killed a man, is, if time permits, to sever the private parts with a knife—a gruesome usage which is characteristic also of the Bantu, for instance, the Kaffirs."⁶

Among the frontier tribes of northeast India warriors of distinction, who have slain many people, wear the hair of their victims depending from the side-ornaments of the helmet. It accumulates into a kind of fringe around the face. Women's tresses are preferred as being longer.⁷ The oldest brother in a Naga family, besides his own trophies, gets the skulls taken by his brothers, to decorate his portal. Skulls of enemies taken in battle are generally decorated with a pair of horns or with wooden imitations of them.⁸ "The successful head-hunters of the Ao tribe wear, as badges of their prowess, collars composed of pairs of boar's tusks, which are tied point to point and base to base, so that they encircle the neck. . . . Each pair of tusks so worn indicates an enemy's head taken in battle."⁹

The skulls acquired by Malays in head-hunting are ornamented and set up in the houses; he who has the most of them is a great man. Among the Dyaks the shield is ornamented with human hair; whenever the warrior takes a head, he inserts a tuft of the hair in his shield.¹⁰ In Borneo the most valuable ornament of the verandah is the bunch of human heads which hangs over the fireplace like a cluster of fruit; these are obtained on various warpaths by the members of the family, dead and living, and are handed down from father to son as precious heirlooms.¹¹ On the island of Nias only those natives may wear a ring around the neck who have been successful on a head-hunting foray.¹² The Samoans are said in vainglory to have piled up the heads of their enemies before the public assembly, the head of the most important chief being put on top.¹³

Mutilation of the dead was neither universal nor constant among the American Indians, but "the cutting off of the head or taking of the scalp was generally practised. The fundamental reason for scalping has not yet been fully explained, but there is evidence to indicate that it was connected with the rites observed when a boy was recognized as a member of the band and his life was dedicated to the God of War."¹⁴ "The Menomini endeavored to take the entire scalp, including the skin over the forehead, but if there was not time enough

for this, a small piece, including the place where the hair radiates from the crown, was sufficient. While the scalp was fresh the warrior licked the blood from it to symbolize the devouring of the enemy by the Sun." After the scalp-dance, "the sister of the warrior washed his hands with presents and took the scalp from him, so that in the end the trophies accrued to the women."¹⁵ Some tribes took no scalps. The Pima, for instance, "considered their enemies, particularly the Apache, possessed of evil spirits and did not touch them after death." While the Patwin refrained from scalping, they are said "often to have decapitated the most beautiful maiden they captured."¹⁶

"During the battle the Mundrucû spares no enemy. As soon as he has stretched one on the ground by arrow or spear, he seizes him by the hair and with a reed-knife cuts through his neck-muscles and vertebræ with such dexterity that the head is speedily separated from the trunk. The head thus won becomes then the object of the greatest care on the part of the victor. As soon as he has rejoined his comrades many fires are kindled and the skull, relieved of the brain, muscles, eyes, and tongue, is dried on pegs, daily repeatedly washed with water and with oil . . . and exposed to the sun. When it has become quite hard, the skull is provided with an artificial brain of colored cotton and with eyes made of resin and teeth, and is ornamented with a feather cap. Thus outfitted, the gruesome trophy attends the victor, who carries it with him on a string and, when he sleeps in the common house, by day puts it in the sun or the smoke, by night right by his hammock, like a guard."¹⁷ The Guaycuru cut off the heads of slain enemies as trophies, sometimes the hair or even little pieces of the body. "These trophies of victory they give over to their wives who have their jokes with them."¹⁸ The Jibaro Indian does not make trophies solely of the heads of his human enemies but also of the heads of certain animals. There is one animal especially which in this respect plays a curious part in the superstitions of the Jibaros, namely, the sloth. Feasts with trophies made of the head of the sloth are among them as common as feasts with human head-trophies.¹⁹ It is said that tourist curiosity has so stimulated traffic in human heads as souvenir trophies that whole tribes of South American Indians are threatened with extinction. Ecuador has declared war on the head-hunters and has asked Peru and Brazil to assist her. The Jibaro Indians are masters of the secret of how to reduce the human head to the size of a doll's without distorting the features. The heads which formerly were preserved as battle-trophies are now being smuggled into the cities to be sold to tourists, usually for fifty dollars apiece. A skilfully reduced specimen sells at Quito, Guayaquil and other South American ports for as much as three or four hundred dollars. "The tourist in buying them is innocently increasing the savagery of the head-hunters, with the result, it is claimed, that in a short time certain tribes will be extinct."²⁰

The Scythians are said to have taken scalps as trophies, sometimes sewing a number together as a cloak. Those who possessed many scalps were highly honored.²¹ There is an Irish legend that a warrior, having killed an enemy,

broke the skull and took out the brains, which he worked up into a ball, dried in the sun, and preserved as a trophy of valor and a presage of victory.²² Bastian²³ mentions several historical cases of skulls being made into beakers, and states that the church adopted the custom of drinking out of saints' skulls.

BIBLIOGRAPHICAL NOTE

IN the following list of books and articles consulted by the authors are included the titles of several studies, made by former candidates for the doctorate and not yet published, which are deposited in the Yale University Library. Occasionally two editions of the same author's work are cited; for instance, the original and the popular editions of Darwin's *Origin of Species*, or the German and the English versions of Ratzel and Lichtenstein. Anonymous articles in journals are listed under "Anonymous," in the alphabetical order of their key-words. The titles of books and articles, abbreviated in footnotes throughout the body of this book, are cited in full below.

Asterisks have been used to indicate exceptionally important sources, and daggers to designate publications that are readable, apart from their intrinsic scientific value. In some few cases, an asterisk appears before an author's name, thereby conveying a high estimate of his work in general. With almost no exceptions, and those readily identifiable, the publications in the following list have been personally consulted by one or other of the authors. Where reliable writers have quoted from sources not readily accessible to us, such excerpts have been accredited to the secondary source.

The authors wish to express their appreciation of the assistance rendered, in the making of this bibliography, by Miss E. L. Brown and Mr. T. C. Weiler.

NOTE TO INDEX

THE following index is part of the apparatus of this book; it has been constructed on lines calculated to realize the authors' purpose of exhibiting perspective, interrelations, and cross-sections, rather than to secure exhaustiveness. It reinforces the numerous cross-references in the footnotes. It is an index of topics rather than of words and names. Major topics can, with its aid, be followed throughout the volumes.

An index of such sort may, at least to some extent, repair the inevitable misrepresentation produced by any selected classification of societal phenomena, by bringing together elements common to many topics but not so capable of forming topics by themselves. A certain arrangement of topics and materials has to be adopted for purposes of exposition, and that arrangement necessarily excludes or subordinates others which will seem to many better and more logical. The index may suggest several cross-classifications, as well as the innumerable interrelations of topics which are the despair of any classifier of evolutionary phenomena, but which must needs be indicated unless violence is to be done to the truth.

It is as impossible, in this book, constructed as it is upon evolutionary lines, to index evolutionary factors and their action, as it would be to list all cases of the mores. The text of this treatise is adjustment, as resulting from the factors of variation, selection, and transmission. Such entries as "survival-value," "rationality," "maladjustment," offer some special indication of the results of the evolutionary process; and the topic of "correlations" assembles cases of adjustment of mores and institutions to one another, illustrative of "the strain toward consistency" in the mores. Samples of such correlations have been brought together under the key-word, "correlations," and many others are to be found under headings such as "property," "religion," "marriage." Here again, the impossibility of exhaustive indexing simply reflects the salient fact about human society, that it is a living whole whose parts are endlessly interrelated.

An index constructed along such lines presents no proper names, either of authorities or of tribes. It was at one time intended to attach to this book a register of tribes mentioned and also ethnographical maps. This project may sometime be realized but has been impossible of accomplishment prior to publication. In respect to the tribes, however, it should be noted by anyone who may wish to find the practice of any particular people with respect to a certain usage, that our instances are regularly presented, both in text and *Case-Book*, in a certain order.

We begin with the Eastern Branch of the Black Race (Australia and Melanesia), thence passing to Africa, which is traversed, usually, from south to north. Asia follows, beginning at the north and working in a southeasterly direction. Then come the Malay Archipelago and the islands of the Pacific (Micronesia and Polynesia). America is next, beginning with the Eskimo and working southward to the southern tip of South America. From this point we usually shift to the seats of ancient Eurasian culture (Assyria, Egypt, etc.) and end with contemporary but backward European peoples and with survivals in historical and contemporary periods. A slight familiarity with this

arrangement, which is based upon a rough combination of geographical and cultural criteria, will enable anyone whose interest lies in certain regions to find such relevant instances as our text and *Case-Book* contain.

The *Case-Book* is not as exhaustively indexed as is the text. It is understood that an asterisk following a topic-number in the text indicates that there is a corresponding topic in the *Case-Book*. When, therefore, an index-entry covers an asterisked topic, there is no page-reference to the corresponding topic in the *Case-Book*, but the one entry carries both text and *Case-Book* topics.

All references to the *Case-Book* are indicated by *italicized figures*, following the entries having to do with the text.

A. G. KELLER.

INDEX

- Abandonment. 282, 343, 837, 859-61, 927, 1070, 1071, 1073, 1088, 1091, 1092, 1163, 1389, 1915 ff., 56, 105, 338, 340, 354 ff., 407 ff., 559, 572, 579, 783, 786, 791, 835, 1051, 1066 ff. (*woman at childbirth*); v. house-burial; accident; childbirth; old, treatment of.
Of the dying. 856-858, 861, 1393.
- Abduction. 1539, 1627-8, 1647, 1760, 1973, 1984-5, 894-5, 901, 954-5; v. bride-price; child-marriage; capture-marriage; mock-capture; elopement.
Of groom. 968.
- Abnormality. 980, 362, 579, 718, 1006, 1045 ff.; v. evil eye; extraordinary; fetish; man-fetish; infanticide; twins; inspiration.
- Aborigines. 571, 1038-9, 1329, 107, 512-3, 562, 879; v. fetish-man; out-cast race.
- Abortion. 1415, 1791, 1868, 935, 1043 ff., 1060; v. foeticide; license, premarital.
"Absence" of mind. 781.
- "Absolute." 260, 614, 652, 654, 657, 2172, 2173, 2245; v. rights, "natural right."
- Abstinence. 873 ff., 879.
- Accident. 855, 1070, 1072-4, 1090, 1101, 1135, 1137, 1144, 1161, 337, 339-40, 362, 383, 502, 517, 557-9, 579; v. aleatory element; lightning; purposes and consequences.
- Accommodation. 1983.
- Acculturation. 47, 419, 527, 1618 ff., 1975, 1120-1, 1127-9; v. contact; parallelism.
- Acting; v. dance.
- Adjustment. 3 *et passim*.
- Administration; v. chief.
Sub-agencies of, 517 ff.
- Admiration dangerous; v. evil eye; disparagement.
- Adoption. 223-4, 389, 423, 440, 455, 712, 714, 716-8, 1501, 1690, 1923-5, 1944, 1959, 1994, 2024 ff., 83, 143, 159, 162, 200, 410, 415, 546, 884, 1009, 1077-9, 1091, 1100, 1106, 1115, 1132, 1140, 1155 ff., 1157 (*birth-ceremonies*); v. *ambil-anak*; blood-brotherhood; sex-ascendancy; slavery.
- Posthumous. 1058, 1078.
- Adultery. 380, 435, 689, 1161, 1242, 1275, 1439, 1461, 1528, 1608, 1690, 1746, 1750-1, 1757, 1764 ff., 1769 ff., 1863, 1986, 89, 284, 439, 575, 852, 854, 934, 976 ff.; v. theft (977); chastity; infidelity; woman as property; initiation; divorce; sin; crime; punishment.
- Adverse possession; v. monopoly.
- Adversity. 935, 960 ff.; v. aleatory ele-

- ment; avoidance; ghost-cult; daemonology; insurance.
- Affection; *v.* love.
- Affinity. 1572, 1610, 1612 ff., 1978-9, 2010, 869 ff., 875; *v.* relationship, artificial.
- Age-grades. 1564-5, 1602, 1947, 1960, 2000-1, 2006, 155, 858, 882, 884-5; *v.* terms of address.
- Age of marriage, disparity in. 2004, 2019, 249-50, 845, 852, 865, 1008, 1021, 1026, 1031-2, 1058-9, 1139-41, 1157; *v.* child-marriage; the old; widow; elders; gerontocracy; marriage, normality of.
- Aged, treatment of; *v.* old, treatment of; family-life.
- Agency. 756-7, 788-9, 827; *v.* cause. Spiritual: 654 ff., 893, 895, 900, 938, 935 ff., 938, 942-5, 956, 961 ff.; *v.* disease; eidolism; fetish, animal; death not inevitable.
- Agriculture; *v.* tillage.
- Albinism. 1033-8, 1092, 1253, 1344, 1347, 1586, 72, 74, 462, 510 ff., 706, 1048.
- Alchemy. 1325, 1331, 1332, 729.
- Aleatory Element. 737 ff., 772, 787 ff., 818, 821, 823, 824, 827, 830, 839, 840, 848, 851, 893, 894, 912, 916, 932, 938-9, 956, 959, 960, 964, 980, 988, 993, 1000, 1015, 1017, 1023, 1033, 1037, 1061-3, 1066, 1068, 1072, 1074, 1082, 1087, 1090, 1098, 1132, 1133, 1138, 1155, 1167, 1170, 1179, 1188, 1205, 1210, 1254, 1285, 1316, 1319, 1322, 1324, 1331 ff., 1341, 1345, 1357, 1370-2, 1377-8, 1380, 1383, 1385, 1419, 1426, 1430, 1433, 1449, 1466, 1523, 1535, 1580, 1692, 1713, 1723-4, 1729, 1812, 1836, 1840, 1905, 1915, 2039, 2041, 2070, 2073-4, 2151, 2165, 2174, 2231, 20 ff., 262, 427-9, 432, 435, 438, 444, 478, 502, 605, 613, 622, 706, 725, 790, 834, 836, 958, 1066 ff., 1073; *v.* dream; lightning; accident; mystery; ordeal; fate; lucky and unlucky; evil eye; coincidence; gambling; extraordinary; disease.
- Attention to bad rather than good luck. 827-8.
- Alien. 358, 360, 371, 424, 445 ff., 1 ff., 48-9, 115 ff., 131, 595, 597, 879, 1017; *v.* in-group; ethnocentrism; guest-friendship; atomism.
- Alliance; *v.* blood-brotherhood.
- Allocation. 1526-7, 1607-8, 1623, 1696-7, 1838, 1940, 1999, 2043; *v.* terms of address; sex-ascendancy; tattoo; cult-mark; marriage-mark; totemism.
- All-souls' day. 877, 909-11, 394; *v.* dead, feast of.
